

THE
IMPERIAL GAZETTEER;

A GENERAL
DICTIONARY OF GEOGRAPHY,
PHYSICAL, POLITICAL, STATISTICAL, AND DESCRIPTIVE,
WITH A SUPPLEMENT,

CONTAINING THE GEOGRAPHICAL INFORMATION DOWN TO THE LATEST DATE.

EDITED BY

W. G. BLACKIE, PH.D., F.R.G.S.

EDITOR OF THE "IMPERIAL YEAR."

The Work comprises comprehensive Accounts of the Countries, Cities, Principal Towns, Villages, Seas, Lakes, Rivers, Islands, Mountains, Valleys, &c., in the World. Compiled from the latest and best Authorities.

ILLUSTRATED BY ABOUT 800 ENGRAVINGS ON WOOD.

SINCE the time that the publication of the IMPERIAL GAZETTEER was completed, very extensive additions have been made to our knowledge of various parts of the world. Africa—Southern, Central, and Eastern—has been opened up greatly by Livingstone, Barth, Richardson, Speke, Vogel, Baker, Anderson, Burton, Speke, Grant, Baker, and other travellers. The journeys of the Gregories, Macdonell Stuart, Landsborough, the unfortunate Burke and Wills, McKinlay and others, have changed our ideas regarding the interior of Australia, which was supposed to be covered with salt scrub, hard baked mud, or burning sands, and to be a barren waste; but immense tracts are suited for the abode of the hardy settler, and capable of supporting countless flocks of sheep and herds of cattle. In Eastern Asia the Russians have augmented our knowledge of the lands bordering the mighty river Amoen; the British and French expeditions to China, and the researches of intrepid travellers, have increased our information regarding the features, the products, and the people of the Middle Kingdom, while in the Arctic regions, new islands, straits, and seas have been added to our maps by the numerous daring explorers who endeavoured to track the course and solve the fate of the lamented Franklin. Much has been done likewise to increase our knowledge of the less known parts of North and South America, and short but sanguinary continental wars have brought about extensive changes in the political geography of Central and Southern Europe.

In compiling the SUPPLEMENT, thus rendered necessary by the progress of discovery, all the valuable works of travel, home and foreign, that have appeared in recent years have been consulted, and also the more important geographical and other periodicals published in this country, and in France, Germany, and America, and considerable additions of new matter have been obtained through the kindness of private correspondents.

It is a pleasure to place much thanks to us for the assistance through which the work has been brought to its present state, and to the many gentlemen who have

in many cases been made to those on places already noticed in the body of the Work and sometimes new ones have been substituted in their stead, where the amount and value of recently acquired information seemed to demand such a course, and articles on many places formerly omitted—whether accidentally or by design—have been now inserted. At the end is given a full abstract of the Census of the United Kingdom of 1861 presenting the latest returns of the population of all its counties, towns, villages, parishes, and islands.

In addition to preparing the SUPPLEMENT the text of the original Work has been dealt with to some extent. A number of important articles have been renewed or improved, statistics in many instances have been modernized, and numerous alterations rendered necessary by recent political changes in Europe have been introduced. The population given in the articles on places in Great Britain and Ireland is uniformly that of the Census of 1851 and the populations according to the more recent returns of 1861 are shown in an abstract of that Census given at the end of each volume.

Extensive and rapid as have been the additions made to our knowledge of the earth's surface in recent years it is believed that the IMPERIAL GAZETTEER as now completed may fairly claim to exhibit a satisfactory view of the present state of geographical information.

The following extracts from the Prospectus is used on the first publication of the IMPERIAL GAZETTEER describe its general plan and scope—

In compiling this Work the most recent and authentic sources—home and foreign—from which anything new and interesting can be obtained will be consulted, and particular attention will be paid to the Trade and Resources of the various places described and to the Social Condition Manners Customs, &c. of the Inhabitants. Great care will also be bestowed on the Physical Geography of Countries in the various departments of Geology Hydrography Climatology Botany Zoology &c. and much pains will be taken to attain accuracy in laying down geographical positions and relative positions by consulting the best and most recent maps or by inducing them from good written authorities. It will thus be understood that the IMPERIAL GAZETTEER will not be compiled by merely rewording old materials, but will be an entirely new and carefully drawn up Work adapted in every respect, to the wants of the present day by the information being brought down to the latest possible period.

Hitherto, most works of this kind have been compiled on one or other of two different and to a certain extent, opposite plans—the one being to give the greatest possible number of places with brief accounts of each the other to give lengthier articles, with a more limited selection of subjects. Both plans appear to be defective—the one from the meagreness of its details the other from the scantiness of its list of places many localities of interest, and not a few of importance, being in the latter case necessarily omitted. In the IMPERIAL GAZETTEER an attempt will be made to avoid both these defects by terse writing judicious compression and a rigid exclusion of irrelevant detail and by dwelling only on the more prominent and interesting features of the localities described. It is consequently not intended to present the reader with lengthy wearisome treatises, but with concise readable articles, occupying a position between the scientific and the popular retaining the precision of the one without its abstruseness, and the interest of the other without its vagueness.

The Work is illustrated with about EIGHT HUNDRED Engravings on Wood printed in the text and a Frontispiece to each volume engraved on Steel in the most finished manner. The Illustrations in the text comprise Views of Cities and Towns of remarkable Buildings, Antiquities, Natural Scenery Costumes, Plans of Ports and Harbours and small Maps showing River Mouths, Islands, and Island Groups, &c., on an enlarged scale all derived from the most authentic sources.

The Supplement is published separately imperial 8vo, cloth, price 18s.

GLASGOW AND EDINBURGH.

OPINIONS OF THE PRESS,

MOST OF THEM EXPRESSED WHILE THE WORK WAS ORIGINALLY IN PROGRESS OF PUBLICATION
OR SOON AFTER ITS COMPLETION

ATHENS, CALIF.—A knowledge of Geography in its widest sense, is now essential not merely to the merchant, the emigrant, and the politician but to the ordinary newspaper reader who wishes to understand and appreciate what he reads. Such a knowledge may be derived from this excellent book of reference, which is correctly described in the above title, and contains all that is really worth knowing of each place mentioned in it. All the articles that we have examined—whether long or short—have exhibited a greater degree of correctness in minute details than we should have thought practicable in so comprehensive a work.

ATLAS.—(*First Notice*). This is one of those stupendous volumes which require for their perfect production capital, foresight, and great editorial integrity. The Publishers pledge themselves that this work shall not be a mere re-burying of old material, but an entirely new and that the information shall be brought down to the latest possible date. The facts we have applied certainly satisfy us in this, as far as the present volume is concerned, this pledge has been fulfilled.

ATLAS.—(*Second Notice*). All who are learners of purchasing a Geographical Dictionary it once copious and exact in its information cannot do better than provide themselves with this.

MORNING HERALD.—We have gone through the articles referring to places with which we are intimately acquainted and we find such a number of facts of general interest, yet to be acquired only by a personal knowledge of the locality—such a variety of information geographical, mercantile, scientific, and local—such an attention to orthography occasionally betraying a study of philology, and such a summary knowledge, in fine, of men, manners, and things at home and abroad, as fairly marks the Imperial Gazetteer beyond dispute the most reliable authority of the day.

The execution of the work on the whole defies adverse criticism. The accomplished editor has devoted his entire strength to consulting the latest and the best authorities, sparing no pains to verify his statements, searching with unwearied patience for facts and data, and giving his energies to their proper arrangement for ready discovery.

For many a year to come it will remain the standard authority upon geography and topography. As a standard work of reference for every one connected with literature or business the Imperial Gazetteer must long remain unequalled.

ECYPTUS REVIEW. From personal examination, we feel qualified to speak unhesitatingly of the great superiority of the present Work to all others of its class with which we are acquainted. It leaves them far behind, and supplies what has long been needed—a concise repository of new and interesting information. As such it should find an immediate place in every library and will be an invaluable book of reference both to the teacher and scholar, the man of general intelligence, the student of philosophy and the inquirer into the history, habits, and condition of various peoples. The Work is published in parts, and is thus happily brought within the means of a very large class.

We have not often been disposed to speak so strongly in commendation of a work, but in proportion as its merits are known it will be highly appreciated.

THE ECONOMIST.—This is just such a book as we have long desired to see. Properly does the preface say that "next to a good Dictionary the most generally useful book is a good Gazetteer." Just now too in consequence of the gross imperfections of most former compilations, and by the

lapse of time in an age of unexampled activity and progress, such a work is peculiarly wanted. It must be compiled, as this generally is, from the most recent and authentic sources home and foreign—must steer equally clear of being a mere index to all the spots of the globe that are designated by proper names, and of being a collection of long treatises on places that are no longer of any use, were, deserving of no such notice. Amongst its numerous illustrations are plans or maps of remarkable cities, groups of islands, &c. &c. which add much to its value. As far as we have had an opportunity of examining it, the Imperial Gazetteer is distinguished at once for completeness and correctness.

(*NOTE*).—By far the best Gazetteer in our language.

EXAMINER.—We have traced the book with a keen eye to perceive that the respective articles have really been drawn up—and drawn up very skillfully—from recent sources; they are for a Gazetteer extremely full of information, terse and pleasantly conveyed. The value of the Work is very much increased by the introduction of a large number of good woodcuts, including many maps of towns, harbours, and districts, sketches of remarkable places, figures, illustrations of famous men, &c. &c. which add much to its value. As far as we have had an opportunity of examining it, the Imperial Gazetteer is distinguished at once for completeness and correctness.

UNITED SERVICE GAZETTEER. A Work which will last as long as the language as a monument of his (the Blackies) talent and energy applied to one of the most useful and practical of purposes. At any time a Gazetteer such as the Imperial must have become a fixture with the public but ever since the introduction of competitive examination for the public departments, it has become an indispensable necessity in the library of both teacher and candidate.

The Work which has already read all the commendations of the universal press.

THE READER. As a book of reference for the private study Blackies' Imperial Gazetteer is a work of rare merit furnishing in a condensed form a vast amount of information accompanied by a large number of engravings. Its compactness, the Imperial Atlas is not less deserving of commendation.

MANCHESTER EXAMINER AND TIMES. We have reviewed it at this unusual length because it is an unusual Work indeed nothing of a Gazetteer kind has hitherto published approaches it in greatness of design and in excellence of matter while, for elegance of typography and pictorial illustration, nothing like it before its own advent, was attempted.

LIVERPOOL FREE PRESS.—Designed as a companion Work to the Imperial Dictionary previously issued from the same press, the Imperial Gazetteer not only equals, but even exceeds, the reputation of its predecessor and we may with our hesitation, venture to advise every reader upon purchasing.

BRADFORD OBSERVER.—We can with the most perfect confidence recommend the Work our cordial recommendation.

It is, indeed, a master piece of utility and beauty. The vast number of standard authorities quoted for the different articles, and the repeated occurrence of original contributions, supplied by local writers, cannot fail to excite the admiration of the reader at the immense research and pains bestowed upon the Work. We know of nothing of the kind that can make even the slightest pretensions to compare with it.

WORKS PUBLISHED BY BLACKIE & SON

THE IMPERIAL BIBLE-DICTIONARY HISTORICAL, BIOGRAPHICAL, GEOGRAPHICAL and DOCTRINAL by numerous eminent Writers. Edited by the Rev PATRICK LAURENCE D.D. Many hundred Engravings on wood and steel. 4 large vols. Imperial 8vo. cloth £9 12s.
Orthodox in doctrine, and stirring and glowing every page the mark of independent and impartial research. —*Cham.*

THE IMPERIAL ATLAS OF MODERN GEOGRAPHY (consisting of about One Hundred carefully coloured Maps embracing the most Recent Discoveries and the Latest Political Changes. Edited by W. C. BLACKIE and F. S. S. With an Index to nearly 120,000 Places. Imperial 4to. half-bound in Morocco, 18. 20s. 6d.

After a careful perusal of the whole work we can safely say that it will be one of the most useful and valuable atlases ever published, and is well adapted for the use of all who are interested in the progress of the world. It is the most complete and reliable work of the kind ever published. —*Edin. Rev.*

DR OGILVIE'S DICTIONARIES

2302, 2304, 2306, 2308, 2310, 2312, 2314, 2316, 2318, 2320, 2322, 2324, 2326, 2328, 2330, 2332, 2334, 2336, 2338, 2340, 2342, 2344, 2346, 2348, 2350, 2352, 2354, 2356, 2358, 2360, 2362, 2364, 2366, 2368, 2370, 2372, 2374, 2376, 2378, 2380, 2382, 2384, 2386, 2388, 2390, 2392, 2394, 2396, 2398, 2400, 2402, 2404, 2406, 2408, 2410, 2412, 2414, 2416, 2418, 2420, 2422, 2424, 2426, 2428, 2430, 2432, 2434, 2436, 2438, 2440, 2442, 2444, 2446, 2448, 2450, 2452, 2454, 2456, 2458, 2460, 2462, 2464, 2466, 2468, 2470, 2472, 2474, 2476, 2478, 2480, 2482, 2484, 2486, 2488, 2490, 2492, 2494, 2496, 2498, 2500, 2502, 2504, 2506, 2508, 2510, 2512, 2514, 2516, 2518, 2520, 2522, 2524, 2526, 2528, 2530, 2532, 2534, 2536, 2538, 2540, 2542, 2544, 2546, 2548, 2550, 2552, 2554, 2556, 2558, 2560, 2562, 2564, 2566, 2568, 2570, 2572, 2574, 2576, 2578, 2580, 2582, 2584, 2586, 2588, 2590, 2592, 2594, 2596, 2598, 2600, 2602, 2604, 2606, 2608, 2610, 2612, 2614, 2616, 2618, 2620, 2622, 2624, 2626, 2628, 2630, 2632, 2634, 2636, 2638, 2640, 2642, 2644, 2646, 2648, 2650, 2652, 2654, 2656, 2658, 2660, 2662, 2664, 2666, 2668, 2670, 2672, 2674, 2676, 2678, 2680, 2682, 2684, 2686, 2688, 2690, 2692, 2694, 2696, 2698, 2700, 2702, 2704, 2706, 2708, 2710, 2712, 2714, 2716, 2718, 2720, 2722, 2724, 2726, 2728, 2730, 2732, 2734, 2736, 2738, 2740, 2742, 2744, 2746, 2748, 2750, 2752, 2754, 2756, 2758, 2760, 2762, 2764, 2766, 2768, 2770, 2772, 2774, 2776, 2778, 2780, 2782, 2784, 2786, 2788, 2790, 2792, 2794, 2796, 2798, 2800, 2802, 2804, 2806, 2808, 2810, 2812, 2814, 2816, 2818, 2820, 2822, 2824, 2826, 2828, 2830, 2832, 2834, 2836, 2838, 2840, 2842, 2844, 2846, 2848, 2850, 2852, 2854, 2856, 2858, 2860, 2862, 2864, 2866, 2868, 2870, 2872, 2874, 2876, 2878, 2880, 2882, 2884, 2886, 2888, 2890, 2892, 2894, 2896, 2898, 2900, 2902, 2904, 2906, 2908, 2910, 2912, 2914, 2916, 2918, 2920, 2922, 2924, 2926, 2928, 2930, 2932, 2934, 2936, 2938, 2940, 2942, 2944, 2946, 2948, 2950, 2952, 2954, 2956, 2958, 2960, 2962, 2964, 2966, 2968, 2970, 2972, 2974, 2976, 2978, 2980, 2982, 2984, 2986, 2988, 2990, 2992, 2994, 2996, 2998, 3000, 3002, 3004, 3006, 3008, 3010, 3012, 3014, 3016, 3018, 3020, 3022, 3024, 3026, 3028, 3030, 3032, 3034, 3036, 3038, 3040, 3042, 3044, 3046, 3048, 3050, 3052, 3054, 3056, 3058, 3060, 3062, 3064, 3066, 3068, 3070, 3072, 3074, 3076, 3078, 3080, 3082, 3084, 3086, 3088, 3090, 3092, 3094, 3096, 3098, 3100, 3102, 3104, 3106, 3108, 3110, 3112, 3114, 3116, 3118, 3120, 3122, 3124, 3126, 3128, 3130, 3132, 3134, 3136, 3138, 3140, 3142, 3144, 3146, 3148, 3150, 3152, 3154, 3156, 3158, 3160, 3162, 3164, 3166, 3168, 3170, 3172, 3174, 3176, 3178, 3180, 3182, 3184, 3186, 3188, 3190, 3192, 3194, 3196, 3198, 3200, 3202, 3204, 3206, 3208, 3210, 3212, 3214, 3216, 3218, 3220, 3222, 3224, 3226, 3228, 3230, 3232, 3234, 3236, 3238, 3240, 3242, 3244, 3246, 3248, 3250, 3252, 3254, 3256, 3258, 3260, 3262, 3264, 3266, 3268, 3270, 3272, 3274, 3276, 3278, 3280, 3282, 3284, 3286, 3288, 3290, 3292, 3294, 3296, 3298, 3300, 3302, 3304, 3306, 3308, 3310, 3312, 3314, 3316, 3318, 3320, 3322, 3324, 3326, 3328, 3330, 3332, 3334, 3336, 3338, 3340, 3342, 3344, 3346, 3348, 3350, 3352, 3354, 3356, 3358, 3360, 3362, 3364, 3366, 3368, 3370, 3372, 3374, 3376, 3378, 3380, 3382, 3384, 3386, 3388, 3390, 3392, 3394, 3396, 3398, 3400, 3402, 3404, 3406, 3408, 3410, 3412, 3414, 3416, 3418, 3420, 3422, 3424, 3426, 3428, 3430, 3432, 3434, 3436, 3438, 3440, 3442, 3444, 3446, 3448, 3450, 3452, 3454, 3456, 3458, 3460, 3462, 3464, 3466, 3468, 3470, 3472, 3474, 3476, 3478, 3480, 3482, 3484, 3486, 3488, PREFACE

TO THE ORIGINAL EDITION WITH SOME UNIMPORTANT OMISSIONS.

IN concluding this undertaking, * * * * little more remains than to indicate the plan upon which the GAZETTEER has been written, and to note some particulars respecting its production

A leading aim throughout has been to maintain a proper medium between those works which give lengthy and elaborate articles, and consequently treat of a comparatively small number of places, and those which, by giving very short meagre articles often little better than registers of positions, are enabled to include an immense number of places. While in the number of articles the IMPERIAL GAZETTEER greatly exceeds works of the former, it does not fall much short of works of the latter class, for, by a rigid exclusion of irrelevant matter, by carefully avoiding the repetition of information in articles relating to the same subjects, though necessarily arranged under different heads, and by adopting a concise style of writing, space has been found, generally speaking, to notice all known towns having not less than 1000 inhabitants, and many even of a smaller population, besides including the needful articles on countries, seas, lakes, rivers mountain ranges, &c.

To facilitate the labour of consultation the Editor has endeavoured to construct all the articles upon a uniform plan. In those on TOWNS, first the position is given then a description and enumeration of the principal buildings and institutions, followed by an account of the manufactures and trade and closed, where needful, with succinct historical notices, the population being always at the end. In the articles on COUNTRIES, first the position boundaries, and general features are noticed then in suitable detail the mountains and valleys, lakes, rivers, climate natural products, manufactures, trade, people, manners and customs language and literature, government army and navy &c, and, at the end, the chief facts in their history. All these subjects, however, are not treated of under *separate headings* in the articles on *every* country, but, where they are, they will be found generally to follow in the order above indicated, and where they are not, the *subjects* at least will usually be found adverted to pretty much in the same sequence.

In fulfilment of the promise made in the Prospectus to consult in the compilation, the most recent and authentic works, both home and foreign reference may with confidence be made to the authorities quoted at the end of the articles. That these authorities have not been more uniformly appended as the Work advanced, was owing wholly to the urgent demands upon the allotted space by the accumulation of materials, and the fear of still further increasing the extent of the book. Besides the use that has been made of several public libraries, a private library, extending to nearly 2500 volumes, has been collected exclusively for the compilation of the IMPERIAL GAZETTEER, including works in French, Italian, Spanish and Portuguese, German, Dutch, Danish, and Swedish.

In countries whose languages are written in the Roman or Gothic character, the spelling adopted of the names of places is, generally speaking, that used by the natives themselves. To this rule, however, there are numerous and notable exceptions thus, for instance, while

there has been no hesitation in writing Nurnberg for Nuremberg Wartemberg for Wirtemberg, Nijmegen for Nymwegen, Leipzig and Danzig for Leipzue and Dantsie, it was deemed inexpedient to write Lavourno for Leghorn, Torino for Turin, Firenze for Florence &c., though in cases like these, where an English name is used as the leading word in the article the true native name is usually appended in brackets. In countries, the languages of which are not written in the Roman or Gothic character, the attainment of uniformity of spelling is impracticable. Linguists of the same country are not at one as to the orthography of sounds, and those of different countries spell them according to the canon of pronunciation of their native language thus the sound of *sk* in the English word *shall* would, by a Frenchman be written *sch* by a German *sch* by an Italian *sci* by a Swede, *sk* or *sj* &c, rendering a strict inquiry into the nationality of the writer necessary when interpreting his orthography.

The Editor has much pleasure in acknowledging the valuable assistance he has received from William Desborough Cooley, Esq, F.R.G.S. author of *Inner Africa Land Open*, &c. &c, G. S. Brent, Esq F.R.G.S, Henry Beveridge Esq Advocate Sir Robert H. Schomburgk, author of *Reisen in Guinea und am Orinoko*, &c British Consul in Santo Domingo and with out further particularizing his best thanks are cordially returned to those gentlemen both in this country and in foreign countries, who kindly revised the articles on the places of their residence or their nativity including many of the most important towns both at home and abroad and to those very numerous correspondents, in all parts of Scotland, England, and Ireland, who, by obligingly furnishing replies to the Schedule of Queries submitted to them respecting the place of their residence, supplied an amount of accurate information that has greatly enhanced the value of the GAZETTEER.

The PICTORIAL ILLUSTRATIONS 567 in number were selected by and executed under the superintendence of Mr Robert Blackie one of the Publishers. They are derived partly from original drawings, but principally from engravings and expensive illustrated works, the authorities from which they are taken are given under the titles of the subjects. While these authorities serve to authenticate the drawings, they also indicate where further illustrations of the same localities are likely to be found, and by thus showing the great variety of sources from which the views have been derived give a slight idea of the extensive research undertaken in collecting them the entire series forming only a small selection from the large mass of materials and authorities which have been accumulated and consulted for the purposes of illustration. Preference having been given to views published in the countries to which they relate as likely to be the most authentic works published in France, Switzerland, Spain, Italy Germany, Holland, Belgium Norway Russia, Hungary the United States, India, and the British Colonies, have thus been laid under contribution. The small MAPS and PLANS, 172 in number, were drawn and engraved by William Hughes, F.R.G.S. and reproduced for surface printing by glytophography, of which art they furnish very successful specimens.

* * * * *

In conclusion, the Editor indulges the hope that the IMPERIAL GAZETTEER will be deemed no unimportant contribution to the collected geographical knowledge of the present day, and that the efforts made to render it a Standard Work of Reference have not been altogether without success.

W G BLACKIE.

GLASGOW February, 1855

PREFACE

TO THE SUPPLEMENT AND REVISED EDITION

SINCE the time that the publication of the IMPERIAL GAZETTEER was completed, very extensive additions have been made to our knowledge of various parts of the world. Africa—Southern Central, and Eastern—has been opened up greatly by Livingstone, Barth, Richardson, Overweg, Vogel, Baikie, Andersson, Burton, Speke, Grant, Baker, and other travellers. The journeys of the Gregories, Macdonall Stuart, Landborough, the unfortunate Burke and Wills, M Kinlay, and others, have changed our ideas regarding the interior of Australia, hitherto supposed to be covered with salt scrub, hard baked mud or burning sands and have shown that immense tracts are suited for the abode of the hardy settler and capable of grazing countless flocks of sheep and herds of cattle. In Eastern Asia the Russians have augmented our knowledge of the lands bordering the mighty river Amoor, the British and French expeditions to China, and the researches of intrepid travellers have increased our information regarding the features, the products and the people of the Middle Kingdom, while in the Arctic regions, new islands, straits, and seas have been added to our maps by the numerous daring explorers who endeavoured to track the course and solve the fate of the lamented Franklin. Much has been done likewise to increase our knowledge of the less known parts of North and South America and short but sanguinary continental wars have brought about extensive changes in the political geography of Central and Southern Europe.

In compiling the SUPPLEMENT, thus rendered necessary by the progress of discovery all the valuable works of travel, home and foreign that have appeared in recent years have been consulted, and also the more important geographical and other periodicals published in this country, and in France, Germany and America, and considerable additions of noteworthy facts have been obtained through the kindness of private correspondents.

Besides articles on places made known to us for the first time through recent discoveries, or which have risen into importance through war or commerce, additions have in many cases been made to those on places already noticed in the body of the Work, and sometimes new ones have been substituted in their stead where the amount and value of recently acquired information seemed to demand such a course and articles on many places formerly omitted—whether accidentally or by design—have been now inserted. At the end is given a full abstract of the Census of the United Kingdom of 1861, presenting the latest returns of the population of all its counties, towns, villages, parishes, and islands.

The plan adopted in the SUPPLEMENT is identical with that of the GAZETTEER. The descriptions and accounts have been taken almost solely from original authorities, and confined as far as possible to statements of fact, opinions and suppositions, as such, being studiously and uniformly excluded. Indeed, geographical conjectures are so frequently found in experience to require subsequent modification, that it would be contrary to the design of such a work as the IMPERIAL GAZETTEER to record matters which a few months or years after may prove to be really non-existent. The object has been simply to collect ascertained and tested facts, and to arrange them in such a manner as to give the substance

of all that is known respecting the places treated of. And in compassing this object, no labour, or time, or expense has been spared.

In addition to preparing the SUPPLEMENT the text of the original Work has been dealt with to some extent. A number of important articles have been renewed or improved, statistics in many instances have been modernised and numerous alterations rendered necessary by recent political changes in Europe have been introduced. The population given in the articles on places in Great Britain and Ireland is uniformly that of the Census of 1851 and the populations according to the more recent returns of 1861 are shown in an abstract of that Census given at the end of each volume.

Extensive and rapid as have been the additions made to our knowledge of the earth's surface in recent years, it is believed that the IMPERIAL CAZETTEER as now completed may fairly claim to exhibit a satisfactory view of the present state of geographical information.

The Editor desires to express his deep obligations to several gentlemen who have rendered valuable assistance in the compilation of the SUPPLEMENT—more especially to the Rev W. R. FINDLAY M.A., Rector of Fetherley, who besides writing many articles, scrutinized the MS. with the eye of an accomplished geographer and greatly facilitated the work of revision—to the late HENRY BRIDGER, Author of the 'Comprehensive History of India,' who supplied a large number of important articles—to SAMUEL MOSSEMAN, late editor of the China Mail and author of China, "Our Australian Colonies," &c who contributed most of the articles on Chinese and Japanese localities—to WILLIAM HUGHES, F.R.G.S. for contributions on African and Australian geography—and to friends at home and abroad who have sent information respecting the localities in which they reside, or with which they are intimately acquainted.

W. G. BLACKIE.

GLASGOW April 1863.

A VIBRATING ZONE

[illegible]

MARKED LETTER

The subjoined marked letters, used in the names of various foreign places, should be sounded as follows —

z in German Swedish, and Danish names as z in *fat*
 z in German Swedish, and Danish names as z in the
 French word *sex*.

There is no equivalent for this sound in English. It is common, however, in Scotch, and is the same as *sp* in *asper* or *u* in *mar gar*.

It in German, Swedish, and Danish names, similar to the French *u*.

The same remark applies to this as to c. The sound is a sort of combined between that of s and z. It is not.

A in Swedish names nearly like *oa* in boat

It is in Spanish names, as French *gn* or resembling *n-y*
as *Bello*, pronounced *Bon-noré*.

ç is French Spanish, and Portuguese names, as o soft
in Portuguese, something resembling some

DISTANCE, MEASURED, HEIGHTS, ROUTES, &c.

Distances are given in British statute miles, and are to be understood as direct unless otherwise expressed.

The area of countries, islands &c. is given in square statute miles, unless expressly stated to be in geographical miles. In smaller tracts, as counties, the area is given in hundredal acres.

1 steeple male	+	1780 yds.
1 gen. male	+	2024 yds
1 sq. male	+	840 acres.
1 gen. sq. w.	+	1 244 sq. steeple w. alien
10 gen. sq. alien	+	12-240 or 124 nearly

Foreign money, weights, and measures, are reduced to British standards.

Degrees of heat are expressed according to Fahrenheit's thermometer
Vol. I.

Soundings in the small maps of ports and roadsteads are in fathoms.

Longitudes are always E. or W. from Greenwich.

For latitude and longitude, three special authorities have been consulted, besides maps, namely—
Tables of Maritime Positions, in The Practice of Navigation and Nautical Astronomy by Henry Raper
Lieut R N London 1849

Verzeichnis Geographischer Ortsbestimmungen nach den neuesten Quellen, mit Angabe derselben von C. L. v. Lattrow Leipzig 1844 Wien 1845

Tables des principales positions Géographiques du Globe
&c. par Ph. J. Coulier Paris. 1828

Generally speaking a preference has been given to the tables of Raper and Lutwac but wherever a portion has been taken from any of the three works it is indicated by the letter (A.) (L.) or (O) following the longitude. Very many positions, however have no distinctive letter attached to them. These are either not to be found in any of the Tables above referred to, or for some special reason it has been deemed better to give them on the authority of the traveller or navigator from whom the information on the locality has been derived. Unless, indeed, which is frequently the case, the only authority for them be the map

ORTHOGRAPHY

The orthography of foreign names, as printed in English is proverbially irregular. In the case of European countries having languages written in Roman or Gothic characters, this irregularity arises from two causes either from adopting the name of a locality in one country through the medium of the language of another (for instance, Mayence the French form, in place of Meintz, the usual English form or Mainz, the correct German form, of the well-known town of that name on the Rhine or from the writer not being acquainted with the language of the country in which the locality indicated is situated. As regards countries whose languages are not written in Roman or Gothic characters the difference of orthography has in a great measure arisen from the arbitrary methods adopted to produce the desiderated sounds—a point on which even distinguished linguists are at variance. Here also as in the former case, still further irregularity is produced, by adopting the names of localities in such countries through the medium of some foreign continental language for instance Jidda is frequently written according to the French form, Djidda Jéba, in the same way becomes Djebel and the sound represented in English by *ge* in Mecca or *in* *self*, invariably becomes *se* in names adopted from French authorities.

THE

IMPERIAL GAZETTEER;

A GENERAL DICTIONARY OF GEOGRAPHY,

ETC. ETC

AA

AALSBUND

AA a contraction for the old German Ahha, and the name as Ah Aha, Aha, Aah and Aah, and meaning flowing water.

As a final syllable, it appears in the name of many places as, Bodeck, Willich, &c. As is the name of numerous streams in different countries.—In Prussia there are five, none of them important. 1. An affluent of the old Rhine, which it joins below Anholt, within the Dutch territory. 2. An affluent of the Vechte, into which it falls at Neuenhaus in the Hanoverian province of Bentheim. 3. An affluent of the Ems, into which it falls at Münster. 4. An affluent of the Weser, which it joins at Herford 15 m. S.W. Minden. 5. A small stream near Densen, in the vicinity of Jülich, called also Aha and Agerbach.—In SWITZERLAND there are four. 1. An affluent of the Aar, rising in the canton Lucerne, in lake Baldeg, flowing through the Hallwyler lake the canton Aargau, and falling into the Aar near Wildguy. 2 and 3 Affluents of lake Lucerne and both in the canton Unterwalden. The one rises in lake Langens flows through lake Berner and falls into lake Lucerne at Alpnach. The other rises in mount Sarrenen, flows past Stanz and falls into lake Lucerne near Buochs. 4. In canton Uri, a stream connecting lake Pfäfers with lake Gröden. After it leaves the latter lake, it is also sometimes called the Aa, but more usually the Glatt.—In HOLLAND streams with the name Aa are very numerous, having generally however a distinguishing prefix by which they are best known as, the Almsche Aa, the Fivel Aa, &c. Two streams may however be named, that are usually known by the name Aa simply. 1. In N. Brabant, rising near Mierde, and flowing N till it joins the Ley below Oosterwyk. 2. In prov. Drenthe, rising near Wousterup taking a N course, and falling into the Hunze at Groningen.—In BELGIUM one in prov. Antwerp, rising N.E. from Turnhout, flowing S.E. and joining the Lette (Petit or Klein Nethe) below Grobbendonck.—In FRANCE, one in dep. Fin de Calais rising near the village of Bourches. It takes a N.E. course and falls into the strait of Dover at Gravignes, through the St. Omer Canal.—In SPAIN there are two. 1. The Boidier-Aa, prov. Languedoc or Languedoc. It flows past Volmar and Vanden, to which town it is navigable from its mouth, in the gulf of Rugs. 2. The Trinder-Aa, prov. Overland. It is formed by the junction of the Menal and the Ales, and falls into the gulf of Rugs, close by the mouth of the Dura.—(Ritter's Geog. Zee. Van der Aa's Nederlanden. Des. de la France. Des. de la Suisse.)

AACH, two villages.—1. In Baden, 8 m W from the N end of lake Constance, on a steep hill and partly surrounded by a wall. It has paper mill and oil-mills, tan works, and dyeworks. Its inhabitants, who are R. catholics, are much occupied in rearing cattle. Pop. 800. 2. In English Prussia, near Trèves. It has a church, and in the 17th c.

vicinity are quarries of gypsum and lime. Pop. 200.—AACH river. See Aa.

AACHFEN a city Prussia. See AIX-LE-CHAPPELLE.

AACHHAUS. See AACH.

AACHIRKEBY or AACHIRKEBY a town Denmark on the N. end of Bornholm, about 4 m from its S. coast. It is the only town on the island not upon the sea-coast. Its neat church is built of black marble, quarried in the vicinity. The inhabitants are mainly devoted to agriculture. Pop. 620.—(Bagger.)

AAL, a town in Norway prov. Buskerud on the Litledal 120 m N.W. Bergen. Pop. 4500.—2. AAL, or EL-AAL is also the name of two small villages in Syria, parishes of Damascus.

AALBORG (Aal-borg) an ancient seaport, Denmark in Jutland cap. hant Aalborg, on the E. side of the Limfjord and about 16 m. W. the Kattegat. lat. 57° 42' N. lon. 9° 55' E. It is intersected by two streams, is surrounded with a fosse and contains a cathedral, a college, naval school, a bishopric library and various other public buildings and institutions including a richly-endowed hospital. It has a dockyard, and is a great place of trade. Its manufactures of sugar soap stuff, shoelaces, leather and hardware are considerable, and its herring fishing is extensive. Herring, corn, wool, hides, tar, tallow and wax figures, are exported. The first and second to a considerable extent. Vessels drawing more than 10 ft. are obliged in consequence of the filling up of the harbour to lighten before entering. About 600 annually visit this seaport, and 74 belong to it, including steamers. It has direct steamboat and sailing-boat communication with Copenhagen. Formerly Aalborg was the most considerable place for trade in Jutland, now however it is rivalled, and in some respects excelled by Aarhus and Randers. It is of high antiquity being mentioned as a famous seaport in 1070. It was fortified as early as 1618. Pop. 10,000.—The head of Aalborg is bounded N. by hant Høring S. by the Kattegat, S. by hant, W. by Randers, and W. by the Limfjord. Area. 838 sq. m. Pop. 66,300.—(Bagger.)

AALLEN a town Württemberg, on the Jaxt, formerly a free imperial city in an agreeable well-cultivated valley on the Koeber 45 m E. Stuttgart. It is surrounded with turreted walls and has two gates, a fine church and manufactures of woollen and linen goods, and ribbons, spinning mills, tanneries, and breweries. In the neighbourhood are immense forests, and extensive iron mines. Pop. 4972. All Lutheraan. AALENND a small seaport, Norway. lat. 62° 24' N. lon. 6° 5' E. hant, Ronneby, picturesque situated within view to the S.E. of the peaked Lang Field mountains. It has a well-sheltered harbour, a considerable number of boats engaged in the cod fishery by means of nets, and carries on a good trade principally in cod-fish, with Italy and Spain. The

summit between Christened and Trondhjem calls here. Pop. in 1848, 85.

AALMEER [Belgen]. a vil. Holland, prov N. Holland, on the E. shore of the sea of Haarlem. 9 m. S. E. Amsterdam. It has a townhouse, and a Calvinistic church, close to the sea, in a churchyard which is raised some feet in order to preserve the graves dry. A K. catholic church as hospital for orphans and aged men and women, and a well-attended school. Fishing, especially of eels, is carried on to some extent, and in the vicinity are numerous and fruit gardens, in which large quantities of strawberries are raised for the Amsterdam market. Pop. about 3000.—(Van der Aa's *Hedelanden*.)

AALST two vil. Holland.—1. In prov Gelderland, 6 m. S.W. Bommel on the right bank of the Maas. It has a Calvinistic church, the remains of an old castle, and 400 inhabitants. 2. In prov N. Brabant, 4 m. S. Eindhoven, on the road between Hertenbosch (Bois de dol) and Maastricht, on the streamlet Tonguevree. It is a long narrow village, whose inhabitants are employed in linen weaving and in agriculture.—*ALST* in Belgium. See *ALST*.

AALTEEN a vil. Holland, prov Gelderland near the Friesian frontier 18 m. S.E. Donsburg and 1 m. W. Bredevoort, on the left bank of the Eltingerbeek. It is agreeably situated on an incline, and has a comfortable prosperous appearance. It has a Calvinistic and a K. catholic church, a school, a spinning and a weaving factory and manufactures of bombazine, distaff and linen goods, a brick and tile factory, stills, breweries, brandy distilleries and breweries. *Aalten* has weekly well-frequented markets. Pop. 2000.

AALTEEN, a m. Belgian. See *ALTEEN*.

AAMADT or **AAMURT**, a small town, Norway, bail Hedemarken, on the right bank of the Glomsen, about 80 m. N. Christiania. Pop. 3000.

AAR [meaning Eagle and the root of many German and Swiss names] the name of several rivers.—1. In Switzerland, the principal river after the Rhine and the Rhoda. It gives its name to the canton of Aargau or Aar country. It rises in the Bernese Alps, and has its source in three glaciers, the Obere, Mittere and Untere. The Aar forms the southern valley of Basel between the lake of Constance and the Bernese Alps. It supplies the lakes of Bière and Thun and then becomes navigable. It flows past, or rather round Bern at the confluence of the Saane, changes its course from E.W. to N. and at the junction of the Thiele to S.E. touches upon Solothurn, Aargau, Aarau, and Brugg and falls into the Rhine, opposite Walden. At the village of Coblenz, after a course of about 160 miles. From the right side it receives as tributaries, the Emmen, the Reuss, and the Linth, and numerous other streams from the left, the Glomsen, the Saane, and the Thiele.—2. A small stream, principality of Waldeck, W. Germany. It rises N. of Lorbach, and, after a course of 20 to 30 miles, falls into the Diemel at Warburg, in Westphalia.—3. A small stream in the duchy of Nassau, which rises near the village of W. when flows N. for about 20 miles, and falls into the Lahn at Diers.—4. A river of Holland, an affluent of one of the numerous branches of the Rhine which it leaves in N. Holland, below Aankersdijk, under the name of the Korte Aar takes a N. course, is called the Kromme Aar and ultimately as the Aar proper, falls into the Amstel.

AARAU or **AARU** [Aar mow], a town, Switzerland, cap. canton Aargau, situated at the height of 1140 ft. above the sea, on the right bank of the Aar. It has various public buildings and useful institutions. Among the former are a council house and a church and among the latter a cantonal school and other seminaries on orphan asylum, and a public library. Aarau has a thriving trade and manufactures of silk, cotton, vitrol, leather cutlery and ordnance. In the numerous are mines of coal and iron. The civil war which raged for several years in Switzerland in the beginning of the last century was terminated by the peace of Aarau in 1737. Pop. chiefly 18000, upwards of 4000.

AARBERG or **AKWANG**, a small town, Switzerland, canton Bern, cap. of district of same name, about 12 m. N.W. Bern, on the right bank of the Aar on a rocky eminence, which during high floods, is surrounded by the river. It consists of one wide street lined by well built houses, has two bridges, one of which is defended by fortifications. It has little trade,

the inhabitants being chiefly employed in agricultural pursuits. Pop. about 1000.

AARBUERG or **AAWANG**, a small town, Switzerland, canton Aargau, at the confluence of the Aar and the Wigger about 10 m. S.W. Aarau. It has manufactures of cotton and wool, with a copper foundry. The inhabitants navigate the Aar and carry on a small trade in wine and other articles. On a high rock above the town is a fortified castle, built by the Bernese in 1660, and for some time used as a state prison, but now employed as the arsenal of the canton of Aargau. Pop. 1200.

AARDENBURG, a small frontier town, Holland, prov Zealand, 4 m. S.E. Sluis, and 10 m. N.E. Brugge, in Belgium. It has a townhouse, an old and handsome Calvinistic church, a small K. catholic church, a school orphan hospital two cornmills, and some manufactures of tobacco and leather. The inhabitants are chiefly engaged in agriculture, and are generally in comfortable circumstances. Pop. 1274. Aardenburg in older times had 74 streets, five market places, and two large public squares, and as early as A.D. 1338, it was famed for its commerce. Though now 16 m. from the sea, it formerly had a port and haven in which 600 vessels could lie, and was esteemed one of the finest towns in Flanders, and the capital of the seaport. War inundations, and the rise in the level of the land seaward, have reduced it to its present dimensions.—(Van der Aa.)

AARGAU or **AROWIA**, a northern canton of Switzerland, the 16th in the Confederation bounded E. by the Rhine, which separates it from the grand duchy of Baden, N. by canton Zurich and Zug, S. by Lucerne and by Bern, Solothurn, and Basel, greatest length 35 m. greatest breadth 28 m., area about 400 sq. m. It is hilly being composed chiefly of spurs of the Alps and Jura, but has no mountains more than 5000 ft. high and it is well wooded, has numerous verdant fertile valleys, abundantly watered by the Aar and its many tributaries from the right. The climate is moist, moist, and variable and the soil in the left of the Aar clay compact, and difficult to work, and to the right light sandy and fertile. Agriculture is in an advanced state, and more grain is raised than the consumption of the canton demands. Hemp and flax are extensively raised, fruit and vegetables abound, and vineyards are numerous but the wines are of inferior quality. The grazing is excellent, but cattle rearing is less extensively pursued than agriculture. Aargau is one of the principal seats in Switzerland for the manufacture of cotton and silk and for the construction of machines. Cotton goods, white and coloured, silks, ribbons, linens, stockings and other hosiery are made. A considerable number of people find employment in fishing in the Aar and the Rhine, in the best traffic on these rivers, and in the transit trade which is carried on actively both by land and by water. Education is good and plentiful and the head school in Aarau is quite a model of its kind. Aargau formed part of the canton Bern till the year 1798 when its independence for which it had long struggled was secured by the French Government. Practically formerly belonging to Austria, was added to it in 1803. Its constitution was first fixed by the congress of Vienna, in 1817. It was then rather aristocratic, but has been more popular since the revolution which took place, Dec. 1830. In 1841 the constitution was again revised, and settled in its present form. The legislative power is vested in the great council one-half of which is renewed every three years. All citizens who have attained the age of 24 have a vote, and each 180 voters send a representative to the great council. The executive power is vested in the small council of nine members (of whom at least four must be Protestants and four K. catholic), elected by and from the great council. Pop. 183,600 of whom 100,400 are Protestants, 79,800 K. catholic, and 3100 Jews.—(Real *Encyclopædic Ritters Lex*.)

AARHUUS, a seaport, Denmark, cap. bail of same name, E. coast of island, of which it is now the most important town lat. (north) 56° 9' 30" N. lon. 10° 18' 30" E. It is situated at the mouth of the Aue, which flows through the town. It is surrounded by a single wall with seven gates, and contains a college, an hospital, and a cathedral of Gothic architecture, one of the largest and handsomest in the kingdom. Aarhuus carries on a considerable trade, and has manufactures of wool and flax, sugar houses, starch mills, saw mills, distilleries and fisheries, also a large establishment for

curding woolen rags technically called shoddy. The round-bottomed boats good anchorage in 5 to 6 fathoms, and is safe, excepting with S.E. winds, when the sea is tremendous. There are two lights in the harbour one on the pilot-house and one on the mole visible 4 or 5 m. distance. The chief exports are grain, cattle, spirits, and mail. There are 49 vessels belonging to the port, whose tonnage altogether amounts to 2318. Steamers and packet-boats regularly ply between it and Kallandborg and Copenhagen. The town was twice almost wholly destroyed by fire first in 1541 and again in 1555. In 1678 2300 of its inhabitants were swept off by the plague. Pop. 8000.—The bail of Arhus is bounded N. by bail, Wiborg and Randers, E. by the Ketogast, S. by bail, Walle, and W. by bail, Kingklipping area, 286 ges. sq. m. Pop. 40,000. It is the most densely populated of the bailwicks of N. Jutland.—(Buggesen.)

AARLANDERVEEN (Aar turf lands) a vil. Holland prov. S. Holland, 13 m. N.E. Leyden 5 m. S.E. Waulbrugge. It forms a double row of houses round the Calvinistic church which is an old structure. It has also a R. cathed. church, a Jewish synagogue, a neat school with teacher's house attached and a cornmill. In the vicinity are several water mills, and many cornhouses for cheese and the land is rich and well cultivated. Pop. about 1500.

AARLE, a vil. Holland, prov. N. Brabant, 8 m. N.E. Lindebeek and 18 m. S.E. Hergenboord on the right bank of the Aa. The inhabitants are chiefly engaged in bringing in waste lands and in rearing poultry sending some hundreds of young chickens every Thursday to Hergenboord. There is here also a bull foundry. Pop. 450 and of the combined par. of Aarle and Rixtel, 1200.

AAROP a small Danish isl. duchy of Schleswig N. portion of the Little Belt, 1 m. from the coast about lat. 56° 15' N., lon. 9° 45' E. It is about 24 m. long, by rather more than 1 broad. Some of its few inhabitants are good pilots. This island is sometimes mistaken for the much larger one at the S. end of the Little Belt named Langeland.

AARON a small peninsula on the W. coast of France, dep. Ille et Vilaine, Bretagne on which the town of St. Malo is built. A narrow causeway connects it with the mainland. See MALO [Fr].

AAREVANGEN a small in Switzerland cap. circle of same name on the right bank of the Aar canon of, and about 20 m. N. E. Bern. It is built partly on a rising ground, and partly on a plain. It has important cable fairs. In the vicinity is a mine of pit coal. Pop. 2163.

AAS, a vil. France, See BASSE NORMANDE.

AAS-FAARST RAND a small port, Norway bail Jarlsberg and Læsvig, on the W. shore of Christiansk Gulf 10 m. S.E. E. Holmestrand. Wood is shipped here. 1 op. in 1845, 484.

AASZY, AASH or AASH-EL-AAY [the ancient *Aashu* or *Owasu*] a river Myrie rising on the E. side of the Anti-Libanus, near the village of El-Ras 27 m. N. E. Baalbek, in a triangular-formed natural basin in the rock, measuring about 50 paces round, and nearly encircled by trees and bushes, of which chestnut, willow and dwarf oak are most plentiful. It takes a N. course towards the fertile plain of Hamah and the valley of El-Ghaz towards the lake of Antioch or Ash-Dun gha, whose waters it receives, and thence flows S. W. to the Mediterranean into which it falls after a course of about 200 m. It forms some lakes, receives the waters of various rivers, and by its overflows greatly fertilizes the land upon its banks, rendering it capable of supporting a much greater extent of population than at present inhabit it. The river abounds in fish particularly a species of eel much in demand by the Greeks, for whose consumption, during Easter feasts, large quantities are annually salted and exported. The Aashy is not navigable, being encumbered at its mouth by a sandbank, on which, in winter there is only 54 ft. to 9 ft. of water but according to Col. Chesley, this bar might easily be removed, and the river rendered navigable, at least for boats, as far up as Mand Frash, 27 m. above Antioch. The fall of the river from the last named city to the sea, is not above 54 ft. in the whole.—(Parr. Geog. Soc.)

AATYL, or ATYL, once an important city now a small vil. Syria, in the great plain called the Hamau or Hamour, 24 m. S.E. E. Damascus, and 48 m. E. lake Taurus. It was in a wood and is about 1 m. in circuit, though the inhabitants

consist only of from 200 to 400 Druses, who dwell in huts among the ruined edifices. There are here the remains of two handsome temples that on the N. side, called El Kasr

EL-KASR, AATYL. From Lelouche. Voyage en Syrie.

is in complete ruins. It consisted of a square building with a high arch across its roof two minarets on each side of the gate, and in front a portico of columns, the number of which it is now impossible to determine. On the S.E. side of Atyl stands the other temple which is of small dimensions but of elegant construction. It has a portico of two Corinthian columns, and two pilasters, each of which has a projecting base for a statue. The gate is covered with sculpture. On both temples are numerous inscriptions in Greek. The tobacco of Atyl is preferred to that of any other part of the Hamour.—(Barckhardt.)

ABABDEH or BABEL ANANAH a vil. Middle Egypt, on the right bank of the Nile 8 m. S. Ben Hassan lat. 27° 43' N. lon. 30° 57' E. Near it are the ruins of the ancient Achnou, or Antiochopolis a city built by the emperor Adrian and named from his favourite Antioch, who was drowned in the Nile. These remains, which are entirely Roman, are supposed to occupy the site of a still more ancient city named Bana, famed for its oracle, and mentioned by Abulfeda under the name of Achnou, or Antioch, which the place is still sometimes designated. In the time of Roman dominion, Antioch was the capital of a province, named the Antiochia and under the Christian emperors, the metropolis of an episcopal see. Little of it now remains except its theatre, the substructure of various buildings, and the hypocauste without the walls. The circuit is said to have been 8 or 4 m. the present dimensions being 6000 ft. by 8400. The direction of the principal streets, which were broad and spacious, with a colonnade on each side, may still be traced. Other existing monuments are the remains of various temples, and four monumental columns bearing an inscription to Good Fortune and the date of the 14th year of Marcus Aurelius. All that consisted of Antioch has been burnt for mortar by the Turks, or employed by them in the construction of modern buildings. Without the walls numerous relics of antiquity are to be met with the most remarkable of which is a ruinous edifice on the summit of a hill said to have been used as a convent by the Christians, and named, from the circumstance, Dayr e Dook or 'Convent of the Cock'—(Wilkinson's *Modern Egypt*. Voy. Duc de Ragusa.)

ABABDEH, the name of an extensive desert, Upper Egypt, and of a number of tribes by which it is inhabited. The Ababdeh desert, or desert of the Thebaid, lies between the Red Sea and the valley of the Nile and extends from the Kasser and Copthos road, lat. 27° N., into Nubia beyond the tropic of Cancer and borders with the Blega or country of the Bahari tribes. It is traversed in various directions by roads, both ancient and modern, contains numerous towns and villages, is of some note in point of geological and mineral productions and is remarkable for its architectural remains and for the number of hieroglyphical inscriptions found upon the rocks. The principal and most interesting road is that called the Darb e Hamau, about 248 m. long, which runs diagonally across the desert from Copthos to Berenice and passes through eight Roman

students, much supplied with large wells and aqueducts, for the use of the inhabitants and travellers. The most noted goat-skin production of this tract of country is the *brodia verde*, or green brodia, made by the ancients into many useful and ornamental articles, of which the macrophagite of Alexander in the British Museum is a specimen. Emeralds and gold have been found in various parts. Bernards, or Lydian stone was formerly quarried in the mountains now known by the name Om Kerredah. The Ababshis who inhabit this desert are the nomadic tribes, the principal of which are the Gervahs, the Somadis, the Abodis, and the Ababshis. They are supposed to be the aborigines of the country to have come from Blyad or Belyad, and to be Arabs only in habit. Though speaking the Arabic language, their peculiar pronunciation, dark complexion, and the difference of their whole outward appearance, readily distinguished them from the genuine Arabs. They have long hair like the Nubians, whom in many other respects, they resemble. Their arms, also, are the same as those used in Nubia, consisting of sword, spear, small knife and target which they prefer to firearms, and with which they fight, from the backs of camels, almost in a state of nudity. They live in mud huts, chiefly on the borders of the great valley of the Nile. They are well known for the excellency of their camels and chronometers, and though scarcely deemed of a trustworthy character are employed in securing the caravans which cross the desert from Sennar. (Wilkinson's *Modern Egypt*.)

ABACAXIS, a river *Paraná* prov. Para, rising about lat. 5° 30' S. long. 38° 35' W. takes a N. course, passes through lake Guaraní, and falls into the Furo or Marañon, an affluent of the Amazon lat. 4° 8' S. lon. 50° 30' W.

ABAGO (SHRAT AND LITTLE), two of the Bahama Islands the larger 86 m. long and about 15 broad the smaller 48 m. long and 4 to 5 broad. They lie between lon. 77° and 78° W. and lat. 25° 50' and 26° 55' N. Area 225 sq. m. of which 135 075 acres are waste. Three schools have been established here by the Board of Education, appointed under the Act to establish a system of popular education and industry in the Bahama Islands. These schools were started in 1847 by 236 pupils, composed of an equal number of boys and girls. Pop. 1900.

ABAD —1. A vil. Belochistan on the right bank of the Naror, or Nari, —2 m. S.E. by E. Gundava, lat. 29° 17' N. lon. 67° 45' E. —2. A vil. Hindu between Shikarpur and Shikhar lat. 27° 45' N. lon. 66° 56' E. —3. A vil. Persia prov. Farsistan, E.S.E. Shiraz.

ABADFEH a vil. in Persia, prov. Fars, 118 m. N. Shiraz, and 115 S.S.E. Isfahan. It is indolent by dissipated walks, and defended by a square fortress, containing almost all the population.

It suffered much during the wars of the succession to the Persian throne in the 18th century and was the residence of the last prince of the house of Safavids, murdered to assist there by Murcem Khan, who died in 1779. The gardens around Abadfeh supply Shiraz with delicious fruit. Pop. about 5000.

ABADES a to. Spain, Old Castile, prov. and 8 m. from Segovia. It stands on a beautiful and open plain consists of a triangular plain and several paved streets; is regularly built, though most of the houses have only one story and has a parish church a school house a primary school, and a small innkeeper's room. The rearing of sheep and cattle are the chief employments. Pop. 800. (Madox.)

ABADIN a vil. and port *Manila*, prov. and about 19 m. from Lago. Its monthly cattle-fairs are important. Pop. (1897) 3387. (Madox.)

ABADIUTTES, a tribe in the island of Candia, about 4000 in number and occupying about 20 small villages. They are the descendants of the Saracens, who took possession of Candia in 823. They are a superstitious and revengeful race, and much inclined to a predatory life, to which they are also forced by the oppression of the Turks and Greeks.

ABANTE, a vil. *Brazil* prov. of 40 m. S.W. Para. on the right bank of the estuary of the Rio Itara, and on the island formed by the mouth of the Rio Tocantins, and the rivers Moço and Igara. The soil in the vicinity is excellent, but it is badly cultivated. (See *Geo. Imp. Brazil*.)

ABAGATU a station in the Asiatie Russia Trans-Baikal territory lat. 49° 35' N. lon. 116° E. It stands on a bank Argus, a little below the point where that river issues

from lake Kalon or Dalai Nor on the S.E. frontier of the Abakang plateau, in a region so unproductive and barren, that, on that account alone, and without reference to its topographical features, it may be considered the extreme N.E. end of the Gobi desert. (See *Geo. Soc.*)

ABAI or **ABAY** the Nile of Bruce principal tributary of the Bahar-el-Azrak, or Blue River one of the head-streams of the Nile. Its sources are in a swampy meadow near Mekele, in the district of Baharda, from whence it takes a circuitous direction round the peninsula of Gijama passing through lake Dambos, and falling into the Bahar-el-Azrak in about 11 N. lat. See *ABER* (BAHR-EL) and *NILE*.

ABAI, a small outpost near the N.W. point of Borneo about lat. 5° 31' N. lon. 116° 30' E. The depth of the harbour is not at high water admit vessels drawing more than 12 ft.

ABAINVILLE, a vil. France, dep. Meuse, beautifully situated on the Orne and celebrated for its iron works, and for the excellency of its manufactures in that metal. There are altogether between 600 and 700 individuals employed in these works, and from 3000 to 4000 tons of iron are manufactured annually.

ABAITA, a considerable river Brazil, prov. Minas Gerais, rising in the Serra da Mata da Corda, and flowing into the San Francisco after a course of about 185 m. from S.W. to N.E. In this river was accidentally discovered, in 196 the largest diamond ever found in Brazil weighing 1 of an ounce try. It was found by three men, who were afterwards persecuted by the government, while searching for gold. On presenting this valuable gem to the town viceroys they were pardoned and rewarded. The river was afterwards worked at different periods by the government but with indifferent success. The works were ultimately abandoned to private adventurers.

ABAJO a vil. in Central Africa Yoruba, about lat. 7° 50' N. lon. 4° 50' E. It stands on the top of a granite hill, inaccessible for horses except by a secret path. Its houses are rudely constructed, but owing to the natural strength of its position it appears to have enjoyed much. It not only freedom from attack. It is subject to malaria, which rules it by an epidemic, or dysentery. The plateau on which Abajo stands is about 2000 ft. above sea level. (See *Geo. Soc.* xxx.)

ABAKANSEK a large river R. Siberia, having its sources in the Altai mountains, prov. Tomsk. It is formed by the junction of two streams called, respectively the great and Little Abakan, which rising from 20 to 30 m. apart, unite at lat. 53° 33' N. lon. 88° 45' E. whence the river flows in a N.E. direction 60 li. thence the Yenisei at Mordok about 5 m. W. by N. Minousinsk, lat. 53° 04' N. lon. 91° 18' E. The length of the stream from the confluence of the Great and Little Abakan, until it joins the Yenisei is about 14 m. For about 86 m. of the latter part of this course it has an average breadth of about 1 m. and is throughout dotted with islands, which increase in number towards its junction with the Yenisei. The whole length of the river from its sources, taking the Great Abakan as the original stream is according to Tchikatcheff, who calls it a beautiful river 211 m. The sources of this branch are two small lakes; its earlier career is described by the writer just named as extremely impetuous, its channel narrow and rocky, and the scenery around wild and picturesque. Tchikatcheff made an attempt to explore the sources of the Little Abakan also but was compelled to abandon the enterprise, in consequence of the vast and dangerous accumulations of snow which every moment threatened himself and his party with destruction. Having, however subsequently obtained an audience which commanded a view of the sources of the stream, he found that those as in the case of the Great Abakan, were a number of small lakes situated in a sandy plateau in the midst of a labyrinth of mountains. (Tchikatcheff's *Report* *des. l'Asie Orientale*.)

ABAKANSEK a Cosack military station Siberia, prov. Tomsk, on the right bank of the Abakan, at a bend of that river 94 m. S.W. Minousinsk lat. 52° 55' N. lon. 89° 40' E. It consists of about 60 houses of wood, inhabited by Cosacks and a number of sergeants, or hussars, occupied by a colony of Begal, a distant race from the Kalmaucks, who, however are now beginning to construct habitations after the Russian fashion. It is surrounded by several wooden stockades, and is flanked on the W. by a range of trees.

ool mountains. The country round is very beautiful but the soil is unproductive to agriculture, although the climate is comparatively mild. During three days that Tbilichoff remained here in the month of July the temperature rose to 110° Fah. and in the shade to 78° the former being 80° higher than is usually experienced in England. In the vicinity of this station as throughout the whole of S Siberia, there are numerous tunnels, called by the Tatars the tombs of the Gati system. At Katal, in which a mountain of gold and other metals have been found. Organic human skeletons from 7 to 8 ft. high covered with hieroglyphics are also met with here. There is another station of the same name on a sandy flat on the right bank of the Yenisei 33 m. N from Minousmak where numerous relics of antiquity are also found, consisting of ancient tombs and Mongolian inscriptions. It is reported to be the mildest locality in Siberia, the summer being sufficiently warm to ripen water melons and tobacco.

ADAMIA a vil and par Spain, Asturias prov and 23 m. E Oviedo with an ancient parish church said to be anterior to the invasion of the Moors. The chief occupations are agriculture and domestic weaving. Pop. 1062.

ADANATOK, ADANAKA, one of the Alutian or Fox islands, Russian America about 16 m. long; with little vegetation but filled with forest of all colours, by the catching of the few inhabitants gain their subsistence.

ADANCAY a in Peru, cap. dist. or prov. of same name. It is situated in a spacious valley on the right bank of the river Abancay here crossed by one of the largest bridges in the kingdom about 70 m. W by R. Cuzco and 800 m. E.E.E. Lima, lat. 13° 27' S. lon. 78° W. It has a convent of the order of St. Dominic and several sugar works and refineries. The district is about 60 m. in length from E. to W. and 40 m. breadth from N. to S. The temperature is mild and the soil fertile, producing wheat, maize and other grain in abundance but sugar is the staple production and is here so well refined as to equal in whiteness the finest sugars of Europe. Hemp is also cultivated and considerable numbers of horned cattle are reared. The pop. of the town estimated at 5000.

ADANILLA a in Spain, prov. of, and 16 m. N.N.E. Murcia, on an island at the foot of some rocky hills. It is divided into an upper and a lower town, the former chiefly consisting of ruins, and including the old parish church and the ruins of a castle, the latter comprising a number of good streets, and a square in which are situated a fountain, granary, spacious courtyards, the school and the new prison. There are, besides, an old prison a second church, several chapels, a cemetery and some flour and oil mills. In the vicinity barley, maize, olives, vines, figs, almonds, and pines are cultivated and a few sheep and goats are reared. The inhabitants, besides agriculture, are chiefly employed in manufacturing charcoal, export maize, and home-made linen. Pop. 4636.—(Madrid.)

ADANO a in Venetian Lombardy district of, and 5 m. S.W. Padua, famous for its sulphureous waters and mud-baths much resorted to in chronic catarrhes, diseases, gout, &c. As sulphureous waters they are the hottest in Europe, having a temperature of 167–187° Fah. and contain common salt, sulphuric acid, sodium and magnesium. Adano was known to the Romans under the name of Aquæ Apollinis or Aquæ Patavina, and some remains of Roman baths were discovered at it the end of last century. It is the birthplace of Tiberius Vivianus and of the celebrated physician Pietro d'Adano, professor in the university of Padua, who was condemned to death for sorcery but died before the sentence was put into execution. A.D. 1819 Pop. 3000.

ADARAN or ALMANI a in Spain, prov. of and 22 m. N.W. Murcia at the foot of a mountain on the left bank of the Segura. It has a square, in which are the courtyards the dirty unhealthy prison two schools, and the parish church. The inhabitants are engaged in agriculture and as muleteers they manufacture esparto mats and home-made linen and have some oilmills. Pop. 2455.—(Madrid.)

ADARAN, a small tn. Russian America, on the S slope of the Alaskan mountain, about 80 m. N.W. Eriwan. It lies near the left bank of a considerable stream of the same name which rises in Alaskan mountains, and flows towards the Arct, but which it, in summer time, never reaches, all its waters being drawn off by the Americans for the purposes of irrigation.

ADATZKAYA or ADATSKA, a tn. Siberia, gov. Tobolsk, on the left bank of the Ishim, and 40 m. E. from the town of that name. Pop. about 3000.

ADAUJAR, a co. or district, Upper Hungary W the Theiss, cap. Kaschau on the Hernad area, 633 sq. m. It is a fertile grain and grazing district, producing likewise, excellent fruit and grapes, from the latter of which the celebrated Tokay wine is made. Adaujar also yields metals, and precious stones, mineral waters, and salt. Pop. 133,938.—(Bathföszeg.)

ABB a in Arabia, in the Djebel, or mountainous district of Yeznan 77 m. N.E. Mecca, and 104 m. N.W. Aden, lat. 19° 59' N. lon. 44° 35' E. It is isolated by a strong wall and has several mosques, paved streets, and about 800 houses built of stone. Water is supplied to it, by means of an aqueduct, from the high mountain of Baidan in the neighbourhood. The surrounding country is well watered and fertile. Pop. supposed to be between 4000 and 5000.

ABB HEAD (Br.) a lofty promontory or headland having the appearance of an island on the E. coast of Scotland co. Berwick, 11 m. N.W. by air of that name, and 15 m. S.E. Dunbar lat. 55° 55' N. lon. 2° 8' W. (a) There is deep water close by the point, and a little way from it 80 and 40 fathoms. The adjacent shore is rocky. The E. extremity of the height was occupied by a Roman station and the W. half a mile distant by a British stronghold.

ABBADIA, a small tn. Brazil prov. Bahia 50 m. S.W. Sergipe upon the Ariguita 15 m. from the sea. It has a school and a harbour accessible to coasters, and exports sugar, cotton, tobacco, and mandarin flour. Pop. of town and neighbourhood 1300.

ABBADIA SAN SALVADORE a tn. and commune, Italy in Tuscan prov. Grosseto, diocese of, and 17 m. S.W. Chiusi, on an elevated plain at the side of the isolated trachyte mount, Amata, which rises to the height of 5300 ft. above the sea level. The town is surrounded by a wall entered by gates, and comprises a small square, four principal parallel streets and an Episcopal church. On the N. without the walls is the abbey of San Salvatore, from which the town derives its name. The vicinity is fertile, being watered by the river Paglia, and the rivulet Iquillo and Altinate, all of which take their rise in mount Amata. Pop. in 1845 including the commune 4295.—(Dante Trav. Italia.)

ABBA-SEEN See ASU BIR

ABBA-ABAD the name of two villages Persia.—1 A vil and fort, prov. Khorasan 885 m. N.E. Ispahan and 170 m. W. Mashed, lat. 36° 28' N. lon. 56° 32' E. on the highroad from the latter city to Teheran situated in a dreary desert. The village and caravanserai were erected by Shah Abbas the Great, for the benefit of caravans crossing the desert. There being only one spring here no means of irrigation exist, and the inhabitants are often forced to traverse the desert to obtain a supply of provisions for themselves and the caravans. Besides being exempted from taxes, they derive considerable profit from selling provisions to travellers and are more clean and comfortable, both in their houses and dress than the generality of the subjects of Persia.—2 A small tn. and fort in the frontier prov. of Azerbaidjan situated upon the river Aras. It contains an old Armenian church now used as a powder magazine. This Abbasabad was treacherously surrendered to the Russians in the war of 1827.

ABBAZACCA a tn. Western Africa, on the left bank of the Quorra about 48 m. below the junction of the Chadda with that river and about 276 m. from the sea lat. 7° 10' N. lon. 8° 15' E. The banks of the Quorra are very low for upwards of 30 m. before reaching Abbaazacca, and are destitute of towns and villages but both are numerous below it. For the first time, say the Landers, on reaching Abbaazacca, since leaving Zaria, in Yarbith (about 845 m. W.) we beheld the graceful cocoa nut tree and heard the mellow whistling of grey parrots.

ABBEKUTA. See Supplement.

ABBELEY a par England co. Worcester area,

2666 ac. 6 m. S.W. Bewdley. Pop. in 1851 695.

ABBERTON a par England, co. Essex; area, 1087 ac.

Pop. in 1851 279.—There is another par of this name,

co. Worcester area, 1001 ac. on a branch of the Avon.

Pop. in 1861, 80.

ABBEVILLE, a large fortified tn. and river port,

France, dep. Somme, cap. arrond. of same name. 120 m. by rail, N N W Paris, situated in an agreeable and fertile valley on the river Somme, which divides the town into three parts, the central and most important one being on an island. The houses are mostly built of brick, a few are stone, interspersed with some picturesque old structures of wood. Some of the streets are broad, but the most of them are narrow

IN VETERAN ABBEVILLE. From *Peopling from L'Espresso* Press.

crooked, dirty and badly paved, rendering the pleasant wooded promenade on the transports all the more acceptable. The principal buildings are the Tour de Beffroi, the barracks, the forwarding hospital and the church of St. Valtrien. The magnificent W front, and part of the nave of this last-named edifice were built during the reign of Louis XII., under the care of Cardinal George d'Amboise, but the original design was never completed; the facade is in the flamboyant style, covered with the richest tracery and the niches filled with statues of saints attired in anglican costumes. Abbeville is the seat of courts of primary jurisdiction, and of a court of commerce and it has a chamber of commerce, a royal society of sciences and belles-lettres, a commercial college and a public library of 15 000 volumes. The manufactures of the town are considerable, employing 13,000 workers, and amounting annually to £250 000. They consist chiefly of cloth, serge, (French velvets, calicoes, muslins, laces and woollen thread, particularly, which is flax, malleable, cordage, soap, lamp-black, &c. Bleaching dyestuffs, tanning, paper making and book-binding are carried on. Abbeville, from its advantageous position on the Somme has a wide river is a place of some commerce, produce, from a considerable distance inland, being brought to it for export. At high water vessels of 100 to 150 tons can reach the harbour and the number which annually frequent the port is about 3-4. The principal articles of traffic, besides the manufactures already alluded to, are grain, oil, seeds, lard, wine, brandy, cider, &c. Abbeville, anciently Abbeville Villa, or Abbe Villa, was formerly cap. of the old county of Ponthieu and was frequently an object of contention during the wars between France and England Pop. in 1846, 17,035.—(*Des de la France*.)

ABBEVILLE.—A well watered and fertile district of the U. States, in the W part of S. Carolina, between the rivers Savannah and Saluda, area about 1000 sq. m. Wheat, rice, oats, Indian corn, and tobacco are grown, and sheep, cattle, pigs, and silkworms are reared. The district also possesses

several distilleries, tanneries, and flour and sawmills. Pop. in 1840, 23,851 composed of whites, 13 880; slaves, 10 143; free coloureds, 828. A post-village, cap. of Abbeville district, 37 m. W by N Columbia, on a branch of Little river. It has a courthouse, jail, arsenal, and magazine. A post-village in Alabama, cap. of Henry co. 311 m. S. E. Tuscaloosa.

ABBEY the name, with and without suffixes of a number of small towns, townships, villages, hamlets, parishes, and other places, in England Scotland and Ireland.

Those in ENGLAND are—1 *Abbey Dore* or *Dore Abbey* par Hereford 5590 ac. Pop. 668—3 *par Whitby* ac. Pop. 181.—2, *Abbey Holm*, township, par Holm Cultram Cumberland named from an abbey founded there in 1150 by Henry prince of Cumberland son of David I. king of Scotland.—3, *Abbey Milton*, or *Mildilton*, township, Dorset.—4 *Abbey Park*, hamlet, Bucks.—5 *Abbey Norton*, vil Stafford.—7 *Abbey Street* chapel, Cumberland, St. Mary's par Carlisle. In SCOTLAND—1 A small vil co. of and about 1 m. E. Haddington, and 18 m. E. Edinburgh. It is remarkable only for its historical associations. Here, in 1178, Godwinus Arch. of Northumberland mother of Malcolm IV. and William the Lion, king of Scotland, founded and richly endowed a convent or priory of Cistercian nuns and here, on July 7 1549 the Parliament of Scotland was convened and gave consent to the marriage of Queen Mary to the Dauphin of France.—2 A vil. co. Stirling about 1/2 m. N. E. Stirling. It derives its name from Cambuskenneth Abbey which is close by. It is prettily situated, and is chiefly inhabited by weavers.—3, *Abbey St. Balthas*, par co. Berwick 4 part area, 5000 ac. contains the ruins of a nunnery dedicated to St. Balthas. 1 op. in 1851, 138.

In IRELAND—1 *Abbey or Crossmore Abbey* a par and vil. co. Clare on the shores of the harbour of Barren, bay of Galway and directly opposite the town of the latter name, 115 m. S. W. Dublin and 40 m. W. Limerick. The ruins of the abbey are extensive and form an interesting feature in the landscape. Pop. of par in 1851 1009.—2 *Abbey or Inishmoneagh*, a par partly in the co. Waterford and partly in that of Tipperary 65 6 ac. Pop. in 1851 3819.—3 *Abbey Knockmay* co. Galway 12 986 ac. contains ruins of old abbey in which are various fresco illustrations of ancient Irish customs. Pop. in 1851 3247.—4 *Abbey*, par malva in Limerick 16,150 ac. Pop. in 1851 4264.—5 *Abbeymore*, par co. Galway 11 57 ac. 1 op. in 1851 2047.—6, *Abbey-Jerpoint* par co. Kilkenny 1006 ac. contains ruins of an ancient abbey founded in 1180. Pop. in 1851 306.—7 *Abbeylara*, par and vil co. Longford, 5563 ac. Pop. in 1851 1861.—8, *Abbeylara*, par, co. Cork 4422 ac. contains ruins of an ancient abbey of same name, founded by Bernardine monks. Pop. in 1851 1915.—9 *Abbeylara*, par and vil co. Longford 3246 ac. Pop. in 1851 699.—10 *Abbeylara*, par co. Cork 9314 ac. contains ruins of an ancient abbey in which are some interesting monuments. Pop. in 1851 6900.—11 *Abbeylara*, vil co. Longford.—12 *Abbeylara*, vil co. Kerry on the W of Brick, 5 m. E. by 7 Tralee 1 op. 418.—13 *Abbeylara*, market town and par Queen's co. near the left bank of the river 9 m. S. S. W. Maryborough and 23 m. S. W. Dublin. It has a very handsome church, R. Catholic chapel three schools, almshouses, market and session-house, prison and infirmary with two woollen manufactures, a large worsted mill and a hosiery mill. It has its annual fair. Pop. of par in 1851 6997 of which the town comprises 1341.—14 *Abbeylara*, a vil and suburb of the borough of Downpatrick, co. Waterford. It extends along the N. E. side of Dungarvan harbour and derives its name from the remains of an ancient Augustinian abbey founded in the 13th century.

ABBATE-GRASSO (sometimes DIAGRAMMA) a considerable town and commune, Venetia Lombardy cap. district of same name, prov. of, and 30 m. N. W. Paris, on the grand canal di Burcardo, which runs from that city to Sesto, and near the left bank of the Ticino. It is well built and clean, surrounded by a wall, and comprises three churches, two chapels, two infirmaries, seven convents, and municipal buildings. The manufacture of silks, cloth, silk, bristles, candles, &c. is carried on, and an annual cattle fair is held in July. Pop. 6503.—The district, situated in a remarkably fertile and well-irrigated plain, contains twenty-two communes, and produces grain, grapes, madder, and other fruits;

vegetables of every kind, and of the best quality abound on the rich pasture lands bordering the Teuton, numerous cattle are reared. Excellent butter is made, and much acre is bestowed on the cultivation of silkworms. Pop. 35,338

ABBITBEE, a lake of Upper Canada, 40 m. long, greatest breadth 16 m. The Hudson's Bay Company have a trading post at its S.E. extremity for the purchase of furs and peltries; lat. 49° N. lon. 78° 59' W. It contains a number of small islands, and gives name to a tribe of Indians who chiefly reside near it. Abbitbee is also the name of a river issuing from the lake, which, after a course of about 240 m. S.E. to N.W. unites with the Moose river, and falls into James Bay in the S. part of Hudson's Bay. In the eastern line Moose fort.

ABBO a name by itself, and, with prefixes, of four small towns in Abyssinia, Kingdom Amhara, districts Matheba and Goutte S.W. from lake Dembea all situated near the sources of the Abba, and within a few miles of each other. The most S. Abbo being about 25 m. from the most N. Borkon Abbo, and the two intermediate towns Abbo, and Walled Abbo, being only 7 or 8 m. apart.

ABBOT'S LANGLEY a vil. and par. England, co. Hertford. The vil. lies about 21 m. N. London, a little to the W. of the main road to St. Albans. It is situated on a high level and consists of one principal street. The houses are small, and most of them old. The church is an ancient building in the Elizabethan style of architecture and contains some curious antique monuments. There are also two small dissenting chapels, and a boys' girls and infants school. The village is not lighted but is well supplied with water. The inhabitants are chiefly employed in agricultural pursuits. There has been recently established here an interesting institution called the Bookellers Retreat, consisting of seven commodious cottages belonging to the Bookellers Provident Society and appropriated to their decayed members. There are some large paper mills in the parish. Near the centre of the parish is the King's Landing station. Area of par. 5,100 acres. Pop. of vil. and par. including Hymerly 7,894.

ABBOTS, this name with various suffixes, of so great prevalence in England—1 *Abbot's Aune* a par. co. Hants area 3,100 ac. 2 m. W. Andover Pop. in 1851 500—2 *Abbot's Dackington* or *Dickington* Abbot's a par. co. Devon area, 1510 ac. quarries of blue building-stone, limestone, and marble. Pop. in 1871 80—3 *Abbotbury* a par. co. Dorset, area, 4050 ac., ruins of Benedictine abbey large ancient sheep-fair Pop. in 1851 1077—4 *Abbot's Kerswell*, a par. co. Devon area, 1670 ac. 11 m. S. Newton Abbot monastery of Cistercian monks. Pop. in 1851 460—5 *Abbotsham* a par. co. Devon area, 2080 ac. 2 m. W. Budford Pop. in 1851 341—6, *Abbot's Leigh*, a par. co. Somerset area, 2120 ac. Pop. in 1851 448—7 *Abbotley* or *Abbot's Leigh*, a par. co. Huntingdon area 3,110 ac. Pop. in 1851 43—8, *Abbot's Marston* a par. co. Worcester area, 1420 ac. on the Birmingham and Gloucester Railway 1 op. in 1851 235—9 *Abbotston*, a par. co. Hants 2½ m. N.W. New Alresford Pop. in 1851 348

ABBOYSHALL, a par. and vil. Scotland co. Fife on the coast of the Firth of Forth area, 4020 ac. Pop. in 1851 4080

ABCHERON a peculiar district of Runda, Trans-Caspian, prov. Daghestan, on the W. coast of the Caspian Sea. See *ABCHERON*

ABCOUDE, a vil. Holland, prov. of, and 15 m. N.W. Utrecht, on the left bank of the Vecht. It has a large beautiful Calvinistic church, a R. catholic church and a school. The horse market, held here the last Thursday of August, is celebrated. Pop. about 1000—(Van der Aa.)

ABIDA a prov. Morocco, bounded N. by the prov. of Tenguia, E. by that of Morocco, S. by that of Rheima, and W. by the Atlantic. We have hardly any knowledge of the interior further than that its N. portion consists of a series of extensive steppes or plains. On the coast, Cape Cassin, the N. limit of the province, rises precipitously 211 f. above the sea. About one half of the coast lies S. of Cape Cassin consists of white cliffs rising above a sandy beach, the remainder is composed of sand hills 150 to 200 ft. high. Inland from this portion of the coast, extends a ridge of sandy-looking hills covered with brushwood the whole coast being sandy barren, and nearly destitute of good water

but portions of the interior are said to be fertile and well cultivated.—(Four Geog. Soc. vol. vi.)

ABD-AL-KUBIA, or **ABD-UL-KOORY** properly *Abdu* or *Kuru*, a small rugged isl., coast of Somalia in E. Africa, between Cape Guardafui (Ras Amer) and the isl. of Soofra, in lat. 11° 55' N. lon. 52° 30' E. It is about 18 m. long E. to W. but very narrow and near its centre are two hills, which give it the appearance of two islands when seen from a distance. Wood and water are scarce, and the inhabitants few.

ABDASTON or **ABDASTON** a par. and township England, co. Stafford area, 5330 ac. 2 m. N. from the Birmingham and Liverpool Canal Pop. in 1851 591

ABDER or *Aburru* the ruins of an ancient city, supposed to be those of Eborac, in Aralia Petras, 70 m. S.W. by 8 Jerusalem, and 210 m. E.N.E. Cairo lat. 30° 55' N. lon. 34° 35' E. The ruins consist of the remains of numerous houses the walls of a large Greek church, and an extensive fortress, both situated on a long hill or ridge, overlooking a wide plain. Connected with the fortress are cisterns, and deep wells walled up with good masonry. The ruins are surrounded by traces of ancient cultivation.

ABD-EL-GEDRY, an isl. in the river Nile, in Upper Egypt, to the S.E. of Girgeh, about 6 m. long.

ABDIE, a par. Scotland, co. Fife N.W. part of the co. on the Firth of Tay area, about 7034 ac. contains several lakes the largest, Linneth is surrounded with beautiful scenery. Pop. in 1851 1458.

ABDON a par. England co. Salop area 710 ac. Pop. in 1851 179

ABD-UL-KOORY See *ABD-AL-KUBIA*

ABDU L-KURI, or *PAIKURUN BODAL*, is the name of a dangerous reef of rock and coral, lying off the S. coast of Arabia, in lat. 12° 12' 30" N. and lon. 52° 11' E. (A.) discovered by Capt. Haines on July 1830. It extends 1850 yds. from N. E. to S. W. with a breadth of 800 to 600 yds. Its highest part at the time of its discovery being a pointed rock, which was only 17 ft. below the surface. It is 2½ m. distant from the nearest land, bearing N. by W. the soundings in its neighbourhood vary suddenly and are not to be relied on. Between the shoal and the shore there is a depth of 120 fathoms. But the safest navigation is to seaward.

—(Four Geog. Soc.)

ABELA See *AMILA*.

ABERNBERG a small in. Bavaria, in Middle Franconia, 15 m. S.W. Nuremberg. It has two churches and a poorhouse, and its inhabitants are engaged in needle making and in oil draving boys. Pop. 1133.

ABERNBERG a tn. Lower Bavaria, 15 m. S.W. Nuremberg, cap. of district of same name on the right bank of the Abens, here crossed by a bridge. It is the seat of a court of justice (Landgericht) and has two churches and a castle, the former residence of the counts of Abenberg. It has manufactures of cloth and other woollen fabrics, and of earthenware. Hops are cultivated in the vicinity and there are several breweries in the town. There is a mineral well in the neighbourhood the waters of which containing iron salt and sulphur are used both internally and externally for numerous diseases, gout, &c. The Austrians, under the Archduke Louis and General Illier were defeated here by Napoleon, who took 18,000 prisoners on April 20, 1809. Pop. 1210.—The district has an area of 112 sq. m. and a pop. of 37,000.—(Hahn.)

ABER, the name with various suffixes, of several parishes and villages in Scotland and Wales, and of a parish and township in England.

Those in Scotland are—1 *Aberarder* a vil. and par. Marazion co. Banff 9 m. S.W. Banff Pop. in 1851 1066—2 *Abercrombie*, a par. and vil. co. Linlithgow on the shore of the Firth of Forth area, 4490 ac. There are some of the ruins of Roman forts in this par. The vil. is beautifully situated 10 m. W. N.W. Edinburgh Pop. in 1851 of par. and vil. 977—3 *Abercrombie*, a par. co. Fife (See *MONAGHAN*, Str.)—4 *Aberdeenshire*, a par. co. Perth area 3800 ac. bounds in freestone, proprietor Earl of Kinnoull Battle of Duplin fought in this par., Aug. 12 1553. Pop. in 1851 248—5 *Aberdeenshire* a vil. par. and bay co. Haddington N.W. coast. The par. contains about 4000 ac. Pop. in 1851 1099—6 *Aberdeenshire* a par. and vil., co. Forfar; 2 m.

In the N W parts of Aberdeenshire there are some extensive forests, including the celebrated forest of Mar in which are many magnificent specimens of the Scotch fir some of these supposed to be from 300 to 400 years old. The largest measure 18 and 14 ft. in girth 6 ft. from the ground, and are about 80 ft. in height. These forests are plentifully stocked with red and roe deer and all sorts of game.

The soil of the county varies greatly. The finest arable land lies chiefly between the Don and the Ythan. In the lower parts round the coast clay is prevalent in the upper arable districts, there is a considerable extent of light, sharp sandy loam. Sand moor and moss prevail on the hills and higher grounds, occupying with the mountainous tracts and other waste lands, nearly two-thirds of the entire county. The climate is, on the whole, mild but the summer short, and somewhat cold. An improved system of cultivation is extending over the county chiefly from the example of experienced farmers from the southern districts of Scotland, many of whom have settled in it. All the crops usual in other parts of the country with the exception of wheat, for which neither the soil nor climate are suitable, succeed well, here especially oats, of which about 10 000 acres are grown annually—barley potatoes and turnips. But the most important object now with the tenantry is the rearing of cattle immense numbers of which are exported annually. The native breed, which is said to have greatly increased in size since the introduction of turnip feeding, is preferred by the best judges. Dairy husbandry has also made great progress but sheep-farming has not increased in proportion.

The old domestic stocking knitting, for which Aberdeenshire was once famous, is now nearly extinct; but there are extensive manufactures of cotton, linen, flax, and of woollen and sail cloth in the city of Aberdeen and neighbourhood.

The scenery in the mountainous parts of the county is of the most magnificent description and attracts numerous visitors in the summer season. Much pleasing scenery occurs also along nearly the whole course of the Don.

In the county is situated Balmoral the summer residence of Queen Victoria. It occupies a natural platform at the foot of a hill called Craig-an-gowan in the par of Crahan on the N bank of the Don, 52 m. by road W S W Aberdeen and 75 m. N Edinburgh. The original building a picturesque and antique structure, after undergoing many modifications

BALMORAL CASTLE—From a Photograph.

and being frequently enlarged was pulled down and a larger and more commodious mansion, better suited to accommodate the royal household was erected from the designs of Wm. Rankin, architect. Aberdeen. The present castle exhibits the characteristic features of the Scottish baronial architecture and though not uniformly correct in detail is a pile of much beauty of aspect and harmony of proportion. It is built of granite, smoothly dressed in ashlar work and the interior is fitted up with singular taste and splendour. The grounds are of considerable extent and richly varied while the surrounding scenery comprises nearly all the elements of the beautiful and romantic in landscape, a singular charm being

derived from the finely wooded hills and bold rocky heights that spring abruptly from either bank of the Don.

The annual value of real property assessed in Aberdeenshire, in 1863, was £218 000 exclusive of railways. A large proportion of the working population is employed in agricultural pursuits, and the coast fisheries which are extensive and prosperous. The county returns one member to parliament constituency in 1865 4219 County town Aberdeen. Pop in 1861 212 083

ABERDEEN (NEW) a royal burgh and seaport, Scotland co. Aberdeen, of which it is the cap. situated mostly on rising ground, at the mouth of the river Don on its N bank 84 m. direct distance N E Edinburgh, and 130 m. by rail lat 57° 5' 54" N lon 2° 5' 7" W. The town is large and handsome, the streets, in general are spacious and regular and the houses wholly built of fine grayish white

THE MARKET CROSS, ABERDEEN—From an Original Drawing.

granite from quarries in the neighbourhood. The principal street in the city is Union Street in the line of which a splendid granite bridge, of one arch 133 ft. span and 55 ft. from the base of the pier to the top of the parapet, is thrown over the ravine of the Don burn which intersects the city and falls into the harbor. Among the principal public buildings may be mentioned the county rooms, founded in 1820 the surgeons hall advocates hall Marzaball College the trades hall the public market the barracks, erected on the Castle-hill, a military hospital on the Head- ing-hill the nearest place of education now connected with the Coast hill by an elegant cast-iron bridge, the Bridewell on the west side of the town and the old market cross in Castle Street a fine specimen of the ornamental architecture of the 17th century. It is of a hexagonal form and is adorned with a series of well-executed quarter length effigies of Scotch and British sovereigns from James I to James V. It was erected in 1685 on the site of an older cross which was then demolished. In 1899 the present structure was removed to the spot it now occupies a distance of about 100 yards from its former position. On 15th October 1863 a bronze statue by Macintosh in honour of Prince Albert, was inaugurated by her Majesty.

The churches in Aberdeen are numerous, those belonging to the Free Church forming a considerable majority over any other denomination. Many of the structures are handsome, and that of the East and West Churches, combined in one edifice is imposing. It is situated in Union Street, from which it is separated by a facade of the Ionic order.

The charitable and benevolent institutions are numerous. The principal establishment of this class is Gordon's Hospital which is similar to George Heriot's Hospital in Edinburgh and maintains and educates 120 boys. This hospital was endowed by a citizen who acquired a large fortune in Dundee and left the property under deed of mortification dated Dec 13, 1759 in charge of the magistrates, for the education of the sons of decayed burgesses and relatives of the name of Gordon and Mannes. In 1816, another benevolent

gentleman left considerable property for the education of boys under similar conditions, which was conjoined with Gordon's Hospital, and by the economical investment of the whole funds, after defraying the cost of the building, the trustees are enabled to command an annual revenue of £3000. Among the other charitable institutions of the city, we may commend a house of refuge, founded and endowed by Mr James Watt, surgeon. Four industrial schools for the deaf and dumb institution, an orphan girls school and an asylum for the blind.

The most valuable of the benevolent institutions of the city is the Royal Infirmary which was established by the magistrates in 139 and which by numerous bequests and liberal subscriptions has become so extended as to afford accommodation for the treatment of 300 poor patients, and at the same time constitutes a valuable adjunct to the Aberdeen medical school. Under the same management as the infirmary the constituency of which are the subscribers above £5 there is a lunatic asylum, which was chiefly built by a legacy of £10,000 left by Mr John Forbes, of Nova. The average number of patients is 90.

New Aberdeen is the seat of a college, called Marischal College founded and endowed by George Earl Marischal in 1595. The original building having been found inconvenient, a new structure was erected in 1837 at a cost of £50,000 when several new chairs were erected and endowed. There were 114 bursaries connected with this college and university of the annual value of £1150 70 of which were open to competition. By ordinances of the Scotch Universities Commission dated 9th and 10th Jan 1860 Marischal College, New Aberdeen, and King's College Old Aberdeen, were united into one university entitled the University of Aberdeen, from and after 15th Sept. of that year. Six new chairs were endowed, and eight professors provided with residences. The united university now contains a medical and twenty-one professors—seven in the faculty of arts. Four in divinity one in law and nine in medicine. There are also numerous bursaries attached to the university—about one-half open to competition, and the rest presented to by their respective patrons.

Besides the public schools which are under the charge of the magistrates, and to which the children of pauper poor may be admitted free of charge, there are five endowed schools, 36 national and voluntary schools, and free schools of industry. From statistical returns recently obtained by an educational society it is found that there were about 6500 children at school within the city when the parliamentary census was taken in 1851 which is equal to nearly one-twelfth part of the population.

The manufactures of Aberdeen date from a very early period of history. So early as the year 1200 it is reported to the Netherlands woolfiks, and in the 15th century there were exports of plaiden, fagras, stiffs, serge and stockings; in return for which the burgesses received wine, brandy, sugar, rice, iron, grain, flax, and fruit. Stocking weaving was the staple manufacture of the city for many years. In 1749 a manufactory for preparing linen thread was established, and afterwards two flaxmills were erected, then followed the establishment of four cotton manufactories, only one of which continues in operation. The flaxmills employ between 2000 and 3000 hands, the cotton works about 1500 and the woollen manufactures 2000 hands. Woollen are also woven to the extent of £100,000 annually.

Besides these there are three manufactories for combing one of them the largest of the kind in the kingdom. Granite was first polished in this city, and now there are large establishments for preparing that stone for all sorts of useful and ornamental work. Paper making is carried on to a considerable extent in the neighbourhood, and, in connection with the paper works there is the largest envelope manufactory. It is supposed in the world. There are various ironworks, chiefly new, to be employed in iron ship-building, and six ship-building yards, where some of the largest and finest vessels for the China and Australian trades have been built.

The harbour of Aberdeen is spacious, and is rendered safe by a pier of granite on the E side of the Dee, which extends into the German ocean. The harbour and docks, the latter including a surface of 34 acres, are the property of the corporation of Aberdeen, and the business is virtually

managed by a committee annually elected by a general assemblage. The ordinary revenue is about £20,000, and the expenditure between £17,000 and £18,000. The foreign commerce is chiefly with N and S America, the E. Indies, the Mediterranean and the Baltic. The principal imports are wheat, flour, coal, salt, flax, lime, guano, timber and iron. Exports—linen, cotton, and woollen goods; oats, barley, and bere; cattle, sheep, pigs, butter, eggs, pork, salmon and granite of which last £46,000 worth is sent annually to London. The trade in cattle, sent to London and other southern markets, is extensive and lucrative, yielding, it is calculated, a return of a million sterling annually. There were 13 ships formerly employed in the whale fishing but these are now reduced to two or three. The shipping trade of the port has greatly increased of late years. In 1855, the number of vessels belonging to Aberdeen was 530, tonnage 82,018 while, in 1855, the number was only 13, tonnage 25,063. Regular communication by steam is maintained between Aberdeen and London, Leith, Caithness, Orkney and Rhéland. On Grindice point a little S of the entrance into the harbour there stands a lighthouse first used in 1833. It is a double light, exhibiting two fixed lights, one over the other and may be seen at the distance of 13 to 16 miles; lat 58° 8' N lon 3° W. There are also several smaller lights for the harbour. A bar light is at the mouth of the harbour on which there are 14 ft masts, and 21 ft spring tides.

The mercantile institution of Aberdeen comprises a gallery, two native banks, viz the Town and County Banking Company and the North of Scotland Banking Company; and seven branch banks, viz a branch of the Union Bank of Scotland, the National Bank of Scotland, the Bank of Scotland, the Commercial Bank of Scotland, the British Locomotive Bank, the City of Glasgow Banking Company and Royal Bank of Scotland. There are also a National Savings Bank and two native Insurance Companies. The gallery which was at one time the great commercial league of the city being now stripped of its exclusive privileges, exists only as a charitable or benevolent institution. There are seven in corporate trades, possessed of property to a great extent, and it is worthy of remark that the trades and the city treasury are the principal feudatories of Aberdeen.

The municipal affairs of the town are conducted by a provost, four bailies, a dean of guild and 12 councillors. The washing, cleaning and lighting are under the control of a board of commissioners, of which the provost the dean of guild, the city treasurer and the convener of the trades are ex officio members, other 16 commissioners being chosen by rate-payers paying £5 of yearly rent.

Aberdeen was originally called *Denniska* but during the Scots-Saxon period it became known by the name of *Aberdeen* or *Aberdon*, and in subsequent ages by *Aberdeen* or *Aberdon*. The etymology of this designation is generally allowed to be false, and from some manuscripts published by the Spalding Club it would appear that for the first 12 centuries the Celtic was the only language spoken and written in this city and the north of Scotland.

During the reign of David I., and probably about the year 1130, Aberdeen was constituted a royal burgh and the inhabitants burgesses, as holding their burgessdom immediately of the crown. In 1140 the city was ranked under the Laws of Burrows, and provision made that the provost, bailies, and council shall be chosen annually by the common suffrages of all the honest men of the burgh. About the year 1179 William the Lion confirmed the privileges and immunities enjoyed in the name of his grandfather and created the city into a corporation by royal charter, which appears to have been the first instrument of the kind executed in Scotland. Thus enfranchised, the magistrates became entitled to send representatives to the national parliament or Scottish Estates. In 1198, additional privileges were conferred on the city. In 1222-23, Alexander II. permitted the holding of a weekly market, and authorised the institution of a merchant guild, or Mercantile confraternity. In 1242 David II. summoned a general council to meet in the city at which former charters were enlarged; local improvements were directed, the streets paved, and many of the houses, formerly built of wood, rebuilt of stone. From these circumstances, the town thenceforward became distinguished by the name

of New Aberdeen. The last charter granted to the city was by Charles I. and is dated Outlands Sept. 9 1638. By the act of Union Aberdeen became entitled to send a representative to the parliament of the United Kingdom conjointly with Aberdeen, Montrose, Brechin, and Bervie; but by the Reform Bill of 1832 it was again erected into an independent constituency which includes both New and Old Aberdeen.

Among the eminent men born in Aberdeen were John Barbour the poet, George Jameson the painter James Gregory inventor of the reflecting telescope, and the late eminent physician Dr Abercrombie of Edinburgh.

According to the census of 1851 the pop. of Aberdeen, including the par of St Nicholas and Old Machar was 71 978; (1861) 73,805 Parliamentary constituency 8704.

ABERDEEN (OLD) a small but ancient city in Scotland, on Aberdeen pleasantly situated on the S bank of the Don about 1 m N New Aberdeen of which it may now be considered a suburb. It consists of but one principal street running N and S and some diverging lanes or alleys, several of which are very old. It is surrounded by many land some villas and is, altogether an agreeable place of residence. The more remarkable buildings are the college (King's College) the remains of the cathedral the town house and the old bridge of Don. The townhouse is a neat structure and is provided with a handsome public clock. The bridge celebrated in Scottish tradition by the name of the Brig o' Balgownie, is one of the oldest edifices of the kind in Scotland, having been erected by king Robert Bruce in the 14th century. It consists of one large Gothic arch of 67 ft span. The nave of the cathedral now used as the parish church of Old Machar and two fine spires at the west end, are all that remains of the original structure a magnificent building constructed in the 14th century and dedicated to St. Machar. It has still an imposing appearance and is kept in high preservation its large western window and oak ceiling painted with armorial bearings, being much admired. The college buildings occupy the sides of a

KING'S COLLEGE, OLD ABERDEEN.—From Local Print.

large quadrangle. These buildings are finely set off by a noble tower surmounted by an imperial crown of open stone work. The college was founded by Bishop Elphinstoun in 1494 and was subsequently patronized by James IV. It is now incorporated in the University of Aberdeen. There are also a grammar school in the town, and various other schools. Old Aberdeen has neither trade nor manufactures, but is wholly dependent on its connection with the university. Hector Boscawen, a well known Scottish historian, was principal of King's College. Pop 1945.

ABERDEEN is an U States, Mississippi r bank Tom-highes, 26 m. N Columbus. It stands in a fertile district, is visited regularly by steam boats from Mobile and ships annually about 30 000 bales of cotton. Pop 8900.

ABERDOUR, the name of a village and two parishes, situated within about 2 m. of the sea and much resorted to in the summer season, as sea bathing quarters, by the citizens of Edinburgh, being distant from that city only about 8 m

and having daily communication with it by steamer.—The parish lies on the shores of the Firth of Forth abounds in coal lime and freestone, and is well wooded. There are here the remains of the old castle of Aberdour built by the Regent Morton. Area about 5000 acres. Pop. 1845—2 A par co. Aberdeen, on the N coast 8 m. W Fraserburgh from 10 to 11 m. long and about 7 broad. The whole sea coast of this par is bold, rocky and picturesque; and contains some remarkable caverns in one of which Lord Fitzgibbon lay concealed after the battle of Culloden, till his retreat was discovered by the footprints in the snow of the young girl who carried him his supplies of food and other necessaries. Pop 1857

ABERDOVY a harbour on the W coast of Wales, co. Merioneth, 10 m. N Aberystwith lat. 52° 36' N lon. 4° 7' W. This harbour is safe and convenient for vessels drawing not more than 15 ft. but as the bar and channel leading into it frequently shift a pilot is necessary.

ABERFILDY a vil. Scotland on 1 arth 22 m. N W the city of Perth, and 63 N W Edinburgh. It lies in a picturesque locality near the right bank of the Tay and consists chiefly of one long street, with another leading off about the centre, and a small square at their junction. It has a parish and a free church, a bank, and some good schools. In the vicinity are the Birks of Aberfeldy the wooded uplands round the fine falls of the Moness, which are celebrated in Scottish song. Pop. in 1851 823.

ABERFRAW a small tn. seaport, and par Wales, on the W coast of the isl. of Anglesea, on a slope rising from the E and S. E. at the mouth of the river Ffrw about 7 m. S E Holyhead and 15 S. W Bangor. It consists of two narrow streets. The houses are all of stone and many of them thatched. It is not lighted and is but indifferently supplied with water. The church is a very ancient building and contains one of the most perfect Anglo-Saxon arches in the principality. There are, besides, two Methodist chapels and a free school. In summer a few large boats carry corn and potatoes to Carnarvon and Llan, which form nearly the whole trade of the place. Husbandry and fishing form the chief employment of the inhabitants. There are six cattle fairs held during the year. Aberfraw was one of the three royal residences of Wales and a seat of the principal courts of justice. In moderate weather a vessel may stop a tide in the bay in 4 or 5 fathoms, clean sea 1 above 2 cables from the N. side of the bay. Small vessels go further in and lie aground. Area of par 6254 ac. Pop 1338.

ABERFOLIO or **ABERFOLKE** a small par and romantic seat in the Highlands of Scotland, co. Perth, on the S. boundary 2½ m. N Glasgow and 16 m. W by N Skirling. The clachan (duglass, hamlet) of Aberfollie, is the scene of some amusing incidents in Scott's novel Rob Roy. The scenery around is varied and picturesque. Pop. 514.

ABERFORD a tn. England, co. York W Riding 9 m. N E Leeds, and 14 m. S S York, is a valley on the river Gosh, which is here crossed by a substantial stone bridge of three arches. It consists of one long street, a mile in length the houses are of stone and generally well built. The town is not lighted, but is amply supplied with water from springs. The only buildings of any note are the church—an ancient structure of mixed architecture, and the Aberford almshouse, built in 1844-5. The latter is a handsome building and contains eight inmates, four male and four female. There are here a Methodist chapel a R. catholic chapel a national and other schools. There are no manufactures, the inhabitants being mostly engaged in agricultural labour and a portion in collecting and lime quarries in the vicinity. Petty sessions are held here every fortnight, and Justice of the Peace courts daily. Aberford is a polling place for the W Riding of York. Its population has greatly increased within the last 10 years. Area of par. 4129 ac. Pop 996.

ABERGAVENNY a tn. and par England co. Monmouth the former 14 m. S W from the town of Monmouth, and 18½ m. by railway from London, pleasantly situated on rising ground at the confluence of the Uik and Gaverenny over the former of which there is a handsome stone bridge of 15 arches. The town is long and straggling and some of the streets are narrow but great improvements have taken place of late years. It is now lighted with gas, and amply supplied with water by pipes from springs in the vicinity. There are

two churches, one of which, recently rebuilt, is a handsome structure, and contains several ancient monuments. There are, besides, several Dissenters meeting-houses, a R. catholic chapel, a free grammar school founded by Henry VIII., a national school, and several daily and Sunday schools. The benevolent institutions comprise a dispensary, a lying-in hospital, and some minor charities. A thriving reading society or association was established here in 1845. Abergavenny was at one time famous for the manufacture of flannels and periwigs, but both trades are now extinct. Its former importance is the consequence of the introduction of machinery and the latter through the caprices of fashion. The wigs made here were composed of goats hair and were remarkable for their extreme whiteness the quality which constituted their chief value. The principal trade now remaining is in wool, but a pretty extensive general retail trade has arisen from the establishment of several iron works in the vicinity. There is here, also, a large boot and shoe-making concern, a coach manufactory several tanneries, tallow-chandlers, saddlers, cabinet makers, wood-turners, and between 500 and 600 ft. The prosperity of the place is further promoted by the Monmouthshire and Brecon Canal, which passes near it. Petty sessions are held here every Wednesday. Market days, Tuesday and Saturday the latter principally for grain. There are three fairs annually for cattle, sheep, horses, hogs, and flannel. The scenery in the vicinity is singularly beautiful and picturesque, particularly when seen from the terrace of the ancient castle of Abergavenny which is situated on an eminence near the R. extremity of the town and is open to the public. Area of par. 4 59 ac. Pop. of town and par. 5500.

ABERGYLE, or **ABERYSTWYTH** a small market tn. and par., N Wales co. of, and 10 m N by W Denbigh, and 6 m S.W. St. Asaph. The town is about half a mile from the sea, although called a seaport in several gazetteers. Being surrounded with beautiful scenery and having a salubrious air it is much frequented by its sick, while its fine beach attracts numerous sea-bathers during the summer season. It is also much resorted to on account of its cattle fairs, of which there are three annually. There are churches and several dissenting chapels here, and a national and British school. None of the churches have any architectural pretensions. The town consists of three streets one of which, the main street, is straight. The houses generally are built of limestone with which the neighbourhood abounds the rest of brick. There is no trade in the town, the inhabitants consisting of shopkeepers, tradesmen, mechanics, and a few farmers. At the distance of about 1½ in there are some remarkable caverns. Area of par. including St. George 4053 ac. Pop. 3507.

ABERQUILLY, a small vil. and par., S. Wales, co. Carmarthen, hms. Elvst the former on a beautiful plain in the vale of Towy 3 m. N.E. the town of Carmarthen. It consists of one straight street, generally well kept. The houses have been well built, principally of stone, but are falling into decay. The village is well supplied with water but is not lighted. The church is in the Gothic style. There are, also, a very handsome Independent chapel, built about five years ago, of dressed limestone, and one national school. Near the village is Abergilly palace, the residence of the bishop of St. David a handsome structure, surrounded with finely ornamented grounds. Pop. of par. and vil. in 1851 5250.

ABERNETHY a village and two parishes, Scotland — 1 A vil. and par., co. Perth the former 7 m. S.E. town of Perth, and 27 m. S.W. Edinburgh. It is irregularly built, and is composed chiefly of thatched houses. Abernethy is supposed to have been the capital of the Picts. A religious house, dedicated to St. Brigid, was endowed here during the Pictish period, and long flourished under the patronage of the Scottish kings and here the Calixtus continued, till they were suppressed in the 15th century. There is, likewise, at this place, a round tower of great antiquity 74 ft. in height, and 45 ft. in circumference at the base. In the floor of this tower three skeletons were found in 1841 indicating apparently that these mysterious structures were used as places of sepulchre. Numerous other interesting relics of remote times have been found in this neighbourhood, proving, in connection with its historical associations, that it had been at a former period a place of great note. Area of par. a small portion of which is in co. Fife, about 7030 acres. Pop. in 1851 3026, of vil. 577.—2 A par. partly in the co. of Elgin, and partly in

that of Inverness, being united with the par. of Kinrosshire. Pop. in 1851 1871.

ABERSEKE, or **ST WOLFOATE**, a small lake, Upper Austria, circle Traun, 6 m. W. Ischl. It is about 6 m. long by 3 m. broad has a depth of from 500 to 600 ft., and yields pike, salmon, and large trout in great quantity. Near the E. end is the vil. of St. Wolfgang whence the lake derives one of its names.

ABERYSTWYTH, a small market tn. Bohemia, circle of, and 19 m. N.N.E. Ebnoburg. It lies on the Wistritz, at the foot of the Fiesberg and has a church. In the neighbouring hills are mines of silver tin and cobalt, in which the majority of the inhabitants are occupied. Pop. 1700.

ABERYSTWYTH a seaport in Wales, co. Cardigan, pleasantly situated on an acclivity on the bay of the latter name at the confluence of the rivers Ystwith and Rheidol 83 m. N.E. the town of Cardigan and 180 W.N.W. London. It was at one time strongly fortified with walls a portion of which still remains on the shore. Abergystwith has become of late years, one of the most fashionable watering places on the Welsh coast, and has consequently been much extended and improved. The streets are steep and uneven but some of them are spacious, and they are in general regular well paved and well lighted with gas. The houses are for the most part, neat and substantial and many of them large and handsome, and all amply supplied with excellent water brought by pipes from the neighbouring hills. The principal public buildings, and other objects of interest, are the two churches, one of which is a handsome new structure in the Gothic style, the custom house, assembly rooms, town hall and theatre. The Marine Parade, an elegant crescent, is situated on the margin of the sea, and close by is the Marine Terrace, a handsome range of modern buildings, commanding a fine view of the bay. At the north end are the marine baths, in which every requisite accommodation is to be met with. There are also a market place, and a handsome general mart lately erected an infirmary and places of worship for Baptists, Independents, and Methodists. There are four dissenting schools and one national, an institution for the deaf and dumb for the propagation, and an infirmary. Besides sea-bathing, for which the beach is admirably adapted, having a gentle slope with water of the utmost purity there is a chalybeate spring within a few hundred yards of the east end of the town, the waters of which resemble those of Tunbridge. There are four public walks, the principal of which, called the Castle Walks, are much admired for the extensive views they command. Races are held every August, on race ground about 2 m. from the town. Archery and cricket clubs have also been established. A little west of the town, on a bold eminence projecting into the sea, are the picturesque ruins of an ancient castle, founded in 1109. There are no particular manufactures carried on, the people being chiefly employed in seafaring, mining and agriculture. Their condition appears to be favourable. The harbour which was formerly in a very bad condition has been of late considerably improved. It has now an average depth of 16 ft. water at spring tides. A substantial stone pier has been erected on the S. side of the entrance into the harbour which protects it from the W. gales. The pier extends 350 yds. in a S.E. direction. The principal exports are lead ore from Cardiganshire, pig lead oak bark, corn, and butter. The imports, coal, oil, lime, American timber and general merchandise. The number and tonnage of sailing vessels registered at the port on December 31st, 1852 was 379; ton. 84,029. The number of vessels that entered the harbour during the year ending 31st December 1852 was 690 ton. 51,058 the number that cleared during the same period, 435 ton. 27,534. The government of the town is vested in a mayor recorder chamberlain, and common burgesses. Abergystwith is one of the contributory boroughs of Cardiganshire. Pop. 5641.

ABERYSTWYTH or **ABERYSTWYTH**, par. Wales, co. Monmouth, hms. and 8 m. S.W. Abergavenny. It abounds with valuable iron-mines and contains the Ebbw-valle, Man-y-glo, Caerbuck-vale, Blaine and other ironworks, and also yields coal and roofing stone. Pop. 18,055.

ABHA a large vil. Ahyndale, state or kingdom of Taged about 60 m. N.E. Axum; the residence of a chief who rules over the territory of Massawa, and the seat of a considerable trade in cattle, horses, iron, slaves, and cotton.

ABIAID (RABAH-EL) a large river of Africa, supposed to be the true Nile, this river being formed by the junction of the Bah-el-Abiad (White Nile) and the Bah-el-Azrak, or Blue Nile at Khartoum lat. 15° 40' N lon. 35° E (See *ALGERIA, BAIR EL*). It is believed to rise under the name of Tshadi, at a comparatively small distance from the sea, in the country of Mine Mout, a continuation of the high plateau of Abyssinia, situated to the N. of the great lake Zambéze, or Nyassid. It was succeeded by M. Armand d'Abbadie, in 1842 to 4 42° 45' N lat. (See *NILE*).

ABILA, ARI, or ABALA (Hebrew *Abel*, a grassy spot). The name of several ancient places in Syria, of which the most noted was Abila of Lysanias, esp. of the Roman prov. of Abilene, on the river Barada; 18 m. N.W. Damascus, on the site of the modern village of Bak Wady Barada. A few broken pillars, and other fragments, are all that now remain to indicate its former rank.

ABILENE, a small district, or Roman prov. Syria, whose precise extent is now unknown. It lay N.W. Damascus, and was named from its chief town, Abila.

ABINGDON a bur and market tn. England co. Berks, 50 m N.W. London r bank of the Thames at the junction of the Ock. Its streets are spacious, and well paved and lighted. In the centre of the town is the market place and market house the latter a large and handsome building of freestone. The other public edifices are the two parish churches, one which is Henry, is a large Gothic structure, with a fine spire; the chapel of the Dissenters, of which there are four or five, including Baptists, Independents, Society of Friends and Wesleyan Methodists; the guildhall and the county jail. The educational institutions comprise a free grammar school a national, and a British school. There are a number of almshouses in the town, and various minor charities. The principal manufactures are canvas sacking and sailcloth the latter however has much fallen off late years owing to the competition of establishments in the N. of England and in Scotland. Hailing carpet weaving and hemp dressing are also carried on to a considerable extent. The municipal corporation consists of a mayor four aldermen and 12 councilors. Abingdon returns one member to the House of Commons registered electors, 515. Seven fairs are held annually chiefly for horses and horned cattle. Races are held in September. The branch railway of the Great Western line, leading to Oxford, passes by Abingdon, where there is a station. Abingdon is a very old town its original foundation being ascribed to the Saxons. In former times, it was called Sæverhamton and is spoken of in ancient records as a wealthy city and royal residence. Pop. 6984.

ABINGDON a par. England co. Surrey area 6547 ac 44 m S.W. Dorking 1 pop. 8,0.

ABINGHAIL a par. England co. Gloucester area 751 ac Pop. 342.

ABINGTON the name of several parishes, England—1 *Abington*, a par., co. Northampton area, 1113 ac. It has two small churches. Pop. 164.—2 *Abington* (Great) a par. co. Cambridge area, 1500 ac 2½ m N.W. by W. Luton Pop. 321.—3 *Abington* (Little) a par. co. Cambridge area, 1150 ac. Pop. 807.—4 *Abington* (St. Giles, or Giles) a par. co. Cambridge area, 1237 ac. Pop. 238.—*Abington* is also the name of a par. and vil. Ireland co. Limerick and Tipperary area 30,400 ac. 1 pop. 6145.

ABIPONES, or ARIPONAS, a warlike tribe of aborigines, B. America, republic of El Plata, located in El Gran Chaco, on the right bank of the Yernépo. The men are tall, robust well featured and excel in swimming. Their leader in war is their judge in peace. They subsist by fishing and hunting and hold the flesh of the tiger in the highest estimation. They are much given to war and their weapons are long lances and arrows, with iron points. Their numbers once amounted 100,000, but now their number amount to 5000, and are daily decreasing.—(See *English-Spanish*).

ABISCUM or ABOSKUM a small tn. Persia, prov. of 45 m N.E. from Astrabad, upon the river Gurgan lat. 37 17 N lon. 55° E. It has a small but well frequented port upon the Caspian Sea. The fishery near Abiscum is leased to the Russians, who send seven or eight vessels here annually.

AB-IS TADA [standing water], a lake, Afghanistan (called *see*).

ABKABIA, ABASIA, or ABCHASIA a trans-Caucasian

prov. Russia, gov. Imzereth, bounded N and W by the Caucasus which separates it from Circassia, E. by Mingrelia, and S. by the Black Sea. The country is composed wholly of the S. side of the Caucasian mountains—some of whose snow covered peaks are here 13,000 ft. to 13,000 ft. high—and of the low plains intervening between these mountains and the sea. The prevailing geological formations are greenstone, porphyry black slate and Jura limestone. Immense forests of the finest trees—oak, alder, chestnut, &c. divide the mountain sides stretching down to the plains, whose Italian climate, ripening maize, figs, pomegranates, the fruits of central Europe, grain, and excellent grapes, lentils to profitable cultivation but the country is waste its numerous ruins alone proclaiming its former flourishing condition. Nor do the Abkases excel in cattle rearing or commerce—a little of the latter in felt mantles, fox and polecat skins, honey wax, and honeywood, being carried on—any more than in agriculture. On the contrary with much indifference are these branches of industry pursued that by their means they do not obtain a sufficient subsistence which, therefore, they seek out in the manner most congenial to their tastes by plunder and robbery—occupations which, in them have become a second nature. The slave-trade with Turkey formerly constituted one of the chief employments and tended greatly to reduce the population. Notwithstanding the wealthlessness of the Abkases slaves are still secretly exported. The Abkases belong to the Circassian race, and distinguish among themselves five tribes—Abkases proper, Bakhies, Tschabekies, Ashabives, and Entsochabives. Abkasia, under the Byzantine emperors formed an independent state, separate from Georgia. In the 11th century by berrahip, it fell to the kings of Georgia, under whom it decayed and in 1457 it fell under the supremacy of the Turks. In 171 the Abkases asserted their independence and after various fortunes, about 1823 the reigning prince, Michael Bel called on the Russians to occupy the country which they did by stationing troops at Sokum, Tambov, Mitsund, and Lagra, the chief towns of Abkasia. Area about 3538 sq. m. Pop. about 25,000.—(See *English-Spanish*).

ABKASIA LITTLE, a district, Circassia (called *see*).

ABKEPTLEBY a par. and township, England, co. Lancashire area, 2920 ac. Pop. 54.

ABKHANIA See *ABCHASIA*.

ABKURLEN a river, LITHUANIA See *KARUS*.

ABLA, a tn. Spain in Andalucía prov. of and 34 m. N.W. Almería, on the highroad between that town and Granada, situated on the S. slope of the Sierra Nevada, close and built with houses raised on cascares 25 ft. above the carriage road. It has three squares a parish church chapter house, public storehouse, and prison. Its inhabitants are engaged in distilling brandy and in making bricks, tiles and earthenware. Pop. 210.—(Called *see*).

ABLAIKIT (Great and Little) two small rivers, E. Siberia, affluents of the Irtysh, into which they fall, after having united a few miles above Ust-Kamenogorsk in about lat. 49° N lon. 82° E. On the right bank of the most westerly of these rivers, is the small decayed town of Abilaik, 50 m S.W. Ust-Kamenogorsk in which are the remains of a temple, surrounded by a wall 16 ft. high, said to have been built previous to 1071 and to have been dedicated to the native deity, by Abia chief of the Kalmaus.

In the valley of Abilaik are the ruins of an ancient Tartar castle which has been dignified by the name of the palace of Abilaik, although it would seem to have had little other claim than extent to such title. Its materials having been carried away for building purposes, hardly anything more than the foundations now remain.

ABO a seaport tn. and dist. of Russian Finland. The tn. was at one time the cap. of Finland, as it now is of the dist. of its own name to the river Aareyoki, between the gulfs of Bothnia and Fö land lat. 60° 27' N lon. 23° 17' E. It was at one time a flourishing place, but had fallen into decay when a tremendous conflagration, which occurred in Nov. 1847, completed its ruin. On that occasion, nearly the whole city was destroyed, including the university and its valuable library and other public buildings together with 768 houses out of 1100. The university which is now removed to Helsingfors, the Russian cap. of Finland, had previous to its destruction, 40 professors and several hundred students, a library containing many thousand volumes a collection of

philosophical instruments, a cabinet of natural history and an observatory. The town has also been in part rebuilt; but the houses and public edifices being placed at considerable distances from each other it covers a great deal more ground than formerly. Notwithstanding the disaster above mentioned, Abo still has some manufactures, and a considerable trade, particularly in the weaving of which employs many of the people. Shipbuilding also is carried on to a considerable extent. The cathedral, though a heavy ungenial building is remarkable for its antiquity and interesting from its associations, having been the cradle of Christianity in Finland. It was greatly injured by the fire in 1837 but has since been restored. The harbour is shallow at the town, but there is depth enough for large vessels 3 m. below in consequence of the rising of the land along the whole of this coast, & is gradually receding from the sea.—The district of Abo has an area of 7480 sq. m. Grain, flax, hemp, and tobacco, are cultivated, and cattle are reared. Building timber is abundant, as are also limestone, slate, and iron. Pop. of town (1841) 13,080 of district 100,000.

ABOHI, a tn. W. Africa, cap. of the two Eboe kingdoms as the upper end of a creek of the Niger lat. 5° 40' N lon. 0° 25' E. Numerous little creeks lead to the dwellings of the principal men, surrounded by the huts of their dependants, and here their canoes are laid up. There is no regularity observed in the position of the huts, except that they are built on either side of these creeks, and about 20 to 30 yards apart having a few palms or banana trees to afford shelter from the burning sun. Each family has one or more canoes. The huts are of a square form most of which are built at right angles, usually built of mud and roofed with a compact matting of dried palm leaves and reeds the floor is raised a foot and a half. The entrance is square, and serves for the threefold purpose of door chimney and window. The houses of wealthier persons are larger and have many compartments, with a quadrangular court, in which many of the household and cooking operations are carried on. The king's residence is here, and is the largest in the town. Abohi is very unhealthy particularly on the subsidence of the periodical floods, when the muddy deposits are exposed to the sun. The people cultivate rice, indigo, cotton, bananas, oranges, coconuts, ground nuts, yam, pineapples, Guinea peppers, &c. Domestic slaves are numerous, but they are invariably well treated and many of them become free. The natives are tall, well made, and muscular but the hands and feet are large.—(Allen's *Niger Expedition*.)

ABOMLEY, a tn., W. Africa, cap. of the kingdom of Dahomey on the coast of Guinea lat. 7° 40' N lon. 4° 5' E situated in an indifferently watered plain of rich red loam. There being almost no stone to be found nearer than the Kong mountains, distant upwards of 60 m. like other Dahomean towns, it is built of clay. The town is walled and the houses seldom exceed one floor in height. Mr. Duncan, who visited it in 1845, thus describes one of the king's palaces, which may probably be taken as a favourable type of Dahomean houses in general.—After passing through two quadrangles of about 60 yards by 30 we entered the principal square. This square is formed of three sides of houses or long sheds and on the opposite side to the principal part stands, at a high wall of clay with human skulls placed at short intervals on the top. This palace, for the king has many is divided into different apartments, all on the ground floor for though the ridge of the roof is of sufficient height for two stories, yet the slat is brought down so low as to reach to within 4 ft. of the ground. Along the front is a low piazza, extending the whole length of the building. The main entrance is in the centre of the side of the square. At stated intervals, the ceremonies called *exodos* are held when large numbers of human beings are sacrificed. After the death of a king as many it is stated as two thousand human beings have been sacrificed to his manna. A court of appeal, in which the king usually presides, has been established, which has greatly contributed to put down the oppression frequently exercised upon the people by the local government (caboors). Native from all parts of Central Africa are to be met with in Abomey which is much resorted to for traffic in slaves, and to a less extent for traffic in palm oil and ivory all of which are shipped at Whydah distant about 90 m. S. Pop. about 34,000.—(Dunstan's *Travels in Western Africa*.)

ABOYI ABAYI or **BOYORABOYI** a market tn. Hungary district of and 50 m. S.E. from the Zagyrva. It lies in a plain, between Tapolcsa and Török St. Miklos, on the road from Gyungy to Debrecen, near Baskok. It has a R. Catholic and a Protestant church. Pop. 3000.

ABOLAIR.—1 A bay on the N coast of Egypt, of a semicircular form, and spacious, stretching from Abokir E. out on the W to the Rosetta mouth of the Nile, on the E. a distance of about 28 m. It is chiefly remarkable as the scene of the decisive Battle of the Nile, in which Rear-Admiral Nelson, on August 1 1798, with 14 ships of the line, destroyed the French fleet under Boscawen.—2 A small town and castle on a point of land stretching into the Mediterranean and forming the western boundary of the bay lat. (coast) 31° 20' N lon 30° 5' E. (N.) It lies near the site of the ancient Canopus where the god Socrates was worshipped and to which the inhabitants of Alexandria resorted for the purposes of divination and divination. The castle was strongly fortified by Mahomet Ali and used by him as a state prison, substituting confinement therein for the punishment of death. On March 8 1901 the British army under Sir Ralph Abercromby effected a landing at Abokir in the face of a tremendous fire from the French and on the 13th, succeeded in driving them from a strong position on the adjacent heights, towards Alexandria.—(Wilkinson's *Moslem Egypt*).—3 An inlet in the bay of Abokir called also Nekros's Island, 3 m. E. from the town and connected with the shore by a narrow reef. It contains some remarkable antiquities, part of which are now under water. Among these have been noticed several floors of buildings, arched chambers lined with stucco, &c. and a singular subterranean passage open towards the N., leading to apartments which have an aperture at top, level with the highest part of the island. The whole surface is described as covered with various plants, especially a species of hly and the sands of the shore contain those beautiful shells used as earrings by the Maltese sailors.

ABOYNE, a par Scotland, co. Aberdeen 4 m. long by 3 broad. Pop. 1108

ABRAHAZ, a tn. Brazil, prov. of and 28 m. N.E. Bahia distant about 4 from the sea. It has a church and schools and the inhabitants—for the most part Indians—cultivate mandioc, and occupy themselves in fishing and the chase. The soil in the vicinity is fertile. Pop. 2500.

ABRANTES (Lalin, *Abraunus*) a fortified tn. Portugal, prov. Lower Beira, on the right bank of the Tagus 78 m. N.E. Lisbon. It is situated upon a rising ground, surrounded by gardens, vineyards, and olive plantations. It is the entrepot for part of the productions of the provinces of Alentejo and Beira, and carries on an active traffic with Lisbon in which it sends considerable quantities of wine and oil with molasses, peaches, olives, and other fruits and vegetables. In which trade more than 100 houses are constantly employed. It contains an old castle, four parish churches, and four convents—two of which, that of San Vincente, is the largest and finest in Portugal—an hospital, and an old almshouse. Abrantes gave the title of duke to Junot, one of Napoleon's generals. At the capitulation of Cister, it was surrendered to the British. Pop. 6447

ABRACHYWILLER a coen and vil France, dep. Moselle 8 m. from Sarrebourg. Saw paper and meal mills &c. Pop. 2997

ABRIOLA, a tn. Naples, prov. Basilicata, 2 m. S. E. Potenza on a steep rock in a healthy and fertile district. Pop. 3000

ABROBANYA, or **ABROBANTA** [in German, Grossschitten] a market in Transylvania, 28 m. N.W. Karlsburg, with a German (reformed) a Wallachian a Greek, and a R. Catholic church. The most of the inhabitants—who are composed of Hungarians, Germans, and Wallachians—are employed in the neighboring gold and silver mines, supposed to have been wrought by the Romans, and to have produced for the place the name of *auraria Magna*. In the town, there is a board of directors for the management of the mines. The ore, after being separated from the earth with which it is mixed is sent to the furnace at Kalina. Pop. 4000.

ABROLHOS.—1 A cape on the coast of Brazil, prov. Porto Seguro, between the rivers Parahipe and Camuelina lat. 17° 58' S. lon. 38° 42' W. Off this point, in the

Atletia, about 50 m from the shore, like the four small but dangerous rocky islands, or shoals, of Santa Barbara, commonly called the Anzoles. They are projections from a bank of rocks, which exhibits itself occasionally between 17 and 20° S. lat. at a distance from 6 to 30 m. from the mainland. They are fringed by Cape Viscery as rather low but covered with grass with a little scattered brushwood the highest rising about 100 ft above the sea, and the second in their vicinity so very irregular that little dependence can be placed on the lead. The centre island of this shoal is laid down in lat. 17° 51' S., lon. 88° 41' 30" W. — 2 There is another reef of the same name (Houtman's Anzoles) off the W coast of Australia lat. 28° 30' S. 113° 30' E. In some of the islands forming this group Capt. Stokes found traces of guano. — (See Sec. 1. 315)

ABRUZZO-BANYA. See ABRUZZO

ABRUZZO a territory kingdom of Naples of which it forms the N extremity; bounded on the N and W by the Papal States N.E. by the Adriatic E. and S.E. by the prov. of Salerno, and S by Salerno. It is divided into three districts or provinces—Abruzzo Ulteriore I. Abruzzo Ulteriore II. and Abruzzo Citeriore, so called from their respective relative positions to Naples and when spoken of in the plural number called collectively the Abruzzi. The first comprises 1143 sq. m. with upwards of 175,000 inhabitants the second, 2220 sq. m., with about 300,000 inhabitants and the third, or Abruzzo Citeriore, 1700 sq. m. with about 260,000 inhabitants also. The entire territory is traversed by the Apennines, and is throughout extremely rugged and mountainous. Abruzzo Citeriore so much so, as to present the most serious obstacles to internal communication. The sea-coast of the Abruzzi on the Adriatic is about 80 m. in length and is without a single harbour. Most of its rivers, which are numerous, fall into the sea just named. The celebrated Lago Celano the Lacus Fucinus of the ancients, is in Abruzzo Ulteriore II. it is about 15 m. in length, with a breadth of 5 or 6, and is chiefly remarkable for its size and fills, the causes of which are unknown and for its association with the name of the emperor Claudius, who cut a canal in order to prevent the lake overflowing—a work in which 30,000 men were employed for 11 years. Both the soil and climate of the Abruzzi are various the latter differing with the elevation of the former being cold on the mountains and hot on the low grounds. Though the highlands are sufficiently barren the plains and valleys are fertile, producing large quantities of corn, wine, oil, figs, peaches, almonds, &c. The mountains are covered with numerous flocks of sheep, the rearing and tending of which and other domestic animals, forms the chief employment of the inhabitants whose coarse habits, natural indolence and want of education cause them to neglect the cultivation of the soil and to prefer sloth and poverty to exertion and competence. They are tall and robust in person fond of pleasure, but sullen and revengeful in disposition and were formerly much noted for their predatory propensities. Manufactures are almost unknown in the Abruzzi nothing being produced but some woollen silks, and a little embroidery—their only commerce is in the export of wool and cattle.

ABTHORPE a par and vil England, co Northampton area, 1915 ac. Pop. 500.

ABU or ABOO.—1 A remarkable mountain, N Hindustan prov Ajmer or Rajpootana, principality of Marwar or Leod-poor 55 m W by N Odeypoor lat 24° 45' N lon. 73° 50' E It is the highest peak in the Aravalli range, and is stated to be 5000 ft. in height, as indicated by the barometer. The temperature on the summit is said to be so mild, that European fruits and shrubs grow on it readily. A Hindu tradition alleges that the hill was brought by the sage Vedabha, from the Himalayas, a distance of somewhere about 700 m that he might continue his devotions on the spot he had been accustomed to.—2, A volcano, on the E. side of the island of Sangre in the Indian Archipelago. It is the loftiest mountain on the island, lies near the coast, and is visible from a considerable distance. It is continually smoking and has, on several occasions, caused great destruction by its eruptions.

ABU ARISH, a petty state, Arabia, cap. same name, on the Red Sea, between lat. 15° 50' and 17° 40' N. and forming a part of Yaman. It is bounded, N by Hejaz, E by Asyr

S. by Yaman, and W by the Red Sea. It is about four days journey long, by about two broad, and consists chiefly of a sandy plain, nearly sterile on the coast and towards the centre but more fruitful in the direction of the mountains, which form its E boundary. Winter is dry but in the warm season, which is almost insupportable to Europeans, there are daily rains, frequently accompanied by storms of wind. The country has no streams, and few wells, yet the rain water is not collected into tanks, but allowed to spread over the land without any attempt at systematic irrigation. Durra, or Indian millet, is here as elsewhere throughout Arabia, the principal cereal cultivated. The Indian cotton plant is also grown. The Meson balsam is plentiful and in the gardens, sesam, colocynth bananas, &c., are raised. The country is covered by small groups of trees of from 50 to 150 so overgrown with parasitical plants as to present almost impenetrable thickets. By heating the twigs of a tree called musmak, the Bedouins form a pencil with which they lay on their tongues and rub on their teeth a kind of finely powdered tobacco, named Borjag which is enjoyed both by males and females in Abu Arish with a similar relish to that which, in other parts of the world attaches to smoking eating opium, and chewing betel. Gazelles and hares are numerous, wild cats and mice plentiful, and scorpions are not uncommon. Sheep, a beautiful breed of goats, splendid horses, zebras, camels and dromedaries, constitute the principal native riches. The chief lakes the title of Sherik.—(Hittler, *Reichsland*.)

ABU ARISH a tn Arabia, cap. of state of same name, about 20 m E. the Red Sea lat. 17° 40' N lon. 41° 25' E 90 m. N Lohela. It is walled and lies in the middle of an extensive plain, covered with the mesquit tree and jassam bushes. Its castle Deir-el-har is high, well built, and strong but the palace of the Sherik is merely a large hut, externally decorated with mother-of-pearl. The town has some miserable-looking mosques, an hammam, and some deep wells. The inhabitants, who are poorly clad, carry on a little trade as in the bazaar and the narrow street leading to it, are dirty. Pop. 7000 to 8000.—(Hittler.)

ABU GIRGEH, or ABOO GIRO a large F lake in of Middle Egypt, about 2 m W the Nile, 40 m S Beni Suef lat. 28° 30' N lon. 30° 50' E. It is situated in a rich plain, as a spot where several extensive mounds point out the site of an ancient city the name of which is unknown.

ABULLIONTE, a tn Anatolia Turkey on an is. in lake of same name, 15 m. S. the Sea of Marmara lat. 40° 8' N lon. 28° 31' E. It is said to consist of 300 Greek and 100 Turkish houses and entirely covers the island on which it is built. It is defended by a wall, and contains a ruined castle apparently Byzantine, chiefly constructed with large blocks of marble, derived from more ancient buildings. The island on which the town stands, is connected with the mainland by a wooden bridge of simple and slight construction. Abullionte occupies, according to Mr Hamilton, the site of Apollonia ad Rhodacum. The lake 16 m. long by 11 broad, is celebrated for its carp, which are taken in great quantities and sent as far as Constantinople. Pop. 2000.—(Hamilton's *Asia Minor*.)

ABU MARIKH, a vil Upper Egypt, the discovery of a hill about 8 m. E. from the Nile, and 80 S E Girgeh. ABU MANDUR, a vil. and convent on the left bank of the Bolbitine branch of the Nile, about 2 m. above Rosetta. The convent—which is prettily situated close by the river and adorned with palm trees—is supposed by Demm, to indicate the site of the ancient city of Bolbitum. It was from its tower where he happened accidentally to be, that the French general saw Napoleon's fleet approaching to fight the battle of the Nile. The scenery around this locality is singularly beautiful.

ABURY a par and vil England. See AVRECHY

ABULCANBUL, See IRAMBU

ABUSHIR a vil. Arabia, prov Oman 17 m. S.W Muscat. It lies at the foot of a picturesque range of hills exhibiting red, gray yellow and black brown pebbles destitute of soil and vegetation. To the N.E. the ground slopes to a sandy flat, extending to the sea, about 6 m. distant. The village is a miserable place, consisting of mud houses, and destitute of any water, with a few mud towers, looked for defence. The only water here is a warm spring, rising in a cavern in the calcareous rock behind the village, and of a temperature of 113° F. It is used for irrigation for cooking and for medicine,

superstition attributing to it many virtues that it does not possess.—(Fraser)

ABU SIN or **ABBA-KEEN** an affluent of the Upper Indus, from the right. It rises in the mountains of Hindu Kush, about lat. $35^{\circ} 20' N$ lon. $75^{\circ} E$. It takes a S. course between 4 hr mountains and falls into the Indus near Mullal lat. $34^{\circ} 40' N$ lon. $73^{\circ} E$. It is a considerable stream bringing down drift wood and is not fordable. The hills and valleys are mud and gold dust. The Afghans erroneously consider at the head streams of the Indus.—(Latter)

ABU-YIL, **ABULISA**, or **ABOOWEEN**, the name of several lakes in E. W. E. of which the most remarkable are a vil in the Delta, and a fortified tower on the coast of the Mediterranean. The former $\frac{1}{2}$ m. S. the great promontory and about 60 h Cairo, lies on the left bank of the Theban branch of the Nile near the site of the ancient *Thaues*, where are various mounds and other relics of antiquity but none meriting particular notice. The latter called also the Arab Tower is situated near the S.W. extremity of the lake Marouti, probably not far from the ancient *Taposiris* and is the first elevated object seen by mariners in approaching Egypt from the W.

ABU TICP, **ABOOWEEN** or **ABOOWEEN** (the *Abbas* of Latin writers, and *Abouk* or *T. p. k. u. k.* of the Copal in consequence of the Upper Egypt on the left bank of the Nile lat. $2^{\circ} 2' N$ lon. $31^{\circ} 5' E$. So early as the time of Abulfeda, the people was much cultivated in the vicinity and is still grown there. The place is noted for the quality of the opium it produces.

ABU a jar England I India an 1440 ac I p. 734

ABYDOS or **ABYDOS** an anc. city Anatolia which once stood on the E. shore of the Dardanelles, at the narrowest part of the strait, opposite *Nesos*. Originally it belonged to the Trojans, and subsequently was inhabited by the Thracians and Milesians. Xerxes here built his bridge to boats for the invasion of Greece, and here Alexander and his army crossed from Europe to Asia. Lander says ancient writers, aware slightly from Abydos to Mentes to see his loved Ilia, a feat in swimming once successfully accomplished after a long day on, at the expense of a severe attack of ague, a few fragments of walls are all that now remain of this city whose site is partly occupied by the Turkish fort *Avalon*, the only stronghold on the E. Cardian side capable of defence on the land side.

ABYDOS, or **ABYDOS**, the modern *Abd-el-Matrou* and *Fish* of the Coptic an ancient city Upper Egypt, about 6 m. W. the Nile lat. $27^{\circ} 15' N$ lon. $32^{\circ} E$. In the great canal called the *Bahr* *Yusuf*. Even in the time of Strabo Abydos was reduced to a mere village, yet its ruins still testify its former grandeur. It was a residence of the Egyptian monarchs and the reputed burying-place of the god Osiris in consequence of which belief the bodies of many Egyptians were brought from a great distance, in order to be interred within its sacred precincts. The Memnonium, or palace of Memnon, and the temple of Osiris constitute the chief remains of this once magnificent city. In the former of these in 1819 W. J. Landis discovered the famous Abydos tablet now in the British Museum, on which are engraved a genealogical list of the Pharaohs. In a cemetery to the N. of Abydos, are various antique sepulchral monuments and on the W. are immense quarries.—(Wilkinson's *Monuments of Egypt*)

ABYLA, or **ABYLA**, the N. termination on the E. side of the strait of Gibraltar, near Ceuta, of a range of mountains in Morocco, and forming one of the pillars of Hercules.

ABYSSINIA or **ABYSSINIA**, an ancient kingdom of E. Africa, between being now broken up into several independent states has no longer any political existence. Its limits have been variously defined by different authorities, hardly in two agreeing as to what these limits precisely are, but they may be generally stated as extending between lat. $7^{\circ} 2' N$ and $16^{\circ} 40' N$ and lon. $43^{\circ} 20' E$ having Nubia N. and W. the Red Sea and strait of Bab-el-Mandeb E. and to the S. the Indian Ocean, stretching to the Indian Ocean. The entire length of the kingdom from N. to S. is about 670 m. its breadth from E. to W. at the broadest part, about 640. The principal divisions of Abyssinia are

called respectively *Dankal*, *Adal*, *Tigre*, *Amhara*, and *Shoa* (all of which see). The last of these, Shoa, is rapidly becoming a great and important kingdom. Some extensive but little-known tracts on the S. and S.W. inhabited by the Galla tribes, and comprehending the province of Mena, and a great forest on the N. abounding in elephants, complete the occupation of the whole space embraced by the limits generally assigned to Abyssinia. The more marked physical features of the country may be described generally as consisting of a vast series of table lands of various, and often of great elevations, and of numerous ranges of high and rugged mountains, some of them of very singular forms, dispersed over the surface in apparently the wildest confusion. Enclosed in these mountains are prodigious and inexhaustible natural repositories of water which pouring down by the deep and tremendous ravines that everywhere intersect them impart an extraordinary fertility to the plains and valleys below. The country thus presents the sterner features of mountain scenery combined with the luxuriance of tropical vegetation. The chasms or ravines that occur in the plateaux are often of appalling depth and are rendered more hideous by their impenetrable gloom; their summits frequently not being more than 300 or 400 yards asunder. Harza describing one of these fearful ravines says: "Masses of debris of a dark but brown colour are piled perpendicularly on either side the walls, and rising from a very narrow channel strewn with blocks of stone and huge fallen fragments of rock, tower overhead to the height of 500 or 100 ft. One perilous path affording barely sufficient width for a camel's tread leads twisting away into the gloomy depths below. On emerging from these tremendous chasms the traveller is surprised to find a level plain spread out on either side, instead of the lofty mountains or steep ascents that usually overlook the deep ravines on either bank. This singularity forms one of the peculiar physical features of Abyssinia, and imparts to its great water courses the appearance rather of cascades than of natural depressions. It must be observed however that these apparent plains are not in the level usually unperceived by that term, but lofty table lands, many thousand feet above the sea. The mountain scenery of Abyssinia is thus, as might be expected on the most stupendous scale including waterfalls of prodigious height. In the dry season these falls from their great elevation descend in mere spray but, during the rains, present a magnificent spectacle. Notwithstanding, however, the wild and rugged appearance of this country generally, it contains numerous valleys and plains of unequalled beauty and fertility rich in all the most valued productions of the earth. Many of these favoured districts are spoken of with rapture by travellers, both as regards the luxuriance of their vegetation and the salubrity of their climates. The most extensive is the plain of the Dambala, emphatically called the granary of the country where it reigns a perpetual spring.

Geology—The geological structure of Abyssinia presents a granite base, with a superstructure of sandstone, and occasionally limestone strata, and breccia. The granite lies in the surface in the lower parts of the country, but sandstone predominates in the upper and assumes a tabular form often lying on the tops of the mountains in enormous flat masses. Large tracts are of an ancient volcanic rocks. Of this character is a great portion of the country lying between Tajura and Ankerbe in the S.E. part of Abyssinia, and extending over a space of about 700 m. in length from N. to S.W. Throughout nearly the whole of this tract, volcanic ridges are everywhere present. Small cones, each showing a distinct crater, are numerous, and the surface of the sheets of lava which the plains below are everywhere still retains a fresh and glossy appearance although there has been no volcanic action in this part of the world for unnumbered centuries.

Mountains and Table Lands—The most remarkable and loftiest summits occur in the centre of the N. part of the kingdom in the prov. of *Harren* immediately to the W. of the river Teazze. The highest of these called *Amha Hai* is supposed from the circumference of its summit being covered with perpetual snow to have an elevation of at least 16,000 ft. About 10 m. N.E. of this mountain is mount *Hoyed* whose summit is also covered with perpetual snow, and whose height, though not positively ascertained cannot be much less than that of the former. On the N.E. part of the king-

dom, a long range of barren hills runs parallel with, and at a distance of about 40 m. from the shores of the Red Sea forming the W boundary of Dancalia. It does not attain any great altitude, the highest peaks not exceeding 1000 ft., while the general elevation is not more than 500. In Shoa, the mountain chains run chiefly N and S and reach generally an elevation of from 8000 to 9000 ft. but many of their single summits greatly exceed that height. They are abrupt, difficult of access, and intersected by numerous deep chasms. These mountains consist of a structure of basalt, wacke, and trachyte the latter in all its varieties. The table lands of Abyssinia form one of its most remarkable physical characteristics, and are distinguished from all other elevated table lands by the great depression of their water-channels. They consist of a succession of elevated, undulating plains, many of which are 7000 and 8000 ft. above the level of the sea and are intersected by narrow valleys, or water-courses, 3000 and 4000 ft. deep. The elevated country has taken swamps, verdant meadows and cultivated land producing various grains, and occasionally coffee, but the higher plains, from their great elevation, yield barley only. The most remarkable of these table lands occur in the provinces Amhara, Tigre, and Shoa.

Lakes and Rivers.—The principal river of Abyssinia is the Bah-el-Azrek or Blue River (see AZREK BAH-EL). It is one of the great branches of the Nile, and rises under the name of the Dedhena, in the Galla country S of Abyssinia, about 73° W N. Hakkia, the cap of Koonra, and joins the Bah-el-Azrek at White River (see ABAB) BAH-EL. The chief branch of the Nile at Khartoum lat 14° 40' N lon 33° 39' E. The next considerable stream is the Tseana or Tschana which has its rise in the mountains of Larra about lat 11° 30' N lon 39° 30' E. It pursues a N W course and finally joins the Nile, under the name of the Athara, at Adarcor in lat 17° 40' N. Its bottom is extremely narrow compared with the size of the river. Hence describes it as being shaded with fine lofty trees, the water remarkably clear and the banks adorned with the most fragrant flowers. It takes its name Tseana—The Terrible, from its impetuosity. The Hawash (black sea) the third or according to Harria the second largest river of Ab. rises near the N. E. of the Chakia mountains, the largest branch proceeding from Lake Fawja, about lat 8° 40' N lon 33° E. at an elevation of 9000 ft. above the sea. Shunting the S. L. limits of the kingdom of Shoa, it pursues a N and E direction to about lat 42° E. where it is lost in the sands, or led off in canals by the natives after running a course of about 240 m. in length. The banks are beautifully wooded along the whole length of the stream which may be traced by the luxuriant vegetation that marks its route through a treeless and barren land. This river is the recipient of the waters which come from the E. desirability of the table land of Abyssinia. The Aba or Abay (black sea) is also a large stream, being the principal tributary of the Bah-el-Azrek or Blue River. The Anasto likewise a considerable river rises on the confines of Tigre crosses the country on an E direction towards the Sea of Bah-el-Mandeb, which however it never reaches, making like the Hawash, into the sand when within about 20 m. of the coast its entire length is about 200 m. In the earlier part of their course, while flowing over the level surfaces of the table lands, the rivers of Abyssinia are little better than muddy brooks which in the dry season nearly disappear altogether but, during the rains, overflow their banks and inundate the plains for miles. Where they begin to break from the level, which they do by descent in the rocky strata, at first only a few yards in width but gradually opening to the extent of several miles they at once form torrents of 80 or 100 ft. in height, and in some cases much more, and then continue down a succession of falls and rapids, so as to descend several thousand feet in the course of a few miles.—The principal lakes of Abyssinia are the Tana, Zana, or Dembea (black sea) in the territory of Amhara, a large and beautiful sheet of water at a height of upwards of 6000 ft. above the sea. According to Arrowsmith's map, it is about 60 m. in length from N W to S E and about 40 in breadth. Hence makes it only 45 m long and 35 broad. During the rains, it overflows its banks, and lays the low country around it under water to the distance of 3 m. It contains a number of pretty large islands, most of which are inhabited, abounds with fish of various kinds, and is much frequented

Vol. I.

by hippopotami. The next most important lake is Halk, in the province of Amhara on the N. confines of Shoa. It is about 40 m. in circumference, has several bays, and contains an island called Debra Noyadged, almost square in form, with a monastery on it, called St. Stephen's, and 100 houses, and distant from the mainland about 250 yards. On the S. and E. there are steep mountains, but on the N and W the shores are low. The other lakes of considerable extent are, Ashangoo, in Tigre about 30 m. long by 15 broad. Fawja, near the S. boundary of the kingdom. Lagha a Summa, about 100 m. N W from the former and the remarkable salt lake, Asael (black sea).

Mineralogy.—Abyssinia, so far as known, is not remarkable for its minerals neither precious metals nor precious stones having yet been discovered in it the gold which is brought through it being all from the barbarous and unknown countries to the S and W. Among the useful mineral products are iron sulphur coal, and salt. The iron is found chiefly in the high lakes, the sulphur in the hills of Ballala, where the pits are described as being exceedingly deep. Coal beds appear to extend along the whole of the E. frontier of Shoa, but the combustible nature of that is scarcely known in the country. Salt is obtained in great abundance from a salt plain on the S. E. border of Tigre and from Lake Asael. The former is said to be four days journey in length. The salt near the surface is pure and hard but beneath it is coarser and requires some exposure to the air before it hardens. In some parts the incrustation is 3 ft. deep but, in general at the depth of 2 ft. it is too much mixed with earth to be fit for use in its native state. It is not used long past pieces by the Abyssinians and is used as a medium of exchange. A few hot mineral springs are known and made use of in Keki and Giddam.

Climate.—The climate of Abyssinia is as various as its surface. In the valleys it is delightful but on the mountains exceedingly cold. Heat from being met with on many of their summits in the latter end of the year and the country around presenting the bleak and barren appearance and sometimes of vegetation of extreme northern regions. In other places the heat is intense, especially on the borders of the Red Sea, and in the S. parts of it a kingdom where the feeling of oppression, occasioned by the excessive heat, is frequently succeeded by hot sunstrokes, which raise it a third (the Abyssinians) to 196 the annual height being about 110°. The mean temperature at Ankobar the capital of Shoa, in June 1842 was, according to Major Harris 69° 1 and in January of the same year 53°. In the lower districts the intensity of the heat gives rise to various exanthemas, which occasion numerous fatal diseases. The rains, always accompanied by tremendous tempests begin in June, and continue till September during which period they are so violent as to put a stop to agricultural labour and all other out-door operations. But after they have ceased, pastures and meadows are clothed in cheerful green the hills and dunes are adorned with myriads of beautiful and sweet-scented flowers, and the sides of the mountain ranges become one sheet of the most luxuriant vegetation. —(Harria, vol. II p. 272.) The finest months of the year are those of December and January.

Vegetable Productions.—Although situated within the tropics, the vegetable productions of Abyssinia are nearly those of the temperate zone. The principal grains are millet, barley, wheat, maize, and tef. The wheat is of the finest description, and the bread made from it has been praised by all travellers who have visited the country. Tef (the Abyssinians) a very small seed, is a favourite with all Abyssinians. The bread made from it is soft and spongy with a coriander taste, and is said to be wholesome though not pleasant to the taste. There are four varieties of this grain, two brown and two white the latter is the finest and the most esteemed. Great trouble is taken to improve the cultivated sorts of grain, by changing the seed-corn at every season, and sometimes by sowing promiscuously different sorts to produce new varieties. The result is a prodigious diversity. There being no fewer than 24 varieties of wheat, and 16 of barley. Two crops are obtained yearly the seed being sown in one field while the crop is being gathered in the next. In some places there are three harvests within the year. Large quantities of a plant called *awee*, resembling the banana, are raised and used as bread. It is said to be extremely agreeable. The leguminous

however cannot certainly be extended either to the Danakil or Galla tribes, both of which are notorious for ferocity and cruelty. The Abyssinians are irritable, but easily conciliated. The religion of Abyssinia is Christianity—which became the national religion in the fourth century—Islandia and Judaism. The Christians are divided into three hostile parties all deeply sunk in superstition. They baptize their male children after 40 days, and their female after 60. They attach great importance to fasting and have preserved many Jewish customs. The Mahometans entertain little zeal for the religion they profess, few of them having the least knowledge of the Koran though fond of quoting its marked expressions. They live on good terms with the Christians, but are greatly inferior to them in morality. The Jews live chiefly in the neighbourhood of Gondar and Shalga and in the N.W. of Lake Dembea. They are extremely ignorant, but are much more laborious than the other Abyssinians. They never carry arms, either for attack or defence, and maintain their own poor none of whom they will allow to beg. In nearly all the provinces and districts, marriages are performed with great simplicity and are as easily dissolved but after a third divorce men can neither contract another regular marriage nor receive the sacrament unless they become monks of whom there are two classes. In some places, matrimony is solemnized by the church the contracting parties agreeing to abide by each other for life but this is of rare occurrence while the fidelity with which the vows are kept may be doubted. The servants of Abyssina, says M. Gobat, are generally more faithful than in Europe while children are more severely punished by their parents for theft than for any other offence.

The barbarous practice of eating raw flesh at their feasts while it is yet warm and quivering is one of the most extraordinary manifestations of their uncivilized condition and brutal propensities. The cannibals however which Bruce describes as forming a feature of these feasts, have been denied by both Gobat and Dubouche.

The administration of justice in Abyssinia, is sufficiently simple and almost always extremely corrupt. There are no lawyers. If any one has a complaint against another he will sue before daybreak in order to go and cry before the house of the governor of his district, till he hears him. Then the accused person is summoned when the accuser and accused put questions to each other alternately in the presence of the judge. The sub-governors being easily corrupted by bribes all important cases are presented to the governor-general, or Dergam who usually gives himself much trouble to discover the truth.—(Gobat). The judge has the power to execute the fate of a murderer thus long left to the will of the relations of the deceased, unless the latter have been a stranger when the Dergam acts the part of prosecutor. The price of a man is 250 dollars.

Language.—The Gera language was anciently that of Abyssinia, and remained so till the 14th century of the Christian era, when it was supplanted by the Amharic, which is now the prevailing language of the country and though spoken in a great variety of dialects is the only one which has assumed a written form. Its literature however is very scanty there being only according to Harris, 110 volumes extant in the whole of Abyssinia, and these are nearly all of a theological nature. The ignorance of the nation generally is deplorable, these children only receiving the rudiments of education who are designed for the service of the church. Writing is a work of great labour in Abyssinia, even to the practised scribe. The dilatory management of his awkward implement is attended with gestures and attitudes the most ludicrous. Under many convulsive twitches of the elbow they style a carded fart to the mouth, and the end being snared between the teeth is manifested in a sort of nasal twaver. Throughout the duration of the necessary preliminary the narrow strip of dirty vellum is held at arm's length, and viewed sidelong on every side with looks of utter horror and dismay and when at last the stick descends to dig its furrow upon the surface so terrified schoolboy with the breath of the pedagogue hanging over him ever took such pains in penning his potboilers, as does the Abyssinian professor of the art of writing in dabbling his strange hieroglyphics upon the scroll.—(Harris, vol. ii. pp. 180-181). After reading this description it will not surprise the reader to

learn that 17 years have been employed in transcribing a single MS. The ink used in writing is a mixture of gum-arabic, mixed with lampblack which acquires the consistency of graining ink, and retains its intense colour for ages. The pen is the reed used in the East, having no nib and the inkstead the sharp end of a cow's horn stuck in the ground, the writer squinting beside it.

History.—The Abyssinians were converted to Christianity in the time of the emperor Constantine, by some missionaries sent from Alexandria. In the sixth century the power of the sovereigns of their kingdom had attained its height, but before another had expired the Arabs had invaded the country and obtained a footing in Adel though they were unable to extend their conquests further. For several centuries subsequently the kingdom continued in a distracted state, being now torn by internal dissensions, and now invaded by external enemies. To protect himself from the last the emperor of Abyssinia applied, about the middle of the 15th century, to the king of Portugal for assistance promising at the same time, implicit submission to the pope. The solicited aid was sent, and the empire saved. The E. catholic priests having now ingratiated themselves with the emperor and his family endeavored to induce them to renounce the tenets and rites of the Coptic church and to adopt those of Rome. This attempt however was resisted by the ecclesiastics and the people and finally ended after a long struggle, in the expulsion of the E. catholic priests in 1632. The kingdom however maintained its integrity and independence till the 18th century when it was overrun by the Moors and Gallas, and finally dismembered. It now consists, as elsewhere mentioned, of a number of petty independent states, the principal of which are enumerated and referred to at the beginning of this article. The princes of the blood-royal now wander over the country unheeded and unprotected attending themselves to any chief who may be willing to acknowledge and support them. The form however is still retained of placing the crown upon the brows of a descendant of the ancient line of Solomon who is content to be a mere puppet in the hands of the temporary ruler, enjoying a stipend of 800 dollars per annum, with some paltry revenues.—(Harris, vol. ii. p. 10). Some account of the commerce of Abyssinia will be found in the notices of the different provinces particularly Shoa. Pop. estimated at from 4 000 000 to 5 000 000.—(Harris *Highlands of Ethiopia* Johnston's *Travels in S. Abyssinia* D'Herbier, *Second Voyage dans le pays des Adels et le Royaume de Shoa* *Journal of the Rev. Messrs Isambard and Knapf* *Explor. Reses in Abyssinia* Balbi *Sommerfelt's Physical Geography*).

AGAPULCO, or AGOPONETA, a tn. Mexico prov. Guadalupe, between the rivers St. Pedro and de Coahuila about 40 m from where these united streams fall into the Pacific Ocean. It is the chief place of the district and is about 450 m N by W Mexico lat. 22° 23' N lon 100° 40' W. It is partly built of mud, with a spacious rural-like square shaded by fine trees, a quaint old church and a convent of the Order of St. Francis. From an account given of it by Lorez Wiles, of the U. States navy, it seems to be a gay and somewhat profligate little place. The country around it fertile and yields the means of subsistence almost spontaneously—a circumstance which goes far to account for the idleness and entire exemption from care, which seems to be here so general. Cacao, bananas, guavas melons, and many kinds of fruit, are produced in the vicinity in great abundance.

AGAPULCO or Los Reyes a seaport to Mexico, prov. of that name 180 m S. by W from the city of Mexico lat. 16° 50' 49" N lon 99° 52' W (a). The greater part of the town is on the sea-shore. The houses in consequence of the frequency of earthquakes are never built above the ground floor those of the lower orders are of cane thatched. Those of the better class are formed of mud and straw generally from 3 to 4 ft. in thickness in the walls. The latter are generally tiled, to afford ventilation and avoid insects, which are numerous and troublesome. The market is indifferently supplied but fowls fruit, and vegetables are readily obtained. Human life is held here in little estimation and a proneness to violence so general, that the inhabitants seldom leave home unarmed. The peasantry also are disarmed before entering the town and receive their passes and receipts for arms, which are retained on re-passing the boundary. At a short distance

from the town, on a promontory running into the sea, is situated the castle and fort of San Diego, capable of mounting 60 guns, but little more than half this number are actually mounted.

The garrison is stated at 500. The fort, though constructed by the best engineers of the day is unfortunately situated, being commanded by every accessible height in its neighbourhood. The trade of Acapulco was formerly considerable, but is now almost wholly confined to San Blas, (prov. Guadalupe, 740 m. to the N. W.) It has still however a little coasting trade with Luna Grayaguai and Callao. The chief exports are cochineal, indigo oil and a few skins. The imports are cotton, jewels raw and prepared silk, and spices. When under Spanish dominion, Acapulco was famous for its trade with the Philipinas, and for being the resort of the celebrated Manila galleons. It was then a place of great note, and remarkable for the high tone of its society which can attest principally wealthy Spaniards who acted as agents for houses in Mexico. All this, however, together with the general prosperity of the place, was annihilated by the edict of 1808 which required all old Spaniards to quit the territory—an edict which was enforced with merciless rigour. The ruin of the town has been further promoted by natural visitations—earthquakes and inundations of the sea, no fewer than nine of the former having occurred within little more than a century, namely between 1522 and 1853. Several of these were so violent as to destroy the town entirely. The last which occurred in 1853 demolished all the churches, and did not leave a single house undamaged. Some of these visitations were accompanied by violent influxes of the sea, which on more than one occasion, covered the Plaza to the depth of 10 ft. The town itself is extremely unhealthy the air being moist, still, and intolerably hot, but at a little distance, a refreshing breeze constantly blows. An attempt was made to procure an admission of fresh air into the town, by making an artificial opening in the rocks by which it is shut in, but with no perceptible effect. The bay or harbour of Acapulco is esteemed one of the finest in the world for its size. It is of easy access, has sufficient depth of water, excellent anchorage, and is perfectly secure, being so completely land-locked that it resembles a mountain lake. On the N. and E. sides, it is shut in by mountains ranging from 2000 to 2500 ft. high, on the W. by heights varying from 300 to 500 ft., and at its entrance, it is protected from the heavy seas of the Pacific, by an island of oblong figure, which forms two inlets, or outside the principal of which is the S. side. This fine harbour is capable of accommodating 100 vessels of the line, with moorings of half a cable range or one cable number. Pop. consisting chiefly of missionaries and fishermen, 3000.—(Baker's *Voyage round the World*, Commercial Traveller, *States of Mexico*, &c.)

ACALA a river Brazil prov. Para. It rises in about lat. 5° S. flows nearly due N. and after a course of about 150 m., falls into the estuary of the Para about 10 m. above the town of that name. lat. 1° 40' S.

ACALU a In Peru, on the river Rio San Juan 20 m. from the shores of the Pacific, about lat. 1° N. lon. 76° W. It is built on a fine plain. Its port is Port Luis, an open roadstead, with good anchorage, but the landing difficult. Pop. 6000.

ACARNANIA, a district, now Greece, and, along with Eolia, forming a nome or dep. in the N.W. part of the country as now divided, having the Gulf of Arta on the N., and the Mediterranean on the W. It contains sulphur and coal, is naturally fertile but indifferently cultivated. It is well wooded, and has several beautiful lakes, the largest of which are Lakes Ambrakia and Ozero, the one about 7 m. in length, the other about 5, both having an average breadth of between 2 and 3 m. The chief town is Molossini.

ACASTH-MALBIS a par. England, co. York E. Riding area, 1730 ac. Here is a college founded by H. Bailiignon. 1 op. 321

ACATEL a, a tn. Mexico, prov. Puebla, 12 m. S.W. Tehuacan. The valley in which the town is situated contains a considerable number of Indian families, and several cultivated estates. Various other small Indian settlements, in S. America, bear the same or a similar name.

ACATEL a tn. Mexico, prov. of and 60 m. S. from Puebla 123 m. N.E. Mexico, on the left bank of the Yopoc lat. 17° 59' N. lon. 98° 11' W. Its principal trade is in salt procured from the salt marshes in its neighbourhood. The majority of the inhabitants are Indians or of Indian extraction.—**ACATL** is also the name of six different Indian settlements in New Mexico.

ACADIA, a tn. Naples, prov. Capitanato district of, and 6 m. S. from Bovino. It has a parish church, and a *monte-dipendente*. Agricultural produce of all kinds, fruits, &c. are abundant here and the pastures in the neighbourhood are extensive. 1 op. 3415

ACATELURA a tn. Naples prov. Juvenata 18 m. N.W. Montepeloso. It has a parish church and a *monte-dipendente*. The district produces wine, grain, fruits, chestnuts, flax and hemp, and abounds in good pastures. 1 op. 3140

ACLIANO a tn. Naples prov. Abruzzo II. It is situated at 10 m. N.E. from Aquila, and 14 m. N.W. Sulmona in a valley between two hills, having an agricultural pop. of 3.

ACCONBLEY or **ACCONBY** a par. England co. Herefordshire, area, 1001 ac. 1 op. 141

ACCUAH or **ACCUA** a tn. and British settlement in W. Africa, on the Gold Coast territory of Ashantee 75 m. N. Cape Coast Castle lat. 5° 31' N. lon. 0° 11' W. (N.) It is situated on very low ground, and is intersected by deep water-courses. The native dwellings are miserable enough, but some of the English houses are large and commodious and well adapted for the climate. The principal occupation of the natives is search for gold and manufacturing it into trinkets. Their implements are few and extremely rude, but they contrive to make very beautiful chains, the value of which is enhanced by the parity of the metal scarcely any alloy being admitted. The exports from Accra are gold dust, ivory, gums, palm oil, coffee, and the great *monte-dipendente*. The imports are chiefly cotton goods, earthenware, muskoka, knives, gunpowder, beads, ornaments, tobacco, &c. Accra is under the jurisdiction of Cape Coast, and is the most eastern of the British factories on the Gold Coast. The Dutch have each a factory here—that of the former is called Christiansburg the latter is unimportant.—(Allen's *Voyage to Accra*.)

ACCRINGTON (New), a tn. England co. Lancashire, lon. and 4 m. E. from Blackburn. It has a handsome new church three dissenting chapels, and a national school. The inhabitants are mostly employed in cotton factories weaving and calico printing: there being here some large establishments for these purposes. Near it is Old Accrington, having 2166 inhabitants. Pop. 8106

ACUMORI a tn. Italy Naples prov. Abruzzo II. It is situated on the left bank of the Tronto, having a large church three convents, and about 8700 inhabitants.

ACUERO a vil. Spain, Extremadura, prov. of and 48 m. N. from Cáceres, and 34 m. N.N.E. Alentejo, on the S.E. slope of a steep hill. It is tolerably well built, and has two squares several steep streets, an ancient parish church, chapel of ease, town hall, hospital, prison, two schools, a cemetery and several fountains of excellent water. The inhabitants are chiefly employed in weaving duffel running cattle, and in making oil and wine. In the vicinity is a forest of remarkably fine chestnut trees. Game is plentiful. Pop. 2366.

Acorno is also the name of several other small villages in Spain.

ACHERENZA [anc. *Acherenza*] an anc. archi-episcopal city Naples, prov. Basilicata, about 14 m. N. E. Potenza. It was formerly the principal city of the province, but has now fallen into decay. It has a cathedral, a castle, two convents, a grammar school, and an hospital. Pop. 5480.

ACHERNO a town Naples prov. Principato Citra, in a valley surrounded 17 m. N. E. E. Salerno. It has a cathedral and parish church, and is the seat of a bishop, suffragan of Salerno. There are here a *mont-de-geld*, a paper manufactory and a forge. Pop. 3500.

ACERFA, a city Naples prov. Terra di Lavoro 9 m. N. E. Naples the see of a bishop, suffragan of the archbishop of Naples. It has a cathedral seminary and *mont-de-geld*. Its situation is extremely unhealthy but the country around is fertile. Pop. 7781.

ACILIA a district, anc. Greece, in the Morea, now included in the modern zone, or district, of Achaea and Elis, which extends along the shores of the Gulf of Patras and Lepanto and the Ionian Sea, from the river Alphion, on the W. to the small stream, Styra, on the E. The esp. Patras (anc. *Patras*) of the 12 ancient cities, is the only one now of importance, even the sites of some being doubtful or unknown.

ACILIA *ACHEN*, or *ACHERN* a small kingdom, and of the isle of *Patras*, stretching along the E. coast as far as Diamond Cape, and along the W. coast to Haros bounded southwards by the Bætic country and having an area of about 1500 sq. m. The country is sandy, but fertile and has several rivers, one of which flows in an other part of the island and it is traversed by a ridge of hills from Achen Head, towards the S. E. till it joins with the Kimpang mountains. Its three principal streams are the Sinala the An. nababo, and the Achen. Among its vegetable products are cotton, rice, and many kinds of fruits and some attention is paid to the rearing of cattle and horses, which latter though small are spirited, and much sought after for the Malacca market. Of other animals it are goats, birds abundance of game and fish and hawks as elephants, which latter frequently do considerable damage to the rice crops. And also gold and copper mines and manufactory of gold and silver thread silk cotton, firearms, and gunpowder. It has a considerable trade exports gold, precious stones, betel leaves, camphor pepper sulphur &c. and imports cotton goods cloth, salt, iron, opium, glass, and European manufactures.

The inhabitants are partly Battas, and partly Malays and more laborious, heavier cleaver possessed of more information regarding foreign countries, and as a whole more accountable in their dealings than the other inhabitants of Sumatra who rank sufficiently low in the scale of honesty though little dependence must be placed on the good faith of merchants of the capital. In religion, they are idolaters, excepting the worst people who are Mahometans, and possess many mosques. When a young man wishes to marry he pays a certain sum to the father of the bride but previously to doing so, he must be perfectly satisfied that his intended has no personal defects otherwise the match is broken off. The wife and children become the property of the husband who may pledge or sell them at his pleasure Polygamy is permitted and, by the rich, it is practiced. The king who is called *Tasikin* or *master* receives his revenues in kind. The government is hereditary and despotic, and the laws are severe.

Achen was visited by the Portuguese as early as 1506. The Dutch arrived in 1593, and, in course of the next century overran it more than once. Ultimately however it was settled as an independency in alliance with Holland. Its prosperity has decreased considerably since it was first conquered. The extent of its population is uncertain but it is estimated at 300,000. — (Van der Aa's *Nederlandsche*).

ACHEN a town Saxony, on the above state on a river of the same name, a branch of which flows through the town, and about 14 m. from the sea lat. 5° 23' N. lon. 95° 23' E. (c.) It stands on a plain surrounded by a thick wood of palms and bamboos that runs along the coast. The houses are built of bamboo and rough timbers, and stand apart from each other. They are mostly raised on piles some feet above the ground, in order to guard against the effects of inundation.

There is here a palace belonging to the Sultan an ancient structure, surrounded by a moat and strong walls. Near the gate are several large places of ordnance two of which are old English guns, having been presented by James I to the first reigning monarch of Achen. The roadstead in which the shipping lies, is off the mouth of the river where there is a bar with not more than 4 ft. water on it at low water spring-tides and which can be passed by the vessels of the country only. The roadstead, which is gradually getting sanded up, was sheltered by several islands but is now during the S.W. monsoon and the rainy season, very much exposed. Achen was at one period a place of greater note than it is now its trade having fallen off. It was the port to which the earliest voyages to the East were almost exclusively directed and was the point first touched by an East India Company's ship. Its trade however in the commodities enumerated in the preceding article, is still considerable, particularly with Singapore, Batavia, and Bengal. Rice, bullocks poultry vegetables, and fruit, may generally be obtained here in abundance, and plenty of fresh water. The natives are said to be frugal and trading vessels are warned against placing too much confidence in them. The country about the town is highly cultivated and abounds with small villages, groups of houses, and mosques. Pop. 35,000. — (Van der Aa's *Nederlandsche* Hoorburgh's *East India Directory*).

ACHEN the name of two small rivers, Bavaria, both of which rise in the Tyrolean Alps. The one after forming *Lake Achen* falls into the Isar about 3 m. within the Bavarian frontier its total course being about 20 m. The other, called *Gross Achen*, flows in a level thal through the Tyrol into the valley of Isar, and falls into the Bavarian lake Chiem after a course of about 30 m.

ACHERN an ancient princely duchy of Baden, Middle Rhine circle, 14 m. S.W. Baden lat. 49° 14' N. lon. 8° 14' E. on the left bank of the Rhine and on the railway from Karlsruhe to Rureberg in a picturesque and fertile district of the Black Forest. The inhabitants are principally occupied in agriculture and cattle breeding plow making and beer brewing, and have some trade, for which there is a considerable weekly market. In the neighbourhood is the vast limestone asylum of Illenau. At Salsbach, not far from Achen stands an obelisk of granite erected by the French in 1819 to mark the spot where their great general, Turenne, was killed by a cannon ball while reconnoitering the Austrian army July 2, 1675. Pop. almost all R. catholic. 1938.

ACHILL an isl. and par. Ireland co. Mayo. The former—sometimes called *Eagle Island* from its being the resort of eagles—is separated from the mainland of Connemara by a narrow sound, favorable at low water and the most westerly point of the island called Achill Head 2259 ft. high, is a well-known headland lat. 53° 58' N. lon. 10° 18' W. (p.) The island itself which is the largest off the Irish coast, is 17 m. long and about 5 broad comprises 36,283 statute ac. and is very mountainous especially on the N. and W. sides, with large uncultivated intervening bogs. The inhabitants of Achill live chiefly in miserable hovels, clustered along the sea-shore. Their occupation is fishing and tilling the small patches of reclaimed land around their huts. The lake of Achillbeg which lies about 2 m. from the mainland is about 1 m. long and 1/2 m. broad. Some fine pink crystals or amethysts, called Achill diamonds have been found on the slope of a hill near the village of Keem on this island and among the cliffs on the sea-shore there was discovered about seven years ago a fine bed of limestone. At Kildurmet and Slieveamore, there are remains of old churches, with burial grounds attached at Kildurmet, also are the ruins of an ancient castle. The parish contains 51,372 ac. Pop. of island and parish 4960. — (Fraser's *Handbook for Ireland* O'ney's *Statistics*).

ACHMIN *ACHMIN* [anc. *Chasme* or *Penopolis*] a town Egypt, on the right bank of the Nile, in a fertile valley at the foot of the Mahabian mountains, 250 m. S. Cairo lat. 26° 23' N. lon. 31° 45' E. It is a place of great antiquity and was formerly one of the most considerable cities of the Thebaid but was reduced to ruins by the Arabs. The streets are spacious and straight, and are adorned by some mosques, and a bazaar. The inhabitants carry on a considerable manufacture of coarse cotton cloth, near great numbers of poultry

and cultivate the date and sugar cane but depend chiefly on the culture of wheat, which is produced in abundance, and of excellent quality. The remains of Memphis, or City of Pto., lie E. of the present town. Pop. counting of Mahomet, E. cathedral, and Coptic churches, is variously stated at 4000 to 10 000.—(Wilkinson's *N. W. Egypt*.)

ACHMUNEIN or **FAHOM** is the name of a modern village, Central Egypt, occupying the site of the ancient Hieropolis Magna, between the Nile and the river Tounaf lat. 27° 45' N. lon. 30° 45' E. The beautiful portico of the temple of Thoth formed in 1322 almost the only relic of the ancient architecture of Hieropolis but being composed of limestone, it has since been removed, and burned by the Turks for mortar.—(Wilkinson's *Modern Egypt*. Russell's *Papae*, 864.)

ACHUR a par and hamlet, Ireland, co. Sligo Pop. 718 ac. contains several villages and some fine ruins Pop. 13345

ACHRAY (Loch) a small but picturesque lake, Scotland, co. Perth, celebrated as Scott's *Lake of the Lake*. It lies between Loch Cairn and Loch Venachur

ACHTIFAD a prom. rect. headland on the W. coast of Ireland, co. Galway district Connemara lat. 55° 53' N. lon. 10° 10' W.

ACIL LEAT a hamlet in E. coast of Sicily 7 m. N. E. Catania. It is built on a large mass of basaltic lava at the foot of Mount Etna and stands about 800 ft. above the level of the sea, the port being below at the mouth of the A. is riv. It was formerly defended by a fort which is now converted into a stone pier. The houses are built of lava the streets are wide, regular and clean, and the town altogether presents an appearance of prosperity. Corn, wine, fruit and wax and sugar form the principal articles of trade, and in these a considerable business is done. The environs are fertile, and produce large quantities of hay. There is a mineral spring. The port is small with a mole built with lava. It has several commodious warehouses. Pop. 15 000

ACHEN a tn. Prussia, prov. Saxony 22 m. S. W. Magdeburg on the left bank of the Elbe, and on three sides enclosed by the duchy of Anhalt. It is walled and has four gates, two Lutheran churches and an hospital. Some trade is done in cattle grain wool mercury and wood and in shipping on the Elbe. The manufacture of clock leather tobacco and mathematical and optical instruments, is carried on. A good trade in trade cattle, and there are some breweries in the place. Pop. 4100

ACHLAM, the name of two parishes in England both in the co. York.—1. *Johnston East E. Riding* 29 0 ac. Within the par. are some Roman remains. Pop. 763.—2. *A. Ham West E. Riding* 14 6 ac. on the Stockton and Darlington Railway. Pop. 110

ACKWORTH a par. England co. York. W. Riding 4 6 m. Friends school. Pop. 1075

ACKLE a par and vil. England co. Norfolk 3209 ac. Large fair on W. summer day. Pop. 720

AC-MFCHET See *CHIFFRHOUL*

ACQUANIMO a tn. N. W. Africa, on the left bank of Old (Ghazal) river lat. 6° 40' N. The banks of the stream which is here about 40 yards wide are well cultivated (Capt. Beccoff, who explored the river in 1846 says, that the inhabitants seemed alarmed at the appearance of the vessel and hastened to arm themselves but were easily prevailed upon to believe that their visitation was friendly not hostile. On being satisfied of this, they immediately became quiet and peaceable. Several women were observed employed in boiling palm oil in native earthen pots, in the open air.

ACOMB, or **AKKUM** a par. England, co. York Assize 2 74 ac. on the Great North of England Railway. Pop. 319

ACONACACI a prov. Chili S. America, bounded E. by the central ridge of the Cordillera of the Andes, W. by the prov. of Quilva and the Pacific Ocean N. by the prov. of Copiapo, and S. by that of Santiago, extending from E. to W. about 40 m. and from N. to S. about 110 m. It possesses a considerable portion of cultivated ground, and is watered by two principal rivers flowing from the Andes, namely the Putaendo from the N. E. and the Aconcagua from the S. E. The valley of Aconcagua is a tract of level ground of an oval form about 2500 ft. above the level of the sea varying in

width from 1 to 8 m. and extending W. to the ocean about 20 m. It is watered by pure streams, and covered with shrubs and hamlets, surrounded by orchards and vineyards. In this province contains the loftiest summit of the Andes, the peak of Aconcagua rising 23 910 ft. above the sea situated in lat. 32° 38' 30" S. lon. 70° 30' 30" W. It has been called a volcano, but erroneously there being no evidence of volcanic action at any part of the mountain. The height of the peak here given, is from Mrs. Somerville's *Physical Geography* other authorities make it several hundred feet less. In Johnston's *Physical Atlas* it is stated to be 23 200 ft. only. But, even at the lowest estimate, it would still remain the loftiest summit of the Andes. The province is divided into four districts—Putendo, San Felipe, Santa Rosa, and Concomar. The whole is parcelled out, with few exceptions, into small farms, separated by colonnades of rammed earthen walls, and irrigated by numerous well-directed channels. Vegetation proceeds rapidly. The principal produce is grain, maize, beans, pumpkins, grapes, melons, olives and other fruit and garden produce, with a great quantity of wild marjoram. Orchards and vineyards are numerous and barrenness of lucerne, for the fattening of cattle are abundant. The climate here is hotter in summer and more rigorous in winter than in any other latitude of the coast. The capital is San Felipe. 1 op. of prov. 90 000

ACUACAGUA (also *San Fila Vepu*) now called *San Felipe*, a city and chief place of above prov. about 60 m. N. E. Valparaiso 15 m. W. from the base of the Andes and about the same distance from the W. end of San Isidro or Villa Nueva. It is laid out with great regularity in the form of a square surrounded by extensive *alameda* or public walks, planted with Lombardy poplars. In the centre of the town is a large open square, one side of which is occupied by the townhall and municipal offices opposite are the church and barracks and the remaining side consists of shops and private dwellings. The houses are all of one story and are in a good style of building. Buses and postmans are seen in every courtyard, and the gardens are well filled with various fruits. The houses on all other parts of hill have no fireplaces instead of which *brassers* or pans of live coal are used when heat is required. The streets are tolerably well lighted and watched at night. Pop. 12 000.—[*Notes of a Tour Exploring Expeditions*, vol. 1 p. 192.]

ACQUA-NUOVA a river in Sicily, co. Agrigento, co. of Agrigento, on the F. bank of Old (Ghazal) river between lat. 7° and 8° N. and lon. 15° and 16° W. about 70 m. E. from Idalia, on the Nigru. It is in the form of a crescent, and about 3/4 of a mile in length, but the houses are of the poorest and meanest description. Captain Beccoff, who explored the river in 1842 describes the inhabitants as a fine-looking and intelligent race. Both sexes, he adds, wear around the middle the usual cloth of European or native manufacture, with strings of beads round the neck, wrists, and ankles. None but children go naked; the females wear laceless and legless, made of cow resin. The principal use of their finger rings is to grow with each other which is considered best, as in many places on the Nigru a mark of greatness. Pop. about 4000

ACQUA a vil. Tuscany prov. Livorno 16 m. E. Liphorn celebrated for its mineral springs and baths which have much frequented and have been resorted to since the 13th century

ACQUAPENDENTE (anc. *Acquapendente*, or *Agua Terna*) a small tn. Papal States, delegation of, and 1 m. W. by N. from Orvieto, and 55 N. W. Rome, situated on the summit of a rock over which several cascades are prompt whence its name. It is ill built and derives its only interest from its singular position. Previously to the 17th century it had few inhabitants but Pope Innocent X. having removed the episcopal seat to St. Peter's, in 1647 it became a place of some importance. It is the birthplace of the epaunant Fabrons ac Acquapendente, under whom Harvey studied at Padua. In the last century Acquapendente was visited by a disastrous earthquake. Pop. 3000.

ACQUAVIVA, a tn. Naples prov. Terra di Bari district of, and 18 m. S. from Bari in a healthy situation at the foot of the Apennines. It is surrounded with walls and ditches; has a handsome parish church several convents, two hospitals, and a most *degrate*. Pop. 5500

ACQUI a tn. Savoy, co. prov. of same name, on the left bank of the river Bormida 18 m. S. W. Alessandria

It is the seat of a bishop suffragan to the archbishop of Turin. It contains a synagogue, a theological seminary and a royal college. There are here, also, warm sulphurous baths, which draw a great many visitors. The manufacture of silk is carried on to a considerable extent. Some ruins still remain of the *Akropolis* of the Romans. Pop. 7000 of whom 479 are Jews.—The province of Acre forming part of the government of Alexandria, comprehends an area of about 534 sq. m. It contains large tracts of fertile land, and some considerable mines of iron and other minerals. The principal employment of the inhabitants is winding and throwing silk. Pop. 91 000.

ACRE *St. Jean d'Acre*, or *ACCOR* an ancient fortified town and seaport, Syria, on the E. coast of the Mediterranean lat. 33° 57' N. lon. 35° 30' E. (n) on a low point of land stretching into the sea, forming the N. E. side of the Bay of Acre, the promontory of Mount Carmel being on the S. W. Previous to its destruction in 1819 by Ibrahim Pasha, the city although it had often before been reduced to a state of decay presented a very beautiful and imposing appearance, from its lofty walls and mosques, overtopped by trees from the mound, and surrounded on the outside by orange lemon, and palm trees but like all oriental towns its streets were narrow and filthy

ACRE. ENTRANCE OF THE HARBOR OF THE PASHA. From Fortin. Voyage dans le Levant.

The houses were solidly built with stone, with flat roofs the basins mean but tolerably well supplied. The principal objects were the mosque of Dymcar Pasha, the seraglio, the granary and the arsenal. It had in former times a considerable trade its exports with France, Venice, England, and Holland—whence oil, cotton, skins, and other goods were brought hither—have consisted chiefly of grain and cotton its imports of rice, coffee, and sugar from Damascus. All this has been long since changed and this bulwark of Syria is now little better than a heap of ruins. In 1859 it was besieged for nearly six months by Ibrahim Pasha, during which 35 000 shells were thrown into it, and nearly all its buildings, public and private, destroyed. Before it had recovered from this calamity it was bombarded (November 2 1840) by an English fleet, consisting of seven line-of-battle ships, four war steamers, four throwing shells, and some smaller vessels, aided by two Austrian frigates, the whole being commanded by Admiral Sir Robert Stopford. After two hours heavy firing a magazine blew up with a tremendous explosion, destroying two entire regiments of Egyptian infantry and every living creature within an area of 60 000 square feet. On the following day the town was taken possession of by the English and Austrians. But these more recent calamities by no means comprise the

entire history of its misfortunes. In 1104, it was captured by the first crusaders in 1110 it was taken by Baldwin king of Jerusalem 77 years afterwards it was recovered by Saladin, and in 1191 it was retaken by the Christians under Richard Cœur de Lion and Philip Augustus, and given to the knights of St. John of Jerusalem from whom it received the name St. Jean d'Acre. The Christians retained possession of it for a century but, in 1291 it was retaken by the Saracens, an event which terminated the Latin domination in the Holy Land. From that period till the end of the 18th century the town fell to decay although partially repaired, and, for short intervals, occupied by various contending parties. It was later improved and fortified by Ahmed Dymcar the Turkish Pasha of Sidon whose residence it then became. In 1799 it was for 61 days besieged by the French under Bonaparte, who, by the brave resistance of the Dymcar aided by Sir Sidney Smith, were at length compelled to abandon the siege. The last event of importance in its history took place in 1840 as recorded above. The state of the present town was at one time occupied by a Phœnician city called *Archo* which was subsequently changed by the Greek conquerors of Egypt to Ptolemais. Pop. about 12 000 of which one-third are Turks.

ACRI a tn. Naples, prov. Calabria Citra, district of and 13 m N. E. from Cosenza, in a fine salubrious situation and fertile country. It has six parish churches and an hospital. Pop. 7651.

ACRIEF a par. England co. Kent 1084 ac. 5 m N. N. W. Folkestone. Pop. 198.

ACRO-CORINTHUS a preceptory and somewhat conical rock, near the city of Corinth in Greece, on which stood the ancient acropolis or citadel of the place and a temple of Venus. It is about 2000 ft. above the level of the sea, and is the site of a modern fortification, which is considered one of the strongest in Greece.

ACRO, or *Arca*, a vil. Lower Hungary co. of and 8 m S. S. W. from Komorn, with a castle and park, a R. catholic and a Calvinistic church, a vineyard, and four mills. Pop. 3400. *Arca* was the scene of a sanguinary and unequal battle between the Austro-Russian army and the Hungarians, on July 16 1848.

ACRA. See *AK HOMAN*.

ACTEON INLAND and **REEF** situated at the S. entrance into D'Entrecasteaux Channel Van Diemen's Land. lat. 41° 34' S. lon. 148° 59' E. (n) The rocky shoals forming this reef are depressed over a space 8 m in length by 1 m in breadth, and are extremely dangerous, having been the cause of several disastrous shipwrecks including that of the *Acteon* from which they derive their name. Some of these unfortunate occurrences were attended with fearful loss of life, the vessels having been, in several instances, convulsed and emigrant ships.

ACTIUM a promontory and tn. anc. Greece situated near the entrance to the Gulf of Arts (*Ambracian Gulf*) on the N. coast of Acarnania. Two exiles claim to be identical with the former Actium—One at the entrance of the gulf the other at Cape Madonna, a few miles to the eastward. From the descriptions of ancient geographers the former appears to be the true Actium. The town—which received its name from the Greek *actos*, a promontory—contained a temple dedicated to Apollo but the place owes its fame entirely to the naval battle fought in its vicinity between Augustus and Antony Sept. 2 B.C. in which the latter was defeated Augustus in commemoration of his victory enlarged and beautified the temple of Apollo inscribed quinquagennial games called *Actia*, and built the city of Neopola, on the opposite coast, near the modern Preveza.

ACTON alone, and with various suffixes, is the name of a small tn. and of several parishes and townships in England—1 *Acton*, par. co. Chesh. and union Nantwich from which it lies 2 m S. W. It has a church, two Dissenting chapels a free grammar school and two national schools. Pop. of the par. which includes 16 townships, and comprises 15,542 acres. 1815 in 1851—2 *Acton* a township, Cheshire, 29 m by rail from Liverpool. Pop. in 1851 424—3 *Acton*, or *Acton*, a par. co. Suffolk annual fair July 6. Area of par. 2511 ac. Pop. in 1851 639—4 *Acton-Benchington* a par. co. Worcester 1859 ac. great quantity of hops. Pop. in 1851 208—5, *Acton-Greave* a township, Cheshire 1004

so. on the Birmingham Railway 1 op in 1851 173 —6, *Acton-Round*, a par. co. Selop 2126 so. Pop. in 1851 168. —7 *Acton-South*, a par. co. Selop 1889 so. near a branch of the Tems. Pop. in 1851 215

ACTON, a vil. and par. Englad. co. Middlesex, hum. Onelestone, about 3 m. W. London, on the road to Oxford pleasantly situated on a slight inclination. It consists almost entirely of one long street, and has nothing very attractive in its appearance although there are many handsome villas in its vicinity. There are here, besides the parish church, an Independent chapel and a R. catholic place of worship, several charity schools, and a set of almshouses for 12 poor men, and the like number of poor women. In the vicinity is a mutual spring formerly held in great repute. The village of East Acton is at the distance of about 1½ m. Area of par. 228½ ac. Pop. 2509

ACTON BURNELL, (vna. *Exborne*, or *Out-town*) a li and par. Englad. co. Salop. hum. Condover 7½ m. S. Shrewsbury picturesque situated on a slight acclivity near the Stratton Hills, and remarkable for containing some buildings illustrative of the ecclesiastical and domestic architecture of the 13th and 16th centuries, and for having been the scene of the proceedings of a parliament held here in the 13th year of the reign of Edward I. in which was passed the Statute Merchant Act, appointing the mode by which a statute merchant is to be made and the various procedures to be observed by creditors in recovering debts, &c., &c. There is here a beautiful transfarm church, built by Bishop Burnell in the early part of the 14th century and one school not included partially on the national principle. Area of par. 214½ ac. Pop. 416

ACTOPAN, a town and district, Mexico the former 65 m. S. N. E. the city of Mexico lat. 20° 17' 28" N. lon. 98° 43' 52" W. (1) It contains an ancient convent of the order of St. Augustin. Its population consists chiefly of Ochooms Indians, of whom it there are between 2000 and 3000 families with a small proportion of Spaniards, mestizos and mestizas. The principal occupation of the inhabitants of the district is raising goods and sheep which are raised, particularly for those about and for. The land is fertile, especially in the vicinity of the town, but is much encumbered with prickly plants, thorns &c. The climate is mild. Raining birds, including the nightingale, are numerous all over the district

ACTU, a small seaport town. N. coast, Hayti or St. Domingo lat. 19° 47' 40" N. lon. 72° 27' 15" W. (L.) 70 m. E. Cape St. Nicholas —**ACTU**, is also the name of a small river in the same island, which falls into the sea at the neck of Point Abaco.

ACTUO or **ACTUO**, a lake, Chili prov. of, and 38 m. S. S. W. from Santiago is about 9 m. in length, and 3 in breadth and discharges itself into the river Maypin by a small stream, leaving a course of about 15 m. The scenery around it is remarkable for its beauty. It abounds in fish and aquatic fowls, including swans and flamingoes. In a mountainous ridge close by are the gold mines of Alsua.

ADAFUOLIA a large tree. Palaetes country W. Africa lat. 15° 6' N. lon. 1° 42' E. It is situated in a dry healthy plain, bearing a such red soil and is enclosed by a thick clay wall 18 ft. high. There is here an extensive market for slaves, and for other less objectionable wares, such as Horns, armlets, bracelets, and anklets, native razors and beads, cloths of different kinds, and carved wooden bowls, bows, arrows, carterware, porcelains, &c. It is said to be as large as Abomey (pop. 24 000), and its trade in native merchandise nearly equal. Adafuolia was the extreme limit of Mr. Dummer's travels towards the interior and there he obtained, from an eye-witness, an interesting and minute account of the death of Mungo Park. — (*Travels in Travels in Western Africa*).

ADAJA, a river Spain, Old Castile, rising near Plasencia in the Sierra de Atocha. It passes on the Z. direction for about 20 m., when it turns abruptly to the N., and, passing the city of Avila, falls into the Duero about 15 m. S. Valladolid after a course of between 80 and 90 m.

ADALIA, **BATALIA** or **BATALIA** (vna. *Adalia*), a seaport, Anatolia, Asiatic Turkey at the head of the gulf of the same name lat. 36° 52' 12" N. lon. 30° 45' E. (L.) pleasantly situated on the slope of a hill rising to a height of 75 ft. above the level of the sea. The houses being

built circularly round the harbour the streets appear to rise behind each other like the seats of a theatre. There is a bazaar or collection of shops, where various articles of European manufacture are displayed. The neighbourhood abounds with orange, lemon, fig and mulberry trees with vine, sugar cane, &c. and the view from the higher houses is said to be very fine, the country being fertile, and the mountains poetically beautiful. In the town are fragments of ancient buildings, columns, inscriptions, and statues, which are generally built into the walls of the town with care and some taste. Adalia is begirt with a double wall. Scarcely a ship rides in the seaport harbour a few boats occupying a port which, in early ages contained its fleet. A stream in the neighbourhood is supposed to have been the ancient *Cyrenoides*. The Gulf of Adalia, at the head of which the town is situated, is a deep and broad indentation, being about 100 ft. in width at its entrance and 50 in length. Cape Kholdonia forms its W. and Cape Anamor its E. entrance. Pop. of town, 8000

ADAM BAY Australia, N. W. coast lat. 12° 10' S. lon. 131° 45' E. 70 m. N. W. Victoria, Port Essington. It stretches 6 m. inland, and is 10 m. in breadth at the entrance with 9 fathoms water. The river Adelaide falls into this bay. It was named by Stokes the discoverer after Sir Charles Adam.

ADAMS BRIDGE a remarkable sand-bank between Falk's Strait and the Gulf of Mansar stretching from the island of the latter name on the N. W. coast of Ceylon to the island of Ramasorum off the S. E. coast of the Ceylon. The bank is about 80 m. in length, and ½ m. in breadth and consists entirely of sand partly above and partly below water collected apparently by the surf and currents, and so far as known, unsupported by rock. It is said that throughout the whole extent of the bridge there is not above 3 or 4 ft. water at high tide in any part. There are three principal channels through the bank: one near the island of Mansar called the Tai Mansar passage a long narrow and very winding channel, having about 6 ft. water in the shallow parts with the exception of a bar opposite its N. end on which there is not more than 3 or 4 ft. water. The second passage is about 6 m. further to the W. and is called the Tunny Goodly channel is narrow in the centre, and 80 ft. deep with broad curved bars opposite its two ends, on which there is not more than 5 or 6 ft. water. — (*Major Sir's Report Hordburgh's India Directory*)

ADAMS PEAK, a lofty mountain in the S. part of the Is. of Ceylon 45 m. E. S. E. Colombo lat. 6° 52' N. lon. 79° 20' E. (L.) It is of a conical form, about 7000 ft. high, and can be seen at sea, in clear weather from a distance of nearly 150 m. It is considered sacred by the followers of Buddha, as well as by the Mussulmans of Hindoostan, and crowds of both Buddhists and Mahomedan pilgrims, annually ascend the mountain in the months of January February and March, being the dry season on the W. side of the island. The summit is surrounded by a wall about 5 ft. high, in which are two distinct openings to admit pilgrims. By the side of this wall a level path has been formed encircling the rocks, which rise to a height of about 8 ft. in the centre and are surrounded by a small wooden temple. On the top is an impression of the foot-print, and a lock of the hair of the king of Kian. The Mahomedans, however, assert that the footprint was left by Adam our first parent, who here landed his exiled son from Paradise—supposed to have been in the island of Ceylon hence the name of Adam's Peak. The impression itself appears to be a superficial hollow nearly 5½ ft. long, by about 2½ ft. broad having a border of gilded copper studded with a few grains of little value. The offerings of the devotees, consisting of copper wire, rice, coconuts, cotton cloth, handkerchiefs, betel leaves, flowers, incense, ornaments for the cover of the footprint, and a lock of the hair of the head, or a portion of the beard are forwarded at the end of the season to the chief priest at Candy. The average annual amount is about £2.0 sterling. The view from the summit is singularly magnificent. — (*Knighton's Hist. of Ceylon*).

ADAMS, the names of several towns, counties, and districts, United States.—1 A town, Berkshire Massachusetts.—2 A co. in state Mississippi.—3, A district, New Hampshire.—4 A district, New York.—5, A co. Ohio.—6, A co. and in Pennsylvania.

ADAMSON'S HARBOUR, or **PORT ESPERANCE**, a small arm of the sea on the E coast of Van Diemen's Land, d'Entrecasteaux Channel, between the estuary of the Huon and S. 101° E. is 2 m. wide at the entrance, and runs about 10 m. inland lat. 43° 30' S. lon. 147° 15' E.

ADAMSTOWN a par. Ireland, co. Wexford area, 8124 ac. contains several interesting ruins and a lofty mountain called Carrockbar said to be 8000 ft high Pop. in 1851 1846.

ADAMUZ, a to Spala, Andalusia, prov. of, and 91 m. N.E. from Cordova, situated on the ancient Murcia, about 14 m. N. of the Guadalquivir. consists of solidly constructed houses, forming about a dozen ill built streets and has four churches, an enclosed school, prison and barracks with 2040 inhabit. ants engaged partly in tillage partly in making white soap and olive oil, and in weaving coarse linens. Considerable quantities of the oil and soap are sent to Castile. (Madox.)

ADANA, an anc. m. Asiatic Turkey district of same name, on the Euxine about 21 m. from its embouchure in the Mediterranean lat. 37° N. lon. 35° E. is situated on a gentle declivity and surrounded by groves of mulberry, peach, apricot, fig and olive trees and vineyards. It is large and gloomy but well built, and contains some good bazars. It was formerly enclosed by walls, of which parts only now remain together with a Roman archway and bridge. The inhabitants consist chiefly of Turks and Armenians 10 p. 10000.

ADANAD or **ADENYRA** a m. Hindoostan prov. Malabar division Shimoga, 25 m. S.W. of Calicut, the residence of the Alwarthi Tamburac or chief of the local muns of Malabar who are styled Nambiar.

ADARKE, a vil. or small town and par. Ireland co. Limerick prov. Munster the former 8 m. S.W. Limerick and 102 m. N.W. by W. Dublin, on the W. bank of the small river Magne. It is crossed by an ancient, but excellent stone bridge of 14 arches. The houses are for the most part old and ill built, but great improvements have been effected of late years by Lord Duncannon, who is proprietor of the village. Adarke, however, is remarkable only for some extensive and interesting ruins in the town and vicinity. These consist of the remains of a monastery founded by the first Earl of Kildare in 1279 of which the tower nave and part of the choir only now exist. Of those of an Augustinian abbey on the bank of the river and of a Franciscan abbey on the S. side. The cloisters of both the latter are nearly in a perfect state. The par. is comprised in an area of 11,843 acres Pop. of town in 1851 801.

ADASTON or **ADASTON** a par. England, co. Stafford area, 510 ac. 43 m. W. by S. E. of Lichfield near the Birmingham and Liverpool Junction Canal Pop. in 1851 911.

ADDA **ADDDA** or **ADDDA** a river in eastern Lombardy formed by several rivulets which descend from the Rhodan Alps, and unite at Bormio at the N. entrance of the Valtellina valley which it crosses throughout its whole length passing Sondrio and subsequently fall on into the Lake of Como about 6 or 7 m. from its extremity. It issues south from the S. end of the Lago di Como and flows nearly due S. to Lecco, whence it takes a S.E. direction, so ultimately joins the Po about 4 m. W. of Monza. Its entire course, exclusive of its passage through the Lake of Como is 45 m. 150 m.

ADDA KUNDU an old m. in W. Africa on the right bank of the Niger about 200 m. from its embouchure. lat. 7° 44' N. lon. 6° 35' E. It is now deserted and to ruins. A model farm was established a few miles above the town in 1841 by the Niger Expedition, under the command of Capt. Prutter and at the expense of the African Agricultural Society but the death of the superintendent, the mismanagement of the settlement, and the pernicious climate, caused it to be abandoned next year.

ADDERBURY a par. England co. Oxford area, 6380 ac. on the Oxford Canal with a church and school Pop. in 1851 2310.

ADDERLEY a small m. Abyssinia kingdom of Tigre prov. Senen cap. of its district on the N.W. slope of the Sannan mountains, near the pass of Lalamed and on the route followed by Bruce, in the journey from Axum to Gondar lat. 13° 35' N. lon. 38° 3' E.

ADDEIGHOGH two par. Ireland—1 co. Mayo area, 36430 ac. Pop. 5068—2 Galway 8442 ac. Pop. 2161.

Vol. I

ADDERLEY a par. England, co. Salop area, 2850 ac., on the Birmingham and Liverpool Canal Pop. 1333.

ADDINGHAM two parishes in England.—1 **Addingham** a par. co. Cumberland area, 9520 ac. two small churches Roman road, called the "Maiden way" and Druidical monumts on the river Eden Pop. 7 8—2 **Addingham** a par. co. York W. Riding area 5478 ac. 6 m. E. by S. Ripon worsted and cotton mills Pop. 1623.

ADDINGTON the name of five parishes in England.—1 **Addington** (Great) a par. co. Northampton 34 m. S.W. Thrapston area 1230 ac. on the Northampton Canal Pop. in 1851 270—2 **Addington** (Little) a par. same co. S. of Thrapston 1170 ac. 10 p. in 1851 270—3 **Addington**, a par. and town p. co. Kent 943 ac. Druidical monumt and land spring 1 p. in 1851 220—4 **Addington**, a par. co. Surrey 9900 ac. mayor of Addington Archbishop of Canterbury's seat, 1 eld by 11 singular tenures of making and presenting to the sovereign a mass of postage at his or her coronation. It is near W. Wickham K. at and has a narrow bar of low marsh on the beach-covered 1 m. 10 p. in 1851 815—5 **Addington**, a p. co. Dorset 1320 ac. 11 m. W. N.W. Walslop fund for apprenticing poor boys 1 p. in 1851 71.

ADDIT a par. England, co. York W. Riding area 6306 ac. one Norman church several charities a farm of 1000 ac. of a Roman town and many antiquities discovered in 182 and 1840 Pop. 1160.

ADDLITHORPE a par. England co. Lincoln area 2006 ac. 74 m. F.S.E. A. 10 p. 258.

ADDOO or **ADDOO** one of the Addive Islands 10 m. in length N. to W. and 7 m. in breadth N. to S. of a crescent form convex towards the S. and concave towards the N. lat. 2° 7' N. lon. 73° 35' E. N.)

ADEI, or **ADAPTI**, formerly a prov. Abyssinia, now a separate kingdom but neither its precise position nor its limits would appear to be ascertained, unless hardly any two authorities agree as to either some making Adal and Dan each synonymous, and others including Bonanai to it a exclusion of Dardel. As usually understood, however, it would appear to be that district stretching along the F. confines of Abyssinia between lat. 10° 30' and about 12° 30' N. having the Sea of Bah-el-Mandeb on the E. for half its length and the territory of the Bonanai throughout the other half. Its entire length from N.E. to W. is thus about 160 m. It is bounded on the W. by the country of the Galla tribe but its precise limits in this direction are utterly unknown. A. indeed, is the kingdom generally it being nearly an entire blank on our maps. So far as the country has been yet explored—still a very small extent in comparison to the whole—it presents a curious formation many ex. not entirely being visible, but found in a state of activity. Herds of Java of great thickness, are also met with. The country is generally m. and barren but presents occasional patches of good soil in which various grains are produced including wheat, barley and millet. Tracts also occur covered with light green grass, on which numerous flocks and herds are reared. The climate is singularly variable, and generally very unwholesome. Both the animal and vegetable productions of A. are the same as those common to the other provinces of Abyssinia, as is also its zoology. The people of the country are of nomadic habits and would appear generally to resemble in most respects those of Dardel, with A. and are indeed spoken of as the same race by any travellers. The term Dardel being indiscriminately applied to the inhabitants of both countries. The principal towns are Tigayon and Moos.—(Giles Isenberg and Knapp.)

ADELFI ISLAND of the N.W. coast of Australia, and about 5 m. from it a small island. Its centre is in lat. 13° 28' S. lon. 121° 15' E. N.) There are several small islets near it.

ADELAIDE, a to. N. Australia, co. Adelaide, of which it is the chief place on the S. shore of St. Vincent's Gulf about 6 m. from the coast lat. 34° 50' S. lon. 138° 28' E. (N.) It is intersected by the river Torrens, which divides it into S. and N. Adelaide. The former is on flat ground and twice the size of the northern part of the town. It has also been more extensively built upon, and is the established commercial division of the city. The government house and all the public buildings and offices are in S. Adelaide. The former is a handsome building resembling a country gentleman's house in England with well kept gardens around it. Several of the

streets would do no discredit to any secondary towns in England. They are all spacious, varying from 60 to 130 ft. wide, and run at right angles with each other. The public offices and jail are on the right of the public buildings in the town with noisome. There are, however, several excellent edifices for sale, including the R. Australian Bank, which stands in a prominent position on the N. Terrace. There are two Episcopalian churches in Adelaide, each calculated to hold about 1000 persons, and having in average attendance about 300. Another church has been recently erected in N. Adelaide. There are, besides, many dissenting places of worship, all respectable-looking buildings, the average attendance at which is about 200. There is also a R. Catholic church, with an excellent school attached. It is, however, planned on too large a scale, the town continues to have a struggling appearance and will probably not see us for several years to come. At present it is pretty studded with large gum trees. Nearly every article of European produce can be had here, and often if not always, at a very little advance on home prices.

Fort Adelaide—lat 34° 48' S. lon 138° 38' E. (R. — is about 6 or 8 m. from the town, with which it is connected by an excellent macadamized road, carried, in some places, on a causeway over a swamp. It is situated on the E. bank of a large creek, penetrating the Mangrove Swamp by which the shore of the gulf is here fringed. The creek, which is from 10 to 11 m. in length, proceeds first in a N. E. direction, this portion being called the north arm, then suddenly bends round, and runs for about 10 m. to the S. Measure are now being taken for removing the port to the north arm, where there is broader and deeper water and from which vessels can yet more readily to sea than from the present port which is 3 or 4 m. further up. Fort Adelaide is a large harbour. When the colony was first established, there were, at no time even at spring tides, 10 ft. water on the bar, but having been deepened, vessels draw up to 17 or 18 ft. may be brought in during the winter months. It is a considerable safe harbour, and is loaded deeper than 1 or 10 ft. Fort Adelaide is a free port, and since it was declared so, it trade has greatly increased, though for several years it has not presented in the way of our surprise from Great Britain, consisting of the produce and manufactures of the United Kingdom, and also of the United States, and the exports to Great Britain to the value of three quarters of a million, the latter being a result of the wool which increased from 400,000 in 1834 to 1,270,000 in 1836. In 1837 Adelaide was laid out in 1837. Pop. 1840, 20,000.

(See also *Exp. into the Cause of the Adelaide*)
ADELAIDE ISLAND, in the Antarctic Ocean, lat 67° 15' S. lon 116° 15' W. (R. — discovered by Capt. Biscoe in 1831-2, who describes it as having a singularly attractive appearance with one lofty peak in the middle, shooting up to a great height and a lower range of mountains, extending about 4 m. from N. to S. The upper summits merely sprinkled with snow, but deeply covered towards their base which slopes down to the water and terminates in a cliff of 10 or 12 ft. high in the middle and in every direction to an extent of 200 or 300 yards from the edge. At a distance of 8 m. no bottom could be found with 250 fathoms line. Adelaide is the westernmost of a chain of islands lying E. N. E. and W. S. W. now called Beccia's Range, after the discoverer. These islands form a high mountainous land to which the name of Graham's Land has been given.

ADELAIDE (QUEEN) ISLANDS, a group of islands on the S. W. coast of Patagonia, at the W. entrance to the Strait of Magellan.

ADELAIDE RIVER, in W. Australia. It falls into Adam Bay (which see) and is navigable 60 m. for vessels drawing 11 ft. water, bamboo and rich alluvial flats on each side, at a distance plains openly wooded with gum trees, soil light, not sandy. It abounds with alligators. The mouth of the river is fringed with alluvial flats, extend 5 m. It was discovered by Capt. Wilkes of the *Beagle*, on Aug. 31, 1839.

ADELSBERG or ADLERBERG, a village in Hanover, prov. of 7 m. in W. of Göttingen on the right bank of the Selk River. It was church and a synagogue and the ruins of two castles, with some trade in cloth and stone linen weaving. The inhabitants cultivate tobacco and flax. Pop. 1460.

ADELSBERG, a village in Asiatic Turkey, prov. Van, 16 to 18 m. from Aklat on the N. W. shore of the Lake Van.

Though small, and many of the houses in ruins, it is a pretty and pleasant place, the approach to it being skirted by meadows and orchards. The greater part of the inhabitants live in detached houses among the gardens, while the whole village in which it is situated is occupied. The rocks are limestone and pure water runs in great abundance through the lanes, serving to irrigate the gardens. There are here great plenty of common fruits and water melons and grapes also thrive well. Coarse cotton cloths are manufactured there being about 20 looms in the town employed in the production of these fabrics. Adelsberg contains about 250 Mohammedan and 30 Armenian families. — (*Drake, London Geo. Jour.* vol. x. p. 406).

ADEL NAW, a town in Prussia, cap. of circle of same name, prov. of and 68 m. S. E. from Posen and 40 m. N. E. Breslau, in Sillesia. It lies in a flat, swampy country on the left bank of the Bartisch and has a Lutheran and two R. Catholic churches. Tanning is carried on to a small extent, and some trade is done in cattle and mercury. In the vicinity is much wood and horse breeding is successfully pursued. Pop. 1680.

ADELPHI III or FAYU III, two small islands in the Grecian Archipelago, about 40 m. N. E. Scarpanto in lat 39° 2' 45' N. lon 28° 59' 15' E. (R. —)

ADELSBERG, a market in Austria, prov. Illyria, 23 m. N. E. Trieste. It lies in an elevated situation in a dreary barren country among limestone hills, on the great road between Vienna and Trieste. The inhabitants are chiefly engaged as carriers. Pop. 1500. Adelsberg is only remarkable for the numerous and extensive stalactite caves that exist in the limestone rock in its vicinity, as it is the largest hitherto discovered in Europe. The first cave is about half a mile distant from the village, its entrance is in the face of a cliff surmounted by a round castle. It has been explored to a distance of between 2 and 3 m. from its mouth and is found to terminate in a lake. The river Peller disappears in a vast cavern 60 ft. below the entrance to the grotto, reappears at about 180 yards within the cave and is then lost under the mountains issuing to light again at Pannos, about 8 m. off where it is called the Lura, being planks and pieces of wood it is not apparent for twelve hours after issuing thence into the stream in the cavern. Having proceeded about 300 yards into the grotto a vast gloomy space is entered called the Dome, being a hall more than 300 ft. long and 100 ft. high the river is heard rushing below. Crossing the latter by a wooden bridge and scaling the opposite side by a flight of steps cut in the rock a range of fairy like halls and chambers, of various size, present themselves. It is impossible to describe all the beauties and wonders of the gigantic stalactite caverns, and lofty halls supported as it were by Gothic columns, and apparently filled with statues of exquisite delicacy and wisdom. There is, however, one part of the cave which is grander and of sublimity so far exceeds all the rest, that it must allow to be more especially. It is called Mount Calvary and is situated near the extremity of the grotto about 1½ m. from the entrance. Here we suddenly found ourselves in an open space, of which we could neither see the limits nor distinguish the height of the roof. In the centre, the ground rises considerably forming a steep and rugged hill, over which our path led, the roof rising in proportion as we ascended, with a deep and gloomy-looking ravine on either side. The hill which consists of the blocks and fragments fallen from the roof was almost everywhere covered with a thick crustation of white stalactites, which having assumed every possible variety of form appeared in the murky gloom like wandering spectres, or beautiful marble statues. At each step as we advanced fresh figures were seen arranged with apparent taste along the terraces of a rising ground. It is almost fanciful ourselves walking in an enchanted garden adorned with a rich profusion of statues, columns and vases, while the darkness made the speckled hall appear still more extensive. In short, our expectations great as they had been, were not disappointed. — (*Hamilton's Asia Minor* vol. 1.)

About 3 m. from the village is the cave of Maddalena, or the *Maddalena Grotto* which is not so extensive as the one just described, but, in some respects, is more striking. That of Adelsberg is almost level the whole way, but the Maddalena is one continual descent at an angle of nearly 40 degrees, of great breadth and supported by a greater number of massive stalactite columns. In the cave is found that

remarkable animal, *Protes angustus*, one of the four true amphibians known to exist, being supplied with both lungs and gills for breathing. This cave is also a favourite resort of robbers, who infest the neighbouring forests.—(Hamilton.)

ADENHEIM a small in. grand duchy of Baden circle of the Lower Rhine. It lies to a vale, in the Odenwald, 32 m. E. Homburg. The inhabitants are principally occupied in agriculture, wine growing and raising cattle. Adenheims came under the sovereignty of the Grand Duke of Baden in 1806. Pop. principally Protestants 1476.

ADENAU a town in prov. of, and 64 m. N.W. from Valenau on the slope of a hill on the right bank of the Oueda river. Its houses are of a regular height but the streets are crooked and badly paved. It has two spacious squares, a church, with a tower 144 ft. high, two chapels, three schools, two of which are endowed, a townhall and several flour-mills. The inhabitants are employed in weaving cotton and linen for home consumption, in distilling brandy and in making wax, hempen shoes, and earthenware. Pop. 4080.—(Madox.)

ADEN an ancient, and once celebrated city and seaport of Arabia on its coast about 100 m. E. the Strait of Bab-el Mandeb and 120 m. E.S.E. Muscat (Arab. Islet 1. 4 point 12 40, 12 N. 100 40 5 E. (2)) situated on the N. side of a lofty promontory composed chiefly of masses of dark-coloured volcanic rock, wholly destitute of vegetation. The city itself is situated in an amphitheatre of rocky mountains literally in the crater of a volcano, being closely surrounded with lofty walls and battlements of naked rock. The houses or rather huts are in rows traversing a small valley very slight in their construction and limited in their accommodation many of them are entirely of wicker work, having waggan roofs with interwoven leaves of the date palm for a covering. In some instances the roofs are flat. The buildings are generally of an untraced stone, compacted with layers and pillars of wood instead of mortar. No glass windows are to be seen and the apparatus for admitting the light are exceedingly small. The houses in the Jews quarter are the most respectable but even of these, little that is favourable can be said. One of the most conspicuous objects in Aden is the tomb of the Mahometan saint Idris ibn Abdallah. Few towers and minarets are visible. On the N. and W. sides of the town, there is a steep and lofty mountain called Jebel Shamsah which rises to the height of 176 ft. on the highest summits of which are some old towers erected by the Turks. Numerous wells, and the remains of basins for the reception of water of great magnitudes, are found in various directions and, in the valley of Tanha, a succession of hanging caverns, formed by excavations in the limestone rock. These are lined with flags of stone, and supported by lofty buttresses of impenetrable masonry forming deep reservoirs of a semi-elliptical form.—(Wilson's *Lands of the Bible*) The

(tanks are now in ruins and the supply of water wholly obtained from wells of which according to Mr. Malcolmson C. V. and Staff surgeon—who resided at Aden for six years—there are no fewer than 550 situated mostly though not invariably at the foot of the hills, cut through the solid rock to an average depth of 40 ft. not more in many instances than 4 ft. in diameter and built from the rock with a circular rubble wall. The water in many of the wells is brackish and in all has a saline taste, in pleasant to strangers on whom it acts for a time as a slight aperient—an effect, however which ceases after a brief period. The water notwithstanding this peculiar character is said to be of very superior quality though stigmatized as bad by several visitors to the place. The accounts of its supply are equally conflicting as those of its quality. Mr. Malcolmson represents the former as abundant while Commander Brown of the *Agincourt*, who visited Aden in 1845 asserts that it is scarce, in excess, and says that his assertion by a very strong argument, that he paid for very brackish water three rupees per 100 gallons and for the best (being only one well) six rupees for a similar quantity which in the latter case would be nearly equal to 12d. per gallon. The same authority represents it a supply of provisions generally including vegetables, as being scanty and charges high—again quoting prices while Mr. Malcolmson says that such are abundant. With regard to these discrepancies it can only be remarked that Commander Brown's previous statement of charges doubles has its effect in determining the belief of the reader.

The climate of Aden may be divided into two seasons—the hot and sultry of the N.E. and S.W. monsoons the former commencing at the end of April and continuing till the beginning of October the latter prevailing during the remainder of the year. During the continuance of the S.W. monsoon the wind is prevailingly from the thermometer to 104 in the shade. In the cold months from October till March it falls as low as 64 at night and at mid-day rises only to 80. Rain occasionally falls with tropical violence in the months of November, January and February. The climate however does not on the whole, appear to be positively unhealthy. Mr. Malcolmson says, that for seven months in the year it may be considered equal if not superior to that of most stations in India.

The harbours of Aden, two in number are considered the best in Arabia. The eastward or outer harbour is divided into two small bays by the rocky islet of Sirah which was formerly fortified. Extending from this islet seaward, is a short projecting point which breaks the swell of the sea, and formerly rendered the space between it and the town wall adapted for an inner harbour. Of this harbour all that at present remains is a narrow channel of deep water close under the reef only sufficiently capacious for sea or eight native boats. The rest is entirely choked up with sand.

ADEN THE ANCHORAGE, FROM THE NORTH.—From a Drawing by Lieut. B. Lewis, R.N.

The other or W. harbour called Aden Back Bay affords a convenient and secure haven accessible at all seasons and ships may anchor in any part of it. In this harbour called Bander Tawayyi by the Arabs, is the anchorage for the

Oriental mail steamers. It lies within the small islands seen on the map, and S.W. from the Tank, opposite the coaling station. The scenery of this bay is of a very wild and awaking character as will be seen from the accompanying view looking

towards the coaling station, from which a road, through a deep chasm, leads to the town of Aden, about a mile and a half distant. On the E. side of its entrance, a mass of rocks, black and rugged, called *Jabal Hoss*, rises 193 ft. above the level of the sea. The high land which forms *Cape Aden*, when approached from the E. is seen from the sea at a distance of between 40 and 60 m.

In 1859 the town, and the peninsula on which it stands, were purchased by the East India Company from the Sheikh

ings or the wretched huts of the inhabitants. Two of the minarets were then in a dilapidated condition and the several mosques were in ruins. The fortifications surrounding the town were constructed by Sultan Bolman. A battery formerly extended along the whole length of the shore and here, mounted on rads carriages, are still seen three enormous brass guns supposed to have been brought there by the Turkish fleet in 1530. In the 17th century Aden contained 30,000 inhabitants. When Louis Wallstedt was there, in 1835, its population did not exceed 800—the descendants of Arabs and Somalis and the offspring of slaves.

Not a Turk remained in the town and only about 20 families were engaged in mercantile pursuits; the remainder gaining a miserable subsistence by supplying the Hagg (pilgrimage) boats with wood and water or by fishing. A few Banians monopolized the greater part of the trade; and about 350 or 400 Jews, with their wives and families occupied a separate quarter—(Nisabur's *Arabia Felix*, *Almagest*, Wallstedt's *Travels in Arabia*, vol. II. Wilkinson's *Modern Egypt*, vol. II. pp. 45, 46. *Account of Aden* by J. P. Macdonald, Esq. Civil and Staff Surgeon in *Four Voy. Arctic Soc.* vol. VII. p. 979. Brown's *Remains on Aden* in *Natural History* vol. I. p. 244.)

ADEN (Cape) is the name now generally given to the tract of sea lying between the N. coast of Somalia terminating E. with J. us Jeridif (Cape Guardafui) and the S. coast of Arabia, between Ras Arrah and Ras Agh, the town or in lat. 1° 40' N. lon. 44° E. the latter in lat. 15° 15' N. lon. 51° 30' E. its length from E. to W. is thus about 480 m. its breadth from N. to S. varies from 160 to 200 m. The

principal bays, harbours and inlets on the Arabian side, are Khore An erra, a basin like mist, of 3 or 4 m. in extent, about 20 m. E. Ras Arrah, Aden Bay and Maibon the former called *Bander Tuway* by the natives. Maibon or Mukallah Bay, one of the best harbours on the coast. In about lat. 14° 30' N. lon. 48° 12' E. and Shanna Bay in about lat. 14° 40' N. lon. 49° E. On the African side of the gulf there are only two bays or harbours of any note, these are Seyla, in lat. 11° 1' N. lon. 43° 14' E. and in lat. 10° 22' N. lon. 45° 10' E. The latter is one of the most considerable bays on this coast and though little known to Europeans, is much frequented by trading vessels from the coast of Arabia and the adjacent parts. During the months of January, February and March E. and N. E. breezes prevail in the gulf. In April and May the winds are generally light, varying from E. N. E. to S. E. with clear weather. In the former month the mercury rises to 80° and 88° in the latter from 84 to 95. In June, July and August, the weather is generally very hot from September to December both inclusive, the winds are principally from E. to E. N. E. with pleasant weather and a temperature ranging between 76° and 84°. The Gulf of Aden is known also by the names of Sea of Babel-mandeb and Gulf of Arabia. (Hassler's *Memor. of the Sea* and J. *Coast of Arabia* Homburg's *East India Directory* &c.)

ADENKALA, or ADANKARA an island (its cap. is the Indian Archipelago) belonging to the Dutch. The island lies E. of Flores, from which it is separated by the strait of the same name lat. 8° 1' S. lon. 123° 14' E. (n.) about 35 m. long by about 1 m. broad. It is mountainous and well wooded, with a river on its E. coast. Besides the cap. Adankara, which is a haven there are the villages of Carme, Labetan, Laman, Lamebule, and Trony. This island belonged formerly to the Portuguese who have still a possession on it, named *Woer* which carries on a little trade with Coepang.

ADENKALA, a town, Franks, prov. Lower Rhine, gov. of and 30 m. W. W. from Coblenz, on one of the tributaries of the Ahr 2484 ft. above the sea. It has a church and diurnal manufactures, on a small scale of woollen and linen fabrics. Three corn-mills, some tanneries and six annual markets. In the vicinity are iron and lead mines. Pop. 1480.

ADERNÖ (anc. *Adernum* or *Hadernum*) a small town, prov. of and 18 m. W. from Catania, and about 10 m. W. W. Mount Etna. It is surrounded by walls and has several churches and monastic establishments. The principal

to whom they belonged to be made a depot for coals and a coaling station for the mail steamers between India and Suez and the result is, that not less than 4,000 tons of shipping visit the port annually to supply the depots with coals. The son of the Sheikh who had sold the town refusing to deliver it up, a naval and military force was sent out, in 1840 to take possession of it which was done. The place was afterwards attacked repeatedly by the Arabs, who, being repulsed with loss on every occasion, finally left the town in quiet possession of the English. Hence then its improvement has been rapid. Capt. Haimes of the Indian navy the governor writing from Aden, June 2, 1843 says, "The city now rises to increase and supplies of all kinds are plentiful. The pop. is now about 20,000 instead of 600 as in former times. It is a busy lively place. We have as many as four steamers a month and trees and gardens are sprouting up on all sides. The pop. now (1850) is estimated at about 40,000. Coffee of the best quality and all the other commodities which enter into the commerce of the Red Sea, are procured here including the gum, myrrh, frankincense, and balsam, imported from the E. coast of Africa."

The station is thus important to Britain both in a commercial and political point of view. The peninsula of Aden resembles the rock of Gibraltar and could be rendered as formidable. The town is now in a fair way of becoming the entrepôt and point of transit for the commerce of Arabia and Abyssinia, to the detriment of Mecca. Aden, says a French geographer, is unique as a military position. As a Roman commercial colony in the time of Constantine, it was famous for its impregnable fortifications, its great trade and its excellent ports, which received vessels from all parts of the known world. In the hands of England it is sure to recover its prosperity and supremacy over all the surrounding countries, more particularly over Yemen and to be a stumbling-block in the way of the future commercial relations between France and Abyssinia. —*L'Espresso*, *Annuaire des Voyages et de la Géographie* for 1844.

In the 11th, 12th, and 13th centuries, Aden maintained an extensive trade with India and China, and was then the entrepôt of the riches of the East. Its decay dates from the discovery of the passage round the Cape of Good Hope. In 1855, according to Wallstedt all that remained of the former city were four minarets, about 100 houses, and some dispersed remnants of its walls, the rest being occupied by tombs, mounds, and heaps of rubbish, roofless walls of olden dwell-

church is in a handsome square the columns of its facade are of lava. The river Sineto, in the vicinity of the town, forms some remarkable cascades. Pop. 6623

ADDERIG a par Ireland co. Dublin Area 769 ac. Pop. 100

ADAMIAN [*After Memoir of Türal*] a small in Asiatic Turkey push. Darbel 75 m. W by S from the center of the name, and 152 m. N.E. by N Aleppo; lat. 37° 45' N lon. 38° 22' E It is of a circular form, with a mound in the centre and is surrounded by gardens and groves. It contains 1100 houses, several mosques, three famous khans and a bath. Of the houses, 800 belong to Mahometans and 300 to Christians. Mr. Amaworth describes the country around as consisting of nearly level grassy plains, well watered by rivulets.

ADICE [*anc. Adasice or Adasice German, Etelc*] a large river N Italy it rises in the Rhodian Alps about lat. 46° 30' N and, after a winding course of about 180 m. chiefly S and W falls into the Adriatic at lat. 45° 10' N lon. 12° 20' E. In its course through Italy it passes Verona and Lagnago and is from 300 to 500 ft. wide below the former to which point it is navigable. Being confined like many other Italian rivers, between high artificial embankments it is deep and rapid and of difficult navigation especially in the spring when it is liable to sudden floods from the melting of the snow. The Adige and Po now enter the sea by one common delta, two branches of the former being connected with arms of the latter. The junction of the two streams at this point has had the effect of accelerating the encroachment here of the new sea upon the Adriatic. The principal affluents of the Adige are the Musack the Noce and the Avisio.

ADINIA, a small in As at Turkey, on the S shore of the Sea of Marmora, from which it is distant about 1½ m. lat. 40° 20' N lon. 27° 50' E. It is situated on high ground is composed of from 400 to 500 houses, chiefly Turkish and contains six mosques. It is a wretched looking place but is surrounded with numerous relics of antiquity.

ADJYGHUR a tn and fortress Hindoostan prov Alle Jabad, situated between Calcutta and a small lat. 24° 50' N lon. 86° 8' E. The fortress, enclosing a space of about 800 yards in breadth, is placed on a steep hill and is inaccessible except by well-defined paths leading to the gates. It was besieged and, after a resolute defence, taken by the British, in 1809.

ADLINGFLEET a par England co York W 1 ding area, 5235 ac. 0 m S.E. Howden 1 up 487

ADMIRALTY GULF Antarctica, N.W. coast, about 70 m. S.W. Cape Londonderry lat. 14° 38' S lon. 126° 58' E. All this part of the coast extending from N.W. Cape to Cape Londonderry is subject to light winds during the E monsoon and occasionally to strong winds and gales from the N.W. during the W monsoon.

ADMIRALTY INLET a bay S side of Barrow Strait, N America lat. 73° 40' N lon. 83° W. The shores of the inlet or bay and adjoining country present a beautiful appearance from the sea the latter consisting of verdant meadows, adorned with clumps of trees, on which deer are seen depasturing in great numbers.—The name, *Admiralty Inlet*, has been given also to a deep indentation in the land recently discovered in the Antarctic sea, by Capt Ross about lat. 14° 15' S and lon. 68° W. This arm of the sea is terminated at about 20 m. from its entrance, by a glacier. The S.W. head of the inlet, for about 10 m. is formed of deep brown-coloured lava, and the W coast of perpendicular cliffs of basaltic rock.—(Ross's *Antarctic Expedition*, 1839-43.)

ADMIRALTY ISLAND a large isl. on the W coast of N America, between the continent and George III's Archipelago 80 to 90 m. long and 25 broad, its centre is at lat. 67° 30' N lon. 134° 40' W. The shores are in some parts bold and rocky in others low. It has some commodious bays well supplied with fresh water. Although the soil is sandy being but a thin layer on a bottom of rock, it is covered with fine trees mostly pine, measuring, some of them 28 ft. in girth. The sea has made large encroachments on the island, as well as on the neighbouring continent. The

native are fierce and warlike, and well acquainted with the use of firearms.

ADMIRALTY ISLANDS, a group of isl. in the S. Pacific Ocean to the N of New Guinea between lat. 2 and 5 S. The largest—Great Admiralty Island—is between 50 and 60 m. in length. They were discovered, in 1616, by two Dutch ships fitted out by a company of merchants of Alkmaar and commanded by an experienced navigator named Cornelius Schouten, who was accompanied by James la Maire the son of a merchant of Elmont, as commissioner or supercargo and to whom the discovery of the islands has been attributed though on what ground is not evident. They have been called with apparently more propriety Schouten's Islands. They were visited in 1761 by Capt. Carteret by Monello, the Spanish navigator in 1781 and by d'Entrecasteaux when in search of La Perouse, in 1791. They are little above the level of the sea, but present a beautiful appearance being covered with a luxuriant vegetation and with dense groves of coconut trees—the nut forming the principal food of the natives. The soil and climate are good but common custom with their shores is rendered difficult by the formidable reefs and breakers with which they are surrounded. The islands are black, but not of the deepest shade of large stature well formed and agreeable countenances differing but little from Europeans. They go nearly naked, the only covering, of the men being a shell and of the women a girdle of a rat's tail. Their hair is black and crisp and their whole bodies bedecked with a composition of red ochre and coconut oil. Both sexes adorn themselves with shells. Accoutrements as to their dispositions some navigators representing them as docile and friendly others as the reverse. Their war weapons are pointed with flint and their knives are made of the same material. Their canoes formed of the trunk of a tree hollowed out, having the sides raised with boards are skilfully constructed and many of them of great length reaching to 50 ft. though only 2 or 3 ft. wide. In the canoes which carry large sails of matting, they glide along with amazing rapidity. The chewing of betel is general among them.

ADMIRALTY SOUND Terra del Fuego. It extends inland 48 m. S.E. having a width of 7 m. at the entrance, which gradually diminishes to 4 m. On the N side, the shore is straight, but the S side has two deep inlets. It terminates in a bay extending onwards for from 10 to 15 fathoms but is very much exposed to N winds.

ADONI or **ADAVANT** a district and to N Hindoostan, Balaghat territories, bounded on the N by the Icombra river. It was ceded, with the country to the S of the Icombra and the Kachina, in 1800 to the British Government. Its principal towns are Adoni, Chagor and Gonor.—**ADONI** cap. of the district, is 30 m. W S.W. Kurnool lat. 16° 40' N lon. 77° 30' E. In 1787 it was taken and destroyed by Tippos Bah and added, along with the district, to 1800 to Great Britain. It is now a place of little importance.

ADONY a market in Hungary circle of and 24 m. S.E. from Stuhl Eisenburg and 28 m. S. Buda. situated in a fertile country on the right bank of the Danube. It has a Greek church some Roman antiquities and carries on a brisk trade. Pop. 3150

ADOK a m. extreme S of Saxony circle of, and 28 m. S. from Zwickau, 15 m. E.N.E. Ilf, in Saxony and within 4 m. of the Bavarian and of the Bohemian frontier. It lies in a rugged picturesque valley on the Elster near its source has two churches and a public reading room and carries on an active frontier trade. The inhabitants are busily engaged in weaving paper making cane grinding brewing dyeing vinegar making tanning in the manufacture of musical instruments and strings, and in cattle rearing which has been carried on extensively. Pop. 2450.

ADOUÉ a river France has its source in the mountain ridge of the Tournalet, dep. Haute Pyrenees. Its course is first N then W and S.W. and S.S.W., passing St. Leger and Dax to the former of which it is navigable, and falls into the sea a little below Bayonne. Its whole length is estimated at about 170 m. The current is rapid and sometimes so violent

Adria (separated from the Roman emperor Adrian, who rebuilt it in the second century and constituted it capital of the province of *Moesia Asenaria*). In August 1859 it was taken and occupied by the Russians, who remained it till the 14th of September, when they there signed a treaty of peace with the Porte. *Adriana* is subject to the plague occasionally the least severe visitations were those of 1856 and 1867. The surrounding territory is fertile. On rocky stands on the N side of a large bay, a few wheat hills, on one of which it is partially built. It is crossed by several bridges, over which strings of camels are usually passing. Pop. of city, near 100,000; and Port, 2000.

very shallow (10-20 m) (Levin, *op. cit.*, 1961).
The Adriatic (S.E.E.), or Gulf of Venice (*Mare Adriaticum* or *Adriaticum*) is a large body of water, extending in a W direction from Italy 40° to 45° 50' N, bounded N and N.E. by Austria, E. by Turkey and W and S.W. by Italy. It is about 500 m in length, with an average breadth of about 100 nautical miles at the Strait of Otranto where it does not exceed 46 m in width. Its depth, between Dalmatia and the mouths of the Po, is 23 fathoms, but a large part of the Gulf of Trieste, and the Adriatic, opposite Venice, is less than 15 fathoms deep. Further to the S. where it is less than 10 fathoms deep, the bottom is covered with mud, deposited considerably. It has little or no perceptible tide, except at Venice, where there is a rise of a few feet. Notwithstanding the present shallowness of the Adriatic, there can be little doubt that its original depth was much greater than it is now as was also its extent: the former being affected by the deposits of sand, silt and calcareous concretions - strictly analogous to the strata of which the subapennine and other hills of the Italian peninsula are composed - and which rapidly accumulate along the bottom and the latter, by the low alluvial plains, formed along its shores. The numerous accretions of these accretions of land occurs on the W coast where a series of lagoons, formed by long lines of sand bars are rapidly filling up and being converted into meadows by newly deposited mud brought down by the streams. Between the N point of the Gulf of Trieste down to the N. of Ravenna there is an uninterrupted series of recent accretions of land, more than 100 m. in length which within the last 2000 years, have increased from 2 to 20 m in breadth. It is well collected the recent rate of advance of the delta of the Isonzo into the Adriatic, which is about 100 m. a year was also calculated for a year whereas the mean annual gain from 1600 to 1704 was 74 years (—0 yoll's *Geology*). During summer the navigation at the Adriatic is safe, but the S.E. gales in winter render it dangerous vessels failing to make some of the bays on the E side, running the risk of being stranded on the shoals on the W. The Italian and Venetian shores are low and sandy without good ports and bordered by dangerous shoals. The E coast is high and rocky and indented by numerous bays and gulfs affording good anchorages. The principal ports are Trieste, the Gulf of Trieste, the Gulf of Venice, the Gulf of Cattaro, Trieste, and Trieste in Austria and the Gulf of Manfredonia, in Italy. The chief trading ports are Vienna, Trieste, Trieste, Venice, Ancona, and Otranto.

ADEO a Venetian Lombardy cap of district of same name prov. of and 10 m WNW from Brescia, and 10 m. N Chiavenna. The inhabitants are chiefly occupied with agriculture, raising grain, fruits, and vegetables, grapes and olives and in rearing silkworms. Pop. of to 2214 of district. 14568—(*Dress. (New Italia)*.)

POPGADEEN ISLANDS. A group of islands lying off the W end of the Isl. of Slieve between lat. 55° 55' and 58° 5 N and lon. 12° and 12° 20' E. They are five in number namely Martinto, Favignano, Levanzo, and the two For Michele. Martinto the most westerly rises to the height of 237 ft. and is about 7 m. in circumference. It contains 50 or 60 inhabitants who subsist by cultivating the ground, collecting honey and exporting figs. Favignano, the largest island, is 14 m. in circumference. It derives a considerable amount of its produce from Italy and Sicily, and grows wheat, barley, and many other crops. It is also famous for its stews, mussels, and from the sale of sheep, goats, and poultry. The island abounds in game and hares and rabbits are plentiful fish also is abundant. Levanzo, 3 m. N. E. by E. Favignano, is about 6 m. in circumference it is high of rugged appearance, and accessible only at two or three spots. Its chief produce is figs but the few residents who are on the island cultivate a little grain and rent and rear a small number of sheep and goats. There is excellent fishing all round the island but particularly on its S. side. The For Michele are two small islands lying N. E. of Favignano, they are separated from each other by a channel 1 m. wide.

islands group, only by the *Archipelago* (so the former is named) given by the Greeks and Romans to that part of the Mediterranean lying between Asia Minor on the E. Greece and part of Turkey on the W. and the shores of Hœponia, i.e. the latter country on the N. Its length from N. to S. is about 400 m.; its breadth generally upwards of 200 excepting at Capo Dure at the S. extremity of the island of Negropont, where it narrows to 80 m. but afterwards expands to nearly its former width. Its depth is very great, there being no bottom with 200 fathoms line, at less than a mile from the shore. It contains numerous islands, many of which are of volcanic origin; others are composed of a white or white-grey limestone, and are distinguished by the name of *marino* into two chief groups called, respectively, the *Cyclades*, from their supposed circular arrangement, and the *Sporades*, or *Scattered Islands*, the former comprising those lying to the W. and now considered part of Europe, the latter those dispersed along the Asiatic coast. Some of the islands have an exceedingly picturesque appearance, and are very fertile, producing wine, oil, grain, mastic wax, rhubarb, figs, silk, honey, olives, lemons, and oranges. The climate is more equal and temperate than that of the adjoining continents. Several of the larger islands contain sulphur, alumina, iron, and other minerals. Most of the islands are now cultivated, and have an average height of 1500 to 1800 ft. All the islands are thinly peopled, but the men are a shrewd, shrewd race, and from their lowland position, make excellent sailors. The religion of the inhabitants is that of the eastern

Island Greek church. Professor E. Forbes, in dredging the Ægean Sea, has ascertained that there are eight well-marked regions of depth each characterized by its peculiar zoological fauna. The first of these, called the *Hydroid* zone, extends to a depth of 3 fathoms only, but this narrow belt is inhabited by more than 100 species; the second region is almost equally populous and in the eighth, no less than 65 species of tuffaceous have been taken. The majority of the shells in this lowest zone are white, or transparent. Only two species of molluscs are common to all the eight regions, namely *Atrina lineata*, and *Cyrtium lineata*.

Among the principal islands of the Ægean Sea, are Santorin, Thessalon, Chios, Kalamos, Amorgos, Milo, Paros, Naxos, Syros, Mikonos, Andros, Nifkaria, Paros, Jaho, Sikyo, Mitilini, Lemnos, Imbros, Samothrace, and Thasos (all of which see, under their respective names).

ÆGINA ÆGIA or ÆGIA an Isl Greece, with cap. of same name. The Isl lies in the Gulf of Ægæa (see *Saronicus Sinus*), 16 m. S. by W. Athens lat. (Mount Elia on the S. part) 37° 41' N. lon. 23° 30' E. (N.) It is 8 m. in length and about the same breadth. It is in general fertile particularly in the N. part, where it is level and enjoys a delightful climate, the atmosphere here pure, that epidemic fevers the scourge of the Mæotis, are unknown in it. The principal agricultural productions are corn, cotton, wine, olives, figs, almonds, &c. Ægina was anciently celebrated for the splendour of its buildings, but since the only remains consist of some tomba vestiges of walls, a mosaic pavement, and a few of the columns of the famous temple of Jupiter Pantheon, or the Pantheonium of Ægina, one of the most ancient in Greece. These ruins stand on an eminence of considerable height, called *Mount the El*. It was of the Doric order and had a portico of six columns at each end, and ranges of 12 columns along each side the columns on the angles being coated both in flank and in front internally it was divided into what may be termed nave and aisles by two ranges of columns the space between which was uncovered. The extreme length of the temple is 90 ft. measured at the base of the columns, by 45 in breadth. The columns, of which there were originally 36 now 25, are nearly 23 m. in height. The sculpture of the Ægina was of a character so peculiar, as to constitute a distinct style of art, frequently alluded to by ancient writers. Specimens of these sculptures were discovered in 1811 among the ruins of the Pantheonium by a party of English and German travellers. In recent times, the island (Ægina has again begun to rise into prosperity and importance. On a ridge, which is separated by a narrow valley from the hill of the Pantheonium are the ruins of a town, built for some time occupied, by Venetians. To facilitate their commerce, real enterprise, this situation was abandoned, and the inhabitants removed to the site of the ancient city on which now stands the modern Ægina. This comparatively recent town is regularly built, and has some good houses, an orphan asylum museum library and law office. For some time it was the residence of the Greek senate and governor and its various institutions were in a fair way of prospering, but the removal of the court to Athens, along with the liberal and other stores of Ægina, have caused the latter greatly to decline. The pop. of the town is about 10,000.

Ægina was, at an early period, occupied by colonies from various parts of Greece, and in the sixth century B.C. the Æginetians had attained to great wealth and importance. They sent 30 ships of war to the battle of Salamis, where the valour of those who manned them contributed much to the success of the day. After the war with Persia, there arose between Athens and Ægina dissensions, which terminated in the former taking possession of the island and expelling its inhabitants. Their capital Ægina, which, in the reign of Tibertius, was destroyed by an earthquake, stood upon the W. coast. Its only remains are the fragments of a temple, the moles of its harbour and some traces of its walls on the landward side. Pop. of the island exclusive of the town, 6000.—(Gifford's *Islands of the Ægean*, &c.)

ÆLITHIA, or **ÆLITHIA**, a commune and vil. Belgium, prov. E. Flanders, situated near the canal about 14 m. W. Ghent. It is a station on the railway between that city and Brugha. Here are sawmills, breweries, and distilleries. It has some trade in linen. Pop. of commune, 364.

ÆNG a trib. Arakan on the left bank of a river of same name, 80 m. S.E. of Arakan lat. 19° 59' N. lon. 94° 10' E. It was formerly an importantemporium for goods but has now much fallen off. The river is not navigable except during floods, and then only for the boats of the country. The situation of Æng is tolerably dry and healthy, and in the environs, are grown tobacco, cotton, ginger and peppers, of good quality but agriculture is much restricted on account of the destruction caused by the troops of elephants that infest the country.

ÆROË, or **ÆROË**, an Isl Denmark, in the Little Belt about 8 m. E. from the Isl of Ålesø lat. 54° 50' N. lon. 10° 20' E. about 15 m. long and 5 m. broad at the broadest part. It is hilly but fertile, and is now destitute of wood although at one period covered with it. Its N.E. coast is beset with shallows. Products the same with those of the island of Fünen, to which province it belongs and from which it is but 7½ m. distant. It contains several towns and 10 villages, and is, in proportion to its extent, the most populous district in the kingdom. The principal town Århus is situated on the S.E. side of the island has a pop. of about 1000, serves on a considerable trade in corn, &c. and owns about 50 boats and vessels of different sizes with a tonnage amounting, altogether to about 1260 tons. Pop. of the isl. 10,300.—(Bægesen *Der danske stat*.)

ÆRSCHOT or **ÆRSCHOT** (Latin *Arachotum*) a town Belgium, on the Deiser prov. S. Brabant, district of and 8 m. N.E. from Iouan, and 29 m. N. L. Brussels. It is a place of some antiquity and in the 12th century was the capital of a county of the same name. It was celebrated in the wars of the United Provinces and was taken by the French in 1466 and 1793. The ruined tower of Arachot is all that remains of its ancient fortifications. The parish church is an antique edifice. There are here some gun distilleries leec is much factured and there are some trade in wood and grain. Pop. 3895.

ÆERBEELF a vil and commune, Belgium prov. W. Flanders, district of and 14 m. N. E. from Courtrai. It has some trade in fax thread and been 1 op of commune, 3505.

ÆERTVEKE a vil and commune Belgium prov. W. Flanders district of and 1 m. S.W. from Brugha. It has a considerable trade in fax, linen and wool. Pop. of commune, 3185.

ÆTOLIA a division of ancient Greece, which may be said generally to lie between the Gulf of Patras and the Pinus montana. The ancient inhabitants—a mixed race from various parts of Greece—had a warlike and predatory character. Their servility was at one time esteemed superior to any other in Greece and, for a long period, they successfully resisted the power of Macedonia. Their government was originally a monarchy which in a short time, was succeeded by a sort of republic, composed of a number of independent states. On the establishment of Roman dominion in Greece Ætolia became a part of the great Roman province of Achaia. In later times, the country was alternately subject to the Greeks and Turks and now consists, with Acarnania one of the principal divisions of modern Greece.

ÆZCOA, a valley Spain, Navarre, on the S. slope of the Pyrénées having 3100 inhabitants partly employed in tillage, but mostly in smuggling contraband goods across the French frontier.

ÆFFANE, a par and vil Ireland, co. Waterford area 7775 ac. Noted for its fine charries introduced by Sir Walter Raleigh. Pop. 1537.

ÆFFOGADO, a vil. Brazil prov. Pernambuco, near the sea, on the left bank of one of the mouths of the Cayo bacão, and 3½ m. S. of Pernambuco. It has three churches and a harbour suitable for large vessels and carries on some trade in cotton and sugar. Pop. 1000.—(Die *Geo. Imp. Brasil*.)

ÆFFPUDDLE, a par England on Dorset area, 3818 ac. on the river Piddle 8 m. F by N Dorchester. Pop. 468.

AFFRIQUE (Str.) (Latin, *Sancus Africannus*) a trib. France dep. Arroyon cap. around. 80 m. S.E. Rhodan situated in a fine valley between two mountains, in the Gorge, surrounded by meadows, orchards, and vineyards. The straits are, in general, broad but the houses are, for the most part, old fashioned and ill built. The principal public edifices are

an hospital courthouse lately erected, the parish church, and a beautiful fountain place in the centre of the principal street. It is the seat of a tribunal of justice, and of commerce also of a communal college, and a society of agriculture. It is now the third town in the department for commerce and has manufactures of woollen cloths, serges, coverlets, cotton yarn, and honey as well as works for tanning and dressing leather. A good deal of business is done here in Raghoutshida and here the manufacturers of Cashmere and Cascarina obtain their supplies of wool. The town was formerly well fortified. Pop. in 1846, 8760.

AFGHANISTAN the land of the Afghans, an extensive but imperfectly known territory of Central Asia. It is by some writers called Cabool, or Caboolistan, though this would seem to have been the name of an empire much more extensive than what is now recognized as Afghanistan. It is likewise at times called Kandahar and also, though very improperly *in Persia*. What is now generally understood by Afghanistan is that territory lying between lat. 34° 30' and 36° 25' N. and lon. 69° 10' and 71° E. bounded N by Khiva Bokhara, and Bulakhan S. by Beloochistan and part of Sindh E. by Damana (its limits in this direction, however being sometimes extended to the Indus) and W by Persia. Its extreme length from N to S, is about 615 m. its breadth about 600. The N.E. portion of the territory is crowded with lofty mountains and is called, on this account Kohistan, or Land of Mountains. These belong to the central Hindoo Kooh or Indian Caucasus—a continuation of the Himalaya range, and rise to a stupendous height. The magnitude and variety of their lofty summits, says Mr. Eppinington, and the awful and undisturbed solitude which reigns amid their eternal snows, fill the mind with an admiration and astonishment that no language can express. The ascertained heights of the most elevated summits, vary from 18 000 to considerably upwards of 20 000 ft. The loftiest peak is about 42 m N W of Cabool. This mountainous region is traversed by numerous passes the greatest number and most remarkable of which are between the 68° and 69° E. lon. the highest are those of Hajekruk and Kaleo respectively above 15 000 ft. Five other passes, within the limits mentioned are those of Ooma, 11,000 ft. Karkootal and Akrohet, each about 9000 ft. and Shikun, 8040 ft. In the defiles of these mountains, the road frequently passes the base of a mural precipice rising perpendicularly to the height of 2000 and 3000 ft. and exhibits monuments of solemn grandeur which it is difficult to describe.—(Lieut. Burrows.) It was in the defiles of the Kurukh mountains E from Cabool between Tugan and Jagulind, that the British army was exterminated in 1842. The whole of the passes are free from snow about the end of June but the most elevated peaks continue covered throughout the year. Notwithstanding the great elevation of these regions, the heat of the sun, at mid-day in summer is intense, and vegetation extremely rapid. Lieut. Burrows found the inhabitants plunging in the snow left the ground at a height of 10 000 ft. the chief crop being a kind of barley without husk. The loftiest peaks of the Hindoo Kooh are entirely destitute of wood, and in many places of verdure, but aromatic plants abound, and afford a pasture peculiarly favourable to sheep. The mountains also flourish here in great luxuriance, and is eaten with avidity by the natives, though having the same offensive odour in the fresh as in the preserved state. The valleys, in this elevated region, present a striking contrast to the sterility of the mountains being strewed with the finest fruit trees, and clothed with a rich verdure the sides of the lower hills, also are covered with forests of pine oak, and wild olive. The other ranges of mountains that traverse Afghanistan are the W Hindoo Kooh, or Ghooz Mountains (see *Persepolis*) a continuation of the central Hindoo Kooh, and the Soliman Mountains. The former skirt the N boundary of the territory extending for about 350 m. from E. to W. They attain no great height, but are rugged and barren, of difficult access, and little known. The latter traverses the country from N to S, parallel with, and close to, its E limit. They are connected with the central Hindoo Kooh by the Khyber and Salt Hills and their height, though much inferior to the former is still considerable. Mount Soliman on which the ark is said to have rested, attaining an elevation of 12 000 ft.

VOL. I.

Their whole length is also about 350 m., lying between the 29th and 34th parallels of N lat. There are numerous minor hills scattered over the various parts of the country. In the most extensive system will be found between the 30th and 32d parallels of N lat. and the 66° and 68° E. lon. covering a space of about 100 m. in length, by about 190 in breadth, having the Kurukh hills on the S and the Gambia hills on the N. In the extension of the former into the adjoining territory of Beloochistan, is situated the famous Kolan Pass, so important in a military point of view and through which the Bengal army marched in 1839.

Although by far the greater portion of Afghanistan is a land of rocks, mountains, and desert and some of the former of the most inhospitable character there are yet a number of fertile valleys, well watered covered with clover thyme violets, and many odoriferous plants, and remarkable for their picturesque beauty. In these favoured spots grain is grown in abundance and, as elsewhere mentioned fruits of all kinds, including oranges citron grapes pomegranates, apricots apples, quince peaches pears, plums, almonds, and walnuts. The most extensive of these valleys or plains are those of Cabool and Peshawar but there is also an exceedingly rich level tract in the vicinity of Herat. A great part of Sistan is more desert, as is likewise a large portion of the S and S.W. part of the country extending over a space of about 400 m. in length, by 100 in breadth.

There are few large rivers in Afghanistan and none that is not fordable throughout its course for the greater part of the year. The principal are the Cabool Helmand, Farrah-Koot, Lora, Gomal, Kishnah, Shabrud, and Urigshan besides several minor streams. Most of these rivers are found flowing through the centre of the kingdom but, with the exception of the Helmand, which is said to be 400 m. in length their courses are comparatively short, many of them being lost in swamps and deserts in the interior. There are no lakes in Afghanistan, if we except two sheets of water which are rather morasses or lagoons than lakes one of these is called Ab-Istade and is situated about 50 m. S. by W Chaman, the water is salt, and the banks are densely incumbered with that mineral. Authors differ as to its extent, this depending on the quantity of rain that falls, as in times of inundation its dimensions are doubled being sometimes about 12 m. in diameter at others less than the half it is yet thought to be more than 3 or 4 ft. deep horses having been ridden into it, to the distance of 1 m. from the shore without the water rising higher than their bellies. The other morass, or lake, is called Hamoon, a Persian word signifying a plain, and Zerrah by which last it is distinguished in some maps. It is called, besides, by various other names both by Persians and natives. It is situated in Sistan, on the W. border of Afghanistan and is about 50 m. in length from N. E. to S. W. and about 25 m. in breadth. It has rarely a depth of more than from 8 to 4 ft. and is almost entirely covered with reeds and rushes. The water of this lake, or swamp, is salt also or at least brackish the degree of saltness depending on its depth, and the nature of the bottom. The rivers Helmand Farrah-Koot, and other streams flow into the lake, from which there is no outlet, the masses of the water being checked by evaporation merely.

Minerals—These consist of gold silver copper iron lead tin, antimony zinc, rock salt &c. Gold so far as yet known is chiefly confined to the streams that flow from the Hindoo Kooh, but is believed to exist in some of the other ranges also although it has not hitherto been obtained in any great quantities. Silver has been found in small quantities in some of the valleys and it is said that there are several mines of this metal in the Hindu Kush mountains but at present worked. Copper abounds in many places, in the Kurukh range in the vicinity of Tugan and to the S.E. of the city of Cabool where it is believed the richest deposits are to be found. Lead and antimony are met with in the Ghobund valley and in the lower part of the Hindoo Kooh; the latter exists also in the Khyber range, and in such quantity as to render the waters deleterious. Iron ore occurs in great abundance throughout the entire range of the Hindoo Kooh. Coal is found in the Kila range also at Debandina, in the N. of the plains of Peshawar and in the Hindu Kush country.

Climate—The climate of Afghanistan is various, depending more on the difference of elevation than on that of latitude.

5

the cold being very severe in the higher regions and the heat intense in the lower. These extremes are strikingly illustrated by the circumference of the summits of the mountains below often covered with snow while the heat of the plains is being all but intolerable. Sewee situated in Swatistan the territory forming the S.E. portion of Afghanistan, and is lat. 32° 30' N. and lon. 67° 58' E., is reckoned the hottest place in the territory. It is also extremely hot at Kandahar the thermometer in summer being frequently above 110° in the shade, while in winter the inhabitants suffer from cold fairs being extremely scarce. At Cabool the snow lies for several months, either during which the people remain in their houses, and sleep, like the Russians, close to stoves, the thermometer falling to 3° or 6° below zero. An illamane says Mr. Elphinstone the cold is spoken of as excessive, even by the inhabitants of the cold countries in the neighbourhood and traditions prevail of the city having been twice destroyed by falls of snow in which all the inhabitants were buried. But when the vernal equinox is past, the snow suddenly disappears, the country is covered with young grass, the buds burst forth and are soon followed by a profusion of flowers the inhabitants then throw aside their winter raiment for a thin dress of cotton or cotton and often sleep at night under trees, or in the open air. The prevailing winds are from the west, and are in general cold while the easterly winds are hot. The climate on the whole, however is favourable to the human constitution, and in some parts highly salubrious diseases are few the principal are fevers agues, smallpox and ophthalmia.

Vegetable Productions.—Our knowledge of the vegetable productions of Afghanistan is humbled. The most common trees in the mountains are gums of various kinds, a species of oak called *balook*, and the wild olive all these are found at high elevations—the first at a height of 10,000 ft. Inter mingled with these are the cypresses, which attain a great size, walnut, hirc, and holly. On the lower slopes of the Hindoo Koosh, the small leguminous plants from whose leaves and twigs the true *zaidjo* dye is extracted, grow spontaneously On the plains are found the mulberry *tamarak* acacia date palm, willow, plane, and poplar. Besides these, many of the finest fruits of Europe grow, including grapes and also several kinds of bushy bearing edible berries. The rose yamsooline, poppy *marisians* *lyscanth*, tobacco, &c. are found in gardens but some of them grow wild. Excellent vegetables are in general of inferior quality. Those cultivated are cabbage, cauliflower, spinach, lettuce, onions, garlic, beetroot, &c. But it is in the production of fruits that Afghanistan excels few places supplying such a variety and abundance.

Animals.—The wild animals of Afghanistan are neither very numerous nor very formidable, with the exception of the wolves. Lions are few small in size and weak and are chiefly confined to the hilly country about Cabool. But they differ so widely in their characteristics from the true, or African lion, that Mr. Elphinstone doubts whether they are lions. Tigers are found in most of the countries east of the range of Soliman but they also are of a weakly and timid nature. Leopards are numerous in Kolistan, but they do not attack man wolves, hyenas, jackals, and foxes are common everywhere. The wolves are particularly formidable during the winter, in the cold countries, when they move about in bands, destroying cattle, and frequently mauling persons who come in their way. Bears are numerous in the woody mountains. Monkeys are found in the N.E. parts of the country and wild sheep and goats are common in the mountain tracts in the north. In the wilds of the Soliman, and of some other mountains, a quadruped, called the *markhor* is found. It is of considerable size, resembles an elk, and has very large horns. The other wild animals are the wild ass or gorkhor, the wild boar, the porcupine, various kinds of deer and goats, the wild dog, the fox, and the hare. There are no elephants in a wild state, and no rhinoceroses, although these were formerly numerous. Of birds, the number and variety are considerable, including several kinds of eagles, and many kinds of hawks, amongst which are the falcon and gohawk. Herons cranes, storks, wild ducks, geese, swans, partridges, and quails abound. Ostriches and magpies, both unknown in India, are numerous in the colder regions of Afghanistan. The reptiles requiring special notice are snakes and scorpions the former however are mostly inno-

uous the latter are large and venomous, though their bite is rarely fatal. Turtles and tortoises are common. There are no crocodiles. Variations of locusts are of rare occurrence and their devastations have caused several famines. Bees are common. Mosquitoes are less troublesome than in India, except in Scania where they are very formidable. The domestic animals are the horse, camel, dromedary, mule, ass, ox, sheep, goat, dog and cat. The horses of Afghanistan are not much esteemed excepting those bred about Herat, which are of a superior description but a hardy race of ponies, called *yaboo*, is reared in the Herat country. The mules and asses are much employed, the former in carrying the baggage of armies, and the latter in conveying produce to the fields, &c. But the camel and dromedary are the usual beasts of burden, especially the latter. The ox is used for the plough where horses are not to be had they are also used amongst the pastoral tribes for carrying their tents. The sheep, which form the great dependence of these tribes, are like those of the Cape of Good Hope, remarkable for the size of their tails, which are about a foot broad, and of 10 or 12 lbs weight, composed entirely of fat, their fleeces are large and fine. Dogs are kept in great numbers, and are generally of good breeds; the greyhounds are excellent and are much used by the pastoral tribes in hunting. Amongst the cat kind, is a long-haired species called *boorak*, which is much esteemed and exported in great numbers, under the name of Persian cats, though nearly all from Afghanistan.

Agriculture.—Afghanistan is, on the whole, a poor and barren country vast tracts being covered with stones, so that the tillable part of the soil bears no proportion to the untillable. The cultivators of the soil consist of five classes—freeholders, tenants, bargains or metayers who labour the land for a certain portion of the returns, hired labourers and vassals, who cultivate their master's land for a mere subsistence. Land is divided into irrigated and not irrigated, called *abse* and *halah* and its value is stated to be from 12 to 19 years purchase. The rent varies according to situation and fertility from one-tenth to two-thirds the latter being the usual rate around the town of Cabool. The common term for a lease is one or two years the longest five. The ordinary means of the nation of labourers is, for the nation of some months, 30 respect, with food and clothing. There are two harvests in the year in most parts of the country one, sown in the end of autumn, and reaped in summer consists of wheat, barley, peas, and beans the other sown in the end of spring and reaped in autumn consists of rice, Indian corn and mung. The first harvest is generally the most important. Besides these crops, there is another comprehending maul melons, water melons, the scented melon, and various sorts of cucumbers, pumpkins and gourds which is looked upon as a distinct harvest. Wheat is the food of the people throughout the greatest part of the kingdom the barley being given to the horses. Turnips are cultivated in great abundance in some parts of the country and are used to feed the cattle. Ginger and turnip are grown in the eastern countries sugar cane to a small extent, on the rich plains and a little cotton in the hot climates. Madder is raised in great quantities in the colder regions. To these productions may be added saffron, the plant of which, as elsewhere mentioned, is found wild on the hills. The prepared drug is exported to India, where it is a favourite ingredient in the cookery both of Hindoos and Mahomedans. Tobacco is also produced in many parts of the country. The most general mode of irrigation is from streams directed into the desired channels by various contrivances and expedients. The land is always watered, where water can be obtained, before being ploughed it is ploughed deeper than in India, and with a heavier plough all the sowing is broadcast. The place of a harrow is supplied by a plough, on which the conductor stands to guide the cattle and increase its effect by his weight. The crop is reaped with the sickle the grain is generally trodden out by oxen, and winnowed by being thrown up to the wind with a shovel. The grain is kept in large round hampers, supported by wooden feet, and plastered with mud or in tubular earthen vessels, and coarse ear-cloth bags. It is ground by windmills, water mills and handmills the first is in general use in the west only the handmill being the most common particularly in the ruler parts of the country and among the nomadic population. Both the wind and water mills differ

from those in general use in this country the former having the sails within the building the wind reaching them through an aperture and the wheels of the latter being horizontal, with the fasteners depressed obliquely. The plough is generally drawn by oxen, but in some parts by camels.

Trade and Manufactures.—There being no navigable rivers in Afghanistan and the country but ill adapted for wheel carriages, commerce is generally carried on by boats of hides, chiefly camels formed into caravans. The principal foreign trade is with India, Persia, and Turkistan. The exports to India consist principally of horses, furs, shawls, Chinese madder saffron, tobacco almonds, pistachio nuts, walnuts hand silks, and trunks. The imports from India are coarse cotton cloths, muslins silks, indigo, ivory shells, bamboo, wax, tin, sandal wood, sugar and spices. The exports to Turkistan consist chiefly of articles imported from India, such as white cloths, shawls Indian turbans, camels, and indigo. The principal imports are horses gold, and silver. From Bokhara, cochineal, broad cloth, paper tinsel cast-iron pots, cutlery and other hardware are imported, being brought there from Russia. To Persia are exported shawls and shawl goods indigo carpets Chinese Indian brocades, muslins, and other cotton cloths. The imports are raw silk, silken stuffs, and a sort of strong cotton manufacture of various colours called kudduk. The exports to Chinese Turkistan are nearly the same as those to Bokhara. The imports are woolens, Chinese silk and satin, tea, porcelain raw silk cochineal crystal, gold dust golden ingots, &c. The trade with Caucasia is trifling consisting of wine, vinegar cheese, clarified butter and slaves. Slaves are also imported from Arabia and Abyssinia. The internal trade of the country is also considerable. The principal marts are Cabool, Herat, Kandahar and Herat. The commerce and carrying trade of Afghanistan are prosecuted chiefly by the Solomani, a pastoral tribe of Afghans who occupy the country eastward from Herat to the Indus. Many of these are men of great opulence. They amount to 100,000 persons, and take with them 24,000 camels. The manufactures of the kingdom are very unimportant. At Cabool and Kandahar woollen goods are manufactured chiefly shawls but they are inferior to those of Cashmere being stiff and harsh to the touch. The woollen fabrics of the country are rarely exported, as, from the scarcity of art flour, the want of machinery and the great demand, there are not enough produced to supply the home market. At Peshawar a coarse kind of cotton lincense is manufactured which is exported through Tartary. The unsettled state of the country and the want of perfect security to property and to person interfere sadly with trade and commerce.

People.—The population of Afghanistan is composed of a great number of different races and tribes, the principal of which are the Doodanimes the Berkozanties, the Ghiljies,

of state belong to them. They inhabit the tract of country occupying the central portion of W Afghanistan, and are partly pastoral and partly agricultural. They lead a happy and industrious life, having no feuds amongst themselves, and rarely any with their neighbours. They are fond of social enjoyments, and delight in entertaining and being entertained. Their appearance is prepossessing they are stout with good complexions, and fine heads, of which they take great care. Their demeanour is at once modest and manly. They never go armed except on journeys when they frequently carry a matchlock, with a long bayonet of peculiar construction fixed to it. The Berkozanties occupy the N E part of Afghanistan and like the other races are composed of various tribes, of which the most remarkable are the Raudays, who are supposed to amount in number to about 700,000. Those of this race who inhabit the upper countries, are remarkably sober and free from vices but those dwelling on the plains are notorious for every kind of debauchery and are, in all respects, the worst of the Afghans. They are generally stout men with fair complexions, gray eyes and red beards, and affect a military carriage, with an insolent and haughty demeanour. They are extremely quarrelsome, and of a savage disposition but are, social brave and hospitable active, gentle, and industrious. Their arms are a spear matchlock, long dagger and sabre. The Ghiljies are after the Doodanimes the most eminent of the tribes. They are divided into two families, Torani and Boorizani of which the first is divided into two, the second into six clans. The Chakri tribe inhabits the S. part of the Khakas country N W from Swatzen about the Tobe and Khafiz Anzen mountains and amounts altogether to about 200,000 in number. The total population is estimated but from uncertain data at rather more than 2,000,000.

Religion.—The Afghans are mostly Mahomedan Soomeres, but all the Persians in the country are Shoebis and between these two sects the interest animosity prevails more indulgence being shown by the former to Christians than to the latter. The Persians are more bigoted than the Soomeres. Besides these, there are numerous other sects such as Soofies, Zuckees, Hoshameeas, &c. The first says Mr Elphinstone, are rather a class of philosophers than religious men their belief being that the world was created but God will yet bring an Illusee. No people can be more regular in performing their devotions than the Afghans. Their prayers begin before day and are repeated five times the last of which falls a little after the close of the evening twilight. The hour of prayer is always announced from the tops of the minarets and has a solemn and pleasing effect. The mollahs, or priests are numerous. Their character and names are conferred by an assembly of members of the order on candidates who have undergone a regular course of study and examination the ecclesiastical ceremony consisting in placing on the new member the turban of a mollah, which is white, very large and of a peculiar shape. They are an influential body and being composed mostly of active and intelligent men have acquired an almost unlimited power and authority in the country. The education of youth the practice of the law and the administration of justice are entirely intrusted to them. Their means of subsistence are, in the country grants of land and a tax similar to tithes in towns fees on marriages burials &c. and the gifts of their congregations.

Government, Public Revenue, Military Force, &c.—Afghanistan was formerly a monarchy the crown being hereditary in a branch of the house of Buddayee. It is now divided into three chiefships—Herat Cabool, and Kandahar. The revenue of the first is about £200,000 the one half in money the other in produce. Cabool is believed to have yielded, under a system of grading taxation about £240,000 and Kandahar about £80,000. The whole of the Afghan force, which is chiefly cavalry amounts to about 16,000 men, they are but imperfectly disciplined and are embarrassed by the multitudes of their arms, which consists of a long heavy matchlock, a bayonet, a sabre a blunderbuss and three long pistols a couple of djaas, a dagger and four or five knives, besides a shield. The Kurumbanahs are the most numerous and best portion of the Afghan army. The police of the country is very bad. In many parts of the kingdom, travellers can be secured from being attacked and plundered only by engaging an escort of the tribe, or by paying customs to the chief. In cases of robbery the inhabitants of the district where it was

DOODANIME AND AKADODANIME, From Afghanistan's Capital.

and the Caukas tribe, all of which are again subdivided into numerous smaller families, or clans. Of these four principal races, the Doodanimes, who are divided into two great branches, Zeeruk and Panyan, and these again into nine lesser tribes, are the most influential on account of the extent of territory they occupy and because the royal family and high ministers

committed are liable for the amount stolen in the event of the thief not being forthcoming. The police does not interfere in cases of murder perpetrated by way of retaliation except in towns and their vicinity. Justice is administered in cases by a *caimom*, or *cadi*, assisted by inferior officers.

Towns.—These are few in proportion to the extent of the country. The principal ones are Cabool, Kandahar, Herat, Peshawar, Dehra Ghazee Khan, Dehra Ismail Khan (Ghuznee), Isafah, Charkhar, Jellalabad, Kala Bakh Khat, Cishakh, Farah, Balahvar and Mirtankote (which see).

History.—Of the early history of Afghanistan little is known—a circumstance the less to be regretted that its interest commences only with modern times. In 1713 Nadir Shah conquered the country. Ten years afterwards, he was murdered by the Persians, and was succeeded by Ahmad Shah the founder of the Durranee dynasty who was crowned at Kandahar in 1747. His reign which continued 30 years, was occupied with wars, external and internal. On his death, he was succeeded by his son Timur Shah who was again succeeded by Zaman Shah, a younger son of the deceased prince. The latter was in turn, displaced by his elder brother Mahmood by whom he was imprisoned and deprived of sight. Mahmood was, subsequently dethroned by another brother Shooab-ool-moolk who imprisoned him in the course of the intrigues and convulsions which succeeded. Mahmood obtained his freedom, reappeared in arms and recovered the throne—his son having fled and found a retreat in the Herat territory. In the year 1837 the British Government thought it advisable to establish a friendly alliance with the ruling powers in Afghanistan, restored Shooab to the throne by means of a large armed force but though engaged in maintaining the rights of a legitimate prince, the British troops were ultimately driven (April 1840) from the country under circumstances of the most atrocious barbarity and treachery which however were amply avenged in the same year by another British army under General Pollock, which, advancing through the Khyber Pass recaptured Cabool and re-established British supremacy in this quarter of the world.

AFIUM KARA HISAR or **AFIUM** or **AFIUM KARA HISAR** [Optim black castle a large city Asiatic Turkey] is a town, cap of the sanjak of Karahissar 196 m E. Smyrna, and 170 m S.E. by E. Constantinople lat 38° 42' to 40° 10' N lon 30° 50' E. Its situation as will be seen from the accompanying woodcut, is sufficiently striking and picturesque. It stands partly on level ground, and partly on the lower declivities of a series of rocky heights, rising from the former to the latter by a gradual ascent.

AFIUM KARA-HISSAR.—From Constantinople, Viewed on Ocean

The remarkable isolated rock which is seen towering loftily above the town, is from 300 to 400 ft. in nearly perpendicular height; and consists of red trachyte, containing large crystals of glassy felspar. It can be ascended only by a steep and difficult path winding up a narrow crevice. On the summit,

from which a commanding view is obtained are the ruins of a Byzantine or Turkish fort, a deep well and several receptacles for water partly of stone, and partly hewn out of the living rock. The entire circumference of the town is nearly 3 m. Most of the houses are of stone and well built but the streets are extremely narrow and in some places very steep. It contains 10 mosques, one of which is a noble building and several lofty minarets, which add much to its picturesque appearance. There are also two or three Armenian chapels, numerous khans and public baths, and an extensive range of substantial barracks of recent erection. The streets and bazars present a lively and bustling aspect, being always crowded with people—a result of the advantageous position of the town, which is on the road from Smyrna to the East, towards Armenia, Georgia, Persia, and the countries bordering on the Euxine, all the caravans to and from these places passing through it, as well as those proceeding to Constantinople and from Syria. The shops and markets are thus amply stocked with European manufactures and Eastern productions. Fabrics of wool and tapestry are amongst the staple articles of industry but firearms and sabres are also an important branch of manufacture. The town had formerly a considerable trade in red leather but it has now fallen off as has also the demand for its saddle leather which was at one time in great request throughout all parts of the Turkish empire. The manufacture of carpets—which is carried on amongst its staple products—is chiefly carried on in the country between Afium-Kara-Hissar and Smyrna, and only to a comparatively small extent in the town itself. The principal trade of the place, however is in opium (Afium from which the town has derived its name). The quantity of this drug manufactured here annually has been variously stated and is not perhaps accurately known. Niebuhr who visited the town in 1787 states that he saw opium to be 130 mule loads, or about 20 tons. The poppy from which it is made, is cultivated in the neighbourhood of the town, and chiefly in the fields, which is preferred on account of its capricious and the useful bland oil obtained from its seeds. The best description of the opium manufactured here and in other parts of Turkey yields nearly three times the quantity of an opium afforded by the Indian opium. Afium is the residence of a pasha, and the seat of a bishop of Armenian Christians. It is between 50 000 and 60 000.

AFRAGOLA a small in Naples 5 m N.E. city of Naples, district of Caserta, situated on a plain with a humid atmosphere. It has several churches and several straw-hat manufactories.

AFRICA one of the great divisions of the globe, and the third in point of extent. In form, it somewhat resembles an imperfect triangle, with its base N. and its apex S. Its entire length from N. to S. or from Cape Bianco on the Mediterranean to Cape Agulhas, 100 m S. from the Cape of Good Hope, is 5000 m and its greatest breadth from E. to W. or from Bas Jorjafout (Cape Guardafui) on the Indian Ocean, to Capet Verde on the Atlantic is about 4800 m but in consequence of its irregular form its area is only 12 000 000 sq m.

It has the Mediterranean on the N. the Atlantic on the W. the Southern Ocean on the S., and the Indian Ocean and Red Sea on the E. and N.E. It is thus wholly surrounded by sea, excepting where the narrow neck of land called the Isthmus of Suez, connects it with Arabia. Its nearest approaches to the neighbouring continents occur at the Gulf of Suez, head of the Red Sea at the Strait of Bab-el-Mandeb, and at the Strait of Gibraltar a few miles only separating it from the opposite shores at these points. Its coast line, which is considerably indented by bays or gulfs, is nowhere very deeply indented with bays or gulfs, except the Gulf of Genoa, on its W. coast. The other principal indentations are the Gulf of Sidra, on the N. coast, the Bay of Benne and Biafra, on the W. coast and Delagoa and Sofala Bays, on the E. coast. Its more remarkable pro-

jections are Capes Blanco and Spartal, on its N. shores; Cape Verde, on the N.W. Cape Agulhas on the S. and Ras Jeredion on Cape Guardafui, on the E. coast. There are but few islands off its coast so close to its shores as to warrant their being considered as specially pertaining to it. Amongst these few are the Bassage of the mouth of the Rio Grande, in Seneambia Fernando Po in the Bight of Biafra, Prisco's Island and the islands of St. Thomas and Annobon, all in the Gulf of Guinea. On the E. coast are the Basaruta and Quarimba Islands, and the islands of Zanzibar and Pemba. At greater distances are the Canary and Cape de Verde Islands, off the N.W. coast. Madagascar the Comoro Islands and Socotra, off the E. coast. Madagascar being separated from the continent by the Mozambique Channel, which has a width, at its narrowest part, of about 250 m.

Table Lands, Mountains and Deserts.—From what is known of the physical conformation of Africa, it has been inferred that it is very generally composed of a vast series of table lands rising in successive terraces from the coasts to the interior. This is known to be the case in S. Africa in Abyssinia, where they present the grandest features, and at various other points and where not positively ascertained, has been presumed from the fall in the beds of rivers. A definite lower level is known of the surface of these table lands in the interior which yet remains unexplored. The most extensive range of African mountains with which we are acquainted is that generally known by the name of the Mountains of the Moon, which commences at Kila Kila about 200 m. S.E. Sierra Leone; lat. 0° N. lon. 9° 20' W. runs in a S.E. direction nearly parallel with the coast, and at a distance from it varying from 80 to about 150 m. to lon. 26° E. when it suddenly takes a N.E. course, crosses the entire continent, and terminates at Ras Jeredion (Cape Guardafui) on the E. coast at a distance of upwards of 4000 m. The W. portion of this range, or that which runs parallel to the coast of Guinea, obtains the name of the Kong mountains, and in some parts, the Snowy mountains. About lon. 12° E. an offshoot of this vast chain called the Cameroon mountains, apparently of volcanic formation stretches down, in a S.W. direction, to the Bight of Biafra, and near the sea, assumes an elevation of 13 000 ft. North of the Kong mountains are various lofty mountain ranges, running in a N. direction. Amongst these, are the mountains of Hombori and Ilakala. Between the mountains of 7 and 11 W., and the parallels of 11 and 14 N. another chain of rocky heights rising to an elevation of from 2000 to 5000 ft. and clothed by tremendous ravines, skirts the Joliba or Niger. The next more remarkable mountains of Africa are those comprising the Mount Atlas range (which see) beginning at Cape Goer or Ghir 10° W. lon. and extending E. as far as 50° W. lon. where it approaches 32° N. lat. The distance from one side to the other of this range has been estimated at from 30 to 40 m., and the height of its highest summit, Mitlail, 27 m. S.E. the town of Morocco at 11 400 ft. above the level of the sea. The higher regions of these mountains are seldom entirely free from snow. A mountain of great height has lately been discovered in E. Africa, by the Rev. Mr. Robinson, of the Church Missionary Society. Mr. Robinson places this mountain, which he calls Kilimanjaro, or Kilima dja ero, Mountain of Greatness in lat. 3° 40' S., and lon. 36° E., and represents it as being covered with perpetual snow which being so near the equator would indicate a height of at least 20 000 ft. The mountain is described as having two summits rising to the limit of snow of which the eastern is the lower it terminates in several peaks, covered during the rainy season far down with snow but which in the dry season sometimes melts entirely away. The western summit is the proper perpetual snow mountain, which, rising considerably above its neighbour affords also much more room for snow being formed like an immense dome. The two summits are 10 or 12 m. apart. If the position of Kilimanjaro be correctly laid down by Mr. Robinson it will be about 800 m. due W. Mombasa on the coast of Zanzibar and just so far into a hitherto unexplored country of which nothing was previously known in the provinces of Shoa, the mountains attain a considerable elevation that portion of it called Bilha being entirely surrounded by lofty and craggy hills.

The great deserts of Africa are the Sahara, and those of Nubia and Libya, the two latter however being nearly con-

tinuations of the former which is the largest desert in the world. The Sahara thus extends from the Atlantic Ocean nearly to the Red Sea, a distance of upwards of 8500 m. having an average breadth until it reaches Nubia, where it is intersected by the rich valley of the Nile, of from 500 to 1000 m. Its entire area has been estimated at 750,000 m. a space equal to the superficies of the Mediterranean. (See SAHARA.)

Rivers and Lakes.—The principal rivers in E.W. Africa, beginning at its N. limit and proceeding S., are the Senegal, Gambra, Camanna, Cadeo, the Joliba or Gambia, the Rio Grande, the Niger, the Sierra Leone River, the Aduri or Volta, the Quorra or Joliba (and Niger) the Zaire or Congo, the Conza, and the Gariep or Orange River. In E. Africa there are few large rivers, the most considerable are the Kambel or Quillimane, and the Juba or Tumbo. The former rises in the table lands in the interior, and enters the Mozambique Channel by several mouths, at lat. 18° S. lon. 37° 30' E. It is said to have a course of 900 m. and to be navigable, during the rains, for 200 or 300 m. from the sea. The Juba, which is said to rise in Abyssinia, falls into the Indian Ocean at the town of Juba, on the coast of Zanzibar in lat. 0° lon. 45° 30' E.

It is said to be navigable for boats to a great distance from the sea. The other principal rivers of E. and N.E. Africa are the Hawash, in Abyssinia, the Atbara, the two principal branches of the Nile—the Bah-el Abiad or White Nile, and the Bah-el Azrek, or Blue Nile—and the Nile itself. With the exception of the latter there are no rivers of any magnitude so far as known in N or N.W. Africa. The known lakes of Africa are few in number. The largest of which there is any certain account is Lake Tchad. It is situated in the territory of Horum, and nearly in the centre of the continent, approaching the 15th degree of N. lat. and under the 15th degree of E. lon. It is about 230 m. long, and at the widest part about 140 m. broad. The other known lakes of Africa are the Doba, in Soudan in the same latitude with the Tchad and, under the 5th degree of W. lon. traversed by the Niger the Lake of Demben, in Abyssinia, traversed by the Bah-el Azrek or E. branch of the Nile and the Joliba, in E. Africa, about which little is known. Neither of these, however are of nearly such extent as the Tchad. Lakes are also met with within the ranges of Mount Atlas, the largest of which is called Lowdayah. To the lakes above enumerated has now to be added a large one, recently discovered (July 1849) in E. Africa, by the Rev. David Livingstone who places its N.E. extremity though doubtfully in lat. 20° 20' S. lon. 24° E. It is reported to be about 70 m. in length and is at once the source and recipient of several fine streams. The largest of these is the Zonga, which flows from the lake, first in a N.E. and latterly in a S.E. direction. It is described by Mr. Livingstone as a beautiful stream, the banks are covered with gum trees including a variety of the Baobab, some individuals of which measured from 70 to 76 ft. in circumference. The water of the river is soft, cold, and remarkably clear. It rises and falls periodically but the cause of this phenomenon is unknown. The natives say Mr. Livingstone, paddles along the rivers and lakes, in canoes hollowed out of the trunks of single trees, take fish in nets made of a weed which abounds on the banks and kill hippopotami with harpoons attached to ropes. We greatly admired the frank, kindly bearing of these inland savages, and I greatly enjoyed following the windings of the river in one of these primitive craft, and visiting their little villages among the reeds. The name of the newly discovered lake is Ngami, the Great Water. It is pronounced Mr. Livingstone adds, as if written with the Spanish N the g being inserted to show that the ringing sound is required.

Minerals.—Gold, gold dust, and iron are amongst the best known of the mineral riches of Africa, and are the most generally diffused throughout that continent. In the country of Bambook, S. of the Senegal, where most of the gold that finds its way to the coast is obtained the mines are open to all and are worked by the natives of the adjoining villages. The richest gold mine known in Africa is that of Natoko—a small round isolated hill situated on a plain about 800 ft. high, and 8000 paces in circumference at the base. This eminence is of alluvial formation being composed of a tenuous argillaceous earth. The gold here is found in the various forms of lumps, grains, and spangles every

cable foot being loaded it is said with the precious metal. In searching for gold, the natives have perforated the hills, in all directions, with pits, or holes 5 ft. in diameter and 40 ft. deep. The surface earth is first met with about 4 ft. below the surface, becoming more abundant with increase of depth. At a depth of about 20 ft. lumps of pure gold weighing from 2 to 10 grains are found. Forty m. N. of Nataloo, are the gold mines of beanyale. The source whence the gold is obtained here, is of a wholly different nature from that of the former. It has instead of being of soft argillaceous earth is composed of rock and sandstone, and has to be pounded in a mortar to get at the gold. Gold is found also, in the beds of the rivers in this neighbourhood. The most recent gold mine in this part of Africa, is that of Namibia situated at the back of the western chain of the Tabaas mountains. It is found in a hill similar to that of Nataloo, but is of a paler colour and is on this account, preferred being more ductile and malleable. In a valley E. of the Rio d'Uro, is the mine of Kombayra—an isolated mound of argillaceous earth as in the former two cases.

Here, too, the beds of the adjacent streams contain gold, which, in this part of W. Africa, is found dark but over a surface of 1900 sq. m. Bitter being employed as an article of commerce, the gold is lifted down and formed into earrings or other trinkets never being offered for sale excepting in a manufactured shape. This operation is performed by the blacksmiths of the country who, with no oil or implements than an earthen chaffing dish, a pair of bellows, and a large and small hammer manufacture trinkets of various kinds. These are ultimately formed with the small hammer the gold being in a cold state. Large quantities of gold dust are also found on the banks of the Rivers in the W. coast where it is said 10,000 slaves are employed for two months every year collecting it. The gold dust procured here is higher coloured, cleaner and better than that found anywhere else. The principal part of it is conveyed in the interior where it is manufactured into trinkets previously to being brought into market. Iron is found in Morocco, Abyssinia, Algeria, and in various mountainous districts of Central and S. Africa. Salt is also found in great abundance throughout the greater part of Africa, both as a residuum and as a fossil, the former on the banks of salt lakes, the latter by mining. The sea water is infused, however, there are many lakes and extensive districts without it and there it is considered a luxury and brings high prices. Mangrove is also common. An important discovery has recently been made of extensive deposits of nitrate of potash and soda, in the neighbourhood of Agura l'equine, on the W. coast of S. Africa, which are likely to be turned to good account. Copper ore of the richest description, is to be found at a short distance beyond the Orange river and lead of a superior kind, has long been known to exist near the mouth of the Yon blades river in the district of Istenage Cape Colony.

Climate.—The great space which Africa occupies on the globe, extending to the 30th parallel on either side of the equator, subject to other influencing causes, so diversifies its climate, that no general account could give a correct idea of it. Although the greater part of this continent lies within the torrid zone, and might be expected to possess a certain uniformity of climate corresponding to such a position, this is not the case. Extensive arid plains, swamps, marshes and the exhalations of a rank vegetation give it a fatal variety. The S. and N. extremities being beyond the tropics, and, of course, within the temperate zones, are sufficiently healthy and so also is the E. coast generally although in some places it is far otherwise. It is on the W. coast that the climate of Africa is most disastrous to Europeans, and where the heat of the sun is most intense. Benagambie, between lat. 10° and 11° N. being perhaps, the hottest place on the globe. The whole of the Gold Coast is also extremely unhealthy owing to it has been alleged, to the sudden extremes of heat by day and cold by night and to the thick sulphurous exhalations which rise from the valleys every morning and diffuse themselves far over the surface of the land, spreading death and disease amongst the white population. In the midst of the most beautiful scenery where trees and rocks and still waters, and a delightful verdure give assurance of an earthly paradise, the angel of death lurks unseen, and strikes down

his victims without warning and while yet in the pride of their strength.

The appalling number of deaths that have occurred in the various expeditions that have gone to the coasts and interior of W. Africa, bear fearful evidence of the fatal nature of the climate. Upwards of a third of all the Europeans who have endeavoured to ascend the Senegal river have perished in the attempt and nearly a half of those comprising the expedition sent out by Government in 1816, to explore the river Kaize, shared a similar fate. On that occasion the commander Capt. Tuckey his lieutenant the purser ten of the crew and four scientific gentlemen, all died within three months, and in the case of the Niger expedition in 1841 no fewer than 41 Europeans out of 145 including several officers and surgeons, died in less than two months. On this expedition, numerous experiments were made to test both the air and the river water for the purpose of ascertaining whether they contained as had by many been alleged that they must, an extra quantity of sulphuretted hydrogen gas, supposed to be the agent of death in these regions, and to be due to the quantity of decomposing vegetable matter abounding in the rivers. But though conducted with the greatest care, from none of the experiments did it appear that the gas in question existed in excess, either in the air or the water.

In Sierra Leone, perhaps the most unhealthy spot in these unhealthy regions, the mortality amongst Europeans is very great few ships returning without losing some of their crew and not infrequently so many that they are unable to leave the port until others have been obtained. The number of governors that have perished here from the effects of the climate one after the other, is another striking evidence of the singular malariality of its atmosphere. The agent of death in nearly all these cases is fever generally violent, and of the remittent type. Besides the known and alleged causes for this fatality there are other and mysterious influences in operation for in the case of the expedition commanded by Capt. Tuckey the journal of that lamented officer bore that no climate could be finer than that they were enjoying that the thermometer was never below 60 during the night, and seldom exceeding 70 during the day, an rare and the sun seldom visible. The seasons of Africa consist but of two—the dry and rainy the latter including May, June, July, August, September and October the former the remaining months. The wet season, gloomy and obscure, is always ushered in and terminated by tornadoes. During its continuance the mountains are wrapt in perpetual fog and disease, though not peculiar in any season becomes more general and more fatal. The tornadoes however which are always accompanied by tremendous storms of thunder and lightning have a beneficial effect on the atmosphere rendering it cool clear and invigorating. Sir James Alexander speaking of the W. coast of Africa, says that the mornings were beautiful from half past five till eight; that, during that time the atmosphere was cool and the foliage and verdure around fresh and smiling but at the last hour named the scene suddenly changed the sun burst forth with inconceivable fierceness, all sounds were hushed, and all nature drooped men retired into their huts or tents, and the wild animals sought the depth of the forest or the jungle. With us, a typicality of climate is the stillness of midnight in those regions it is the stillness of midday. Along the Gold Coast, land and sea breezes prevail the former generally from N. N. W. the latter N. W. and W. S. W. The land breeze continues from nine a. m. till seven p. m. but in the rainy season is irregular. Though many of the coasts of Africa are deluged by rains there are vast tracts in which hardly any ever falls. These are the deserts and this is supposed to be one of the causes of the high temperature of this continent, which is much hotter than either Asia or America, although the heat is not generally so intense as to admit of its being considered the sole cause of disease. The range of the thermometer on the W. coast in 1819 was at the highest only 95 mean 76° while the average heat at Sierra Leone is only 82 at Cape Coast Castle, from 85° to 90° at the Cape, it is never below 50°. These places, therefore are free from those vicissitudes, or extremes of heat and cold which are so fatal in other parts of Africa. The greatest height the thermometer was ever observed to stain at the Cape was 102, but the general range of the warm season is between 80° and 90°.

Races of People.—Our information on this interesting branch of knowledge, like that on most other subjects connected with Africa, is imperfect. Generally speaking however Africa, N. of the Senegal, and E. to Egypt, may be said to be inhabited by Arab races, known to us as Moors, Berbers, Kabyles, &c. (See ALGERIA, BARBARY MOROCCO) Egypt (which is inhabited by Copts and Abyssinians and Somalis by tribes described in the articles on those countries. The original inhabitants of Cape Colony were Hottentots, who are now however confined to the territory N. of the colony washed by the Atlantic, and stretching N. to about lat. 24° S. They are of a yellowish colour with high cheek bones, wide apart lower portion of the face narrow nose flat and broad eyes small and distant from each other hair not diffused over the head, but in separate tufts. General stature of the men 4 ft 6 inches; women 4 ft. the latter distinguished by a large accumulation of fat over the gluteal muscles. Their language is full of guttural sounds, many words being ended by a peculiar click, disagreeable to the ear and difficult to imitate. They are a mild and inoffensive race but have yet made little progress towards civilization. Those living in the immediate vicinity of the Cape have, of course, become subject to European influence but a few tribes in the interior still retain their independence, wearing the old sheep-skin dress, observing old customs, and living in dirty kraals, or huts, composed of mats stretched on a frame of sticks. They migrate from place to place, leading an idle and wandering life, and living chiefly on the milk of their cattle. To the E. of Cape Colony as far as lat. 24° S. the coast—and how far inland is not known—is inhabited by Kafirs (see KAFFRANIA) Central Africa, from the Senegal S. to the country of the Hottentots and Kafirs and E. to the Indian Ocean is wholly inhabited in all probability by negro races but too little is known of this vast district to enable us to speak with precision. The physical characteristics of the negro are well known—skin and eyes black hair black and woolly forehead low cheek bones prominent nose broad thick and flat lips thick corners of the mouth and sides of the feet flat. In strength and stature they are equal to Europeans. Various opinions are entertained of their intellectual capacity—some claiming for them an equality in this respect with the whites others denying them the ordinary intelligence of human beings. Without instituting comparisons it may be safely asserted, that they possess capabilities of a much higher order than has been generally allowed them, the proof of which it would not be difficult to adduce. Though the natives of the extensive regions marked out above are designated by the general term *Africans*, there are a great variety of nations, distinguished from each other by both moral and physical differences. The peculiarities of the various subdivisions of the Negro race will be noticed in the articles on the countries which they inhabit.

Animals.—With the zoology of Africa we are yet but imperfectly acquainted enough however is known to form a very interesting chapter in natural history. Of the 300 different species of mammals that inhabit Africa, 242 are peculiar to the continent. Of the Quadrupeds apes, monkeys, &c. it possesses 55 species, of which 48 are peculiar. Of the Chiroptera (bats) 30, of which 26 are peculiar. Of the Carnivora, 66 peculiar 52 Rodentia (gnawing mammals) 46 peculiar 25 Edentata (sloths, nut eaters, &c.) 8 all peculiar Psyllodermata (hog, horse, elephant, &c.) 15 peculiar 12 Ruminantia, 73 peculiar 63 Cetacea (whales) 10 peculiar 8. The quadrupeds of burden are the camel (Arabian) and the horses and asses of Barbary. Of horned cattle there are many different varieties. The oxen of Abyssinia and Bechuanaland both having horns of immense size—the former 4 ft. in length, and the latter measuring upwards of 3 ft. in circumference at the base, but so light, that they hardly weigh 25 each the broad-tailed sheep of Barbary the Cape of Good Hope and other parts of Africa and the long-legged, small-tailed sheep of Egypt Senegal and Nubia. Of goats there are a great abundance and variety being in many places more numerous than sheep. The domestic cat is rare in Africa, but dogs are numerous. In the large towns of Egypt and Barbary troops of these animals are maintained by the public to act as scavengers the duties of which they perform with entire efficiency. Domestic poultry are abundant in every part of Africa, though not indigenous as the

country. Amongst the wild animals, is that extraordinary species of the ape called the chimpanzee or *Simia troglodytes* of naturalists. It attains the ordinary stature of man, and inhabits the countries from Sierra Leone to the S. confines of Angola. The baboons among the inferior tribes of the Quadrupeds, inhabit the mountains and rocky heights. They sometimes attain a great size, and, from their strength and mischievous disposition, are held in much dread by the natives. The stoekys, properly so called, inhabit the woods, and swarms over the whole continent.

The carnivorous and ferocious animals of Africa are numerous and formidable. At the head of these stands the lion, of which there are three varieties—the Barbary Senegal and Cape lions. The fur of the first is of a deep yellowish brown, and the mane of the male much developed. The fur of the second is of a more yellow tint mane less thick and hair nearly wanting on breasts and inside of legs. Of the Cape lion there are two kinds, one yellowish and the other brown the latter being considered the more ferocious and formidable. It is a belief amongst the S. African tribes, that the lion prefers human prey to any other. Next to the lion ranks the leopard and another there being no tigers in Africa. Though not generally dangerous, nor much dreaded, they are so numerous in some parts, that the natives will not venture to travel through the woods unless well armed and in large parties. In other places their increasing numbers have compelled the inhabitants of many villages and towns to remove to other provinces. There are some of these marked differences between the leopards and panthers of Asia and Africa that distinguish the lions of these two countries. The hyena is found in great numbers in S. Africa, especially in the neighbourhood of the Cape of Good Hope and, it has been asserted as high as Barbary. In the former region there are two species—the spotted hyena, or tiger wolf and the strand or coon wolf—the former being the more ferocious. The civet is found in most parts of Africa, and is kept in great numbers by the natives, on account of the perfume. Insectivorous are also numerous. Of the Rodent mammals our knowledge is very limited. So far as known there are three varieties of hares common rabbits sugar or tree shrews species of jerboas squirrels, rats, and mice—the two latter being so numerous in southern countries. Of the dentate mammals, there are two species found in Africa, the aardvark, or ground hog (*Oryzomys capensis*) and the long-tailed pangolin (*Araia tetradactyla*). In the first rank of the Polydactyls, it will be ranked quadrupeds of Africa namely the elephant which it has been said though the point seems by no means established attains a greater size here than in Asia. It seems more certain that the tusks of the African elephant are larger and heavier than those of Asia. The difference in physical structure between the Asiatic and African elephants are—the head of the latter more rounded front convex instead of concave ears much larger and the general number of nails on the hind foot, three, instead of four. The magnitude of the Asiatic elephant is said to surpass that of the African, but on no good authority. The utility of the race generally has been good deal overrated. Cuvier is not disposed to estimate it higher than that of the dog. Elephants are dispersed all over Africa S. of the Sahara. They live in herds of from 100 to 300 and are so numerous, that their tusks (ivory) form a principal and one of the most valuable exports of Africa. These are found in great numbers in the woods, broken off by accident but the greater portion is procured by destroying the animal which is effected by the natives in various ways. The flesh is held in much esteem in various parts of Africa. The foot is used to be a delicacy. The rhinoceros is found in the middle and S. parts of Africa, frequenting the same haunts as the elephant. The natives hunt this animal with great sagacity for the sake of the hide and horns—the only parts of which any use can be made, the flesh being unpleasant to the taste, having a resemblance to pork, but being much coarser. Of the hides, shields harness &c. are made; the horn derives its value from its real or supposed medicinal virtues. The African rhinoceros is distinguished from the Asiatic by having no front or corner teeth. Hippopotami are found in great numbers in the large rivers and lakes of Africa, amongst the former particularly the Senegal, Gambia, Niger and Zaire or Congo. It is peculiar to Africa and is divided into two species—the hippopotamus

of the Cape (*H. Capensis*) and the hippopotamus of the Senegal (*H. Senegalensis*). The distinction between these two species, however, is not very marked, consisting merely of some difference in the formation of the skull. The natives take them as trophies or prey, but the colonists pour the Cape deer-skins upon them with the rifle. The flesh is much esteemed as a article of food. The *Ham Capensis* the name given to the fat which has immediately under the skin, when salted and dried, is in great demand with the Europeans of Cape Town. The most valuable part of the animal however is its great canine teeth which consist of the tusks ivory and is in much request by dentists, for making artificial teeth no other ivory keeping its colour so well.

The engulo or wild boar is also found in Africa but is distinct from that of Europe, its smaller teeth resembling in form and structure, those of the elephant. The zebra and quagga are found all over S and Central Africa. The symmetry and brilliant coloring of these animals, added to the extraordinary regularity of the stripes with which they are adorned, rank them amongst the most beautiful of quadrupeds. The quagga is less than the zebra, with the hinder parts higher and the ears shorter. Both the zebra and quagga are found in greatest numbers near the Cape, but the former seems to be more widely dispersed than the latter. A third species, between the S African quagga and the zebra, is found in large herds N of the Orange River.

The antelope is the most numerous of the ruminating animals of Africa, there being no fewer than 50 species proper to Africa, 22 of which are found within the colony of the Cape.

The giraffe or camelopard inhabits the interior parts of Africa as high as the Senegal but is not found in Gambia or any of the W part.

In the interior of Africa, several species of wild buffalo are met with, but little is known regarding them, further than that they are large and fierce, particularly those near the Cape of Good Hope.

Among the catenous mammals that inhabit the seas and coasts of Africa, the most remarkable is that species of whale called *Manatus* (*Manatus Senegalensis*) an herbivorous animal, supposed to be the creature of the fabulous marmot. The rivers and coasts of Africa abound with various kinds of fish some of the most splendid colours. Shell fish are also abundant.

Of the ornithology of Africa little more is known than that it comprehends a great number of birds, of the richest and gayest plumage. Amongst the most beautiful of these is the sun bird (*Amazilia*). The ostrich is now almost exclusively confined to Africa. Its flesh when young is good, and the eggs are considered a delicacy both by Europeans and natives.

The *Hottentots* abstract the eggs from the nest with a long stick, that the hen may not be driven from it, but continue to lay. The plumes are much in request in Europe for ladies' head dresses, and are therefore an important article of commerce. The best however are not taken from the wild birds but from domesticated individuals, reared by the Arabs, who provide them with clean and soft beds, in order to preserve the feathers from injury. Vultures are found amongst the lofty mountains of Central Africa, and in the most inaccessible places towards the Red Sea. They are also found in the N of Africa, and in the Cape colony. The two principal species of African vultures are the *Vultur Kalla* (Kalla a vulture) and the *V. aegyptiaca*, or screech vulture, the *Oreos* of the French. The latter which is of gigantic size, is extremely useful in consuming the carcases of dead animals, which might otherwise pollute the air and engender disease. It prevails most in the Namagana country where it was first observed by Le Vallant. It is gregarious, lives together in numerous companies. The *Gigantes* has the only palmaceous fowl adapted to the country that Africa possesses.

The crocodile inhabits all the large rivers in the tropical countries of Africa, and abounds in the Nile below the first cataract, never being seen above it. Lizards, serpents, and various species of voracious reptiles, abound in all parts of Africa. Amongst the insect tribes of which there are many thousands, the locusts are the most remarkable, having been, from time immemorial the scourge of the country. Hardly less formidable or destructive are the ants, which swarm in countless myriads in tropical Africa in many

places, their habitations, seen from a short distance, present the appearance of a native village. They move in vast columns, consuming every animal and vegetable substance that comes in their way.

Feasible Productions.—The greater portion of Africa lying between the tropics, its vegetation is of course, much suited by that circumstance. With exception of its S. extremity it may be said to be wholly a plant region one species or other of that useful plant being met with throughout nearly its whole extent, as far as yet explored. The N. of Africa, along the Med. terrace, presents a vegetation similar to that of many parts of the S of Europe, but much more luxuriant. Wheat and maize are here cultivated, the olive, the orange, the castor-oil plant, the fig tree and the dwarf and the date palms are plentiful and the *Zingiber* lotus or lotus bane, is so abundant, that its fruit—which is still partially eaten—constituted formerly an important article of food to some ancient tribes from which they were named by the Greeks *Lotosophages*—lotus eaters. South of the Atlas mountains lies a tract, called the Land of Duhia from the great profusion in which the *Zingiber decalophyllum*, or fat palm is diffused over its surface. Bk, maize, plantains, yams, manioc, yams, and such like (*Zingiber* *hypogaeum*) are cultivated along the whole W tropical coast. In Senegambia, Adanson first discovered the enormous Baobab tree—a plant also common in Malindi and found as far S. as Lake Ngami—whose stem is sometimes 50 ft. in diameter though not more than 10 or 15 ft. high, but having a very large, bushy head and whose fruit, under the name of monkey's bread, forms an important article of native food. In the same region it unites the nut, from which gum Senegal is obtained. Along the W coast, likewise, but in greatest abundance on the Guinea coast, are found the Elaeis Guineensis from which palm oil and wine are obtained the cabbage palm the wax palm, the Elaeis butter tree, all yielding products important to man. To these may be added the African oak, and that plant characteristic of river mouths the mangrove. Of fruits the best are the banana, pawaw, custard apple, lemon orange, and tamarind. At the Cape of Good Hope, wheat and other cereals are cultivated but the most characteristic vegetation of this district is the baobab, which grows in vast profusion, in great variety and of surpassing beauty. Gossamers, and various bulbous and orchaceous plants, are also prevalent rendering this district a complete flower garden. The E. coast may generally speaking be said to be characterized by the same vegetation as the W. Here however the cultivation of rice is more general than of maize, less. Tamarinds, figs, and plantains, grow on this coast and the cotton plant is found in great abundance. The N. E. part of Africa, in vicinity of the Sudd, is rich in frankincense, myrrh, casamane, and numerous other species. The highlands of Kalla are the native place of the coffee plant, which gives its name to the province of Kalla. In many tropical localities, but more especially along the E. coast, this plant forms thick woods. Towards the end of the 16th century it was introduced from Africa into Arabia. Abyssinia, though within the tropics can scarcely be said to possess a tropical vegetation. The country generally is so much raised above the level of the sea that its characteristic plants are more those of the temperate than of the torrid zone. part of it, however, is included in the equatorial region. Kalla, though further from the equator than Abyssinia, as it lies on a lower level, possesses a vegetation much more tropical. The Baobab, Elaeis Guineensis or palm oil tree, and Bontax pentadactylus, or Indian cotton are among its more prominent plants. Egypt has long been celebrated for its wheat, which is there extensively grown, rice, beans, peas, waxman, and cotton are also cultivated. Beans and other cereals are found in Upper Egypt, and form a considerable article of commerce. The dwarf and the date palm are plentiful and the down palm (*Phoenix Thebaica*) is not uncommon. Further information respecting the vegetation of Africa will be given in the articles on its various countries. What has been said here is merely intended as a rapid sketch of a very extensive subject, of which within our limits, merely a few select points can be noticed.

Religion.—Mahometanism and Feticism (the latter from the Portuguese word *fetico*—something sacred) are the prevailing religions of Africa, especially in Abyssinia, where a debased sort of Christianity exists. A *fetico* may be any

places, their habitations, seen from a short distance, present the appearance of a native village. They move in vast columns, consuming every animal and vegetable substance that comes in their way.

sort of substance—a stick, a stone, a horn, or any other casual object—which, being chosen by an individual, is set apart, invested with a supernatural influence and worshipped as a divinity. It is from that moment believed to be endowed with a power of doing good or evil, and is feared and courted accordingly. Several of the African nations have a *nyam*, or *nkanda*, some having a serpent, others a cock, others a lizard, and other animals, besides those presiding over the destinies of families and individuals. At Cape Coast, the public *nyam* is a rock that projects into the sea, close by the castle. Sacrifices are yearly made to this rock by the priests with extraordinary gestures and invocations. Others of the negro tribes worship the sun, the moon, the stars and other, idols of human form. Human sacrifices are common amongst these nations, although, it is said, only on the occasion of the accession of a sovereign or during the prevalence of an epidemic. The victims, on these occasions, must be brought from a distance and his fate carefully concealed from him till the fatal blow is struck, which it is, in the presence of the assembled people and great men of the nation.

Languages, Social Condition, &c.—The languages of Africa are the most numerous to admit of any attempt being made even to enumerate them. The most widely diffused are the Arabic, the Berber and the Mandingo languages—the last prevailing over nearly the whole W coast and the former two over all the E and N.E. parts of the continent. In S. Africa, the Hottentot and Kaffir languages are those best known. The number of languages spoken throughout Africa has been estimated at upwards of 150—of which 83 it is said, are spoken between the W Ocean and Red Sea.

A sketch of the various countries of Africa presents a peculiar social picture of its own and as these, with numerous other details, will fall naturally to be noticed in the respective articles on those several countries, we shall here confine our notice to W Africa alone that is, from about lat. 17° S to lat. 17° N—one of the most interesting portions of that continent. The social condition, generally of this part of Africa, is, as might be expected, extremely low yet, important facilities for improving this condition, and for the successful introduction of civilisation are not wanting. The black population are natives of kum, aboos, and numerous dispositions and where these may not exist as in the case of a few tribes, there is an intelligence and general aptness, which would readily appreciate and appropriate the advantages of civilised life. The African black has none of the rosy ferocious temper of the savages of the Pacific and South Sea Islands, nor any of the proud reserve and ruthless nature of the American Indians while his love of music and song prove him to have feelings and tendencies amenable to social refinement. M. Quen describes the character of the population about Cape Lachen as excellent and adds, that they exhibit traits of feeling and paternal affection that would do honour to a civilised people. Of the population in the neighbourhood of Cape Palmas, he speaks in equally favourable terms calling them a docile and peaceable race. Lieut. Christopher's account of the native population on the coast, is no less pleasing. He found them, he says, a hospitable, cheerful, and happy people living in the midst of plenty. Amongst the Follahs, who are perhaps one of the most advanced of the different nations of W Africa, there exist many of the usages and customs of civilised life. It is matter of regret, that there should be exceptions to this general good character of the African tribes but so it is, there being several nations remarkable for their savageness and barbarity. Amongst these the Ashantee stand conspicuous, proving—and it is no solitary instance—the singular fact, that the cleverest and most intelligent races of Africa are the most cruel and ferocious. There seems little doubt that the cannibalism prevailed, and probably still prevails, to a considerable extent, amongst some of the tribes of W Africa. In the industrial arts, the W Africans have made little progress, although some of the tribes, particularly the Ashantees, Jollofs, Dahomans, and Moors, possess considerable skill in working in metals, in tanning leather and in the manufacture of cotton cloths. Although, in this last, few of them being acquainted with the shuttle, they will take a couple of months to work what a European would despatch in a few hours. In all matters connected with agriculture, they are also miserably backward. There is as usual, some

Vol. I.

of the indifference, as well as the venality, to be found everywhere of the moral darkness and low social condition of Africa. The most curious instance of this is presented in the form of a mysterious personage, called Mumbo Jumbo, whose business it is to punish refractory ladies, on the seditions and castigations of their husbands have failed in having the desired effect. In such cases, Mumbo Jumbo arrays himself in a fantastic coat which always hangs ready for his use on some convenient tree, in or near the village puts a crown of straw on his head, and, after dark, marches into the market place, where he summons the offending fair one into his presence. Mumbo's power being absolute he dares not disobey but presently makes her appearance, with a sword at her heels. She is now strangled, and Mumbo Jumbo commences a vigorous squallum accompanied by the applause of the surrounding mob. He is then held in great dread by the African ladies, who will yield much rather than expose themselves to a call to appear in his presence. Mumbo Jumbo is no other than the husband of the fair culprit dressed for the occasion, or some friend deputed by him to perform this piece of conjugal duty.

Commerce and Slave Trade.—The commerce of W Africa bears no proportion to its extent. The objects for which it is to be found in the barbarous state of its inhabitants and in part, in the unhealthiness of its climate, which prevents Europeans developing its utmost capabilities and resources. Its principal articles of export are palm oil, gold, gold dust, ivory, gums, timber wax, hides, feathers &c. The gum Senegal is exported in large quantities by the Moorish tribes who possess the gum forests of the Sahara. They collect it in December and pack it into sacks made of tanned ox hides. The annual produce of these forests amount to 1,800,000 lbs. The Moors take blue Indian calicoes in exchange for their gum. During their absence on their trading expeditions, they live on the gum, consuming about six ounces every 24 hours. Those who can afford it, dissolve it in milk those who cannot, use it as it is, or dissolve it in water. Gold and gold dust, the former fashioned into trinkets form a considerable branch of African trade. The native dealers in gold carry a pair of small scales about with them in which they weigh the precious metal making no difference in price between the wrought gold and the gold dust. Salt is another important article of internal trade. The demand for this necessary of life is very great, and the price proportionately high. A slab of salt, 2½ ft. long 14 inches in breadth, and 2 inches thick, will often bring a price equal to £1 10s while £1 15s to £2 is the usual value of a piece of these dimensions. The slave trade forms a conspicuous feature in African commerce, and continues to do so notwithstanding the efforts that have been made to put it down. It has been calculated that about 110,000 slaves are yearly exported from the S. parts of the W coast, besides those shipped at other places. Cuba and Brazil are great markets for slaves the trade being encouraged in the former by the Spanish authorities who derive a profit from their importation, the captain-general receiving an ounce of gold for every negro landed on the island, and the inferior officers proportionate allowances. Besides the external trade a very extensive internal trade in slaves is carried on in Africa, and markets are established in their disposal. They are moved from place to place in caravans of from 100 to 2000, of all ages, but chiefly boys and girls. Slavery in W Africa, however exhibits a much milder character than in any other part of the world. The slave is there treated with consideration and kindness and rarely subjected to corporal punishment. Amongst the Malabars, the children of slaves are never sold, so that no separation between parent and child ever takes place. Slaves, on falling into the hands of the trader, are well treated and in being marched from place to place, are unfettered well fed, and carefully looked after, though surrounded by guards on horseback, armed with whips are rarely if ever touched with the thong. The cowrie, a small shell imported from the Maldiva Islands by British traders, is the principal circulating medium of S. and Interior Africa. but of so low a value is it, that it requires between 4000 and 5000 to make the equivalent of £1 sterling. Amongst the exports to W Africa in 1844, there were haberdashery &c. between £11,000 and £18,000 brass and copper manufactures £18,850 cotton manufactures £220,564 books, 2382 arms and ammunitions, £26,000.

Progress of Discovery—There seems reason to believe that the discovery of Africa had been accomplished by the Phœnicians long prior to the earliest historical records. It is, at any rate, certain that an idea of its peculiar form was familiar in the days of Herodotus—an evidence that the fact had been ascertained, notwithstanding it is uncertain by whom although this merit has been ascribed to Necho, king of Egypt, who, according to the historian just named, fitted out an expedition for that purpose. Scætopus a Persian nobleman, was the next who made the attempt. He sailed from the W., and proceeded E. along the W. coast for several months, but was obliged finally to abandon the enterprise as impracticable. Scætopus was succeeded in African adventures by Endorus, a native of Cyrene, who made several attempts to explore the unknown regions of that continent but the results of his efforts have not been handed down to us, and, it may be supposed were not very satisfactory. An expedition to the W. shores of Africa was fitted out by the Carthaginians, about 570 years B.C. with the view of establishing colonies at such points as might be found suitable for such purpose. Thirty thousand persons, of both sexes were embarked on this occasion, on board of 60 ships, of 50 oars each, and several colonies established but the entire history of this expedition is so brief and indistinct, that no clear idea of either its progress or results can be obtained. At a later period, the Romans made some equally unsatisfactory efforts to explore the unknown coasts of Africa, Polybius, the celebrated historian, having been sent thither by Rome, on a voyage of discovery. It is not, indeed, until history brings us to the expeditions of the Portuguese, those once famous and enterprising navigators, that the progress of African discovery becomes interesting, and from this point it will be found indicated in the following table—the form, it is believed, best adapted for giving at once a clear and rapid view of the subject. It must be premised, however, that the list contains but a selection from the better known travellers in Africa, that a host of others, the names of whom, probably of equal degree, whose names have been omitted, as it has not been intended to attempt more than a mere outline of the progress of discovery in that continent. Influenced by a similar motive, we have refrained from detailing the extensive researches of the French in Algeria—an omission, however which will be found supplied, to some extent, in the article under that name.—

- 1433 — A Portuguese expedition reached Cape Bojador but did not land.
1482 — The Portuguese first led Cape Bojador.
1487 — The Cape of Good Hope discovered by Bartholomew Dias, a Portuguese navigator.
1490 — Columbus, Portuguese, visited E. Africa and Aden.
1497 — Vasco da Gama reached the Cape of Good Hope.
1500 — Alvarez, a Portuguese visited, Guinea, Senegal, and Kait.
1500 — Queen Elizabeth granted a patent to some merchants of Bristol to carry on the trade of the Senegal and Gambia.
1518 — An African Company formed in London—sent out an expedition, which succeeded the Gambia as far as Timb.
1518 — Piaz, a Portuguese, visited the sources of the Niger-d-Azrek.
1520 — Capt. James succeeded the Gambia to the same height, namely to Timb.
1560 — The Dutch formed a colony at the Cape of Good Hope.
1567-5 — Henry Rieu, a Frenchman, performed several voyages up the Niger.
1714 — M. Compton traversed the kingdom of Benue.
1728 — Rieu travelled through Senegal and N. Egypt, &c.
1768-69 — Adams travelled on the Niger.
1781 — Capt. Henry King a Dutchman, traversed the country of the Senegambia.
1785-6 — Brown travelled through various parts of Senegal.
1789-70 — Brown travelled through various parts of Senegal.
1776-65 — Spang and Vallent travelled through various parts of S. Africa.
1796 — Park explored the source of the Niger.
1796-6 — Brown travelled in Central Africa, visiting Defoor and Bornu.
1797 — Rieu travelled as far as the Snow Mountains in S. Africa.
1801 — In the same year and during several subsequent years, Hinnenmann travelled in various parts of N. Africa, and in France.
1801 — Trotter and Beaumont penetrated to Letitia, the capital of the Senegal, and were followed in the same track some years afterwards by Hildebrandt, Burckell, and Campbell the missionary.
1808 — Rieu travelled in Egypt and Abyssinia.
1808 — First expedition to reach the Niger but never returned, having been killed, with nearly all its attendants, by the natives.
1808-9 — Rieu travelled in Egypt and Nubia, visiting the lower Nile.
1808 — Rieu visited Egypt, and made numerous interesting discoveries and interesting acquisitions.
1819 — M. Mohr made a journey to the Senegal and Gambia.

- 1820 — Duncan, Outrey and Clapperton, crossed the Sahara, and explored the S. and W. shores of Lake Chad, and travelled through Senegal and the Fula country.
1820 — Major Leing penetrated to Timbuctoo. Murdered on his return by his guides.
1820 — Leander explored the Niger and proved that the numerous subterranean in the Gulf of Benue are the delta of the Niger. Gambia penetrated to Gambia in Abyssinia.
1821 — Bissell made two journeys to Abyssinia.
1820 — Leander and Kraft travelled in Egypt and Abyssinia.
1820-3 — Dr. Baid travelled through various parts of Abyssinia.
1821 — Trotter and Allan survey the Niger and other parts of the W. coast.
1823-3 — Sir W. G. Harris travelled in Abyssinia on his mission to Senegal. Rieu travelled up the Senegal, and explored parts of the Fula country.
1823-4 — M. Rochet d'Edelmont travelled to Aden and Senegal.
1824 — Duncan penetrated into the interior of Africa, from Whidah in the Gulf of Benue, to lat. 11° 45' N., lon. 1° 15' E.
1824-5 — Richardson traversed great part of the desert between the River Mr. Rieu discovered a lofty mountain covered with perpetual snow in E. Africa, about 300 m. W. from Timbuctoo.
1828 — The Rev. David Livingston discovered a large lake called Ngami in S. Africa.

Settlements—The principal settlements of the British in Africa are Sierra Leone, Cape Coast Castle and the Cape of Good Hope with several subordinate establishments on the Gold and Slave Coasts. The possessions of the Dutch are Elmina, and Axim on the Gulf Coast the former 9 m. W. of Cape Coast Castle, is a well built fort, garrisoned by 100 men. The latter have also a few considerable ports on the Gold and Slave Coasts the chief of which is Freetown, the residence of the governor-general. The Portuguese have several possessions on both the W. and E. coasts and the French on the Senegal and Gambia. To these has to be added the Native Republic of Liberia, near Cape Mesurado, founded by the American Colonization Society for the reception of free negroes from the United States.

Population—There being no means of ascertaining the population of Africa with any approach to certainty we must be content to take the guesses of the most credible authorities on the point. Baild estimates it at 20,000,000. Maltus at 27,000,000, and the W. African Almanac at 101,000,000. —(Harris's *Highlands of Ethiopia*. Martin's *Columbian Library*. —*Queen's Geo. Society of Africa*. Capt. Turkey's *Expedition to the River Zaire*. Capt. Alexander's *Colonies of Western Africa*. Beaman's *Wanderings and Adventures in the Interior of Southern Africa*. Lieut. Christopher on the East Coast of Africa. *Athenæum Foreign Quarterly Review*. Burckhardt, Ledyard, Belson, Pearce, Bruce, Harris, Duncan, Allen's *Niger Expedition*. Johnston's *Physical Atlas*.)

AFRICAN ISLANDS, two islands in the Indian Ocean between Africantia and Seychelle Islands N. Madagascar the most northerly is lat. 4° 55' S. lon 53° 30' E. (N.) They are connected by a sand bank, and are so low that they are almost overflown at high spring tides. They are destitute of fresh water but abound with turtle and aquatic birds. They were discovered by a French vessel in 1766.

AFRICA, one of the wandering tribes of Persia, of foreign descent, of which description of people one-fourth of the population of that country consist, forming distinct classes, apart from the original Persians, by their habits and modes of subsisting. The Afghans, who had themselves originally of the Turanian tribes, are divided into two principal branches, Shamsis and Kirikis. They are a numerous tribe consisting altogether about 20,000 houses. They principally reside in towns and are to be found in greatest numbers at Aherud and Kelat.

AFVSTADT or AVSTRA, a Sw. Sweden district Vester, on the right bank of the Dal, and about 80 m. from its mouth, in the Gulf of Bothnia, 55 m. W. N. W. Upsala lat. 60° 7' N. lon. 18° 9' E. They are here extensive iron and copper works, the produce of the mines in the vicinity being manufactured here for exportation. Pop. 800.

AFZILGHUR, a N. Hindustan prov. Delhi, presidency of Bengal, near the Kumaon mountains lat. 29° 25' N. lon 75° 40' E.

AGABLY a Sw. N. W. Africa, one of the coast of Senegal lat. 28° 30' N. lon 10° 10' E. Caravan routes from Morocco and Tripoli meet here, and afterwards diverge to Maccotene, and Timbuctoo from the latter of which Agably is distant 8 S. W. about 700 m.

AGADAS. See AGADAS.

AGADEZ a town, N Africa, Sahara, kingdom of Aur or Anber, about 800 m S.S.W. Mowrouk; lat. 15° 30' N lon. 7° 30' E. It is situated on a *hamada* or tableland at about 8 m in circuit; land has almost a ruined appearance, consisting of about 700 houses, built of mud, occasionally white-washed and flat-roofed. A tower 92 ft. to 95 ft. high is the principal defence. The manufacture of limited extent, consists of mats and leather work particularly saddles, and the saddles used in riding the *maheurs* or swift camels. The trade is chiefly in millet which is almost the only food. The inhabitants, now only about 8000 though they formerly numbered from 50,000 to 60,000 speak a peculiar language called Emghadesi, which is also spoken at Timbuktoo, and have five or six schools in which the boys are taught to read the Koran and to write. (Richards, *Barth, etc. Exped. in Central Africa.*)

AGADJIL, **AGADEKKA**, or **SANTA CRUZ**, a seaport in Morocco, prov. Suse, 18 m S. Cape de Gaer or Ghir lat. 36° 25' N lon. 5° 32' W (a) on the summit of a hill 600 ft. in height and surrounded by dilapidated walls once an important place, but now in a state of decay. Half way down the hill on which the town stands, and between it and the sea, there is a battery which was intended to command the anchorage, and to prevent a running of water near the beach, but it is now likewise in ruins. The Bay of Agadez is one of the best roadsteads on the coast of Morocco, having a moderate depth of water and being completely sheltered from the strong N.E. winds, although exposed to those from the W. It abounds with fish of various kinds of which great numbers are caught, dried and sent to Mogador and the interior and now form the sole article of trade in this once flourishing place. Provisions are good and plentiful and water easily procured. Pop. about 800.

AGALEOS, or **GALISA**, a small isl. Indian Ocean, about 485 m N.W. of the N. extremity of Madagascar. The N. end of the island is lat. 10° 21' 30' S. lon. 56° 28' E. (a) It is 11 m in length, and little more than 1 m in breadth all low land, with a gap in the middle, where the sea breaks through on high tides, giving it the appearance of two islands when seen from a distance. It produces maize, wheat, &c.

AGAME, a prov. Tigris, in Abyssinia, in the N.E. part of that territory and W. from the great salt plain in which the country terminates N.E. The ground is high but fertile and well cultivated and the air cool and salubrious. The principal towns of the province are Genet and Senaro.

AGANA (SAN JUAN DE LOS RIOS) a town in Guahua or Guahua the largest, and one of the most southern of the Ladrone or Mariana Islands, on the W. coast, 12 m N.E. harbour of Apra lat. 18° 30' N lon. 144° 08' E. situated in a fertile district, at the base of a range of low hills. It is the principal town of the island and is the residence of the governor of the Archipelago. It is well fortified and is surrounded with beautiful gardens. The streets are regular, the houses chiefly of wood erected on posts and standing about 3 ft. clear of the ground, roofed with tile and palm leaves. Agana was built by the Spaniards, when they founded the colony about the middle of the 17th century. Pop. 2118.

AGATA DE GON (SANTA) a town in Naples, prov. Terra di Lavoro, district of Caserta, and 12 m N.E. Capua. It has a cathedral, seven parish churches, and an abbey and is the chief place of one of the dioceses forming the archbishopric of Santa Agata and Terra. Pop. 5500. — There are several other towns and villages of the same name in Naples, the principal of which are Agata Santa prov. Capitanata, district of, and 7 m S.E. from Bovino. Pop. 4648. — Another in the prov. Terra di Lavoro, district Gaeta, built on the ruins of the ancient *Minturnae* of the Romans. — **SANTA AGATA VECOGIA**, prov. Calabria Ultra I 3 m S.E. Reggio. Pop. 1200. — **SANTA AGATA NUOVA**, at a short distance from the latter has a cotton manufactory and a pop. of 608.

AGATHO or **AGATHA**. See **GAZAGH**. — **AGATHO**, or **AGATHA**, a small isl. of the Aloutian group, whose centre is in lat. 52° 43' N lon. 173° 37' W (a). It is covered with low hills, and is thinly peopled.

AGDASS, a town in interior of N.W. Africa, near the S.E. border of the Sahara, and N. confines of Gerdau lat. 16° N lon. 6° 32' E. on the route from Tripoli and Fezzan to the town of Kachia, in the country of Houma, from which it is about 210 m distant, nearly due N. Agdass is about 590 m W N.W. Lake Tchad.

AGDE (anc. *Agatha*) a maritime city France, dep. Hérault, about 12 m S.E. Beziers, on the left bank of the Hérault, here crossed by a suspension bridge, and 2 m. from its embouchure, in the Gulf of Lyons lat. (harbour) 45 16 42" N lon. 3° 26' 43" E (a). Agde is sometimes locally called *Ville Rose*, from the black volcanic basalt of which it is built. It is a military place of the fourth class and has a tribunal of commerce, an exchange, and a cathedral the latter a remarkable structure, of great antiquity in the Gothic style, built of black basalt, with a strong square tower 114 ft. high, which forms a useful landmark to mariners. The town is separated from its suburb by the river on which there is a small port, capable of accommodating about 450 vessels of from 60 to 200 tons burden. Most of the smaller vessels are engaged in fishing, supplying the whole department, and part of that of Gard, with fresh fish. Being advantageously situated, it carries on an active coasting trade, there being about 120 vessels, of from 100 to 300 tons burden, belonging to the port. It has manufactories of verdigris and soap, shipbuilding and distilleries; exports large quantities of corn and flour and imports olive oil, dried fruits, woollen goods, leather and perfumery and soap from Marseilles, with which port it has a regular communication by steamers. Pop. in 1845 8984.

AGEN (Latin, *Agenum*, *Agenensis*) an ancient town, France, cap. dep. Lot-et-Garonne, 74 m S.E. Bordeaux on the right bank of the Garonne crossed here by a beautiful stone bridge of 11 arches and also by a suspension bridge, between which and the town is the fine promenade called *Les Grèves*. The town itself is a place of little interest, being in general ill built, with old, narrow and dirty streets and the exhalations from the marshes of Brax render the air somewhat insalubrious. Among the public buildings are the old church of St. Capran, the hospital of St. James and the prefecture originally the Episcopal palace, which is a handsome edifice. The site of the cathedral of St. Adrien, destroyed at the Revolution, is now a cattle market. Agen forms the entrepot of the commerce between Bordeaux and Toulouse. It is the seat of a bishopric suffragan to Bordeaux, and of a *Cour Royale* for the departments of Lot, Lot-et-Garonne and Gers. It has a college, several libraries and a noble library, and a public library with more than 15,000 volumes also a library, and a house of correction. An extensive sailcloth factory is carried on here, for the supply of the French navy. There are also manufactories of serge, printed cloths, cottons, camlets, pottery, candles, and soap and some brandy distilleries and tanneries. Its scarlet and deep red dyes are much esteemed and the celebrated *grapes of Agen*, from the plum orchards in the neighbourhood form an article of export to the value of 234,000 annually. Large flocks of geese are reared in the vicinity and fattened on maize. In ancient times, Agen was the capital of the Nitiorum a people of Gaul afterwards a *prætorian city* under the Roman emperors. Pop. in 1846, 16,517. (Guibert, *Dec. Cou. et Stat. French Official Papers*.)

AGNOIS, an anc. district France, in Guernsey. It constituted part of the old kingdom of Aquitaine, and is now comprised in the department of Lot-et-Garonne.

AGER, a town in Spain, Catalonia, prov. of, and 85 m N.E. from Lerida, in a valley. It is surrounded by walls and fortifications, in a good state of preservation, but its streets are crooked, dirty and unpaved. It contains a square, cape close townhall an endowed school and two churches. The inhabitants are engaged in agriculture, olives being the principal article of produce and in breeding sheep, goats, and pigs, all of which animals, but the last in greatest numbers, are sold at the annual fair held in December. Pop. 5300.

AGEROLA a small town in Naples prov. Principato Citra, district of, and 11 m S.W. from Salerno. It stands on a hill, and enjoys a salubrious climate. Pop. 2470.

AGGERSHUUS, **AGGERSHUUS**, or **AGGERSHUUS** the most populous and important of the five administrative provinces into which Norway is divided, and co-extensive with the diocese of the same name. It lies between lat. 58° 56' and 62° 58' N., and is bounded, E. by Sweden, S. by the Skagerrack, S.W. by prov. Christendom, W. by Bergen, and N. by Trondhjem, or Trondhjem; area, 10,911 sq. m. Pop. in 1845, 552,833. It is a mountainous romantic country, and, like other parts of Norway the unutilized portion bears

a large proportion to that under tillage. The soil in the small valleys is tolerably fertile, and yields grain, though not in sufficient quantity for home consumption. Cattle and horses rearing are extensively and successfully carried on. The mountains yield an unlimited supply of fine timber, and iron, copper and silver are wrought. The province is watered by the rivers Drammen, Glumum, Loxum, Lougen, Kira, Nid etc., and of the numerous lakes that diversify its surface, the most noted are the Milson, Fimund, and Tyra. It is divided into six hallwicks Aggerhus, Smaleshus, Buekerod, Jarlsberg and Laurvig, Christian and Hede- nassen. The principal towns are Christians, the capital of the province and of the country. Drammen, Kongsberg, Laurvig and Tysberg. The town of Aggerhus in which is the cap. Christians, has an area of about 717 sq m. and a pop of 88,755. AGGERHUS is also the name of an ancient fortress forming the diadem of the capital. (Capt. Roosen in *Bulletin de la Soc. Geo. Forsell, Statist. von Schweden*).

AGGERSE, a small isl. Denmark S.W. coast of Sealand from which it is distant about 3 m. lat. 55° 35' N lon. 11° 10' E. It is about 15 m. long and 1 or 1½ broad at the E. extremity of the island is a lighthouse, elevated to a height of 24 ft. above the level of the sea, as a substitute for a lighthouse.

AGHA or ANAKA a par Ireland co. Carlow area, 4184 ac. on the river Barrow 1 op 1516.

AGHABOE, a par Ireland Queen's co. 18,703 ac. abounds in excellent limestone. Pop. 4510

AGHABON a par Ireland co. Monaghan 11,544 ac. contains several small lakes people miserably poor Pop. 4874

AGHABOLOCUE, a par Ireland co. Cork 18,733 ac. a sacred wall and stone, in the churchyard, the latter called St. Olan's Cap. Pop. 8567

AGHACKRW a par Ireland, co. Tipperary 1230 ac. Pop. 322.

AGHACROSS a par Ireland co. Cork 255 ac. two annual fairs. Pop. 75

AGHADA a par Ireland co. Cork 2458 ac. on the E. shore of Cork harbor Pop. 2484

AGHADE a par Ireland co. Carlow 1696 ac. P. 480

AGHADEIRG a par Ireland, co. Down 13,920 ac. Pop. 7242

AGHADOE, a par Ireland co. Kerry It was anciently a bishopric but, being merged in that of Ardfert, is now annexed with it to the see of Limerick. Its ruins of its cathedral are still extant, and near them are those of an ancient round tower called The Pulpit, by the peasantry and a round castle, called The Bishop's Chair. In 1281 there was an almy here, in which the son of the O'Donoghue, its founder was killed. The village of Aghadoe is distant about 2 m. from Killarney. The parish includes a portion of that town and comprehends within its limits the beautiful island of Inishfallen, and part of the lakes of Killarney. Area of par. 16,92 ac. Pop. 2861

AGHADOWN a par Ireland co. Cork 8982 ac. contains several islands Pop. 8273

AGHADOWY a par Ireland co. Londonderry 16,304 ac. Pop. 6315

AGHALALION a par Ireland, co. Antrim 5470 ac. Pop. 8314

AGHAOWFR, par Irel Mayo 55,048 ac. P. 6511

AGHALEE a par and vil Ireland co. Antrim 2400 ac. Pop. 1280

AGHALUCHEER a par Ireland co. Tyrone and Fermanagh 45,471 ac. extends along Lough Erne abounds in limestone and sandstone and contains several small lakes, and old castles. Pop. 18,323

AGHAMORL a par Ireland, co. Mayo 22,510 ac. contains several small lakes and much bog. Pop. 6097

AGHAMOON a par Ireland King's co. 5544 ac. contains a mineral spring and the ruins of Ballybrist Castle. Pop. 856

AGHANLOO a par Ireland co. Londonderry 8251 ac. contains a mountain called Bannaveagh which rises from the margin of Lough Foyle to a height of 1260 or 1280 ft. Pop. 3514

AGHARA See ANARA

AGHARUN or KWARRA (Hoo) a vil Turkey in Asia

paah. Diarbekir, finely situated in a gorge of the mountains of Diarbekir Dag, and surrounded by magnificent walnut trees. It commands a splendid view of the plain on which the gorge in which it is situated opens.

AGHAYALLEN a par and vil. Ireland, co. Kerry 16,748 ac. lies along the Shannon, and includes the island of Corrie-a-felle contains an old castle. Pop. 5100

AGHER, a par Ireland, co. Meath 2063 ac. Pop. 347

AGHERN a par Ireland, co. Cork; 2458 ac. Pop. 219

AGHEERTON or BALLYAGHEERTON a par Ireland, co. Londonderry 8697 ac. lies along the coast of the N Channel contains iron ore, and an old church, and castle. Pop. 2034

AGHIART or BALLYAGHIART, a par Ireland co. Galway 5231 ac. lies along the shore of Ballyquin Bay Pop. 780

AGHMA ART a par Ireland Queen's co. 9601 ac. Pop. 2483

AGHMAT or AGHMET a vil Morocco, on the W slope of Mount Atlas, on the vicinity of some of its loftiest summits, the left bank of the Wadi Edda a tributary of the Toudra, 30 m. S. Morocco. lat. 31° 30' N lon. 7° 30' W. It is said to have been at one time the residence of the Moorish emperor and to have contained 6000 houses but it is now an insignificant village.

AGHNAMHEADLE, a par Ireland co. Tipperary 10,323 ac. Pop. 2194

AGHOID a par Ireland co. Wicklow 8140 ac. Pop. 1734

AGHOR, river Balochistan, forming the S.E. boundary of prov. Belkhan. It rises in the district of Jina takes a S. course for about 50 m. and falls into the Indian Ocean about lat. 20° 25' N lon. 65° 50' E.

AGHORE, or FAKHREDDIN a par Ireland co. Kilkenny 911 ac. Pop. 1721

AGHERIM or AGHERIM a decayed vil. Ireland, co. Galway 68 m. W. Dublin, and 56 E. town of Glenties, remarkable for the signal and decisive victory obtained in its neighborhood, July 12 1691 by the forces of King William, commanded by General de Ginkell afterwards Earl of Athlone over those of James II. under the French general St. Ruth who was killed early in the action. Swords, spear heads, and cannon balls, have frequently been dug up on the site of the battle. In the village are a church, a chapel and a small Methodist meeting house. Area of par. 7203 ac. Pop. 1355.—There is a village of the same name in co. Wicklow on the left bank of the Derry 34 m. S. Dublin

AGINCOURT now AGINCOURT a vil France dep. Calais, 20 m. S.E. W. St. Omer and 30 m. N.N.E. Abbeville celebrated as the scene of the great victory, gained on St. Crispin's day Oct. 25 1415, by the English, over a French army more than six times their number. The village of Agincourt, a dirty insignificant place contains only a pop. of 401 Of the castle mentioned by Shakespeare as standing hard by only the foundations remain. A wood still exists supposed to be that in which Henry V. posted his archers.—(History of England, Murray's Handbooks for France)

AGIO ST. RATTI (anc. Aeg.) an isl. of the Grecian Archipelago, 30 m. S. Lemnos, and 46 m. W.W.N. Mytilini lat. 39° 31' N lon. 26° 14' 42" E. (n) There is a small village on the W. side of the island.

AGLIE or ANAKA a s. fardalun Eskos, in Piedmont, 30 m. N. Turin, and 10 m. W. Ivrea. It has a collegiate church and a superb royal residence which contains a small but very choice collection of Roman antiquities, and a library Pop. 5490.

AGLISK the name, with and without affixes, of a number of parishes, Ireland.—1 A par co. Cork 6771 ac. Pop. to 1851 1717.—2 A par, co. Kerry 4857 ac. Pop. in 1851 1848.—3 A par co. Waterford 6856 ac. Pop. in 1861 3769.—4 A par, co. Wicklow 1844 ac. Pop. in 1861 458.—5 A par, co. Tipperary 6698 ac. Pop. in 1851 1218.—6 A par, co. Londonderry 1716 ac. Pop. in 1851 479.—7 A par, co. Londonderry 1716 ac. Pop. in 1851 479.—8 A par, co. Londonderry 1716 ac. Pop. in 1851 479.

AGLY a small river France, which has its source in the dep. of Aude, near Quissac, from which it flows S.E. enters the dep. of the Pyrenees Orientales; turns nearly due E.

and finally falls into the Gulf of Lyons 8 m N N E Pieris
on the whole coast between 50 and 60 m.

AGMONDESHAM. See AGMONT.

AGNADELLO a vil Venetian Lombardy prov of and
10 m N E Lodi, district Pannino. Here, in 1609, Louis
XII, King of France gained a complete victory over the
Austrians and here, in 1705 Prince Eugene was defeated by
the Duke of Vendôme. Pop. 1600.

AGNANO a lake, Italy about 4 m S.W. Naples. The
circular hollow in which it lies, is supposed to be an ancient
crater but some have ascribed its origin to an excavation
made by Lucullus, to serve as a fish pond. It is from 1½ to
2 m in circumference, and derives its greatest beauty from
the verdure on its margin and from the fine hills around it.
In summer the air is unhealthy. Near the lake is the cele-
brated *Grotto del Case*, or *Grotto of Doga*, a small aperture
in the side of the mountain, remarkable for emitting a deadly
vapour to whose noxious effects it is a common practice to
expose dogs, which are thus quickly deprived of all appearance
of life, but are as quickly restored on being brought into the
fresh air. This grotto is alluded to by the elder Pliny. Close
by the lake are also the sulphurous vapour baths of San Ger-
mano, the *Aguas Thermales de la Rousa*.—(Bastace's *Classical
Tour* vol. II. p. 882)

AGNES (Str.) a small market to and par England on
Cornwall. The former is built on a small rocky harbour near
the Bristol Channel about 8 m N W Truro. It contains a
free school a British school and several dissenting places of
worship. The harbour is accessible at high water only and
even then, is capable of receiving but a few small vessels.
There is, however some trade in coal lime, and slate.
Market day Thursday. This market, which is for all sorts
of wares and provisions except corn has been held from time
immemorial. The inhabitants are chiefly miners. The
coasts of the parish are exceedingly wild rocky and precl-
ious. About St. Agnes Head the cliffs are tremendous, and
have often been the scene of the most disastrous shipwrecks.
A pilchard fishery was established here about the year 1802
Upon the painter was a native of St. Agnes, having been born
there in 1761. Area of par 8504 ac. Pop. 6074

AGNES (Str.) the most southerly of the Bailly Islands,
on the coast, and included in the county of Cornwall. Lat.
49° 55' 36" N. lon. 6° 20' 42" W. (N.) It is of an irregular
form with an area of about 800 ac. The soil is fertile and
intensely cultivated, but there is a great deficiency of water.
On one of the lowest hills a lighthouse was erected in 1880.
The light, which is revolving is elevated 188 ft. above high
water mark. 1 sp. 204

AGNO—1. A river Lombardy an affluent of the Adige
from the left. It rises about 21 m N Verona takes a
S.E. and somewhat winding course, passes Legnago, Cologne
and Este, and falls into the Adige at Rotta Sabazia, 8 m
N W Rovigo. Length, exclusive of windings, about 46 m.
—2. Market in Switzerland with stream and valley of the same name,
Switzerland in canton Tesau, of which it is one of the most
important places. The town is in the district of Lugano, and
lies at the N end of the Lago d'Agno, the W arm of the
Lago Lugano. It is beautifully situated and has two hand-
some churches. The inhabitants are Catholics and speak
Italian. Pop. 726

AGNONE, a tn. Naples prov Salerno, district of, and
18 m N. E. from Salerno pleasantly situated on a hill, and
said to be built on the site of the ancient *Agonion* of the
Samnites. It has 18 churches, an hospital, and five monas-
teries, which advance loans of seed corn to the poor agri-
cultivists in the neighbourhood. It is celebrated for the
excellence of its copper manufactures, of which it has several.
Pop. 7480

AGNUR or **AGNUR**, a tn. Punjab, on the right bank of
the Chenab 85 m above where it is joined by the Tuni or
Makht river 66 m N N W Lahore lat. 32° 53' N. lon.
74° 58' E. It is a place of no importance, situated at the
base of the most southern range of the Himalayas, where it
first rises above the plain of the Punjab. The river is here
protected by a steep bank probably more picturesque than
useful, but early in the present century by Alun Singh,
and subsequently plundered by Ranjit Singh. The old
palace is in ruins and imparts a picturesque appearance to
the place. Near Agnur rises the mountain Trikuta and

about half way up its N side is a place of pilgrimage with a
temple much celebrated for its beauty and sanctity. The
river Chenab is here a strong clear stream with water of icy
coldness. It becomes navigable a little way above Agnur and
continues so to the sea.—(Hedges's *Travels* Thomson's *Gaz.*)

AGO a small isl. Sweden Gulf of Bothnia, 110 or 12
m Gadeberg, about 6 m from the mainland lat. 61° 32' N.
lon. 17° 23' E.

AGOA DE PAO a seaport tn. St. Michael, one of the
Azores, on the E. coast of the island 12 m N. E. Ponta del
Gada, the cap. Pop. 3000.

AGON a small seaport tn. France dep. Manche, about
7 m W Coutances. Vessels are fitted out here for the New
foundland cod fishery. It has also some trade in timber and
slates, and was formerly celebrated for its fair. Pop. 1006

AGOONA a small state W Africa, Gold Coast, territory
of Ashantes between lat. 5° 20' and 5° 40' N. lon. 10° 10' and
40° W. It is about 30 m. from K. to W. and about 20
from N to S. There are one Danish, one Dutch, and one
British settlement on the coast of this district, named, respec-
tively Christiansborg, Cyrensebor and Fort James. Win-
nebush was formerly the most important place in Agoona, but
it is now abandoned.

AGOEDO a small tn. Austrian Italy on the left bank
of the Cordevole, 13 m N W Belluno lat. 46° 16' N. lon.
12° 6' E. It lies in a mountainous district containing rich
mines of sulphuretted copper. Pop. 8500

AGORTA or **AGORTA** a seaport to S.E. coast Sicily
prov. of and 12 m N N W from Syracuse lat. 37° 13' N.
lon. 15° 14' E. It stands on the S. side of a peninsula that
terminates in Capo Santa Croce and is fortified. It was a place
of some importance before the earthquake of 1693, which
buried more than a third of its inhabitants under the ruins of
their houses. To deepen the calamity the entel was blown
up, the powder magazines having been ignited as was sup-
posed by the sulphurous vapours that issued from the ground.
The houses are near and the inhabitants have a general and
poverty-stricken look. The port is spacious, though of rather
difficult access, and liable to heavy swells when the wind is
from the E. or S. It exports a little wine, oil and audine,
and has a considerable trade in salt, which is the chief article
of export. Pop. 10,000

AGOWES, a people of Abyssinia, divided into three dis-
tinct tribes one of which inhabits the fertile country lying
immediately W from the source of the Blue Nile, in the
territory of Amhar; another called the Gusha Agow, in
hills in a district on the E. bank of the Tseana in Tigre
the third occupies a tract on the N. bank of the same
river also in Tigre.

AGRA, a gov. prov. and district, Hindoostan.—The
government includes the N.W. provinces Delhi Meerut,
Rohtak, Agra, Allahabad, and Benares (which are) contain-
ing an area of 51,881 sq m and a pop. of 13,738,744 ———
The prov. of Agra, same name, is situated chiefly between
lat. 25° and 28° N. bounded S. by Oude and Allahabad S.
by Malwa, W. by Ameer and N. by Delhi. It is about
250 m long and 180 broad and is subdivided into five dis-
tricts, which, with their area, population, &c., are exhibited
in the following table —

	Number of Square Miles	Area in sq. m.	Area in Acres.	Land Revenue in Rs. &c.	Total Pop.	Mean Pop. per sq. m.
Muzaffarnagar	948	1168	384,970	100,033	460,773	417.7
Agra	1267	1454	1,086,414	180,082	697,123	469.4
Farrukhabad	934	1246	1,025,530	135,649	777,559	497.6
Mysorepur	1697	1710	1,480,688	118,673	921,761	540.0
Etawah	1618	1806	1,071,837	130,120	648,610	358.5
Total	7444	8548	8,797,595	708,005	4,281,834	416.0

The average rate of the land tax on the total cultivation,
according to the table by Mr. Thornton in the *Journal of the
Statistical Society* from which the preceding is an extract, is
Rs. 64. per acre. The province is watered by the Ganges, the
Jumna, the Chambal and various smaller streams. It is generally
flat, and destitute of wood, but the S. and W. are hilly and
abound in jungles, which swarm with peacocks. In many parts
there is a great deficiency of water the smaller streams being
either absorbed by the heat, or turned aside by the cultivators of

the soil, for purposes of agriculture, before they reach the larger; with are, therefore, the only other resources of the inhabitants. The climate, except during the prevalence of the hot winds, is temperate and healthy and, in winter nights, cool but, on the whole, unfavourable to European constitutions. The soil is well adapted for the cultivation of indigo, cotton, tobacco, and sugar. Various kinds of grain and pulse, including millet, barley wheat, &c., are also raised. Wheat and barley, however, form the principal crops; rice and oats being hardly known. Owing to the scarcity of water rice is little cultivated except in the vicinity of rivers. Cotton is the staple product. Agra has the common breeds of cattle and sheep, with horses of a good description. There are some marble and sandstone quarries and copper has been found, but not in a situation favourable to mining. Silks and muslins were formerly manufactured, but the principal article of manufacture is coarse cotton cloth, the exportation of which has lately much declined. This province, which was marked out by the Emperor Akbar in now entirely either in possession, or under the control, of Great Britain. The natives, who are principally Hindoos and Mahomedans are handsome and robust, and much superior to the natives of the more E. provinces. The Hindoos speak the colloquial and the Persian or English the official language.—The *annexation of Agra* extends in a S.E. direction along both banks of the Jumna, to the junction with the Chambal. The portion of the district within these two rivers is a table land, about 60 ft. above the beds of these streams, and is composed of a light soil. In the dry season, the tanks and rivers are without water. The entire area of the district is 1,788,414 ac. The quantity of cultivated land is 818,655 ac. and of cultivable land 92,981. The natives of Agra, and of many of the contiguous territories, have long been notorious for their predatory habits, which, previously to British ascendancy were committed to, and encouraged by the Zemindars, or landholders, who shared in the plunder thus obtained. The total population amounts to 657,193 of which 588,256 are Hindoos, and 70,936 Mahomedans and others, not Hindoos.—(Hamilton's *East India Gazetteer* Historical and Descriptive Account of British India Journal of the Statistical Society of London, 1847.)

AGRA or AKRAMARAD, a city of Hindoos and esp. of prov. of same name, on the right bank of the river Jumna 116 m. S.E.E. Delhi; 740 m. W.W. Calcutta. 62° N. E. 100 m. by rail and 1000 m. N. by W. Madras lat. 27° 11' N. lon. 78° E. A great part of the city is now in a ruinous state, but it still maintains much of its original splendour. The houses, generally are lofty consisting of several stories, and the streets extremely narrow. It contains no modern buildings

the most to the left of the river. This superb edifice the Mughal Mahal, probably in the world stands on the banks of the Jumna, is enclosed on three sides by a high red stone wall, and forms a quadrangle of 190 square yards, with a lofty dome of 70 ft. diameter in the centre, and tall minarets rising from the angles of the terrace. It is built of white marble, and the great central hall, in which are the tombs of the Emperor and his queen is paved with alternate squares of variegated coloured marbles while the walls, tombs, and screens, are ornamented with the most exquisite mosaic work, chiefly of agate, lapis lazuli, and jasper. The chambers and corridors, which surround the hall are finished with similar elegance. The whole cost of the building is said to have been £3,174,802 sterling. It is surrounded by a beautiful garden, adorned with fountains of white marble and containing a profusion of fine trees and flowering shrubs. It is now in charge of the British Government, and is kept in the highest order. The imperial palace built by the Emperor Akbar the Mughal Musjid, or pearl mosque, both now used as offices, warehouses, and lodgings; the mosque named the Jumna Musjid, and the tomb of Edinabad-Dowla, are all remarkable structures. In the neighbourhood are likewise numerous splendid remains of Indian art. The fort of Agra is large, and strongly built of red sandstone with a ditch a double rampart, and bastions. It has been repaired, and much improved, for the accommodation of the British garrison. The trade of Agra, carried on partly by land and partly by water consists chiefly in the exportation of indigo silk and sugar, and the importation of horses, camels, gram, fish and dried fruits and manufactured silk and cotton. Agra was at various periods the seat of the Mogul Government, and is intimately connected with the whole modern history of India. Previously to the 16th century it was an inconsiderable village, but, early in that century it seems to have been first made an imperial residence by the Afghan Emperor Sher Shah. It was further enlarged by Akbar about 50 years afterwards, and by him named Akbarabad. It continued to be the occasional seat of Government till the final decay of the Mogul dynasty about the middle of the 18th century. In 1784, it was taken by the Marhatta chief, Madhrajee Kinde, who retained possession of it till 1808, when it was besieged and captured by the British under Lord Lake. Soon after it was made the headquarters of a civil establishment for the administration of justice, and collection of revenue, and subsequently became the seat of the British Lieutenant-governor of the N.W. provinces. This city is the birthplace of the celebrated Abul Fazel viizer or prime minister to Akbar whom he assisted in the preparation of a work entitled the *Agon Library* containing an account of everything connected with the domestic government, and occupations of that emperor. Agra is still regarded with great veneration by the Hindoos, as the birthplace of the sixth Avatar, or incarnation of the god Vishnu, named Parasurama, whose conquests extended to the island of Ceylon. 1 op. in 1837 98,597.—(Historical and Descriptive Account of British India Haber's *Indian Journal* Hamilton's *East India Gazetteer* Joo quonson's *Letters from India* Mart in a *British Traveller in the East Indies*.)

AGRAM, or AGRAMAR (Latin, *Agropolis*) a city of Hungary, esp. Croatia, on the left bank of the Sava, from which it is about 2 m. distant 106 m. E. by N Trieste lat. 46° 48' 54" N lon 15° 59' 5" E (L.) finely situated on a wooded slope, overlooking the fertile plain of the Sava. It is the seat of various local courts, and of a bishopric. It is divided into three parts—the free, or upper town the lower or chapter town and the bishop's town. The first crown a hill called *Medved*, or *The Bear* and is the most fashionable of the three, being inhabited exclusively by the higher classes. The streets here are regular and well built; many of the houses are in the Italian style, with flat roofs; and the whole is surrounded with palisaded walks, planted with poplars, forming an agreeable

TAJ MAHAL, AGRA.—From High Ground, View to South.

of any note, but some of its more ancient structures are on a scale of great magnificence. Of these the most celebrated is the *Taj*, or *Taj Mahal*, a mausoleum, built in the 17th century, by the Emperor Shah Jehan in commemoration of

his favourite queen. This superb edifice the Mughal Mahal, probably in the world stands on the banks of the Jumna, is enclosed on three sides by a high red stone wall, and forms a quadrangle of 190 square yards, with a lofty dome of 70 ft. diameter in the centre, and tall minarets rising from the angles of the terrace. It is built of white marble, and the great central hall, in which are the tombs of the Emperor and his queen is paved with alternate squares of variegated coloured marbles while the walls, tombs, and screens, are ornamented with the most exquisite mosaic work, chiefly of agate, lapis lazuli, and jasper. The chambers and corridors, which surround the hall are finished with similar elegance. The whole cost of the building is said to have been £3,174,802 sterling. It is surrounded by a beautiful garden, adorned with fountains of white marble and containing a profusion of fine trees and flowering shrubs. It is now in charge of the British Government, and is kept in the highest order. The imperial palace built by the Emperor Akbar the Mughal Musjid, or pearl mosque, both now used as offices, warehouses, and lodgings; the mosque named the Jumna Musjid, and the tomb of Edinabad-Dowla, are all remarkable structures. In the neighbourhood are likewise numerous splendid remains of Indian art. The fort of Agra is large, and strongly built of red sandstone with a ditch a double rampart, and bastions. It has been repaired, and much improved, for the accommodation of the British garrison. The trade of Agra, carried on partly by land and partly by water consists chiefly in the exportation of indigo silk and sugar, and the importation of horses, camels, gram, fish and dried fruits and manufactured silk and cotton. Agra was at various periods the seat of the Mogul Government, and is intimately connected with the whole modern history of India. Previously to the 16th century it was an inconsiderable village, but, early in that century it seems to have been first made an imperial residence by the Afghan Emperor Sher Shah. It was further enlarged by Akbar about 50 years afterwards, and by him named Akbarabad. It continued to be the occasional seat of Government till the final decay of the Mogul dynasty about the middle of the 18th century. In 1784, it was taken by the Marhatta chief, Madhrajee Kinde, who retained possession of it till 1808, when it was besieged and captured by the British under Lord Lake. Soon after it was made the headquarters of a civil establishment for the administration of justice, and collection of revenue, and subsequently became the seat of the British Lieutenant-governor of the N.W. provinces. This city is the birthplace of the celebrated Abul Fazel viizer or prime minister to Akbar whom he assisted in the preparation of a work entitled the *Agon Library* containing an account of everything connected with the domestic government, and occupations of that emperor. Agra is still regarded with great veneration by the Hindoos, as the birthplace of the sixth Avatar, or incarnation of the god Vishnu, named Parasurama, whose conquests extended to the island of Ceylon. 1 op. in 1837 98,597.—(Historical and Descriptive Account of British India Haber's *Indian Journal* Hamilton's *East India Gazetteer* Joo quonson's *Letters from India* Mart in a *British Traveller in the East Indies*.)

promenade. In the lower town, the houses are old and mean and the streets and squares ill paved. The principal buildings are the cathedral, episcopal palace, the Narbonne Domo, the national casino, or club-house, and the Government house. The cathedral is a lofty and spacious building, in a mixed style, the front being Byzantine of the 11th century and the body Gothic. The great eastern window which has been recently renewed with painted glass is a magnificent specimen of this beautiful art. The episcopal palace still has the castellated round towers of the Middle Age but the most is now replaced by a garden and the curtain has been pierced with modern windows. The income of the bishop is little short of £20,000 a year. Both these buildings, the cathedral and palace adjoin the lower town. The Government house, in which the diets are held, is situated in the upper town. The Narbonne Domo is an elegant new structure, in the Palladian style of architecture, containing a museum, and the rooms of the Agricultural Society. There has been lately founded here an institution for sisters of charity, to which the bishop contributed £15,000. The building occupies a prominent position in the lower town and includes within its walls an hospital for poor women, and a school for poor female children, as well as the dormitories and church of the motherhood. There are also a civil and military hospital an orphan institution, and a German and Italian theatre which, however are open only in winter. Two journals are published in the town both conducted with considerable talent and there are two libraries—a public library and the cathedral library. The educational institutions comprise a royal academy, a primary and preparatory schools, and a theological seminary. There are manufactures of silk and porcelain, and a considerable trade in tobacco and honey. Within a few miles of the town is the bishop's English park, a favourite resort of the inhabitants in the summer season. It is of several miles extent ornamented with oaks, and intersected by numerous beautiful drives. The Sava is not navigable for steamers as far up as Agramunt but from Sams at the confluence of the Culpa a weekly steamer descends to Semlin opposite Balgrade, except during the winter months. Pop. 14,900.—(Paton's Highlands and Islands of the Adriatic, vol. ii. p. 185. Ruffelspinger Lex. Oesterreich. Bantien.)

AGREDADA, a tn. Spain in Catalonia, prov of, and 25 m. N. E. from Lerida, at the foot of a hill on the right bank of the Rio. The houses are regularly built, but the streets are tortuous and unpaved. It has a square in which is an arched fountain, and it likewise possesses three churches, a townhall, hospital, Latin and other schools, and a public storehouse. The inhabitants are chiefly employed in raising corn and fruit for the markets of Barcelona in weaving dimities, and in manufacturing hempen sandals. Pop. 2680.—(Madon.)

AGRAPHIA, or AGRAPHIA a part of the Pinus range of mountains in Greece between Theasaly and Epirus, which gives its name to a district of the Turkish path. of Triclasia.—There is likewise a vill. named AGRAPHIA in the isl. of Corfu.

AGREDA, a tn. Spain, in Old Castile prov of, and 98 m. E. N. E. from Burgos, on the N. slope of the sierra Moncayo. It stands on the Queylos, which divides the town into two parts, and is entered underground having a fountain and the townhall situated over it, on a fine stone bridge of one arch. The streets are irregular but the houses are well built, and there is a somewhat handsome square, lined with good houses. In this town are likewise three churches, an hospital, two schools, and an abbot's. The manufacture of the place, once much more important than they now are, consist of pottery, wax, wax, sweetmeats, chocolate, and shoes. Agreda is supposed to occupy the site of the ancient *Gracchoris*, or *Gracchoris*, which was built by the praetorian Sempertius Gracchoris in commemoration of his conquest over the Celtiberi, and it contains some Roman remains. Pop. 3847.—(Madon.)

AGREDA, or NEW MALAGA, a small tn. Colombia, S. America, republic Ecuador district of, and 90 m. S. W. from Popoyan 108 m. N. N. E. Quilo founded in 1641. There are several gold mines in the neighbourhood.

AGREVE (St.) a small tn. France, dep. Ardèche, 40 m. N. W. Viviers, on the Rhone. It contains a Calvinistic consistorial church, and has an active trade in grain, wine, fruit, butter, cheese, and cattle. For wine, oil, soap,

cheese, and other articles, it forms the entrepot of the neighbouring districts. Pop. 2435.

AGRIB, AGRIB, or GRABIS (Mouss) a remarkable mountain of Central Egypt about 16 m. inland from the coast of the Gulf of Suez lat. 28° 7' N. lon. 32° 52' E. (N.) It is of a conical form, and of so great a height that it can be seen from a distance of 100 m.

AGRI DAGH, *See* AMARAT.

AGUA an active volcano Guatemala, close by the old m. of that name lat. 14° 33' 30" N. lon. 91° 40' W. It rises to the height of 15,000 ft. forming a beautiful and perfect cone, verdant to the summit. It occasionally spouts forth torrents of boiling water and stones, and has twice destroyed the old city of Guatemala. Agria is one of three volcanoes lying close together and presenting a scene of great magnificence the others are Panay and Fuego.

AGUACHAI, a. tn. Guatemala, prov. San Salvador about 3 m. S. from the lake of the same name. It lies about 20 m. from the Pacific, on the road between the city of Guatemala and Sonsonate. lat. 14° N. lon. 89° 42' W. It is a place of considerable trade and has extensive manufactures of sugar. Pop. about 5000.

AGUADILLA, a small coast tn. and haven, N. W. side of Porto Rico lat. at the N. end of a large sandy bay of the same name lat. 18° 24' 54" N. lon. 67° 8' W. (N.) The inhabitants, originally from the Canaries cultivate tobacco and coffee, and carry on some trade. In the haven is good anchorage in 14 or 15 fathoms, and the only danger when approaching it is a reef running off ½ m. from Point Diana. Water good, and fresh provisions cheap. Pop. 2500.—(West India Directory.)

AGUAPEHI a river Brazil prov. Matto-Grosso. It rises in the mountains from which it takes its name, on the confines of Bolivia, about lat. 16° 10' S. and after a course first N. and then E. for about 100 m. falls into the Jauru an affluent of the Paraguay. From the same mountains rise the rivers Negro, and some other streams which fall into the Guayra, one of the head streams of the Amazon. These two rivers, the Aguarapehi and the Negro, the waters of both of which ultimately reach the Atlantic—the former by the La Plata, and the latter by the Amazon—approach at Villa Bella so near to each other that between them there is only a portage of 3 m.

AGUARY RIVER. *See* ARAGUARY.

AGUAS CALIENTES, a tn. Mexico prov. Guadalupe, or Jalisco 270 m. N. W. the city of Mexico and 70 m. S. Zacatecas. By some it is said to be cap. of a district of the same name, in prov. Zacatecas. It lies in lat. 22° N. lon. 101° 40' W. on a level plain upwards of 6000 ft. above the sea level and is very favourably situated for trade, the great road from Zacatecas to Sonora and Durango, crossing here the highway from San Luis Potosi to Guadalupe. It has some handsome houses numerous churches, three convents and an hospital and is surrounded by rich gardens with olives, vines, figs, peaches, &c. Manufactures of cotton fabrics carried on to some extent. An annual market is held for 14 days. The climate is mild and delightful. The N. wind never affecting the town in consequence of its position on the W. slopes of the Cordillera. In the vicinity are two warm mineral springs from which the town takes its name, lying about ten yards apart from each other and having a temperature varying from 80° to 120°. The water is impregnated with copper remarkably clear and of an agreeable temperature. Pop. supposed to be 30,000.—(West's Mexico Gregg's Commerce of the Present Ritter's States Lex.)

AGUILAR DE LA FRONTERA, a tn. Spain Andalusia, prov. of, and 22 m. S. by E. from Cordova, on the left bank of the Chica on the summits and acclivities of four low hills. It is divided into the upper and lower town. The former is named *La villa*, from having formerly contained the principal buildings. Many of the houses are of three stories, one of which is always occupied as a granary. Some of the buildings—as the chapter house, the prison, the fish market, and the abbot's—are of good modern construction, and the whole town is remarkable for the whiteness of its houses, and the cleanliness of its streets. Frontiers has, besides, three elegant public squares an old and a new townhall, both well built; a murky unhealthy intermediate place of security for the accused, a church, and several chapels; a dismantled, but

strongly-built Moorish caste, several well-attended schools, both endowed and private, as hospital for the wandering poor; and an infirmary. The inhabitants are employed as agriculturists, carvers, and sheep, cattle, horse, and mule breeders; in manufacturing soap, cloth for local consumption, earthenware, tiles, and bricks, and in quarrying lime, gypsum and freestone. A fair for the produce of the district, is held in September. Pop. 11,850. —(Macle.)

AGUILAS (SAN JUAN DE LAS) a small town and port, Spain prov Murcia, 3 1/2 S E Lorta, 89 m. S.W Cartagena, on the Mediterranean lat. 37° 25' N lon 1° 57' W (a). The port, in which resides consuls of England, France, and Portugal, is neither large nor secure at all seasons, and it is defended by a circular fort in rather a dilapidated condition. The town, which consists of well-built houses forming broad streets, has a spacious square, an elegant custom house, a public granary, an abbey, a church, and a school. In the vicinity the rich lead and silver mines, on the sierras Abnagera and Lomo de las, occupy a considerable number of the inhabitants, and others are employed in agriculture, and in folding bonitos, sardines, &c. The exports consist of grain, mules, barrels, lead, silver &c. to the average extent annually of £135,000. Pop. 4839. —(Macle.)

AGUIQUES, a town in Canaries, isl of Gran Canaria, at the foot of Mount Vesuvius, and about 1100 ft. above the sea level. Its houses, chiefly of one floor and built with little taste, form three irregular streets, and as many irregularly shaped squares, both of which are, however well paved. It has a church, a badly-attended school, and, outside the town, a cemetery. The trade of Aguiques consists in sending to the Palmas market the produce of the vicinity consisting of grain, grass, honey, poultry and oil of excellent quality. Pop. 3078. —(Macle.)

AGUILHAS (Cape and Bank) The former is about 95 to 100 m. S.E. the Cape of Good Hope, and is the most E. land of Africa lat. 34° 51' S lon 20° 5' E. (a). Its highest part is 450 ft. above the level of the sea and its true meridional distance from the shore is nearly 1 m. From this point the descent E. is rather gradual; W., the descent is at first steep, then slightly undulating. S. it is steep then undulates to within 300 yards of the shore, where the ground becomes flat. A lighthouse has been recently erected on the Cape, the light of which was exhibited for the first time on March 1. 1845. The structure stands on an elevation of 52 ft. above high water and bears N 20° (magnetic) distant about 520 yards from the extreme point of the Cape. The tower is about 70 ft. high and the light being 128 ft. above high water mark, may be seen from the deck of a vessel, in clear weather at the distance of 15 m. Its lat. is 34° 49' 46" S. lon 20° 0' 40" E. —The Bank of Aguilhas extends from the Cape of Good Hope, along the E. coast of Africa, to Great Fish River a distance of about 560 m. Its breadth generally is about 100 m. but opposite Cape Aguilhas, it stretches out in a triangular form to upwards of 200 m. The Cape current—apparently the cause of its formation—passes clear of it throughout its whole length, defiling accurately its seaward edge or limit. Grassgroves, or what, are frequently seen floating with their heads a little above water more particularly in moderate weather with E. winds, when the water is smooth on the bank at such times a ship may be liable to run aground one of the rocks before it are aware of—an accident which has frequently happened to the great alarm of all on board. Large seals and polar geese also frequent the Bank. Fish larvae abound Sir E. Belcher relating, in his *Voyage of the Beagle*, that in two hours he caught on the Bank 42 fine fish, varying from 6 to 36 lbs. and adding, that immediately after taking the first fish, he found that the lead ceased to descend, in consequence of the dense shoal that swarmed below. Some of these were caught at the depth of 78 fathoms. Aguilhas is Portuguese for needles. It is a quite improper to write the name Laguilhas, or Laguilhas, as is sometimes done. —(North's *East India Directory*, *Voyage of the Beagle*, *Natural Magazine* for 1845 and 1850.)

AHADEKOL, a vil Turkey in Asia, pers. Anadolli, a few hours journey E. from Latak, or Haleb, which is situated lat. 35° 58' N lon 29° 50' E. Ahadekol is itself an insignificant village, but is remarkable for the extent and magnificence of the ruins in its vicinity. On the summit of a hill, says Mr W J Hamilton, we saw the remains of a theatre, with

half the scene and proscenium standing built of very large blocks of stone. All the seats of the arena are gone, but the hollow clearly remaining. The ruins of another theatre, and of several temples, were also found by Mr Hamilton, who adds, that architectural ornamented sculpture was lying about in every direction and many inscriptions, but chiefly repudiated These ruins, Mr H. believes to be the remains of *Trigleopolis*.

AHAQUAY a slave port on the coast of Guinea, about lat. 6° 15' N; lon 1° 45' E. Besides the numerous slaves shipped at this port, there is some traffic in palm oil and ivory. The natives are of a degraded character and given to every kind of vice, in which, however they only follow the example of the numerous Spanish and Portuguese residents. Cotton is cultivated, spun and woven into cloth, by the natives, who also cultivate indigo and manufacture it in a rude manner. There are two markets daily which are well supplied with Brazilian tobacco, yams, manioc root, plantains, bananas, ginger, pepper, cotton, grass bags, and mats of various colours, &c. Fish are caught in great abundance, chiefly in the Lagoon river which is here about 70 yards wide in the dry season, and 8 1/2 ft. deep, and flows immediately below the town. The vicinity of the town abounds in luxuriant tropical vegetation. —(Duncan's *Travels in Western Africa*.)

AHAMIZIRI a par Ireland, co. Sligo area, 16,414 ac. Lord Follinham is proprietor and owns the whole par. Pop. in 1851 6429.

AHANTA or **AKANTY** a maritime district of Ashantee (which see.)

AHALI, a small town Persia, prov Azarbijan 30 m. N.E. Tabreez lat. 38° 25' N lon 47° 10' E upon a river of the same name, and formerly surrounded by a wall, now in ruins. It contains about 100 houses, and the tomb of a saint held in reverence by the Mussulmans. The district around is well cultivated and much wheat and barley are grown. —Ahar river runs in the mountains N. of Tabreez and flows at first to the E., then to the N. and after a course of nearly 120 m. falls into the Arax, about 70 m. from the Caspian Sea.

AHARA or **AGHAKARA** a par Ireland, co. Longford area, 2590 ac. Pop. 529.

AHARVEY a par Ireland Queen's and Wicklow co.; 6889 ac. Pop. 1812.

AHASCRAIGH a par Ireland, co. Galway 17,348 ac. There is here a holy well surrounded with fir-trees, believed to possess great virtues. Pop. 3644.

AHAUS, a small town Prussia, prov Westphalia, gov. of, and 27 m. W.N.W. from Münster on the right bank of the Aa. It is the cap. of a circle of the same name and the seat of some local courts of justice, and has manufactures of linens, tiles, and tobacco. Dyeing and hose burning are carried on and seven annual markets for mercury and cattle are held. It has a castle, built by Bishop Ferdinand of Fletsteden, but now the property of the Princes of Salm-Kyrburg into whose possession the town came in 1802. Pop. 1760. —(Hübner's *Lex. Deutschland*.)

AHF a stream, Prussia prov Westphalia, dist Arnsberg, which after a course of about 2 m., disappears under the earth near St. Brillon and appears again near Alme in a second bed.

AHII or **PRACOCK** ISLAND a small uninhabited isl in the Low Archipelago, or Pamooi group S. Pacific Ocean lat. 14° 20' S; lon. 146° 27' W. (a). It is well wooded, and is surrounded by a coral belt of from 200 to 500 ft. in breadth. Its lagoon, which is on the W. side, and to which there is only a small boat entrance, contains a favourite fish of the natives of the adjoining islands, who repair thither at certain seasons to take them.

AHILOLO **AHILOLO** or **AKILO**, a small town European Turkey prov Roumelia on the W. shore of the Black Sea, on a promontory at the entrance of the Gulf of Saros, lat. 40° 51' N lon. 27° 52' E. In the neighbourhood are salt springs, and marbles, from which salt of inferior quality is made, the profits being the property of the Sultan.

AHLEN a small town Prussia, prov Westphalia, gov. of, and 17 m. S.E. from Münster on the right bank of the Weser. It is the seat of a local court, and has two E. Catholic churches; oil-making and distilling are carried on, and three cattle markets are held annually. Pop. 2750.

AHMAR El-Kow, or El-Ahmar [The red mound] marks the site of *Hieracopolis*, a very ancient city of Upper Egypt, which stood on the W bank of the Nile, about lat. 25° 10' N lon. 32° 40' E, nearly opposite El Kah.—The word *Ahmar* occurs in the names of various other places in Egypt, one of which is a well, or stream, styled El Ahmar about 80 m. S.W. Komeh where caravans rest on their way through the great desert of the Thebaid.

AHMEHABAD an anc. city of Hindoozan esp. district of same name, prov. Guzerat on the left bank of the Boomburmit, 3.5 m. S. Bombay lat. 23° 0' N lon. 73° 40' E. It was formerly one of the most opulent and commercial cities in the East and was celebrated for its buildings and handsome streets, but has now fallen into utter decay having been ruined by the exactions of the Mahabatas. It was stormed by the British, under General Goddard, in 1780, but continued in the possession of the Mahabatas till 1818, when it was ceded to the British Government by the ruling Puthra, or chief civil minister of the Rajah. A great part of the city and some of its most remarkable edifices, were destroyed by the great earthquake of 1819; among these was the great mosque, erected by Sultan Ahmed nearly 450 years before. The excessive unimpeded duties levied by the Mahabata chiefs were abolished by the British Government, and a better system of taxation introduced. The pop. is supposed to amount to 300,000. Pop. of district in 1891, 838,078.—*Hindoozan and Desayevs Account of British India* Hamilton's *East India Gazetteer* Martin's *East India*.

AHMEDNUGGER a city and fortress Hindoozan, esp. district of same name presidency Bombay prov. Arrangabad, on the S. 130 m. E. Bombay and 70 m. N.E. by R. Poona lat. 19° 10' N lon. 74° 50' E. It is walled and contains some well built streets and a good market place. The fort which is about 1/2 m. from the city is built entirely of stone, is of an oval form with round towers, ditch and glacis and is about 1 m. in circumference. It was taken by the Duke of Wellington (then General Wellesley) in 1803. In the vicinity of Ahmednugger are the mausoleum of Saleb Jung situated on the summit of a mountain and the ancient palace of the sultans a massive pile, surrounded by a broad and deep moat, faced with solid masonry. In 1820 the pop. exclusive of the garrison, was estimated at 20,000. Area of district 9910 sq. m. pop. about 670,000.—There is another town of the same name in the prov. of Cooper on the left bank of the Boomburmit lat. 23° 43' N lon. 73° 10' E.

AHMEDPOOR a city, Western India state Bulawalpoor on the route from the city of that name to Khenpoor 50 m. S.W. the former and 46 m. N.E. by N the latter lat. 23° 20' N lon. 71° 30' E. The houses are, in general built of mud. It contains a large mosque, with four tall minarets and has manufactures of matchlocks gunpowder cotton, silk and tongsies a fabric of rich coloured silks interwoven with cotton of the brightest colours about 4 yards in length and 2 in breadth worn round the waist. The pop. has been variously estimated from 8000 to 30,000 but may probably be about 20,000.

AHMOOD AMOUD or AMON a tn and pergunnah, Hindoozan, prov. Guzerat, the former 50 m. S.W. Baroda and 60 m. N. Surat lat. 22° 8' N lon. 73° 10' E. The pergunnah, or district of villages, comprehends 2114 sq. m. and lies along the E. shore of the Gulf of Cambay for a distance of 80 m. A great part of it is unproductive; but more than a half is under cultivation and suitable for the production of cotton rice wheat, and various Indian grains. It is the property of the East India Company to whom it was ceded in 1817 by Dowlat Ror Shieha. The pop. in 1882 amounted to 16,547 of whom 18,144 were Hindoos, and 8962 Mahometans.

AHOUGHILL, a par and vil. Ireland co. Antrim area, 35 268 ac. Contains a Moravian settlement called Grasshill. Pop. 8093.

AHR, or AAR, a river France prov. Lower Rhine, rising in the Elffberg mountains, S.W. from Hildebelsm. It flows N.W. changing to N.E. and passing through the valley of the AER falls into the Rhine near Simsig and opposite the town of Lins, after a course of about 80 m. The scenery on its banks is considered equal to that of the Rhine. In the valley of the Ahr some good wine is made.

Vol. I

AHRWEILER, a small tn. Prussia, prov. Lower Rhine, gov. col. and 28 m. W. N.W. from Coblenz lat. 50 m. S. Cologne, on the left bank of the Ahr chief place of drets of same name, and seat of local courts. It is agreeably situated, and surrounded with a fosse and walls in which are four gates. It has two churches and a chapel. One of the churches, a beautiful Gothic structure was erected in the 13th century. Ahrweiler is the centre of the wine trade of the Ahr valley the slopes of which are covered with vineyards. The average annual produce in wine is 688,250 gals. There are here some manufactures of cloth, and some tanneries and dye-works. Pop. 8000.

AHUX (anc. *A. Colomer*) a tn France, dep. Creuse on a mountain, at the foot of which runs the river Creuse, 11 m. S.E. Guers. It has manufactures of cloth, a good trade in cattle, and more fairs in the year. In the neighbourhood are extensive coal pits, and the remains of a celebrated abbey of the order of Cluny founded a 997. Pop. 2113.

AHUS, or AHUCA, a vil. Sweden, about 10 m. S. Chrutunast at the mouth of the Helge-A. It was at one time a considerable place, but is decayed; it is still, however the outer port of Chrutunast and contains a mission house.

AHWA, or AHWC, *anc. Aphis* a small tn 1 cen. prov. Khuzestan 48 m. S. Shuster on the left bank of the Karoon (*Karun*) (عكاش كوه) lat. 31° 22' N lon. 49° E in a flat unenclosed country. It occupies a portion of the site of the old city and is built with the material. It has a mean appearance and the only respectable building it contains is a mosque, apparently of modern date. The remains of the ancient city are numerous, and cover a great extent of ground showing that it had once been a great and flourishing place. Amongst the more remarkable of these ruins are those of a boud, or stone dyke, which was thrown across the river to form a store of water for the purposes of irrigation it is upwards of 100 ft. in length, as in several places, 10 ft. high about the same in breadth and contains many single blocks measuring from 8 to 10 ft. There are also the remains of a fine bridge and of a spacious palace. On the S. side of the town there are several singular cavities, and some neglected water mills. Pop. about 1500 mostly Arabs.

AI a river Russia in Europe, prov. Orenburg. It rises in the W. slopes of the Ural mountains flows generally N.W. and falls into the river Ouk, about 100 m. N.E. the town of that name, after a course of about 10 m.

AI, or AY a tn. France. See AY.

AI US ATAS, or *Azamas* (anc. *Azga*) a seaport of Asia

Turkey on the Bay of Iskanderpoor past Adana 8 m. S.E. the town of that name and 37 m. N.W. Iskanderpoor lat. 36° 40' N lon. 35° 47' E. It was once a considerable place and there are still some remains of its ancient prosperity but its trade has been long since transferred to Jaken deroon.—There is a small village of the same name in the provinces of Asia, about 25 m. W. Angora, situated among hills to which it gives its name.

AIALALUK, or *AIALILUK* a vil. Anauk Turkey 38 m. S.E. by R. Smyrna, on a hill of the same name. The latter is a picturesque insulated eminence, crowned with a ruined castle, and covered lower down, with the remains of the Turkish town which rose into existence when Ephesus was destroyed and from the materials of which it was built. At the foot of the hill is a beautiful aqueduct, constructed chiefly of ancient fragments and on the western side is a marble mosque of Saracenic construction. At a short distance S.W. from the town are the ruins of Ephesus. The village of Aialuk now consists of a few miserable huts only.—(Hamilton's *Asia Minor*).

AIASH or *AYASH* a ruined seaport, Turkey in Asia, with some remains of antiquity. It lies on the coast of the Mediterranean, prov. Ichil (Ailela) lat. 36° 30' N lon. 34° 12' E.

AIGHACH a small tn Bavaria, prov. Upper Bavaria [Ober Baiern] 13 m. N.E. Augsburg, on the right bank of the Paar, here crossed by three bridges. It is the seat of the local court, and has a castle, church, and three chapels, town-hall, orphan hospital and general hospital; breweries, distilleries, bleaching, sawmills &c., and some trade in flax. Aighach was taken and burnt by the Swedes during the Thirty Years war and, in 1704, by the Spaniards. Pop. 1860.

AIDAB, or *ADIB*, a seaport tn. Russia, on the Red

Sea, 171 m. N.W. Berceles lat 23° 3' N; lon. 37° 10' E. During the 11th, 12th, and 13th centuries it was the entrepot of commerce between E. Africa and Arabia, and the point of embarkation for the caravans proceeding to Jidda, the port of Mecca. It is nearly surrounded with desert, and is now of little importance.

AIDIN Inver or **CHERLHUR** [anc. *Traflet*] a tn. Asiatic Turkey push Anatolia, on the frontier about 80 m. S.E. Smyrna. It is 4 m. in circuit, and is the residence of a pasha, and a place of great trade, being next in commercial rank to Smyrna. Bazaars shaded by trees, form the streets. It contains many fine mosques, churches, and synagogues. Of the old city there only remains enough to show that it occupied an elevation overlooking the modern town. On a height stand conspicuously the ruins of an ancient palace, which is visible from a distance of many miles. The bazaars present a very animated sight, from the variety of objects exhibited, and the picturesque costumes of the natives. The heat of the sun, and the dazzling whiteness of the houses are greatly relieved by the foliage of the trees and plants growing in and near the streets. The environs are no less beautiful: the town being surrounded with gardens and orchards, commanding a fine view of the plain. Pop. including Turks Armenians, Greeks, and Jews, about 80,000.

AIDON a small in Sicily prov. of 23 m. F.S.E. from Caltanissetta and 5 m. N.E. Piazza, in the Val-di-noto Pop. 8700

AIDOR a tn. European Turkey Bulgaria, at the foot of Mount Haimura, about 40 m. S. Shumla, and 85 m. N.E. Adrianople. It is a place of some antiquity and was besieged and taken by Amurat, in 1394. It is noted for some hot springs in its vicinity and for a large annual fair.

AIGASH or **AIGAS**, a small but beautiful (al) in Inverness-shire, Scotland, formed by the river Beaulieu which here parting in two, again unites and thus insulates the spot to which the above name [*Oeshic, Elenus Aiga*] has been given. It is a high rounded hill covered with oak and larch and is noted for having been the place of retreat selected by Lord Lovat, when letters of fire and sword were issued against him by King William, in 1697. It is 4 m. from the embouchure of the river 4½ m. S.W. Beaulieu and about 14 m. S.W. Inverness.

AIGNF the name of numerous localities in Austria, Bavaria, and Wurttemberg, none of which are of any importance.

AIGHTON a town in England co. Lancaster area, 8 80 ac. Here are an almshouse R. Catholic college of Stonyhurst, and cotton factories Pop. 1169

AIGLE, a small in Switzerland Pays de Vaud cap. of a district to which it gives its name situated on the torrent called La Grande Eau, in the Val d'Ormond, about 1 m. E. from the Rhone, and 21 m. S.E. Lausanne, on the high road to Martigny. The houses, built of black marble quarried in the vicinity and unpolluted give the town a somber appearance. The inhabitants are principally employed in agriculture, and the cultivation of vines the produce of which is much esteemed. Pop. 1653.

AIGLE (L.) a France dep. Orne, 80 m. S.W. Paris, agreeably situated on the sides of two hills on the river Huis, which divides it into three parts. It is well built, but has few architectural objects of any note. There are three churches, one of which, St. Martin's is very large, but none of them are otherwise remarkable. In the centre of the town is a castle, or chateau built of brick, and surrounded by lime trees of extraordinary size and beauty. L'Aigle is noted for its industry and has manufactures of linen, cotton, paper, leather cutlery, and hardware, and a good trade in corn, wool and cider. Large quantities of needles and pins are made here which are held in high repute. In the neighborhood are the mineral waters of St. Euzen. Pop. 5084.

AIGLE (L.) a small in Lower Canada, in the St. Lawrence, formed by the confluence of that river with the *riviere des prairies* which forms the S. boundary of the Island of Montreal.

AIGNAN (Sy) a tn. France, dep. Lot-et-Cher 50 m. S.W. Orleans, on the left bank of the Cher. It is a very industrious place, and noted for its manufacture of gun flints, of which the only quarries worked in France—those of Menes and Conchy—are in the vicinity. The quantity annually pro-

duced is estimated to amount to about 85 or 40 millions. Cloth, earthenware, and saltpetre are also made here, and there is some trade in wine and wool. Pop. 3145.

AIGRE, a tn. France, dep. Charante, 20 m. N.W. Angoulême, agreeably situated on an all. formed by Lempes, an affluent of the Charente. Here are numerous brandy distilleries and a good trade is carried on in grain, hemp, flax &c. but particularly in brandy. It has also some trade in hemp, onions, and wine. Pop. 1653.

AIGREVEUILLE, the name of two villages, France, the one in the dep. Cherbourg Inferieure and the other in Loire Inferieure. Pop. of the former 1083 of the latter 1215.

AIGUERELLE **AQUANELLA** or **AQUE BELLE** [anc. *Carbourselle*] a tn. and commune, Gardman States Navy near the French frontier 6 m. W. Chamberry 564 ft. above the level of the sea. It was destroyed by the Burgundians about the 15th century rebuilt under the name of Aquabella sacked by the Saracens in 835 and rebuilt by Berold King of Saxony in 998. In the neighboring mountains are mines of copper and iron. Pop. 1286.

AIGUES-DEE [*Latin Aquas Sparas*] a tn. France, dep. Eux de Drome, 10 m. N.E. Clermont, and 100 m. S.E. E. Laria. It consists of a single street lined with handsome houses, and has manufactures of cloth felt hats, and candles. In the neighborhood is a mineral spring which exhales carburetted acid so pure that animals are often suffocated with its waters hence called by the people of the district *Les Fontaines asphyxiantes*. Pop. 2361.—There is another town of the same name or Aiguesperouse, sometimes spelt, with a pop. of 1001 in the district of Villafraiche, dep. of the Alpes.

AIGUES-MORTES [*Latin Aquas Mortuas*] a decayed in France, dep. Gard, 20 m. S.W. Nismes near the mouth of the Rhone on the Grand du Rol at the junction of the Canal de Beaucaire with that of Bezangs. It is a fortified place, and, from its position forms an important military post for the defence of that part of the coast. The exhalations from the salt marshes by which it is surrounded, render it very unhealthy. A good deal of prunella is made here, and some trade is carried on in iron and steel principal articles of export, salt and wines of import from some colonial produce, and wool. The town was founded in 1248, by St. Louis of France, who embarked here in that year for the crusades. The walls and gates are still entire but the houses have been filled up. Before entering the town to the north is a single round tower 90 ft. high, called the Tower of Constance built by St. Louis, and surmounted by an old lighthouse turret of 34 ft., which was used as a prison for Protestant chiefly females, who adhered to their religion after the revocation of the Edict of Nantes. It was long supposed that, since the 13th century the sea had retired about 5 m. from the town. It seems now to be ascertained, however that the sea never came so far up as this wall but that close to the town there was a small port, connected with a canal, now filled with sand extending thence to the harbour of Grand du Rol on the Medi. terranean. Not far from Aigues-Mortes are the celebrated salt lakes of Porcelet, protected by the fort of that name, which yield salt of fine quality to the extent of value of £200 yearly. Pop. 3068.—[Murray's Handbook for France. Babel Abroad, &c.]

AIGUILLÉ (L.) [The needle] a mountain of France formerly reckoned one of the seven wonders of Dauphiné dep. Isere, eastern Vesille situated between the hamlet of Bouchons and the town of Corps, nearly 4 m. from the latter on the left of the great road from Grenoble to Gap 5663 ft. above the level of the sea. The lower part resembles a truncated cone, while the upper portion is of a conical form, as if a second mountain had been placed above the first. It is also called *Monte Saccarum* having been long supposed inaccessible, but in 1422 Charles VIII., passing Grenoble on his expedition to Naples sent the captain of his Mamelukes to try to gain the summit, in which he succeeded.

AIGUILLON an ancient in France dep. Lot-et-Garonne in a fertile vale, on the left bank of the Lot, about 1 m. above its influx into the Garonne, 16 m. N.W. Agen. It is still surrounded by a ditch the remains of its ancient fortification. It has two castles, both situated on an eminence one old and remarkable for its extent, and the great variety of styles of which it is composed the other modern, in the Italian style, and a

fine structure. There are here a communal college, and many factories of serge and drapery. It has also some trade in corn, hemp, wine, and brandy. A bridge of seven arches here crosses the river Lot. Pop. 8994.

AIGURANDE, a small tn. in France, dep. Indre, partly on a hill and partly on a plain 26 m. E. Chateauroux, surrounded with walls and ditches. An extensive trade is carried on here in cattle, and furs are frequently held. 1 op 2087.

AIKTOB, a par England on Cumberland, area 1157 sq. Pop. 856.

AILAH or **ELAWA** a decayed to Amble, in the Hejaz, at the N. extremity of the Gulf of Akabah; about 2 m. N. the village and fort of that name, and 190 m. E. Suva. A few scanty ruins are all that remain of it and even the site is now a subject of dispute, being often confounded with Akabah. Anciently called *Ailoh*, or *Elah*, it gave its name to the E. or Elamite branch of the Red Sea. It is mentioned by Moses in his account of the journeyings of the Israelites, and Solomon used it as a naval station for his ships. It is also mentioned by several Arab writers.

AITSA CRAIG a remarkable rocky conical (el Frith of Clyde, Scotland) on Ayr lat 55° 10' 12" N lon 4° 1' W (a) 10 m distant W from the coast of Ayrshire at Girvan and boulder that balances E. from the coast of Ayrshire, near the Malt of Gentry. It has an elliptical base of 3800 ft. in the

AITSA FROM THE SOUTH.—From sketch by R. Shanks.

major axis by 2200 in the minor and rises sharply from the sea to the height of 1088 ft. It consists of columnar trap, approaching in some parts to basalt and is precipitous on all sides except the N.E. on which it slopes towards the shore, and where alone it is accessible. At a considerable elevation are the ruins of an old tower or castle. The vegetation on various parts of the surface is described as luxuriant though there is little pasture on it. It is a breeding place for innumerable sea fowl, gulls, kittiwakes, puffins, solan geese, &c. A few rabbits and goats inhabit the rock. It is chiefly from the feathers of the birds that the rent of the island is derived, and it is only during the season when the birds are sought for that any one resides on the island. It is surrounded with banks well stocked with fish.

AILU, a small ill in the N. Pacific Ocean a little S. from the Redank strait lat 10° 27' N lon 170° 0' E. (a).

AIMARAZ, a district, in Esp. Lina, at the foot of the Cordillera de Huambo, extending about 150 m. from N to S, and 25 from E to W., and comprising 50 villages. The climate is generally cold, except in some of the valleys, which produce sugar and grain, and afford pasturage for cattle. Three rivers pass through the district, but, on account of the height and steepness of their banks, are unavailable for any purpose, till their united streams in lat. 14° S. lon. 78° W form the Pachicheco, which ultimately falls into the Amazon, being previously crossed by a number of suspension bridges. The numerous veins of gold and silver with which the district abounds, are neglected. Pop. 15,000.

AIMARQUES, a small tn. and commune, France, dep. Gard, 15 m. S.W. Nîmes in the middle of a marsh, between the rivers Tarn and Vidourle. It has some trade in brandy. It was here that St. Louis and his brother the Count of Thoulouse, assembled their troops, previous to their departure for the crusades. Pop. 2011.

AIN a river France, which rises among the slopes of the

Jura, about 8 m. N.E. from Neuvy and, after pursuing a S.E.W. course for more than 90 m. flows into the Rhone opposite the village of Anthon about 20 m. above Lyons. It gives its name to a department in the former province of Burgundy. Large quantities of planks and timber are floated down this stream.

AIN a frontier dep. France, in the ancient province of Burgundy separated into two nearly equal parts by the river from which it takes its name bounded N. by the departments of Saône-et-Loire and Jura E. by Switzerland and Savoy from which the Rhone divides it, as it does also from the department of Isère on the S. and W. by the Saône, which separates it from the departments of Saône-et-Loire and Rhone. Its length from E. to W. is about 52 m. its breadth about 43 at the broadest parts. The E. portion is very mountainous, containing a prolongation of the Jura chain. Pastures afford good pasturage it yields asphalt, pyrites, potter's clay, marl, iron, freestone, and limestone as d the best lithographic stones in France are produced near Billely. The W. division, or district on the right bank of the Ain, though in parts somewhat marshy has extensive tracts of cultivated land. About the middle of the department, in the mountains, is the Lake of Nantua about 1500 ft. above the level of the sea. Numerous pools and small lakes are found in the S.W. which are alternately drained for cultivation, and used for breeding fish. The whole number of lakes in the department—the largest not above 2 m. long—exceeds 1800 and the humidity occasioned by them is stated to be very prejudicial to the health. The tillage is chiefly effected by oxen, and the produce of the harvest is sufficient for the consumption of the department. The chief products are rye, maize, corn, wheat, salt, oil and wine. Great numbers of horses, cattle, and sheep, are also raised. The greater portion of the wines are exported those of Beysse, as good as ordinary being the most esteemed. The manufactures consist chiefly of cloth at Bourg the capital of the department and at Mornand, near the Rhone, linen, and paper at Nantua, Châtillon and other places straw hats at Lagnieu and wambles at Bourg and at Perny celebrated as the residence of Voltaire. — See these towns. A good trade is also carried on in leather, poultry wood, and cheeses, of which those made in Gex are highly esteemed. The geographical position of this department makes it the passage for the commerce between the N. and the S. of France from Strasbourg to Marseilles. The transit is most easy during the period of the importation of grain from Barbary received at Marseilles and intended for Switzerland. The department is subdivided into five arrondissements 25 cantons, and 443 communes, and contains 28 m. 404 market towns and villages and 1467 hamlets. It forms the diocese of Billely. Pop. in 1846 367,362. Except in the arrondissement of Gex, where the greater portion are Protestants, the inhabitants generally are R. Catholics.

—*French Official Papers* *Dir. de la France*.

AINAD or **ADAN** a tn. and district, Arabia, prov. Hadramaut. The town lies on the right bank of the Wady Hagger about 207 m. N.E. Aden; about lat. 15° 12' N lon. 47° 10' E. About one day's journey from it is the tomb of Kahtan, a celebrated place of devotion, at which a great fair is also held. — (*Chumey's Zeyher's Expedition*).

AINAJA or **AINA** a small tn. European Turkey prov. Roonia on the W. coast of the Black Sea, near a small bay and cape of the same name, about 74 m. N. Adriaupole. It is surrounded by marshes and is extremely unhealthy. — The Cape of Amula is the *Thapsus promontorium* of the ancients lat. 41 52 N. lon. 28 5 E.

AIN AMER, a vil. Algeria, Sahara desert, 10 m. S.E. Ourgla, and 895 m. S. Algiers lat. 31° N lon. 8° E. It consists of about 100 houses, surrounded by date trees and by gardens, watered by numerous fountains. In the vicinity is the salt lake called *Sakla* and *Malah*, which every season yields 400 to 500 camel loads of salt, without any apparent diminution of the quantity.

AINDERBY-BEEFLE, a par. England, co. York N. Riding area, 4660 ac. near Great North of England Railway. Pop. 845.

AIN MADI a tn., N. Africa, Algeria, built on a hill about 40 m. W. El-Arou, in an acid plain lat. 35° 53' N; lon. 3° 48' W. It is of a semi-elliptical form, and is surrounded with defences, and large walled gardens; it is sur-

are irrigated by a stream rising at the foot of Mount El Marhab. The houses, of which there are about 150 to 200, are only of one story and have terraced roofs. They are built of baked earth, small stones &c. and are formed into streets so narrow as to be impassable by carriages. The town contains one large mosque, or more. The house of the *Fekry* or governor is the only one which is well built, all the others have a mean shabby appearance. The place was attacked by Abdel-Kader in 1830 and was besieged by him for eight months without success. He got possession of it, however, by stratagem, but it was soon retaken. It is now a dependancy of Algeria. Pop. about 1500.—*Sahara Algerien.*

AIN-BEFTILIA, or simply *Beravaria* a vil. Algeria, 161 m. S.S.W. Oran lat. 33° 25' N. lon. 1° 10' W. on a small stream of the same name and on the S. slope of the *Moud hills*. The houses, according to our authority about 250 and according to another about 350 in number are built of dry stone, none of them in a state of dilapidation that plainly indicates the circumstances of the people and besides the chalky sandy nature of the surrounding country contributes to impart to this village a miserable aspect. In the centre of the village is a sort of square, used as a caravansary for strangers the streets are from 3 to 6 ft. wide and the tolerably large mosque is supplied with a minaret. In the vicinity are a number of badly kept gardens protected by two towers. Wheat, barley and several kinds of fruit, including grapes, are grown.—(*Bulletin Geo. Soc.* 1848.)

AIN-BEFTILIA a vil. Algeria is 151 m. S.S.W. Oran lat. 33° 30' N. lon. 1° W. on the S. side of some extensive sand dunes, which stretch about 5 m. N.E. to S.W. Its size is variously stated, from 107 to 250 houses, of tolerably solid construction. It has a mosque and a school and extensive and well-cultivated gardens, watered by a stream of the same name as the village and surrounded by a general wall defended by 14 towers. Barley and wheat are chiefly cultivated, and peaches, almonds, and grapes are plentiful.—(*Bulletin Geo. Soc.* *Sahara Algerien.*)

AINBIABLE a par. England co. Cumberland, 11 m. N. E. Carlisle area, 4178 ac. Here was formerly a famous Benedictine monastery founded by William Rufus. Pop. 624.

AINSTY a large district En. land co. York W. Riding, W. the city of York, to which it is annexed under the name of the *Amity* of the city of York. It contains 49,420 ac. and had, in 1841 a pop. of 94,9.

AIN TAB or *AERTAN* an anc. tr. Syria, cap. district of same name 55 m. N. Aleppo lat. 37° 3' N. lon. 37° 23' E. It lies on the Euphrates is tolerably well built, and contains 6000 Turkish, and 500 Armenian houses, principally of stone, five fine mosques several baths, an Armenian church and good barracks its citadel or castle, on the N. side is built on a mound resting upon rock, and has a very striking appearance. On the opposite, or S. side, is a spacious cemetery having the appearance of a large suburb. The town is well supplied with water by a stream of which, it is said, flow constantly through the streets. The inhabitants are a tall but hardly independent race.—The district produces cotton, wool (sheep and goats) bees wax, &c. The cotton is coarse and the sheep wool mostly used in home manufactures but the goats are excellent, and the small quantities produced eagerly bought for exportation. The other articles of produce in the district are oil, grain and rice. Manufactures—yellow and morocco leather and calico. Much pine wood is cut in the mountains and sent to Aleppo, with which and Oran, Aleppo, and the port of Alexandretta, it has commercial communications, and is on the whole a place of considerable importance. Vineyards are numerous in the territory. Pop. of district, about 80,000 of the town, 3500 about one-fourth of the whole are Christians or Jews.

AIN TECAZZE, a small lake in Abyssinia, E. part of the prov. Tigra, from which flows the river Taccana, one of the largest streams in Abyssinia. The lake lies in lat. 11° 35' N. lon. 39° 15' E.

AINUNAY, or *AMUNAY*, a haven, Arabia, on the Red Sea, E. from the entrance to the Gulf of Akabah lat. 28° 8' N. lon. 35° 13' E. It is formed by the Bay of Amnun, which is enclosed by the islands of Okman-ur Maymun, and several coral reefs and small islets, some of which are covered with mangroves. The entrance to this haven is near Okman-ur

Island, and is only practicable for small vessels. The interior of the haven is about 12 m. long, by about 6 broad with a depth of 12 to 13 fathoms, and is the only secure place of shelter in the N. end of the Red Sea. The coast is very stony but not unfruitful being overgrown with many wild plants flowers, and numerous trees. The bay or haven, takes its name from the ruins of the town of Amnun which are hard by and both have obtained their name from a rivulet which here disappears in the sands, the Ain Unay that is the streamlet Unay. At this streamlet, the pilgrims from Cairo to Mecca pass on the twelfth or thirteenth day of their journey.—(*Butcher's Arabian.*)

AILOU or FOWL ISLANDS, a circular group of small low isles, Asiatic Archipelago about 500 N. Island of Waypoo and about 100 m. N. by N. the N.W. extremity of Papua, or New Guinea. They are about 20 m. number and are fortified by an extensive reef which projects around them to a distance of 3 or 5 m. The southernmost island, extending nearly E and W about 15 m. are five in number and the largest called Ailou Baba, is about 8 m. long, having a considerable number of huts on its W. end and is the fourth island from the E. It lies in lat. 0° 21' N. lon. 131° E. (a.) The south-westernmost island of the group is detached a considerable distance from the others. The central and southernmost islands are uneven and a little higher than the N.E. ones, which are low and flat. Several of them are inhabited, and they abound with excellent turtle. The N.W. island is in lat. 0° 58' N. lon. 131° 8' E.

All (Point or N. Wales co. Flint, W. entrance of the river Dee. 19 m. E. Great Orme's Head lat. 53° 21' 26' N. lon. 3° 19' 14' W. There is here a round tower striped red and white horizontally having two fixed lights.

ALLAINES, a tr. France, dep. Somme, Picardy 16 m. W. N. W. Amiens. It is well built, and agreeably situated. The church Notre Dame is a somewhat remarkable structure. At one end of the town are the ruins of an ancient castle. Manufactures—silk-hosiery, sack, soap, pressed oil for which there are 20 mills cloth, thread, fax, leather &c. Pop. 2060.

AIRARA, a small river kingdom of Bho. Abyssinia. After being joined by the Umptoo, and other streams, it runs into the Cassim, which falls into the Hawak.

AIRASCA [anc. Iru] a tr. Ireland, Sardinian States, 6 m. E. Pigorini Pop. 1900.

AIRDLE, or *AMULE*, a small river Scotland co. Perth having a course of about 12 m. it issues through a narrow valley of the same name, anciently famous as a resort of the wild boar.

AIRDRIE, a large and thriving in Scotland co. Lanark Middle Ward partly on a gentle acclivity having a W. exposure and partly on the slope and summit of a more abrupt elevation, 11 m. E. Glasgow and 33 W. Edinburgh the highroad between these two cities intersecting it from E. to W. and forming its principal street. The other streets, many of which are spacious, mostly run at right angles and are all well paved and lighted. The houses generally without having much external pretensions have a respectable and comfortable appearance and the shops, though not particularly gay or ostentatious, are well stocked and exhibit plenty of the more substantial manifestations of prosperity. The town is now amply supplied with water by a recently formed water company. The principal public buildings are the townhall a handsome edifice, surmounted by a fine spire the National Bank, and Bank of Scotland. There are a number of churches, including two belonging to the Establishment three to the Free church two United Presbyterian; one Reformed Presbyterian one Baptist one Methodist one Independent and one R. Catholic, besides one or two others. Many of these churches are very handsome structures. A mechanics institute and library have existed in the town for several years and a commodious academy has recently been built. There are here a large cotton-spinning and weaving factory several extensive foundries and machine shops a distillery a brewery and a tan work, all in active operation; handloom weaving is also carried on to a great extent. But Airdrie owes its prosperity chiefly to the extensive operations connected with the coal and iron trade in its vicinity being situated in the centre of the richest mining district in Scotland. Its progress was in consequence almost unprecedented. In 1811 its population amounted only to 5594. In 1841 it had increased to 12,996.

and, in 1851 it was 14 485. In consequence of the exhaustion of certain mines the population has decreased since 1851, and in 1861 numbered only 12 922. The civic affairs of the town are administered by a provost three bailiffs, a treasurer and seven councillors. Courts for criminal cases are held by the magistrates every Monday and weekly courts are held by the sheriff substitute on Fridays and by the justices on Thursdays. Airdrie unites with Hamilton, Falkirk, Lanark, and Leithgow in returning a member to Parliament.

AIRE, a river England, rises in the moors near Malham, W. Riding Yorkshire. It runs about 1 m. underground pursues a S.E. course to Leeds from which town it is navigable. At Castleford it is joined by the Calder and finally falls into the Ouse 3 m. S.W. Howden, in the E. Riding. It derives its chief importance from the number of canals with which it is connected.

AIRE, or **AXIS** (Point of) Isle of Man the most northerly point of the island lat. 54° 25' N. lon. 4° 22' W. There is a handsome lighthouse on this point, with a single revolving light, bright and red alternately 100 ft. above the level of the sea.

AIRIS-SUR-LA-DOULE, an anc. in France, dep. Landes situated in an agreeable and fertile country on the slope of a hill on the left bank of the Adour 16 m. S.E. St. Sever. It is well built and the streets are regular. It contains a college and cathedral, and has tanneries, and a hat manufactory. Pop. 4697.

AIRE-SUR-LA-YS a tn. France, dep. Pas de Calais on the Ys at its junction with the Laquette, about 10 m. S.E. St. Omer with which it communicates. The town is neat, and well paved adorned with several beautiful fountains, but situated in a low marshy soil. The church of St. Land is a handsome Gothic edifice. There is here an extensive barracks capable of containing 6000 men. Trade in linens, flannels, hats, thread, starch, other work, grain, &c. Duties and soap are also made here. Pop. 8691.

AIRLIE par Scotland on Forth lying in the great Strathmore valley and giving the title of Earl to the Ogilvies, whose ancient seat, the Donal House of Airlie was destroyed by Argyle in 1640. Pop. 840.

AIRLOIA, a tn. Naples prov. Terra di Lavoro district of, and 9 m. N. from Nola and 18 m. S.E. Capua in a fertile plain, surrounded by mountains, and enjoying a salubrious climate. It has six churches, and several convents. Pop. 4634.

AIROIO [German, *Erzthal*] a vil. Switzerland, canton of, and near the left bank of the river Tessin on the S. slope of Mount St. Gothard, about 8000 ft. above the sea, on the great route into Italy. 24 m. N.N.W. Locarno, and 28 m. N. Airoio. It has some good slated stone houses an hospital, and a church. Garnets are found in the neighbouring valleys. The union of various lines of road here, renders it a place of considerable transit trade. The language of the inhabitants, both of town and district, is Italian. Near this village the French were defeated by the Russians after a sanguinary battle, fought Sept. 12 1799. Pop. 1880.

AIRTH a vil. and par Scotland on Stirling shire, 16 400 sq. ac. extends along the Firth of Forth 6 m. from above St. M. 1 (1841), 1498 of which the vil. contained 583 (1851) 1418.

AIRTHREY or **AIRTHREY** See **REIDFORD AILLY**.

AIRVAULT [Latin *Aurea Vallis*] a tn. France dep. Doubs Savoy, 39 m. N. Potemur upon the right bank of the Thonet. It is well built, with a fountain in the centre of the principal street and a beautiful Gothic church. Here are the ruins of an old castle and of a monastery destroyed during the religious wars of the 17th century. The inhabitants have a trade in wine, grain, flax, hemp, cloaks, brandy and wool manufactures of cloth and serge, tanneries, &c. Pop. 1867.

AISNE [anc. *Armenia*] a considerable river of France, which gives its name to a department. It rises near the vil. of Heslens, in the basin of the Meuse, and, after a course of above 150 m. first to the N. by W. and then to the W. by S. falls into the Oise, about 1 m. above Compiègne. It becomes navigable from Chateau Porcien.

AISNE, a dep., N. M. France, so called from the river of the same name cap. Laon. It is formed of portions of the ancient provs of Picardy and the Isle of France bounded N. by the dep. du Nord, and the Belgium prov. of Hainaut N. by the dep. de l'Ardenne and Marne; S. by that of the

Haine-et-Marne and W. by those of Oise and Somme, area, 1,486,124 ac., or 2322 sq. m.

Under cultivation	898,000
Woods and	204,148
Vineyards	25,418
Heath and Moorland	26,277
Barren	355,285

The surface, in general consists of undulating plains, intersected in the N. by low hills and valleys. In the central and S. parts, the summits of the hills seldom rise to more than 500 ft. above the level of the sea. The soil is for the most part calcareous, except in the N. districts, where it is clayey and in some parts stony. In the S. chalk is found and in other parts, freestone, slate, &c. The elevated table lands are the most fertile. Wheat, rye, maslin, potatoes, hemp, flax, hemp, and beetroot are among the chief agricultural produce. Two-thirds of the harvest are exported, and compared with its extent more oxen, horses, and sheep, are reared, than in most of the other departments. The breeding of mornons is carefully attended to and the annual amount of wool is calculated at more than two millions of pounds. The cheese made in this district is of excellent quality. Beetroot, sugar, and leeches, are also exported. These last are got in the lakes, of which there are 80 covering more than 2470 sq. of land. The oil made from the beechmast yields in some years, as much as £20 000. The vine is not cultivated to any great extent except in the arrondissements of Laon, Soissons, and Chateau Thierry. The manufactures of this department are very important. They consist of cotton at Guse on the Oise flannels, cottons, lace, lawns, cashmere imitation shawls, soap and violet at St. Quentin glass at Nou. on champagne bottles and mirrors. The department is subdivided into 7 civil and 7 electoral, arrondissements, 3 cantons, and 840 communes. Besides the up. the principal towns are Soissons, Chateau Thierry, Verrieres and La Ferté Milon, the birthplace of Racine. The river Oise in the N. the Aisne in the centre and the Marne in the S. with their tributaries, water the department. Several canals traverse it, and the great roads from Paris to Lille, and from Paris to Metz, with other public routes, pass through it. Pop. of dep. 667 432 — French Official Table.

AISTHORPE or **EAST THORPE** a par. England, co. of and 6½ m. N.W. from Lincoln. Area of par. 806 ac. P. 96. **AITETAKI** or **WYTHOTAKI** an isl. in the Pacific Ocean, one of Cook's group lat. 18° 54' 4; lon. 159° 22' W. (n.) It is about 9 m. in length and rises to the height of 360 ft.

AIVALI or **KIDORIA** [anc. *Herodone*] a tn. of Anatolia Turkey sanjak Karasi on the promontory forming the W. side of the Gulf of Adramytti, 60 m. N. by V. Smyrna lat. 39° 18' N. lon. 28° 42' E. In the beginning of the present century it was a place of considerable note possessing a college and library two hospitals and extensive manufactures of soap numerous oilmills and tanneries. But, in June 1821 during a contest between the Greeks and Turks it was set on fire by the latter and reduced to ashes. It is said to be reviving.

AIVALLI [anc. *Agave Socius*] an anc. city of France dep. Bouches-du-Rhône, chief place of a round agnally situated near the river Arc, in a plain surrounded by fertile hills, 18 m. N. Marseilles. The town was greatly embellished by Louis XIV. most of the modern streets are broad and well paved, but those of the old town are narrow and dirty. The houses in general, are well built and the public buildings handsome. A principal street, called the *Cours*, or promenade of Orbellie, is bordered with elegant houses, planted with avenues of trees, and adorned with public fountains, one of which has a statue, by David, of *le Roi Roi*. In the centre of the market place is another public fountain and near it a curious clock tower erected in the Middle Ages, the internal machinery of which puts in motion some antique figures when the clock strikes. In the old town, the feudal walls and gates of which are still standing as the ancient cathedral of St. Sauveur. Amongst the chief ornaments of Aix are the baptistery constructed with the remains of a Roman temple, and the carved wooden doors, executed in 1503, which are curious specimens of the state of art at the commencement of the 16th century. The townhall situated in a narrow street is an elegant edifice and contains a large collection of anti-

quities. The Palais, a very old building, which occupies one side of a fine square, called The Place des Froidvaux, has several large halls in one of which the parliaments of Flanders formerly assembled. Before the first French Revolution, this city had a university founded in 1404, by Pope Alexander V and several richly-endowed ecclesiastical establishments. It is the seat of an archbishop, a royal court of appeals for the departments of the Basses-Alpes, the Var and the Bouches-du-Rhône, a school of commerce, a school of theology and jurisprudence, a royal academy, a library having not less than 100,000 volumes and a museum. Its literary and scientific institutions, with its facilities for study have acquired for it the title of the Athens of the S. of France. There are two public hospitals, and one lunatic asylum in Aix also a theatre. There are in the town several manufactures of silk and velvet stuffs also of hard ware, in printed calicoes, and woollen cloth. On the hills around are almond groves, and plantations of olives which furnish the much-esteemed sweet oil of Aix, the best produced in France the trade in which, however, began to decline after the destruction of a large portion of the olive trees in 1788 and has greatly fallen off since 1890 when an unusually severe frost killed many more. Among the articles in which the commerce has much increased within the present century are grain, almonds, plants, raisins, figs, brandy wine, vermicelli and fish. The celebrated tepid mineral springs of Aix were known to the Romans, but they were for a long time disused. In 1704 they were again discovered and identified by the medals and inscriptions dug up, but they are in less repute than formerly. The water is clear light in heat, is just warm, without much taste or smell. The bath-house belongs to the hospital. Aix is the birthplace of Tournet, a noted artist. Aix. Pop. 1846 21,280.

AIX or AIX-LEZ-BAINS, a town in the Savoy Province, 8 m. N. Chambery near the Lake Bourget in a fertile valley through which a long avenue of poplars leads to the lake. Aix is celebrated for its hot alumineous and sulphurous springs, which annually attract a number of strangers. The waters were in repute with the ancients, by whom they were called *Aque Grœcæ*, because the present Romans acquired them in the reign of the Emperor Gratian. There still remain some ruins of a triumphal arch, and of a temple of Diana. Pop. 238.

AIX (L'Isle) or L'Isle d'Orléans, a small island on the coast of France, dep. Charante-Inférieure, in the Bay of Biscay lying between the islands of Oleron and Rochefort on the mainland about 5 m. off the shore, opposite the mouth of the Charente, and separated from Rochelle and Rezon by the Basque roads lat. 46° 0' 50" N. lon 1° 10' 30" W. It has a strong military fort and batteries, to defend the entrance of the roads, and a village containing 250 inhabitants, the greater part soldiers. There is a lighthouse on the island. Pop. about 400 to 500. — Aix is also the name of a small river in France dep. Loire Inférieure, which after joining the Sèvre falls into the Loire.

AIX D'ANGILOU, a town in France, dep. Cher 12 m. N.E. Bourges, formerly known under the name of the fortress of Gilon. It has two fairs in the year at which a great number of cattle and horses asses and swine are sold. Pop. 1426.

AIXE a small town in France, dep. Haute-Vienne, 7 m. S.W. Limoges on the Vienne river. There are here manufactures of bonnet-boxes, nails, bricks, and tiles. Pop. 2631.

AIXENOTHE, a small town in France, dep. Aube, 15 m. W.S.W. Troyes has a cotton factory a tannery and hat and tile works, and some trade in grain, wool, and cattle. Pop. 1697.

AIX-LEZ-CHAPPELLE (The waters of the chapel German Aachen, Latin, *Aquisgranum*) an ancient and celebrated city of W. Germany, prov. Lower Rhine, dep. district of same name 48 m. W. by S. Cologne, 80 m. E.E. Brussels, and 185 m. N. Paris lat. 50° 40' 44" N. lon 6° 4' 40" E. (L). It is pleasantly situated about 500 ft. above the sea level, in a rich valley watered by the Wurm, and surrounded by the Venn hills. The city enclosed within ramparts, which serve as promenades, is divided into the inner and the outer towns the streets are well built, particularly that called *Flower Street*. It contains three monasteries and 18 churches a handsome theatre a public library of 10,000 volumes a

gymnasium or higher grammar school three hospitals and other charitable institutions. In the townhall, in the market place, is the coronation room, adorned with the portraits of the German Emperors, and many precious relics of old German art together with half-size portraits of Napoleon and the Empress Josephine, painted by David and presented by the Emperor to the town. The market place itself is adorned with a beautiful fountain, surmounted by a bronze statue of Charlemagne.

As the chief station of the Belgio-Batavia Railway connecting with Antwerp, Ostend, and Cologne, Aix-le-Chapelle affords an extensive mart to the commerce of Prussia, and is, besides the seat of commercial and factory courts. It was formerly eminent as a manufacturing city especially of cloth and needles and its prosperity in this respect seems of late to be reviving. Its woollen cloths are highly esteemed on the continent of Europe. In 1844, there were 2362 looms, and eight power looms employed in this manufacture 62 spinning factories, with 62,659 spindles for wool, and seven mills, with 65,000 spindles, for rougher work. It is estimated that about 3000 of the inhabitants are engaged in making the cloth, while more than 19,000 in the town and neighbourhood are occupied in preparing the wool. Carpets, needles, wax-cloth, leather watches soap, and sal-ammonia, are also manufactured to a considerable extent. There is, likewise, a pretty large wine trade. Although, however, pre-eminently, for its numerous chimney stalks, an appearance of being an extensive seat of manufactures and having considerable commercial relations with France and Belgium Aix-le-Chapelle derives its celebrity chiefly from its historical associations and its importance and prosperity principally from the influx of visitors to its baths, of the former of whom there are annually from 7000 to 8000. There are, in all eight mineral springs here six of them warm. The most famous is the Imperial spring or *Source de l'Empereur* which has a temperature of 143° Fahr. and the vapour of which, when confined deposits sulphur. For the accommodation of strangers, there are eight bathing houses. The rooms for bathing are excellently fitted up, with baths from 4 to 5 ft. deep, built in massive stone, and in the old Roman style. Outside the walls in Leunberg, rising nearly 300 ft. higher than the city. It is a favourite summer resort of the families of Aix-le-Chapelle where they can repel their eyes with a magnificent view of the surrounding country their ears with fine music, and their stomachs cravings with all luxurious delights.

During the Middle Ages, it was a free imperial city and its citizens, throughout the empire were exempt from feudal service, from attachment of their goods and persons and from all tolls and taxes. Charlemagne raised it to the rank of second city in his empire and made it the capital of all his domains N. of the Alps. It became his favourite residence after 768, and he spared no expense in beautifying it. Till the dissolution of the Germanic empire, the coronation of the Emperors of Germany by right, was celebrated here though in some instances, this ceremony was performed at Frankfurt. The imperial insignia were preserved here till 1793 when they were carried to Vienna. In the cathedral a large flat slab of marble marks the tomb of Charlemagne. In 997 Otto III. ordered it to be opened, when the body of the Emperor was found in good preservation. The church of the Franciscans contains a splendid Descent from the Cross by Balens which was carried to Paris, but brought back on the fall of Napoleon.

By the treaty of Lunéville, concluded Feb. 9 1801 which separated the left bank of the Rhine from Germany the city was transferred to France, and remained the chief town of the French department of the Roer till 1814 when it was restored to Prussia.

A peculiar historical interest attaches to this city as the place where several important congresses have been held. Two famous treaties of peace have been concluded here, the one May 2 1668 between France and Spain putting an end to the war of disunion, carried on by Louis XIV. for the possession of a great portion of the Spanish Netherlands, which he claimed in right of his Queen and the other October 2 1748 between the principal sovereigns of Europe, terminating the war of the Austrian succession. Here, too, was held the celebrated congress of 1818, its object and result being the withdrawal of the allied troops from France. The

also celebrated for its gardens and vineyards, the grapes produced being the largest and best in India. Pop about 25,000.—(Hamilton's East India Gazetteer Heber a Journal Historial and Descriptive Account of British India Martin's East India)

AJOFEIN is a Spain New Castle prov. of and 9 m. S. from Toledo. It stands on a plain, and comprises about 30 well-built streets, three squares, with a church, chapter house, courthouse two hospitals, five schools and a decayed old prison. The inhabitants are engaged in agriculture, in weaving coarse cloth and carpets and also in ropework, and matting factories. Some sheep and oxen are pastured in the barren district country 1 up 2808.

AJURUKA, a in Brazil prov Minas Gerais on the Ajurucá river here crossed by a bridge, 173 m. S.W. Ouro Preto, and 177 m. E. Rio de Janeiro. It lies in a fertile country at the foot of the Mantiqueira ridge of hills, and has a church, prison, and townhouse. The soil of its environs, once auriferous has long been exhausted of the precious metals, and the inhabitants have consequently turned their attention to the more profitable pursuits of agriculture, and rearing swine for the Rio de Janeiro market. The district is rich in tobacco, millet, manioc, sugar cane, and coffee, and with the town, contains a pop. of 12,000.—(The Geo. Imp. Brazil)

AKABAH (AKABA CASTLE, and VILLAGE) is in Arabia, an arm of the Red Sea, on the E. side of the peninsula of Mount Sinai, which separates it from the Gulf of Suez. It extends nearly 100 m. in a straight direction N.E., being in general about 9 or 10 m. wide, and, where broadest, 10 or 1 m. It has the appearance of a deep narrow bay, the surrounding hills rising in some places 2000 to 2500 ft. perpendicularly from the shore. The varied hues of the granite rocks bared in sunlight presenting a spectacle of wild magnificence. The soil has in some places a depth of 200 fathoms, and, in some parts is unfavourable the flow of its water is gentle and equable, though at times strong from the violence of the winds. At its S. extremity it communicates with the Red Sea, by channels on each side of the island of Tiran. One of which, that between the latter and Ras Farah, being about 1 m. wide at its narrowest part. From Ras Mohammed, further to the S. than the Strait of Tiran to Akabah the gulf consists of a succession of bays bounded by rocky headlands. It is subject to hot terous winds and dangerous and sudden swells and is, in many parts, traversed with hidden shoals and coral reefs which render the navigation peculiarly unsafe. By the accidents it was styled *Sinai Eleusina* from the port of Eleusis at its N. extremity. (See Atlas).—On the E. side of the gulf is the CASTLE of AKABAH from which the former takes its name lat. 29° 30' 50" N. lon. 35° 0' 55" E. (N.). It is an oblong quadrangle of high thick walls, with a tower or

over by a Turkish governor and garrisoned by some 30 or 40 Egyptian soldiers. It is said to be infested with scorpions, for the destruction of which a numerous stock of rats is maintained. The fortress, like some others, was built for the protection of the pilgrims enroute on their way from Cairo to Mecca. Government stores are here kept for their supply.—The VILLAGE of Akabah is situated at the N. extremity of the gulf and is supposed to be the *Emmaphra* of the Old Testament. It is now remarkable only for its date groves some of which are 1 m. in length. Water is plentiful and good fruits and vegetables abound. The name Akabah, signifying a mountain pass, or steep declivity is derived from a long and difficult descent of the pilgrim route, from the mountains in the neighbourhood of the village called by Edrisi *Akabal Ailah*.—There is another Akabah, a day's distance from the above, called Akabah Khaleem, or the Syrian Akabah. It lies in the great pilgrim route from Damascus to Mecca, and, like the Egyptian Akabah, appears to take its name from a steep declivity.

AKALZIK, AKHAKIR or AKIKHA is a Russian Armenia, district of same name 110 m. W. Tiflis, 125 m. N.E. Erzeroum lat. 41° 25' N. lon. 42° 45' E. on the left bank of the Delta 10 m. NW from its junction with the Kar. It is without walls, but defended by a strong citadel, built on a rock, which, when it belonged to Turkey baffled all the attempts of the Russians to reduce it. Akalzik is the seat of a Greek archbishop and contains two Christian churches, a Jewish synagogue and several mosques one of which, that of Sultan Ahmed, is built on the model of St. Sophia at Constantinople, and has a college and library attached to it. The latter was accounted one of the most curious in the East but the Russians have removed about 800 of the most valuable works to St. Petersburg. The neighbourhood produces silk, honey and wax with excellent fruits, raisins, peaches apricots and figs. Some manufactures are carried on, and the inhabitants prosecute an active trade with various places on the Black Sea. Formerly a large slave market was held here but it has been suppressed by the Russians, since they acquired possession of the country. In the vicinity are some alkaline springs. Population (1856), 12,080 which includes Armenian, Georgian, Persians, Turks, Russians, and Jews.

The former Turkish pashalik of *Akhalzik* or *Tcheldir* as named by the Turks, forms now a political and administrative subdivision of Russian Armenia. It is a mountainous country watered by the Kar. From the elevation of the country the winters are long and rigorous while the heat in summer is equally intense. The climate however is healthy the air pure, and the soil fertile but the sudden changes of the seasons are unfavourable to cultivation maize, barley tobacco, flax, and cotton are among the ordinary produce, while excellent fruits grow without much culture. The inhabitants raise cattle and sheep in considerable numbers, particularly the latter and pay great attention to the breeding of bees and silkworms. Grain is abundant. Some woollen cotton, and silk stuffs are fabricated and the exports consist chiefly of cattle, hides, tallow honey and wax. The territory is one of the last conquests of Russia from Turkey. Pop. estimated at 70,000.—Georgians, Turks, Armenians, and Jews.

AKARAO a harbour or inlet in the Isl. of New Munster New Zealand, in Banks Peninsula, having Hercules Head on the N.E. and Iron Head on the S. lat. 43° 54' S.; lon. 178° 1' E. (N.). The harbour stretches N. into the land for about 10 m. with an average breadth of about 2 m. A settlement was formed here by the French in 1840 and a French frigate was, in 1844 constantly on the station for the protection of the settlers, who are few in number not amounting to 100. They live peaceably under British laws, and employ themselves wholly in agriculture, and in cultivating gardens for their own support. The harbour of Akarao is said to be a very fine one.

AKASSA, a town or vil., W. Africa, on the banks, and near the mouth of the Rio Nua. The huts of which it is composed are of a quadrangular form, and are built of bamboo, and roofed with palm leaves. They are mostly of two compartments, communicating with each other. The high places are flat narrow boards raised about 18 inches on four stones. The native males are well made and active, and occupy themselves in fishing, and the culture of small plantations of cas-

AKABAH ENTRANCE TO THE FORTRESS
From London, Voyage de l'Arabie Pétrée.

bation at each of the four corners. All around the walls, on the inside is a row of chambers or magazines, one story high, with a solid flat roof forming a platform round the interior of the castle. On this platform are erected in several parts, temporary huts, or chambers, covered with the stalks of palm leaves, and occupied by the garrison apparently as a dwelling.—(Robinson). It is a place of no strength, provided

ma, Indian corn and bananas. They barter palm oil for tobacco and spirituous liquor of which they are excessively fond. Pop. about 300. **AKAMA** is also the name of a river of N.W. Africa, which flows along part of the N. border of the Sahara, and S. boundary of Morocco, and falls into the Atlantic about 30 m. S.W. from Cape Non. lat. 28 15' N.—(Allen's *Niger Expedition*.)

AKELY or **AKLEY-COCK-BROCKWOLD** a par. England, co. Bucks. area, 1690 ac. 2½ m. N.W. Buckingham 7 ac of this parish are divided between poor families and widows. Pop. 378

AKENHAM a par. England, co. Suffolk, 3½ m. N. by W Ipswich; area, 998 ac. Pop. 181

AKEREH a large vil. in Kurdistan 20 m. N.E. by E. Mosul lat. 36° 40' N. lon. 43° 40' E. It consists of about 500 houses surrounded by gardens, and is protected by a strong castle, situated on the summit of a rock which overlooks the village.—(Col. Bland's *Journey through Kurdistan*, and accompanying Map. London Geo. Jour. vol. viii.)

AKERMAN [anc. Tyre] a seaport in Russian Europe, prov. Bessarabia, near the mouth of the Danube in the Black Sea. lat. 45° 11' N. lon. 30° 21' E. It is ill built and dirty. It contains some mosques and Greek churches. The port is good, and is commanded by an old dilapidated citadel which, when the town was under Ottoman sway contained a strong garrison. Some defences still remain. The vicinity produces fine grapes, from which excellent wine is made. Large quantities of salt are made from extensive saline lakes in the neighbourhood. The site of Akerman is believed to have been included in the Roman colony of *Julia Alia*. A treaty was signed here, Oct. 6, 1828 between Russia and the Porte, by which Moldavia, Wallachia, and Servia were made dependencies of Russia, and passed from under the protection of Turkey. l.p. (1849) 16,076 chiefly Greeks, Jews, and Armenians.

AKHALKHALAK or **AKHALKALAKI** is in Armenia, belonging to Russia, on the W. border of Georgia, district of and 35 m. S.E. by E. from Akatsk and 80 m. S.W. Tiflis on an affluent of the Kour or Cyrus lat. 41 30' N. lon. 43° 20' E. In the Middle Ages, this was one of the most considerable cities of Armenia.—There is another town of the same name in Georgia, 10 m. S.E. of Gori and 80 m. N.W. Tiflis lat. 41 52' N. lon. 44 22' E.

AKHALTSEKH is in Asiatic Russia. See **AKALSK**. **AKHISAR** [White castle] or **AKA** is in Asia Minor, Turkey pass. Anadolu, 6 m. N. of Smyrna, on the Kodos, in the valley of the Hyllis lat. 38 55' N. lon. 27 56' E. It consists of about 2000 houses, and several hundred huts for the poorer population and contains nice mosques and one Greek church. About 800 of the houses are inhabited by Greeks, 80 by Armenians and the rest by Turks. This town has been long noted for the skill of its dyers, and still maintains its reputation in that art. Large quantities of scarlet cloth being sent weekly to Smyrna. Ak-Hissar teems with relics of a former city although there is no trace of the site of any ruin or early building. These relics comprise fragments of carved stone as abundant, that, in many places, the streets of the modern town are paved with them. Within a distance of 3 m. the walls are formed of Corinthian pillars, the bucket being drawn through holes cut in the centre. Here stood the ancient Thyabara, the seat of one of the seven churches of Asia. Pop. about 8000 of which nearly one-sixth are Greeks.

AKHLAT a tn. Asiatic Turkey on the N. shore of Lake Van, at the foot of the Nurad Tagh mountains, 80 m. N. E. of Bitlis or Behlis. The environs abound in grapes and other fruits. It is, however, a poor place, though formerly the residence of the ancient Kings of Armenia. The ruins of the old city with numerous other remains of antiquity are at some distance from the present town, in a ravine Akhlai is surrounded with a double wall and ditch; it is further protected by towers and a citadel. The houses are built of square stones cemented by clay similar to those of Bitlis. Number of households, about 1000. Probable pop. from 8000 to 4000.

AKHMIN, or **AKMIN**, a tn. Upper Egypt, 15 m. N.W. Gizeh, on the right bank of the Nile, from which it is about 2 m. distant. It has a bazaar and a market every Wednesday. Akhmin stands on the site of Chemmis, or Vot. 1.

AKHTEKA, or **AKTEKA**, a tn. Russia gov. of and about 60 m. N.W. from Kharkoff, or Kharkov chief place of a district, and situated on a small river of the same name lat. 50° 17' 56" N. lon. 34 57' E. (N.) It is surrounded with ditches, and contains eight churches. One of which is held in great veneration, from its containing an image of the Virgin There is here a manufactory of light textile stuffs, and, on the 6th of every May, a great market, or fair is held. The environs are fertile and the orchards produce excellent plums and cherries. Akhterka was founded by the Poles in 1641. Pop. 13,500.

AKI a principality Japan in the W. portion of the ul. of Nippon opposite that of Sikoku. It is divided into eight provinces is mountainous and woody; the soil is poor producing only some rice of an inferior quality and a little grain. There are salt works on the coast and sponges are found upon the rocks which border it.

AKIR, a vil. Syria on the right bank of and 3 m. N. from the Wes Bara lat. 31 30' N. lon. 34 50' E. There is a river of the same name in the S. part of Syria lat. 23 54' N. lon. 33° 40' E.

AKIRKA See **AKALSK**. **AKKA**, a tn. Morocco, prov. Socos, on the border of the Great Desert, on the caravan route from Morocco to Timbuctoo lat. 30° 4' N. lon. 8 30' W. It lies on the midst of a well watered and well-cultivated territory and forms a convenient halting place for caravans. It contains only about 200 houses, of which 50 are inhabited by Jews.

AKKREUM a vil. Holland prov. Friesland, 8 m. N.W. Heerenveen and 7 m. E. Huisk. It is a beautiful and prosperous place lying on the left bank of the Nooro on the highway between Heerenveen and Leeuwarden. It possesses a large Calvinistic and a Baptist church, a school, boat-building yards, anchor smiths and a sawmill. The inhabitants are employed in the rearing of cattle in river traffic and trading, chiefly in butter and cheese. l.p. 1100.—Van der Aa's *Nederlands*.

AKLANSEK, a tn. and territory Siberia, gov. Okhotsk on the left bank of the Aldan near the head of the Gulf of Penzinsk lat. 61 45' N. lon. 102 30' E. It was founded in 1678 has some fortifications constructed of wood, to protect it from the incursions of the Tschuktschi and Koréaks, and is guarded by a post of Cossacks. It is the place of barter with the nomadic tribes. The adjacent country is little cultivated. Pop. 2000.

AKNUR See **AGNER**. **AKORA**, or **AKARA** a tn. in Afghanistan, on the right bank of, and 3 m. from the Cabool river and 27 m. E. by S. Peshawar lat. 34 3' N. lon. 72 10' E. It was formerly a place of considerable importance with a neat mosque and handsome beazar built of stone, but has been nearly laid in ruins by the Sikhs.

AKOOSCHIA, a territory and tn. Russia, prov. Daghestan. The former occupies the E. slope of the Caucasus and is inhabited by a people called Lezgians, who speak a peculiar dialect. They consist of about 18,000 families, distributed through 34 villages and are governed by a kind of federative republic composed of 13 cantons. Each village has a chief of its own, who is always the oldest man in it. The people are employed partly in agriculture, and partly in rearing sheep. But in the latter much more extensively than the former. The town, capital of the district, is situated on a high point of the Caucasus near the source of the Lenkai, 55 m. W.W. Derbent. Pop. (1849) 8000.

AKOWAAY a tn. and independent settlement on the Guinea coast, situated on the N. side of a lake-like expanse of a lagoon which extends parallel with the sea, along the right of Basin from the E. of Whydah to the river Volta. Akoway lies on a rising ground shaded with fine trees, and is well built for a town in this part of Africa. Large cotton trees grow in the neighbourhood, and the soil is good and well suited for growing corn, manioc, ground, and all sorts of vegetables. Pop. 7000 to 8000.—(Duméril's *Stroels in Western Africa*.)

AKRAHI a small tribe, inhabiting a district of about 20 m. m. on the coast of Arabia near Aden. They are described, by Captain Haines, as a fine body of men, but addicted to war and rapine. The women are pretty of a slight, elastic, beautiful form with great cheerfulness of manner. The chief produce of the territory occupied by the Akrahi is millet, of which they export great quantities. They also raise large flocks of sheep and goats.

AKRON a city, best flourishing in U. States, Ohio, on the Ohio Canal 30 m. from its junction with Lake Erie, and 105 m. E. Columbus. It carries on an active and extensive trade and contains a courthouse, a jail built of stone, five churches belonging to various dissenting bodies, an academy and six schools. Its manufactures comprise four fulling mills five woolen factories, four sawmills, a powder mill a grist and oilmill. There are two printing offices and three weekly papers. Pop. 1665.

AKRAI—A river Circassia, rising in the N. E. slopes of the Caucasus, about lat. 42° 20' N. lon. 43° 52' E. It flows N. N. E. and falls into the Terek about 46 m. from where the latter joins the Caspian Sea, after a course of about 130 m.—A vil. on the right bank of the above river 35 m. S. S. W. Kizlar said to be frequented by slave-dealing Jews and Armenians.

AK-SERAI (White palace) a tn. Asiatic Turkey cap. of a sanjak of same name, prov. Khairi about 90 m. N. E. Konia lat. 38° 35' N. lon. 34° 5' E. It lies in an open and well-cultivated valley, on the left bank of the S. W. Kizil Irmak. Ak-serai under the Arabs was a considerable and open town, and now derives its chief interest from its numerous baronial remains, some of which are of great beauty. It contains 810 houses, a few of which are occupied by Armenians, the rest by Mahomedans. The sanjak of Ak-serai occupies a large plain inhabited chiefly by wandering Kurds and Turcomans, the former of predatory habits, the latter leading a quiet and pastoral life. The head of the valley of the Beyas-ai is composed of level uplands, terminating in abrupt cliffs overhanging deep ravines, with shingly and sandy declivities, strewn with rocky detritus.

AK-SHEHR (White town) a tn. Asiatic Turkey pash. Khairi, sanjak Alekhar 70 m. N. W. Konia lat. 38° 23' N., lon. 31° 25' E. on an E. slope of the Salmas Dagh mountains, at the entrance into an extensive valley watered by the river Kama, which flows into the sea lake of Ain Ghul between 2 and 3 m. from the town. The houses rise in terraces one above the other or are disposed amidst groves and gardens. There is a carpet manufactory here and a considerable trade. Antiquaries have hazarded the opinion though unsupported by evidence, that more than one ancient city had occupied the site of Ak-shehr or its immediate vicinity. Pop. 8500.

AKSU a small tn. Asiatic Turkey pash. Andoliz, sanjak Khodavendur 18 m. E. by S. Brusa and about the same distance E. Mount Olympus. The high road from Kutaya to Brusa and Mondiana—the latter on the gulf of that name—passes through it.

AKSHINSK, a fortress, Siberia, gov. Irkutsk, right bank of the Onon, near the Chinese frontier and 70 m. S. W. Dornomak. It has some trade in muscovy and siberian skins.

AKSOU Aksu or Oksu a district and large commercial and manufacturing in Little Bokhara, a prov. of China, in the N. W. part of that empire. The town is 810 m. N. E. by E. Kashgar lat. 41° N. lon. 79° E. and is situated in the valley of the Aksou at the termination of a road leading across the Tian Shan mountains to the province or district of Ili, with which it carries on an extensive trade. It is a flourishing place, being much resorted to by caravans from all parts, and being a convenient place of exchange for the merchandise of Russia, China, and Turkey. It is celebrated for its manufactures of cotton cloth and saddlery. The former is a peculiar fabric, called *kasu*, and is esteemed the latter is manufactured from deer skin, and is highly esteemed. The saddles and bridles, in particular are elaborately and beautifully embroidered, and otherwise ornamented, and are exported in great numbers to distant countries. The artisans of the place also work skillfully in precious stones, and execute superb vases with much taste. On market days, the town is crowded with buyers and sellers, and presents a very lively

and stirring appearance. There are here a Chinese custom house, and garrison of about 8000 men the officers of which, however are accountable to those at Ouché, a large town about 70 m. W. Aksou.

Aksou was formerly the residence of the kings of Kashgar and Yarkand. In 1716, it was nearly destroyed by an earthquake and, in the beginning of the present century suffered severely from an inundation, by which 8000 persons perished. The district is well watered by several mountain streams and is very fertile, producing grain, fruits, vegetables and cotton in abundance, and pasturing great numbers of cattle and sheep. The inhabitants are industrious, generally in comfortable circumstances, and ever remarkable for their generosity and hospitality often ridiculing the ungratefulness of the other Mahomedans. A Chinese writer thus marvelously characterizes them: Their manners are simple they are neither covetous nor rogues, like the other Mahomedans they are fond of smoking drinking, and dancing like those of Kaché. They are said however to be, with all their good qualities, extremely irascible and, when excited, apt to have recourse to violence. There is said to be a mine of rubies near Aksou but not worked. Pop. of town, 20,000 of the entire district, considerably upwards of 100,000.

AKSTAPA a river and valley Georgia. The river is an affluent of the Kur from the right, into which it falls, about 23 m. S. S. E. Tiflis. It rises about 15 m. N. W. the N. point of Lake Okchaba, or Sévan and runs a generally N. E. course of about 50 m. The valley through which it flows is volcanic, and the villages in the valley are nearly all Armenian. Several of them have vineyards, and plantations of mulberries, but of no great extent.—(Dubou de Montperoux's *Voy. Asiatique de Caucase*.)

AKTEBOLDI a small haven of European Turkey sanjak Kirkkuch on the S. W. coast of the Black Sea lat. 42° 4' N. lon. 37° 50' E.

AKUN an ul and active volcano, of the Aleutian series lat. 54° 17' N. lon. 165° 22' W.

AKURKA. See AKETIKKA.

AKUTAN an ul and active volcano, of the Aleutian series lat. 54° 22' N. lon. 165° 40' W. (n) The volcano is 3333 ft. in height.

AKYAB, a seaport, India beyond the Ganges, prov. Aracan of which it is the cap. as well as of a district of its own name. It lies on an island at the mouth of the Mayu or Aracan river lat. 20° 8' 24" N. lon. 92° 54' 54" E. (n). The town, which was commenced in 1826 is composed of houses built chiefly of bamboo. They are, however spacious and airy and are elevated a few feet above the ground to guard against damp. The harbour though its entrance be rather intricate for strangers, has good and safe anchorage in 84 to 84 fathoms water. This port has been rapidly rising in importance, more especially as respects its shipments of rice to various ports in the East to Europe, and even to America. When cleared in the U. States, it is sometimes re-exported with the Carolina brand upon it, being little, if at all inferior to the rice of that State. Akyah is a free port and all commodities upon exception, are exempt from duty. The imports are unimportant, there being no market for any quantity of one article. There is a civil judge here, who tries all suits for sums not exceeding 500 rupees (£50) the language used in this court is Burmese. Pop. about 6000.—The seaport of Akyah is the largest of the three into which the prov. of Aracan is divided. It is much intersected with rivers and salt-water creeks or natural canals, with water sufficient to admit a vessel of 800 to 600 tons, proceeding 20 to 25 m. beyond Akyah. Rice is the principal crop, and the only grain exported. The natives are deficient in the method of cleaning it, so that it is often shipped in the husk. Other articles of produce exported are sundewy tobacco, bees wax, honey, cotton, hides, horse, wood oil, shark fin, fish maw, shrimp, ginger, coars, ballocks, pomegranate and salt, which last is next in importance to grain. At the port, and in the district of Akyah, there are generally loading at the same time, from 100 and 200 vessels, chiefly small craft from the Coromandel coast, where partly is cleared for the Mauritius and Bourbon markets. During 11 years, ending 1845, the grain exported from the port and district amounted to the average of 82 435 tons and the number of vessels to 625.—(Jour. Geo. Soc., *Nautical Magazine*, 1845.)

ALA a n. Austrian Tyrol circle of 9 m. S. from Rovereto, on the left bank of the Adige. It is the last station on a Tyrolse ground when travelling towards Italy and has on a picturesque slope, its well built houses in scattered groups, forming a kind of crescent half encircling the mountains which rise above it. Ala has a gymnasium and elementary school manufactures of velvet and silk, more important formerly than at present and its inhabitants are also engaged in raising grapes, grain, fruit and in meadow culture. It occupies the site of the *Moenes* ed *polonium* of the Romans and, during the Middle Ages, it was named *Bala*. Pop. 2800

ALABAMA one of the S. United States, America, bounded N by Tennessee, E by Georgia, S. by Florida and the Gulf of Mexico and W by Mississippi. Greatest length, from N to S, 817 m.; greatest breadth, about 186 m. superficial extent, 66,000 sq. m. or 25,160,000 acres between lat. 30° 10' and 35° 0' N. and between lon. 85° W. and 88° 30' W. The S. part of the State, which borders on the Gulf of Mexico and Florida, over a space of 50 or 60 m. in width, is low and level and wooded with pine, cypress, and loblolly the middle is hilly with some tracts of level sand or prairie the N is broken and mountainous. The district is intersected by the rivers Alabama, Tombigbee, Mobile, Black Warrior, Coosa, Tallapoosa, Tennessee, Chatahoochee, Perdido, and Cahawbe, some of which are navigable by steamers for several hundred miles. The soil is various being in some places, particularly in the S. sandy and barren. In others fertile. On the margin of the rivers there is some rich land beyond, the ground is low wet and interspersed with stagnant pools. Next to this river swamp, and elevated 10 or 15 ft. above it, there lies an extensive tract of level land, composed of a black rich mould, and covered with wood. To this succeed the *prairie*—wide-spreading plants or grassy undulating land without timber and dotted with gums, herbage, and flowers. The climate in the S. of the bottom land, during the winter and of the country bordering on the mountain peaks of the Tennessee, is unhealthy. In the more elevated parts, it is more salubrious, the winters being mild, and the summers tempered by breezes from the Gulf of Mexico. Its staple production is cotton but it also produces wheat, barley, oats, rye, maize, potatoes, hay, tobacco, rice and sugar. Iron ore is found in several places, and coal abundance on the Black Warrior and Cahawbe. Marble, also is found, and gold ore in small quantity. Live stock—Horses, mules, cattle, sheep, swine, and poultry. Principal manufactures—Cotton, iron, leather hardware, bricks, and carriages.

The legislative power of Alabama is vested in a senate consisting of 38 members elected for four years, one half going out every two years, and a house of representatives, consisting of 100 members elected for two years, chosen by universal suffrage, and, together forming the *General Assembly* of the State. The governor in whom the executive power is vested, is elected for two years. The State sends five representatives to Congress. It is divided into 49 counties. Its praiseworthy towns are—Montgomery, now the seat of government, Mobile, the chief port, Cahawbe, St. Stephens, Tuscaloosa, Wetumpka, Florence, and Huntsville. In 1848 the exports amounted to about £2380,549; the imports to £23 879. In the present year (1850) the national debt is £2 077 187 on which an interest is payable annually of £108,516. Pop. in 1846 674,327 of which 253,532 were slaves in 1840 and 3039 free people of colour.—(*U States Geo. Department's American Geo. Times*—*Geological and Railroad of the U States Ministry*) *U States*

ALABASTER, *FLINTSTONE*, or *YFERRA* one of the Bahamas. See *BAHAMAS*.

ALABAT one of the smaller of the Philippines, on the E. coast of the island of Luzon prov. Tayabas, near the head of the extensive inlet at the S. end of the island, which terminates in the Gulf or Bay of Lamon or Lamon. The N. point of the island is in lat. 14° N. lon. 121° 55' E. (A). It is about 10 m. in length and from 4 to 5 m. in breadth. The inhabitants are described as a savage race.—(*Malat's Philippines*)

ALACRAN or **ALACRANES** (CRA) a reef, or shoal Gulf of Mexico, off the N. coast of the peninsula of Yucatan, from which it is distant about 80 m. On the S. side is a harbour called Port Alacran, in lat. 22° 38' 30" N. lon. 89° 42' W. (A). It is secure, and well sheltered by dry reefs, which protect it as

effectually as land. On February 12 1847 the mail steam packet *Forest* was lost on the reef when 12 persons perished.

ALADAN *ALADA*, or *ALADIVA* ISLAND, a cluster of small islands Bay of Bengal off the coast of Sum. forming part of the *Mergel Archipelago* lat. 9° 35' N. lon. 9° 58' E. **ALADJAHIBBAR**, or **KARUKATTA**, a n. European Turkey esp. *manjak* Karukatta, prov. Serrie, on the right bank of the Morava, about 96 m. S. *Scemedia* lat. 49° 19' N. lon. 21° 28' E. The *manjak* is traversed by cliffs from the Balkan range, and is watered by the Morava and some smaller streams, all of them discharging their waters into the Danube, to which the district gradually slopes. It contains some towns and vineyards.

AL ALJOS, a n. Span. town, prov. of, and 30 m. S.W. from Valladolid, near the left bank of the Trabacosa. It is agreeably situated and its regular paved, and clean streets are lined with dry elegant vaults for storing wine, the preparation of which constitutes one of the chief occupations in the town. It has a square, in which are the townhall the prison and one of the two churches possessed by the town, both of these spacious Doric buildings. There are, likewise, in Alajos four schools, an hospital for wayfaring poor and several other benevolent institutions. The inhabitants are employed chiefly in raising wheat, barley, rye, and peas, of which considerable quantities are exported to Madrid and Portugal. In growing wine, part of which is also exported in weaving domestic linens for local consumption, and in tanning leather. Pop. 3245. Madrid.

ALAGHELZ, a volcanic mountain and mountain range, bordering the N. side of the basin of Armenia. It lies on the N. side of the great plain of the Araxes, and on the E. touches on Lake Gokcha, or Sevan, and on the N. it is connected with offshoot mountain ranges of the Caucasus. On some parts of its slopes large quantities of sulphur are obtained its highest peak rises 15 688 ft. above the sea level.

ALAGOAS, a maritime prov. of Brazil, deriving its name from various mispronouncing of *Alago* for which it is noted. It lies between lat. 9° and 10° 30' S. and is bounded N and W by the prov. of Pernambuco, E. by the prov. of Sergipe del Rey and F. by the Atlantic length about 140 m. by a breadth of about 90 m. This province has several lakes, none of them of great extent, frequented by a great variety of birds and several ridges of hills, none of them of great elevation but generally well wooded and inhabited by abundance of game, oysters, manioc, &c. which constitute a grateful sustenance to various tribes of nomadic Indians that frequent these wilds. From the extent of surface covered by lakes and by forests, the climate of Alagoas is on the whole moist. The plates near the sea are generally sandy and not very fertile. But inland, the soil is good, producing besides tobacco cotton and sugar which are exported to Bahia and Pernambuco mangoes, oranges, jack fruit and abundance of fine timber used for shipbuilding in the above-named ports, and in Maceio. Cattle are reared but not in numbers sufficient to supply the demands of the coast towns. Limestone, granite, and various kinds of clay abound in the prov. Pop. 140 000.—(*Enc. Geo. Imp. Brazil*)

ALAGOAS, a city and seaport in the above prov. on the coast of the Atlantic, S. side of an arm of the sea named Mundaú, which runs inland about 40 m. and about 20 m. distant from Maceio lat. 9° 40' S. lon. 35° 59' W. It is built on an elevated situation, and being adorned with lofty mango trees has an extremely picturesque appearance when viewed from a distance but does not improve on a nearer inspection.

The houses are mostly of stone, and generally more than one story in height many of them, however, are falling into decay while the streets have altogether a desolate appearance—a consequence, chiefly of the expulsion of the Portuguese by the Brazilians. There are eight churches and two convents in the town all handsome buildings. The market is well supplied with fresh and salt-water fish, and with the fruits of the district. This town has fallen off since the seat of local government was transferred to Maceio which is the chief place of trade. The principal productions of the country around are sugar cotton, manioc, hides, Brazil wood, and rosewood. Pop. of town and district, 13,000.

ALAGON a river Spain, formed by the union of several small streams which take rise in the Sierra Franca, prov. Salamanca. Flowing in a S. direction, it traverses and

brings a considerable portion of the province of Cáceres, changes, at Badajoz, its course to S. W., and, receiving several affluents, falls into the Tagus, about 2 m. N.E. Alentejo. The Alagón is about 120 m. in length, and noted for the mass and flavor of its trout and other fish.—(Nadon.)

ALAGON a. to Spain Aragon prov of, and 15 m NW from Barcelona, near the junction of the Jalón, or Xalón, with the Ebro, and close upon the Aragon Canal. It is a well built, well-serviced, little town, with clean and paved streets. It possesses two churches, four schools, and an hospital. The inhabitants are principally occupied with agriculture; producing grain, olives, grapes, &c. and in manufacturing a small quantity of salt-petre. Pop 1932—(Madoz).

ALAGLASH or **ALLAGASH** a river in Maine, U States, America. It is the outlet of the waters of numerous lakes.

among which the most considerable are *Aphnoegonegamoock*, *Algoos-qagamoock*, and *Potegues-qegamoockook*, from which it takes a crooked N course, interspersed with numerous rapids round the Allegash mountains, over a considerable fall, called the Great Fall, to the river St John, which it enters lat $4^{\circ} 4' N$ lon. $62^{\circ} 5' W$

ALAIS, a flourishing manufacturing town, France, dep. Gard, upon the Gardon d'Alais, at the foot of the Cevennes mountains, and formerly cap. of the district of Cevennes 86 m N W Avignon 23 m N W Nismes, to which there is a railway. Although pretty well built there is nothing remarkable about its public buildings. In the town there are a Protestant cathedral for a tribe of 15 commerce and coal the primary jurisdiction of the town and a well equipped chemical laboratory for the engineers employed at the mines, a theatre, and a public library containing about 4000 volumes. Alais owns its prosperous condition to the richness of the surrounding country in coal, iron, lead, zinc, and manganese, all of which are wrought, but more especially the first two, with great assiduity. The coal of the District was not wrought until 1809 and from that period may be said to date the rise of Alais manufactures. The principal manufactures are of iron, tin, and glass, silk gloves, stockings, and thread ribbons, seals, beads, glass to a considerable extent porcelain and pottery ware. The Grain—Grain, wine, sulphate of iron, coal, and the various articles manufactured in the town and neighbourhood. In the vicinity are several alabaster springs, which during the autumn months, are visited to some extent for their medicinal properties. Pop in 1819 8000 in 1846, 17,888 —(*Enc. de*

LA PAZ, JULIA, a In Central America state, Costa Rica, 25 N 85 W Carageo lat 9 40' N lon 85 40' W. Some of the better houses have a landscaped appearance; they are long and low with broad piazzas and large windows having wooden balconies. The plaza is beautifully situated. Mr Stephens, describing the town as it appeared on a Sunday says, The inhabitants, who were cleanly dressed, were sitting on the piazzas, or with doors wide open, reclining in hammocks, or on high-backed wooden *setees* under shade. The women were dressed like ladies and some were handsome, and all white. As we passed along the street, we were welcomed in the most friendly manner by all we met. The road for two or three miles before entering the town is lined with houses, the fronts of 400 yards square, and the houses are of the most sumptuous and are decorated with paintings. Rows of trees, bearing beautiful flowers, and which, in some places, are planted between the houses, run on either side of the road. In the fields, the growing of sugar cane is the chief culture; every house has attached a small sugar mill. Pop. about 19 000.

ALAKANANDA, a river, Himalayas, rising in the Himalayas mountains about lat. 81 N°; lon. 79° 55' E. and flowing S.W. through the prov. of Gurwal. At Devarayaga, a small town 12 m. W. Garunagar lat. 80° 10' N°; lon. 78° 40' E. it unites with the Bhagirathi in forming the river Ganges. It is one of the sacred rivers of the Hindoos, and abounds with a species of fish named roher (*Cyprinus dentatus*) which the Brahmans daily feed, and some of which become so tame, as to be tamed from the hand. Another species, named roher beautifully coloured and of fine flavour is found in the river. — Hamilton's *East India Gaz.*

ALAK-DAQH [Beautiful mound] a lofty mountain, Turkish Armenia, prov Erzeroum about 50 m. W Mount Ararat, with which it is connected by several lofty chains. Its

height has not been accurately ascertained, but is stated at 9000 or 10 000 ft. above the sea. On the N faces of the highest peaks, Mr. Brant saw large masses of snow lying in the month of September. —The name ALAN-DAG is applied also to a portion of the Altair mountains, and to a range of mountains in Anatolia, 85 m. N. W. ANKARA.

ΔΙ & ΚΟΙ [Beautiful village] a vill. Asiatic Turkey
push. Yan on the E. side of the lake of the latter name. It
contains a church and, on a hill overlooking the village, are
the ruins of another of ancient date, while at the bottom there
is a third of smaller dimensions. There are extensive vineyards
in the vicinity and a considerable quantity of *wine kists*,
which is sent to, and disposed of in the city of Yan. The
Lakes of Yan is not visible from the village, being shut out from
view by an intervening range of low hills.

ALAMEDA [A row of trees] the name of several towns and villages, Spain.—1. A *viñal* Old Castle *pro* Santa, whose inhabitants are employed in agriculture, in rearing of sheep and goats, and in weaving domestics. Pop. 372.—2. A *viñal* in *Andalusia*, *pro* of *San* N. W. from *Malaga*, on thirteenth from *Sevilla* to *Granada*. It has a church and grocery sold in the vicinity is of good quality producing grain olives, and sugar cane. Pop. 3690.—3. A *viñal* New Castle, *pro* of, and *San* Madrid, noted for the *Caperca*, the fine place and a pleasure ground of the *Dukes* of *Oseña*. Pop. 1192.—4. A *viñal* Leon, *pro* *Salamanca*, about 18 m. from *Candido* *Rodrigo* It has irregular streets, a church and *crudo* *montañas*. Pop. 714.—5. *San* *Mari* de *la* *Alameda*, a *viñal* Old Castle, *pro* of and 98 m. W. from *Madrid* on the confines of the two Castiles. It has a cold unhealthy climate, and contains a church and school. Pop. 500.—6. *Alameda* de *la* *Reyna* a *viñal* Old Castle *pro* *Valencia*, 8 m. from *Illes* it has regular streets, a townhouse, granary and a church. Pop. 107.—7. *Alameda* del *Valle* a *viñal* Old Castle *pro* *Madrid* 10 m. from *Butrago* in a valley of the same name. Pop. 244.—8. *San* *de* *la* *Alameda*.

ALAMOS (Los) is a Mexico pop. Sonora, 140m. N.W. Sonora, between the Rio del Norte, and the Rio Mayo. It is situated in a barren plain, in a district celebrated for its silver mines, which are a few miles distant from the town. The merchants of Alamos are generally wealthy and the town is of entirely handsome. It contains some good and well paved streets. The houses are generally built of stone or brick, and laid over with stucco. Those that surround the square are of modern architecture, and belong to the principal miners and merchants. A new church of stone, finished in 1826 is a very elegant building. The Alameda is a pleasant promenade formed of avenues of poplars with stone seats at intervals. Fresh meat is dear being brought from a great distance. The water used in the town is drawn from deep wells, and is very bad and scarce. The inhabitants are chiefly engaged in agriculture, and stock raising, and are generally as poor as usual, and unsuitable, even amongst themselves. They have no amusement except gambling which they carry on to excess. Pop. about 6000 and from 3000 to 4000 more are employed daily in the mines.—There are four other towns of the same name in S. America.—(Ward's Mexico, vol. II App.)

ALAMUT or ALANMOT a district of Persia, a little to the W. of Tehran, between lat. 56° 4' and 51° 0' E. and intersected by the 34th parallel. It is bounded N. by a high range of mountains, which separate it from the provinces of Gilan and Mazandaran and is about 80 m. in length by 20 in breadth. In this district is situated the ancient stronghold of the chiefs of the Assassins (*See* ASSASSIN). It stood upon a high naked and exceedingly steep rock and was deemed impregnable before gunpowder became a munition of war. A few dilapidated walls and cisterns are all that now remain of the ruins of a nest in this stern retreat was sometimes called. The vicinity of the rock, says Col Sibbel is a most dreary solitude, excepting eagles and hawks, not a living thing to be seen nor even a single tree, but the view from the summit is not so desolate.

ÅLAND or **ÖLAND ISLANDS** a large group of 80 inhabited and 200 uninhabited islands, situated between the Gulf of Bothnia and the Baltic Sea and near the mouth of the Gulf of Finland, between lat. 58° 50' and 60° 40' N. lon. 19° 30' and 21° E., and occupying a space of about 352 sq. mi. They formerly belonged to Sweden, but are now included in the government of Finland having been ceded

to Russia in 1809. The navigation amongst them is rendered difficult by the narrowness and shallowness of the channels. The principal islands are Aland, which gives name to the group, Lomland, Lompsland, Kleron, Fogles Kumlings, Bredon, Verdon, and Hanneo. The whole group is composed mainly of red granite, with here and there strata of red marl and limestone. The foundation is covered with clay flint, and immense and along the coasts are large masses of fossiliferous flint. Aland, distant about 80 m. from the Swedish coast is the largest of the whole, being 25 m. long and about 22 broad. It is hilly, deeply indented by numerous bays, and contains forests of pine and birch. It has also some good pasture and arable land and is watered by several small streams. Wheat, barley and rye are raised here, as in some of the other islands in sufficient quantities for the supply of the inhabitants, who rear also a number of horses, cattle, sheep, and goats. In this island there is a harbour capable of containing the whole Russian fleet, and a cistern in which, it is said, 90,000 men might be quartered. Besides other occupations, the inhabitants employ themselves in shooting wild fowl and other game, in quarrying and burning limestone, but principally in fishing and catching seals, which abound on their coasts. The produce of the country consisting of butter, salted meat and fish, cheese, hides, charcoal, timber lime, and gum, is conveyed in small vessels to the neighbouring ports upon the Baltic. The whole archipelago of Aland is divided into eight parishes, of which five are in the principal island. There are various good ports and several villages, or hamlets, of which Gustafshamn, in Aland where there is an old castle, is the chief place. The inhabitants are entirely of Swedish extraction. The first victory of the Russians over the Swedes was gained in the neighbourhood of these islands, by Peter I. in 1714. The principal ports are now generally occupied by detachments of the Baltic fleet and one of the smaller islands on which a telegraph is established, is inhabited by the pilots who are employed by the Russian Government for conducting the mails and travellers. Pop. 14,000, of which 9000 are in Aland and 5000 in Kumlings.—(Gilbert, *The Sea of Swed.*)

AL-ARABISH

ALABAMA, a N. E. river, belonging to Spain, situated on the slope of a high mountain in the interior 11 m. N. E. of Palmas. It is tolerably well built, and has two municipal offices, a church, and two endowed schools, some water and several windmills, brandy distilleries, and manufactures of soap and coarse cloth. Pop. 4000.

ALABAMA or ALABAMA an important river N. E. Siberia between the Indigirka and the Kolyma it rises in lat. 67° N. in the Alaskan hills, and flowing nearly parallel with the former river falls into the Arctic Ocean, about 100 m. to the N. E. of the embouchure of that river.

ALA-SHEH (anc. Philadelphus) a city Turkey in Asia, pers. Anadolus, 82 m. E. Smyrna, stands on part of Mount Taurus near the river Cogamne famous as the seat of one of the first Christian churches. It is of great extent but the houses are mean, and the streets narrow and dirty. A vast number of interesting remains of antiquity are scattered about the town, consisting of fragments of beautiful columns, sarcophagi, fountains, &c. Ala-Sheh was built by Attalus Philadelphus king of Pergamos, and is still a place of some importance, being much resorted to by caravans going to and from Smyrna. Pop. 16,000.

ALASKA

ALASKA a seaport in Barrenia State, prov. of and 5 m. E. W. from Albenga lat. 44° 2' N. lon. 9° 11' E. The port is excellent, and carries on a considerable trade 1 op 6000.

ALASSONA a N. European town, of and 35 m. N. E. from Tricela, or Tricelina, and 25 m. N. W. Larissa. It has a Greek convent, a considerable summer market, and a population of about 3000.

ALATA, a small river Ahyraile, a tributary of the Bah-el-Arak, near its confluence with which occurs the celebrated cemetery of Alata, first described by Bruce. The cemetery on the Bah-el-Arak is locally known by the name of *Tu Emt*, or *Spoke of fire* and is situated about 20 m. S. Lake Thana, about 5000 ft. above the level of the sea; lat. 11° 30' N. lon. 37° 40' E. (See *ALARA*, *BAH-EL*.)—There

is a vil. named ALATA in the Isl. of Corsea, about 6 m. N. Ajaccio.

ALATA CASTRA, a Roman fortress, Scotland, co. Moray par. Duffus. See *EDINBURGH*.

ALATAMAH, or ALATAMA a river Georgia, U. States, America, formed by the union of the Ocmulgee and the Oconee, from the sources of which, in the Alleghany mountains, its course is about 500 m. It is a large but gentle stream flowing through forests and plains, and falling, by several outlets into Alabama Sound, 60 m. S. W. Savannah. Its average breadth is 600 yards, its depth 3 ft. and the bar at its mouth has 14 ft. at low water. On both branches, it is navigable by vessels of small tonnage 500 m. from the sea.

ALATRI a N. Papal State, delegation of and 5 m. N. from Frosinone. It has some trade in wine, oil and common cloth. The bishop holds immediately from the Pope. Pop. 9000.

ALATYR, a N. Russia, gov. of and 90 m. W. W. from Simbirsk, at the confluence of the Alaty with the Sura lat. 54° 45' N. lon. 48° 15' E. The houses are constructed of wood, and it has a considerable trade in corn. Pop. (1850) 7247. The river Alaty rises in the gov. of Simbirsk E. through part of Novgorod as it in Simbirsk falls into the Sura at the town from which it derives its name, after a course of upwards of 125 m.

ALAUJI a N. Frontier dep. Assam cap. of a district of some extent, 140 m. S. Quila on the road from that city to Guenay lat. 23° 22' S. lon. 79° 17' W. It has an altitude of 7950 ft. above the sea, in the valley of Alauji on a small river of its own name an affluent of the Gulf of Guayayuti. It has a church, a Franciscan convent, and a school and in the neighbourhood are warm medicinal springs whose waters are used to some extent. Manufactures.—Cloth both woollen and cotton, in which, also some trade is done. The valley to which Alauji gives its name is one of the highest and richest in the Andes. It grows rice, sugar cane, some grain and fruits of every kind.—(Gutierrez Alcala Gilbert *The Sea of Swed.*)

ALAVA a hilly prov. in the N. of Spain, cap. Vitoria, one of the three Basque provinces, between lat. 42° 23' 40" and 43° 8' 5" N. lon. 3° 11' and 3° 6' W. bounded N. by Biscay N. E. by Guipuzcoa E. by Navarre S. by Old Castile and W. by Santander area 2069 sq. m. The general features of this province are very rugged, branches of the great Pyrenean chain ramifying throughout its length and breadth, and forming a natural boundary between Alava and the other two Basque provinces—Biscay and Guipuzcoa. The mountains yield iron, copper lead and antimony marble freestone, white limestone and granite most of which are wrought to some extent they are clothed with oak, chestnut, holly pine, an other hardy timber and abound in ferruginous, calcareous, and sulphurous springs. The principal streams are the Zadorra and Ayala both affluents of the Ebro, which forms the boundary between Alava and Old Castile. In the N. part of the province are salt lakes or salt pools. The valleys are fertile, but the system of agriculture is very defective and the implements used in husbandry of the most homely and primitive description. Grain especially wheat, the staple food of the inhabitants, vegetables, fish, hemp and abundance of fruits of excellent quality are produced and wine is plentiful but inferior. Sheep goats, pigs, horned cattle, and mules for agricultural labour and carrying, are reared, and deer and game of all kinds abound. The chief occupation of the people is husbandry but many are also employed in tanning in grinding corn expressing oil, and manufacturing cloth, felt hats, harness, hardware, and glass and some are engaged as carriers. Alava exports fruits, iron, copper and manufactured goods and imports sugar, chocolate, tobacco, and implements for mechanical purposes. Education is little attended to partly from the children being too early sent to labour and partly owing to the peculiar prejudices of the people, who both in language costume, and manners, are entirely different from those of the other portions of the peninsula; and who priding themselves on nobility of birth, resent, as an insult any attempt to correct their moral deficiencies. It is worthy of remark, that, though much addicted to smuggling yet theft and murder is much less frequent amongst them than in most other districts of Spain.

and the hospitality of the peasantry according to their humble means, is proverbial. For costume, and other particulars respecting the Biscayans, see *Baiona Provincas*. Pop. 81,897. —(Madrid, *Dic. de España*.)

ALAYA (also *Corcoran*), a seaport in Turkey in Asia, *pash. Isthik*, cap. *mukah* of the same name. Lat. 30° 31' 30" N. lon. 32° 1' E. (a) situated on the face of a rocky promontory from 500 to 600 ft. in height, and surrounded with old walls now falling to ruins. The town and adjacent cliffs of compact white limestone, have a picturesque appearance from the sea. But from its being built on an acclivity the streets are so steep, that one only is practicable for horses. The houses are wretched, and the mosques small and mean. There is here neither pier nor harbour. There is, however, good anchorage in the roads, from two to four cables length from the shore. About 9 m. N. E. from the town is seen the peak of a *moor* nearly 5000 ft. high, which forms a good landmark to seamen. Pop. 3000.

ALAYOR, or ALAYON, a *tu* in *Almorca*, belonging to Spain, situated in the interior about 10 m. W. N. W. Fort Mahon. It is a close-built and uneven town, having a town-house, two churches, an hospital, endowed school, some wind mills, handy distilleries, linen weaving, cheese making, and a small trade in wine and potatoes. Pop. 4723. —(Madrid.)

ALP, or *Alr* called also the *BRANAR ALPS*, a chain of mountains separating almost exclusively to Wittenberg extending S. W. to N. E. from the source of the Neckar by which river it is separated from the mountains of the Schwarzwald, or Black forest, to that of the Jura, a total length of 84 m. and having a breadth varying from 15 to 20 m. It forms the water shed between the Neckar and Danube and in different parts, takes the names of *Monte Alb*, or *rough Alps*, by which, indeed, the whole chain is designated, though properly restricted to the district between Leuchter and Zaunmug. Hochstetter applied to the district round Blaubeurg, and Aulbach to the elevated plains between Aalen, Heidenheim and Weissenheim on the right bank of the Brenz. It slopes gently towards the Danube and shows its greatest escarpment towards the valley of the Neckar seen from which it appears very much like the Jura when viewed from the basin of the Aar that is to say it exhibits a line of heights uninterrupted and almost of the same level above which a few points are elevated. Its geological structure is the same as the Jura, of which, indeed, it seems to be an E. continuation. Though, like the Jura, it is deficient in water yet from its slopes rise the Kocher, Vils, Rems, Lauter, Enns, Ebnath, Leuchter, Brunn, Brenz, &c. In three most important summits are the Hohenberg 3569 ft. the Dudenberg 3321 ft. and the Schaffberg 3334 ft. above the sea level. —(*Oberpreuss. de P. Europa*.)

ALBA (the *Alba Pompeia* of the Romans) an episcopal city Sicilian states, cap. prov. of same name, 30 m. S. F. Turin, and 10 m. S. W. Add on the right bank of the Tanaro, which is crossed by a bridge of boats. The country round it is called *Albania*. The town, which at the sea of a bishop, suffragan to Turin contains a cathedral, several churches, and a college. It has an extensive trade in cattle. Pop. 7690. —The river is watered by the rivers *Benaco*, *Belbo*, and *Bormida*, and produces in abundance grain, maize, wine, and fruit, and the milk is considered to be the best in Piedmont. Amongst the products are marble, rock salt, and sulphate of magnesia. Pop. 105,737.

ALBACETE, a prov. S. E. of Spain partly in Murcia and partly in New Castile, between lat. 38 and 39° 45' N. and lon. 0° 57' and 5° 9' W. It is bounded, N. by the prov. Cuenca, E. by Valencia and Albacete, S. by Murcia, and W. by Ciudad Real and Jaen; area, 3545 sq. m. The surface of this province is considerably varied presenting, in some parts, lofty *sierras*, peaks of which attain a height, above the sea level, of 5000 ft. and, in other parts, rich plains and arable land. As a whole, it is hilly but its valleys every where are fertile. The hills produce wheat, for several purposes; abundance of oak also juniper, tamarisk, and various other interesting plants. The province is well watered by the *Júcar*, the *Guadalequivir*, the *Segura*, the *Murdo*, and numerous smaller streams, all of which empty themselves into the Mediterranean and it possesses several salt lakes, or *salinas*, and numerous medicinal springs—hot and cold, saline, sulphurous, ferruginous, sulphureous, and calcareous. Agriculture is in

an advanced state for Spain; and cereals, hemp, tobacco, grapes, almonds, nuts, oranges, lemons, lemons, olives, aloe, saffron and rich honey are produced; the grapes and saffron in large quantities. The annual produce of the latter amounting to 12 000 lbs. The pasture lands are rich and large numbers of sheep and goats, and a considerable number of cows, horses, mules, and asses are reared. The mineral riches of Albacete consist of building stones, millstones, gypsum from copper shale, antimony sulphur and coal but none of them are wrought to any great extent, some not at all. The main occupation of the people is agriculture and cattle rearing; some are employed as carters, and others in various trades and manufactures in weaving sundry kinds of coarse cloths, chiefly for local consumption, making earthenware, hardware, and soap distilling brandy &c. The trade of the province consists in exporting agricultural produce and some iron, zinc, and sulphur. The state of education is miserably low and crimes against the person are numerous. Pop. 195,531. —(Madrid, *Dic. de España*.)

ALBACETE, a *tu* in Spain, in Murcia, cap. prov. of same name, on the highway between Madrid and Cartagena, and 110 m. N. N. W. the latter place. It lies in a fertile but treeless plain is richly supplied with water which is, also, of very indifferent quality. The streets mostly cross each other at right angles they are commodious, and generally clean. Many of the houses are decorated with green painted balconies. The town has, likewise, six squares in which are to be found the courthouses, barracks, and hospital civil and military and the most noteworthy buildings are the parish church, of the 16th century the chapter houses the palace de *Paseo Hermoso* and the bull ring. Besides these there are a chapel, an hospital for wayfarers poor a normal seminary and numerous public and private schools. Albacete, from its position, is a place of considerable business and carries on trade, both direct and transit, with Murcia, Alicante, Valencia, and Madrid exporting grain, saffron, and cattle and importing wool, fish, medicines, rice, sugar, wine, iron, cloths &c. The inhabitants are principally engaged in the carrying on trade in making a sort of clasp-dagger knives, called *puñales* and *casacas*, in quality said to be second only to those of Toledo, but far inferior to Sheffield goods in making shoes, soap, earthenware, and other articles to a smaller extent. A great fair is held in September. Pop. 12,143. —(Madrid, *Dic. de España*.)

ALBA DE TORRES, a *tu* in Spain in Leon prov. of and 17 m. S. E. from Salamanca on a slope on the right bank of the *Tormes*. It has two squares, in the larger of which are the parish church, and the townhall and it likewise possesses a public granary an endowed hospital, and three superior and well-attended schools. Its inhabitants are chiefly devoted to agriculture. At Alba de Torres, Oct. 19 1805 Marshal Kellerman gained a victory over the Spanish Duke del Parque. Pop. 2176.

ALBALA, a small *tu* in Spain, in Extremadura, prov. of and 20 m. S. E. from Caceres, at the extreme E. of the *sierra de Montanechos*. It has a church, townhall, school and several fountains. The inhabitants are engaged in tillage, feeding cattle, manufacturing gray plush and expressing oil. The produce of the vicinity is grain, fruits, and vegetables, is abundant and black sheep, cattle, and pigs, are reared. Pop. 2135.

ALBALATE DEL ARZOBISPO a *tu* in Spain, in Aragón prov. Teruel, 46 m. S. E. Huesca, on the left bank of the *Martin*, an affluent of the *Ebro*, situated on a slope, and pretty regularly built having a church, a Latin and two other schools, an hospital, and cemetery. The inhabitants manufacture linen, coarse cloth, and baize cultivate grain, wine, oil, silk, and wool and rear sheep and goats. Pop. 3746. —(Albatala is likewise the name of various other villages in different parts of Spain. —(Madrid.)

ALBAN (8c) a *tu* in France, dep. Loire, 18 m. N. Mende. It has manufactures of woollen stuffs, and an hospital for insane families. Pop. 2155. —There are several small towns and villages in France of this name amongst them is a hamlet, dep. Loire, remarkable for its mineral waters, which are much frequented.

ALBANCHEZ, a *tu* in Spain, in Andalusia, prov. of, and 28 m. N. E. from Almería, on a hill in the midst of lofty *sierras*. It contains a large square a parish church chapter house,

prison, two endowed schools, and a cemetery. Manufactures—Linen fabrics, quilts, and blankets, oil, and large quantities of tiles and bricks. Grain grapes, olives, and fruits are cultivated and a few sheep and mules for farming labour reared. Pop. 2190.—There is another **ATRAMONTE**, about

In Andalusia, prov. of, and 16 m. E from Jerez. It has a church and school but, as a whole, has a very run-down aspect, the houses being ill built and in a state of decay. Pop. 1198.

ALBANIA (called *Skopje*, by themselves from *Skopje*, a Servian *Armatshko*, by the Turks *Armatshko* and *Armatshko*, by the Balkans and *Albania*, by the Greeks) a mountainous country, by the Adriatic, 38° 30' N. 19° 45' E. 100 m. long and 31 25' W. It is about 280 m. in extreme length and in breadth, varying from about 90 m. in the N. and centre to about 40 m. in the S. near the Gulf of Arta, bounded by S. and E. W. by the Adriatic and Ionian seas. It by Montenegro from which it is separated by the river Moraca, and by Bosnia. P. by Servia, and that part of Romenia, namely *okolina* of Monastir and Macedonia, and by Thessaly or Trakia, and S. by Greece. The N. and E. boundary from Bosnia to the Gulf of Arta, is formed by a ridge of mountains which generally speaking also constitutes the water shed. It is called *Prokletie* or Dugie by the Roman frontier. S. *Daghi* Vird, Grammos, &c., on the frontier towards Romenia, and Thessaly. The country is divided into 1 *Upper Albania*, as far S. as El Bassan, on the river Scutari comprising the pashaliks of Ipik, Prizren and Scutari and several *kryezines*. 2 *Central Albania*, from El Bassan S. to the mountains of Tomor and Skrapari and the mouth of the Vojuzda, governed by the *kryez* of El Bassan. Tirane, Gavatja, and Durazzo, and 3 *Lower Albania*, or Epirus, S. to the Greek frontier wholly governed by the pashas of Janina, and exclude Epirus. In the *tenogori* or mountainous parts of Albania, and exclude Epirus. In the *tenogori* are laid down in this article we have followed their elaborate and thoroughly scientific work, *La Tyrénie* and *Épire*, par MM. Bong.

Upper Albania is composed of at least nine tringles of hills of which six are in Epirus, and three or four in Central and Upper Albania all having a descent N.W. to S.W. excepting the hills along the N. and S. slope of the Dittira, of Lake Ochrida and the Staradagh which last has a low descent N.E. to S.W. In the S. of Epirus the hills are less destitute of wood near the sea, and composed of a series of valleys and ridges, but more to the N. they attain a considerable elevation. In Central Albania the hills are more widely low, and the country is the hottest in the country. In the latter district and Epirus, having snow on them nearly nine months of the year. The following are a few of the principal heads:—

		Dist.
Lower Albania	Mount Perister	7100
or Epirus	Corradina	5895
	Jocumaria	4495
Central Albania	Mtwards of the G.F.	9054
	Flangha near Vologosht	1970
	Flangha E. of the Pass N of Berat	1573 to 1386
	Peak of Kollitina	787
Upper Albania	Peak E. of Kollitina	5315 to 5653
	Peak of Isartolina	6810

Besides those specified there are many other peaks, both in Epirus and in Upper Albania, above 4000 ft. high

Drains.—Altogether has no great rivers, in consequence of their course being so short, and the inclination so great, causing many of them in summer to have scarcely any water, and some of them even to be completely dry. The upper and lower courses of the Rio Grande, the Rio Colorado, the Rio General Alianza, and the N. of Ephra, the general course of the streams is E. to W. though the White and the Black Drin, before their junction run respectively N. and N. and the Vojatas and its affluents run E. to N.W. In S. Ephra however the streams generally run from N.E. to E.W., or from N. to S., and only here and there from N.W. to S.E. The Drin, or Drino, is the largest Albanian river. It is formed by the White Drin rising on the mountains of the S. of the Black Drin, and the Black Drin, issuing from the mountains of the N. of the S. flows S., and the latter N., to their junction, about 15 m. S.W. of Prizren, where the course of the river is W. It is formed by the Drin, which is about 14 m. S. Scutari, and its white affluents, from either source, is about 150 or 160 m. It is navigable for large vessels as far as the Bole, and for boats of 40 to 60 tons above Scutari. The Bole, which empties

Lake Skutari with the Adriatic, is navigable for coasters to Obod, a short distance below the town of Skutari. Excepting the Arta and Loran which are navigable near their mouth, none of the other rivers of Albania can be navigated being, at most, useful for the purposes of flotation and irrigation. In this class may be named the Scambi Ergent, Vojziz, Kalunas, Mattia, Mavro-potamos &c.

Lakea—Albino, like Greece being a combination of the mountains that constitute Hessegravia, and having a similar composition, partakes of the peculiar system of subterranean streams that characterizes the waters of that country. In this respect, Eurus is especially remarkable for its circular basins, and the manner in which its waters are collected, and that disappear at certain points, and reappear at others in subterranean rivers. The finest example of this last is found in the Lake of Janina, formed of two basins, united by a channel so narrow and filled up by plants and sedges, that in process of time, probably there may be two lakes in place of one. The upper is 20 to 30 fms long, and 10 to 15 m broad. The lower is 8 m and smaller lake, and is 10 to 15 m long, and 5 to 8 ft. wide. The waters of the upper lake, when they re-appear in the lower lake, and form the Velohatna, an affluent of the Kalmaros. The waters of the lower lake escape by subterranean courses, and near Vostovo form the sources of the St. George, an affluent of the Vardar. The Lake of Janina thus sends its waters both to the Adriatic and the Aegean Seas. The highest and most beautiful lake in Albania and south of Greece is the Lake of Obidria, which has 2147 ft above the sea level. It is 10 to 12 m long by about 8 m broad at its widest part. The Lake of Scutari in Upper Albania, which would seem to have been at one time even larger than now is the largest Lake in the country being somewhat longer though not quite so broad. It is 15 to 20 m long, and has some islands near its W. shore and abounds with fish. There are several smaller lakes, but none of these important.

Geology — Geologically Albazur belongs to the Cretaceous system of the Alps, and is composed chiefly of ammonititic limestone, with here and there upheaved schist and serpentine. Along the courses of the rivers, but more especially at their mouth are alluvial deposits and sometimes tertiary clay. It is not certainly known that the country contains any metals though some authorities contend that argentiferous lead and copper are to be found in Epirous.

Vegetation.—In consequence of its lofty mountains and northern position, Albania possesses an extremely rare vegetation. Alpine and subalpine, the forms are similar to those found on the Alps of Switzerland, and on the mountains of Scotland many being identical, though of course not a few are different. *Barbarea media* well known on the Pyrenees, is here found in abundance, though wanting in the Alps, which in their turn possess the rhododendrons, which are wanting in Albania. Though by no means a thickly wooded country it possesses many of the same trees and shrubs as the Alps, and cypresses, and laurels. Vines are rare, especially in Epirus, and the orange, almond, fig, mulberry, citron, likewise maize, wheat, and barley, either grow naturally or are cultivated.

Zoology.—There were very few mammals, and deer are found on the mountains; sheep and goats, but more especially the latter are numerous. Cows are kept to some extent; the horses are excellent and sure-footed, and mules and asses are plentiful. The lakes abound in water fowl and a kind of aloupe, or heron, ascends the Boyana to Lake Sentaur, where it is taken in considerable quantities. Various other kinds of fish but particularly refs, inhabit the lakes and streams and with such rapidity do many of these latter diminish in the summer that large quantities of eels are frequently left dry in the beds of the rivers or of the various courses made for the purposes of irrigation. Eagles, various kinds of hawks, and numerous other kinds of birds are plentiful and hawking is a frequent amusement of the water sportsmen; the parents of birds with young are doggedly helped and the parents of birds with young are doggedly helped and the parents of birds with young are doggedly helped in Ephra the conchoidal snail (charvaceus) beds are packed everywhere; and, in the marshes in the basin of the Arts and near Lake Sentaur, leeches are found in considerable numbers.

Climate.—The heat of summer is almost insupportable in the maritime valleys of Albania. There are in the country numerous circular cavities, whose waters being absorbed, the air in summer is stagnant and heavy giving rise to

these dangerous intermittent fevers that regularly visit the country especially from July to November. The temperature in July and August reaches, in the shade to 97 and even to 101. The winter or cold season lasts from November to April snow on the coast is rare, though on the mountains plentiful. October and December are the rainy months in which the rivers overflow their banks.

Trade, Commerce, and Tourism.—In the import and export trade of this province vessels under the British and French flags, the Greek and Ottoman flags, are almost the only ones engaged. A few Austrian trading companies, and a few Italian trading companies, while French and Russian are still more rare. The exports are shipped chiefly at Preveza or Prevaia, at the entrance to the Gulf of Arta, and consist principally of grain, timber oil, salt fish, cheese, tobacco, cotton, wool, and capotes—a large white woollen outer garment manufactured in the country. The cotton is received through Thessaly and is exported to the German and Italian ports of the Adriatic. The chief imports, most of which come also by the way of Preveza, are sugar, coffee, gunpowder, arsenals, ironmongery, common cloths, linen, and valvets. The principal connections of the coast are with Greek houses at Smyrna, and Maltese houses, through which they receive the manufactures of Great Britain. In the year ending December 31 1849 61 ships arrived at Preveza 330 British and Italian vessels, and 533 departed and probably about 150 more from various other ports. The internal trade of the country is carried on by means of pack horses, four or five of which are attached to each other by cords and guided by one man. Other ports besides Preveza, are Parga, Arona or Valona, Durazzo, Dalgian, &c. and of principal towns, may be named Arta, Janina, Scutari, &c.

Governments.—Albania is under the government of the different Turkish pashas in whose territories it lies, but the power of the former is a web limited by the bold and warlike tendencies of the inhabitants who will not brook a despotic control. The local authorities are constituted differently in different places and although all the tribes are nominally subject to the Turkish Government a great part of them are virtually independent.

People, Manners, Customs, &c.—The Albanians are of rather short stature, muscular active and of a warlike spirit. The women are tall and strong but not beautiful, having generally an air of coarseness, the result of the laborious work they are compelled to perform, and of the harsh treatment they meet with from their husbands. The dress of the men consists of a shirt of white cotton, worn often till it becomes black, drawers of the same material, a mantle of white woollen, a large great coat or capote with loose open sleeves and a waist girdle, formed of a coarse shawl drawn tight by a belt that contains their pistols. The habits of the Albanians are filthy, many of them wearing their garments till they are falling to shreds and are covered with vermin. Their food is simple and nourishing, and their occupations neat. The distinguishing features of their character is a strong feeling of nationality. They are all trained to arms, and make brave and hardy soldiers, but their discipline is very imperfect. Their usual arms are two pistols in the sash or girdle, a yatagan or cut-throat slightly bent forward a sabre bent backward, hung to a belt, and a long musket. They are numerous in the Turkish army of which they constitute the best soldiers. In agricultural operations, their industry is remarkable. The families who are regarded as an inferior sort of beings, are compelled to do the most laborious work. The Albanians are fond of ornament, and much addicted to dancing. Their native language appears to be founded on the ancient Illyrian but hitherto no good grammar or dictionary of it has been published. Most of the natives acquire also the Greek tongue. They are divided into Greek Christians, K. Catholics, and Mahomedans. Pop. estimated at 1,600,000.

History.—Though Albania has frequently changed its name, its limits, and its boundaries, its people have been embosomed in its mountains from the earliest records of history, whose language and habits have retained unusual traces of nationality. The earliest geographer who mentions the Alban of this district is Ptolemy and they appear in his time to have been a small tribe of Illyrians. In the 9th and 10th centuries, Albania was included in the great Bulgarian kingdom established south of the Danube but it was not till the year 1079 that the

Albanians began to act an important part in history. From this period, they exercised important influence in the perpetual wars of their neighbours but, in 1383, they were defeated for the first time, by the Turks, and again in 1478—their last struggle—where Albania became a province of the Turkish dominions, still maintaining however a certain degree of stubborn independence, which the Porte has hitherto found it impossible to overcome. (*See Turkey, &c.*)

ALBANO (BART-) a town in the Papal States, comarca of, and 14 m. S.E. from Rome, on a hill about 900 ft. above the sea level and on the S. side of the lake of the same name (*see next article*) celebrated for its beautiful scenery and pure air. The modern town occupies part of the grounds of the two villas of Pompey and Domitian. The most remarkable remains at Albano however are those of the amphitheatre of Domitian, mentioned by Suetonius and Juvenal as the scene of the most revolting equality of that tyrant. Near the gate of the town, on the side of the road rises an ancient tomb, said, by some, to be that of Ascanius, the son of Aeneas but, by others the sepulchre of Cloelia, slain by Milo. The wine of Albano, the produce of the vineyards around the lake, still retains the reputation it had in the days of Horace. The neighbourhood of this town was studded with the villas of the Roman patricians, many of which are still traceable. It is yet much resorted to, in summer by wealthy Roman families, who have their country seats there. Albano has been the seat of a bishop since A.D. 400. Adrian IV. (Nicholas Break spear) the only Englishman who ever filled the papal chair was Bishop of Albano for some years previous to his elevation to the pontificate. Pop. 5600. (*Murray's Handbook for Central Italy* pp. 503, 504. *Encyclopædia Britannica* 1877 through Italy vol. 31. p. 306.)

ALBANO (Latin, Lacus Albanus) a lake Papal States, near the town of Albano and 15 m. S.E. Rome, of an elliptical shape, spreading 12 m. in length, and about 1 m. in circumference, supposed to occupy the crater of an extinct volcano. Its situation is picturesque being surrounded with steep crags, mantled with copse, while its high banks are covered with tastefully laid out gardens and orchards. But the most remarkable circumstances connected with it, was the formation of the emulsion (*emulsio*) by which the Romans, while engaged in their contest with the Venetians A.D. 359 (A.D. 394) succeeded in lowering the waters, which, they feared might burst their banks, and destroy the adjacent country. This emulsion, or tunnel is cut nearly through solid rock, at a depth of about 450 ft. beneath the summit of the cliff. Its length is fully 14 m. its width, everywhere, at least 4 ft. and its height from 7½ to 10 ft. It is carefully built round with solid masonry and altogether discovers an extraordinary degree of skill and perseverance. Its upper end is nearly on a level with the surface of the lake or 919 ft. above the sea. It runs under the hill and town of Castel Gandolfo 3 from the staircase of Lary and from indications on the banks of the lake itself it appears that its waters stood, at one time about 200 ft. higher than their present level and discharged themselves by a gully artificially widened into a broad canal.

ALBANO or M. M. CAVO (Latin Mons Albanus) Papal States, the highest point of the chain of mountains which bound the Campagna di Roma on the K. and S. nearly 3000 ft. above the level of the sea. On the summit stood the celebrated temple of Jupiter Latinus, built by Tarquin the Proud; memorable in Roman history as the scene of the *Fides Latina*, the solemn assembly of the 47 cities forming the Latin confederation. The sides of the mountain are covered with fine woods, consisting principally of chestnut trees. The view from the peak is exceedingly beautiful, extending over an immense tract of country. The ascent to it is by the ancient *Via Trionfalis* the road by which the Roman generals, who were allowed the honours of the lesser triumph, or ovation, ascended on foot to the temple of the Latin Jupiter. (*Murray's Handbook for Central Italy*.)

ALBANO (BART-) a vil. Sardinian States, in Savoy 2 m. from Chianeri on the Aissa. Several antiquities have been found near an old Roman way which passed through it. Pop. 1250.—Also the name of a vil., prov. of, and 7 m. W. from Vercelli.

ALBANY (Sr) an anc. bor. and market in England, co. Bedford. **Albany** 31 m N W London, and 64 m N E Watford station, on the London and Birmingham Railway. It is situated on the summit and declivity of a small hill, and consists of ten principal and several smaller streets, many of which are very deep, but all clean and well kept, excepting in the lower parts of the town, where drainage is much neglected. In the older quarters the lanes and alleys are narrow and many of the houses ancient; but in the newer portions the openings are more spacious, and the houses, which are all of brick, are well built. The town is well paved and lighted with gas, and amply supplied with good water. The chief public buildings are the Abbey church, the churches of St. Michael and St. Peter the tall clock house, an old Roman watch tower and the townhall, a large substantial building. There are also several dissenting meeting houses and a small R. catholic chapel. The charities comprise a free grammar school, founded by Edward VI. a blue-coat school, in which between 30 and 40 boys are clothed and educated a girls school, and several almshouses the principal of which was established by Sarah, Duchess of Marlborough. There are, besides the schools above enumerated three daily and Sunday national schools. The principal object of interest in St. Albany is the Abbey Church, part of a celebrated monastery founded in 703 by Otho, King of Mercia, one of the Saxon kings. It stands on an elevated site, and, being a very large and beautiful structure in the form of a cross, has an imposing appearance. Its architecture is of various styles, comprising that of every age from the time of the Normans to that of Edward IV. while the materials of which it is composed are equally heterogeneous. The oldest parts of the building are towards the centre. Its entire length is upwards of 600 ft. from E. to W. including a chapel at the E. end, and its extreme breadth about 900 ft. It contains the ashes of King Otho, and those of Humphrey, Duke of Gloucester youngest son of Henry IV. The remains of the celebrated Lord Bacon lie in the church of St. Michael. St. Albany has little or no trade, and its only manufacture is straw plaiting and straw bonnet making both of which, however are carried on to a considerable extent. There are also silk mills for winding and throwing silk, which employ a considerable number of hands. The town is governed by a mayor four aldermen, and 12 commoners and the usual corporate officers. It returns two members to Parliament, and gives the title of Duke to the family of Beaufort. St. Albany is situated close to the ruins of the ancient *Verulamium* (Verulam) parts of the walls of which are still standing. Registered electors, 541. Pop. of bor. 7000. —(Correspondent on St. Albany.)

ALBANY H.E.A.D. (Sr) a headland, or promontory English Channel, on the coast of Dorsetshire, 441 ft. above the sea. On the cliff near the top are the ruins of a chapel supposed to have been erected in the 12th century. lat. 50° 55' N. lon. 2° 2' W. (v)

ALBANY a city U. States, America, on Albany cap. of the state of New York, and the second in pop. wealth and commerce on the right bank of the Hudson 132 m N the city of New York, and 312 m N E Washington. lat. 42° 39' 30" N. lon. 73° 44' 49" W. It was founded by the Dutch early in the 17th century received its present name from the English, to whom it capitulated in 1664 and next to Jamestown, in Virginia, is the oldest town in the U. States. The site on which it is built is very uneven, rising from a flat alluvial tract on the margin of the river to a height of 230 ft. above its level. The city has been greatly improved of late years, and now contains many handsome buildings. The principal public edifices are the capitol, or state house, the seat of the Senate and House of Assembly the Albany academy a spacious and elegant structure of freestone, accommodating 400 students; the Albany female academy with 800 pupils the city hall the state hall, for the public offices; the state arsenal the medical college, and about 40 places of worship, belonging to various denominations. Its literary institutions comprise a public library containing 27,000 volumes a young men's association for mutual improvement, consisting of 1500 members who have a reading-room and library containing 6000 volumes. Amongst the principal charities are the Albany orphan asylum which maintains from 80 to 90 children male and female the poorhouse, and St. Joseph's orphan asylum—a R. Catholic institution, but for

females only the number of inmates being generally about 40. Albany has near the head of this water the Hudson being navigable as far as the city for vessels of 60 tons and when the navigation is not obstructed by ice, steamers ply daily between it and the city of New York. In 1855 the total tonnage that arrived at the port was 87,998. The Erie and Champlain Canals unite about 9 m. N. of the city where they are connected with a basin covering 32 acres. By these canals, plus from Michigan, Pennsylvania, and Canada, and oak, cherry and poplar timber from Ohio is brought, rendering Albany one of the largest lumber markets in the world. In 1852 the total imports by canal were 25,487,386 of which the amount for lumber was 21,284,248. Other important articles received the same year were—flour 1,551,789 barrels; wool, 4,145,970 lbs. oats, 2,981,938 bushels wheat 1,495,714 bushels barley 1,396,618 bushels. The New York and Albany Railway and several other railways connecting Albany with Boston and many places to the E. terminate on the opposite side of the river. On the W. the Mohawk and Hudson Railway connects it with several other important lines. Though chiefly noted as a place of trade and of thoroughfare the manufactures of Albany are various and some of them extensive. They include carriages, hats and cane maces leather ropes soap and candles, musical instruments, copper tin, and sheet-iron, oldclothes stores, and carpets a number of breweries, and some making houses. Numerous steamers and low boats ply between Albany and New York, besides other vessels navigating the Hudson. Pop. (1860) 50,763.

ALBANY a small maritime division, E. frontier colony of Cape of Good Hope, about 550 m E Cape Town bounded, N. W. by the division of Somerset, W. by Uitenhage, E. and N. E. by the division of Victoria annexed to the colony of the Cape in 1847 and by the river Knysna and S. by the Indian Ocean. Its coast line, stretching from Great Fish River on the N. E. to Emsbrouk River on the S. W. is about 85 m. in length. The whole length of the district, from N. W. to S. E., is about 65 m. its breadth from 30 to 40. The N. portion of the division is intersected by Great Fish River. The other streams of any note are the Karooe and the Knysna. The prevailing formation is sandstone and gray wacke quartz and gray slate are common. The surface is agreeably diversified, presenting in some parts the rugged features of African scenery. In others, the influence of the champagne districts of England, or continent of Europe, is manifest, as, extremely healthy. Dividing the district nearly through the middle, the lower part, or that nearest the sea, is best suited for agricultural purposes being free from obstruction of every kind, and having a soil well adapted for the production of grain of all descriptions. This portion of the country is thickly worked and is stamped in every part with the distinctive marks of an English colony, having a park-like appearance, and being studded with beautiful shrubs and trees, while numerous comfortable-looking farm houses, with neat enclosures, dot the surface of the land. The upper or N. portion again, is better suited for sheep rearing and is considered on this account at present as by far the most valuable. In this part of the country there are some mountains of considerable height the chief of which are R. the Knif R. the Fish river and S. W. the Afsigat Mountains. The indigenous trees and bushes of the district are various, and many of them extremely beautiful and as but few of them are deciduous, they retain their beauty during the whole year. At midsummer, which is there the month of January the plains and valleys are covered with flowers and shrubs of the gayest colours, and the most fragrant odour. Useful kinds of timber are abundant and both the soil and climate appear favourable to many of the forest trees of Europe, and also to the fruit both of warm and cold latitudes. The oak and fir are common, and grow rapidly and luxuriantly, standing often to large size but their timber is more soft and porous than that of colder climates. Orange trees thrive well in most situations, and produce fruit of fine quality. Peaches, nectarines, apricots, mulberries, apples and pears, are abundant. Plums are in great variety, but less plentiful. The vine is common and prolific, but no good wine has been yet produced here. Melons and many other plants of a similar class, thrive exuberantly, and are very productive. Cucumbers and cabbages are not uncommon, but their fruit is scanty and rather insipid. The cotton tree, though not culti-

veted to any extent, meadows well, and produce cotton of good quality. The most productive of the cereals is maize. Wheat is successfully cultivated, but is subject to rust near the coast and is not of such good quality either in respect to colour or weight, as that which is produced more in the interior or in the W. districts. Barley and oats are abundant and kitchen vegetables, of every variety may be produced in suitable situations. Wine though of very indifferent quality was formerly the staple produce and export of the district. Wool is now the great object of attention, particularly in the E. districts, where great solitudes is obtained for the improvement of the live stock. The stock of sheep amounts to about 311,000 goats, 84,963 horned cattle, 48,429 horses 3014.

The trade of the district is considerable extending itself far into the interior to the N. and also along the E. coast. The exports amount to about £100,000 annually and the imports, of which a considerable portion consists of hides, skins, and tallow to upwards of £168,000. The quantity of raw wool produced yearly is upwards of 868,000 lbs. Manufactures have made little progress, but there are several tanneries soap works and tile kilns. Hats, also are made to some extent, and are much esteemed for their durability. The cap. is Graham's Town (which see) situated nearly in the centre of the division. There are also the towns of Bathurst, Beaufort, and Port Franks, at the mouth of the river Keiskamma, which is much frequented at its entrance by sail. Pop. of division 14,723, of which 6183 are coloured. (Cape of Good Hope Almanac).

ALBANY a river Upper Canada, district of same name, which has its source in Lake St. Joseph about lat 51° N lon 80° W and, after an N. E. course of about 300 m falls into James Bay (the S. part of Hudson's Bay) by a large estuary containing many small islands, on one of which is situated Albany fort and factory. Other three trading houses have been erected on its banks. By affluents from the right, and numerous small lakes, this river gives water communication with it a great Lake Superior and, likewise, by affluents and lakes to the W. and N. it communicates with Lake Winnipeg. In the estuary is a considerable cataraict, called the Great Fall there being a smaller one about 40 m. further up the river.

ALBANY ISLES, Australia, N.E. coast they are six in number but one only is of considerable size. In Port Albany in the S.W. of the great island, there is a harbour suitable for large vessels, where drinking water may be obtained. The S.E. peak of this island is in lat 10° 45' S. lon 142° 39' E. (c.)

ALBANY or **ALBANATY** called by the Chinese Yalou, meaning the embouchure of a river a locality still given on our maps, in the Chinese prov. of Manchouria, on the left bank of the Amour lat. 53° N lon 122° 30' E. It was formerly a Russian fort, occupied during the boundary war with the Chinese, and appears subsequently to have been disfigured with the application of gun. Along with the surrounding country Albany was abandoned by the Russians to the Chinese, at the treaty of Nerchinsk, 1858. Its fort was razed, and we possess no account of it being at present an inhabited locality.

ALBATROSS ISLAND a small isl. Bass's Strait, Australia lat. 40° 22' S. lon. 144° 38' E. (n.) It is about 1 m. long, and 130 ft. high and has obtained its name from the great number of albatross by which it is frequented. It abounds also with seals.

ALBAY a prov. in, and bay island of Luzon one of the Philippines. The prov. Albay forms the S. portion of the island, and is bounded W. by prov. Camarines, and on the other three sides by the sea, its S. coast forming the N. side of Bernardino Passage, or Strait. This province is fertile and rich, the soil is cool and the roads generally are so good as to be suitable for carriages. The mountains which traverse Albay are a continuation of the Luzon Cordillera. They are inhabited by two native tribes, Igorotes and Negritos, and present two remarkable peaks both volcanoes. That of Bulusan, in the S. being nearly silent, and, from its isolated position and central shape, serving as a landmark to mariners; and that of Albay formerly called Mayon, being always active, and subjecting the province to frequent earthquakes. The coasts are irregular and in general, but there are

two excellent harbours, the Bay of Albay on the E. and that of Sumang on the W. The province is divided into 37 pueblos, or parishes, and has a pop. of 123,866. — **ALBAY** the cap. is hard by the volcano and about 8 m. from the bay of the same name lat. 15° 23' N lon. 123° 52' E. It is a large regularly built town, having some stone houses and a new road, a church, a convent, and an adulteration of tobacco and wine and it carries on an active commerce. Pop. 18,116. — **ALBAY BAY** or **GUZU W.** coast of the prov. is large and secure and almost land locked. North it is protected by the islands of Davao and Maraput, between the latter of which and Point Malalabon, on the coast of Iloilo, is the entrance to the bay 4 to 6 m. wide. From Point Malalabon to opposite the town of Albay is 19 m. and the greatest breadth is about 12 m. (Malat's Philippines).

ALBAYDA a town Spain, prov. Valencia, 9 m. S. by W San Felipe pleasantly situated, thickly well built, and having two squares, two parish churches, a Latin and two primary schools, an hospital prison, cemetery and an extensive old palace of the Marquis of Albayda. The inhabitants are engaged in linen weaving, brandy distilling, and soap boiling and cultivate grain grapes, oil, and vegetables. An annual fair is held in July. Pop. 8130. — (Madrid).

ALBEGNA (Abruzzo) a river Italy Tuscany. It takes its rise on Mount Aniene, about 5 m. S. Castiglione, 3000 ft. above the sea level and pursuing a S.W. course for about 36 m. falls into the Mediterranean after having been augmented by several tributaries.

ALBEMARLE SOUND a large inlet, E. coast of N. Carolina, U. States, America, from 6 to 15 m. in width and penetrating into the land for about 70 m., 20 of which, and the narrowest part, running nearly due N. It receives the Roanoke and some other rivers, and communicates with Pamlico Sound by two narrow channels, and with Chesapeake Bay by a canal cut through the Great Dismal Swamp. — **ALBEMARLE** is also the name of a co., Virg. U. States.

ALBENDORF a vil. Prussia, prov. Schlesien, of 50 m. S.W. from Breslau, and 7 m. N.W. Glatz near the Bohemian frontier. It is chiefly remarkable as a Catholic place of pilgrimage. There are here a fine church numerous chapels, statues, &c. all contributing to a representation of the city of Jerusalem, and history of our Saviour. All the ramp grounds in the neighbourhood of the village are made use of, as Calvary Gulgatha Bon &c. In order to complete the picture. In 1822 85,000 pilgrims visited this place. Pop. 1300. — (Huhn's Lex. Deutschland).

ALBENGA a small maritime town, Sardian States, cap. prov. of same name, 44 m. S.W. Genoa, at the mouth of the Centa, residence of a bishop suffragan to Genoa, and having a theological seminary. The environs produce oil and hemp in abundance but the place is considered unhealthy. It is the *Albena* *Impugnata* of the Romans and some ruins of a rotunda, and an ancient bridge, are still to be seen. Pop. 5000. — The prov. comprises the seven districts of Alessio, Albenga, Calizzano, Andora, Leco, and Finale Bepa. Pop. 57,594.

ALBENQUE (L.) See LALBENQUE.

ALBENS, a small town Sardian States, in Savoy prov. Geneveve, 6 m. N. N. E. Ann. where numerous Roman antiquities have been excavated. Pop. 1300.

ALBERBURY or **ALBERBURY** a par. England co. Montgomery and Salop area, 9669 ac. 8 m. W. by N. Shrewsbury. Ruins of New Abbey Glyn, a hamlet in this par. Mithropage of old Part. Pop. 1748.

ALBERCA, a town Spain, prov. of, and 4 m. S. from Murcia, having a parish church two schools, and a bishop's palace. The inhabitants are exclusively devoted to agriculture and cattle raising. Pop. 2406. — The name *Alberca* is also given to a river in Almorcia, a mountain in Avila, a town in New Castile, and a village in Leon. — (Madrid).

ALBERCHE, a river Spain which, rising in Old Castile, in the Sierra de Avila, about 2 m. S. Villanueva, flows E. by S. traversing the province Avila, where New Castile, and flows S.E. to within 6 m. of Navalcarnero, when, changing to S.W. after a course of about 148 m., and being augmented by numerous tributaries, it falls into the Tago, about 8 m. E. of Talavera. — (Madrid).

ALBERES MOUNTAINS, the name of the E. portion of the Pyrenees (which see).

ALBEEQUE, a tn. Spain, Valencia, 11 m. N. San Felipe, on the high road to Madrid. It is surrounded by a wall and fence has irregular streets a principal and four smaller squares two parish churches; an old palace, once the residence of the Duques del Infantado a prison two hospitals and several schools. The inhabitants trade in silks, rice, and fruits. A fair is held at midwinter when large quantities of silk are sold. Pop. 3101.—(Madrid.)

ALBERONA, a tn. Naples, prov. Capitanata, district of, and 21 m. W. from Foggia situated in a valley. Pop. 3300.

ALBERT [formerly *Ancre Lata, Ancre*] a small tn. France, dep. Somme, 14 m. N. W. Péronne, and 18 m. N. E. Amiens on the river Miraumont, an affluent of the Somme. It has cotton and paper mills, printworks and bleachfields, with a considerable trade in corn and cattle. There is a cave or quarry in the neighbourhood, discovered in 1732 where within a space of 1100 ft long by 6 broad a great variety of petrifications (chiefly of marsh plants) are found. Pop. 2826.

ALBERT (Lake) a light of Lake Alexandrina, or Victoria, S. Australia, connected with the former by a narrow channel. See AUSTRALIA.

ALBERT RIVER, N. Australia, falls into the Gulf of Carpentaria lat. 17° 30' S. lon. 140° E. See AUSTRALIA—Bacon.

ALBERTON a tn. N. Australia, prov. Gipp's Land, on the banks of the Albert river. It is a post town and petty sessions are held in it.

ALBIN See ALBY.

ALBIANO a vil. and commune, Italy in Tuscany prov. Pisa, 16 m. S. by E. Pontremoli on the slope of a small hill which forms the S. projection of Mount Bolano whose E. base is reached by the river Magra, which joins the Verso to the S. W. It contains a parish church and a castle, surrounded by old towers walls once the property of the Marquises of Madonna, and only approachable by one narrow and steep path. Pop. of vil. and commune, 1213.—(Della One Italia.)

ALBIGEOIS, formerly a district of France in the anc. prov. Ruteni now in Languedoc dep. Tarn.

ALBIVEN a vil. in Switzerland and canton Valais, on the N. side of the Rhone, from which it is between 4 and 5 m. distant lat. 46° 23' N. lon. 7° 38' E. It stands on the summit of a precipice, and is accessible only from the valley below by ladders placed perpendicularly against the face of the rock. These are ascended and descended by the inhabitants, including women and children, during night as well as day and often with heavy burdens, without the slightest hesitation although the ladders are frequently awry and unsteady and many of their roads loose and broken.

ALBINO a tn. Austrian Lombardy, delegation of, and 7 m. N. E. from Bergamo, upon the Suro. It is well built, and remarkable for the palace and beautiful gardens of Count Spal. The parish church is old. It has a normal school, with extensive silk spinning mills lime and tile kilns, and manufactures of agricultural implements. The district contains quarries of black marble, and whetstones, of great repute. In Mount Forcetta in the neighbourhood, alabaster is found of surpassing beauty. Pop. 9600.

ALBINO, the name given to a variety of the human species distinguished by the physical peculiarities an unusual whiteness of skin, the more remarkable that it occurs most frequently amongst blacks, and tribes generally of a dark complexion white and silky hair eyes weak and mostly red, but sometimes also blue constitution feeble. They are to be met with in various parts of the world, but are perhaps most numerous in Africa.

ALBION the anc. name of Great Britain said to have been given to it on account of the lofty white cliffs on the S. shores of the island.

ALBION, the name of several post townships, townships, and post villages in the U. States.—1 Post township so. Kamebo, Maine. Pop. 1694.—2 Post township, so. Orleans, of which it is the cap. state of New York, contains a courthouse, jail, clerk's office, Baptist, Methodist, and Presbyterian churches, an academy and female seminary. Pop. 1400.—3, Post vil. co. Calhoun Michigan.—4, Post vil. co. Edwards, Illinois; it occupies a high and healthy situation

and is settled chiefly by English emigrants.—5, Post vil., N. Carolina.—6, Township, on Oswego, Albany. Pop. 1508.—7 Township, co. Calhoun Michigan. Pop. 932.

ALBION (New) an extensive tract of land on the N. W. coast of N. America, discovered by Cook, March 7 1778. This name was originally applied by Sir Francis Drake, in 1578, to Calicut, and part of the coast to the N. but recent geographers limit the designation to that part of the coast of the Pacific Ocean which extends between 43 and 48° N. lat. It is wholly included in the U. States territory of Oregon which see.

ALBIS, a mountain range in Switzerland, often Zug running nearly parallel with the S. part of the Lake of Zurich, from which it is distant between 3 and 4 m. The highest summit, called Hiltberg attains an elevation of 2722 ft above the sea level and commands an extensive view. There are two roads across these mountains, both leading from Zurich to Lucerne, one of which the most northern and the longer passes under the Hiltberg the other the one now most commonly taken, crosses the high Albis, and is available to carriages, unless very heavily laden. The views commanded by this line of route are exceedingly beautiful.

ALBISOLA-MARINA a vil. Sardinian States prov. of, and 8 m. N. W. from Savona, on the Mediterranean. It is surrounded by a fertile country covered with a luxuriant vegetation and producing fruit in great abundance.

ALBLASSERDAM a vil. Holland, prov. S. Holland, 10 m. S. E. Rotterdam and 3 m. N. Dordrecht, on the right bank of the Albis which is here crossed by a dam hence the name. It is a well-built village, has a Calvinistic church a good harbour and a yearly horse market. Pop. about 1200.—(Van der Aa's Nederlanden.)

ALBOACER, a tn. Spain in Valencia, prov. of, and 22 m. N. W. by N. Castellon de la Plana, on the S. declivity of the Sierra Espinosa. It is excellently built, with steep and irregular though wide streets, and possesses a large and handsome parish church, several chapels, a townhall, prison hospital, two schools, a public storehouse, and cemetery. Manufactures:—Linen and woollen fabrics, hardware and earthenware. Produce of vintner:—Grape wine, oil, fruits, vegetables, silk wax and honey; sheep goats, horned cattle, and pigs. Iron is found here, but not wrought, and several valuable marble quarries exist in the neighbouring mountains, on which likewise, in many places oak, beech, pine, and other hardy trees are plentiful. Pop. 1834.—(Mulea.)

ALBOI ODREY a tn. Spain, in Andalusia, prov. of, and 20 m. N. W. from Almería on the left bank of the river Almería. It is built on hilly ground but still regular having three squares a church some schools a townhall prison, and the ruins of an old fortress. The inhabitants are engaged principally in tillage, cattle rearing, and as carriers and occasionally a portion are employed in the lead mines of the Sierra de Gader. Pop. 2067.—(Madrid.)

ALBONA, a small tn. Austria prov. Illyria near the Gulf of, and about 23 m. S. W. from the tn. of Fiume. It lies in the midst of a rocky district, unsuited for the cultivation of grain, but abounding in excellent fruit, especially grapes, olives and chestnuts. Pop. 1650.

ALBOR, one of the Bahama Islands, between the islands Yucayo and St. Salvador.

ALBORAN a small tn. Spain, Mediterranean prov. of, and 66 m. S. W. from Almería lat. 30° 58' N. lon. 3° 17' W. (n.) It is about 2 m. long 1 m. broad low flat unincultivated, and inhabited by a few fishermen only. On the S. side is a roadstead resorted to by smuggling privateers and fishing vessels.

ALBOURNE a par. England, co. Sussex 2½ m. N. W. Harst Pierpoint rect. 1740. Ac. Pop. 837.

ALBOX, a tn. Spain, in Andalusia, prov. of, and 40 m. N. E. from Almería, agreeably situated on the banks of the rivulet called Rambla de Orta, which divides the tn. into the two quarters of San Francisco, and La Lema, the latter of which is chiefly inhabited by mechanics. It has several good streets, a fine square (the Plaza de la Constitución) and a smaller one, with a central fountain. The principal public buildings are two noble handsome churches; some schools a well-endowed hospital for indigent poor and foundlings, founded in 1764; a fine townhall and a small prison. It also has

several Cornishmen, and two Cornishmen. The manufactures are blackens, coarse linen and hempen fabrics, earthenware jars, dishes, and plates and connected with the town there are several corn and oilmills. The exports are considerable quantities of oil and corn and the imports, wine and brandy. A fair lasts from November 1 to 15 and there are yearly markets. Pop. 7421.—(Madox.)

ALBRIGHTON, a par. England co. Salop. area, 8424 ac. Here are several churches and two annual cattle fairs. Pop. 1151.

ALBUERA, a river Spain, prov. Badajoz, rising in the mountains about 6 m. W. de Pavia and flowing N., emptying itself into the Guadiana, 9 m. S. Badajoz, after a course of about 50 m.—(Madox.)

ALBUERA, a vil. Spain, in Extremadura, on a river of the same name as the Guadiana, 15 m. E. by E. de Badajoz, having only 450 inhabitants but celebrated in military history as having been the scene of a sanguinary conflict, May 16, 1811 between the French under Soult, and the Anglo-Spanish army under Lord Beresford, in which the former was defeated. In this battle the French lost 8000 men, and the allies 7000 all within the short space of four hours.

ALBUFEIRA, or ALBOFEIRA, a small seaport and in Portugal, on the S. coast of prov. Algarve, 15 m. E.S.E. Silves, and 29 m. E. Lagos at the head of a bay of its own name. Built on the edge of a high rock on the shore, enclosed with a curved wall and defended by a battery on the beach. It lies between two hills, on very uneven ground in a mountainous and has a church, hospital and about 3000 inhabitants, chiefly fishermen.—(Willkomm's *Zoon Jahre in Portugal*.)

ALBUFEIRA, a lagoon Spain, prov. of, and 10 m. E. from Valencia, about 10 m. long, and 25 in circuit, separated from the sea only by a narrow strip of land. It swells in winter and is then a complete preserve for fish and wild fowl, of which last, no less than 70 varieties frequent it. Its banks are thickly studded with rice plantations, the cultivation of which is very destructive to life. This lake and domain valued in 1835 at £200,000, was conferred on Marshal Suchet, by Napoleon, together with the dukedom of Albufera, as a reward for his capture of Valencia. The property however was soon afterwards restored to the Valencians, by the Duke of Wellington.

ALBULA, a mountain and river in Switzerland both in the Grisons, the former occurring in that portion of the Rhaetian Alps, by which the E. part of the canton is intersected lat. 46° 5' N. lon. 9° 53' E. It presents two lofty peaks one of which, Crap Alu or White Peak, is 7560 ft. in height, the other on the S.E. called Pix Eire is 8770 ft. high. There is a pass over this mountain, the culminating point of which marked by a cross, is 6080 ft. above the sea level. Some parts of this pass are dangerous, fragments of broken rocks often hanging down from the heights above, and in spring avalanches are to be apprehended, while nearly the whole pass is one scene of complete desolation.—The river Albula proceeds from a small lake near the foot of the mountain and after flowing for about 25 m. in a N.W. direction, falls into the Rhaetian, 2 m. N. from Tams.

ALBUROL, a vil. Spain, in Andalusia, prov. Granada, 35 m. W. by S. Almeria, near the coast of the Mediterranean. It is well built, has clean paved streets, a good square, church three schools, a storehouse, two prisons, and several convents. The inhabitants are engaged in preparing wine, raisins, figs, and almonds in husbandry cattle rearing carrying and fishing and in distilling. They export fruits, wine, and spirit of wine and import grain wood, and colonial produce. Pop. 8764.

ALBUQUERQUE, a vil. of the Mexican Republic, prov. New Mexico, situated to the W. of the Sierra Oscura, on the left bank of the Rio del Norte 50 m. S.W. Santa Fé. It is famed for the beauty of its women. Pop. 6000.

ALBUQUERQUE, a vil. Spain Extremadura, 28 m. E. by E. Badajoz, and close on the frontier of Portugal. It is a miserable decaying place, with three or four squares, two parish churches, two schools, two hospitals, a prison, and several public buildings. The manufactures are lace, earthenware, hats, potteryware, soap, and chocolate. In the vicinity, grain, wine, oil, honey fruits vegetables, and fax,

are raised in abundance. An annual fair is held in September. Pop. 5470.—(Madox.)

ALBURY or ALBURY a par. England co. Norfolk area 1512 ac 4 m. E. by N. Harleston Pop. 576.

ALBURY or ALBURY a par. England co. Oxford area 1110 ac. 8 m. N.W. Tinsworth Pop. 254.

ALBURY or ALBURY a par. England, co. Surrey; area 4503 ac. 5 m. S. E. Guildford fund for apprenticing poor children. Pop. 976.

ALBY a par. England co. Norfolk area, 811 ac. 4 m. N. by E. Aylsham. Pop. 273.

ALBY or ALBI [Latin *Albys Alba Augusta*] an anc. city France cap. dep. Tarn, on the left bank of the Tarn river on a hill in the midst of the plain of Langueadoc, 358 m. N. Paris and 42 m. N.E. Toulouse. It is the seat of an archbishop as very ill built, the streets being narrow irregular and dirty, and the houses all of brick. Its squares are few and not remarkable, excepting that in the new quarter of Vigan, which is large and regular not to any fine. The promenades and avenues which terminate in this square are charming and are designated the *Lois of Albi*. They were formerly separated from the ramparts of the city by a broad ditch; and in them used to assemble, during the times of chivalry the knights of all the surrounding country to take part in the tournaments of the times. The ditch is now filled up, and the ramparts thrown down so that the suburbs are from part of the town, and tend much to beautify it. In all quarters of Albi there are numerous fountains of excellent water. The principal building is the cathedral of St. Cecilia, a Gothic brick edifice, begun in 1282 and not completed till 1512. Other important edifices are, the church of St. Salvé, the courthouses and the general hospital which last is united a very fine structure. Besides a tribunal of commerce, and a communal college, there are in the town a museum of natural history a society of rural economy trade, and statistics and a public library of more than 12,000 volumes; also a theatre and barracks. The manufactures are of coarse linen cloth, seeking cottons table cloths, handkerchiefs, hats, cord, tools, Sies, scythes, and wax candles. Wood (partly) has been made here from a very early period. In the neighbourhood are copper glass, and paper works and a foundry for casting bullets. The town suffered much in the religious wars of France and from it the Protestant reformers of the 12th and 13th centuries, called the Albigenses took their name. Pop. in 1846, 14,211.

ALCÁZAR DO-SAL [Salt castle] a vil. Portugal prov. Setúbal, on the right bank of the Sado. 50 m. E.S.E. Lisbon, in the midst of an extensive plain enclosed by walls, and defended by a fortress on a steep rock. It has some churches, an hospital, two schools, and a prison and, on the banks of the river are numerous salt pans. Considerable quantities also of sedgemoats and rushrooms are made here, chiefly for the Lisbon market, and much corn is sent hence down the river for Setúbal and Lisbon. During the war of succession in Portugal the town and castle were taken early lately by the contending parties. Pop. 1909.

ALCALÁ DE CHIVERT, a vil. Spain, Alcala, prov. of, and 30 m. N.E. from Castellón de la Plana in a pleasant valley on the road from Barcelona to Valencia. The streets are narrow and tortuous the public buildings comprise a church of modern architecture, three schools, an hospital asylum workhouse, and jail. There are two tobacco factories five brandy distilleries, and some oilmills, in the town. The vicinity produces grain wine, oil, honey wax fruits, and vegetables and game is plentiful. Pop. 4959.—(Madox.)

ALCALÁ DE GUADAIRA or DE LOS PANDEKOS [anc. *Hispalis*—a place of many springs] a vil. Spain in Andalusia, prov. of and 6 m. E.S.E. from Seville on the Guadaira, crossed here by a stone bridge of seven arches. It stands near the river and is overlooked by the ruins of an ancient fortress, crowning the summit of an adjacent eminence, the site of an old Moorish town once surrounded by walls, with a deep and wide fosse. It comprises four squares and several tolerably constructed, though steep streets two parish churches, with cemeteries attached; municipal offices two general hospitals; a lying-in hospital, and house of refuge; three primary schools a prison abattoir and several public storehouses. The manufactures are earthenware, brick,

seap, and coarse cloth, and, connected with the town, are flourmills, but the place is chiefly noted for its bread, reputed the best in Spain, being remarkably white and fine flavoured, and so much esteemed, that 130 mules are daily employed in conveying it to Seville. There are at least, 50 bakeries in the town. The vicinity produces grain, wine, oil, fruits, vegetables, honey and silk. Sheep, horned cattle, and a few goats and pigs, are reared and, in the neighbouring hills, are several quantities of granite and freestone, and numerous tunnels, some two leagues in length, whence flows the purest water which is conveyed to Seville, first in a brick calderia, and subsequently by an aqueduct of 400 arches, called the *Calle de Carmona*, from its contiguity to the highroad to that city. Pop. 6700.—(Madrid, *Diccionario de España*.)

ALCALA DE HENARES, or **DA SAN JUBRO** (anc. *Complutensis*) a city Spain, in New Castle, prov. of and 16 m. S.W. from Madrid, and about 1 m. from the right bank of the Henares. It has an imposing appearance when

THE ARCHBISHOP'S PALACE, ALCALA DE HENARES, &c.
From Villanueva's Engraving.

viewed from a distance but on nearer inspection, is found to be in a state of decay. It is enclosed by crumbling walls and the houses are mean, and in a ruinous condition. It contains three pretty large squares, one of which the Plaza de Cervantes, is ornamented with trees, and a fountain; another the Plaza de Torres, comprises a respectable town hall, and some large storehouses, and two pretty alamedas. The other public buildings include the magnificent Gothic church El Magistral with three others a theatre hospital barracks and riding school with a handsome palace, belonging to the Archbishop of Toledo. The largest however and in some respects, the finest edifice in the place is the Colegio Mayor de San Ildefonso founded in 1510 and richly endowed by Cardinal Ximenes. A university was established here once, second only to Salamanca having 19 colleges and 10,000 students reduced to about 400 previous to its removal to Madrid. The College has three squares, and a magnificent chapel containing the tomb of the founder with his effigy—the masterpieces of Dominico el Ffornicino the building however like many others in Spain, was never finished. Here was printed, at the expense and under the direction of the Cardinal, the far-famed Complutensian Polyglot, 8 vols. folio, 1502-1517. It was not published till 1522, the expense exceeded the then enormous sum of 52,000 ducats (£11,112) and only 500 copies were printed, of which three only were in vellum, and one of which subsequently sold for 2221. Alcala has very little industrial activity; it supplies the capital with much of its bread, and has also taneries, soap works, chocolate mills, and manufactures of coarse linen and woollen fabrics with two well-attended fairs, in August and November. Alcala numbers among the distinguished individuals to whom it has given birth, Cervantes, the celebrated author of Don Quixote, the Emperor Ferdinand brother of Charles V. the poet Figueroa and Antonio de Solis, the historian of the conquest of Mexico. Pop. in 1793 estimated by Estrada at 22,000, now diminished to 1932.—(Madrid *Diccionario de España*.)

ALCALA DEL JUJAR, a town Spain in Murcia, in a rocky locality on the left bank of the Júcar 19 m. N. by W. Albacete a gloomy dirty and unhealthy place, with narrow steep, and tortuous streets; having a parish church, two endowed schools, and a prison. The inhabitants are chiefly engaged in tillage and domestic weaving. The vicinity produces grain, oil, vegetables, and some fruits mules and asses are numerous. Pop. 2382.—(Madrid.)

ALCALA DE LOS GAZULES, a town Spain in Andalusia, on the slope of the Ronda mountains, prov. of and 87 m. E. by S. from Cadix. It is situated at a height of 2550 ft. above the sea, and comprises an old and new town, the former of which is partly enclosed by a ruined wall a few wide well-built streets, with others narrow and tortuous three spacious squares a parish church chapel of ease, three schools two hospitals barracks, storehouse, and several handsome fountains. Close to the town also are the remains of an old castle. The surrounding country is rugged and bleak suitable only for pastures. The inhabitants exhibit but little industry or activity. Pop. 6120.—(Madrid.)

ALCALA DEL RIO a town Spain in Andalusia, prov. of and 8 m. N. from Seville, on the Guadalquivir having a parish church and chapel two endowed schools, a townhall, a prison, and storehouse. The inhabitants are employed in tillage and pasturage the produce of the vicinity being grain fruits and vegetables sheep goats and horned cattle. Pop. 3820.—(Madrid.)

ALCALA LA REAL a city Spain, in Andalusia, prov. of and 30 m. S.W. from Jaen, in a glen on the N. side of the Granada mountains at a height of above 2700 ft. above the sea level. It is irregularly built, with steep and narrow streets but has a large square, ornamented with a fountain. The chief public buildings are two parish churches a chapel of ease a town and courthouse a Latin and six primary schools a civil hospital, formerly a fine abbey storehouse, prison, several convents and a tower containing the first clock made in Spain. The inhabitants are principally engaged in agriculture and in the city there are three soap factories, and two brandy distilleries. The vicinity produces grain fruits, and vegetables of the finest quality and in great abundance. Sheep goats, pigs and horned cattle are reared though in too limited numbers for the consumption of the people. Fruits and grain are exported and wearing apparel cloth, cotton fabrics iron hardware rice and oil are imported. Pop. 11,521.—(Madrid.)

ALCAMO a town Sicily prov. Trapani situated in the val di Marsara, on the high road between Palermo and Trapani, from which latter town it is distant 25 m. E. Its situation on a height is pleasant and commanding, and it is surrounded with entire forests of olive trees. The streets are dirty and ill paved. Near Alcamo are the ruins of the ancient *Segesta* including the remains of a magnificent theatre, and temple.

The district of Alcamo is divided into four cantons Alcamo, Castel a Mare, Palafiumi and Gibellina. Pop. 15,834.

ALCANADRE a river Spain Aragon, which rises in the Sierra de Cuara, near Voltana, prov. Huesca, flows N. and N.E. and after receiving several affluent joins the Cinca at Yellovar 17 m. W. by S. Lerida, after a course of about 60 m.

ALCANAR a town Spain, Catalonia, prov. Tarragona, 10 m. S. Tortosa. It has a church endowed school and seminary. The inhabitants are employed in domestic weaving expressing oil, and cultivating the grain fruits, and vegetables which abound in the vicinity; wheat is exported, implements of husbandry are imported. Pop. 3022.—(Madrid.)

ALCANADE a town Portugal prov. Extremadura, comarca of, and 13 m. N. from Santarém with a strong castle on a rock. Pop. 1540.

ALCANTE, a city Spain, Aragon, prov. of and 66 m. N.E. from Teruel, and about the same distance S.E. Saragossa on a rising ground on the right bank of the Guadalquivir, here crossed by a substantial stone bridge of seven arches. It comprises nine squares and numerous well constructed paved, and spaciuous streets, lined with edifices, several of which have

considerable architectural merit. The public buildings are a magnificent catholic church with many fine tombs and pictures; three parish churches, a townhouse, a large Gothic guildhall, ecclesiastical convents, police office, college; Latin, and four other schools; hospital, several well-ventilated prison cavalry barracks, storehouses several convents, one of which is used as an infirmary barracks and theatre. A public promenade, 1 m. in length, ornamented with trees and shrubs, and having a fountain of good water affords scope to the citizens for recreation. The manufactures are all worsted coarse linen, hats, gypsum and soap; there are also flour and oilseeds. The exports consist of grain, silk, wool and oil; and the imports of wine, hardware, cotton fabrics, and leather. The vicinity produces abundance of wax, fruits, and vegetables, silk, wool, honey and grain. Sheep and a few goats are reared, but there are few cattle fed. Two annual fairs are held in June and August for grain, cattle, and general merchandises. Pop. 5100.—(Madox.)

ALCANTARA, a river in the E. part of Sicily having its rise in the Neptunian mountains, and its embouchure 5 m. S.S.W. from Tauromina, on the S.E. coast of the island. Its whole course is about 30 m. in length.

ALCANTARA *anc. Aleris Caceres* a fortified town in Spain Extremadura, prov. of and 35 m. W. W. from Caceres, on the summit of a rocky acclivity on the left bank of the Tago, surrounded by old walls mounted with cannon and having five gates. On the E. side is the castle, containing a tower of fortification and having a subterranean communication with the Tago, whence an abundant supply of water is obtained. The town comprises two principal and several smaller squares, and numerous narrow streets, and for the most part, ill-built streets. It has two parish churches, one of which is a large Gothic pile; a townhall several schools, a custom house, hospital prison some convents the hereditary mansions of the Marquis de Torre Orgaz, Count de Camilleiros, and the Viscount de la Torre, and a barracks for veterans. Since the last war with Portugal, the manufacturing industry of the town has been reduced to a little weaving; tanning and the mechanical productions requisite for the population. Its commerce consists in exporting wheat and barley to Zarza and Leclatru of rye and wool to Portugal and of oil to the interior of the peninsula and in importing wearing apparel, linen and colonial produce. The vicinity abounds in grain, wine, oil, fruits, vegetables, honey and wax and possesses considerable numbers of sheep, goats, cattle, pigs, horses, and mules.

Alcantara was, in 1214, taken from the Moors by Alonso VIII. of Castile, and given to the Knights of Calatrava to whom were subsequently joined the military order of monks called de San Juan de Perreyro, founded by Sancho Rodriguez Barrientes, in 1106; their noble convent, San Benito, built of granite, still remains though ruinous and in its church are some pictures by Morales. The Portuguese general, Lapeze, in 1809, occupied the town one night which was employed in the continuation of the most wanton barbarities since then its dilapidated convents and process houses, alone indicate its former grandeur. The town is in the vicinity built for Tagus, A.D. 105 is worthy its founder and has survived the violence of wars and elements for 17 centuries at its entrance is a chapel dedicated to Tragan, with some verses inscribed which in one couplet record the name of its architect, Cernus Julius Lacer.

*Portus perpetua, mansorum in aereis munit
Fides domus solida arte Lacer*

The bridge was partly blown up in 1803, by Col. Mayne but repaired, in 1812 by Col. Sturgeon. Pop. 4374.—(Madox.)

ALCANTARA a seaport, Brazil prov. of and 20 m. N.W. from Maranhão, across the Bay of St. Marcos, on a semicircular hill, on the W. side of which the town is situated lat. 2° 23' 33" S. lon. 44° 22' 59" W. (i) It is defended by a fort, and many of the houses are built of stone and are two stories high, though for the most part they have only a ground floor. It has five churches, two convents, a townhall, a prison, and a quay; but, as a whole, the town is in a very dilapidated state, and the streets are overgrown with weeds, while its general aspect indicates decay. The more wealthy residents are the proprietors of cotton plantations the poorer classes gain a livelihood by fishing, and making hammocks; some of which are

so finely wrought as to sell for 25 or 28 each. There are some salt pits within a few miles of the town which were once profitably worked by the Jesuits, to whom they belonged, but are now much neglected. In former times, Alcantara was the capital of the empire of Guama.

ALCANTARILLA, a town, Spain, prov. of and 5 m. S.W. from Merula, on a rising ground, about 1 m. from the right bank of the river Segura, having a parish church, two endowed schools, and a hospital. The people manufacture soap, and cultivate grain, fruits, vegetables, and flax. A few domestic cattle are reared. Pop. 3461.—(Madox.)

ALCARAZ a city Spain, in New Castile prov. of and 48 m. S.W. from Alacete, on the E. slope of an isolated hill on the left of the river Guadarmena, overlooked by a ruinous castle, which crowns the summit, and commanded on the N. E. and E. by mountains of greater altitude, called the Sierra de Alcaraz. The city has seven approaches, leading into four principal streets, which converge in the Plaza mayor or central square and it has a second square some very steep streets and lanes, three parish churches an endowed school, substantial townhouse, hospital and numerous convents, with churches attached, one of which is used as a jail. The inhabitants are employed in weaving and spinning flax and cattle feeding. They export fruit, and the produce of their looms and import oil, wine, and other requisites, by mules. The vicinity produces grain, fruits, vegetables, hyacinth, and flax, and affords good pasturage for sheep, goats, pigs, and horned cattle in the neighbouring sierra, mule, rams, and ewes are kept but they are not wrought. Pop. 7325.—(Madox.)

ALCASSAR, or **AL-KARR** a town, Morocco, prov. Fes, on the W. side of Khos, 25 m. S.E. El-Arishi lat. 35° 1' N. lon. 4° 49' W. It lies so low as to be entirely flooded in winter and it is described as still a considerable place but dirty straggling and dilapidated containing 10 or 15 mosques, of which two only are fit for use. The arkans are Jews, and the majority Moors. A number of streets enclosed sacred by the Mussulmans, are allowed the Jews of the town, parish without mutation on the roofs of the houses and mosques. Alcasar is surrounded by gardens and orchards, and by a flat tract of rich meadow land. About 6 m. N. Alcasar, near the Wad Elmaghar, or Elmaghar was fought in 1578 a memorable battle between Don Sebastian King of Portugal and the Moors, in which the former and the flower of his army were slain.

ALCASSAR GEGI ER. a small fortified town Morocco prov. Fes, on the Strait of Gibraltar at its narrowest part between Ceuta and Tangier. Built in the 12th century by Jacob Almansor. It was taken in 1468, by Alphonso King of Portugal but abandoned soon after by the Portuguese, and re-occupied by the Moors.

ALCÁTRAZ, or **ALCATRÁZ**, a small rocky island on the W. coast of Africa, about 50 m. W. N.W. the embouchure of the river Niger lat. 10° 27' N. lon. 15° 21' W. (i) It is of volcanic origin about 40 ft. in height, deeply rent with fissures, and is entirely destitute of vegetation but is covered with bushes (*Adesmia* *salva*), which maintain a desolating clamour in the night. Turbidity alone is numerous but are not easily caught. The sea around is crowded with sharks, as fierce, says Capt. Boleker that they attack the cars, and frequently leave the marks of their teeth in them.

ALCÁTRAZ, or **ALCATRÁZ** a group of barren rocks, F coast S. America, 20 m. from the mainland lat. 24° 6' S. lon. 46° 40' W. (i) 30 m. S.W. the island of St. Sebastian and 190 S.W. Rio Janeiro. It is recommended that vessels should not approach nearer to these rocks than 4 or 5 m. and then only with a fair wind.

ALCAUDETE *(anc. Trevelman)* a town in Spain, in Andalusia, prov. of, and 24 m. S.W. from Cordova, on a declivity at the junction of three hills, which nearly enclose the town it occupies overlooked by the ruins of an ancient castle, and comprising a large polygonal Plaza, and numerous tolerably built streets, the most of which are paved, two churches, town and courthouse, four schools, a prison, two hospitals, an orphan asylum public storehouse, baths, fountains, and several convents with churches attached, in some of which are preserved the pictures, and other works of art. The inhabitants are occupied in making oil, working basanets, and rearing in domestic weaving and in agriculture. They

export grain and oil and import silk, cotton, linen, and woollen fabrics, and hardware. In the vicinity grain, fruit, and vegetables are grown, and silk is produced considerable numbers of sheep, goats, pigs, horned cattle, mules and asses, are reared, for which and other mercantile purposes, an annual fair is held in August. Pop. 6240.—(Madrid.)

ALCAZAR DE SAN JUAN a tn. Spain, in New Castile, prov. *La Mancha*, 45 m. N. E. Ciudad Real regularly built, and having two good squares with three churches, some ruined convents, several schools, a hospital, two prisons, barracks, and a distillery. Manufactures—Soap, salt-petre, and shoemakers of which some is exported. The imports consist of wine, oil, hardware, and weaving apparel. The vicinity produces grain and fruits. Some sheep and mules are reared, and a fair is held in September. Pop. 7540.—(Madrid.)

ALCESTE ISLAND a small is. in the Yellow Sea, off the N shore of the promontory of Shan-tung and near its E. extremity lat. 37° 29' N. lon. 123° 43' E. (n.) A reef stretches round it for about half a mile some parts of which appear above water.—There is another is. of the same name in the Korean Archipelago, about 110 m. N.W. from Quel-pert lat. 34° 7' N. lon. 125° 21' E. (n.)—**ALCERES** is also the name of a rock in Oeget Strait, in which H. M. S. *Alceste* struck and was wrecked Feb. 15, 1817 when returning from China with Lord Amherst and suite. No lives were lost on the occasion. The rock is in lat. 3° 49' S. lon. 107° 2' E. (n.)

ALCESTER, or ALCESTER, a market tn. and par. England, co. Warwick, the former in a fertile vale, at the confluence of the Alue with the Arrow from the former of which it derives its name. 13 m. W. K.W. Warwick. It consists of one principal street and several smaller and contains many old houses, a fine church, and a handsome townhouse. The manufacture of needles is carried on to a considerable extent and it has a good trade in corn and malt. A free grammar school was founded here in 1594. The principal charities are an endowed school for 12 boys and six young girls, and several almshouses. The town is supposed to have been a Roman station having been built on the site of the old Roman way called Ikenild Street now known as Ickle Street. Various coins, urns and other remains of antiquity have been found in the neighbourhood. 1 op. 1862) 2123

ALCIRA, a tn. Spain prov. of and 25 m. S. by W from Valencia, on an is. formed by two arms of the river Júcar here crossed by two stone bridges one of two and the other of four arches. It is surrounded by old walls flanked by strong towers with several gates, and has some squares, and numerous wide, though ill built streets, a Gothic parish church, conventual churches, townhouse and guildhall, with jail attached a Latin and four other schools, an hospital cemetery promenade, and many public gardens, adorned with fruit trees, shrubs, and flowers. The occupation of the inhabitants is confined chiefly to the manufacture of earthenware, the production of silk, and the cultivation of their fertile soil which yields grain, wine, oil, fruits and vegetables. In great abundance are raised the fruit articles especially silk, their trade consists. Two annual fairs are held in July and December for cattle and general traffic. Pop. 13,000.—(Madrid.)

ALDISTON a par. England co. Sussex area, 2079 ac. 47 m. N.E. Seaford. Pop. 257

ALCOBA (Serra de) a chain of mountains in Portugal, prov. Beira, and extending 8 m. into the comarca of Coimbra and Viseu, between the Mondego and Vouga rivers.

ALCOBAÇA a small market tn. Portugal and cap. of comarca, prov. *Estremadura* 58 m. N. Lisbon 15 m. N.W. Leiria not far from the sea, and near the junction of the small rivers Alva and Baga, whence its name. It has five churches, and is celebrated for its magnificent Clisterian monastery the richest in Portugal, founded in 1148 by Don Alphonse I and containing the tombs of several kings and, among others, of Don Pedro and his ill-fated wife, Infanta Castro whose graves has been sung by Camoes. The kitchen is nearly 100 ft. long and 63 ft. high and its fireplace is 28 ft. long and 11 ft. broad. Alcobaca is the seat of several manufactures, namely, muslins, flannels, and wool. The Marquis de Pombal, also, when prime minister established 250 cotton looms in the monastery. Pop. 1858.

ALCOENTRIS, a small tn. Portugal, prov. *Estremadura*, comarca of and 30 m. S.W. from Santarém. It is within the lines of Torres Vedras, and was occupied by the English troops during the peninsular war.

ALCOLEA the name of several towns and villages in Spain.—1. *Alcolea de calatrava*, a tn. New Castile, prov. of and 14 m. W. by N from Ciudad Real having a square parish church, townhall prison two schools a storehouse and cemetery with an agricultural pop. of 1400.—2. *Alcolea de ocaña*, a tn. Aragon prov. of and 30 m. from Huesca, in a plain on the right bank of the river Gúria, well built and paved, with two squares, a parish church, townhouse two schools, prison granary and cemetery. Weaving tillage, and carrying, employ the inhabitants who support wine, hardware and weaving apparel and export fruits, &c. An annual cattle fair is held in October. Pop. 1200.—3. *Alcolea de las pozas*, a tn. New Castile, prov. *Guadalajara*, 10 m. N. by W from Sigüenza. Ill built, with a church, school townhouse, prison and an agricultural pop. of 180.—4. *Alcolea del río*, a tn. Andalusia, prov. of and 35 m. W. by W from Seville tolerably built, and having a church, two schools, and a prison, with a farming pop. of 1,077.—5. *Alcolea del-Topo*, a tn. New Castile, prov. *Ávila*, 17 m. S.W. by W from Talavera de la Reyna well built, comprising a church school prison and townhall. Pop. 160. There are several other inconsiderable villages called ALCOLEA.—(Madrid.)

ALCONBLERY or ALCONBURY a par. England, co. Huntingdon area, 5700 ac. an annual fair for pedlars ware, June 24 intersected by Alconbury brook a branch of the Ouse. 1 op. 967

ALCONBURY WITH WESTON a par. England co. Huntingdon area 1040 ac. 6 m. N.W. Huntingdon. Pop. 510.

ALCONCEIL a tn. Spain in *Estremadura*, prov. of and 25 m. N. E. from Badajoz, on the slope of a hill. It is mainly built, and is overlooked by an old castle. It contains a church, some schools, a townhall, and small prison. The inhabitants are employed chiefly in treading cattle, raising corn and weaving coarse linen and woollen cloth. The agricultural produce of the neighbourhood is very abundant, and the fruits well-flavoured. An annual fair is held in May. Pop. 3070

ALCOBA a tn. Spain, in Valencia prov. of and 10 m. N.W. by W from Castellón de la Plana. It is on the whole, well built, and has a church four chapels, several schools two hospitals, an asylum, and municipal house. The inhabitants are much engaged in potteries and brandy distilleries. In the neighbourhood are found considerable quantities of chamber and sulphur and silk is cultivated. The agricultural productions are grain, fruits, vegetables hemp, oil, and grapes, which are exported. An annual on the fair is held in October. Pop. 6500.—(Madrid.)

ALCOTIM, or ALCO TRIA a tn. Portugal prov. *Algarve*, comarca of and 23 m. S.E. from Tavira, upon a height on the right bank of the Guadiana. It is enclosed within old walls, and prettily situated on the margin of the river at the foot of a mountain, on which is a castle in ruins. Pop. 1561

ALCOVILA, a tn. Spain, in Catalonia, prov. of, and 10 m. N. from Tarragona, on the Angrau, comprising two churches, two schools, an hospital, and several fountains. The inhabitants are engaged in making earthenware and soap, distilling brandy and cultivating the grain, wine, oil, fruits, and vegetables of the vicinity. Some cattle are reared, and an annual fair held in October. Pop. 2612.—(Madrid.)

ALCOY a large tn. Spain, in Valencia, prov. of and 24 m. N. by W from Alicante, near the source of a river of its own name, crossed here by a Roman bridge. It lies in a hollow formed by the slopes of the surrounding hills, and is remarkable for its antique picturesque-looking houses, overhanging the tarred gardens and ravines. It is enclosed by clay walls, which were much damaged by shot during the last civil war and is entered by numerous gates, four stone bridges serving as means of communication between the different quarters. It contains many modern buildings, a rare case in the towns of Spain and the Plaza de la Constitución was raised with some squares out of the first class of Spanish cities. The streets are regular well paved, and some of them even provided with drains. The public edifices comprise a large parish church, of bastard classic architecture, built in 1740 and some smaller churches, some good and well attended schools, a

townhall and cemetery a poor seymon, public granary and a prison, formed out of a former convent. It is a busy commercial place, and contains many coarse woollen and paper manufactures, especially of paper de hilo or books of home paper for making papillos, or paper cigars. Madon states that 200,000 reams of paper are annually made here, of which 10,000 are used for writing 10,000 for packing and other purposes, and 180,000 for making the papillos. The *pelotillos* of Alcoy or almond sugar planes, are held in high estimation. As respects the people, Mr. Yari describes them as having an air of misery wearing shabby round hats, that give them a poverty stricken appearance and as unacquainted with the courtesies and salutations of high-bred Spain. The agricultural produce of the neighbourhood is grain, wine, oil, fruits, including excellent figs and vegetables. Sheep, goats, pigs, horned cattle, mules, and a few horses, are reared. Two fairs are held annually one in April and the other in October. Pop. 27,000.—(Madon.)—ALCOY is also the name of a small river of Valencia, rising S.W. of the above town and flowing N.E. about 42 m. into the Mediterranean.

ALCUDIA, the names of several towns in Spain.—1. A city and port in the N.E. of Majorca. Lat. 39° 54' 45" N. Lon. 8° 9' 6" E. (L.) at the N.E. extremity of the island, between the large bay of its own name and that of Pollensa. It is surrounded by old walls, and defended by two strong castles and a deep and wide fosse. It is tolerably built, but owing to the great number of runcos and uninhabited houses has a desolate appearance. It has a parish church, townhouse, two schools, a hospital and a cemetery. The inhabitants are engaged in weaving, fishing, and agriculture. As a port, its trade is considerable. Pop. 1116.—2. *Alcudia de la Cruz*, a town, Andalusia, prov. of and 34 m. N.E. from Almeria on the summit of the *sierra de Píbaros* having a church, cemetery, storehouse, and fountain, with an agricultural pop. of 532.—3. *Alcudia de Cortés*, a town, prov. of and 20 m. S. by W. from Valencia, on the right bank of the river Magro well built, with a church, three schools, townhouse, and prison. Weaving, distilling, husbandry, making of hardware and agriculture, are the chief employments of the people. Pop. 1753.—4. *Alcudia de Guadalupe*, a town, Andalusia, prov. of and 23 m. W. by N. from Granada, and 4 m. E. Guadix comprising a square with a central fountain, church, townhall, prison, and two schools, with an agricultural pop. of 722.—5. *Alcudia de Crespas*, a town, prov. of and 52 m. S. by W. from Valencia having a church, a palace of the Counts of Orgaz, and an agricultural pop. of 620.—6. *Alcudia* is also the name of a valley in New Castle, prov. Ciudad Real, and of several other villages not worthy of notice.—(Madon.)

ALCUDIA, A. L. a town, Spain, Extremadura, prov. of and about 20 m. S.E. from Cáceres, on the W. slope of the *sierra Leon* a prolongation of the Toledo range. It is mean, ill built, and confined, but has a parish church, some schools, a court house, granary and prison. The inhabitants are chiefly employed in tillage, rearing hogs, expressing oil and domestic weaving. The vicinity yields grain and abundance of fruits. Pop. 3560.—(Madon.)

ALDABRA ISLANDS three islands situated at the N. entrance into the Mozambique Channel called, respectively East, Middle, and West Islands, but so connected by reefs and rocks, as to appear one island. Lat. (N. W. point) 9° 25' S. lon. 45° 50' E. (L.) East Island is of moderate height, and is here and there interspersed with a few trees, has a fine white sandy beach, and is covered with brushwood and verdure the whole combining gives it a very beautiful appearance. Middle Island is the highest, and is in part, covered with lofty trees, it has also a beautiful beach, and is clothed with verdure. West Island is lowest, and has few trees or bushes, but resembles the two former in other respects.

ALDAN MOUNTAINS AND RIVER, in Russian Siberia. The former are a branch of the Stanovoi mountains, running N.W. to about lat. 67° 30' N. from lat. 61° 20' N., their total length being upwards of 900 m. Their geological composition is chiefly limestone, clay slate, and graywacke. vast forests of larch (*Picea larix*) clothe their sides; and, in the lat. of 61° N., grow at an elevation of 2240 ft., single trees from that to a height of 2600 ft. The greatest heights of these mountains are so surrounded are from 2000 to upwards of 4000 ft. Mount Kiprian, the most elevated summit of the range, attains an elevation of 4235 ft.

The Alden River a tributary of the Lena, flows parallel with the summit range till it falls into the Lena, in lat. 57° 30' N., about 90 m. below Yakutat. It rises in the Yaloum range, under the 66th N. parallel, thence running N.E. past Nankah to lat. 57° 30' where it turns abruptly W. and joins the Lena about 80 m. below Yakutat, after a course of about 800 m. The great road from Yakutat to Ootek crosses it at Aldamaka, which lies 760 ft. above the Sea of Okhotsk.—(Ramus's Siberia.)

ALDABA, a town, Spain, prov. of and about 5 m. W. from Valencia, on the left bank of the river Furiol. It is ill built, and has a church two endowed schools a townhouse, and public granary. The inhabitants are engaged in tillage and distilling brandy. The vicinity produces grain, wine, oil, vegetables, and fruits, especially melons. Pop. 3000.—(Madon.)

ALDBOROUGH, or **ALDBOROUGH** a small seaport in and par England, co. Suffolk lat. 53° 52' N. lon. 1° 86' E. (L.) 20 m. E.N.E. Ipswich, and 82 m. N.E. London pleasantly situated between the river Alde and the sea, and running nearly parallel with the beach of the latter. It formerly consisted of three principal streets but one of these was swept away by the sea, the encroachments of which have long been doing serious damage to the town. These, however, have been temporarily checked by two sand banks which have been recently thrown up for that purpose. The old borough was situated 2 m. E. of the present shore and on the spot where it stood, there are now 24 ft. of water. The older houses of the town are of a mean description, but a number of handsome new houses and villas have been built of late years, in consequence of the place having become a favourite resort for sea bathing, for which its beach is well adapted, while its climate is reckoned eminently salubrious. The parish church, a large and ancient structure, is situated conspicuously on the summit of a hill and forms a convenient landmark for mariners. It is of a mixed perpendicular and decorated style, and has been much disfigured by unseasonable repairs but is now (1850) in course of restoration, a new and magnificent window having been recently put up. There are besides places of worship for various denominations of dissenters, and a flourishing national daily school, supported by subscription several benevolent associations, and a mechanics institute. The town is well supplied with water. The harbour is safe and commodious. The trade of the port consists principally in the export of corn and wool the import of coal and timber and in fish curing. A great proportion of the inhabitants are employed in fishing and sea-faring. Crabbe, the poet, was born here on Christmas eve 1764 and an elegant boat and pinnace have recently been erected in the parish church to his memory. Aldborough formerly returned two members to Parliament but was disfranchised by the Reform Bill. Market days Wednesday and Saturday. Two fairs annually. Area of par 1835 ac. Pop. of town and par 1637.—(Correspondent in Aldborough.)

ALDBOROUGH a market town and par England, co. York. W. Riding on a plain on the river Ire about 16 m. N.W. York. It is small and irregularly built, and remarkable only for its great antiquity as it is supposed to have been the capital of the Brigantes. Under the Romans it was called *Eborac*, and was then surrounded by walls and to have been about 14 m. in extent. Many Roman antiquities have been found here, including colina, urns, the remains of aqueducts and some beautiful tessellated pavements a rare specimen of which was discovered in September 1848 on the property of Andrew Lawson, Esq. Aldborough formerly sent two members to Parliament, but was disfranchised by the Reform Act. It has one church. It is governed by a bailiff. Petty sessions are held at Market day Wednesday. An annual fair in September. Area of par 2823 ac. Pop. 2488.—**ALDBOROUGH** is also the name of a parish in Suffolk has Eppington area 718 ac. Pop. 330.

ALDBOLENE, or **ALDBOLENE**, a par England co. Wilts; area, 8496 ac. 6 m. N.E. Marlborough; ancient church and vicarage. Pop. 1622.

ALDBOROUGH a par England, co. York, E. Riding area, 6519 ac. Pop. 1113.

ALDBURY a par England, co. Hertford area, 2071 ac. on the London and Birmingham Railway ancient church Pop. 830.

ALDEA (Village) the name, with various affixes, of numerous small places in Spain, Portugal, and Brazil.

In Brazil the chief are—*Aldea-do-este do Duero* in Leon prov. of and 33 m. N by W from Salamanca, on the Duero having 1500 inhabitants—*Aldea del Oso*, in Extremadura, prov. of and 15 m. S by E. from Cáceres having 1800 inhabitants—*Aldea del Rey* in New Castile, prov. of and 18 m. S by E. from Ciudad Real having 1700 inhabitants, much employed in lace-making—*Aldea-nueva de Caceres*, in Extremadura, prov. Cáceres, 18 m. N. E. Truxillo with 1550 inhabitants—*Aldea-nueva de Ebro* in Old Castile, prov. Logroño and 55 m. N. W. Alhara with 1800 inhabitants—*Aldea-nueva de la vera*, in Extremadura, prov. Cáceres, 23 m. S. W. Plasencia; having a large church town hall hospital prison and 3400 inhabitants, chiefly agricultural—There are 40 or 50 more but none worth notice.

In Portugal, two only deserve notice—*Aldea Galega*, prov. Setúbal, on the Bay of Montego, which forms a part of the left shore in the Tagus estuary about 10 m. E by S Lisbon and one of the chief ferry stations to that city having 3800 inhabitants, chiefly fishermen (fishermen) and fishermen—*Aldea Galega de Marvão*, same prov. on the left bank of the Tagus, 9 m. W. N. W. Alentejo. Pop. 1458—There are many other ALDEAS—all unimportant.

In Brazil are the following—*Aldea-de-Pedras* prov. Goiás, on the road from Mico-1 onto St. Paul 130 m. S. St. Cruz—*Aldea do Campo* prov. Espírito-Santo 8 m. of the River Doce 115 inhabitants male and export linen—*Aldea Gontaga*, prov. Espírito-Santo, at the head-waters of the Rio-Maga The naturalist St. Hilary, calls this village *Pegúli* and *Aldea Velha*, prov. Espírito-Santo, about 6 m. N. Almeida The Indians of the district construct canoes and the women spin cotton manufacture a kind of coarse cloth and thread which is sold in Rio de Janeiro and Bahia for lamp and candle wicks—*Aldea Velha*, prov. Rio de Janeiro in the district of Cabo Frio—(Madox, *Diário de Espetáculo*, Rio de Janeiro, 1851).

ALDEBY or **ALDEBURY** a par England, co. Norfolk area 3058 ac. 23 m. N. E. Beccles Pop. 564.

ALDENHAM a par England co. Hertford area, 5840 ac. 23 m. from Watford, on the London and Birmingham Railway end Church Pop. 1056.

ALDEBURY a par England co. Wiltshire area, 9950 ac. 8 m. S. Salisbury on the South-Western Railway 1 op. 1438.

ALDERFORD a par England co. Norfolk area, 432 ac. 2 m. N. E. by 8 Rayham Pop. 41.

ALDEKLEY a vil. and par England co. Gloucester area, 598 ac. handsome church with monument to Sir Matthew Hale, who was born here Nov. 1 1608. Curious fossils are sometimes found Pop. 145.

ALDERMASTON a par England, co. Berks area, 8609 ac., 8 m. E. Newbury on the navigable river Kennet. 1 op. 783.

ALDERMAN ISLANDS a small group of islets off the E. coast of the most N. of the New Zealand Islands, New Ulster and about 13 m. from the shore lat. (S. point) 37° E. lon. 176° 4 E.

ALDRIMSTON a par England co. Worcester 8167 ac. on the Moreton and Stratford Railway 1 op. in 1851 522.

ALDERNEY the most N. of the islands in the English Channel known by the name of the Channel Islands, 10 m. due W. from Cape La Hague in France lat. 49° 42' 2" N. lon. 2° 13' 12" W. (u.) It is between 2 and 4 m. long and about 1½ broad. The coast is bold and rocky the cliffs in many places rising from 100 to 200 ft. in height. In the interior the soil is fertile, producing excellent crops of corn and potatoes but round the coast it is sandy and sterile. About a third of the island is occupied by grass lands. The climate is mild and healthy. The Alderney cows, a small, straight-backed breed have long been celebrated for the quality of their milk, which is exceedingly rich but not great in quantity. The cows are not handsome, and are in no great request anywhere but in the islands in which ever they are so much esteemed, that the importation of any other description of cattle is prohibited under the severest penalties. The town, as it is simply called is situated in a beautiful valley near the centre of the island it is partly

Vol. I.

paved but presents nothing worthy of particular notice. The civil power is vested in six jurats who are chosen by the people and hold their offices for life, unless removed for misbehaviour. These with 12 *domaniers*, representatives of the people, form a sort of local legislature. Alderney is a dependency of Guernsey. French manners and the French language, prevail amongst the inhabitants; but all understand, and many speak English. They are about equally divided between the Established church and Wesleyan Methodists. The strait which separates the island from the mainland is called the Race of Alderney from the velocity with which the current runs through it; being at the rate of 8 m. an hour. It is a deep and generally safe channel but when wind and tide meet, is extremely dangerous. There is but one harbour in the island Crasby and there small vessels only can be accommodated. At the distance of about 6 m. N. W. from the island are a cluster of rocks, called the Caskets, on the largest of which there are three lighthouses an alarm bell has recently been added to be used in foggy weather when the lights become invisible. 1 op. of the lat. 5338.

ALDERSHOTT a par England co. Hants; 4144 ac. 2 m. N. E. by N. Farnham 1 op. 875.

ALDETON the name of several parishes England—1 A par. co. Wilts 1587 ac. 3 m. S. W. Malmesbury 1 op. in 1851 182—2 A par. co. Northampton 910 ac. 3 m. N. E. Towcester 1 op. in 1851 139—3, A par. co. Gloucester 1750 ac. near Tewkesbury Bacon encampment Pop. in 1851 486—4 A par. co. Suffolk 743 ac. 7 m. S. E. Woodbridge. Pop. in 1851 600.

ALDFORD a par England, co. Cheshire 9338 ac. on the river Dea ancient castle and townhouse Pop. in 1851 883.

ALDHAM a par England, co. Suffolk 144 ac. on the Ipswich and Bury St. Edmund's Railway Pop. 307.

ALDINGBOURN a par England co. Sussex 3060 ac. 4 m. E. Chichester Pop. 44.

ALDINGHAM (UPPER and LOWER) two united parishes, England, co. Lancaster 4094 ac. 5 m. S. E. Alverton. Owing to the progress of the enclosure of the soil of the church, once in the centre of the parish is row with in row of the high dale. 1 op. 908.

ALDINGTON a par England co. Kent 2076 ac. near the South Eastern Railway. The town of Aldington was once held by Erasmus of Rotterdam. 1 op. 41.

ALDIS PEAK a prominent mountain N. E. Australia lat. 24° 50' S. lon. 149° 31' E. It is an excellent landmark and can be seen at a great distance from the N. E. It was discovered by Dr. Leichhardt in 1846.

ALDRIDGE a par England, co. Stafford area, 7732 ac. near Walsall Here is a curious pool Druids use (literally Druid Sea) an extensive pottery and a manufactory of earthenware and tiles. Pop. 2174.

ALDRINGHAM a par England co. Suffolk area 1738 ac. Fair on St. Andrew's day Pop. 467.

ALDETONE or **ALDETOWN** a market town and par England co. Cumberland on the declivity of a steep hill near the confluence of the New River and R. Tyne 17 m. E. N. 1 m. W. The town consists of one main street and two smaller

neither of them regular. The new houses are chiefly of stone roofed with slate, and are generally substantial and well built being much superior in all respects to the older dwellings. There is abundance of excellent water brought from a neighbouring hill and collected in tanks. The town contains a church, and meeting houses belonging to various religious denominations a grammar school and Lancasterian schools. There is also a mechanics institute, having a library of 500 volumes and a museum and a savings bank, a useful institution which is well supported by the working-classes of the district. The only manufactory in the town is a worsted spinning mill employing about 70 hands. The country around is a dreary waste of naked hills but rich in minerals. The lead mines in the parish are extensive and very productive, giving employment to upwards of 1000 people. Copper ore and iron have also been found and beautiful specimens of spar and, in the lead mines, are numerous large caverns, exhibiting magnificent grotto work, and resplendent with crystals. Most of these mines belonged to the Earl of Derwentwater, but fell to the crown on the attainder of that

unfortunate noblemen in 1715. They were afterwards transferred, by Act of Parliament, to Greenwich hospital, to which they still belong. They are let by the governors of that institution on working leases to the London Lead Company and others, on condition of payment of one-seventh of the ore raised. Upwards of 17,000 tons of lead, each being weighing 8 cwt., were obtained from these mines in 1849 worth, on an average, about 24 p. per ling. The moral character of the people of this district is singularly good out of a population of upwards of 600, there have only been 11 convicts in 25 years, and of these seven only were natives, with a few minor cases determined summarily by the magistrature. Area of par 83,000 ac 1 op. 6818.—(Correspondent in *Alb. obs.*)

ALDSWORTH a par England, co. Gloucester area. 6480 ac on the Cheltenham, Oxford and London United Railway Pop. 379.

ALDWIN (W. F. F. F. F.) a par England co. Northampton 4 m. N.E. Thrapston Pop. in 1861 23 — ALDWIN (A. L. S. S. S. S.) a par adjoining the former united area. *450 ac here are six oral charities. Pop. in 1851 508.

ALDWORTH a par England co. Berks area 1960 ac. 4 m. S. East Haly Pop. 31

AI EGRETE, a fortified in Portugal prov. Alentejo, comarca of and 6 m. S.E. from Portalegre near the Spanish frontier. In the neighbourhood are chestnut forests. Pop. 1180.

ALFTI a river Siberia, an affluent of the Obi, gov. Tomsk. It rises from two head streams, about lat. 50 43 N. lon. 80° 25' E. in that part of the Altai mountains called Tig. herakli Bjelki, and of granite formation. It takes a N.W. course, very winding and irregular partly through a plain about 1000 ft. above the sea level, and covered with poplars and willows and partly through a deep valley composed of clay alluvium, till it reaches the Obi, about lat. 51 15' N. lon. 81 2' E., where it is 939 ft. above the sea level and where its S. bank, being composed of porphyry mountains, the river turns to the N.E. which general direction it maintains, chiefly through a level country partly covered with grass, till it reaches the Obi, 20 m. S.W. Bar near lat. 53° 1' N. On various points of the banks of the Altai are mines of copper the ore from which is conveyed down the river which is navigable, especially in spring, and for country boats, for a great part of its course. The steppe through which the Altai flows in the N. part of its course, is often set fire to, for the purpose of burning up the hard stems that prevent the mowing of the young grass.—(Hittor's *Asia*.)

ALEXANDRIA, a tn. Russia. See ALEXANDRIA.

ALEXANDRIA a tn. Caucasus 10 m. S. Gheorghievsk lat. 44 19' N. lon. 43° 10' E.

ALEXANDROV a tn and district, gov. Caucasus, Russia, the former 43 m. W. Gheorghievsk lat. 44 25' N. lon. 42° 42' E. The S. boundary of the district is formed by the Caucasus mountains, the S.W. by the Kizilman, and the N. by the river Kaban. Summa forest wood is found in the S. but it is only used for fuel. The soil is generally fertile, and suited to the culture of grain and vines. The Kalinkas establish their winter quarters on the banks of the N. and numerous bands of Nogays pasture their flocks in the valleys of the R.

ALEXANDROV a small tn. European Russia, gov. of, and 69 m. W. W. from Vladimir and 58 m. N.E. Moscow on the banks of the river Sema, which falls into the Kizilman. The Czar Ivan Vasilievich sometimes passed the summer here and it was in this little town that he established the first printing press introduced into Russia. It has two churches and a monastery. The splendid acres, or breeding stand for horses, which is here supported at the expense of the crown, is renowned for the variety of its breeds, and for the extent and character of its buildings. This establishment was commenced by the Empress Elizabeth in 1761 and 20 years elapsed before it was completed. Pop. 3000.

ALEXANDROVKA the name of a great number of small towns in Russia, there being no fewer than four in the prov. of Kherson alone, and all within about 50 m. of each other, and in almost every other province there is one or more. The name is sometimes spelled ALEXANDROVA.

ALEXANDROVKA, a tn. European Russia, gov. of, and 45 m. S. from Ekaterinodar, or Jekaterinodar; on district of same name, on the left bank of the Dnieper, at the mouth of the Moscovka. It is fortified and has a considerable trade with the interior of the empire; goods from thence coming here for shipment by the Dnieper for the Black Sea. Pop. (1842) 5192.—The E. part of the district of Alexandrovsk is watered by the Ruma, the R. by the Kouskara, which separates it, throughout a large extent, from the province of the Caucasus. The greater part of the surface is barren heath; there are very few villages, and cultivated land is rare.

ALEKSEIN or ALEKSEIN a tn. European Russia, prov. Tula, on the right bank of the river Oka, about 100 m. S. Moscow and 53 from Tula. It has some trade in hemp, hides, tallow honey and salt meat. Two great fairs are held here annually. Pop. 2000.—The district of Aleksein contains some iron works, and a manufacture of linen, and 246 villages with a pop. of 50,000.

ALEMOUTH. See ALMOUTS.

ALEMQUER or ALEQUER, a small tn. Portugal, and cap. of comarca, in prov. Estremadura on a small river of the same name 14 m. N.W. Lisbon and about 8 m. W. the Tagus. It has five churches three convents, an hospital and paper mill once the largest in Portugal the environs produce good wheat and grapes. Pop. 2485.

ALEMTEJO or ALENTAJO (from *Alen*, beyond and *Tejo*, the Tagus) the largest but least populous prov. of Portugal bounded N. by Estremadura and Beira Baixa, E. by Spain & by prov. Algarve and W. by Estremadura and the Atlantic length, N. & S. 150 m. average breadth, E. to W. about 70 m. area, about 7728 geo. sq. m. The greater part of the surface of this province is undulating broken up only by low hills running N.N.E. to S.W. To the E. rises, in unconnected groups, the low serras de Mamed de Portalegre de Ossa de Évora, and Mont. Mirro, rendered picturesque by steep cliffs, and by the numerous ruins and fortifications with which they are indented. To the W. the hills sink into broad plains (campes) which, before reaching the sandy coast, are traversed by isolated ridges of rock to the S., towards Algarve, they attain the height of 4000 ft. The hills are composed mostly of sands and graywacke schist, and give rise to no streams of importance the principal rivers of the prov. rising in Spain, as the Guadiana in the S. and the Tagus in the N. Of the streams that are purely Portuguese may be named the Sado or Saldão, and the Zêzê, and their affluents. The climate in the S. and W. is hot and dry and the country is composed of plains covered with heath, without trees or bush but here and there varied by marshy tracts. Agriculture, in these localities is little attended to the herds serving chiefly to feed sheep and goats. In the N. the valleys are very fruitful, and the hills grow fine wood. The principal cereals cultivated are wheat and barley, and next to them, rice and maize; of all of which a considerable quantity is exported to Lisbon and elsewhere. For the abundance of grain the inhabitants of Alentejo are in no way indebted to their own agricultural industry or skill both of which are in a very low state, but wholly to the richness of the productive part of the province. Grapes, olives, citrons lemon figs, and other southern fruits, are plentiful and in the woods are found the evergreen oak, the cork oak, chestnuts, pines, &c. The rearing of sheep goats and pigs, and the culture of bees, are extensively carried on, cattle, and mule rearing is less attended to. Good oil, tolerable wine, wool and honey are produced. Game is plentiful. In some localities cloth is woven, and potteryware made; but the manufactures of the province, as a whole, are of little account. Salt is exported. The principal towns are Évora the capital, Portalegre, Elvas, Beja, Faro, and Mertola. Pop. in 1848 276,569.—(Reis's *Encyclopædia* Hassel's *Portugal* Nelson's *Geographical Dictionary*.)

ALENÇON (anc. *Alenconium*) a tn. France, chief place of dep. of the Orne, formerly cap. of the duchy of Alençon, standing on an extensive plain, on the right bank of the Sarthe, near its junction with the Braye, 55 m. S.E. Caen, and 105 m. W. by S. Paris. Of the walls and former fortifications of the town, four gates are all that remain. The streets are in general broad, well paved and clean. Among the principal buildings are the cathedral, the pretecture, the corn

market, the collages, and the townhouses, the towers of which last are the remains of the old castle of the Duke of Aleppo. The town contains a communal collage, with an observatory; a *Shed* of *Shed* two hospitals, one of them for the lame; a public library of about 8000 volumes, a museum of natural history, and a theatre. Aleppo is the seat of considerable manufactures, and of an extended commerce. It was long famed for the manufacture of point lace called *pointe d'Alep* but this branch of industry as well as the making of straw hats, for which it was also known, is now much fallen off. The principal manufactures now are cotton spinning, silk spinning weaving of cotton, woollen, and linen fabrics, tanning, glass making, distilling and brewing. A kind of hamper and linen cloths made here, styled *tabies d'Alep*, are held in high estimation, and nearly 22 000 pieces are sold annually. There are some bleacheries in the environs and the embroidery of muslin occupies a considerable number of hands. Perry and cider are manufactured in considerable quantities, the latter being the common drink of the country and down and quills form staple articles of trade. The district produces abundance of cattle, poultry and a good breed of horses. Amongst its minerals are iron, granite, and freestone. The species of fine rock crystal called *Alamand* d'Alep formerly found in the neighbouring granite quarries, is now nearly exhausted. Pop. in 1846, 14,888.

ALEPOTES. See ALAUTIAN ISLANDS.

ALEPE, or ALAP, a tn and fortress, Malabar prov Travancore, Hindustan, 50 m S Cochin lat 9° 30' N lon. 78° 25' E. It is populous, and is the chief depot from which the Travancore Government exports its pepper grain, and timber.

ALEPPO or HALLES-DE-SHARRA [anc. Chalchoe and Berwa] a city N Syria, push. of the same name on the small river Koks, 80 m S E Iskenderoon which is its port, and the nearest point of the Mediterranean shore, 190 m N N E Damascus lat. 36° 11' 25" N lon. 37° 5' 23" E. It is encompassed at the distance of a few m's, by a circle of low rocky hills, destitute of trees and scantily watered, but affording good pasture for sheep and goats. It occupies eight small hills, of unequal height, with their intermediate valleys, and is surrounded by walls 30 ft. high and 20 broad on which there are seven gates. Its circumference within the walls is about 3½ m. without, and including the suburbs about 7 m. In appearance, on approaching it, is striking and picturesque. Numerous mosques, ospitals, and minarets, the last of dazzling whiteness, crowd on the

of the city particularly in that called *Diyar*, the streets are well paved and, in general better kept than those of any other town in Syria. An ample supply of water is brought into the city by an ancient aqueduct, from two springs 8 m distant. On an oval hill in the N E corner of the city stands the castle of Aleppo a conspicuous object, surrounded by a broad and deep fosse, 3 m. in circumference, now filled up with gardens and plantations. A large square tower beautifully inlaid with a dark-coloured stone, forms the entrance; but the interior is in ruins, many walls only being now habitable. The only other public buildings of any interest are the ancient seraglio, or palace of the pasha, and the mosque of *Dammeh Adabek*. The former now also in ruins, was of great extent and magnificence but the only portion of its splendour now remaining is a gateway of admirable workmanship the arch of which is composed of blocks of polished white and black marble. The seraglio was destroyed, in 1819-20 during the siege of the city by Kourahid Ahmed Pasha. The mosque of *Djani al-Adabek* is reckoned one of the most graceful structures of the kind in Syria. It is surrounded by a magnificent dome and by a tall and elegant minaret. A spiral staircase conducts to the top of the latter from which a splendid view of the city and surrounding country is obtained. The beautiful portico of the mosque was much injured by the earthquakes of 1822. There are two libraries in the city one attached to the Omani mosque, the other in a college called the *Almadhi*; the latter though sufficiently meagre is reckoned the best in Syria. Such institutions however meet with little encouragement in Aleppo, the taste for literature being extremely limited, neither is education in a better condition.

Previous to the earthquake of 1822 Aleppo carried on a considerable trade with England importing thence large quantities of red cloth &c. and re-exporting the Indian manufactures brought overland from Bagdad. Its manufactures were then also very valuable consisting of shawls, cottons, silks, gold and silver lace, &c. in which it is said, 12 000 artisans were engaged. But, on the occasion of the calamity alluded to, the town was nearly deserted by its surviving inhabitants and its trade ruined. Both it and former however have considerably improved since and Aleppo still retains, with less reputation and amount of the excellence of its silk stuffs, with gold and silver thread and its flowered and striped cottons in the manufacture of which about 4000 looms and nearly 5000 persons, adults and children are employed. There are, besides numerous soap, dyeing and print works. Its trade with England has also revived 5000 bales of British manufactures being yearly imported while its caravan trade with the interior as likewise rapidly improving the merchants finding they can now be supplied in Aleppo with all they want. Considerable quantities of wool and silk are exported to France and Italy of the former 2508 bales were exported in one year lately and 179 of the latter. The retail or shop trade however does not seem to be very vigorous, owing in part perhaps to the smallness of capital employed in it the aggregate amount of which, according to Dr Howding does not exceed £30 000 sterling.

The celebrated gardens of Aleppo, nearly 12 m. in length are situated to the S E. of the city but, though much prized by the natives, they have a few straggles for Europeans; being subdivided and enclosed by low stone walls, and exhibiting little of either taste or skill in management or arrangement. The trees are, for the most part, crowded close together with little regard to symmetry while the kitchen and flower gardens, of which the whole is a compound, are undistinguished by the intervention of parterres or grass plots. Close to the city are many extensive quarries, from which is obtained a white gritty stone, easily cut at first, but becoming indurated after exposure for some time to the air. Of this stone all the houses are built. The climate of Aleppo is beautiful but is in summer excessively hot, though considerably moderated by the W winds which then prevail. In winter the air is considerable falls of snow. The earthquakes already alluded

ALEPPO.—From *Phot. Cultural Observatory's Expedition*.

eye the flat roofs of the houses on the hills, rise one behind another in a succession of hanging terraces; while a profusion of cypresses and poplar trees imparts beauty and animation to the whole. But, on entering the gates, much of this pleasing illusion is dispelled. The streets are found to be gloomy and silent the shops mean-looking and the baths and fountains heavy unadorned structures. The houses, however are well and substantially built of stone, two or three stories in height; mostly in the Islamic style with meadow apartments, large windows, and richly ornamented walls and ceilings the latter being often beautifully painted and gilded. In some quarters

to, by which Aleppo was nearly destroyed, occurred on August 18, 1832. It lasted only 10 or 12 seconds; but, in that short space of time, not only Aleppo, but a number of other towns in Syria, were converted into heaps of stones and rubbish and 50,000 human beings destroyed. Aleppo was a place of considerable importance in very remote times, having risen on the destruction of Palmyra. From that period its prosperity continued to increase until the discovery of a passage to India by the Cape of Good Hope, when it began to decline. Its pop. in 1795 was, it is said 250,000 while it is not now more than 60,000 or 65,000; of which 16,000 to 18,000 are Christians. Col. Chesney gives a somewhat different account of the population. He says that it was formerly 150,000 and that it is now reduced to 100,000 of which 66,500 are Turks, 8000 Armenians, 19,000 Greeks, 4500 Jews, 5000 Maronites, 2000 Syrians and Alapiques. The language usually spoken here is Arabic. —The PASHALIC of Aleppo occupies the N. extremity of Syria, and extends southward from the borders of Asia Minor to the foot of the Taurus, to Damascus, Tripoli (in Syria) and the confines of Arabia Deserta. The Mediterranean Sea and the Bays of the Orontes and Iskenderoon being to the W. limit, and the Euphrates to the E. Its surface contains about 7877 sq. m. The W. side is mountainous on the E. the hills are lower and more undulating. The soil is generally excellent, and the climate good. —(Dr. Dornier's *Report on Syria* *Travels in Modern Syria* *See Ray Geo. Soc. Survey of the Euphrates and Tigris* by Lieut.-Col. Chesney &c &c.)

ALGERIA a small decayed v.l. Corsica once a considerable city and the seat of a bishop. It is now remarkable only for the ruins of the Roman colony of Aleria

ALESSANDRIA

ALESSANDRIA DELLA PAGLIA or ALEXANDRIA a in. Pashanlian States chief town of the gov. of the prov., and

of the military division of the same name seat of a council of justice under the jurisdiction of the senate of Tunis 48 m. E. R. R. Tunis on the right bank of the Tamaro a little above where it is joined by the Bormada. The town is fortified has a citadel and is the seat of a bishop, suffragan to Vercelli and the residences of a chief rabbi. It has a royal college and theological seminary a cathedral, 12 parish churches, three hospitals an orphan asylum a gymnasium, very extensive barracks, and a theatre. Manufactures—Linen silks, cloths, and wax candles. Alessandria is considered to be one of the strongest towns in Europe both from its citadel its enter works and from the nucleus of the Tamaro by which the surrounding country can be inundated. It is the hub of Piedmont and was founded in the 19th century under the auspices of Pope Alexander III. the patron of the Guelphs for the purpose of defending Italy against the Emperor Frederick I. and the Ghibellines. In the year 1707 it was ceded, by the Emperor Joseph I. to the Duke of Savoy was taken by the French during the war of the Spanish succession, and retaken by Prince Eugene in 1796, it capitulated to Bonaparte on June 25, 1799 it fell into the hands of the allied Russian and Austrian army and, after the battle of Marengo was restored to the French, who kept possession of it till 1814, when it was restored to the King of Sardinia. The battle of Marengo was fought a little to the E. of the town, on June 14, 1800 Pop. 84,000 of whom 650 are Jews. —The prov. is rich in pastures, and produces large numbers of cattle. The fields, in general are surrounded by ditches of water on whose banks grow mulberry poplar, and walnut trees. The climate is temperate; but the stream is occasionally felt. Wheat maize, wine, silk, fruit of fine quality madder wood and the finest fax of Piedmont, are produced in the province. Wood is very scarce. Pop. 93,556.

The gov. is composed of the provinces of Alessandria, Asti

Casale Acul, Voghera, and Tortona; whose united pop. is 547,662

ALESSANO [Alessanum] a tn. Naples, prov. Otranto, district of, and 21 m. S.E. from Gallipoli; built on the ruins of the ancient Lesos. Residences of a bishop. It has an hospital and some manufactures of machine and cotton stuff. Pop. 1746.

ALESSIO [enn. Lesos of the Romans; Abolusina of the Greeks] a tn. Turkey in Europe prov. Albana, district of, and 21 m. S.E. from Gallipoli; built on the ruins of the ancient Lesos. Residences of a bishop. It has an hospital and some manufactures of machine and cotton stuff. Pop. 1746. It contains a bazaar and a fortress the latter small, and in bad condition and containing only the barracks a few Christian families, and a mosque, in which is buried Scander-beg, or Iskander-beg, a celebrated Albanian prince and warrior who flourished in the 15th century. Beyond the fortress is an extensive suburb, called Vercelli a thriving place inhabited by Turks. Alessio is the seat of a bishop dependent upon that of Durazzo from which it is 25 m. N. Some traces of the ancient Lesos are still visible. —(*See Ray Geo. Soc.*, vol. xii. Gilbert, *Dic. Geo. et Stat.*)

ALBT or ALBERT [Latin, Albus] a small tn. France, dep. Aude, 8 m. S.E. Limoux and 57 m. N.W. Perpignan upon the right bank of the Aude, in a beautiful valley abounding in fruit at the foot of the Pyrenees. It has four mineral springs, three of them cold, and its baths are celebrated. In the environs are tile works, and copper and iron mines. Pop. 1370.

ALEUTIAN ISLANDS (from the Russian word *Alut* a bold rock) an extensive range of small islands belonging to Russia, in the N. Pacific ocean between Cape Alaska and the right bank of the Aude, in a beautiful valley abounding in fruit at the foot of the Pyrenees. It has four mineral springs, three of them cold, and its baths are celebrated. In the environs are tile works, and copper and iron mines. Pop. 1370.

They were formerly divided into three groups—the Aleutian Andreanofian and Fox Islands but are now all comprehended under the name Aleutian. The first known of these islands was discovered in 1741 by Behring, whose name it bears, and who died there the others were discovered at different periods afterwards, by various Russian adventurers, who sought these regions in quest of fur particularly that of the sea otter. They were subsequently visited by Captain Cook in 1788 who determined their exact positions. These names Kamchatka are Behring's and Mishel, or Copper Islands the first islands in lat. 55° N. lon. 160° E. South east of the latter are the small islands of Atka, Sanikil, and Agatko, between lat. 54 and 55° N. The Andreanofian group, or central part of the chain lies between lat. 52 and 54 N., and comprehends the islands of Kiska, Amchika, Tanaga, Kanaga, Adagh, Atshe, and Amha, with a number of smaller islands. Of the group nearest Cape Alaska, called by the Russians *Syene Oskova*, or Fox Islands, the principal are Oumak, Oumashina, and Oumashok. Beyond these, to the N. E. lies the large island of Kodiak, generally considered as belonging to the group called Schumagin's Islands, on which there is a village of about 400 inhabitants. The largest of the whole chain are Behring's island and the island of Cone-lashka.

The Aleutian islands are of volcanic formation and, in a number of them, there are volcanoes still in active operation. At present, there are upwards of 34 in this chain, varying from 8000 to 9000 ft. in height. In 1798, a volcano island, now called Semna Pogorobova, rose in the middle of the line, or

chain of islands. It was first observed after a storm at a point in the sea from which a column of smoke had been seen to rise. Flashes afterwards issued from the new island, accompanied by a frightful earthquake. Night years after its emergence, it was found, in some places, to be so hot that it could not be walked upon. It is now several thousand feet high and 3 or 3 m in circumference and is still increasing in size. Earthquakes, also of the most terrific description, are of frequent occurrence in this region agitating and altering the bed of the sea and surface of the land throughout the whole tract.

The appearance of the islands is singularly dismal and barren. Jeffy walls of black lava rise perpendicularly from the sea, and beyond, steep mountains of rock shoot up to the clouds while the rocks are so encompassed with reefs and breakers as to render navigation amongst them exceedingly dangerous. The soil is, in general, very poor, but, in some particular spots, excellent vegetables thrive well, and some of the most E. of the islands produce potatoes and main. Considerable numbers of domestic cattle, although the latter do not generally thrive on these islands. Springs of water are numerous and valleys clothed with a rich herbage, and republic of supporting herds of cattle throughout the year are to be met with in some of the islands, especially Oonalaska. Bears, wolves, beavers, ermmes, and other otters, are plentiful while the Fox Islands, as their name implies, abound in furs—black, red, gray and brown. The kinds of fish most usually caught are salmon and halibut the latter frequently of immense size. Seals and whales are abundant on the coasts.

The inhabitants—who seem to be a mixed race between the Mongolian Tartars and the North American Indians—are below the average stature, but stout and well proportioned. They have a round face, small eyes, a brownish complexion, a flat nose, and black hair. In the females, the complexion is of a lighter shade, and the hair approaches to brown. The dress which is common to both sexes, consists of a frock of seal skin, fastened round the neck and descending below the knees. This simple dress is often ingeniously sewed and adorned with glass beads white goats hair and small red feathers. In their native state, they paraded the lower lip, the nose, and the ears to suspend in them bones or crystal rings. The women wear around the neck, as well as the hands and feet, chaplets of variegated stones, and most especially when they could procure it, amber. They also adorned the body adorning it with various figures and, when the female belonged to a family of distinction depicting on her person a symbolical representation of the deeds by which they had acquired renown—the number of enemies slain, or bursts of prey destroyed. The most striking feature in the constitutional temper of the Aleutians is a kind of passive quiescence and patient endurance, amounting almost to insensibility. Left to themselves, they will pass whole days in absolute idleness, scarcely opening their lips to give utterance to a single syllable, or making the least exertion to satisfy the cravings of appetite and on the other hand, when placed under a master they will toil on at any task which may be appointed them, slowly indeed, but without interruption, until it is accomplished. Instances are even given in which they have carried this implicit obedience so far as to sacrifice their lives in endeavouring to perform impossible tasks which senseless or tyrannical masters had imposed upon them. In the ordinary relations of life, the Aleutians exhibit much that is amiable. Parents are treated with great respect and deference, and children are the objects of the fondest affection. The husband is addressed by the wife as *father*, and he applies to her the name of *mother*. The whole family appear to cling to each other and take a deep interest in whatever affects their common honour and welfare. To this happy state of domestic life there must, however be numerous exceptions. The existence of polygamy, and the still more notorious practice of polyandry seem almost inconsistent with the very idea of what is usually understood by a family. As might be anticipated, from the passive qualities of the Aleutians, they are not remarkable for their courage. Provided the destruction of their enemy can be accomplished, it seems absolutely indifferent to them whether it be by force or stratagem. The chief employments are hunting and fishing and in both they show great dexterity. They will face the bear simply armed with a gun or a bow; and have even been known when these

weapons had failed, to encounter and overcome him with a knife. But the sea seems to be their proper element. In the pursuit of the whale and the seal, they are equally skilful and intrepid. The boat which they employ is a kind of canoe, called a *ladder* consisting of a frame of wood or bone, covered with seal skin. It is long and narrow in general holding only a single person, whose head rises out of a circular hole cut in the skin which stretches from gunwale to gunwale, like a deck and is so light that a man can easily carry it. Floes consisting perhaps of a 100 of these *ladders* each manned by double paddles about 8 ft. long will venture 50 or 60 m to sea, and encounter all the perils of a stormy ocean in quest of the sea otter. While the men are thus employed the women occupy themselves in covering canoes, and making mats, beshains, and other articles of straw which display much neatness and dexterity. The food in common use is of the coarsest description—whale's flesh, almost in a putrid state, and fish often of similar quality. Could anything add to the filthiness which the very idea of such a meal inspires, it would be the filthy manner in which it is cooked, both the place and the utensils being allowed to remain in the dirtiest state imaginable. Notwithstanding the grange and almost degrading manners of the Aleutians, they are not strangers to amusements, and even theatrical representations. They have both songs and dances, and a kind of drama, in which some striking incident connected with their history is exhibited. The popularity of these is so great, as to have more than once collected crowds, which caused a famine.

The religion of the Aleutians was a ramification of Shamanism—a superstition prevalent throughout the N of Asia. They acknowledged a higher Deity or Creator but paid no worship to him, under the idea that he had left the charge of the world to certain good and evil spirits, called *Kupada*, and *Aphidichik*. They worshipped the elements and the heavenly bodies, particularly the sun and the moon, which were supposed to have great power in human affairs, the sun, when blasphemed striking the blasphemer blind by its rays, the moon killing him by the stones which she throws down upon him and the stars compelling him to commit them—a task, the performance of which cost him his reason. They had neither temples nor idols but near every village, on a rock or other eminence, was a supposed holy place, which was dedicated to the sun, the moon, the planets, or shamanic deity. On these with mysterious ceremonies, they deposited offerings, consisting usually of the skins of wild beasts, or the feathers of aquatic birds. Amulets, or charms, were also in general use, some of them being supposed to secure their fortunate possessor against all accidents and bring him off scatheless and victorious from every combat. The most effectual of these talismans was a grail, composed of cords or grass, with a particular arrangement of knots. In regard to the immortality of the soul, and the origin of the human race, the views of the Aleutians must have been originally derived from a Divine source. The strongest proof of their belief of the former is derived from one of the most horrid of their practices. On the death of a chief, his slaves were sacrificed on his tomb, that they might go and continue their services to him in the other world. The general idea was that the disembodied spirit returned invisible to its family whom it accompanied for good or evil in all their exertions. It is even said to have been invoked by them, particularly when engaging in war to avenge some harm that had been offered to the family. The original form of government was patriarchal. Every village, which, from the frequency of intermarriage, in fact formed only one family was governed by its *solde*, or chief, and a union of villages, under some superior *solde*, on whose valour or wisdom conferred the dignity formed a kind of state. Under the dominion of Russia, all the primitive institutions and habits of the Aleutians have been greatly modified and many of them have rapidly disappeared. Unquestionably, the best virtues of savage life have thus been lost, and one of its first effects of civilization was the introduction of its worst vices and one of its most disgusting diseases. But these are partly compensated by numerous blessings. The Aleutians have already acquired some skill in mechanical arts. Many of them have learned to read, and actually peruse the Scriptures in their own tongue. Their abandonment of Shamanism for the religion of the Greek church and the deep interest which

they seem to take in its ritual, is probably much less the effect of conviction than of deference to the authority of their masters but the fact that there are already four churches in the islands, thronged by native worshippers, that the visitation spirit which at one time prevailed, and made family feuds impassable, has in a great measure disappeared, gives reason to hope that the Aleutians, instead of being regarded as savages, will at no distant period be entitled to claim a place among civilized men.—(Kerman.)

ALEXANDER ISLAND a small isl. in the Antarctic Ocean, in about lat. (N point) 88° 51' E. lon. 78° 10' W. discovered by Bellingshausen in 1881, but not approached nearer than 25 to 30 m., on account of the surrounding ice.

ALEXANDERSBRAD mineral springs and baths. Thaurus, prov. Upper Fraxinea, 17 m. N.E. Baymouth on the E. side of the Pichtelgebirge, near the village of Sichenwuth upwards of 1900 ft. above the sea level. From its mountainous situation, the climate is somewhat rude. The water springs from granite, limestone, and mica schist is clear has a pleasant chalybeate and somewhat sharp taste, and has a temperature of about 49° Fah. It is an earthy saline, chalybeate spring, containing a considerable quantity of carbonic acid gas, and is esteemed a good restorative and tonic. The water is used both externally and internally and the baths are a good deal frequented.

ALEXANDRETTA ISKEEDROOK, or SCANDROOK a small desert in Syria district Alexandretta, S.E. coast of the Gulf of Beanderoun lat. 36° 35' 18" N. lon. 36° 9' E. (n.) The houses are in general extremely mean looking, but some recent ones have given a rather more respectable appearance to the town. These include the residence of the English vice-consul and some granaries built by Ibrahim Pasha. The town is surrounded by marshes, which render it very unhealthy but it is now less so than formerly in consequence of one of the largest having been thoroughly drained some years ago. "The others being all above the level of the sea might be very easily drained, to the great advantage of the port. The latter consists of a fine bay running in S.E. from the gulf, protected from all winds, and capable of containing in security from 80 to 35 sail. Being the natural point of Aleppo, and of all N Syria, the greater portion of both British and foreign imports and exports pass through it. The direct importations consist principally of grain, rice and salt. The staple articles of export are galls, silk cotton, and dyes, or henna, made from grapes into a coarseness resembling honey and which forms a great article of food among the natives of the country. The inhabitants of Alexandretta are about half Greeks and half Turks and Fellahs.

ALEXANDRIA, an ancient city and seaport, Egypt, about 14 m. W. of the most W. mouth of the Nile, on the ridge of land between the sea and the bed of the old Lake Mareotis lat. (Point Ennesote) 31° 11' 30" N. lon. 29° 51' 51" E. (n.) The ancient city of Alexandria was founded 332 years B.C., on the site of a small town called Racoitis, by Alexander the Great, who gave it his own name. As the site of a great commercial city the situation was well chosen, presenting a probably afterwards fully realized, of uniting the traffic of Europe, Asia, and India. Of the ancient city the plan of which was drawn out by Diocletian, a celebrated architect of antiquity little else than a wide sweep of ruins now remains. It stood a little to the S. of the present town, and was of great extent, having a circumference of 15 m., with a pop. of 300,000 free inhabitants, besides, at least, an equal number of slaves. Its magnificence was so remarkable, that the Romans ranked it next to their own capital and Amer general of the caliph Omar in his letter to the letter after the capture of the city A.D. 640, thus speaks of it:— "I have taken the great city of the West. It is impossible for me to enumerate the variety of its riches and beauty and I shall content myself with observing, that it contains 4000 palaces, 4000 baths, 400 theatres, or places of amusement, 15,000 shops for the sale of vegetables, and 40,000 tributary Jews.—(Gibbon.) The city was regularly built, and traversed by two principal streets, each 100 ft. wide, and one of them 4 m. long. One-fourth of the entire area on which it was built, was covered with temples, palaces, and public buildings. Under the Camer it stimated an extraordinary degree of prosperity, large fleets of merchant vessels loaded with India and Ethiopia, and returned laden with tin

most valuable productions of those countries, to be afterwards distributed through Egypt and other lands. As industries population improved the general welfare. The inhabitants have been accused of an extraordinary irascibility which led, on the slightest occasions to disturbances of the most serious character but it is more than probable that this propensity to tumult and riot had its origin with, if it was not confined to, the idle mercenary troops, of whom great numbers were always quartered in the city and who were ever says Wilkinson more ready to govern than obey.

The weaving of linen and the manufacture of glass and papyrus, were the chief occupations of the industrial population of the ancient city. The most remarkable remains of the Alexandria of former times are the famous obelisks, known by the name of Cleopatra's Needles. These obelisks, of which there are two, are of red granite, and about 70 ft. high with a diameter at the base of about 7½ ft. One only is now standing the other lying prostrate at the foot of it, partly buried in the sand—a present from Memnon All to the British nation, not worth its freight to England. Pompey's, or more properly Diocletian's Pillar stands on an eminence about 1800 ft. to the S. of the present walls. Its total height is 98 ft. 9 in. circumference, 29 ft. 8 in. diameter at the top of the capital, 16 ft. 6 in. In 1865 the base of the column was raised in and restored when it was found to rest on a cube, the capital of a pillar of the time of Ptolemy. In a hollow space, to the S.W. of this column is the site of an ancient circus. About a mile W. of the pillar and without the walls of the ancient city are the tombs, now in a ruinous state, but at all sufficiently impressive. They are of great extent and present some beautiful specimens of architecture. Fragments of columns, and other ruins, scattered over a wide space, with traces of walls vestiges of public halls and noble edifices of various descriptions, all bear evidence of the grandeur and magnificence which had characterized this great city of the East.

The modern city though it is scarce of much bustle and gaiety has no pretensions to any of the splendour of its predecessor if we except, perhaps that picturesque and distinguishing feature of Eastern cities—the minaret some of those of Alexandria being of great elegance and beauty as

MINARET AT ALEXANDRIA.—From Kerman, Province de l'Egypte.

will be seen from the accompanying woodcut. The streets in the Turkish quarter are narrow dirty and irregular the houses are, in general from three to four stories in height, and are substantially built, but have a dull monotonous ap-

pearance, from want of windows to the streets. These inferior habitations have been gradually disappearing, and better houses erected in their place, since 1860 when a revival of commercial prosperity took place in consequence of the establishment in that year of the overland route to India. The value of land has increased in proportion with this progress, so that large warehouses and shops occupy the sites of the old Turkish houses and Arab hovels while the city has extended in the same quarter over an area of half its dimensions towards the sea in that period. In the foreign quarter situated at the base of the peninsula, a European town has risen which is daily extending inland, and will soon cover an area half as large as the Moslem city. Here the streets are laid out with the same regularity and width as in the modern quarters of European cities and the houses are built after a similar fashion, chiefly in the European style, and of white stone. The chief place of business and public resort is the Grande Place, a quarter of a mile in length, and about 150 ft. wide, paved on each side, with a raised-in-garden between planted with lime-trees, having two fountains, one at each end and a wide path between the whole forming an agreeable promenade when the heat of the day is over. High stone steps line the place on both sides, besides the principal hotels, the English consulate and church, and several banks and offices of companies. Altogether this locality presents the aspect of a modern European city where the inhabitants seen in the streets are dressed in western costume. Not only is this the case, but many streets in the Turkish quarter present similar innovations where ordinary shops of an inferior character are seen filled with European merchandise of every description with beer-shops, wine-shops, coffee, and smoking-houses at intervals. The only quarter of the city that retains its Moslem aspect is where the Arab bazaars are located which have not yet yielded to western civilization but it is doubtful if it will remain so long as the land in that neighbourhood is daily becoming more valuable from its vicinity to the Grande Place, and even proverbially stolid Mohammedans cannot resist the golden temptations of the Franks to part with their property.

The governmental establishments, however, have progressed with equal rapidity in an easterly direction. Fortifications have been erected on all the points jutting into the Mediterranean, surrounded the landward approaches on the most improved European system, with an arsenal and barracks comfortably quartering from 8000 to 10 000 drilled troops. It is noticeable that one of the forts commanding the centre of the old harbour is named Fort Napoleon having the military arsenal around it. This will indicate the active European power that has sent its engineers and military officers to aid the Egyptian government in the transformation of Alexandria, which is chiefly after the French model. Not only is this the case but the French language is that used by the victory and his ministers in their transactions with foreigners; it is taught at all the public schools and private seminaries, and where the streets are named, or where any notification is posted up there are in French. To Frenchmen Alexandria is indeed for the inestimable comfort of efficient water-works in that arid country. These are upon a large scale, and situated outside the fortifications, upon a height, about 100 ft. above the level of the chimney of the engine rising some 60 ft. higher forming a prominent object in the landscape, while the buildings are substantial and elegant, surrounded by a garden. At this level there is a reservoir into which the water from the west branch of the Nile is pumped by a powerful engine, so that the highest house in Alexandria can be supplied with water. It is from this source that the public fountains in the Grande Place are enabled to throw up jets of water as high as 40 ft.

While these modern improvements are fast changing the oriental aspect of the city others outside the walls and in the suburbs are rapidly obliterating the landmarks of the ancient Egyptians, Greeks, and Romans. The site of Cleopatra's palace is now that of a railway station for the suburban line to Ramlah 7 m. distant, overlooking the Bay of Aboukir celebrated for Nelson's victory over the French fleet in 1798. Here are some pretty villas built chiefly in the Italian style many of them occupied by British residents and their families. A very handsome Roman Catholic church stands near the bay built at the expense of a Belgian consul who had amassed

a large fortune as an Egyptian merchant. In like manner the terminus of the Cairo and Suez railway with its extensive warehouses and sheds is encroaching on the land of the ancient city. The railway sweeps round the ancient canal leading to the Nile where the upper end of the harbor enters the river and the station is situated a few hundred yards from the old harbour with a short line for goods trains to load and discharge at a jetty. The terminus is a large stone building, with much pretension to spacious accommodation, but it is comfortable and stands in the dustiest locality of the dustiest of cities. Within the walls of the city the dust is bad enough but outside it covers the ground like snow from 4 to 6 in. deep. It is from this cause added to the intense glare of the sun in that almost cloudless climate, that ophthalmia is so common especially among the Arab population some of whom present most disgusting objects. Moreover there is no proper system of drainage in Alexandria, so that what otherwise would be a salubrious site is subject to malarious diseases and the plague.

Alexandria has two ports, one on the E. side called the New or Assiut harbour & the other on the W. called the Old port (ana. *Ennesos*). The entrance to the latter is difficult there being many shoals on which there is not sufficient water to float vessels of large size, and first-rate line-of-battle ships are obliged to take out their guns to enable them to enter with safety. Once in however they have good anchorage with ample depth of water. The deepest part, due W and due N of the outer mole, is from 10 to 11 fathoms; within 200 ft. of the shore it is from 4 to 6 fathoms; and immediately under the town, a cable's length off 8 and 4 fathoms. The Old port might be made one of the finest in the world and if the improvements which have been going on since 1840 be continued it is probable it will become so. The New harbour is greatly inferior to the latter being much smaller with a foul and rocky bottom besides being exposed to the N winds.

The trade of Alexandria is considerable. The principal articles of export are cotton, beans, peas, rice, wheat, barley, gum, flax, hides, lentils, linseed, mother-of-pearl, sea-murex, ostrich feathers, &c. The chief imports from Great Britain are manufactured goods, coal, iron goods, olive oil, indigo, earthenware, hardware, sugar, cloth, drugs, machines, liquors, pitch, &c.

The following are the quantities of the principal imports from and exports to Britain in the years 1860-1882—

Principal Imports		Quantities			
		1860.	1869.	1881.	1882.
Coffee	lbs	418,777	400,820	807,716	271,056
Wheat	Qrs.	277,109	197,785	236,811	139,036
Barley	do.	22, 16	19,846	27,838	12, 869

The number of vessels that left the port of Alexandria with cargoes in 1860 was 1203 of which 163 were British.

In 1838 a treaty was entered into by Great Britain with Mehemet Ali, wherein a great many impositions and exactions, affecting the trade between the two countries, were removed or modified, and the right of selling trading privileges resigned. But, in practice, matters remained much as they were, the Franks evading or misconstruing every clause except those favourable to himself. Since the death of Mehemet Ali, a more liberal and enlightened policy has been pursued. Alexandria possesses a considerable transit trade in consequence of being the principal station on the overland route from Europe to India. Steamers sail to and from England, Marseilles, Trieste, and Constantinople, regularly and goods, passengers, and mail pass thence to Cairo, then across the desert to Fezz, and thence by the Red Sea and Arabian Sea to Bombay, Calcutta, China, &c.

The population is mixed, consisting of native Turks and Arabs, of Armenians, Greeks, Egyptians, Syrians, Maghrebins, Maltese, Jews, and Europeans, the foreigners greatly outnumbering the natives. There is little social intercourse between the natives and the Franks, in consequence of each adhering to their peculiar habits and customs, these being irreconcilable, have the effect of keeping them almost entirely

apart. The women are described, by a modern author, as being generally not merely ugly, but hideous.

The municipal government of the city at the head of which is a governor is good in itself, and well conducted, securing the most perfect order and freedom from riot and crime among the native population, but the accession of foreign adventurers from all parts of Europe, who fall to obtain a living by honesty has increased the criminal class to such an extent that the police have little control over them. This has been further complicated by the system of consular jurisdiction where criminals claim the protection of their consuls, and too frequently escape just punishment. The military are as police, having orders to take all riotous and disorderly persons into custody and have them conveyed to one of the numerous guard-houses distributed all over the city. If the offender be a native he is immediately punished if a Frank he must be sent to his consul to be dealt with according to the laws of his own country.

Ancient History.—The first inhabitants of Alexandria were a mixture of Egyptians and Greeks, to whom must be added numerous colonies of Jews transplanted thither in 535, 820 and 312 B.C. to increase the population of the city and country who, becoming familiar with the Greek language and learning were called Hellenes. It was they who by order of Ptolemy Philadelphus, made the well known Greek translation of the Old Testament under the name of the Septuagint. Under the liberal sway of the Ptolemies, kings of Egypt, Alexandria attained to great eminence as a seat of learning, becoming not more famous for the extent of her commerce and wealth than for her philosophy and literature. The first authority that befell the city was inflicted by the tyrant Ptolemy Physcon who without provocation, let his guards loose on the inhabitants with permission to them to rob and murder at pleasure the consequence was the almost entire depopulation of the city 117 years (180 B.C.) had afterwards influence sufficient to induce strangers from the neighbouring countries to take up their abode in Alexandria and it was thus soon again repopulated, but on the new inhabitants making some complaints of his tyranny Physcon repeated his former atrocity ordering that all the young men in the city should be put to death, which order was carried into effect. The next event of importance was the capture of the city by Julius Caesar after an obstinate resistance by the Alexandrians. The city seems after this (48 B.C.) to have fallen into decay. It was restored by Adrian A.D. 141 but was again depopulated A.D. 215 by Caracalla who having been made the subject of some satirical effusions, ordered a general massacre of the inhabitants, without distinction of age or sex. Caracalla having been murdered shortly after the city soon recovered its former splendour. On the 29th of December A.D. 640 Amrus, a general of the Caliph Omar took Alexandria by storm after a siege of 14 months and with a loss of 23,000 men. From this period it fell into decay till its ruin was completed by the discovery of the passage to India by the Cape of Good Hope.

The most remarkable objects in ancient Alexandria were the Pharos and the Library. The former—which was used as a lighthouse, was a square building of white marble, built by order of Ptolemy Philadelphus—is no longer in existence. Its site is occupied by an old lighthouse. The first of the famous libraries of Alexandria was established by Ptolemy Soter as was also the Museum a sort of academy in which men of learning and science pursued their inquiries. At the time of the second Ptolemy's death the library contained 100,000 volumes afterwards increased to 700,000; of which number 400,000 were in the library of the museum in the quarter of the city called the Bruchion the remaining 300,000 were in a library attached to the temple of Serapis, a structure of surpassing beauty. The former was accidentally destroyed by fire during the war with Julius Caesar and the latter by command of the Caliph Omar (A.D. 642).

No census has yet been taken of the total present population in 1864 was computed at 145,000, shared as follows:—Turks and Arabs, 60,000—mixed population, 25,000; Greeks, 20,000; Italians, 8,000; Austrians, 4,500; French, 2,500; other nationalities, 25,000. This does not include the garrison, which varies from 5000 to 10,000 men.—Private M.C. Notes.

ALEXANDRIA, a town and district of Russia in Europe; the former on the left bank of the Ingouga, gov. Kherson, 175 m. N. N. E. from the town of that name. It is the cap. of the district, and contains a pop. of 2500.—The district is extensive, but healthy and fertile, excepting the banks of the rivers, which are more sterile. Pop. about 21,000.

ALEXANDRIA, the name of various townships and other places in U. States, America, the principal of which is Alexandria, a seaport, and cap. of Alexandria co. a district of Columbia, 7 m. S. Washington. It is finely situated on the right bank of the Potomac; is regularly held out, the streets crossing each other at right angles. It has considerable shipping, there being sufficient depth of water to admit vessels of the largest class to its wharves. The tonnage, in 1840 amounting to 14,470; the principal exports being wheat, flour, maize, and tobacco. It enjoys inland communication by a canal, which joins the Chesapeake and Ohio Canal at Georgetown. Pop. in 1840 8469.

ALEXANDRIA, a pleasantly-situated vil. Scotland, co. Dumfries, on the W. bank of the Leven, 4 m. N. Dumfries. The inhabitants are nearly all employed in the extensive cotton printing works in the vicinity. There is a spacious church here, and an Independent chapel. Pop. 2039.

ALEXANDRINA LAKE. See AUSTRALIA.

ALEXANDROVKA. See ALEXANDROVKA.

ALEXANDROVSK, a town in Russia in Europe, gov. of and 5 m. S. E. St. Petersburg on the river Neva. There is a royal villa here, with a magnificent garden; a sugar refinery; a large tannery; and at short distance from the town the imperial manufactory of porcelain.

ALEXISBAD, a resort for mineral waters in Anhalt-Hernburg 3 m. W. Harnburg, in the valley and on the left bank of the Salka. There are here three wells named, respectively Belkumbrun, Alexabrun, and Emalbrun—all of which are chalybeate, the first being by far the strongest and only used externally the other two are used internally.

ALSYBEE, a vil. W. Africa, near the left bank of the Senegal, lat. 16° 50' N. lon. 16° 4' W. It is a large and populous place. The people are a spirited race, and often at war with the Moors and negro warring tribes—(Raffin's *Afrique Occidentale*).

ALAYOR. See ALAYOR.

ALFAQUES PUERTO DE LOS a small port, Spain, prov. Catalonia, on the Mediterranean, and belonging to Turis, with which it is connected by a navigable canal from 15 to 20 ft. in depth, lat. 40° 37' 42" N. lon. 0° 55' W. (N.) The bay in which it lies affords good and safe anchorage, in 5 to 6 fathoms depth, and yields large quantities of salt which constitutes the principal article of export. There is no good water in Alfiques. The needful supply of this necessary of life is obtained from the neighbouring town of San Carlos de la Rupta, where, moreover the custom house is situated.

ALFARO a tiny Spain Old Castle prov. of, and 34 m. E. E. from Logroño on the right bank of the Ebro, having six capacious squares, and several wide streets and well paved streets, two handsome churches, and a chapel, a large hospital, three endowments, schools, a small theatre, a castle, fine barracks, theatre, and extensive warehouses. Manufactures—Cloth, hats, saltpetre, brandy and leather and there are several corn and oil mills at work. The vicinity produces grain, wine, oil, flax, hemp, silk, and abundance of fine fruits. Sheep, goats, mules, horses, and horned cattle, are reared for the sale of which and other merchandises, a fair is held in August. Pop. 4084.—(Madox).

ALFELD a town in Hanover prov. of and 12 m. S. W. from Hildesheim, at the confluence of the Werra with the Söse which is here crossed by three bridges. It is walled and has four gates, a massive townhouse, a Lutheran Gothic church, a normal school and two small hospitals. Some trade is done in linen and yarn and till making lime burning beer brewing, and tanning are carried on. In the vicinity flax and hops are cultivated and there are corn oil paper and saw mills. Pop. 2709.—(Huhn's *Land Deutschland*).

ALFOLD or **AWFOLD** a par. England co. Surrey, area, 2898 ac. on Arun and Wey Junction Canal. Pop. in 1801 499.

ALFORD a district and par. Scotland co. Aberdeen the former comprising 14 parishes, with a pop. altogether 1000.

of 12,001. It is nearly surrounded by hills and mountains, is watered by the Don, and has a good climate. The parish contains 8000 Scottish acres, and a pop. of 891. In this parish, a battle was fought on July 2, 1644, between the covenanting army under General Baillie, and the royalists under Montrose, when the former was defeated. About the middle of the last century the body of a man in complete armour on horseback, supposed to have perished in the above engagement, was dug out of a moor in this parish.

ALFORD—1. A par. and township, England co. Lincoln, area, 1410 ac.; 24 m. N. N. E. Boston. It has a handsome church, several churches, and two small farms for cattle and sheep. A troutlet and a canal traverse this parish. Pop. 2262.—2. A par. co. Somerset, area, 728 ac. 1 m. S. W. Castlebury on the river Brue. Pop. 94.

ALFORJA, a town, Spain, Catalonia, prov. of and 15 m. W. by N. from Tarragona, built on rising ground surrounded by old walls, with four gates. It is well and openly built has some spacious squares, a parish church, some schools, an hospital, a poor asylum and an excellent fountain. The inhabitants are employed in distilling brandy and in cultivating corn, wine, oil, fruits, and vegetables. Pop. 1230.

ALFORS, a hamlet, France, dep. Seine about 5 m. S. E. Paris, upon the left bank of the Marne which separates it from Charenton celebrated for its royal veterinary school, the largest establishment of the kind in the kingdom, instituted in 1786 having a special library a cabinet of comparative anatomy and one of pathology with hospitals for the sick horses a botanic garden chemical laboratory &c. Pop. 104.

ALFINGTON, a small market town, England, co. Derby 15 m. N. N. E. Derby supposed to have derived its name from Alfred the Great. The inhabitants are chiefly employed in the manufacture of stockings and brown earthenware, and in the neighbouring collieries and iron works. The town is irregularly built and many of the houses are very old. A mile and a half to the W. of the town, the North Midland Railway passes. Area of par. 4,500 ac. Pop. 8326.

ALFISTON a par. England, co. Somerset, area 2495 ac. 1 pop. 4389.—(Madox.)

ALGARINEJO a town, Spain, Andalusia, prov. of and 26 m. W. from Granada, extremely well built, with broad streets and good houses, a handsome square, two churches, several schools, a public granary, numerous fountains, a theatre, and a prison. The inhabitants are employed in weaving, distilling brandy, making soap, expressing oil, and cultivating grain, fruits, and vegetables. Sheep, goats, pigs, mules, and asses, are reared and game is plentiful in the vicinity. Pop. 4389.—(Madox.)

ALGARKIRK, a par. England, co. Lincoln, area, 6050 ac. 8 m. N. N. E. Spalding, seat of Edgar Earl of Mar, who obtained a victory over the Danes here in 870 but was slain next day. 1 pop. 843.

ALGARROBO a town, Spain, Andalusia, prov. of and 18 m. E. by N. from Málaga, on rising ground near the coast of the Mediterranean. It is ill built, mean and irregular but has a square, a church with a clock tower, a chapel, and an elementary school. The inhabitants are chiefly engaged in agriculture, mule driving, cotton weaving and manufacturing earthenware. Pop. 3884.—(Madox.)

ALGARVE, or **ALGARVIA**, a maritime prov., once a kingdom, Portugal the smallest and most S. of the Portuguese provinces, bounded, N. by Alemtejo E. by Spain and S. and W. by the Atlantic Ocean 90 m. in length, about 30 m. in breadth, divided into three comarcas or districts, and containing four cities, 12 towns, 60 villages and 87 parishes, cap. Faro. Its N. boundary is composed of the high escarpments of whose summits are higher than 2500 ft. above the sea level, those with the Fogo, Caldeirão, and Ponta hills (the last the highest in the province some of the summits being nearly 4000 ft. high) belong to the system of the Morena, the most S. branch of the Pyrenean range. They yield oak, and pasture for goats. On the S. coast are many excellent bays and harbours, as Lagos, Faro, Tavira, and Castro Marim. The surface of the province is monotonous but the soil of the valleys is fertile though shallow and little cultivated, and not bearing corn sufficient for its own population. Excellent oil, wine, figs, almonds and olives are produced and exported. The fisheries, chiefly of tunny and sardines, are very productive, but the coral fishery has long been ban-

abandoned. At the S.W. extremity of the province lies Cape St. Vincent, memorable for the victory won over a Spanish fleet, by Admiral Sir John Jervis, afterwards Lord St. Vincent. Feb. 14, 1797. The coast people are considered the best sailors in Portugal, and most of the Lisbon boatmen are natives of Algiers. Pop. of prov. in 1835, 135,260.

ALGATOCIN is a town in Spain in Andalusia, prov. of and 40 m. W. by S. from Malaga, on a skirt of the Sierra Tajo de la Cruz. It has a small square, and several narrow streets, and unpaved streets. A parish church towards prison, school, and a fine fountain. The inhabitants are engaged in agriculture and feeding cattle, and in manufacturing soap, brandy and oil. Pop. 1848—(Madrid).

ALGAYADA, in Spain, Isl. Majorca, 13 m. E. by S. Palma, on a rising ground, irregularly built and ill paved. It has a parish church, two schools, a customary public prison, and a custom-house. Manufactures—Brandy flour and iron. The neighbourhood is extremely fertile, producing corn wine, figs, and other fruit which are sent to the markets of Palma. Pop. 2680.

ALGERIRAS, or **ALGERIAH** [The Island] is a town and seaport Spain, in Andalusia, prov. Cadix, on the W. side of Bay of Gibraltar 7 m. N.W. Point Europa, and 54 m. S.E. Cadix in lat. (moh.) 36° 5' N. and lon. 6° 4' W. (m.) The modern town occupies an acclivity rising pretty rapidly from the sea, opposite the Isla Verde on which stood the older town once so strong as to be considered the key of Spain, but now little but or than a mere ruin. Algiers has no walls, but is detached by a fort on a neighbouring hill. It is well built with wide, broad, and clean streets and has three squares, one of which, at the top of the town is elevated 250 ft. above the sea and is very handsome planted with trees and, in the centre, it has a large ornamental fountain plentifully supplied with water. Another of the squares is used as a market place, and occasionally also as a bull ring. The public buildings and establishments comprise two churches, one of which is handsome, and of modern construction. There is a well-endowed charity school, which breeds as well as educates upwards of 10-12 children a town and countess, a military hospital with 150 beds, a civil hospital and foundling asylum in the same building, cavalry and infantry barracks, a theatre, large prison, and an agreeable almshouse, bull ring, and company or burial ground outside the town. The public fountains are supplied by means of a fine modern aqueduct, which conveys the water from springs on the neighbouring hills, over a double series of arches, about 6 furlongs in length, rising 45 ft. above the small river Mel. The town is well supplied with meat coffee and hotels, and the warehouses are elegant. A recent German traveller says the people are venal and licentious their character being much deteriorated by the excessive amassing transactions carried on from this port. The employment of the inhabitants is divided between navigation and trade. Algiers has considerable manufactures of coarse linen cloth and cotton fabrics, sombreros hats, gloves brown and stained paper and playing cards copper utensils, earthenware and tiles with four corners richly employed in preparing Morocco leather or its supports of coarse charcoal leather rough and prepared cork, tiles, and sweet potatoes, principally to Cadix and Malaga, and provisions to Ceuta, averaging as yearly value about £60,449 while it receives, chiefly for its own consumption, corn wine oil cloth colonial produce, and other articles, including brandy obtained by barter from the rural inhabitants of the interior the whole annually valued at £40,256. The average number of vessels, mostly engaged in the coasting trade, that annually leave the port is 504, on aggregate tonnage of 11,238 tons and of those that enter 572 of an aggregate tonnage of 16,378 tons. The port is not approachable by vessels drawing more than 12 ft. water. The mole is situated about ½ m. N.W. the Isla Verde, and runs out seaward; the small river Mel debouching southward, and capable of receiving small vessels at high water. Shoals and rocks render the navigation difficult in making Algiers. There is also a small dock-yard. Algiers, which was built by the Moors, and taken from them by Alonso X. in 1344 after a 10 months siege, is memorable in British naval history as the scene of a gallant victory achieved, June 8 1801 by Admiral Gantheaume, over the combined French and Spanish fleet. It is thought by some to have been the Carthage of Roman geography and the

Alcivara of the Phoenicians, celebrated for its long-lived king Argemone but this is a mistake, as an amphitheatre and other ruins of the Carthage, sacked by Scipio Africanus, A.C. 171 are still to be seen at El Romullo, between Algiers and Gibraltar. Pop. 11,000.—(Madox; Ford's *Spain—Scenic Directions*, Wilkinson's *Spain* & *Spain*).

ALGEMESI is a town, prov. of and 30 m. S. by W. from Valencia, on the W. bank of the Júcar, having spacious and regular streets, with four wall-built squares, a handsome church, and some chapels, three schools, a small townhall, several convents, and an hospital. The people are employed chiefly in grinding oil wheat, and rice, in distilling brandy and in rearing the silkworms, which are fed on the leaves of the mulberry trees grown in the vicinity. Pop. 4,000.

ALGERIA or **ALGERIE**, a territory of N. Africa, once the Turkish regency or pash. of Algiers, but, since 1830 a French colonial prov. Bounded N. by the Mediterranean Sea, E. by the regency of Tunis, S. by the great Sahara desert, and W. by the empire of Morocco. It is separated from the latter by the straits of Gibraltar, and is bounded by the sea on the N. and W. and 40 E. and between 37° N. lat. seaward, and an irregular line is a stretch as far as the 32° 22' N. parallel its greatest length from E. to W. is about 600 m. its greatest breadth about 350 m. and its superficial area has been vaguely estimated at 40,000 sq. m. much of which however is only nominally under the dominion of the French. The country under the Turks, was divided into the four provinces of Algiers, Oran, Constantine, and Tunis; but since 1843 S. of French has completed it within the three of the first named. Algeria is subdivided into six departments, the chief towns in which are Algiers, Oran, Médéah, Annaba, Mila, and Orléansville, Oran into five the chief towns being Oran, Mascara, Montegem, Nid-el-Ahles, and Tlemcen, and Constantine into four the chief places of which are Constantine, Bona, Retif, and Batna. The zone or stripe of cold water land lying between the mountains and the sea is called the Tell. It is 150 m. in breadth from N. to S. the western end of Oran and Tlemcen, to 120 m. in the province of Constantine.

Mountains *Plateau*, &c.—The Algerian territory is mountainous, consisting principally of the ridges or slopes of Mount Atlas, which runs throughout Algeria, enclosing several plains and valleys, sloping towards the Mediterranean Sea. The principal of these are the W. mountains, in the province of Oran, and the Jura, S. E. of Algiers, both of which are capped with snow in winter the chain of the lesser Atlas, which terminates W. of Bone, being the extreme slope of the last longitudinal terrace of the N. Atlas. A few peaks of the greater Atlas rise between 9000 and 10,000 ft. whereas the highest peak in the lesser Atlas, Mount Gensera, is only 6900 ft. Several low plains lie between the lesser Atlas and the coast, the longest being that of Blida, or Bledja, S. of Algiers, it is nearly 44 m. long and 16 broad and rises towards the Atlas range from a sandy flat covered with grass and brushwood, to the beautiful green slopes of the mountain diversified by meadows, fields, and woods, closely resembling the scenery of Europe. S. W. of Oran is a sandy plain, which becomes a kind of salt marsh in winter. In the S. province are some rich and fertile tracts watered by the Illima, or Hachema, the coast line which is about 600 m. in length consists nearly of an uninterrupted succession of cliffs.

Rivers *Lake* *Marshes*—None of the rivers of Algeria, most of which flow into the Mediterranean, are navigable for any great distance above their embouchure. The country is everywhere intersected by water courses, which, although dry for a part of the year being down, during the rains a quantity of water which floods and fertilizes the plains. These streams are divided by the Atlas range into those which flow N. to the Mediterranean, and those that run S. and are lost to the lakes, swamps, or sands of the Sahara. One of the principal rivers is the Shelif which rises on the S. of the Jebel Wanshera from a number of sources, called The 70 fountains, and, flowing first E. and then N., in the course of which it forms the lake and swamp of Tixerit, falls into the Mediterranean 80 m. N. E. Oran. Another considerable stream is the Adas, which receives during its course various other appellations, past N. E. along the S. base of the Jebel Jura, and, after being joined by a pretty large affluent, called the Abjaly about 16 m. from the sea, falls into the latter a little to the E. of Cape Carthage. The eastern streams, worth naming that fall into the Mediterranean are the Seba, the

Kible, the Liser and the Wedjer. There are besides, various small rivers that discharge their waters into the swamp of Al-Rhoth and the large united streams of the Aghed and the Abiad are lost in the salt marsh of Molgey.

Geological Features.—The primary formations which are found chiefly on the ranges of Mount Atlas, comprise gneiss, and aneasites solid with smaller patches of granite. The secondary rocks consist of bas and calcareous beds, containing few organic remains; and those of the tertiary period are chiefly of a yellow gray limestone, or sand and tertiary clay enclosing beds of gypsum, iron and salt. It had long been supposed that Algeria had no volcanic rocks but trachytes is found at Oran; and at Calla, as well as elsewhere, are distinct traces of ancient volcanoes. As regards mineral products, iron is met abundant especially in the province of Oran. Copper is found also in considerable quantities and there are rich lead mines in the Jebel Wanezkere and near Mascara, which are said to yield 80 per cent of pure metal. Cobalt also, is wrought in small quantities and there are extensive quarries of nitre, salt, talc and potter's clay. Salt and thermal springs are numerous.

Climate.—The climate of Algeria, on the table lands of the lesser Atlas is salubrious and temperate, being unhealthy only near the marshy plains or on the coasts at the outlets of flooded valleys. The average annual temperature may be stated at 50° or 55° Fahr. but, during the hot season it frequently rises to 100°; and during the cool season, it falls as low as 30°. The barometer varies but little amidst all the changes of the weather and the annual average fall of rain at Algiers may amount to 28 inches. The prevailing winds are N varying from due N to N E, and N W which materially temper the character of the climate. At certain seasons the khamsin or hot wind of the Sahara, blows for a few days in succession, considerably increasing the temperature, and even blighting vegetation. It also injures the human constitution, the dust with which it is charged producing ophthalmia. The Tell of Algeria, however, is greatly sheltered by the elevated ridge of the greater Atlas and even the sandy Sahara contains many verdant spots refreshed by the winter rains and well protected from the scorching blast of the desert. The mild season begins in March and ends in June the heats lasting from July to November and the rains from December to February. At the base of the Atlas chain the trees are evergreen, except in December, and by February vegetation is in full vigor; the harvest being ripe in May.

Vegetable Productions and Cultivation.—When duly irrigated, the soil of Algeria is as fertile as in the S. territories of Europe. Many of the hills are clothed with wood to the summit, the forests forming indeed, a chief portion of the natural wealth of the country. Down to the year 1841 the French authorities were but imperfectly aware of their extent or value since which, nearly 200,000 square acres have been appropriated for the benefit of the state besides what had been previously ascertained and turned to account and, in 1845, a head inspector and 67 officers, were employed in the Algerian woods. The custom of firing undergrowth, in order to enrich the pasture grounds, has denuded many hitherto thickly wooded tracts of their finest timber. The fig tree, of which there are numerous varieties, is a native of the country and in some districts is cultivated to a great extent. The pomegranates are abundant, and when covered with its scarlet flowers, is a most beautiful object. From the fruit of the jujube tree, which is very common an agreeable kind of cider is made. The orange and lemon groves are very extensive and have a splendid appearance, particularly in April when they are covered with both flowers and fruit. The tree is generally about 30 ft. in height. The carob or locust tree, is found wild on the hills; its wood is considered unpalatable, and the fruit is sold in the shops. Cherry trees are also met with in the wild state. The date palm is cultivated in the interior of the country only. The black mulberry and wild olive trees are the largest in the country and the latter is amongst the most common, especially in the vicinity of Algiers. Vines are grown in several places, from the produce of which good wines are made but the culture of the grape is not extending, the French colonists being unwilling to run the risk of planting, as the vine does not yield fruit for three years. The principal cereal crops are barley and red wheat the former cut in May and the latter in June.

A little rye is also cultivated by the French colonists. In reaping the corn, the ear only is cut off, the straw being left for the cattle. There is no preparatory tillage of the ground before sowing the grain is thrown on the ground and ploughed in by a very simple plough, drawn by oxen or horses, and sometimes by a horse and a cow yoked together. The furrows run in all directions, and, by their frequently crossing one another leave numerous small triangular spaces unploughed. The sowing season has been tried, but without success, owing to the winter frost. With indigo and cochineal the result has been more favourable. Tobacco has been tried and with such success as to lead to the hope that it may become a staple article of produce. But one of the most useful vegetable productions of the country is the dwarf palm, which covers large districts. Its leaves are made into baskets, cords, fans, mats, sleeping mats &c and the tender foot stalks of the leaves, and the young flowers, form a principal article of food for the Arabs. The culinary vegetables comprise peas, beans, potatoes, artichokes, onions, scarlet lettuce, gourd, cucumbers, parley, leek, sweet savory, chervil, fennel, mint, marjoram, &c. all of which are in great demand. The flora of Algeria is nearly identical with that of the N. of Spain and of Andalusia in particular (*Mag. Nat. Hist.* No. 24.) The French Government has done much to improve the agriculture of the country and early established a model garden, orchard, and nursery at Algiers, which has now several dependent establishments in other parts.

Zoology.—Besides the animals common to the opposite S. regions of Europe, the lion, leopard jackal and hyena, are occasionally seen in the fastnesses of the upper Atlas. There are also antelopes, jerboas, &c and a few man k. w near the Sahara, vultures and ostriches are met with. There are some chameleons and a few scorpions and serpents, but most of the latter are harmless. Locusts occasionally visit the country and are sometimes destructive to the harvests. The coasts abound with fish including fine tunny.

Notes (population).—The indigenous population comprises Kabyles, Moors, Arabs, Turks, Kolongas, and Jews. The Kabyles (called also Berbers) form nearly a half of the whole they inhabit the mountainous lying towards the desert of Sahara where they live in small villages. They are still free, well formed, and possessed of great powers of endurance but they are mostly robbers, cruel and faithless, yet practising hospitality. And are a tenacious adherents to their customs, though much in hunting in which they exhibit much boldness and dexterity. The mountain shepherds dwell in caves, like the ancient Tru-Jodytes. The Berbers however are the most ancient inhabitants of N Africa. The Moors are a barbarous race, formed by the intermixture of various races, the majority of their ancestors being invaders or immigrants from Morocco or other parts of the W. Indeed, men even of Arab blood are sometimes called Moors, if dwelling in towns whilst pure Arabs, on the other hand who live in tents, are called Bedouins. The latter are tall and muscular with spirited handsome countenances, large piercing black eyes, aquiline noses, regular white teeth, full strong beards, and black hair. The complexion of the people northward is light brown darkening southward till at last it is black though without the negro physiognomy which first shows itself in Soudan. The Arabs are a more or less nomadic race dwelling in tents or in bodies of from 10 or 12 to 100 families, every family under a sheikh, who is at once priest, legislator and judge. They constantly war and in the most savage manner either with the Berbers, each other or the French, that being their regular business, and most of their income plunder. They universally hate Christians, but are not less dissembling than the Moors and Berbers, their hospitality being never available to Christians, except within their little encampments. The Arabs are originally Asiatics, and have preserved their distinctive habits for perhaps 80 centuries; but it is probable that, at one period they have greatly intermixed with the Berbers. The Turks, contrary to three centuries masters in the land have dwindled to a handful since the French conquest. The Kolongas, or children of soldiers are a mixed race, from Turkish men and Moorish women. There are likewise many Jews, especially in Algiers and Oran, and carrying on a considerable foreign trade. Although treated with contempt by the Moors previous to the French occupation without protection for property or even life, and obliged to live in

separate quarter apart from the other inhabitants, they were the organs of nearly all the business of the country. Their treatment by the French, however, has been much ameliorated, and their habits and creed are held in respect. The nature of the religion of the Kabyles is nearly unknown. But Islamism is the creed of all the other native races, except the Jews. The general language of the country is Arabic, substituted by foreign words and others from the Berber or Kabyle dialect.

Population.—The population amounted in 1863 to 3,067,124, of whom 194,542 were Europeans and of these 106,820 were natives of France. The native population of the three provinces was taken in 1861 as follows:—

Provinces.	Men.	Women.	Children.	Total.
Algiers.	223,885	223,416	571,867	969,168
Oran.	26,68	26,766	124,911	188,365
Constantine.	24,650	24,697	4,9704	1,039,071
Total.	715,261	714,130	865,402	2,844,800

The population of Algeria, the capital in 1861 was 46,678 of Constantine, 30,339, and of Oran 37,918.

The rate of increase of the European population may be gathered from the following figures:—

Year.	Pop.	Year.	Pop.
1831	2,329	1861	121,822
1846	14,561	1860	149,110
1861	25,72	1861	192,748
1866	100,400	1866	204,678

Religion and Education.—In 1845 there were 12,000 K. each in Algeria having 4 churches and 28 chapels with a bishop and 50 priests performing religious duty not only in churches and chapels but also in the hospitals and prisons. The Protestants, also have consistory at Algiers and Oran. By the census of 1861 the 2 religions of the population according to religious profession were these:—

Roman Catholics.	2,652,100	Jews.	8,007
Protestants.	6,361	Muslims.	2,841

The public education is under an inspector appointed by the French Minister. Colleges at Algiers has 15 professors, who give instruction in Arabic and French as well as mathematical and practical sciences, to about 160 students. Oran, Bona, Philippeville and Bougie, have also their respective schools, attended by about 16,000 pupils, of whom three-fourths are European, and one-sixth Jews and in all the leading towns are communal and primary schools. The ignorance of the natives, however, is deplorable and hitherto, owing partly to idol, now, partly to religious prejudice, they have rejected all attempts at their mental improvement. Algeria has likewise a theol. school and a college for Arabs of high rank. Bona, also, of an oral orders, have formed schools for the natives in various districts.

Trade, Manufactures, &c.—The trade of Algeria continued for many years in a very backward state, and the exports though increasing in amount and value, are still far below the imports. From 1830 to 1840 the value of the exports to France amounted to £20,000 to £125,000 annually. In 1850 they nearly reached £300,000; but by 1855 they had increased fivefold. In 1860 they amounted to £2,000,000 to France alone, and upwards of £3,000,000 to all countries. The principal articles of export are corn, tobacco, oil, cattle, fruit, vegetables, and minerals.

The value of the imports amounted in 1855 to £4,218,080 in 1858 to £4,390,278, and in 1861 to £8,758,638.

Tobacco, grown in the country is an important article of export, and in 1858 there were in the provinces of Algiers, Constantine, and Oran 3777 plantations of this vegetable. The produce of this article in 1855 was valued at £ 866,000 lbs. In the first half of this year 8,464,037 lbs. were exported to Marseilles alone. The Algerian tobacco excels that of Egypt, Macedonia, and Greece and approaches in flavour that of Hungary and Maryland.

The produce of silk has likewise increased greatly. In the province of Algiers in 1850 there were only 89 cultivators of the silk worm, but in 1853 they had increased to 836 producing a total of 31,000 lbs. cocoons of excellent quality. Algerian mulberry also, in much esteemed, being reckoned equal to that produced in Cyprus.

The cultivation of cotton, long only attempted in limited

experiments, increased tenfold in 1853, and produces important results and the dwarf palm (*Chamaerops humilis*) once almost a scourge to the agriculturists, is now likely to become a most important vegetable product, in consequence of recent researches having shown its fibre to be suited for various economical purposes.

The exports of wool a staple Algerian product, rose from 1737 760 lbs. in 1853 to 9,570,878 lbs. in 1858. In the same year argemone seed to the value of £28,714, was exported and the produce of the white mulberry in increased considerably. The coral fisheries employ 166 vessels, obtaining on the average 586 lbs. coral each—value about 28s. per lb.

The principal imports are cotton, woolen and silk goods and refined sugar. A ready sale is always found among the natives for calicoes of all descriptions ordinary manufactured stuffs, common cloths muslin turbans, silk and woolen girdles cotton thread coral for chaplets and necklaces, anti-mony for dyeing the eyebrows English dyewoods, apices spectacles, hardware goods arms, carbines, tea, mirrors, glass ware (including beads and rings) and Spanish pastries, the latter exchangeable in the Soudan for their weight in gold. The manufactures of Algeria are exceedingly backward owing alike to the indolence and ignorance of the natives. They take the higher branches of handicraft, as jewellery watch-making, tailoring &c. the Arabs are employed principally as carpenters and masons. A negroes act as masons bricklayers &c. and the Kabyles manufacture gunpowder and work in the iron, lead and copper mines. The chief manufactures comprise linen woolen and silk fabrics saddlery carpets firearms hardware goods coarse pottery and gunpowder.

Means of Communication.—The roads are poor and the coast, were exceedingly defective. Indeed, there was not a regularly fixed road in the whole territory. It appeared however by the documents accompanying the French general budget of 1843 that the Government engineers had completed up to the close of the 15th year of occupation, 4000 m. of substantial roadway much of which was effected by the enforced labour of soldiers under penalty for infractions of law and discipline. Since the above date, many new lines have been formed with several posts in outlying districts, at medium intervals of 50 miles.

Government.—Algeria which is divided into the three provinces of Algiers, Oran, and Constantine, was before 1830 under a Turkish dey or pasha of absolute authority elected by and ruling over the army but it is now under the supreme power of a governor general appointed by the French Government and under him are a secretary and intendant, the latter of whom is termed the director of Arabian affairs. The governor occupies also the post of commander-in-chief. There is likewise a council of management composed of three members, the director of the Interior, the naval commandant, military intendant, attorney-general and director of finances nominated by the Government who advise upon and confirm the acts of the governor-general. There is also a council (*conseil des contentieux*), formed of a president and four other members who take cognizance of minor criminal and civil offences. Each province has its own governor and military commander and is further subdivided with a separate civil and military official for each subdivision. The native tribes possess an organization of their own, at the head of which are the respective chiefs, with their several subordinate officers, all being at the same time subject to the supreme authority of the imperial Government, administered by a special department of the central administration under the governor-general. All the civil provinces, besides, have their mayors, justices of peace, and commissioners of police. In Algiers, also, there is a tribunal of commerce. The pecuniary cost to France of Algeria as a dependency has been very diversely estimated. By a reference to the French budgets for recent years we find a total average average expenditure on account of this important possession of fully £1,200,000 annually. In 1858 the sum allocated for public works (civil) alone was £242,800 being an augmentation in that item for the previous year of about £24,000. On the other hand while the value of Algerian produce exported to France in 1853 was but £250,000 in 1853 it amounted in value to £440,000—an increase of 206 per cent. Much of the money spent in the treasury is necessarily placed at the disposition of the

military authorities, the army of occupation being so numerous, and is entered under various heads in the special budget of the French war department.

Military Force.—Under the Turks the day maintained a force of 10,000 infantry and 6,000 cavalry, which latter consisted chiefly of Arabs and Kabyles. The military force kept up by the French comprises about 70,000 men, one-third of whom are natives and the principal military posts are at Algiers, Bona, Calla, Guelma, Mers-el-Kharir and Mascara, besides which there are garrisons of French troops, to oversee the natives, in all the larger towns.

History.—The country now called Algeria, says the *Cheriff de Tapis* in his excellent work, *Statistique Morale de la France et de l'Angleterre*, after having reached an extraordinary degree of prosperity and greatness under the Carthaginians for 700 years and again under the Romans for 600 fell afterwards into the power of the Vandals and after these came the Arabs. These last, newly converted to Mahometanism, and commanded by skilful leaders had formed, in 1038 a vast empire which in the sequel, was broken up into petty monarchies, and then the province of Algeria made part of the kingdom of Tunis and of Tlemcen.

In after days, the brothers Moody and Kaid-ed-din noted corsairs who were the terror of mariners, aided by a band of Turkish pirates established themselves as sovereign masters of the city of Algiers and, from that time (a. n. 1506) it became the seat of Barbary piracy and so continued for more than three centuries to the disgrace of all Christian nations.

The Turkish military at no time exceeded a total of from 13,000 to 18,000 in the region of Algiers at all times they dwelt apart, as an alien caste, disdaining to intermarry among the people of the country. It is collective body above a people, who in his turn appointed six subordinates, called *beys*, who administered the affairs of the provinces. In his name all natives were excluded from superior military, political and administrative functions. Finally an auxiliary corps of Arabians, about 6,000 strong, completed this system of armed compression, organised by the successors of the pirate brothers.

In the city of Algiers alone, in the year 1776 it was ascertained that there were 25,000 Christian slaves held in rigorous bondage. Several powers of Christendom had in vain endeavored to extirpate these pirates for no sooner were the hostile squadrons sent to chastise them drawn off than they recommenced their depredations. Finally it was in an attempt to subdue them by force of arms, the Christian powers gradually adopted the less troublesome expedient of paying a regular tribute to the pasha (now called *dey*) of Algiers, to enable their subjects to traverse the European seas in peace.

Matters remained in this state till 1666 when Admiral Blake, by a well-administered assault taught the Algerines for the first time to entertain a due respect for the British flag and he was followed about half a century later by Admiral Matthews, who compelled them to submit to humiliating terms and to pay a heavy fine. These people, however, continued to a much later period to be the terror of the Dutch, Danes, Swedes, Italians, and even Russians hundreds of whose sailors these pirates captured and sold into slavery. In 1815 the Americans captured an Algerine frigate, and compelled the *dey* to renounce all extortion and to pay an indemnity of \$60,000. But to Lord Exmouth and the British fleet was reserved the honour of effecting the entire abolition of Christian slavery in the Barbary states. This was accomplished, July 26, 1816, by the capture of the town and port of Algiers, with 13 English and 8 Dutch ships, when the fleet and arsenal of the Algerines was utterly annihilated and the liberation of 1,000 captives effected together with the repayment of ransom to Sicily and Sardinia amounting to \$337,500. Besides this the *dey* was compelled to sign a treaty by which the practice of enslaving Christians was abolished. Five years after this period an treaty offered by Hussein Pasha, the last *dey* to the French consul, whom he struck in a moment of irritation, induced the Government of France to send an expedition against Algiers. This armament consisted of 103 vessels of war great and small with 500 transports in which were embarked 24,184 soldiers. The vessels contained a vast amount of materiel, and abundance of stores for the troops, and fodder for their horses. General Bournonville was chosen to command the army. Admiral Duperrey the fleet, Capt. Haguenot the navy

All set sail from London May 26 1830, they shortly afterwards touched at Palma, in Majorca, where they remained a few days, and arrived June 18 on the coast of the Algerian territory. On the 14th the troops landed at St. Eustache, 15 m. W. from the city of Algiers. After some fighting which the French had always the advantage, Algiers opened its gates July 12, when the *dey* gave up his city government and treasure the latter estimated at 45,000,000 francs, nearly 22,000,000 sterling—exclusive, it may be added of what was taken away privately or hidden from the French.

The following statement of the spoil taken from the Algerines at the conquest is from the *Statistique Française Universelle*—

	Francs.	£
In coined money and precious metals	45,000,000	1,814,400
Other stored, paid property including wool	1,000,000	120,000
Brown cannon, artillery &c	4,000,000	160,000
	50,000,000	2,094,400

The war expenses of the 1 year on January 1831 had amounted to 25,000,000 francs (\$395,000) not including those of the subsequent 6 months, which amounted to about 23,000,000 francs (\$310,000) making a total outlay of about 48,000,000 francs or £1,914,000. A few years after the nominal conquest of Algeria—for it was little else, in reality for many years subsequent to that event—a formidable enemy to the French arose in the person of Abd-el Kader the Bey of Mascara who placing himself at the head of all the *tribes* of the W. part of the country kept the French at bay for upwards of 14 years—now defeating them, and now himself discomfited—but still keeping the field & appearing after each defeat but the more vigorous for the reverse.

In 1845 and during this protracted warfare between Abd-el Kader and the French the latter barbarously destroyed 400 or 600 Moors, by suffocating them with smoke in the cavern of Dahra in which they had taken refuge. In retaliation of this dreadful atrocity Abd-el Kader in the following year sent to death 300 French prisoners. Latterly the war in Algeria had been carried on by the French against the person of Abd-el Kader alone who now resided entirely in the mountainous tracts of Morocco. Here, hemmed in by the French and by the forces of the Emperor of Morocco who was in the French interest, and exhausted by numerous reverses Abd-el Kader at length surrendered (Dec 22 1847) to the French General Lamoriciere, and thus terminated the war leaving the conquerors in quiet possession of their conquest, and at full liberty and leisure to follow out those plans for the civilization and general improvement of the country which they seem to have earnestly entertained. An extraordinary rising, however, among the Kabyle tribes in 1854 obliged the rulers to have recourse again to armed force after a struggle of some months duration the movement was suppressed and order or the appearance of it restored. In the spring of 1855 the province was visited by the Emperor Napoleon, with the purpose of establishing the pacification of the tribes and devising such measures for the development of its resources as a personal inspection of the country should suggest. One important proceeding in this direction is manifested in the form of geographical inquiry in which the French have been at once extremely zealous and successful. Through the exertions and ability of their engineers, we are every day becoming better and better acquainted with Algeria—a territory of which comparatively little was known before. Since their acquisition of the country the French have published a map of it remarkable for its accuracy they have also surveyed the Bay of Algiers and Bona, and the entire coast line from the former to Cape Spinal a distance of about 500 m. Other maps are now in progress, based on a triangulation made by French officers, so that there can be little doubt that our geographical knowledge of the portion of Africa will soon be very complete, and greatly surpassing that of any other part of that continent. Hitherto, if a investigation of the French have been far the most part, limited to the territory of Algeria, and to the more northern parts of the Sahara, but it is probable that the latter will ultimately attract a large share of their attention and lead to disclosures regarding that unknown region of great interest and importance.—(*Hist. Pictorial de l'Afrique Française*, pp. 143-195. *Voyages Nouveaux en Afrique* vol. i. pp. 131-160. *Quelques Grands des Voyages en Algérie*, passim, &c.)

ALGEZARES, a to Spain prov of and 4 m. S. from *Madrid*, on the side of a ridge 6 m. S.W. *Monte Cabeco Gordo* tolerably built, and having a parish church, chapel, and endowed school. The inhabitants are chiefly engaged in agriculture, and raise grain, fruits and vegetables, which they export to *Gibraltar*. Pop. including the families of *Garcos* and *Raga*, added in 1886 to this town 2117 (Malaga).

ALGEZIRAH or **AL-GEZIRAH**, a district, Asiatic Turkey comprehending the N.W. and greater portion of the ancient *Myrcenopolis*—the country between the rivers, with which the modern appellation nearly corresponds in meaning. This district is slightly elevated above the sea, traversed by chains of hills, well watered and fertile and possesses mines of precious metals.

AL-GEZIRAH, or **AL-GEZIRAH**, a small in Portugal, W coast, prov. *Algarve*, at the mouth of the small river of same name 28 m. N.N.E. *Cape St. Vincent*. It has a church, and an ancient castle, represented in the arms of Portugal. Pop. 1785.

ALGHA or **ATONA**, one of the *Aleutian Islands*, nearly in the centre of that chain; lat. 51° 30' N. lon. 174° W.

ALGHERO or **ALGHERI**, a town and seaport on the W. side of the *Is. of Sardinia*, gov. of and 15 m. S.W. from *Rosario*. Its cathedral 40° 55' 30" N. lon. 8° 15' E. (A.) It is well fortified, especially towards the sea, but is commanded by two eminences in the vicinity. The port is insignificant, and capable of admitting very small craft only, but at the distance of 7 m. a P. to *Genoa* the best, safest, and most commodious harbour in the island. The town is the seat of a *biel up*, suffragan to the *Archbishop of Sassari*, and possesses a handsome cathedral, several convents, and a college. The air is salubrious, and the neighbouring lands fertile. In 1804 the cultivation of indigo was introduced with tolerable success. *Alghero* has a considerable trade in grain, wine, oil, grapes, skins, better olives, tobacco and coral. The town is supposed to have been founded by a colony of *Barcelonians*. Pop. 7000.

ALGIERES (Arabic, *Al Djazaïr*—The islands) a seaport and city N.W. Africa, on the W. side of a bay of the same name, on the *Mediterranean Sea*, lat. 36° 47' 18" N. lon. 3° 4' 30" E. (A.) It was once the capital of the regency or *paish* of the same name, long exclusively dependent on the *Ottoman empire*, but, since 1831, has been the capital of the French colonial prov. of *Algeria*. It is built on the N. slope of *Mont Bouzar*, which rises about 500 ft. above the bay, and the houses are arranged amphitheatrically, terminating in the most elevated part at the *Alcazar* or old citadel.

A STREET IN ALGIERES.—From Bouzar, Algeria.

It is wholly enclosed by an embattled wall 12 ft. thick and 30 ft. high, the strength of which is vainly increased by four castles, and numerous batteries, and it is entered by five gates, two of which are seaward two landward, and one leading to the citadel. The external aspect of the city is exceedingly imposing, owing not only to its form and position

but also to the dazzling whiteness of its houses, which are visible at a great distance. A terrace, named the *Boulevard de l'Impératrice*, and raised upon lofty arches, extends along the sea-front of the city from the entrance of the naval port to the *Rab-Asoun* fort, in the southern part of the city and has a very fine appearance. It has been erected by an English

ALGIERES, THE GRAND MOSQUE.—From Bouzar, Algeria.

firm under very favourable terms with the Imperial government. The streets of the city are mostly narrow tortuous, and extremely dirty as in all Moorish towns, but there have been recently constructed to connect the principal quarters of the town, three long thoroughfares, which are tolerably wide, and comprise the principal bazars and markets. These improve means are constantly progressing, and *Algers*, which has already three well-built open squares, bids fair to have its character wholly changed and to be one of the handsomest cities on the *Mediterranean*. The houses, whether of stone or brick, are annually whitewashed, and are seldom built of more than one story above the basement, each tenement being flat roofed and provided with a tank at the top, to catch the rain-water, besides which there are numerous fountains, supplying an abundance of water from the aqueducts and reservoirs above the town. In the *Rab-Asoun*, which is a broad street leading from the *Rab-Asoun* suburb to that of *Rab-el-Orad*, some of the modern houses have been built with five stories, an ill-judged arrangement in a country liable to earthquakes, one of which in 1817 overthrew a great part of the town. Among the public buildings and establishments, are 10 large mosques, a handsome cathedral, several R. Catholic churches, a Protestant chapel and some Jewish synagogues, six colleges and some convents used as girls' schools, a Government house, exchange, bank, four courts of justice, a *Ministry*'s palace, public library and museum, observatory, several hospitals, and most extensive barracks for cavalry and infantry. The palace of the French governor, a Moorish building stands in the centre of the city in the *Place Malakoff*, and adjoins the cathedral of St. Philip, and near it are the residences of the civil and military officials of the government. There are likewise several handsome hotels, bazars, and shops. Indeed, *Riv. Grenville Temple's* description is true as well as striking—*Algers* is daily assuming a more European aspect—baths are as often seen as *Arabian* cypresses have replaced the *Argemone* and the Moorish bazars give way to the glazed windows of French shops. Mechanics and tradesmen, including of course, a full proportion of tailors, modistes and *parapluier*, are thickly scattered about. Grand cafés, with billiard tables, large hotels, restaurants and eating-houses, *cafés à la mode*, a circus, *cafés*, *cafés*, &c. have been established and omnibuses and cabriolets fly through the town, and run to and from the suburbs. The *Alcazar* or citadel, now occupied as barracks for the French troops, is a little town of itself, consisting with several other houses and gardens, the late day a palace, which however has suffered much from the French soldiery who, on first occupying it, pulled up the pavement, tore down the glazed ceiling of the rooms, and otherwise committed great injury in their eager search after treasure. The marble flooring the arched galleries supported by graceful marble

pillars, which surrounded the open courts the elegant fountain, which scattered coolness around and the latticed shah-shahs still, however remain to repay the fatigue and trouble of the visitor a scent. The *corps de garde*, with the gate and the *apartments*, banana trees, and vines surrounding it, together with the mixture of French uniforms and Moorish costumes, formed altogether a beautiful little picture. Civilization, likewise, is rapidly extending wide streets, lined with pretty houses and villas, are gradually stretching into the surrounding country; good roads have been constructed in various directions and railways are now in operation, or in course of construction. The country in the neighbourhood is generally highly extremely fertile and beautifully diversified with hills, valleys, groves and villas occupied by opulent residents and many of the higher officers of the government. The houses of the European women in particular and those of others generally stand in grounds adorned with fruit-trees and evergreens of great beauty. The soil produces the choicest fruits, melons ripen in summer and in winter and vines and grapes are of unusual size. Corn also is produced in abundance. The effect of these handsome residences and luxuriant country is to give the place an appearance in the distance of great commercial prosperity and opulence. The Moslem or upper part of the town however has still its narrow dark streets, with square-shaped houses jutting out betraying few signs of internal civilization while the lower town near the water abounds with its alleys, and end-de-see—fit receptacles of filth, disease, profligacy and crime.

The harbour of Algiers a work of immense labour was first formed by Barbarossa in 1530 having a mole 590 ft. in length by 140 in width extending from the mainland to an islet, on which are a strong castle with batteries, and a lighthouse, exhibiting a revolving light. The outer and more recently constructed harbour is formed by a jetty running S. and then S. E. for 766 yards from the S. and of the islet, and by another jetty starting from the Hab-Asson fort, and taking a S. E. by E. direction, and 500 yards, and then S. W. E. for 600 yards more towards the head of the other jetty leaving an entrance 380 yards wide, and inclosing an area of 235 acres; the land is high with a quarantine office upon it is immediately in front of the entrance. A red light is shown from the end of the S. mole and a green light from the E. one.

The commerce of Algiers, which was wholly insignificant in the time of the regency has risen to great importance and it has become the entrepot of four fifths of the trade with France and other European countries as well as with Eubah, Mizenah and other towns of the province. For the imports and exports of the port which are included in those of the province, see ALGERIA. The city comprised according to an account by Quatin 2055 licensed traders (*marchands patentés*) about 800 of whom are bankers and merchants, having well-organized establishments, and doing an extensive business both with the interior and foreign countries. There

were also about 50 official brokers, who divided among them the functions of money shapers, ship-brokers, and sworn interpreters. A discount banking company and insurance company also, have been established and a chamber and tribunal of commerce, formed of 11 members hold audiences three every week to settle commercial disputes, and regulate the proceedings of trade. Intercourse with the interior of the country is also greatly facilitated by the railway which has been opened to Eubah about 25 m. S. W. of Algiers. Steamers ply regularly to Marseilles, Rouen, Cote, Antwerp, and Bremen, and a coasting trade is carried on with Tenez, Dellys, Cherchell, Mostaganem, Mare-el-Kebir, Bougie, and Arzew: so that the range of transactions extends more to the west than to the east. The principal articles of this trade are grain, legumes, oil, wine, wood, tobacco, skins, &c.

The trade turned on by the natives would be quite insignificant but for their connection with the French. The Jews however are pretty actively concerned in retail trade, and carry on some of the higher branches of handicraft. The native manufactures are inconsiderable comprising a few silk and woollen stuffs, hanks, burruses, fuzes, saddlery, trinkets, &c.

In 1862 the total population amounted to 68,315—of whom 47,145 were Europeans, and the remainder natives. The garrison usually amounts to about 9,000 men. [The population of Algiers is now officially estimated 1866 at about 100,000—one half Europeans, the other natives.]

Algiers is thought to occupy the site of the ancient *Icosium*. To its Roman occupants succeeded the Vandals; and to them the Moslem Arab invaders of the 8th century the town itself dating from the 10th century. In 1,010 A.D. Ferdinand the Catholic, the conqueror of the Moors in Spain sent an expedition to seize the island in front of Algiers then held by the Moors, and built a fort upon it. The Moors, thus unmolested called to their aid the pirate Barbarossa, who drove out the Spaniards, but kept both fort and town of which he then became the lord and tyrant off g. at the same time, for his security in this usurpation to become tributary with his fellow corsairs to the Porte of Constantinople. The locality thus secured in impunity became an organ seat of piracy on such a scale as to be an object of terror to all European nations which were either obliged to wage open war with the Algerians or else content to ransom their tributaries. As early as 1541 the emperor Charles V. failed in the first attempt against Algiers. In 1683-4 it was bombarded by the French admiral Duquesne. In 1,775 the Spaniards under O'Reilly were repulsed in an attack upon it. In 1815 the Americans humbled the Algerians as did the British, under Lord Exmouth, the year after. For details of this and more recent portions of its history see ALGERIA.

ALGUA BAY S. Africa, 410 in E by N Cape of Good Hope, dist lat Uitenhage. It is of great extent, but it is only in the W and N E parts of the bay that ships may anchor and find shelter. The points forming the entrance into it are Cape Woody on the N E, and Cape Recife on the S W; the distance between them being 38½ m. The centre of the bay is in lat. 33° 55' S. lon 25° 45' E. It is the only place of resort where a distressed ship could find shelter from the violent N W gales which prevail on the Agulhas Bank. The common anchorage off the landing place is in 6½ or 7 fathoms sandy bottom at the mouth of the Barkana r. or Port Alumbeth (which see). The usual landing-place is on a small beach close to the N of the river just named the mouth of which is generally closed with a dry sandy bar. Water is abundant. Bullocks and sheep good and plentiful and fish may be caught in great quantities. Oysters are also to be had at low water.

ALGONQUALES, a Span Andalusian prov Cadiz 14 m. N W Iznaga, on a slope of the Sierra mountains, and prettily built among groves, having a fine church two endowed schools, several fine fountains, a monastery and a small prison. The people are engaged on olive in tillage, but also in grinding corn and the manufacture of linen soap and capotes where they export oil and fruits, and import weaving apparel and other requisites. Pop 3,340.—(Madoz.)

ALGONQUINA a nation of Canadian Indians who on the first settlement of the Europeans, possessed an extensive

descent along the N bank of the St. Lawrence about 200 m. above Trois Rivières. They were once a powerful tribe, and are of mild aspect and gentle manners. They subsisted naturally by hunting, considering the cultivation of the soil beneath the dignity of man. They were attacked by the Iroquois, and would have been eventually exterminated but for the intervention of the French. The principal tribe of the Algonquian nation at present is the Chippewas, who chiefly reside on the Amnobiab or Kaley Lake, and Prairie du Portage. There is a R. cathol. church in their territory but the exertions of the priests have hitherto had little effect on their morals. They are in the general practice of polygamy and much given to the use of intoxicating liquors. Small patches of land here and there are cultivated in an inefficient way by their women, the men being occupied in fishing and hunting. Like most of the other Indian tribes, the Algonquins are rapidly disappearing, their number now not exceeding 600.

ALBUQUERQUE or **ALBUQUERQUE** in the coast of Mexico forming the N extremity of Gox Bay lat. 16° 29' N. lon. 78° 50' E. It is a level headland of moderate height, with an old lighthouse on it, and a small fort, but the principal fort is situated close to the sea, on the S E side of the headland where is a well of excellent water. The common anchorage is abreast of the fort, in 4½ or 4¾ fathoms at low water. On a bluff headland, between 2 and 3 m. to the S E. of Albuquer, is a large, white monastery which forms an excellent landmark for vessels at night for Gox Bay.

AL-HADHR, an anc. city Asiatic Turkey prov. or pash. Baidar, 100 m. N W by S the city of Haidar and 40 m. S W by S. Mosul lat. 35° 47' N. lon. 43° 35' E. Al Hadhr was the *Hatra* of the Romans and seems to have been deserted after their fall. Laterally even its site was unknown to any excepting the wandering Arabs who frequent the surrounding deserts. In 1836 and 1837 the remains of this city were visited by Mr. Ross, surgeon to the British residency at Bagdad, and subsequently by Mr. Amsewerth Mr. Rassam, and others. It seems to have formed nearly a perfect circle, upwards of 3 m. in circumference, and is completely surrounded by a strong wall now in ruins but still exhibiting the remains of 22 square bastions with portions of the intervening curtains. It had, apparently four gates but of these, the E. alone can be distinctly traced. Exactly in the centre of the town are the remains of the principal building, either a temple or a palace, which consisted of a series of vaulted chambers or halls, of different sizes, all opening to the E. and placed in regular succession from N to S. The whole was enclosed by a wall with bastions like those of the city wall, and forming a square 1380 yards in extent the sides facing the city gates, and apparently connected with them by paved roads. To the E. a canal intersects the city from N to S, and the remainder of the space, on all sides of the central edifice is occupied by the ruins of tombs and other buildings, now chiefly a heap of long mounds and hillocks. Al Hadhr is entirely built of a coarse gray granular limestone abounding with marine shells, and said to have been procured from the Sirhan hills. The stones are well hewn and adjusted, but present no appearance of cement, and such is marked with a character generally a Chaldean letter or numeral.

ALHAMA, a city Spain, Andalusia prov. of, and 26 m. S W from Granada on a promontory of limestone which forms an inclined plane from N to S. The old town is bounded by and E. by a cleft in the rock, at the bottom of which runs the stream Maraban, or as Alhama and is inaccessible except from the S and W on which side are the ruins of an old wall and castle, entered by two gates called Granada and Malaga. The new town stretches to the W. in continuation of the old and, with it, comprises two squares and numerous irregular and mostly steep streets few of which are paved a parish church, three conventual churches, town and court houses, a large prison, three schools, a friendly society an hospital a theatre and the ruins of a Roman theatre of gray and earthenware, distilling brandy manufacturing oil, and weaving grain, fruit, and vegetables. Sheep, goats, pigs, and a few mules, are reared in the vicinity and game abounds. The name Alhama is derived from the

ancient mineral baths, about 3 m. from the town. The principal bath is a Moorish edifice, and is easily to be seen. The smaller is a Roman edifice. The waters among other abundant constituents, contain a large proportion of nitrogen gas; the existence of which was first ascertained by Dr. Deubeny in 1843. They are esteemed useful in cases of rheumatism, dyspepsy and catarrhs affections and are resorted to in the season by the inhabitants of the surrounding towns. The town was taken by the French on February 2 1810; when, in consequence of the resistance offered, a great many of the inhabitants were put to death. Pop. 6384.—(Madox-Widdington's Spain, &c.)

ALHAMBRA, a small river Spain Aragon; which taking its rise in the heights of the sierra de Gular prov. Teruel flows in a N W direction for about 20 m., when it runs S W by S. and unites with the Guadalquivir at Teruel, after a course of about 50 m.—A small rd. of some name is situated on the right bank of the above, 12 m. N Teruel. Pop. 564.—(Madox.)

ALHAMBRA, the name of a celebrated palace in the city of Granada, Spain, erected early in the 13th century by the Moors. See GRANADA.

ALHAMBILLA (SIERRA DE) a chain of hills Spain, in Andalusia prov. of, and about 18 m. N E. from Almería extending from the sierra de Filahne E. to the sierra Segura and S. about 20 m. to Cape Gata, with an elevation at the culminating point, of 1800 ft. above the sea level. Parts of the sierra contain marble, limestone, and granite and some of small veins of copper and oxides of iron. The medicinal baths of Alhambilla are situated on the S. side of the sierra, near the promontory of Cape Gata, facing the sea, within an edifice in the form of a parallelogram and of solid construction. The water contains carbonic acid, oxygen, and nitrogen, carbonate and hydrochlorate of magnesium, lime, and soda. The baths are esteemed efficacious in paralytic epilepsy asthma, and St. Vitus dance, and are much visited in the season.—(Madox.)

ALHAMBRA, a small m. Portugal prov. Estremadura on the right bank of the Tagus, with a safe anchorage, and a ferry 18 m. N E. Lisbon lat. 38° 57' N. lon. 9° 2' W. It has a manufacture of cloth with a number of brick and tile works. Pop. 1080.

ALHABURIN DE LA TORRE, a tn. Spain Andalusia prov. of and 8 m. W from Malaga in a plain N. of the sierra de Mijas. It comprises two squares, and several clean and mostly paved streets a townhouse, prison endowed school and two alcazars. The inhabitants are engaged in sowing the fertile soil of the vicinity and expressing oil, but many are likewise employed in the mines of antimony and lead, and in the quarries of gray and white marble which exist hard by. Pop. 3717.—(Madox.)

ALHABURIN LL GRAND a tn. Spain, Andalusia, prov. of and 20 m. W from Malaga on the N side of the sierra de Mijas, between the river Baidar and the brook Gonzalez. The streets are spacious, well built, and paved. There are four squares, two churches, a townhouse, public store, hospital, prison two schools numerous fountains a cemetery and some remains of an Arab fortification and of a Roman aqueduct. The people are chiefly employed in working the marble, free-stone, and granite quarries, in the vicinity; in agriculture and mule driving. Some are also employed in the lead and antimony mines situated in the adjacent hills. In the neighbourhood, grain fruits, and vegetables, are grown and sheep, goats, pigs, and black cattle reared in all of which a little trade is done. Pop. 5514.

ALHENDIN or **ALHENDIN** a tn. Spain Andalusia, prov. of, and 6 m. S from Granada on the left bank of the Dilar. It has a church townhouse, two schools, a palace, a public store, and a cemetery. The inhabitants are employed in tillage and cattle feeding. In the vicinity grain vegetables, and a little fruit, are grown sheep, goats and cows are fed and game is plentiful. Pop. 3275.

ALI, a small in Sicily prov. of and 15 m. S S W from Mesurina. It has two mineral springs. Pop. 1800.

ALI A a tn. Spain, New Castile prov. Caceres 18 m. S W Logroño, on a gentle slope. It has a parish church town-hall hospital, prison endowed school and public granary. The inhabitants manufacture hemp and linen fabrics and are

much engaged in agriculture, and rearing sheep, goats, and cattle. The productions of the vicinity are grain, fruits, vegetables, honey, wine, and oil. The last three articles are largely exported. Pop. 3122.

ALASKA ALASKA or ALABORA a peninsula on the N.W. coast of America, in the Russian territory between lat. 54 and 56° N. It stretches in a S.W. direction, and is about 700 m. in length. At the N.E. extremity of this peninsula, in about lat. 60° there is an active volcano of 14,000 ft. in height, and at the S.W. end are several cones of great elevation, which have been seen in eruption and which are covered, for two-thirds of their height downwards with perpetual snow. The summit of the loftiest peak is truncated, having fallen in during an eruption in 1786.

ALICANTE (anc. *Lucania*) a city and seaport, Spain, Valencia, cap. prov. of same name, at the head of an extensive bay having Cape St. Vincent at its N.E. extremity and Cape St. Pola on the S. 12 m. apart. It lies in lat. 38° 30' 49" N. lon. 0° 28' W. (a.) at the base of a rocky eminence 400 ft. high, surrounded by a strong castle which overlooks it and commands the bay. It is surrounded by walls entered by four gates in well built but almost all well paved streets, and lofty and substantial stone houses provided with terraces and verandahs at comprises four handsome and spacious squares, with several of smaller extent. The promenade, named the *Paseo de la Reina*, or named with trees and a central fountain and without the gates are two delightful alamedas.

The public edifices consist of two parish churches, one college, etc., of Doric architecture a chapel of ease, large townhouse and public hall, with prison attached, three general hospitals, a military hospital, lyceum in hospital, orphan asylum and house of mercy, a college having a small library, a museum and gallery of pictures by the best Spanish masters. Alicante likewise possesses schools of navigation, agriculture, and botany, economic library and artistic societies and numerous elementary schools, a theatre, several extensive storehouses, public baths and eight fountains, but the water is not good, being impregnated with the salts of magnesia. Manufactures—comparatively insignificant consisting chiefly of export cordage, and making much refined however of late years, owing to the manufactured rushes exported, being sent back in a manufactured state. Government has been a cigar manufactory which employs more than 2200 women and a British company has established, in the neighborhood at the foot of Mount Molinet, works for smelting and refining the ores from the mines of Murcia. Though this city is considered the chief commercial port of Valencia and has many French and English resident merchants its trade has greatly declined of late, in consequence of the high import duties which have given rise to an extensive system of smuggling, committed at even by the authorities. The exports are wine, brandy, oil, soap, salt, wool, silk, linen, esparto, raisins, almonds, figs, and herrings, etc. to the amount of £1,958,838. The imports, linen, cotton, salt, fish, corn, timber and other requisites, to the amount of £3,906,870. The harbor of Alicante, in which there is no perceptible tide, is only a roadstead in a deep bay small vessels alone being able to approach the quay; the mole has been greatly extended, and a fixed light was placed on the mole built in 1844, visible at 15 m. distance. To the S. of this light vessels may anchor in six or eight fathoms. Pop. 19,021—(Madon, *Dictionnaire de Géographie*.)

ALICANTE, a prov. Spain cap. Alicante in the S. of Valencia, and extending a small distance into the E. side of Murcia, bounded, N. by prov. Valencia, N. and N.W. by

Murcia and Alicante, and S. and S.E. by Murcia and the Mediterranean. It is about 73 m. long and 68 m. broad, with an area of 2911 sq. m. The surface of this province is much varied to the N. it is rugged and sterile and chiefly of limestone formation in the S. it is nearly level with rich and fertile valleys, and enjoying a mild and salubrious climate the winters being without severity and the summer heats being tempered by refreshing sea breezes. The mountains are in some parts clothed with pine, cork, roses and holly though generally barren. Along the coast, southward there are many salt marshes the masses arising from which is extremely injurious to health. There are also mineral springs, containing sulphurous ferruginous, and calcareous constituents, in various parts of the province that are much esteemed for their sanatory qualities. The plains and valleys are abundantly fruitful and are well watered, partly by numerous natural streams, and partly by artificial irrigation; the inhabitants being extremely industrious and careful

agriculturists. Wheat, maize, barley, lentils, rice, oats, rye, and sugar cane grapes, olive hemp flax, esparto, bay-lilla, oranges, almonds, dates, and various other tropical fruits and vegetables are extensively cultivated, bees and silk-worms are reared, and carob trees are abundant. The quantity of wines made is considerable, the best are the Tentand, Alouque, Esteun, ed through Spanish the influence made are sent to France to be mixed with thin claret and Medoc wines for the British markets. Cattle-rearing is not much attended to.

ALICANTE—From L. by L. Espagna.

The mineral wealth of Alicante comprises six mines of lead 17 of copper, three of iron and 15 of coal, and several marble quarries on Mount Rolle. The inhabitants are engaged in the manufacture of silk, linen, woolen and cotton fabrics, esparto cordage and mats, hats, earthenware, soap, etc., and in brandy distillation, tanneries, oil and corn mills and many are also employed as cartmen. On the coast are productive fisheries of the tunny anchovy and other fish. Alicante exports agricultural produce, wine, oil, esparto, bay-lilla, brandy, soap, salt, silk and wool and imports linen, cotton, stuffs, tobacco, salt fish, and timber. The state of education is far from satisfactory and owing in great measure, to the extensive smuggling carried on, theft and even murder is frequent. Pop. 803,318—(Madon, *Dictionnaire de Géographie*.)

ALICATA, or **ICATA**, a seaport in Sicily at the mouth of the Salvo river, of lat. 34 m. S. E. from Gela, lon. 87° 4' N. lon. 13° 55' E. (a.) situated on the slope of a rocky hill, and defended by two forts. Its port is shallow and cannot be entered by large vessels, which generally anchor about 1 m. S.W. of the town, where they load. It has, however, a considerable trade in grain, macaroni, pistachio, almonds, sulphur and soda. On Mount Serrata in the vicinity may be seen the ruins of Gela. Pop. 19,480.

ALICE, a lately erected and rising in the extreme E. of Cape Colony division or district Victoria on the left bank of a small affluent of the Orange 41 m. N. E. Graham's Town; about lat. 32° 48' S. lon. 28° 59' E. It is in a fertile district, the population of which is rapidly increasing and has a Free church capable of accommodating a congregation of 3000 opened the end of 1842. About 6 m. N. from Alice lies the missionary station of Tynnes and 4 m. E. that of Lovedale and about 1 m. E. the Lovedale Free Church Educational Seminary.

ALICUDI one of the Luperi Islands off the N. coast of Sicily, lat. 38° 32' 43" N. lon. 14° 18' 30" E. (a.) It is of a conical form, and rises abruptly from the sea. The surface is extremely rugged and barren, and presents many marked indications of its volcanic origin, the traces of the lava streams

which, in former ages, descended from its crater still retaining their sterile and repulsive appearance, although the subterranean fires of the mountains have been so long extinguished that there is no record of any eruption. Every spot capable of producing anything is carefully cultivated, and barley, flax, capes, pulses, and wheat of a peculiar fine quality are produced. The coasts are so rugged that there are only two landing places on the island, and both are a fearful scene in rough weather. The climate is remarkably healthy, hardly any disease being known amongst its inhabitants. Alclud was called *Arconus* and *Erconis* by the Greeks, from the heath which grows on it. Pop. about 260 to 300.

ALIFE (anc. *Alife*) a tn. Naples prov. Terra di Lavoro, 16 m. N. E. Capua, remarkable for its marshy fertility. It is the chief town of a *housa*, united to that of *Cosentino*. Teleso, the bishop of which resides at Piedimonte. It is a place of great antiquity having been a military colony of the Romans. On the fall of the Roman empire, it was burnt by Count Celano, a general of the Emperor Frederick II. It is still surrounded by walls and has a cathedral, three churches, and a *monastery*. Pop. 1645.

ALIGHIERI a district and tn. N. Hindustan prov. Meerut, between the Ganges and Gomti. The N. portion of the district is extremely barren consisting wholly of low dark jungle, with scarcely a single tree, but the S. is fertile, and in good cultivation. The whole superficies is estimated at 135,640 ac. of which 901,400 ac. are under cultivation. The principal towns are Alighur (the capital) Coel Harza, Meerut, and Aunohor. Alighur is situated on the lat. 28° N. and lon. 77° 45' E. about 53 m. N. from the lat. 27° 45' N. and 77° 45' E. Calcutta. More correctly, Alighur is a fortress, the town being Coel distant about 2 m. and connected with Alighur by a beautiful avenue. It was anciently a place of importance, being mentioned as such by Abul Fazel in the *Ayees* *Alberny* and was more recently one of Duple's Fort Minda's principal depôts for military stores. The fort is square, with round bastions at the N. E. and S. E. and a single entrance protected by a strong wall. It was taken, in 1803, by the British forces under Lord Lake, when it was destroyed as added to the British possessions. Since that time the fort has been much improved and the town made the station of a civil and judicial establishment. Pop. of dist. 786,161 — Hamilton's *First India Gaz.* Jan. Stat. Soc. 1847.

ALIKE ISLANDS three small islands in the Strait of Malacca lat. 2° 41' S. lon. 116° 54' E.

ALIMENA, a small tn. Sicily prov. Palermo, district of 23 m. S. from Cefalù. Pop. 386.

ALIMUNAJD a fort. Khyber Pass, Afghanistan, about 5 m. from its E. entrance and so called from a small ruined mosque in its neighborhood. The width of the pass here is about 100 yds. the elevation above the sea 2433 ft. The fort is built on a rock about 600 ft. high, nearly isolated and with almost perpendicular sides. It was the scene of some rather remarkable exploits during the Afghan war. It was taken by the British in July 1859, and, in 1841, was unsuccessfully assailed by the Afghans. In January following, it was evacuated by the British, with a loss of 32 men killed, and 148 wounded, and, in 1842, it was again garrisoned by General Pollock, and on the final evacuation of the country in November of the same year it was entirely destroyed by General Nott.

ALINT LOCH a small arm of the sea, Argyleshire Sound of Mull district of Morven Scotland about 2½ m. long, and ½ m. broad. The sides being steep and covered with wood, give a singularly picturesque appearance to this beautiful inlet. The entrance is narrow and at certain periods of the tide, which runs there with great rapidity somewhat shallow, but it is a well-sheltered harbour and the ground good. There is a kind of bar at the entrance having 12 ft. water and towards the S. only 6 ft. at low water spring tides.

ALINGMAN, or **ALINGMANA**, a small tn. Sweden, län or district of Elingsborg or Wenersborg, pleasantly situated upon the small rivers *Sätra* and *Lidån* near their junction with the Lake *Mjörn* about 30 m. S. W. of Wenersborg. Founded in 1619, it was for some time a place of considerable manufactures in wool, cotton, &c. Some little is still done in the manufacture of cloth and stockings, and in dyeing. Altingman

the father of Swedish manufactures, was a native of Alingman. Pop. 1821 — (Tumald's *Geograph. after Swedia*).

ALIO AMBA, a market tn. Abyssinia kingdom of Shoa, 5271 ft. above the level of the sea, 5 m. E. Ankohe, upon the crest of a steep mountain. It is much frequented by the inhabitants of the adjacent villages who resort to it on stated days to purchase their weekly supplies of necessaries. On these occasions, it is crowded by traders from all quarters, offering their various commodities for sale, provisions, horses, cattle, cloths of all descriptions are exposed, with gay assortments of beads, metals, coloured thread, and glass ware. Every month during the fair season caravans arrive here from Hoosea and Tugora.

ALIL LE, or **ALLARAT**, a small seaport in Hindustan state of Travancore lat. 9° 50' N. lon. 76° 24' E. (*Horsburgh*) 80 m. S. by E. Cochin. It carries on a considerable trade in tank timber, betel nut, nut, and pepper. The land has encroached considerably on the sea here during the last 20 years. Pop. about 12,000.

ALINE, or **BAJNAT-NAKE** (anc. *Alina* a vi France, dep. Côte d'Or 7 m. N. E. Hamus situated at the foot of Mount *Auxois*, near the site of its ancient *Alina*, which was taken and destroyed by Caesar as described in his *Commentaries* (vi. 667). Vestiges of walls, aqueducts, broken tiles, coins, and the like, prove the former existence of the city. At the foot of the ancient citadel (now Mount *Auxois*) stands the modern village of Aline, which has some trade in grain, wheat, &c. In the neighborhood are several iron mines and two coal shafts, the latter of which is worked in a hospital containing 40 beds for patients, was founded in 1778, by three wealthy citizens of Paris. Pop. 776.

ALIWAI, or **ALIYUWAI**, a vi. in the Punjab on the left bank of the Sutlej about 30 m. W. by N. Ludhiana. Formerly a place of no note, it has become celebrated by its name having been given to a great battle fought in its vicinity Jan. 28 1846 between the Sikhs and a British army the former commanded by Sirdhar Runjeet Singh, and the latter by Sir Harry Smith. The Sikh force amounted to 24,000 men and a park of artillery of 68 guns, the British to 12,000 men and 32 guns. The battle, which lasted three hours or from 10 A.M. to 1 P.M., ended in the total defeat of the Sikhs, who lost between 5000 and 6000 men, together with their whole park of artillery.

ALJFZLE **SE** **ALAZERUS**

ALJUBAKROTA, a tn. Portugal prov. Setúbal 15 m. S. W. Lissabon, on the summit of a mountain. It has manufactures of stone ware. In the neighbourhood John I. of Portugal surrounded the Great obtained a signal victory over John I. King of Castile, August 14 1485, when 12,000 Castilians were slain. Camoens, in the fourth canto of the *Lusiad*, minutely describes this battle which, with that of Campo de Ourique established the independence of Portugal. In memory of this victory John the Great founded the church and monastery of Batalha, at some distance from the field of battle and the anniversary of the day is still celebrated by a religious feast. Pop. 1034.

ALJUSTICE, a tn. Portugal prov. Alentejo, 54 m. S. W. Evora, and 77 m. S. E. Lisbon. It is really built, and in the vicinity there is a mineral spring. Pop. 1804.

AL KAHSEKIA, a tn. N. W. part of Morocco, not far from Al Ksar. It is a dull and decaying place, but presents appearances of having been formerly more populous and flourishing than now. It contains a few mean shops, and its only commerce consists in a little trade in salt, procured from the neighbouring hills. Pop. about 8000, of which 500 are Jews.

ALKEKTON, or **ALKEKTON**, a vi. England co. Oxford area, 650 ac. Lydiat, the mathematician, born and buried here. Pop. 190.

AL KHAM a par. England co. Kent area, 3200 ac. 4 m. W. by N. Dover ancient church. Pop. 494.

ALKMAAR (Lat. *Almarum*) an old and important in Holland prov. N. Holland cap. of the arrond. and seat of the same name 20 m. N. N. W. Amsterdam, and about the same distance N. N. E. Haarlem 5 m. from the sea, on the great Amsterdam Canal, by which it communicates with the capital with Friesland, the Haller and the N. sea. lat. 52° 37' 54" N. lon. 4° 45' 18" E. (N.) Alkmaar is a clean well and regularly built town, intersected by various *grachten*, or small canals, the banks of which are planted with trees, in front of

the straight lines of houses on either side. It is of an oval shape, and was formerly fortified, and still has seven gates, but its ramparts have been converted to the nurseries and agreeable purpose of elegant public walks. It is the seat of a court of first resort, and of a tribunal of commerce and possesses a highly decorated Gothic townhouse, founded 1509; a weigh house, which is an elegant structure an arsenal, excise office, *mon-dépôt* a beautiful fish market, abundantly supplied with sea fish, a linen and yarn market, and a meet theatre. Its churches are two Calvinistic, one Lutheran one Romanist, one Monastic, one St. Nicholas, and one Jewish synagogue. It is only one of which worthy of special notice is the Calvinistic church of St. Lawrence. A large handsome building of the 16th century Alkmaar has an hospital for old men and women, a Calvinistic and a R. Catholic orphan hospital, an infirmary house of correction society for relieving necessitous trades-women, and various other institutions of less note. It is also well supplied with educational and scientific institutions, having besides common schools, a Latin school, a drawing school, a school of civil medicine, a natural history and literary society, a society of science and art, &c. Alkmaar possesses a roomy haven suitable for vessels wintering in and carries on a considerable export trade in butter and cheese. It is, indeed for cheese, the greatest mart in Holland or even in the world the quantity sold annually in the town being upwards of 4000 tons nearly equal to the half of the whole quantity made in the kingdom. This cheese is exported to all parts of Europe, to the W. Indies, and S. America. The manufactures of Alkmaar consist of silk, some of which, in the refined state, is exported such, vinegar earthenware, leather parchment and it has four saw and 6 rice corn mills. It has a roomy market place and weekly markets for grain, in which a very considerable amount of business is done for fine seeds, such as mustard and canary seed and for fine flowers and plants cultivated extensively in the vicinity of it is a principal market. It has also leather markets twice each year an extensive cattle and pig market in autumn and an annual horse fair.

Alkmaar appears to signify *all-mear* that is all lake and was so named from the number of lakes in former times in its vicinity from which much of its strength as a fortified place was derived but which are now lowerer converted into arable land. It is often honorably mentioned in Dutch history and notices of it are to be met with as early as A.D. 124. It frequently suffered from the floods to which Holland is subject, and also from the wars which have been waged in the country. Perhaps the most remarkable fact in its history is its successful defence against the Spaniards in 1578 which as being the first check they received gave rise to the saying, Victory begins at Alkmaar. Various eminent men were natives of this town of whom may be named Cornelius Drebbel the inventor of the thermometer he died in 1634 in 1595 damask weaving was invented here by Isaacus Lammerstein. Pop about 8000. — (Van der Aa's *Indescriptien*.)

AL-KOSH, or El-Kosh, a walled fortified market in Turkey in Asia, near Bagdad, on the Tigris, about 30 m. N. Mosul. Its vaulted one-story houses are built on the slope of a hill of the E. side. It has a large church and library rich in Hebrew MSS. and is the seat of the Khatun patriarch, who, however resides in Mosul. On a rock above the town, to the N.E. is a very imposing position is the convent of Bahban Morimta. The inhabitants are firmly built supposed to be a Kurdish race, but resembling somewhat Jews or Arabs, and are very independent. Al-Kosh is supposed to be the birthplace of the prophet Nazim and his grave is likewise pointed out. Pop. about 8000.

AL-KSAR, a town, Morocco, about 60 m. S. Tangier and 91 m. S.E. El Arish lat 34 58' N. lon 5 55' W. on the N. bank of the river El Khos, or El Ksa, a rapid yellow stream. It is surrounded by orchards, and gardens of orange, pomegranate and palm and is encircled by an old ruinous brick wall of about 1½ m. in length, having bastions, hospitals, and small square towers, 50 paces apart. The streets are narrow and at intervals arched across. The houses have ridged roofs of tile. It contains a great number of spacious mosques. Al-Ksar was founded about the end of the 12th century and is connected in history with the wars of Oranah.

ALLAGNA DI EPSIA a small town, Sardinian States

prov Valence, 15 m. W N W Varallo and 56 m. N N E. Turin. It has productive copper mines. Pop 3000

ALLAHABAD one of the N.W. provinces, and also a district, Hindoostan, gov Agra. The town lies between Agra on the W and Benares on the E. and is divided into five districts, the names of which with their area, population &c., will be seen from the following table.—

	No. of villages	Area sq. m.	Area sq. m.	Land cultivated sq. m.	Total Pop.	No. of peasants
City poor	2,279	1 56	1,490,301	8,008,354	4,150	313 4
Patil poor	1,614	1188	1,010,880	143,999	30,000	316 6
Muzaffarpur	1,088	1701	1,430,982	147,111	816,565	189 1
Benares	1,369	21 8	1,845,461	124,784	490,608	820 8
All India	4,004	2118	5,101,443	511,216	719,111	310 4
Total	10,352	3693	7,871,487	808,197	5,414,088	924 7

According to another column of the same table from which the above has been extracted and which was read by Colonel Sykes before the Statistical Society in 1847 it would appear that the land tax on the total cultivation is about 4s. 6d. per acre. The N. part of the province is low and chiefly composed of a flat sandy loam. The S. part is an elevated table land, diversified with hills of considerable height. The climate of the flat region is sultry and subject to hot winds. The elevated portions are more temperate and healthy. The province is watered by the Ganges, Ghaghara, Gomti, and other rivers and their affluents and of late years considerable streams. It is reckoned one of the richest and most productive provinces of Hindoostan. It exports diamonds, sugar, cut and uncut, cotton cloths, opium and saltgates and a variety of salt, and various other articles. The diamonds now become scarce, and remarkable for their smoothness and purity are found in the mines of Panna in theilly region. In the time of the Emperor Akbar it was valued roughly at the extent of £100,000 sterling of annual value. In 1774 the British Government acquired a part of it is provision, by treaty from a Nabob of Oude and in 1801 the city of Allahabad and the adjacent districts were ceded to the same power. In 1803 the remainder of the province was exchanged with the British by the Peshwa of the Marathas, for an equivalent tract in Gujarat and the Carnatic. — The river at the area and 1/2 of which will be seen from the foregoing table is chiefly composed of the environs of the city of Allahabad. It is intersected by the Ganges and Gomti, a remarkably fertile much of its soil being composed of a rich sandy loam, and yields good crops of wheat, barley, jowar, and oil seeds. Irrigation has to be resorted to during the dry season. A few small sheep with coarse black wool or rather hair are reared and in the towns, cotton cloth of various kinds is manufactured to a limited extent. — (Hamilton's *East India Com Jour Nat Soc.*)

ALLAHABAD an ancient city Hindoostan cap of the above prov situated near the junction of the Ganges at Jumna lat 26 25 26 N lon 81 51 1 E h. 400 m. N. by W Calcutta and 70 m. W Benares. In 1765 it was taken by the British under Sir R. Fletcher was subsequently restored to the Nabob of Oude and it again reverted to the East India Company in 1808. The town was originally built of brick, but now consists principally of mud houses raised on the foundations of the old buildings. It is a square and former extent are attested by the fact, that for several acres around the fort, the soil is covered with broken pottery and brick dust. The only remarkable buildings are the fort the Jumna Masjid or principal mosque to the west of the Sultan Khano and the Imperial tomb, or mausoleum. The fort or *Chalera Bazar*, so named from a dome and cupolas supported by forty pillars is a triangular lofty and extensive structure, situated on the point of land formed by the junction of the rivers and washed by the waters of the Jumna. It completely commands the navigation and, on account of its favorable site, has been selected as the chief military depot for the upper provinces. The Government house and barracks within the fort are spacious and handsome and connected with the fort there are military establishments, amongst the most beautiful and picturesque in India, and a gunpowder manufactory. The Jumna Masjid, a stately but not an ornamental building on the banks of the Jumna

their W slope is considered one of the finest countries in the U. States. The character of the scenery is at once picturesque and peaceful. The vegetation is different on the two sides the locust tree, Canadian poplar, Hibernian and Hydrangea, are most common on the W side, the American chestnut and Kalmia are so numerous on the Atlantic side as to give a distinctive character to the flora.

ALLEGHANZA, one of the smallest of the Canary Islands, and the most northerly of the group; lat. 29° 51' N. lon. 15° 35' W. 20 m. E. the Island of Lanzarote. It has the appearance of being an extinct volcano the edge of the crater which is two-thirds of a mile in diameter being well defined. The island rises to a height of 989 ft. above the sea, and is so precipitous as to present only one landing place, which is on the E. side, where a tavern ruins for about 500 paces, descending from the sea, and terminates in a little sandy bay open above. On the W side, the cliffs rise perpendicularly to a height of 700 ft. The inhabitants—a mere handful—are chiefly employed in collecting seashell which, like that gathered in the other Canary Islands is reckoned of the best quality.

ALLIGRE, a. m. France, dep. Haute Loire (Auvergne) 15 m. N.W. Le Puy lat. 45° 12' N. lon. 8° 50' E. It stands on the S. slope of a lofty hill, which is overtopped by the far loftier dome of Mont—A remarkable volcanic mountain, of a conical shape, standing isolated, and terminating in a magnificent crater 500 yards in diameter and 40 yards in depth. The inhabitants traffic in grain wool, and cattle. Pop. 2045.

ALLMOND-BEN-OYSAN, a vil. France, dep. Isère (Dauphiné) in a beautiful valley on the right bank of the Romanche, about 13 m. S.E. Grenoble. In its neighbourhood are found cobalt, nickel copper and zinc. Pop. 1466.

ALLEN the name of two small rivers, and of several streams, in England.—1. A river in Cornwall which joining the Tavy at the quay of Truro forms the creek of that name.—2. A small stream in Dorsetshire, which unites with the Stour 10 m. below Blandford.—3. Two streams respectively named L. and W. Allen which take their course in the S. parts of Northumberland at a place called Battle House, 1400 ft. above the level of the sea they unite near Whitfield and subsequently fall into the Tyne at Bellingham 4 m. E. Whitfield.

ALLEN the name of several counties and townships U. States, America.

ALLEN (Boe or) the general name applied to a numerous series of bogs in Ireland, and not, as very generally supposed to one continuous mass of great extent. They are separated, often widely apart with extensive tracts of dry cultivated soil between, over a broad belt of land stretching across the centre of the country from Wicklow Head to Galway on the S. and from Howth Head to Sligo on the N. having thus a breadth of about 27 m. at the E. end and of 80 at the W. extremity. The bogs, however all lie on the E. side of the Shannon, and are, for the most part, of that kind called red bogs.

ALLEN, str. a par. England no Cornwall area 3.01 m. 45 m. N. by W. Luro. Pop. 190.

ALLENDALE a. m. and par. England co. Northumberland. The town is 58 m. E. Carlisle, on an alluvial right bank of the E. Allen. It is irregularly built, but contains some good houses, and a spacious market place. The inhabitants are employed principally in the lead mines in the vicinity. Market day Friday. Pop. 1217.—The **FAHNE** comprises 57 287 ac. and contains several clumps of oak, and places of worship for Methodists, and the Society of Friends, to nearly all of which schools are attached. The parish is hilly and sterile, but rich in minerals. Pop. 6361.

ALLINDOI F—1. A m. Hesse-Cassel in a pretty valley on the right bank of the Werra, where it receives the Althausbach 24 m. E. Cassel lat. 51° 16' N. lon. 10° 5' E. It is encircled with a double wall with three gates and has a hospital and a handsome church. The neighbourhood is covered with orchards and woods, and there is good fishing in the Werra. Some wine and silk are produced, and a good deal of tobacco is raised and manufactured. On a strong salt spring in the vicinity are saltworks. Pop. 2200.—2. A m. Hesse-Darmstadt, 9 m. N.E. Gießen, has meal and oil mills, linen cloth and carpet weaving. Pop. 1150.—3. **ALLINDOU**

is likewise the name of four vills in Hesse-Cassel, of three vills in Hesse-Darmstadt, and of 10 others in Prussian Hanover, Nassau, &c.

ALLEN LOUGH a lake, Ireland, co. Leitrim, about 7 m. long and varying from 1 to 4 m. in breadth. The river Shannon flows through it. A few small islands are scattered over its surface, upon one of which the ruins of a small monastic structure are still visible.

ALLEN'S ISLE a small isl. at the head of the Gulf of Carpentaria, in N. Australia lat. 17° 5' S. lon. 138° 25' E. It is spoken of in Stokes' *Discoveries in Australia* (vol. II. p. 277) as being more fertile than any other part visited; the soil being clothed with rich grass, and with small trees and shrubs of a very green appearance.

ALLENMOOR a par. England co. Hereford area 2007 ac. 4 m. S.W. Illeford. Pop. 617.

ALLENSTEIN a m. E. Prussia gov. of and 65 m. N. from Königsberg at the junction of the New Puck with the Alle; lat. 53° 45' N. lon. 20° 27' E. It is the cap. of a circle of same name; and has a castle three churches, two chapels, and an almshouse with manufacture of haberdashery, linen, fur, earthenware, and pottery; and 12 markets. Of these four fairs. Pop. 8550.—The **CIRCLE** has an area of 5800 sq. m. It is well wooded and watered being not only traversed by the Alle and Passarge, but possessed of numerous lakes. The soil is not well adapted for agriculture, but grazes large numbers of sheep and cattle. A good deal of attention is paid to the rearing of bees. In 36 000 of whom only 2000 are Protestants.

ALLENSTON or **ALLINTON** a par. and township, England co. Northumberland area, 31 340 ac. on the N. of Coquet. Pop. 341.

ALLER a vil. and par. England co. Somerset. The vil. lies at the foot of a hill 64 m. W. by W. from Taunton and 1 m. N.W. Langport. It consists but of one irregularly differently kept street, though the supply of water is ample. It contains a church an Independent chapel, and a day school. The par. comprises 2651 ac. Gull runs to the Danes chief was applied at this place under the sponsorship of Alfred the Great, after the battle of Etandun in which the Danes were defeated by the latter. After Moor was also the scene of a battle between the Royalists and the Parliamentarians in 1644. Pop. of vil. and par. 33.

ALLER, a river Germany rising about 20 m. W. Magedeburg in Prussian Saxony. Flowing N.W. it enters Hanover and after receiving several important tributaries, among which may be named the Oker the Fuße, and the Leine, it becomes navigable at Celle where, still proceeding N.W. it receives the Lüne, not far to the E. of Hudemünden it falls into the Weser near Vrielen. It is 115 m. exclusive of windings, at its mouth.

ALLERDALE the name of two of the five wards into which the co. of Cumberland, England is divided and called respectively Allerdale-above Derwent, and Allerdale-below Derwent. Together they form the 5th Division of the co. and, as such return two members to the House of Commons. Allerdale-above Derwent comprises 31,070 ac. with a pop. in 1841 of 41 621. Allerdale-below Derwent 170 400 ac. pop. 23 826.

ALLERSTON a par. England co. York, N. Riding area 10013 ac. 4 m. E. by S. Pickering. Pop. 450.

ALL FRIKHORP a par. England co. York, E. R. Riding area 2805 ac. 1 m. N.E. Wakefield. Pop. 309.

ALLERTON CLIFF a par. England co. Somerset area, 1169 ac. 4½ m. S.W. by S. Axminster. Pop. in 1841 294.

ALLERTON MALEFRIKIP a par. England co. York, N. Riding 5 m. by S. Knaresborough. Area of par. 2200 ac. Pop. 644.

ALL FRIKIP a par. England co. Warwick area 422½ ac. 2 m. N. Goretory. Pop. 916.

ALLISTAIR or **ALLISTAIR** a p. palace to princesses of Malacca kingdom of Quenda or Kedah four hours pull up the Quenda i. r. It was at one time the residence of the king. The inhabitants consist of Chinese, Malays and Chinese, the latter having a temple. In 1823 it contained 2000 houses.

ALLISTREB, or **ALLISTREB** a parochial chapelry England co. of and 2 m. N.W. from Derby area 990 ac. Pop. 537.

AT L'YVARD a la France, dep. Isere (Dauphiné) 23 m. N E Grenoble upon the Odele, a fertile and well watered valley which, at its little more than 8 m. from the town of L'YVARD, is more than 900 m. above it. In this valley are numerous iron mines, which supply several local furnaces, yielding about 4400 tons of iron yearly. A good deal of it is melted in foundries on the spot: part is used at the famous foundry of St Germain, and part is converted into steel, for which it is said to be well adapted. Sulphur is found in the neighbouring mountain of La Tuille; and in the vale below are two mineral springs, which, though lying near each other are of a totally different nature. At the distance of some from the town are the ruins of the Chateau. Beyond the first place of the celebrated chivalier of that name. I ordered

ALLIER (*la a. Flaver*) a river Franco, which gives its name to a department. It is the most important tributary of the Loire. It rises in the forest of Mercœur at the foot of Mont Teizac, below the chain of the Cevennes. After a course in the main $\text{N} \frac{1}{2} \text{W}$ watering the departments *Lozère*, *Upper Loire*, *Puy-de-Dôme* and *Allier* and separating the departments *Cher* and *Nievre*, it joins the Loire on its left bank, about 4 $\text{N} \frac{1}{2} \text{W}$ Nereis. Its whole length is about 200 m. for a third of which it is navigable.

ALLIER R., a central dept. 1, rance, so called from the river of that name which traverses it from N. to S. comprehending the greater portion of the old province of Bourbonnais bounded N. by the departments of Nièvre and Cher E. by those of Saône et Loire and Loire, S. by that of Puy-de-Dôme, and W. by those of Creuse and Cher. Besides the Allier, the department is watered also by the Cher and other streams. The surface is undulating and the soil in general fertile, producing more grain than is consumed. Agriculture, however, is in a backward state, and the peasants are generally very unwilling to abandon the old customs for modern improvements. Small properties are here, as well as throughout France, have much increased since the first Revolution. In 1844 the number in this department rated to the *Contribution Foncière*, amounted to 68,829 the properties being divided into 2,759,992 parcels. The cultivation of the vine is not so much attended to though some esteemed white wine is made at Saint Pourçain and one or two other places the greater part of which is exported. Large numbers of cattle, sheep, and goats are reared, and there is a strong breed of the wools, principally of oak, furnishing a good supply of timber for shipbuilding. The ponds and lakes are numerous covering nearly 14,826 ac. and, as well as the different streams and rivers abound in fish which with the beech found in the former form a considerable article of trade with Paris. Various mines of coal iron and antimony marble and granite quarries, and porcelain clay pits are worked in the department. There are mineral springs at Vichy, Bourbon L'Archambault, and Neris. Cutlery is made at Moulins the capital porcelain and earthenware at Luray Levy and sodas and glass at Commeny and Souvigny. The department is traversed by six great roads, and the Lyons and Clermont by two roads, and is within the jurisdiction of the Orleans Court of Rom. Pop. in 1845, 359,540. — St. Pergeon *Des de la France*. Gibert. *Des. des Anc. Prov. Franç.*

AFRICAN LIVES (South and East) two rivers of N. Australia, both of which flow into Van Diemen's Gulf at a distance from each other of about 20 m. The scenery on the banks of the latter is said by Dr. Leichhardt to be extremely picturesque.

ALLIGATOR SWAMP a marsh in N Carolina, U States between Albemarle and Pamlico Sounds or between lat 35° 20' and 35° 52' N. It comprises 75 000 ac., and was included in an extensive project for draining such

marshes, entertained some years ago by the U States Government. The lands of this swamp are said to be naturally very fertile.

ALLIGNY a market tn. France, dep. Nièvre, arrond. of, and 12 m. N. E. from Chateau-Chinon. It has five pretty large cattle fairs. Pop. 284.

ALLINCE a vil with a small haven, Denmark, on the N.E. coast of the isl of Bornholm. Its inhabitants are engaged chiefly in agriculture and fishing. Pop. about 600.

ALLOA, a river-port in burgh of barony and par. Scotland, co. Clackmannan. The tn. lies on the N bank of

The Forth 6 m. E. Stirling and 25 m. N.W. Edinburgh lat. 56° 7' N lon 8 40' W and is irregularly built particularly the most ancient parts but in the principal streets, most of the old houses have been replaced by handsome new buildings. They contain also many elegant shops. The streets are well paved well lighted with gas, and kept in excellent order. The most spacious is John Street, leading to the harbour. It is 80 ft. wide, and terminates in a beautiful gravel walk, beyond a view of fine boats, trees, and such. The church is

having a row of nine films trees at each side. The entrance is a handsome street one. In the Gothic style, with a spire 207 ft. high. There are, besides three meeting houses of Presby- terian dissenters, an Independent meeting house, and an Epis- copal chapel, the two last are most structures, the latter being in the Gothic style. There are several branch banks in the town, an assembly room large and commodious, a select subscription library, a number of schools including the All a academy—a celebrated seminary, a grammar school, two public madrasahs, and a school of medicine.

reading rooms, a mechanics institute, and several grandly
benefic and religious societies. The manufactures comprise
several breweries and distilleries, the produce of the former
being much esteemed glass works, bricks, tiles, and other
earthenware. There are also woollen manufactures, an iron
foundry and some pretty extensive establishments for ship
building and rope making. Alloa has a very considerable
foreign and coasting trade, the imports, through the former
consist chiefly of timber, bottoms deals, hamp oak bark, and

bones for agricultural purposes through the latter of corn
 wool, fuller's earth and groecium wines, teas &c The ex-
 ports consist of coals, pig iron, woollen manufactures, glass,
 ale, wilikey leather fire bricks tiles, and common bricks.
 The number of vessels belonging to the port, in 1847 was
 111—tonn 15,918 The number that entered inward in
 the same year was 215—tonn 10,964 onwards 648—tonn

 depth of water 16 ft. at neap tides and from 22 to 24 ft.

at spring tides. The latter are here attended by a singular phenomenon, called *dunbles* or *leaky tides*, chiefly observed at high and low water which consists in a second ebb and flowing to an extent of from 12 to 14 inches after the tide has apparently reached its utmost height and lowest ebb. There is a dry dock a little above the harbour. Close by the town there is a remarkable antique tower called *Alais Tower* built towards the end of the 13th century. It is square, 89 ft. high with walls 11 ft. thick. It was the place of residence

David Allan the celebrated painter was born in Allan, 1744. Pop 6678 Area of par, 2 sq m pop ex clusive of the town. 2617

church of St. Peter, 1812.
 The town is famous for its fishing, and especially England
 or Albion, on the Solway Frith, 20 m. S.W. (see table).
 There is a Quakers meeting house in the town, a free school,
 and two other schools. The inhabitants are chiefly occupied
 in the herring fishery, when herrings are on the coast; but
 their valuations are uncertain, sometimes years intervening
 between the periods of their appearance. Cod are also taken
 in considerable quantities during the winter. Albion is
 much frequented in the summer season for sea bathing. Pop.
 of chapelry 749.

ALLOWAY a par Scotland so Ayr now united to Ayr parish. It contains the house in which Robert Burns, the Scottish poet, was born, and his old residence church, named under the name of Kirk Alloway the imaginary scene of the incidents described in his poem of *Tam o' Shanter*. In the neighbourhood of Kirk Alloway a monument has been erected to the memory of Burns somewhat similar to that on the Linton Hill Edinburgh it contains several interesting relics of the poet, and the statues of Tam o' Shanter and Roderick Jekyll by Thoms.

ALL SAINTS—1 a par England Doncaster 11.00 ac Pop. 224.—2 a par England, Doncaster 9694 ac. Pop. 1261 **ALL SAINTS BAY** (Portuguese *Baía de todos os Santos*) a bay on the coast of Brazil, prov Bahia lat. 12 10' S. lon 38° 50' W. It has two entrances, the principal of which, 8 or 9 m wide is formed on the E. by the promontory of St. Antonio, on which is situated the town of São Salvador or Bahia and on the W. by the island of Itaparica. The least breadth of the channel here is little less than 4½ m but the half of this space only that nearest to the E. side, is navigable by large ships. The other entrance called *Barragem* (false bay) is less than 3 m in width. The bay takes in its whole extent, forms a very deep gulf which bears the name of *Bacaxosa*, and is from 60 to 100 m in extent. The largest fleet may ride in it in safety having excellent holding ground and security from the winds. Several considerable rivers fall into the bay.

ALLSTADT or **ALLSTEDT** an old tn Germany duchy of Saxe Weimar on the Rhine 42 m. W N W Leipzig lat. 51° 20' N lon 11° 22' E It has an ancient church, and a castle occupying a height which commands the town. It is a manufacture of cloth and potash several mills, numerous orchards and four yearly markets, chiefly for horses and cattle Pop. 2026.—The **BALE WICK**—area, 46 sq. m.—is generally fertile with exception of a moorish district called the desert. Agriculture is the principal employment. Pop. 7160

ALMACHAR a tn in Spain, in Granada, prov of and 18 m N by W from Malaga, on the site of a steep hill between two others, called *Carmacha* and *Forceducla*. The town is composed of several miserable, crooked and very steep streets, and has a parish church, a school, three convents, and a cemetery. Manufactures—Linen and woollen fabrics. In the environs, grapes, olives, figs, and pulse are cultivated. Pop. 3081

ALMADA a tn, Portugal prov Fátima, on the left bank of the estuary of the Tagus, opposite Lisbon. It is built upon a height, in a well-cultivated country and has long been celebrated for its figs. It has a strong castle on a rock, an hospital for British seamen, a Latin school, several depots of wine, and a mineral spring. Near it is the fort of San Sebastian, which defends the entrance to the Tagus. Pop. 4638.

ALMADAGH (anc. *Almaden*) a range of mountains in Asia Minor a branch of the Mount Taurus system forming the N. boundary of Syria. The direction of the range, generally is S. E. W. till its termination a little to the S. E. of Cape Khyrnyar on the E. side of the Bay of Iskenderoon. Its whole length is about 160 m. width, 30 m. The mountains composing the range are very precipitous, and can only be traversed by beasts of burden in a few places. The most frequented road runs from Aleppo down N. to Amish, and thence over the Almada to Hama and Angora. They are well wooded being covered in many parts with large cedars, fir, and juniper trees.

ALMAIDEN a mining tn, Spain, in New Castile, prov of, and 66 m. S. W. from Ciudad Real on an elevation in the Sierra Morena. It is, on the whole, well built, and consists chiefly of one long regular paved and clean street, the houses of which are smaller than are usually to be met with in Spain occupying the summit of a ridge with the sides steeped away into rather deep ravines. It has several squares, in one of which, *la plaza de la Concepción*, are the townhall and municipal offices and in another named *la Nueva*, the market is held. The finest building in the town is the prison after which comes the mining academy in which is kept a collection of minerals and other objects useful to the students. There are likewise in the town five ordinary and two Latin schools, an hospital for miners, one for wandering houseless poor and one for foundlings and destitute women. In the

middle of the town is a rising ground, surrounded by the ruins of a Moorish castle and the only other noteworthy building is the large stonehouse connected with the mines. Almalden has no parish church, it having been despoiled during the war of independence, but in several large chapels Divine service is performed. The country around is barren, being fertile, and little attention is paid to agriculture, the main occupation of the people being in connection with the mines. Pop. 6545

The quicksilver mines of Almalden which are a Government monopoly are among the most important of the kind in the world and fix it on as supplied a large quantity of the metal used in the American and Austrian mines for separating gold and silver from their ores by amalgamation. The mines are in three sections, the principal one being just outside the town to the E. the next a little further on in the same line, and the third at Almalden, still further on and about 5 m. from Almalden. The great mine the adit of which is hard by the town consists of three nearly parallel veins, called respectively *San Nicolas*, *San Francisco* and *San Diego*. They are wrought in a perpendicular direction and have attained a depth of about 300 ft. the metal contained in quantity and improving in quality the deeper down it is obtained. The supporting arches inside the mine and other permanent walls, are all of stone, and executed in a truly royal manner. The storehouses and magazines, chiefly cut in the solid rock are in a corresponding scale of magnificence. The furnaces for sublimation being heated with aromatic herbs, send forth a delicious smell. About 4000 men are employed in and about the mines, and these who work below are on an occupied six hours each day. The least of many staves, but perhaps less than might be, in the circumstances have been expected. No work is done during the summer months from want of ventilation in the mines, and during these seasons the men recruit their strength. The great vein is in a bed of fine quartz one of the numerous beds which pervade the great slate formation of this part of the country. Associated with the veins are gray conglomerate, chiefly of fragments of slate of a light blue or gray colour. Though the principal vein apparently runs ago, yet it does not seem to run into the vein, the beds of which are, in general, hardly more than a nearly vertical. The average amount of quicksilver produced from these mines of late years has been 2,027 168 lbs.—(*Madrid Decree de España* Wildington's Spain)

ALMAIDEN DE LA PLATA a tn Spain in Andalusia, prov of, and 26 m. N. by W from Seville, near the left bank of the river Cala. In the vicinity are traces of a river now abandoned and marble is quarried to some extent. Pop. 486.

ALMADIA ISL FTS, a ledge of black rocks running out from the extreme point of Cape Yorda, some of which rise 8 or 10 ft. above the sea. The watermen has the form of a diamond stands in lat. 44 40' N lon 17° 25' W (n) It is said that there are one or two openings through the ledge.

ALMAGRERA [SIERRA DE] a dry barren, elevated mountain range of Spain in the E. of Andalusia, bounding with Murcia, celebrated for its mines of silver and lead. It lies in the prov of Almería, 6 m. E. from Yema, runs in a N. E. direction and on its S. side is washed by the Mediterranean Sea. The mineral wealth of the locality was first discovered by a goat herder, so late as 1830 and now the whole mountain range, and its valleys are filled with busy labourers extracting the various minerals silver lead copper zinc, alum, &c. The hills being very dry the miners are not in their operations hindered by water; and as the strata do not require to be deep, the mining is easily managed. The mines and their proprietors are very numerous. Of the former nearly 100 in number those of *Yema*, *Carmacha* and *Observacion* are the most productive the value of their annual output being in lead £33 174 and in silver £254 014.—(*Wülkemann's Sees Jahre in Spanien* Madrid, Decree de España.)

AL MAGRO a city Spain in New Castile, prov of, and 12 m. E. S. E. from Ciudad Real. It is situated on a high arid and exposed plain is extremely well built has spacious, well-paved streets, and a fine square and public walk, planted with trees called the *Glorieta* two parish churches, and a dismantled church of beautiful architecture decorated with columns and balustrades of alabaster and Jasper formerly

belonging to the monks of St. Bernard, St. Francis, and St. Dominick. Almagro has also a townhall, two hospitals, a barracks, formerly the palace of the grand masters of Castile, Latin, normal and primary schools, a large storehouse, abattoir and cemetery. The inhabitants are engaged in distilling brandy, manufacturing soap, pyram and earthenware and in making lace for the markets of Madrid and Paris. This last trade occupying no less than 8000 families in this and the neighboring towns and villages. The country around is celebrated for its mules, which are reckoned the best in Spain and are sold in great numbers at the annual fairs in April and August, which last is also a great fair for lace. Pop. 12,500. —(Major J. J. de P. p. 106.)

ALMAGUER, a *c*. New Granada prov. Los Pastos, 40 m. S.W. of Iquitos, on a height in the middle of a beautiful plain about 7000 ft. above the sea level. Lat. 1° 04' 29" N. lon. 78° 04' 38" W. (L.). It enjoys a mild, pleasant climate the vicinity yields wheat and barley plentifully and contains some gold mines. It was founded in 1645 by Alonso de Fuen Mayar.

ALMAHADIA, MARRAHOUS, MERRIDIA, or AFRICA in Tunis. E. coast, on a cape or promontory of the same name about 110 m. S.W. the city of Tunis. Lat. 35° 32' N. lon. 11° 51' E. (L.). said to have been founded so early as the 10th century by one of the Fatimite Khalifs. It seems to have been a place of great importance during the Middle Ages and in 1550 sustained a long and rigorous siege from the forces of Charles V. All however that now remains to attest its former greatness are a few defaced fragments of ancient masonry. Its harbour formerly good, is now sanded up. Lat. 35° 32' N.

ALWALIK, or **ALMALIK** a large town, Asiatic Turkey, pass. Amudarya, near Moxa, on the right bank of the small river or Myn, 25 m. from its junction with the sea and 57 m. W.S.W. Adala. Lat. 37° 41' N. lon. 29° 50' E. It is beautifully situated in a little valley, or natural amphitheatre

ALMAZARRON.—From Sahar. Lybia, Oria, and Lybia.

of the Mamayus mountains, at the N.E. end of an extensive plain, elevated 5000 ft. above the sea. The mountain peaks that rise above the town attain great heights the highest summit of the range to which they belong reaching 10,000 feet. The whole appearance of the town is exceedingly pleasing and picturesque, being at once finely set off and relieved by numerous tall poplars and lofty minarets and further adorned by gardens, with which it is surrounded. The houses are built of unbaked bricks and roofed with thin slabs of cedar wood obtained from the forests on the neighbouring mountains which also supplies the odoriferous fuel used by the inhabitants. The town contains altogether about 1500 houses and has several mosques, a bazaar and a market on Thursdays. It is well supplied with water having sufficient not only for domestic purposes, but for the propulsion of numerous mills and the accommodation of several ten yards, dye works and factories. Many Frank merchants resort to this city to make purchases, which they generally forward to Makry 40 miles W. for exportation. A number of the inhabitants of Almazarron are employed in cultivating the extensive and fertile plains which stretch away from the town, and which are inhabited by an industrious and thriving people, as

is sufficiently evident from the superior neatness and comfort exhibited in their houses and apparel and from the excellent condition in which their fences, roads, and bridges are kept. There are no traces of antiquity here. Pop. about 20,000. —(Four Geo. Soc.)

ALMANSA a city of Spain, in Murcia, prov. of, and 87 m. E. from Albacete. It is a flourishing place, situated on a large and exposed plain and is ill built, unpaved and without any spacious squares—so common all over Spain. It has a parish church and chapel several schools a chapter house, an hospital, a capacious prison, and a cemetery outside the town. Manufactures—Linen, cotton, and lampas fabrics which are supplied to the neighbouring provinces brandy, leather and soap. The Vega, or plain near the town, is irrigated by the *Pantano* (reservoir) of Alfara, which is an element of incredible fertility under the almost African sun of this place. Almanza has obtained an historical celebrity from the fact of its having been the scene of an inglorious victory gained April 25, 1707 by 80,000 French under the English Duke of Berwick, over a much inferior force of British and Spanish troops, and it is the command of Henri de Ravigny Earl of Galloway. Pop. 8736.

ALMANZOR a river Portugal prov. Alentejo, an affluent of the Tagus, which it joins 34 m. N.E. of Lisbon, on the left bank after a course of 34 m.

ALMANZORA a river Spain in the E. of Andalusia, prov. Almorá. It rises in the sierra Nevada near the town of Carmona takes an E. & E. course for about 40 m. when it falls into the Mediterranean 5 m. N.E. from Vera. During summer it is an insignificant stream.

ALMARAZ, a small town Spain in Extremadura, prov. Cáceres, on the N. bank of the Tagus crossed here by a fine bridge 126 ft. in span 29 m. N.W. Truxillo mean and ill built, having a small parish church town hall prison and 500 inhabitants and only worthy of mention as having been the scene of a successful surprise of the French, on May 17 1812 by the British under General Hill. The towers and other works, set up by the former were destroyed their stores ammunition provisions, all boats burned and more than 800 prisoners captured including 17 officers. The British lost only about 180 men and two officers. The rapidity with which the whole was done formed the chief element of Hill's success. —(Napier's Peninsular War vol. v. p. 19.)

ALMAR,—1 A vil. Brazil prov. (noia) 60 m. E. city of Natividade. It is situated in a hollow and consists of a few irregular streets. The houses are built of large unburnt bricks made of clay mixed with chopped grass, and dried in the sun they are low and have a mean appearance. It has a church in a ruinous condition. The country around is well adapted for plantations, but the extreme boldness of the inhabitants prevents it being turned to any account. The latter are mostly blacks and mulattoes, and amount to about 800. —(Lardner's Brazil).—2 A river of the same name in the S. of the same prov. falls into the Maranhão, about lat. 14° 22' S. after a course of about 90 m. —(Enc. Geo. Soc. Brazil).

ALMAS, a large market in Hungary co. Bács, about 22 m. N. of the Danube lat. 46° 7' N. lon. 19° 23' E. Pop. chiefly R. catholics 400. —ALMAA, either singly or with various prefixes, is the name of not fewer than 39 places in Hungary and of numerous places in Siebenbürgen or Transylvania.

ALMAZAN a walled town Spain in Old Castile, prov. of and 30 m. S. from Boria, on the Duero here crossed by a stone bridge. The streets are generally well built, and paved with pebbles, though uneven. The square contains the townhall session house, prison, hospital and a spacious palace belonging to the Counts of Almazan. Almazan has six parish churches three chapels, three convents, and a fine cemetery. The walls are of great solidity and have six gates subterranean passages, well armed communiations with the river and with the extramural convent of San Francisco. Manufactures—Earthenware, hair, and woollen and linen fabrics. Pop. 2400.

ALMAZARRON or **MARRAZON** a town and port, Spain, prov. of, and 30 m. S. by W. from Murcia, and 30 m. W. Cartagena. It is well built, with wide though crooked and steep streets, and comprises two parish churches, a convent, school, town and session house, prison, several store houses,

and a cemetery. The people are employed in mining, fishing, the preparation of carbanets of wool, salt-petre, alum, and ochre; in smelting metals, preserving capers, the manufacture of asparto cordage, in tillage, and as muleteers. Grain, fruits, especially figs and vegetables, are raised in the vicinity sheep, goats, and mules, are reared; and mines of iron, copper, argentiferous lead and zinc are wrought. As a port, the trade of Almazora is small, being chiefly coasting; the average number of vessels that entered and sailed from in the years 1844-5 was 556 of which 517 were coasting agents, tonnage, 61,999 Pop. 6814.—(Madoz, *Diccionario de España*.)

ALMAZORA, a town in Valencia, prov. of, and 4 m. S. from Castellón de la Plana, in a plain on the left bank of the Mijares in lat. 39° 56' N. lon. 0° 5' W. 4 m. from the sea. The town comprises several spacious and well paved squares and streets, and contains an ancient parish church a respectable courthouse, an endowed school hospital, and prison. Manufactures—Linen and woollen fabrics, base masts, and paper. The country around is fertile and produces wheat, barley, maize wine oil figs, oranges, with many other fruits and vegetables, especially squashes, of unusual size and weight sheep, goats, and cattle are reared and some fishing carried on Pop. 3638.—(Madoz.)

ALMEIDA, a town, Brazil prov. Espirito-Santo agreeably situated on a height fronting the sea, at the mouth of the Rio Magos about 20 m. N. of the town of Victoria of Espirito-Santo. It possesses a church an extensive market place and a large edifice erected by the Jesuits, who founded the town in 1580 and which is now used as the townhall, the jail and the courts a dwelling house. The inhabitants chiefly Indians and half breeds, are on the increase and employ themselves in fishing in raising the necessaries of life in tilling building timber for export, and in manufacturing earthenware. The women cultivate and spin cotton. Some export trade is carried on in these products of industry with Victoria and Rio de Janeiro Pop. 4000.—(See *Geo. Mag. Nov. 2*.)

ALMEIDA, a fortified town, Portugal, prov. Beira-alta, 66 m. S.E. Lamego, on an elevated plain on the right bank of the Coe within 8 m. of the Spanish frontier lat. 40° 43' N; lon. 6° 52' W. and containing an hospital, monastery church and poor's house. It is one of the strongest, and from its position near the Spanish frontier one of the most important fortresses in Portugal. After the convention of Chisne, in 1808, Almeida was surrendered by the French and the garrison marched to Oporto. For a while after it remained in possession of the British but, on the night of Aug. 27 1810 it again fell into the hands of the French under Massena, being retaken by the English in May 1811 and restored to Portugal. Pop. 1150.—(Napier's *Penninsular War* v. 1 p. 17 *Tubon Geographical Dictionary*.)

ALMEIRIM or **ALMEIRIM**, a town, Portugal, prov. Estremadura, 5 m. S.E. Santarem. The town, built by John I. in 1411 has a royal castle, church, hospital, and workhouse. Pop. 1362.

ALMELO, a town, Holland prov. Overijssel, cap. of arrond. and canton of same name, 55 m. S.E. Zwolle, and 23 m. N.E. Deventer on the Almeloche Aa, on an affluence of the Regge, by means of which it has water communication for truck boats with Zwolle. It is a comfortable trading town, and possesses a handsome townhall a Calvinistic and a Baptist church, a Jewish synagogue, two ordinary schools and one for Latin and modern languages. Formerly a considerable business was done here in weaving and bleaching linen, which has however decreased in consequence of the more general use of cotton. The inhabitants are chiefly employed in preparing yarn and cotton goods and they carry on a good trade in corn. The town has likewise a steam cotton spinning a gun distillery a brewery sawmill, three cornmills, smithies, soapboilers, calenders, &c. Pop. 8000.—(Van der Aa's *Nederlanden*.)

ALMELY or **ALMELY**, a par. England, co. Hereford ares, 8552 ac 54 m. W. Woolly Pop. 698.

ALMENDRALEJO, a town, Spain in Extremadura, prov. of, and 28 m. S. from Badajoz, on a gentle slope in the midst of a fertile plain. It comprises one grand square, with numerous, generally well-constructed, paved, and clean streets, ornamented with arcades and water courses. In the square is a handsome promenade lined with acacias, and adorned with

a fountain of excellent water. The parish church, townhouse, five schools, a spacious prison, an extensive bull ring, and a theatre, are the chief public edifices of the town. The inhabitants are employed in agriculture, weaving, expressing oil, and distilling brandy on no extensive scale. The commerce is confined to the importation of colonial regulations, and the export of considerable quantities of wheat, barley, oats, and a small quantity of beans and peas. A considerable number of sheep, horses, and mules, and a few goats, are reared in the vicinity. Pop. 6810.

ALMENO SAN SAI VATORE, a town, Vaud, cant. of, district of same name, prov. of, and 7 m. N.W. from Bergamo, on an eminence near the foot of Mount St. Bernard, on the right bank of the river Brembo, formerly crossed by a handsome stone bridge with eight arches, of which the piles only now remain. The town is well built, and comprises several churches; a noble townhouse, adorned with numerous fine paintings, an hospital, and a castle. The inhabitants are chiefly engaged in the cultivation of grain and fruits especially grapes, raising sheep, cattle, &c. An annual fair is held in February. Pop. of town 1772 of district 14,802.—(Droz, *Trav. Italia*.)

ALMER, a par. England, co. Dorset area, 1161 ac. 6 m. S.E. Blandford 10 p. 183.

ALMERIA, a maritime prov. Spain in Andalucía, and forming a part of what once was the kingdom of Granada. It is bounded N. by Jaén and Murcia. E. and S. by the Mediterranean Sea, from San Juan de los Rios to the river Adra; in N.W. by the prov. of Granada and Málaga area, 3904 sq. m. Its whole surface is covered with mountains of greater or less elevation, but it presents also numerous, and sometimes extensive, valleys, spreading out into open plains which are as fertile as the mountains are barren. The principal rivers are in the W. some of them of the sierra Nevada among which may be named the sierra Fador whose culminating peak, 6575 ft. high, is covered with snow three quarters of the year. In the N. the limestone cliffs, and various ranges, forming the boundary between Almería and Granada, and its offshoots, sierra de María sierra de Orta, and sierra de la Estanosa. S. of the last named sierra lies the group of the sierra de Filahra, whose culminating point, Cumbre de María, is 6270 ft. high. S. from this chain lies the limestone range of sierra Aljamillo, terminating at the sea in the trachyte and basaltic cliffs of Cape Gata. The province is rich in mines of silver, lead, iron, copper and antimony nitre, jasper and marble are also obtained and large quantities of salt are procured from salines or salt ponds. The soil of the valleys, as already alluded to is good and produces maize sugar grapes and southern fruits abundantly and delectable fruits, which are somewhat famed. Besides agriculture, the principal occupation is connected with the extensive mining operations carried on (See *ALMAGRELLA*.) Exports cordage, matting, and baskets, white lead, soap, mules, and earthenware, are manufactured the products of the soil and of the mines, separate, barrels, and soap, are exported and manufactured cloths of various kinds imported. Education in this province is in a low state, and crimes are numerous though in this respect it compares favourably with Almería and Ciudad Real. Pop. 292,834.—(Madoz, *Diccionario de España*.)

ALMÉRÍA [also *Aferip*] a city and port of Spain, in Andalucía, on the Mediterranean, cap. of a prov. of its own name, near the mouth of the river Almería, and on the gulf of the same name, 104 m. E. Málaga lat. 36° 50' N. lon. 2° 32' W. [a.] It stands E. of the sierra de Baza in an extensive and fertile plain. It is in great part surrounded by Moorish battlement walls about 5 m. in circuit and is defended seaward by the two forts of *Trinidad* and *Tiro*. The streets are narrow tortuous, and ill built, but tolerably well paved and clean lined chiefly with houses erected round small internal squares, forming court yards. It has five squares, one of which the *Plaza de la Constitución*, contains the town and provincial halls, and some Government offices, and likewise serves as a market place. The other public establishments are a Gothic cathedral, founded in 1584, and four parish churches; a theological college attended by 80 students; a college for deaf and dumb and other literature (*colegio de humanidades*) attended by about 50 students; a ladies college, and seven primary and five advanced schools, under a provincial junta, or patriotic society of the *Amigos del país*; a charitable hospital, one

from home on the quay theatre, and small incommensurate, and unsuitable places. On a hill rising 240 ft. above the sea, is an old Moorish fort called the Alcazara, about 1500 ft. in length from E. to W. and about 800 ft. in breadth. Leaving the town N.E. is a prettily-planted alameda, 240 yds long and in the suburb of las Ilustras is another 500 yards long. The port of Almeria is without a mole, though it is proposed to erect one. In the bay however there is good and safe anchorage in 13 and 14 fathoms. The port is one of the second class. About 180 Spanish, and about 300 foreign vessels of aggregation, of about 130,000 tons, enter and leave the port annually besides which, the port has between 100 and 500 coasters. The export trade consists principally in lead, exports and barilla large quantities of which are raised on the plain adjoining the town. The average value of the exports amounts to £248,298. Its imports comprise coal, fire bricks, woollen cotton, and silk fabrics, &c. to an annual average value of £247,946. The internal industry of the town which at present is quite inconsiderable, comprises the preparation of hemp with manufactures of coarse linen and woollen fabrics, sumbrero hats earthenware, brooks, saltpetre, and esparto mats and cordage. Pop. 17,800.—Madr. Diccionario de España.

ALMERIA (GULF OF) Spain, in Granada's bay—Cape Gata on the E. and Front Leone on the W. about 2 m. in width at the entrance, and in depth inland about 10 to 12. 36° 51' N. lon. 2° 53' W.

ALMERODE (GROES) in Hesse-Cassel 23 m. W. Cassel lat. 51. 17' N. lon. 9° 45' E. has considerable manufactures of the well known Hessian crumblers, pipes, billiard balls, china and earthenware with alum and vitriol refineries, and some cottonworks. Pop. 2107.

ALMERIA FROM THE SEA WALL.—From Clapham, & Stephens.

MONVAREZ-RIO, a town in Andalusia prov. of and 15 m. W. by S. from Cordova. Pop. 1392.—3, ALMONDVAR-DEL-PIEDRA, a town in Nov. Castle, prov. of, and 23 m. S.E. from Ocaña. Pop. 894.—(Madr., Diccionario de España.)

ALMOGLA,

a town Spain, in Granada, prov. of and 15 m. N. by W. from Málaga, at the base of a mountain, about 2 m. to the right of the river Campaniles. The town comprises about 445 houses, and contains a parish church tower bell ruinous castle, two schools, a stonemason, and a prison. Manufactures—Hard ware, wax, soft soap, woollen fabrics, oil, and brandy. Grains, wine, oil, fruits,

work at home having most of them one or more looms in their houses. Of the former there are, altogether about 2000 in the township. Almondsbury is a place of great antiquity and is said to have been the residence of some of the Saxon kings. It is also supposed to be the Gwentolodunum of the Romans. The inhabitants of both the village and parish are chiefly employed in cotton, woollen and silk mills, of which there are several in the parish. Area of par. 28 082 ac. Pop. 41,804.

ALMONDSBURY a par England co Gloucester area, 6927 ac. 6 in N. E. Bristol Pop. 1880

ALMONTE a river Spain, in Extremadura, formed by the union of three streams rising in the sierra de Guadalupe, in the neighbourhood of Zorogren prov. Caseres. It takes a N. W. and somewhat zigzag course, and falls into the Tago, after receiving the Megates and numerous other affluents. Its entire length is about 75 m.

ALMONTE a, to Spain, in Andalusia, prov. of, and 22 m. E. from Huelva, on the side of a gentle slope surrounded by plantations of olives and pines. It consists of a square, and several inconvenient and dirty streets, rendered yet more filthy by the impurities conveyed into them by pipes from the houses, most of which are mean and confined. The town contains few churches, a municipal house, supported by arches and thick masonry columns, an endowed school, a wretched prison, and a cemetery. In the vicinity are four windmills, one water mill, and eight oilmills. Oil wine and live stock are exported. Grain though in insufficient quantity for local use, and abundance of oil and wine are produced. 2000 or 8000 mutton ewes, and 500 brood mares, are kept and considerable numbers of sheep, goats, and pigs, reared. Pop. 3779

ALMORA a tn. and fortress, Hlodostan cap. district of Kusanow 170 m. E. N. E. Delhi lat. 30° 25' 30" N. lon. 79° 38' 38" E. (c) on a hill or ridge 5400 ft. above the sea. In 1790 it was taken by the Goorkhas, who were expelled in 1810 by the British to whom the whole province was at that time ceded. The town is compactly built and consists chiefly of a single street, 5 furlongs in length and 50 ft. wide having a natural pavement of rock, with a gateway at each end. The houses are of stone the lowest stories open in front, with square pillars, are raised as steps and the upper projecting stories are fluted and arched. The sloping roofs are slated and neat, but the piles of straw or hay with which they are covered by the inhabitants for winter provision to their cattle, greatly disfigure the appearance of the town. In airy situations around there are a number of bungalows, or low stone cottages, built by Government for civil and military invalids. On the E. extremity of the ridge of Almora stands the old Goorkha fort, built of stone, and to the E. of it are several marble towers. The new citadel named Fort Mura, erected on the W. extremity by the British, is a parallelogram with six bastions, but from its situation, is incapable of a lengthened defence and, being composed of the fragile material of the hill as fast going to decay. The natives of Almora are described as honest and peaceful, but little advanced in civilisation; the surrounding country is bleak, and subject to frequent earthquakes; the climate temperate, and by no means unhealthy. — (Hamilton's East India Ges. Heber's Journal.)

ALMORADI a tn Spain, in Valencia, prov. of, and 28 m. S. E. W. from Alicante on the left bank of the Segura having a square, and several tolerable streets, a parish church, an endowed school, and a small hospital. Brandy distilling soap making dyeing, oil expressing and flour grinding, are carried on. Wheat, maize, barley, and various fruits and vegetables are raised. Pop. 8095 — (Madox.)

ALMORITIA, or BALANMORAN a par Ireland co. Westmeath area 2205 ac. Pop. 627

ALMSFORD a par England co. Somerset area, 844 ac. near Wells Pop. 196

ALMUREGAR a small city and seaport, Spain in Andalusia, on the Maderomera, prov. of, and 88 m. S. from Granada; lat. 36° 47' 50" N. lon. 5° 22' 10" W. (c) The town, formerly Moorish, is in general well built, and has clean streets. Its public buildings comprise a parish church, chapel of ease, townhall, prison, three schools, public storehouse, and the remains of a citadel. The inhabitants are occupied in agriculture, and in the manufacture of sugar straw, and cotton fabrics, their trade, once flourishing

is now magnificient, and is solely in fruits and colonial requests. The port is only adapted for small vessels, being much exposed to dangerous E. winds. The vicinity produces grain, fruits, vegetables, and wine of superior quality; and all kinds of domestic cattle are reared. Pop. 8000 — (Madox.)

ALMURIA DE DOÑA GODINA (La) a tn Spain, in Aragón, prov. of, and 24 m. S. W. from Saragosa, pleasantly situated on a plain near the small river Giron. It is surrounded by decayed walls, in which are three gates, and is tolerably well built. It contains a spacious central square parish church and church of the Knights of St. John some schools, a handsomely built consistory storeroom, asylum, and theatre. The inhabitants are chiefly occupied in preparing soap and distilling brandy. Pop. 2560

ALN a par England co York N. Ridg. g area 9947 ac. 4 in E. W. by S. Zeangewold Pop. 1509

ALNEMOUTH or ALNEMOUTH a small seaport, England co. Northumberland, partly on the slope of a low hill at the mouth of the river Alne, 4 m. E. S. E. Alnwick. The houses are part stone and part brick, and but indifferently built the streets crooked, and not very well kept. There is some trade in exporting corn and other farm produce and in import, timber and general merchandise, from the Netherlands. There is also a considerable fishery. Pop. m. 1841 480

ALNESS, a par Scotland co. Ross acreage length, about 90 m. average breadth 5 m. Pop. 1240

ALNBY (n. s. o.) a small tn. in the river Severn England, about 1 m. W. the town of Gloucester John Olney a charterhouse monk in the reign of Edward III, the author of a few of the old Miracle Plays, was born here.

ALNHAM a par England, co Northumberland area 12 589 ac. Pop. 211

ALN a small tn. 19 m. long, by 4 m. broad, in the Gulf of Bothnia, S. of Harowood on the coast of Sweden. lat. 60° 25' N. lon. 17° 20' E. with iron mines, chalk quarries and herring fisheries.

ALNWICK, a market tn. and par England co Northumberland, Consett ward, E. division. The town is pleasantly situated on the declivity of a hill sloping down to the river Alne, from which it derives its name 2 m. S. E. Berwick, and 34 m. N. Newcastle. It is connected by a short branch, of about 5 m. in length, with the Berwick and Newcastle Railway. The streets are in general handsome well paved and lighted with gas, and the town throughout abundantly supplied with water. The houses are mostly of freestone, many of them handsome, and nearly all of modern erection few of the ancient buildings now remaining. The market place a large area or square, occupies the centre of the town. On one side is the townhall, an extensive building surmounted with a square tower erected in 1731 containing, with other conveniences a large and elegant hall, in which fashionable assemblies were occasionally held in former times. On another side of the square stands a beautiful modern structure, erected in 1827 by the Duke of Northumberland, the lower part of which is occupied as markets, the upper by a handsome assembly room and reading room. The parish church is a large Gothic structure with a neat tower. The R. catholic chapel is also a handsome edifice. There are besides, several meeting houses for dissenters, a number of excellent schools, a dispensary and several charities; a mechanics institute, with library and philosophical instruments attached. But the object of greatest interest in Alnwick is its ancient castle, one of the seats of the Dukes of Northumberland. This magnificent specimen of the old baronial residence—for many centuries a fortress of great strength, and as such celebrated in Border history—stands on an eminence which rises from the S. side of the river Alne, opposite to the town. It is believed to have been founded by the Romans at any rate, it has been ascertained that the site was previously occupied by Roman buildings. About the year 1890 the castle was repaired and restored at an expense of nearly £500,000, and is now in appearance precisely what it was in the days of border chivalry ingeniously combined with modern elegance and convenience. The avenue forming the approach to the mansion is superb while the grounds, which are 5 m. long, and through which flows the Alne, exhibit every species of natural and artificial beauty. A cross, called Malcolm's Cross, marks the spot where Malcolm III. is said to have been killed by a soldier who, on pretence of

delivering him the keys of the castle, which he presented on the point of a spear thrust the weapon into his body.

Altwick possesses but few facilities for other trade or manufactures. There are, however, several tanneries, breweries, and brick and tile works in the town, and a considerable business is done in the produce of the fertile country around chiefly corn, pork, and eggs, which are sent to Alismouth or Alismouth, the port of the town, at the mouth of the river where they are shipped for the London market. The corporation consists of a bailiff, nominated by the Duke of Northumberland 24 common councillors, including four chamberlains. The quarterly sessions for the county are held here, in turn with Newcastle, Hexham, and Morpeth and there is a county court monthly for the recovery of small debts. Area of par., 16,750 ac. Pop. 7819.—(Correspondence in *Altwick*)

ALONIA, or LUKAN PARIA (anc. *Alonia*) a small isl. Asia Minor in the Bos of Marmora, whose inhabitants are employed in wine growing and rearing silkworms. It has a capital of the same name, the residence of a Greek metropolitan bishop.

ALONIA, a city Spain, in Andalusia, prov. of, and 24 m. N.W. from Malaga, occupying a mountainous and exposed site near the foot of the Sierra del Macho. It has two squares with the two principal streets, are wall built and paved the remaining part of the town is very irregular and hilly. The grand square contains the parish church parts of which are good specimens of Islamic architecture. The other public buildings consist of an hospital, prison, several schools, almshouses, three convents, with churches attached and the remains of an ancient Gothic castle. Agriculture expressing oil and the manufacture of soap and sulphate of soda, are the chief employments. Grain fruit vegetables, and superior wine are raised in the vicinity and some sheep and cattle are reared for the sale of which a fair is held in August. Pop. 6793.

ALOST a town Belgium prov. E. Flanders, near the confluence of the Scheldt 15 m. N.W. Brussels, and 8 m. S. the Antwerp station on the railroad and Brussels railway. It is surrounded with walls, which have five gates and is traversed by the Dender which has been converted into a canal, from Alost to its junction with the Scheldt at Termonde or Dendermonde, 8 m. below. The finest building in the town is the church of St. Martin, said to be by the architect of the cathedral of Amiens. It is either unfinished, or has been partially destroyed but the part existing forms one of the largest and finest churches in Belgium and is adorned by a celebrated picture by Rubens—St. Roch beseeching our Saviour to stay the plague of Alost. Within the church is the mausoleum of Thierry Martens, a native of the town who introduced the art of printing into Belgium A.D. 1475. The inscription states, with some ambiguity and without much regard to accuracy that he was the first printer of Germany, France, and the Netherlands. The only other buildings worthy of notice are the townhouse, which was founded A.D. 1500, and has been recently rebuilt and the college, which is a handsome structure. The chief public institutions, beside the college, are the hospital, the academy of design, the chamber of commerce, and the horticultural society. Both the trade and manufactures of Alost are of considerable importance. The former is in corn, oil, and particularly hops, which are extensively grown in the neighborhood. The latter are chiefly lace cotton goods, hats, leather glue, oldory tobacco, and the various products of numerous breweries, distilleries, salt refineries, wax and cotton mills, bleachfields, printfields, dyeworks, copper and iron foundries. Alost, of which the earliest mention in history is A.D. 870 was anciently the capital of what was called *superior Flanders*. The French under Turmeo, took it in 1667 but was obliged to abandon it after their signal defeat by Marlborough, at Ramillies, in 1706. Several Roman camps have been found in the neighborhood. Pop. 10,000.—(Meert, *Dictionnaire de la Belgique*.)

ALONIA, see ALONIA.

ALOZAYNA a town Spain in Andalusia, prov. of and 26 m. N.W. from Malaga, on the N. side of a ridge of rock. It is, on the whole, remarkably built, though inconvenient from the steepness of the hill, and has a good central square, a parish church, and some schools; a secondary hospital, prison, and several public fountains. The inhabitants are principally employed in husbandry on grinding corn and oil and in making hardware, earthenware, and tiles. Pop. 3920.

ALPERA a town Spain, in Murcia, prov. of, and 28 m. S.E. from Albacete, situated on rough, uneven ground, in an exposed mountainous situation. It is clean, and has three good squares, a parish church and some schools a townhall old ruined palace, storerooms, and prisons. The inhabitants carry on some trade in cattle, but are chiefly agricultural. Pop. 2430.

ALPES (Baanes) [Lower Alps], a frontier dep. in the S.E. of France, on the W. slope of the Alps mountains, forming part of ancient Provence with the addition of the rich valley of Barcelonnette, formerly in the *departement* of Embrun, Pichemont, W. by the dep. Vaucluse and Drome S. by that of the Var and N. by that of the Hautes Alpes; area, 1,696,127 ac. only about a fourth part of which is arable land, while nearly one-half is covered with heather and moor, and about a sixth with wood. The whole department is of a decidedly mountainous character being traversed and intersected almost throughout by a ramifications of the Alps several of whose summits attain elevations from 7000 to 9000 ft., and are never free of snow. The slopes of the mountains are generally covered with wood but not infrequently yield a rich pasture, on which numerous flocks of sheep brought hither in spring after having been wintered at Arles, are said to thrive remarkably. Between the mountains, numerous valleys, some of them of considerable extent, intervene. They are generally very fertile yielding on the higher levels rich herbage, and in the plains good crops of grain, and large quantities of fruit. The inhabitants of the more sheltered districts cultivate the olive, the mulberry, the plum, the fig and the almond. In several countries the vine also is carefully cultivated, and yields a wine of tolerable quality for home consumption. Bees are reared in considerable numbers; and among the articles exported are honey dried fruits, &c. The horses are small in size, and few in number mules and asses being preferred to them. Goats are tame, and wild animals are numerous. The chamois is occasionally seen on the mountain slopes and the wolf not infrequently makes its appearance. Lead, silver, copper, and iron, with some coal, are among the numerous products of the department. The manufactures, not important, consist principally of hats, coarse woollen stuffs, some silks, leather paper earthenware, and brandy. During a part of the year many of the poorer inhabitants emigrate into other provinces in quest of employment. Salt springs are found near Castellane and mineral waters at Grignon. Pop. in 1846, 156,675.—(*Dictionnaire de la France* French Official Papers)

ALPES (Hautes) [Upper Alps] a dep. France, forming part of the S.E. of Dauphiné, and a small part of Provence, lying on the W. slope of the Alps bounded E. by the Savoyard States W. by the dep. Drome, N.W. by that of the Isère, and S. by that of the Basses Alpes; area, 1,666,561 ac. of which nearly one-half is occupied by moor, heath, and waste lands, while not a fourth part consists of arable land meadows, and vineyards. Like the department of the Basses Alpes, it is covered almost throughout by enormous masses of mountains several of which are among the loftiest of the Alps range. Mont Pelvoux the highest mountain in France, is in this department, and its culminating point, called the *Mont de l'Arceve*, or *des Evénements*, is 12,442 ft. above the level of the sea. The height of Mont Genevre is 11,788 ft. The scenery is described as being wild and savage, but imposing. The mountains, on their S. side are almost arid and bare but on the N. side, are covered with forests, which extend almost to the limits of vegetation. The climate presents all the vicissitudes and sudden changes of a mountain region—violent hurricanes, storms of hail, heavy falls of rain and snow. In general however the air is clear and not much subject to the malarious fogs with which districts of the same description are frequently visited. Winter in the higher valleys, prevails for eight months, during which the inhabitants are shut out from all communication with their neighbours. The department contains several lakes. The chief streams are the Durance, the Gail, the Beane, the Alpe, and the Draz. Though nearly half the surface is unproductive land and barren rocks, the principal occupation of the inhabitants is agriculture and the rearing of cattle. In the narrow valleys the snow lies long yet the crops are seldom abundant for local consumption. Potatoes, fax, and hemp are grown in considerable quantities, and among the fruit trees cultivated are the chestnut, the walnut, and the mulberry. The vines

produce annually about 1,540,000 gallons of wine, some of which is much esteemed. The slopes supply excellent pasture for sheep and goats. A great number of aromatic and medicinal herbs and plants grow here. All sorts of game abound, and birds of prey are numerous particularly the great eagle. In the mountains are found granite, marble, Rhinoglyphic stone, copper lead zinc, iron, anthracite coal, &c. and among the manufactures are culinary woolen and cotton goods, nut oil, hats, agricultural implements, brandy leather nails tiles, &c. The exports include most of these articles, with cattle wool to a large extent. Wooden shoes, wood chisels and chestnuts. More than 4000 of the inhabitants yearly emigrate to other parts of France in search of employment. Gap is the capital, and other principal towns are Briançon and Embray. Pop. in 1846 188,100. — (*Dict. de la France*)

ALPHAMSTONE, a par England, co. Essex area, 1567 ac. 6 m N E by E. Halstead Pop. 824

ALPHEV, the name of three villages in Holland. — 1 A vil prov B Holland 7 m S.E. Leyden, and 20 m S.W. Amsterdam on the left bank of the old Rhine, over which there is here a drawbridge. It is a comfortable and prosperous village, and one of the largest in Holland having always a considerable air in it, from the numerous boats which pass it, plying up and down the Rhine. It has a Calvinistic and a R. Catholic church three schools, an orphan hospital and a royal posting establishment. Pop. about 2700. — 2 A vil prov Gelderland arond. of and 18 m. S.W. from Nijmegen on the right bank of the Maas. It has a Calvinistic and R. Catholic church, and a school. Its inhabitants, 800 in number are employed in agriculture and raising cattle. — 3, A vil, prov N Brabant, arond. of and 12 m. S. E. from Brda, about 3 m. from the Belgian frontier. It is mentioned in history as early as A.D. 711 and has a R. Catholic church and 350 inhabitants chiefly employed in agriculture.

ALPHINGTON a par England, co. Devon area, 2471 ac. 10 m N E by E. Exeter Pop. 1498

ALPHONSE an isl in the Indian Ocean the N point of which is 12 m lat 6 59 40 S lon 52 41 E. but the mean of four other (alps) observations places it in lat. 7 4 S. lon 52 40 E. It is low of considerable extent, and exhibits some small trees or shrubs. It is surrounded with reefs, which are fast rising into an island of greater extent than Alphonse. About 12 m. S. from the latter lies a sandy shoal or bank called Mont Alphonse, a little above water with a reef of high breakers surrounding it, and extending N. E. and S. W. five or six miles. There are no soundings within a mile of the sand. Dangerous reefs nearly unite the N. and S. islands there is a passage through them, but it is intricate and perilous, and the currents are strong and uncertain. — (*Hornborough's East Indian Directory*)

ALPINGTON a par England co. Norfolk area, 840 ac 6 m S.E. Norwich. Pop. 804.

ALPINE or ALPACANT a vil Switzerland canton Unterwalden about 13 m. from that part of the Lake of Lucerne called Lake Alpstein at the foot of Mount Pilatus 8 m. S. Lucerne, and 54 W. by S. Stans. It is chiefly remarkable for its famous *alpe*, a kind of wooden trough by which the spruce firs of Mount Pilatus were at one time conveyed to the lake from a height of 3000 ft. to a distance of nearly 8 m. which was accomplished in six minutes from the time the tree was launched. A stream of water kept the trough continually moist, to prevent friction and thus facilitate the descent of the timber. It is not now in use, the timber being brought down by railways drawn by horses and oxen. Alpstein has a fine church the steeple of which is the highest in the canton. Pop. 1600

ALPS (*Celtic, Alp*)—White Mountains a name, with various affixes given to many mountain ranges. It is however, more particularly employed to designate that great group of heights containing the highest peaks of Europe, culminating in Mont Blanc, and covering the greater part of Switzerland, and part of France, N. Italy, Bavaria, Austria, and Turkey, forming the central portion of the great mountain system of S. Europe, which in a manner more or less connected, extends from Cape Finisterre on the Atlantic to the Black Sea. Descriptively the Alps may be said to originate

on the shores of the Mediterranean Sea, between Lyons and Nice, whence, separating the basin of the Rhone from the affluents of the Po, the chain stretches across Switzerland and the Tyrol to the sources of the Drava and the Salsach where it bifurcates. The N. branch covers the country round Salzburg, Styria, and Austria, and proceeds N. E. to Italy in Galicia whilst the S. branch after having separated Carinthia from the Venetian territory subdivides on the frontiers of Illyria into two branches, including the basin of the Sava and appears to terminate at the head of the Gulf of Quarnero and the banks of the Kalpa. From this river however, a chain stretches S.E. through Dalmatia and Bosnia, lowering down as the river Neretva (an affluent of the Adriatic) which is now conventionally assumed as the S.E. boundary of the Alps. This great complex of mountains may be said to be included between lat. 44 to 45° N. and lon. 5° and 18° E. The culminating peak of the whole system is Mont Blanc, 15,782 ft. high though the true centre is St. Othard or rather the mountain between the sources of the Rhone and the Inn, and the Swiss cantons Valais, Bern, Uri, and Uriens, on the N. and eastern Pisan and Lombardy and Savoy, on the S. It is a curious fact that its great central mass is nearly equidistant from the pole and from the equator. From its slopes flow either directly or by affluents, the great rivers of central Europe, the Danube, Rhine, Rhose and Po. From the Jura mountains the Alps are separated by the narrow gorge through which the Rhone passes below Geneva, the point of separation from the Apennines as assumed to be the valley of Savona, E. from the Col de Tenda.

Divisions.—According to their altitude the Alps are sometimes divided into Low Middle and High. In the first of these divisions are included all from 2000 to 4500 ft. high in the second those from 5,000 ft. to 8000 ft. where the snow line commences and in the third, those from 8000 ft. to 15,000 ft. whose summits are covered with perpetual snow. A better known, as a more precise division is that adopted by geographers into 10 great ranges

1. The Maritime Alps [*Latin Alpes Maritimae*] consisting of 14 branches, commencing at the valley of Aosta, the junction of the Alps and the Apennines, running N.W. to the valley of Barcelonnette, thence N. and N.E. to Mont Vano separating Piedmont from Provence, a total distance of about 100 m. The culminating peak is the Col de Lardet, 9,845 ft. high and the principal rivers rising in the chain are the Durance, Sava, Var and Verdon.

2. The Cottian Alps [*Latin Alpes Cottiae*] from Cotinus, a prince who resided at Nice] consisting of nine branches, from Mont Vano to Mont Cenis having a general direction, first, of S. to N. then to N.W. and latterly to N.E. Their total length is about 60 m. their highest peak, Mont Olan, 13,819 ft. and the principal rivers rising in them are the Po and the Durance.

3. The Graian, or Graecian Alps [*Latin Alpes Graiae*, so named by the Romans, from the supposition that Hercules crossed them when returning from Spain] comprising six branches, between Mont Cenis and the Col de Bonhomme about 60 m. They include a great part of the mountains of Savoy which provides they separate from Piedmont. Their direction is N.E. and E. as far as the Rocca Melana, then N. to Mont Isère from which point they run N.W. to the Alpes Blanches. Their highest peak is Mont Isère, 13,273 ft. The Little St. Bernard forms part of the range and the principal river rising in it is the Isère.

4. The Pennine Alps [*Latin Alpes Penninae*] from Celine, a prince, an elevated object] including 12 branches, and having a direction S.W. to E. N. E. from the Col de Bonhomme to Monte Rosa, about 60 m. Their highest peaks, as well as of the whole Alps, are Mont Blanc, 15,782 ft. Monte Rosa, 15,102 ft. and Mont Corvin or Matarhorn 14,837 ft. In this range are found the greatest glaciers of Europe still so large streams has its source in the Pennine Alps, their waters mingling with those of the Rhone and the Po, before acquiring any considerable volume.

5. The Helvetic, or Lepontine Alps [*Latin Alpes Helveticæ*, or *Lepontinae*, the latter name being derived from *Lepontini*, the name of the ancient inhabitants of the country in which rise the Rhine, the Rhone, and the Tislin or Ticino] comprising 11 branches, include the heights between Monte Rosa and Monte St. Bernardino a distance of about 50 m. They

ALPS

Follow a general direction of S.W. to N.E. but E. of the Landsmanner to the mountains that surround the Val Biagno and the E. towards the mountains S. Bernardino. This is the most considerable range of the whole system, with glaciers in extent only second to those of the Pennine range. Its branches cover all Switzerland W. of the Rhone the principal one being the Bernese Alps, forming the N wall of the canton of Valais, and equal in height to the main chain. Its highest peak is the Finsteraar-Horn 14111 ft. besides which it includes the Jungfrau, Mönch, and other lofty mountains.

6 The *Elthian Alps* (Latin *Alpes Rhaetiae*) with 144 branches, forming 1) a Alps of the Grosse part of the Alps of Tyrol and covering a portion of ancient Rhaetia. They extend from Monte St. Bernardino, generally E.N.E. to the Dreghynophoria, or Pie de zone Soeveraigne, about 146 in N.W. to the base of the mountains of the source of the Inn, from there to its mouth. In its W part M. of Bludenz, from there to the source of the Danube, and an offset from these mountains covering the country between the Leck and Lake Constance is called the Alps of Aargau. This range has numerous glaciers the outcropping peak is Monte Cristallo 10611 high, and the highest peaks are the Iller, the Iller, the Inn, and the Adige tributaries of the Danube, and the Adla, Osa, and Atruba.

7 The *Aorae Alps* [Latin *Alps Aoricae*, from *Norica* = a Roman province] having 10 branches and extending from the Dreybachstetten 1° towards Hungary culminating in the Gross-Glockner 1° + 6 f. high. The loftiest branches tend N. E. to Vienna which may be said to be the termination of their range, a distance of about 200 m. E. and N. how-
ever it is further continued by the mountains of Gahnen.
The *Aorae Alps* are composed of the following ranges:
The *Aurige Alps* (the *Alps of the Aurige*), Mur from that of the Drave, and forming part of the Styrian Alps the N. following the left bank of the Enns as its course from N. to E. Below this river are the Cattle Gehrige, which join on to the Wesserswald, which terminates at Vienna as woodlands here named, on account of their herbage, Kahlenberg. All the streams flowing from the *Aorae Alps* fall into the Danube or the Danube itself by the Schotten, Vienna, and Krems down to the Danube by the Leitha and the Leith and those of the S. by the Drave.

6. The eastern Gail [Ladin, *Alpea Corruca*, from the secondary to the present Gail S. of the Norce Alps, comprising all branches, lying S. from the α and Rhenian Alps and extending from sources of the Drave to the Col de Tarva, about 108 m. between Carmine and Vasezion Lombardy. Their highest peak is the Marmolata 11 510 ft. high from their N. slope from the Aviso, an affluent of the Adige, and the Gail, a small affluent of the Drave, and from their S. slope the Brenta, Isave, and Tagliamento, to the Gulf of Venice.

8 The Julian Alps [Latin, *Alpes Iuliae*, from the name of the ancient town *Forum Juliae*] comprising eight branches and extending from the Col de Tarvis S.E. to Mont Cenis near Zengy in Croatia, a distance of about 149 m. They lie chiefly in Carniola, E. of Tarvis the main range separating into two branches, bounding ^W and ^E the basin of the Save. From the Schneegau near Lake Zirklitz the S.W. branch subdivides into two effects, of which the one proceeds ^W towards Plimne, and the other E. to the river Isère. The Julian Alps are the most numerous of their category in the Alps, and among the celebrated ranges at Adelsberg (which are) The highest peak of the Julian Alps is Mont Terglois, 10,866 ft. high, and their principal stream is the Save.

10. The *Duenno Alps* [Latin *Alpes Duennoe*] extending from Mont Kleck to the river hachma, a distance of about 161 m. They are chiefly in Croatia, Dalmatia, and Herzegovina their culminating peak is Mont Dimsa, 7456 ft high and their general direction NW to S.E. and in different parts of their course they receive the names of Kleck, Estoral and Wellabitz, or Vellebitch, which last is the Maritime branch, bordering the Carada della Morcena.

The following is a list of the principal heights of all the 10 divisions of the Alps, arranged according to their altitude —

Geology and Mineralogy.—Cadastral generally the Alps will be found to belong to the granitic schists and calcareous formations; that the main chain or centre, is granitic that on the S. and N. slopes the primitive rocks descend to the plain of Italy while to the W and N the mountains are almost all calcareous, as well in Provence and Dauphine as in Switzerland the Tyrol, and Austria. The great mass N of eastern Valais, in eastern Bern is granitic, from the St. Gothard to the Lofschenthal but W of that valley the chain which is prolonged from N. to S. between the Wetterhorn and the Dent de Morcles is composed of a light grey granite, and the granitic rocks of which most of the Jura, Geneva, and Grimsa are formed. The S. flank of the Rhätian and Noria Alps exhibit only schistuous and calcareous rocks and of this last formation along with new red, or variegated sandstone is constituted almost the whole mass of the Caennan and Juliers Alps. The German Alps likewise present to some extent rocks of igneous origin and basaltic mountains are to be met with in S. Tyrol and at near Verona. In two small ranges of the hills called Monti Rarus and Monti Eggenberg lying S. of Vienna. The mountain tops of Lower Friesland, in the N. of the Alps, are of igneous origin, and are carried on to an extent proportionate to the magnitude of the mountain ranges. Iron and lead, however are found in considerable abundance Styria, Carinthia, and Cariola, yield annually about 30 000 tons of iron. The mines of Passau and Masel in Savoy yield likewise a considerable quantity and is of Bleyberg (lead mountain) mine, in Carinthia, furnishes the parent lead in Europe. Rock salt is abundant towards the N. of the chain and the salines of Bex in eastern de Vaud of Hall in Tyrol and Berchtesgaden in Bavaria, in the vicinity of which are one of the largest and most extensive salt works in part the Hol of the Hallen and Berchtesgaden. In the N. W. of Trieste, is well known. Besides these principal products, gold, silver copper, zinc, alum, and coal are wrought to some extent.

On the main, Rhine, and coal are situated to generally the south. The great valleys of the Alps generally run in the direction of the ranges of the Rhenish Massif. Transverse to it, the most remarkable of which is the valley of the Aa, running SSW from the Brenner and having a total length of 96 km, the other transverse valleys are much shorter. Among the longitudinal valleys none can compare with that of the Drave, which, supposing it to terminate to the E. of Warasdin, has a length of 193 km. The valley of the Inn, from Lake Hall to Kapfenberg, is 183 km. long and the Swiss longitudinal valleys, such as those of the Upper Rhine, the Valais, and Val de, have a length of 48 m to 60 m. In their most direct line.

Lakes.—Small lakes frequently occur in the Alps, at great altitudes and of considerable depth. They are to be met with near the summit of many of the cols or passes, at the top of the water sheds, and form the natural sources of streams and sometimes send their waters in opposite directions. Such

are the lakes on Mont Gembre, Cenis, Great St. Bernard, St. Gothard, Bernadina, &c.

Climate.—As might be expected the climate of the Alps is exceedingly various. In the lower valleys of its S. slopes we meet with Italian warmth; in elevated regions, such as the eastern Bern, the temperature assimilates to that of Britain while higher up, on the Alpine heights, the climate assumes an arctic character. In the lower valleys, the mean temperature ranges from 60° to 80°. Half way up the Alps it averages about 55°—a height which, in the snowy regions, it never reaches. But even where the temperature is lowest, the solar radiation produced by the rocks and snow is often so great as to raise the thermometer to 120° and even higher. The exhilarating and invigorating nature of the climate in the upper regions of the Alps, during summer, have been acknowledged by all who have perambulated those romantic scenes. The freshness of the breeze as it comes from the snowy peaks, tempered by the rays of a southern sun enables the traveller without weariness, to perform distances on foot that at home he would have shrunk from attempting. Notwithstanding however the invigorating nature of the climate, the inhabitants of the higher valleys are afflicted with two grievous diseases—goitre and cretinism and so strongly is taste directed by external circumstances, that, in some localities, the former is reckoned a point of beauty in females and appreciated in proportion to its excess.

Botany and Zoology.—In a climate so varied the vegetable productions are in like manner necessarily equally so. In the same region, though of course at different altitudes, we meet the vine, the walnut, and chestnut and the *Rhododendron ferrugineum*, the *Campanula trachelium*, the *Silene acaulis*, and *Salix herbacea*. But the varied vegetation of this region will be more clearly apprehended from the following list of heights attained in the Alps by different plants:

Name.	Height feet	Zone	Height above sea
Orange, Oh e, and Fig	569 ft.	Alpine Zone	4474 ft.
Vine	1698	Wood	4760
Chestnut, Walnut	2577	Scrubby Pine	5108
Cherry	3069	Maple	5418
Hazel	3615	Willow	5613
Oak	3816	Siberian Cedar	599
Elm, Ash	4185	(century)	

At this height cereals may be cultivated.

To these trees succeed heaths and rich pastures, called *alpe*, which extend to the snow line 8000 ft. above the sea level. But this is not the upper limit of vegetation for lichens are found on the highest rocks and Saxaurea at the height of 11 889 ft. on Mont Blanc and 11 609 ft. on Mont Cervin or Matterhorn gathered *Arctia halvetica*, *Golum montanum*, and *Saxifraga hypnoides*. At this great elevation are found two species of quadrupeds, the bouquetin or wild goat and the chamois, which delight in heights inaccessible to man. The bouquetin which has become very rare, scales the most elevated peaks while the chamois is generally found rather lower but is never seen in the plains. In summer the high mountain pastures are covered with large flocks of cattle, sheep, and goats, which are in winter removed to a lower and warmer level. The marmot, and white, or Alpine hare inhabit both the snowy and the woody regions. Lower down are found the mule, the wild cat, the fox, the lynx, the bear, and the wolf, but the last two are now extremely rare. The vulture, eagle, and other birds of prey frequent the rugged Alpine rocks and the snowy ptarmigan seeks food and shelter among the diminutive plants that border upon the snow line. Other kinds of game, including the moorowl, woodcock, and partridge abound in their usual localities, from the upper limit of the wood to the more level and habitable parts below. Several kinds of water fowl frequent the higher lakes, where excellent trout and other fish are found but those situated at the greatest elevation are, from their low temperature, entirely destitute of fish.

Passes.—The passes of the Alps called by the French *cols*, that is, depressions are the roads by which communication is effected between districts on opposite sides of the mountains and in no countries are these essential requisites to profitable industry so supremely important as in Alpine regions. The passes of the Alps may be divided into three classes:—1. Those practicable for wheeled carriages. 2. Those practicable for horses or mules. 3. Those mixed only for foot passengers.

Of the first class, by far the most frequented is the Mont Cenis forming the principal route from France to Italy; the Simplon, from Yverdon into Piedmont and the Splügen and Bernardino, from the Grisons into Lombardy. The Simplon and Stelvio passes—the latter in the Rhaetian Alps, leading from Tyrol into Lombardy—are among the greatest triumphs of modern engineering. The former which was constructed by command of Napoleon (1800-1806) at the joint expense of France and the then existing kingdom of Italy is about 88 m. long, and averages 9 yards in width, the rise being only 1½ inches per yard. It runs mostly between bold and almost perpendicular rocks, which have been tunneled at different places bridges having been also thrown across where chasms and precipitous interrupt the continuity of passages. To give a notion of the colossal nature of the undertaking, it may be mentioned that the number of bridges, great and small constructed for the passage of the road between Brag and Susa, amounts to 611 in addition to the far more vast and costly constructions at terraces of massive masonry miles in length of 10 galleries either cut out of the living rock, or built of solid stone and of 20 houses of refuge to shelter travellers and lodge the labourers constantly employed in taking care of the road.—(Murray's Handbook.) While some of these galleries are of great extent, and as that of Gozdo present to the traveller pictures of savage wildness and sublime grandeur others are little more than simple arch ways of rock forming highly picturesque features in the route. Of this class is the gallery of Isella, the last but one on the Italian

THE GALLERY OF ISELLA.—From Susa, looking N. to Brianza.

side near the village of the same name, 8 m. N.W. Donau d'Ornola. The Stelvio, which is a military road constructed by the Austrian Government, and completed in 1824 is the highest pass in Europe practicable for carriages, being 9174 ft. above the sea, and is a very remarkable specimen of human industry and skill. The galleries, cut for many miles through the solid rock, along the margin of the Lake of Como show higher up, built of massive masonry strong enough to resist the fall of avalanches, the long causeways carried over enormous bridges thrown across roaring torrents, the long succession of masonry terraces, carried up with the most gentle slope, but which nevertheless, surmount one of the highest ridges in the Alps; these are works which, without exaggeration, deserve to be called stupendous.—(Murray's Handbook.) This road on which so much skill, labour and treasure have been expended is seldom passable except from June to October owing to the fearful ravages committed by storms and aval-

avalanches, which causes a large annual outlay for repairs. Of the second class, which is very numerous, may be named the Little and Great St. Bernard, the Col de Balme, the Grimsel, the Gemini, etc. Some of these are set along ledges of rock having enormous cliffs above, and yawning gulfs beneath, or they are in the form of rough stairs, as part of that of the Gemini to the unpracticed eye apparently more suitable to be climbed by numbers, than by four-footed animals. Such passes are always picturesque, and seldom dangerous, though these misconstrued to them are at times apt to have their nerves severely tried when wending their way along the giddy brink of a huge precipice. Of this class of pass, the accompanying cut conveys a good idea. It is that over the Grimsel in eastern Bern, and one of the grandest and most

THE GRIMSEL PASS. From Hermann's Sketches in Switzerland.

interesting passes over the Alps. Its summit is 8400 ft. above the sea.

The third class, those that can be traversed only on foot, is still more numerous than either of the foregoing. Many of them are known only to the natives of the localities in which they exist, are favor to be traversed excepting in the summer season, and some are not practicable for years in succession. These least frequented and most difficult of access appear to have been used principally by contraband traders, and by persons flying from danger. Some of them rise far above the line of perpetual congelation, ascending the valleys of torrents, crossing dangerous ravines and snow-covered glaciers, reveal orol dangerous by frequent crevasses, that is, large rents, sometimes of considerable width and hundreds of feet in depth. Of these, the highest are the Col de Géant, at the head of the Mer de Glace, 11 172 ft. and Mont Curon, 11 096 ft. The following table exhibits the heights of the principal passes of the Alps. These varied are practicable for wheeled carriages, and those marked * are practicable for pedestrians only.

Avalanches.—The traveller in the Alps is frequently exposed to dangers of no ordinary description. The electric currents, attracted and moved in every direction by the warm aerial lofty peaks, which render the winds at once fierce and violent, the melting of the snow or its accumulation upon declivities, or on the edges of precipices which do not allow of its resting, all contribute to the perils that beset him besides which his progress is often interrupted by the tempests called snowstorms by the French and passed by the Germans, and the still more destructive avalanches. The former arises suddenly and with great violence, often accompanied by thunder and lightning, and tossing the snow in eddying clouds around the

traveller blinding his eyes, irritating his skin, and compelling him to seek shelter. The avalanches (French) sometimes accompany the snowstorms, to which in that case, they owe their formation, but they occur also at different seasons, unaccompanied by tempests. They are in general described as enormous masses of snow which, detached by various causes from their original position, roll with tremendous noise and force over rock and precipice, down to the plains below overwhelming man and beast, forest and dwelling, in one common destruction. A touch of the foot, or the slightest motion of the air even that produced by the sound of a small bell, or other instrument, is often sufficient to set the avalanche in motion; or sometimes used to ascertain the distance or nearness of such danger. The most destructive are those which are composed of hardened snow and which rolling or sliding down from the mountains carry all before them. From the frequent occurrence of avalanches, some parts of the Alps are entirely uninhabited and in others, large patches of the tallest and strongest trees are left standing in order to arrest their progress. Houses are built under the shelter of rocks, and all other available means adopted to avoid the effects of these destructive visitants.

Glaciers.—These are to be met with in various Alpine regions, but those of the Alps have been more minutely investigated than any others. They consist of masses of snow formed in valleys above the line of perpetual congelation, whose prolongations extend to these lower down, reaching frequently to the borders of cultivation. They present the appearance of a frozen forest frequently several miles in length traversed by deep rents called crevasses, and are composed of snow melted by solar heat, and frozen into granular ice, constituting a compound of ice and water more or less yielding, according to the state of wetness or infiltration. The upper part of the glacier where the snow is in a transition state from a loose and powdery consistency to ice, is called *névé* in French, and *firn* in German. Professor Forbes says, a glacier is an imperfect fluid, or viscous body which is urged down slopes of a certain inclination by the mutual pressure of its parts. Glaciers are consequently subject to the laws of fluids, and, therefore, by no means stationary except probably during winter but continually moving, their rate of progression during summer as has been ascertained by observation on the Mer de Glace being 18-24 inches in 24 hours though possibly their rate of advance may vary some of these repeating on almost horizontal surfaces while others are inclined at a very considerable angle. On their surface they bear large quantities of stones, some of them of enormous size, brought down from the mountain recesses where the glaciers originate. These heaps are ultimately deposited at the foot of the glacier and form terminal moraines, presenting the geologist with excellent materials for studying the structure of the mountains whence they have been derived. The term moraine is likewise applied to the lines of stones and mud found on the surface, caused by the union of two or more glaciers, which frequently happens from several glacier-filled valleys converging into one. In such cases they are called lateral or central moraines, according to their position. In flood seasons, glaciers vary from a few feet to several hundreds. In mild seasons their bulk is much reduced in size, and in cold seasons they are much enlarged. In the winter of 1818-19 some Swiss glaciers increased so greatly and came so far down into the lower valleys as to sweep away whole villages. During the heat of summer their upper surface is melted, and the waters tumble down the crevasses and mingle with waters below formed by the melting of the under-surface glacier in consequence of the higher temperature of the earth on which it rests. These accumulated waters flow down to the lower end of the glacier and issue from a natural arch frequently of considerable height, formed in the ice, in a muddy stream as if colored with pipeclay arising from the quantity of pounded granite or limestone held in mechanical solution; for as the enormous mass of ice rubs its way down the valley it grinds to powder stones beneath it and, at its sides, and thus discolors the waters that flow from it. Such an arch, varying in size according to the season of the year may be seen in the Glacier des Bois, the termination of the Mer de Glace in the valley of Chamouni, from which arch flows the Arveiron the source of the Arve whose muddy stream pollutes the

impel blue waters of the Rhone, into which it falls below Geneva. Of the numerous glaciers interspersed throughout the Alpine valleys, the Mer de Glace is at once the most extensive, picturesque, and easily accessible. It terminates in the Glacier des Bois, in the valley of Chamouni, a little way E. of the Frenche and of Mont Blanc. This great ice river has near its origin two divided streams derived from different sources. The W branch, denominated the Glacier du Géant or de Tacul, has its rise in a vast basin immediately to the E of Mont Blanc, connected between the upper ridge of the Alps, extending to the Col de Géant on the S. and the chain of Aiguilles de Chamouni on the N and terminating with that of the Charbon, round whose E foot the Mer de Glace sweeps. The other branch, called the Glacier de Léchard, has its origin at the foot of la Grande Jorasse, one of the highest mountains of the chain which separates the Val Forret from that of Chamouni. This glacier is smaller than its neighbor although it is swelled, before their junction, by the tributary ice of the Glacier du Taillard, which falls in upon its right bank from a detached basin, encircled by inaccessible pinnacles of rock in whose centre is the spot called the Jardin, now so frequently visited. (Forbes Alps) This glacier is 730 in length, direct distance, and seldom exceeds two-thirds of a mile in breadth, but is generally less. Its last slope, into the valley of Chamouni has a vertical height of 1800 ft. and, in appearance, it is as if an enormous torrent or rapid had suddenly been congealed. To a accompanying view will serve to convey a distinct idea of the grandeur and barren magnificence of the scene presented by this glacier. The combination

place, and utterly demolished its old walls; they however subsequently restored part of its foundations, though very slightly. Pop. 2356.

ALPUJARRAS, a mountain district, Spain in Andalusia, extending about 50 m. W to E nearly parallel to the coast of the Mediterranean. From Morón to Almería the mountains run N to S. about 85 m from the great chain of the Sierra Nevada to the coast, and form the subordinate ranges of the Sierra Bermeja, de Gudar &c., whose highest peaks, about 6575 ft. high, are covered with snow three-fourths of the year. These mountains in general are rugged and bare, and, excepting some valleys, such as that of Andarax, little susceptible of cultivation though in some parts abounding with vines, olives, and other fruits and in others, clothed with forests of oak, beech, pine, and other hardy trees. The district is watered by the Almería, Alira, and numerous smaller streams. Some wheat, barley, rye, hemp, &c. are grown and a few horned cattle, sheep, goats, and mules, are reared. Here also are mines of various metals, now little wrought, except the lead mines of the Sierra de Ador and the quarries yielding alabaster which is of the finest quality—(Macle, Diccionario de España.)

ALREDFORD a market tr. and name also of two parishes in England co. Hants (Southampton). The town is situated on the main road between London and Winchester 55 m S.W. the former and 7 m. N.E. the latter. The river Itchen passes at a short distance to the W and close by in the same direction is a fine sheet of water called Alrexford Pond covering about 200 ac., fenced in the reign of King John, with the view of improving the navigation of the river. The trade of the town has much fallen off from what it was formerly the only manufactures now remaining being that of lace. Alrexford has been a borough and market town from a very remote period and at one time sent a member to the House of Commons its population being then much greater than it is now. The town is governed by a bailiff and eight burgesses and petty sessions are held here by the county magistrates. Three fairs annually chiefly for sheep. The town was nearly destroyed by fire three times first in 1690, again in 1710 and a third time in 1786. The parishes are called, respectively Old Alrexford and New Alrexford. The former is in the par. of Fawley and contains 983 ac. and 1816 of a pop. the latter in which the town is situated is in Alton division and contains 2608 ac. pop. 598 Total pop. of the two parishes and town 2141

ALREDFORD is also the name of a par. in co. Essex but containing area, 1838 ac. Pop. 458.—Correspondent in Alrexford.

ALREWAS, a par. England co. Stafford area 4329 ac. 5 m N.E. by N Litchfield Pop. 1649

ALROE, an al. Denmark, at the mouth of Helsingørsk fiord lat. 55° 50' N. lon. 10° 5' E. It is separated from the mainland by a fordable channel, and is 2½ m. long and ¾ broad. It contains a village called Alro-Bj which, with the district around, forms the Danish parish of the same name. Pop. 800.

ALSDNO a small tn. and com. Italy dioc. of Parma, 12 m E.R.E. Piacenza. The inhabitants are agriculturists the productions grain hay and timber wine and oil. Pop. 4175

ALSACE [German, *Elsass* Latin, *Alsatia*, *Alsacia*, or *Elaseth*] a former prov. of France, now forming the dept. of the Upper and Lower Rhine.

AL-SALIH, a small tn. on the S. coast of Arabia, 40 m N.E. by E Aden, and about 2 m from the sea. lat. 13° 18' N. lon. 45° 30' E. It consists of about 200 houses, some of which are of stone. The country around is well watered and cultivated. Pop. about 500

LA MER DE GLACE, VALLEY OF CHAMOUNI as seen from La Chapelle.—From La Chapelle at Lausanne

of ice plus upper plain, as it rises up the valley green pastures become flower plains, lofty snowy peaks and enormous bare mountains with perpendicular sides many thousand ft. high form one of the most striking natural pictures the eye can rest upon. The cavern of the chaupin from which the view is taken is near the lower end of the Glacier des Bois, which is the part of the glacier here shown. In the valleys above the glaciers, deep lakes are sometimes formed which at times bursting their barriers, rush down the gorges and lower valleys with destructive fury. For an account of a bursting or débâcle, of this kind see BARNES (VAL DS).—(Orographie de l'Europe Forbes Travels through the Alps of Savoy Murray's Himalayan Private Notes)

ALPS (SWITZERLAND) See ALP.

ALPUENTE, a tn. Spain, prov. of and 48 m N.W. from Valencia, between the mountains del Castillo and San Cristobal. It is very irregular from the inequality of the ground on which it stands but the streets are for the most part well constructed paved, and clean. It has a small plaza, a townhall, prison, and an endowed school a parish church, hospital, cemetery and the ruins of an old Roman castle. The troops of Don Carlos burnt a considerable part of the

ALSEN, an isl. Denmark, duchy of Schleswig situated on the Little Belt, and separated from the coast by a narrow channel named *Ålbog* length, 20 m. breadth from 5 to 7 m. lat. 54° 56' N lon 9° 55' E. It contains several villages, and two considerable towns, Sonderborg and Nørby the former of which has a good harbour with a pop. of 8000. It is one of the finest islands in the Baltic being diversified with forests, lakes, well-cultivated fields and orchards. Flax is abundant in the lakes, some of which, particularly the Nørbyer Sø, the Brød Sø and the Water Sø, are of considerable extent. The produce of the soil consists of wheat, rye, potatoes, rape, flax, and some seed the last of which is much used in Denmark as seedling. A great part of Alsen belongs to the Duke of Augustenborg whose seat, a castellated building, in modern style, stands near the centre of the island, on the wooded bank of a small arm of the Augustenborg-fjord. Sonderborg has the remains of an old castle. In one of the towers of which Christian II. of Denmark and Norway was confined from 1533 to 1549. Pop. of isl. 22,500.—(Raguenet's *Danische Staat*.)

ALSFELD a town in Hesse-Darmstadt, prov. Upper Hesse, on the left bank of the Schwab 25 m. N.W. Fulda, 31 m. N.E. Gießen lat. 50° 45' N lon 9° 18' E. It is one of the oldest towns in Hesse; is walled and has five churches, and a grammar school. Linen is manufactured to a trifling extent, but the staple manufacture is woollen. There are also six dye works, three tobacco factories, several bleachfields and a large distillery. Pop. 3700.—The district of Alsfeld, lying along the chain of the Vogt, has rich cultivated soils. It contains 28 parishes, and has a pop. of 100,100 chiefly employed in weaving linen and other fabrics.

ALSH LOCH an arm of the sea in co. Ross, Scotland lat. 57° 17' N lon 5° 54' W. It forms the common entrance to Loch Duich and Loch Long the former is well sheltered, and capable of holding a great number of vessels. Loch Long is a long narrow river inlet, the entrance to which is shallow with about 6 ft. at low water.

ALSBEBEN a walled town Prussian Saxony gov. Marburg, on the left bank of the Saal 15 m. N.W. Eisenach lat. 51° 44' N lon 11° 48' E. The inhabitants live by agriculture, the rearing of cattle, and commerce. A good deal of sawing is done in gardens. It has an hospital a church and a castle, belonging to the Duke of Anhalt-Dessau. Pop. 1850.

ALSTADLOUG a vill Norway prov. Nordland on the S. shore of the island of Alsen, 186 m. N.W. Trondheim. It is the seat of the Bishop of Nordland and Sørmarken.

ALSTEN an isl. Norway prov. Nordland The N. central point is in lat. 60° 7' N lon. 13° 13' E. The island is mountainous its most remarkable peaks being the Seven Sisters one of which attains an elevation of 4378 ft. On this island is the village of Alstaden.

ALSTER, a river Denmark prov. Holstein rising in a marshy country about 20 m. S. Hamburg. It takes a S. course, passes through the city of Hamburg, after forming the head of the Binnen Alster and falls through dock gates into the Elbe.

ALSTON or **ALSTON MOOR**. See **ALSTON**.
ALSTONEFIELD a par. England, co. Stafford area, 31,860 ac. on the river Dove. It has several churches, lead, copper and coal mines. Pop. in 1841 4701.

ALTAI [more correctly *Altai-yin-ula*, golden mountain] is the name of a group of mountains projecting into the plains of Siberia, from the N.W. angle of the elevated table land of Central Asia, and lying between the sources of the Irtysh on the W. and the Yenisei on the E. The literal signification of the name borne by a group of mountains so distinguished at the present day by its mineral riches, is probably but accidental. The country in question was formerly the seat of the Mongolian tribe called the Golden Horde (*oruk*, a tent) and it is consequent with their usage to suppose that they dignified with the title of golden, the residence of their chief; or the locality in which he fixed his camp and that the name *Altai-yin-ula*, or golden mountain (*Altai* signifies gold in Mongolian) which denoted, at first, only the court or royal residence, came at length to be applied to the whole territory of the tribe. At the present day the name Altai is given, exclusively both by natives and Russian settlers, to the country actually occupied by the Kalmaiks and is thus con-

finued in its application within comparatively narrow bounds. European geographers, on the other hand have hitherto used it as a general denomination for a supposed chain of mountains extending continuously from the upper waters of the Irtysh W. to Lake Baikal; and some have even carried the generalization so far as to include, under the same name, the several mountain chains—the Stanovoi Khatan, Altai, &c., which stretch N.E. from Lake Baikal to the Sea of Okhotsk. But, in reality the broad belt of mountainous country interpolated between the table land of Central Asia and the low plains of Siberia, is broken into numerous ranges of mountains, bearing different names, forming independent groups, and rarely striking from W. to E.

The Altai mountains, taken according to the widest acceptation of the name at the present day extend through 64 degrees of latitude viz., from the vicinity of Tomsk at the N. foot of the Altai or from lat. 56° 5' N to the neighbourhood of Bukharminsk, at the confluence of the Bukharmian and Irtysh in lat. 49° 30' N and through 7 degrees of longitude, from the mountains of Kolyvan in the W., lon. 82° E. to the Sayan chain in the E. The several ranges embraced within these limits are, proceeding from N. to S. and from W. to E. as follows.—The Altai, winding very irregularly from N.W. to S.E. and sending down opposite streams both to the Ob and the Yenisei the chain of Balair separated from the Altai by the valleys of the Tura and the Irtys to the S. and W. of these mountains lies the wide valley of the Ob. Beyond which, S., we find the following Alpine range, viz. the Babeluk, Chachilina, Tuguruk, and Kolyvan mountains all striking nearly W. and E. The Alps of Korgona, Kokon, Ulhuk Turgusuna, Ulhuk and bordering on the left bank of the Katsunya, the Alps of Urdai and Terakhtuk on the right bank, the chains of Kholone, Katsunya, and Archytia S. of these, the Shibebertha chain above the right bank of the Bukharmian, presents, to the N. a concave outline prolonged towards N.W. and this direction of the mountain chain becomes more frequent on the E. of the Katsunya the Balair Kura, and Tobolsk Alps still stretch from N.W. to S.E. but the Kamsa, and Mingin-taiga chains, and part of the Sayan extend in a S.W. to N.E. direction.

The mountainous region thus described occupies an area of about 40,000 sq. m. which is nearly equal to that of England is all comprised in the government of Tomsk, with the exception of the valley of the Abakan, towards the N.E. which belongs to the government of Yemskinsk. The S.W. slopes of the Ulhuk, Ulhuk and Turgusuna ranges, pour some streams into the Irtysh while the N.E. face of the Altai range contributes to swell the Yenisei; but, with these few exceptions, the waters of this extensive region the rivers of which are large as well as numerous, all flow into the main branch of the Ob. The line of demarcation between the Russian and Chinese empire crosses the Irtysh about 7 m. N. of the 49th parallel of lat. runs in an E.N.E. direction along the Yanyin, which joins that river and then passes to the Bukharmian, which it follows to its source; it runs N.E. and N.W. through the heights of Kargad and Mingin-taiga and follows the Sayan chain N.W. and N.E., till it reaches the mountains named Shibebertha. In the remainder of its course E. this boundary line passes for the most part along the N. side of the mountainous region so that in Altai mountains are broadly distinguished from the other mountainous groups which follow them on the E., by the circumstance that, while the former are well known the latter form a *terra incognita* to European geographers.

The Altai group has been described by a geological writer of great authority as a vast preconcipitous connected on the S. with the mainland of primitive rocks, and surrounded on the other three sides by an ocean of diluvial deposits. This opinion requires some modification, perhaps, as far as regards the E. district of the Altai of which only the N. portion presents to view diluvial formations. The Neptunian rocks being chiefly to the classes which lie furthest apart in the preconcipitous series, namely palaeozoic and diluvial. The earliest rocks, which, from the absence of fossil remains, cannot be easily classified from the large portion of the Altai. Clay slate, and chlorite slate, passing, in the neighbourhood of granite, into mica slate, are the prevailing rocks in the elevated districts. Through these the plutonian rocks, gran-

luc, gneiss, syenite, &c., have forced their way heaving up the clay slate in many instances, so that its strata stand in a vertical position. Among these eruptive rocks must be mentioned porphyry and gneiss. Limestone holds the next rank in respect to extent; though, like the clay slate, it is seldom found unaltered by the influence of plutonic rocks but, from its appearance in some places where it has undergone least metamorphism, and is characterized by containing *Calymene polymorpha*, geologists think it likely that the limestone of this region altered as they now are by fire, were originally of the devonian system. The rocks belonging to this system are easily recognized by their organic remains. In the Altai they lie in three districts, or zones, namely Smayak (an abridged form of Smolnogorsk) Tunka, and the Yundak. The carboniferous limestones, also, are widely distributed in the Altai though the coal formation itself has not yet been discovered within the mountains. The sandstones accompanying them are particularly rich in paleontologic treasures, containing among other things the tracks of *Araneosites* apparently of the same species as the *Araneosites* which now flourish in New Zealand and Norfolk Island. The glacial formation encompasses the Altai, as has been already stated nearly on three sides. In this formation, and in the rocks of the devonian and miocene systems lies nearly all the mineral wealth of this favoured region.

The physiognomy of the Altai mountains in their W and

E. divisions, is generally grand and interesting. The rivers, which are very numerous, flow rapidly with full streams, and the various forms of the stratified and metamorphosed rocks of the limestones, porphyry and granite, with the fields (solids or snowy mountains) in the distance, lend to the scene the charm of perpetual novelty. The banks of the Katanga, in the heart of the mountains, present a landscape of the most impressive character: an immense wall of rock extending from W to E supports fields of perpetual snow and glaciers, from the midst of which rise numerous rocky points, pyramids, and truncated cones while in the distance are seen the two towering peaks named the Pillars of the Katanga. These peaks, which are supposed to be the highest summits of the Altai mountains, stand on a wide and elevated table land, lying between the sources of the Katanga, the Mishaya (falling into the Chuya) and the Burell, which joins the Ishkurtas Glaciers, spreading from the base of the Bielukha, or snowy cones, supply the fountains of these three rivers. The absolute height of the Pillars has been estimated, by Dr. Goble at 11 725 ft., or by Teichbühner at 12 700 ft. To the E. of these pillars, the peaks of Chomun-sonom and Arshits increase in number and present forms still more deeply serrated. In the course of all my long wanderings, I do not remember ever to have admired a scene more grand or more magnificent. — (Teichbühner). The accompanying view of these mountains is taken from the N summit of the plateau of

VIEW OF OCHUKUF-CHURUM, KATUNGA AND ARSHITS — from Teichbühner's, *Voyage de* Altaï Oriental.

Saldjar a branch of the chain of the same name. In the E. part of the Altai where the clay slate predominates, the aspect of the country is more monotonous: the mountains lose all variety of form, and assume the character of long ridges. It is on these mountains of slaty structure that the most disagreeable characteristic of the Altai is chiefly developed, namely the great extent of deep bog and morass, through which a horse crawling the hills must wade belly-deep even in the middle of summer and not without the danger of breaking his legs, if he gets entangled in the boughs of the trees which lie buried beneath. The principal heights of the Altai are situated, as might be supposed at the points of intersection of the ranges which strike in different directions. Few of them have, however been as yet measured, and the following list of peaks, the elevation of which has been determined by barometrical observation may be presumed to contain the most accessible summits, rather than the highest:—

The Kroulberg (cross mountain in the Ulduz range) at 7045
the foot of the cross. — — — — — 6940

The area covered by perpetual snow in the Altai is very considerable but the height of the snow line, which is very irregular does not appear to have been yet ascertained for any locality by exact observation. It is supposed to be relatively high, owing, probably to the great mass of the high land and the congenity of the mountains, as well as to the peculiar condition of the atmosphere and, in the E. and more elevated portion of the Altai its general elevation does not perhaps fall much short of 8000 ft. The glaciers of the same region occupy a large extent, but they never descend

far below the snow line and it is a remarkable fact, that though in the granitic districts of the Altai valleys are to be found strewn over with blocks of granite, which in some places occur in great numbers, even on the crests of the mountains, yet being properly so called—the distribution of which is generally never led to the agency of glaciers—are never met with either in the Alpine regions of the Altai or the plains surrounding them. This fact strikes forcibly the traveller from the Russian shores of the Baidar, where so wide an area is overgrown with boulders of Finnish or Scandinavian granite. The limited extent and physical agency of glaciers in the Altai may be assigned, with much probability to two causes—1. The relative dryness of the air for the climate of Baidar on the river Ob (lat. 52 27 N.) be compared with that of St. Gothard on the Swiss Alps, it will be found that snow falls at the former place but 66 days in the year and at the latter 116. 2. The winter is in the Altai the dry season most of the snow falls during the summer months, and little after November. These climatic conditions explain why the line of perpetual snow lies high and why there is so little accumulation of glacier ice. The storm winter of the high lands is kept effectively within bounds by the heat of a short summer. The frost does not disappear till the middle of May and sledge travelling, on the newly fallen snow frequently begins in the middle of September. In the mountains the ice of the lakes may be crossed on horseback in the middle of June. But the prevalence of cold indicated by these circumstances is counterbalanced by a general security of the atmosphere and the town of Pykalka, on the S. slope of the Sherebekhka range, near the Balkhama, standing at a height of 4300 ft. above the sea, is yet uninhabited all the year round, say the fields adjacent to and even above it, are cultivated with success, yielding barley, rye, oats, millet, and summer wheat, besides grain vegetables.

The vegetation of the Altai is varied and abundant, and often vigorous. The local Flora, in which ample justice has been done by the labours of Drs. Ledebour and Bunge, assumes the Asiatic character, the European type prevailing from the Ural mountains to the banks of the Irkisk. The mountain forests are composed of birch, alder, aspen, scotch willow, larch, fir, and the Siberian stone pine (*Pinus sibirica*). This last tree flourishes at an absolute height of nearly 7000 ft. and at an elevation of 6000 ft. where the snow rarely disappears before the end of May it attains a great size, often measuring 14 ft. in circumference. The highest limit of the birch is about 4800 ft. the dwarf willows, and other under-wood, come totally about 1000 ft. higher.

The Altai mountains, and the adjoining ranges to the E., are the native home of the wild sheep (*Ovis argali*) which occupies the crags and most inaccessible rocky heights, leaving the hill sides and elevated valleys to several kinds of deer (*Cervus elaphus*, *C. alpinus*, *C. pygmaeus* &c.). A marmot, peculiar to these regions, abounds in the vicinity of the snow. These animals are preyed on by the gibbon and the bear. The royal tiger prowls through the steppes on the E. and haunts particularly the reedy shores of Lake Balkhama. It is not unlikely therefore, that his predatory incursions sometimes extend into the Altai.

It is related by Tshikhatcheff in the interesting and instructive account of his journey through the Altai, in 1841 that he found near the sources of the Chirya, and in some other elevated districts, extensive tracts covered with the skulls, horns, or antlers, and other remains of the argali elk, and deer of various kinds. Sometimes whole skeletons lay exposed, but more generally they were at least partially buried, only the skull and antlers rising above ground and frequently the latter bones protruded slowly gathering little mounds about them, by ascending the loose drift. Here, then, was to be seen in course of formation, the growing monuments of future paleontology. The Kalmuks when questioned respecting these appearances, ascribed them to the increasing severity of the winter: the destructive effects of which, they said, had been felt by the deer and argali for some years. In like manner Dr. Ledebour states that he often saw in the Altai above the present limits of arborescent vegetation, withered trunks and other inextinguishable proofs that trees had once flourished higher up. But notwithstanding all this how are we to believe that a considerable change is taking place in the climate of the Altai mountains, destroying life and narrowing

the limits of vegetation without being perceptible in the adjoining inhabited towns or depressing the thermometer or manifesting itself otherwise than by merely local effects? As to the limit of arborescent vegetation, may it not be liable to periodical changes, owing to the exhaustion of the ground? In thick woods, when trees die, they are soon replaced by other trees of a different species but on the borders of vegetation where few species will grow the chance of a rapid succession is proportionally diminished. With respect to the destruction of the deer it appears to us that an adequate and very probable explanation of it may be found in the increase of pest dogs, and that inviolate extension of mooses and quagmires, which all travellers in that region describe as its most annoying feature. Nearly all the destroyed deer seen by Tshikhatcheff were smelt, their heads excepted in a morose. These animals are confined by their habits to certain regions. If they venture into the low lands they are attacked by flies and mosquitoes, and driven back to their haunts in the neighbourhood of the snows. But there they find cold, inhospitable sloughs, continually encroaching on their domains depriving them of pasture, and at last engulfing them. It is obvious that the growth of pest makes a change in the surface of the ground which is capable also of destroying trees.

The Altai mountains owe their reputation and importance chiefly to their mineral treasures—such silver copper and iron ores—to which gold has been recently added. It was in 1700 that Nikit Demidoff first opened a silver mine in this region, at Kolyvan. A few years later the Government took the business off his hands, and Schlangenberg (in Russian *Schlangenberg*)—a mine now shrouded into *Serpy*—became the centre of operations. This branch of industry has wonderfully developed in the Altai but we cannot, in this place, do more than indicate the towns in which the metallurgical operations are chiefly carried on these are Karkoul, Serey, Salarek, Ustkhamskoye, Semipalatinsk, Riddersk, and Byrdynovsk, which last possesses, at present, the richest silver mines of the Altai. The valuable ores are all found in the Devonian system, or in the carboniferous limestones, and always in the vicinity of porphyry or greenstones. The gold occurs less down in the glacial strata, associated with remains of the mammoth and rhinoceros, and generally in the vicinity of dioritic rocks taken collectively it belongs to the plains yet, in consequence of the investigations of Tshikhatcheff an expedition was sent, in 1843 to look for gold in the granitic district in the heart of the Altai, near the sources of the Sema, which joins the Kattunya and gold was indeed found in some of the places indicated but not in sufficient quantity to encourage the prosecution of the search. A variety of porphyry commonly styled Jasper which is formed in the late size handsome veins, and takes a fine polish, may be mentioned among the valuable minerals of the Altai.

The Kalmuks inhabiting the Altai are extremely weak poor and inefficient. They are distinguished by the Russians into obedient (i.e., Russian subjects) and double-taxed or paying tribute to China as well as to Russia, though living beyond the Chinese frontier. They are governed by their Zaisans, or native chiefs the Russians never interfering with them, except to collect the yakak, or tribute of furs—Tshikhatcheff, *Poyezd dnu Altai Oriental*, Ledebour *Altai Reise*, Rose *Reise in Altai*, Humboldt, *Asie Centrale*.

ALTAMURA is a Mexican state Tzauapala, on the N. bank of a lake formed at the mouth of the Tampico or Panuco river 10 m. N.W. Tampico. The town consists of a few tolerable houses in a square, a church and a number of thatched cottages. Its vicinity to swamps and lagoons renders it unhealthy, miasms being very prevalent. ALTAMURA is a N. Naples, prov. Terra di Bari, at the foot of the Apennines 113 m. E. Naples, and 20 m. S.W. Bari. It is one of the most beautiful towns in the province, surrounded by walls, and adorned by several elegant structures the principal of which is its cathedral a magnificent building founded by Frederick II. It contains, besides, an hospital and a college, both founded by King Charles of Bourbon. It was sacked by the royalists in 1799. A number of ancient Grecian vases, of exquisite workmanship, and other antiquities, have been dug up in the neighbourhood, corroborative of the opinion that it is built on, or near the site of the ancient Lepanto. It is the residence of a royal governor. The country around is fertile, and abounds in rich pastures. The

rice and olive are the chief productions of the soil. Pop. 14949

ALTAVILLA—1 A. in Naples, prov. Principato Ultra district of and 9 m. E. from Capri, situated on a hill in a healthy locality. It was founded by the Normans. Receding afterwards a sanctuary for the insurgent subjects of Frederick II. that monarch caused it to be destroyed. It was subsequently rebuilt by the inhabitants. Pop. 3584.
—2 A. in prov. Principato Ultra, district of and 7 m. N. from Avellino. Pop. 2106

ALTAR a river England co. Lancaster area 4284 sq. m. It is the largest of the Alt. 1 op. 501

ALTDAMM, or **DAMM** a fortified city Prussia, prov. Pomerania, gov. of and 4 m. E.S.E. from Stettin situated at the point where the river Elbe flows into the Lake Dam. lat. 55° 24' N. lon. 14° 41' E. It has two suburbs a church two schools an hospital a poor's house, and manufactures of cloth and cotton stuffs; but agriculture, the rearing of cattle and fishing, form the chief employments. Pop. 2419

ALTIORF or **ALTORF** (Old village) the name of several towns and villages.—1 A. in Switzerland, cap. em. Uri near the Lake of Lucerne and 21 m. S.E. from the town of that name. It is beautifully situated in the midst of gardens and orchards, at the termination of the great route over the St. Gotthard, on a plain intersected by the mountain streams Schellenbach and Rens 1485 ft. above the sea level and is well built and clean has a townhouse, church, gymnasium and school and in the middle of the town an ornamental fountain erected 1566. It derives its chief interest from its association with the Swiss patriot William Tell, whose men, on the exploit of splitting an apple on his son's head with an arrow said to have been performed here. An old tower ornamented with rude paintings of Tell and the Austrian tyrant Gessler stands near the spot. Tell is alleged to have been born in the neighbouring village of Rüschli, which is regarded as the cradle of Swiss liberty. The town was nearly destroyed by fire in 1790. Pop. 1903.—2 A. small in Bavaria on the Schwarbach in a beautiful and fertile country 13 m. E.S.E. Nuremberg. It has an old palace, several breweries, and a considerable manufacture of wooden toys of all kinds exported in large quantities and wood charcoal. Aldorf was of some importance as early as the 13th century was once the seat of a university which however merged in that of Erlangen in 1806 and has still a normal seminary for Protestant teachers. Pop. 3700.—3 A. in Württemberg circle Danneb, 2 m. N.N.E. Ravensburg having manufactures of straw chairs. At a short distance is the castle of Wengenstein formerly a celebrated abbey of Benedictines. Pop. 2407 (R. catholics).—4. A vil. grand duchy of Baden in a fertile district, on the high road from Offenburg to Freiburg. It has a fine palace, with a good library possessing a collection of coins and valuable MSS. It has also two breweries a distillery and a vinegar work. A good many cattle are reared, and in the neighborhood some wine is made, and a great deal of chicory grown. Pop. chiefly R. catholics 1478.—**ALTDORF** is likewise the name of numerous other localities, all unimportant.

ALTÉE, or **ALTE**, a vil. Portugal, prov. Algarve, N. from Loulé, in a basin like valley on the border of a mountain ridge. Its inhabitants are very poor and subsist chiefly by milking making charcoal, and gathering and manufacturing sparso. Its only importance is derived from the rich copper mines, about 2 m. S.W. from it. These have only recently been opened they do not require to be wrought to any great depth, and the water which accumulates in the diggings is easily carried off. The ore is rich plentiful and easily obtained.—(Willkinson's *Steel Works in Spain and Portugal*.)

ALTEA, a maritime town, Spain, in Valencia prov. of, and 30 m. N.E. from Alicante, on the Mediterranean Sea. lat. 38° 37' N. lon. 0° 8' W. at the head of a bay and built on a rising ground, on the E. bank of the Alga, overlooked by an old fortress. It is cheerful-looking has spacious but steep streets a church Lethu and other schools and a town-hall. The inhabitants are chiefly engaged in tillage but also in manufacturing soap, linen fabrics ropes, and gypsum. In the vicinity grain, fruits and vegetables are grown and pigs, sheep, goats, and mules are reared. About 500 of the inhabitants are engaged in seafaring. Pop. 5502.—(Males.)

ALTEN a river Norway prov. Finnmark rising in two sources S. from Karasjok in the mountains that separate Finnmark from Lapland. It flows N. and falls into the Altenfjord at Altemgaard, after a course of about 40 m.

ALTEN or **ALTENGAARD**, a small town Norway prov. Finnmark, on the river Alten, at its embouchure into the Altenfjord lat. 69° 56' N. lon. 23° 42' E. (L.) It is said to be the most N. point of the globe where cultivation is attempted the produce is potatoes and barley. Two distinct lines of upraised ancient sea coast, one above the other are distinguishable here. They are not parallel and both of them imply that within a distance of 50 m. a considerable slope can be detected, in such a direction as to show that the ancient shores have undergone a greater amount of upheaval in proportion as we advance inland.—(Quar Jour Geol. Soc. No. IV. p. 534.)

ALTENA a town Prussia, cap. circle of same name gov. Arnheim in a deep valley on the E. bank of the Lema, where it is joined by the Netze 40 m. N.N.E. Orlowen lat. 51° 18' N. lon. 7° 38' E. It has an old palace, three churches, several courts of justice, and a warehouse in a building which once formed the residence of the Counts of Mark. On a tongue of land stand large manufacturing works driven by water power and containing machines for making needle pins thimbles and smaller articles of iron ware. The value of the articles annually produced exceeds £75 000 sterling. Altens has also numerous common weaving and stocking looms.—The circle has an extent of about 200 sq. m. It is hilly and not well adapted for agriculture, but a good many cattle are reared. The hills, one of which (the Nordbühl) is above 2000 and another near Alena (the Holsbühl) is 1500 R. high furnish the supply of numerous streams. In particular the Wupper has its rise within the circle. 1 op. of the circle 23 000 who with the exception of 150 Jews and 650 R. catholics are all Protestants.

ALTENAU a small town Hanover mining dist. of and 4 m. N. from Klauenstahl, in a narrow valley on the E. bank of the Hara mountains, and at a height of nearly 1500 ft. above the level of the sea. Its mines produce annually 7500 marks silver nearly £2000 sterling about 5000 tons lead and three tons copper. Iron is likewise produced to the extent of 6000 tons. A good many of the inhabitants are employed in making lace. Pop. 176.—**ALTENAU** is also the name of three vills in Prussia, and one in Bavaria.

ALTENBERG (Old hill) the name of numerous towns, villages, and districts throughout Germany of which the only one worthy of being named is in Saxony circle of and 20 m. S. from Dresden cap. head of same name. It is the seat of a court of justice has a royal stables for the an hospital several mills propelled by water power and in its vicinity are the most extensive tin mines on the Continent 1 op. 1950.—The **RAILWAY** has an area of 40 geo. sq. m. The chief employments are mining of tin, cattle rearing and straw plaiting. Pop. 3740

ALTENBURG or **RAKE ALTENBURG** [German *Rothenburg*] a duchy of W. Germany consisting of two divisions, which are separated from each other by the migration of the Rhine. The E. division formed by the districts of Altenburg and Ronneburg is enclosed on the N.E. and E. by the kingdom of Saxony and has Prussia Saxony on the N. and Rhenus-Gera on the W. The W. division consists of the circle of Saal-Eisenberg and has Rhenus and Gera on the N. Prussia Saxony on the N., Weimar on the N.W. the district of Rudol. on the S.W. and Meiningen and Weimar on the S. The area of the divisions is nearly equal. That of Altenburg containing about 180 and that of Saal-Eisenberg nearly 200 geo. sq. m. but the population of the former far exceeds that of the latter the one being 81 000 and the other only 45 000. The difference of population is accounted for by the different characters of the surface of the countries. Altenburg is one of the most fertile and best-cultivated districts in Germany while Saal-Eisenberg, particularly in the S.E., is covered with mountains and forests. In the E. of Altenburg, however towards the frontier the first slopes of the Erzgebirge begin to rise. They are composed chiefly of a reddish claystone and porphyry and contain considerable seams of brown coal, or lignite. The chief employment of the inhabitants of both divisions, exclusive of those engaged in agriculture, is spinning and weaving. In the towns the woollen manufacture has

the pre-eminence. Among the products may be mentioned woollen textiles, potteries, roofing slates, lignite glass, liquors, porcelain, and excellent stoneware. In the W division there is a considerable traffic in corn and timber. The inhabitants, originally a branch of the Slavonic family have lost the language but still in dress, and several other respects, retain many of the old customs handed down by their forefathers. By the constitution given to Altenburg in 1851 it is a limited monarchy, the legislative assembly consisting of 12 delegates, elected every five years, and a president named by the Duke. As a member of the German confederation, it is united with the other Saxon duchies, and has the 15th vote. Its military quota consists of a battalion of infantry numbering 992 men. In 1873 the larger portion of Altenburg was vested by succession in the family of Saxe-Coburg and in 1825, by virtue of an exchange with the Duke of Meiningen Altenburg, with the exception of a few small districts, fell to the Duke of Saxe-Hildburghausen. Pop. 126,000. —(Hübner's *Land. Deutschland. Reis. Handb.*)

ALTENBURG (Old castle) — A city Germany cap. duchy Saxe-Altenburg, and of circle of its name about 8 m. W. from the 1st bank of the Pleisse, 36 m. S. Leipzig, with which it is connected by a railway opened in 1842 now connected with the Bavarian lines lat 50° 55' N lon 12° 37' E. It is walled, and though irregularly built upon several hills has some fine streets, and many handsome edifices, besides five considerable suburbs, named after the former city gates. It is the seat of the higher courts and Government offices, and contains seven churches a gymnasium, a considerable library a foundation for educating Protestant young ladies of rank a normal school, with a deaf and dumb institute attached and several other educational establishments also, a house of correction, three hospitals, one of them for epileptics, and other two charities an association for promoting trade and industry a philosophical society a horticultural society a historical and antiquarian society a drawing academy a theatre, &c. The palace, which is surrounded by extensive gardens, lies N.E. of the town, on a hill of porphyry from which a fine view is obtained. The Magdalena, or Lutheran female endowment, which stands in a garden E. of the town, is a handsome turreted building. The principal manufactures are of linen, ribbons, gloves, worsteds, brushes, vinegar, brandy and liquors starch, sealing wax, playing cards, paint, porcelain, stoves, tobacco and snuff, optical instruments, &c. A considerable trade is carried on in cattle, corn, wool, and wool. Carriage building is also prosecuted to some extent. Pop. 18,697.

—2 **ALTENBURG** (Hungarian, *Magyar Övár*) a market in Hungary 30 m. S.E. E. Preburg, and 47 m. E. Vienna. It is a naval, on an island of the Leitha, at the point where it unites with the river of the Danube. It is surrounded with deep ditches, and finely-walled gardens has wide streets, and a number of handsome buildings among others a gymnasium, a parish college, an agricultural institution, and an old castle, now used as a corn magazine. The inhabitants, Germans and Hungarians, trade in black cattle, grain, and fruit. In 1605, and again in 1683, the Turks in their progress towards Vienna, burnt this town to the ground. Pop. 8400. —At least 48 places in Germany have the common name of **ALTENBURG**.

ALTENDORF (Old village) the names of numerous villages in Germany in Bavaria, Hesse, Hanover Holstein, Austria, Prussia, and Saxony. They are all small. The largest is a v. in Moravia, on the Felskybach, near Olmitz. It has a church school paper mill lead and iron and two wire-drawing works. In its vicinity are lead and silver mines. Pop. 2020.

ALTENGAARD See **ALTEX**.
ALTENHEIM a vil. grand duchy of Baden situated in a rich champagne country on the road from Kehl to Freiburg 1 m. from the Rhine. It is a very old place, mentioned as early as a. d. 883. The inhabitants, mostly Protestants, are engaged in agriculture and cattle breeding. Pop. 1600.

ALTENKIRCHEN (Old church) a small fortified town, cap. circle of same name, Prussia, prov. Lower Rhine, gov. of, and 16 m. N. from Coblenz on the Wied lat. 50° 27' N lon. 7° 56' E. Agriculture, the rearing of cattle, linen manufactures, and the production of various articles of iron ware,

form the chief employment of the population amounting to 1100. An obstinate battle took place here between the Austrians, under Prince Ferdinand of Wirtemberg, and the French under General Kleber in 1796. —The crania of Altenkirchen has an area of about 180 sq. m. and is rugged and mountainous. Some of the hills are of basalt and the cup-shaped summits of some of them have all the appearance of old castles. Not much grain is produced but a great number of cattle, sheep goats and swine are reared. The cows, amounting to 9400 prove that the dairy is not neglected. Within the circle, at Hamm, are a furnace for making rough steel, another for smelting copper and a powder mill. In other parts of the circle, various mining operations are carried on, and there are several iron furnaces. Pop. 34,000 nearly divided between R. Catholics and Protestants.

—There are several other places in Germany named **ALTENMARKT**.

ALTENMARKT (Old market) the name of numerous unimportant places in Germany.
ALTENSTADT (Old town) the name of seven unimportant places in Bavaria, two in Hesse, one in Wirtemberg and one in Austria.

ALTENSTEG or **ALTENSTEG** a in Wirtemberg, circle Blank Forest, on the slope of a steep hill near the Nagold, 29 m. S.W. Stuttgart. It has tanneries, with woollen and linen manufactures, and a work for making salt of soda. Pop. 2000.

ALTER-DO-CHÃO a in Portugal prov. Alentejo, 15 m. S.W. Portalegre, on the river Aviz. It is enclosed within old walls, and has a poor's house, and the ruins of a castle. Pop. 2000.

ALTFRON a par. England, co. Cornwall area, 15 014 ac. 72 m. W. N. W. Lannission 100. 1893.

ALTHERKE, a par. in glauc, co. Essex. 2260 ac. Pop. 420.

ALTHORPE a par. England co. Lincoln 5460 ac. 100. 1347.

ALTIN a lake, Siberia, gov. of, and 830 m. S.E. E. from Tomsk 77 m. long and 53 m. broad. It has a rocky bottom, and gives rise to the Bys river which after its union with the Katun, receives the name of Obi. In winter the N. part is sometimes frozen so as to be passable on sledges, but the S. part is never covered with ice. The Russians call Altin Lake, *Altyn-Öz*, from the Tatar, a Tartar tribe, who inhabit its borders, and who give it the name of *Altyn-Öz*. By the Kalenks it is called *Altyn-Öz*. The water in the lake, as well as in the rivers which run through the adjacent country is increased during summer by melted snow hence it appears of greater or smaller extent, according to the period of the year at which it is seen by different travellers. —A neighbouring branch of the Altai mountains is also called **ALTIN**.

ALTIRCH (Old church) a small manufacturing in France dep. Haut Rhin (Alsace) 17 m. W. Basel. It is situated upon a height, at the foot of which flows the Ill near the forest of Hart and is divided into the upper and lower town, between which are the ruins of an old castle, the residence of the Archbishops of Austria, when they visited Alsace. It is the seat of a tribunal of primary jurisdiction and of a communal college. The manufactures are principally of earthenware, cotton, and various kinds of implements. There are also breweries and tanneries in the town, and in the neighborhood, excellent quarries of stone and gypsum. A considerable trade is carried on in grain, wine, and hemp and a cattle market is held once a month. Pop. in 1846 3218.

ALTUHL (Lat. *Altenburg, Altonia*) a river Bavaria, an affluent of the Danube, from the left, rising 16 m. N.W. Anspach and 8 m. N.E. Rothenburg about lat. 49° 36' N lon. 10° 18' E. whence it runs S.E. past Puppenheim and Reichardt, about 183 m., to Kellheim, where it joins the Danube, 12 m. E.W. Regensburg. The Ludwig or Mayn Danube Canal, from Hamburg on the Regnitz to Dietfurt on the Altmühl unites the German Ocean with the Black Sea by the centre of Europe.

ALT-ÖFFEN a municipal town in Hungary forming about a suburb of Ofen, or Buda, from which it is separated merely by a barrier. It is supposed to occupy the site of *Altonia* of the Romans. Pop. 9160.

ALTMONTE, or **ALZAMONT** a tn. Naples, prov. Calabria Citra 13 m. S.W. Cassano, situated on an eminence. In the neighbourhood are mines of gold silver and iron and a salt spring. Pop 4600.

ALTON—1 A market town and par. England, co. Hants. The town is about 16 m. N.E. Winchester and 40 m. S.W. London, on the main road from the latter to the former, and near the river Wye. It consists of one principal street, about half a mile long, three small streets, and a spacious market place, all clean and well kept. The houses are respectable, and many of them well built mostly of brick, although there are quarries of good building stone in the neighbourhood. It is amply supplied with excellent water and lighted with gas. The church is a handsome building with a square embattled tower and spire. There are besides several dissenting places of worship a number of schools, including a free school, and a British school several benevolent and charitable institutions and a mechanic's institute, having a library containing 1000 volumes. Bombazines were formerly manufactured here to a considerable extent, but the trade is now entirely extinct. Backing and bag begging—both to a small amount—are the only manufactures now carried on here but there is a considerable retail trade in domestic necessaries. There are also some large breweries, the ale from which is much esteemed. The town is under the jurisdiction of the county magistrates and the petty sessions for the division of N. Alton are held here. It is one of the polling places for the county has weekly corn and cattle markets and two fairs annually one in April for sheep and lambs the other in September for cattle and toys. Area of par. 8896 ac. pop. of tn. and par. 2638.—(Correspondence in *Altou*)—2 **ALTON** is also the name of a tn. near co. Hants. and of a hamlet, co. W. Worcester.—3 A to U States, in Illinois on the E. bank of the Mississippi, near the junction of the Illinois with that river and 180 m. W. Washington. Its streets are spacious, and regularly laid out. There are five squares, and six churches belonging to various religious bodies some of the latter are large and handsome buildings. It is favourably situated for commercial purposes, and has the best landing for steam vessels on the E. bank of the Mississippi. There are here three printing offices, and two weekly newspapers. Pop. 890.

ALTONA the second city in the kingdom of Denmark and though the most recent, yet the largest and most populous in the duchy of Holstein. It is a river port, on the R. bank of the Elbe, a little below Hamburg with whose suburb of St. Pauli its E. side is almost in immediate proximity while, on the W., it is joined by the populous villages of Ottensen and Nienstedt lat. (observatory) 53° 42' 42" N. lon. 9° 58' 42" E. (s.) It stands higher and is hence said to be more healthy than Hamburg. It is in general well built, but does not possess many objects of interest. Its finest street is the Palmstrøm which is long and broad, is lined with good houses, and has a fine shady walk in the centre, formed by a double row of lime trees. Of its six churches, the only one deserving of notice is the high church, which has two towers, and is considered the finest in the duchy. Among the other buildings may be mentioned a gymnasium, with a library of 12 000 volumes an orphan hospital and large infirmary. In the cemetery beyond the town, are the tomb of Klopstock, who died in Hamburg in 1804 at the age of 80 and a monument to the Hamburgers who fell during the siege of 1813-1814. The trade and manufactures of Altona are extensive, and have been carefully fostered by the Danish Government, which has endeavoured by special privileges and immunities, to attract to it part of the extensive commerce previously monopolized by Hamburg. The success has been comparatively limited. Notwithstanding of the rapid, and, for an European continental town, almost unprecedented rise of Altona, Hamburg maintains its pre-eminence and has even converted the former into a kind of suburb, where the merchants of the latter reside, not to carry on, but to retire from business thus almost justifying the vulgar proverb which, playing upon the name of Altona, derives it from the Low German words, *alt-to-nach* (all too night) as indicating its unhappy proximity to Hamburg. Perhaps the most important manufacture of Altona is that of tobacco. One single factory employs 120 persons, and works up 600 000 lbs. In 1844, of 1 100,000 lbs. of raw tobacco used 110 000 were made

into snuff, 84 000 into cheroots, and 84 000 into cigars. The other public works are soap and oil works, dyeworks, dyewoolen goods, a chemical works, a vinegar work a type foundry an extensive linen and cotton printfield, ropewalk, tanneries, and breweries, famous for their beer. The railways recently completed in the neighbourhood have added greatly to the importance of Altona, both in a commercial and military point of view in the former by the railway to Kiel which connects it with the Baltic and in the latter by a branch of the same railway which connects it with the important fortress of Rendsburg. Altona has four dockyards. Its harbour is only a winter haven of the third class, having a depth of water from 7½ to 14½ ft. but the largest merchant vessels once over the bar of Blankenese, can unload at the warehouses on the bank of the Elbe, especially at the W. end of the town where the ordinary depth of water in the river is from 15 to 25 ft. The number of vessels belonging to Altona is 238 and that of the vessels of all kinds, including fishing-boats by which its port was visited in 1858 was 2826 tonns. 156 680. Pop. of Altona proper in 1840, 32 300 but, including Ottensen and Nienstedt, which ought to be regarded as its suburbs 37 000.—Other three places in Holstein, and 11 in different parts of Germany have the name of ALTOW.—(See also *Edinburg* *St. John* *St. Louis* *St. Petersburg*.)

ALTON BARNES, a par. England co. Wilt. area, 1063 ac. 4½ m. W. by N. Pewsey. Pop. 176.

ALTON LANGRASS a par. England co. Dorset 2248 ac. 3 m. E. Cerne Abbas. Pop. 282.

ALTSTADT a vil. Prussian Saxony gov. of and 9 m. E. from Merseburg. In its ancient charters, the treaty of peace was concluded between Charles XII. King of Sweden and Augustus elector of Saxony September 24, 1700.

ALL-RINGHAM or **ALRINGHAM** a small tn. and chapelry England, co. Chester. The town lies 6 m. S.W. Manchester and 25 m. E. Liverpool is remarkably neat and clean on which account and the salubrity of its air it is much resorted to by invalids from Manchester. There are, besides the parish church, several dissenting places of worship, some schools and a few small chapels. Thread and woollen yarns are manufactured to some extent, but the chief employment of the labouring classes is agriculture and gardening. The fruit and vegetable markets of Manchester being chiefly supplied from this neighbourhood. The Duke of Bridgewater's canal passes near the town and contributes largely to its prosperity. Fairs for cattle and drapery in April, August, and November. Pop. 1861 of tn. and chapelry 4488.

ALTBOL, or **ZOLU** an old imperial free tn. Hungary 72 m. N. Pesth. on the bank of the Tura where it is joined by the Sissava. On a rocky height are the remains of a castle, supposed to have been built in 1487, once the favourite hunting seat of King Mathias I. called by the Hungarian peasants the good king Mathias now principally used as a prison.

In the neighbourhood is an secluded spring of some celebrity and hemp is cultivated to some extent. Pop. 2000.

ALTSTETTEN—1 A small tn. and par. Switzerland, cant. of, and 9 m. S.E. from the town of St. Gallen situated on the slope of a mountain in the midst of a fertile and well-cultivated district. It has a fine church, a town-hall, narrow streets, and mostly high stone houses some of which are handsome. The houses of the suburbs are of wood. It sustained a siege of three weeks from the Austrians in 1410, and suffered at various times from fire. In the beginning of the Reformation, Carlsfeld was some time a preacher here. In the vicinity is a Franciscan monastery and an elegant bathhouse attached to the cold sulphurous spring on the R. side of the town. Pop. of tn. and par. 6429.—2 A vil. and par. cant. of, and 6 m. W. N. from the town of Zurich. Pop. 899.

ALTSTREITZ, a vil. and par. Mecklenburg schles. Star. gov. in a plain near the Mühlentbach, which here forms a lake, 58 m. N. N.W. Berlin lat. 53° 19' N. lon. 18° 6' E. It has three gates and as many squares but the houses are for the most part paltry. In the environs are numerous gardens, and a promenade called the *Pomerische phantasie* much frequented. Altstretitz was at one time famed for its horse markets, but the chief employments of the inhabitants now are agriculture and cattle raising. There are also carried on manufactures of leather. Hens sew, hats, mats and wax-tapers. Pop. of whom 880 are Jews, 2948.

ALTON KUPRI (Golden Kupri) a small in Anatolia Turkey in Kordistan, pass. Begdad, on an island in the Akkadian, or Little Zab river which is here crossed by two bridges of the work. 62 m. S. E. Mosul, and 36 m. S. E. Arbil or Erbil. Colonel Baidi says, about 40 m. but, being much fatigued, he may have over-estimated it, and the probability of his having done so is the greater that he states the distance to Kirkook, which is further away at 25 m. The pop. was formerly about 8000, but has since been much reduced by plague and famine.

ALTURA, a town in Valencia, prov. of sud 23 m. W. W. from Castell de la Plana, near the r. bank of the Palancia, tolerably built, with a church, chapel and two schools. The inhabitants are principally occupied with agriculture, making wine and oil, and rearing domestic cattle and silkworms. Pop. 1905—(Mladov).

ALTWASSER, a vil. Prussia, prov. of, and 55 m. W. from Breslau, on a slope of the Vogel koppe, belonging to the chain of the Mittelgebirge, 1200 ft. above the level of the sea, and overlooking an extensive valley of great beauty. There are several saltworks and chalybeate springs here, and the baths which have been established at them are much resorted to. Pop., exclusive of bathers 1890.

ALLUMPOOR, a town in Hindostan in the Deccan, 1. bank of the Krishna lat. 15 54 N. lon. 8 10 E.

ALUSHTA, a town in Russia, on the E. coast of the Crimea, beautifully situated on an isolated volcanic hill, form a spur from the Tauric chain, backed on the E. by the Tauric range, and on the W. by the Uls. E. in S. E. Simferopol. It appears to have been anciently a place of considerable importance. The first mention made of it is in the 6th century when its castle, which bore the name of Aluston, was repaired by the Emperor Justinian. The ruins of the castle still crown the rock on which the town is built, and old legends have been taken of them by the inhabitants who, in many cases, have built their houses against them. These houses are of a very peculiar construction. They are half sunk in the ground, and by means of roughly hewn stones cemented by a kind of grey earth, rise a short way above the surface, and support a flat roof which serves as a terrace walk, and occasionally as the platform from which the next house in the ascent is entered. Alushta still contains the remains of several Greek churches and one of them, from bearing some resemblance to a cathedral church, seems to indicate that the town was once the seat of a bishop.—(Montenegro, Voy. Asie du Sud.)

ALUTA, also, or **ALOUTA** a rapid river Transylvania is rises in the W. Carpathian mountains, on the Moldavian frontier about lat. 46 38 N. lon. 25° 45' E. flows S. to Hlyefatze, thence N. to lat. 46° whence S. W. and S. Crossing the E. Carpathian by the pass of Rothenthurm, it enters and crosses Wallachia, and falls into the Danube at Nicolae after a course of about 270 m. It is said to contain some gold.

ALVA a vil. and par Scotland, co. Stirling. The vil. is 7 m. S. E. Stirling, pleasantly situated on nearly level ground at the base of a hill called Grangehill. It consists of two principal streets running nearly parallel to each other, but straight and well kept. The houses are generally built of the native whinstone, but a few are of red sandstone obtained from an adjoining coal field. On an eminence a little to the E. of the village, stands the parish church built in 1682. There are also a Free church, and a United Presbyterian church. The parish school house, situated in the centre of the village, is a neat building, and capable of accommodating upwards of 100 scholars. There are, besides, a subscription school, an infant school and a seminary for education of female children supported chiefly by private benevolence. Woolen goods, particularly shawls and plaids, are manufactured here to a very considerable extent, and have been so for upwards of a century and a half. Spinning and throwing of woollen yarns is also carried on largely the whole employing about 1800 hands. Glasgow is the principal market for these manufactures, although quantities are sent also to Stirling, Perth, and Edinburgh. Pop. of vil. in 1841 2058 par 124. Total (1851) 2204. There has been an increase of the population since 1831 of nearly 2000 attributed to the success of the woollen manufactures.

ALVAH, a par Scotland co. Banff. area, 16,366 ac. Pop. 1402.

ALVAR, Alvor, or **ALVURA**, a municipality Upper Hindostan, chiefly in prov. Aggra, between lat. 27 and 28° N. W. the dist. of Aggra, and S. W. that of Delhi area, 8000 sq. m. In Mahometan histories it is sometimes called *Mewat* and its inhabitants *Mewatis*. The greater part of the country is hilly and covered with wood; but it contains also well cultivated valleys and plains. The natives are singularly savage and brutal, and are noted for predatory incursions on the surrounding territories. Previously to 1750 it was subject to the rajah of Jeypoor but is now governed by the rajah of Macherrey with whom a treaty was in 1808 concluded by Lord Lake taking him under the protection of the British Government since which every kind of treatment has so far ameliorated the character of the natives, that the name of the *Mewatis* is now seldom heard of. The principal towns are Alvar the cap. Macherrey from which the rajah derives his title and Baghour.—(Hamilton's East India Gen. Walker's Map of India)

ALVAR, or ALVURA, a town Hindostan, in Aggra, cap. principally of same name, 85 m. S. E. W. Delhi lat. 27° 30' N. lon. 78° 0' E. It is strongly fortified, and lies at the base of a steep hill, on the summit of which there is another fort well supplied with water. Alvar is the usual residence of the rajah of Macherrey.—Hamilton's East India Gen. Walker's Map of India, 1840.

ALVARADO—1 A small town and port, Mexico, state of and 40 m. S. E. from Vera Cruz lat. 18° 45' N. lon. 95° 45' W. The town stands in an unhealthy situation on the point of a small promontory which forms the N. W. entrance into the harbour or lagoon. The latter is a large harbour capable of admitting vessels of 12 and 18 ft. draught which, within the bar on which there is 9 ft. depth at low water lie sheltered from every wind. There is a look-out at Alvarado.—2 A river formed by the union of several streams, rising in the mountains of the state of Oaxaca. It flows S. E. through the state of Vera Cruz, forms a lake of its own name, and falls into the Gulf of Mexico, through the lagoon or harbour of Alvarado, after forming a direct distance of 130 m. from the junction of the head stream.

ALVAYAZBIRE, a town Portugal prov. Beira, 81 m. S. Coimbra. Pop. 1943.

ALVECHUECH a par England co. Worcester area, 6747 ac. Pop. 1600

ALVELEY a par and township England co. Salop. 6788 ac. on the E. bank of the Severn. Pop. 1041

ALVERCA—1 A small town Portugal prov. Estremadura, 32 m. N. N. E. Lisbon, upon a height near the r. bank of the Tagus with a small fishing port. The neighbouring hills are covered with olive trees. A well frequented annual fair is held. Pop. 1275.—2 A town in prov. Beira area, 81 m. S. E. Coimbra. Some tanning is carried on. Pop. 780

ALVERDISCOTT a par England, co. Devon area 2278 ac. 5 m. S. E. Bideford. Pop. 840

ALVERNIA a vil. Tuscan on a mountain of its own name, 3 m. N. Chiusi. Its monastery founded A.D. 1218 by St. Francis of Assisi was the cradle of the Franciscan order.

ALVERSTOCK, a par England co. Hants 5222 ac. Pop. 1098

ALVESH a par Scotland, co. Elgin on the Moray Frith Pop. 419

ALVESCOTT a par England co. Oxford 2600 ac. 5 m. E. Bedford. Pop. 376

ALVESDISTON a par England co. Wilts 2531 ac. Pop. 278

ALVESTON two parishes, England.—1 Co. Gloucestershire, 2018 ac. 9 m. N. by E. Bristol. Pop. 84.—2 Co. Warwick area, 4300 ac. 3 m. N. E. Stratford-on-Avon. Pop. 769

ALVETON or ALVON a par England co. Stafford 7379 ac. Pop. 2326

ALVIL a par Scotland co. Inverness area, 41 660 ac. Pop. 914

ALVIGNANO or AVIGNANO a town Naples, prov. Terra di Lavoro, dist. of Iridmont, 11 m. N. E. Capua pleasantly situated on the declivity of the Capratan hills. Pop. 2092

ALVINCE, or **ALVINCE**, also called **ALVINCE**, VINCEA, BUNYON, WICKHAMPTON a town Austria in Transylvania, W. bank of the Maros, 7 m. S. W. Karlsburg with a R. Catholic, a Protestant and a Greek church, and a Franciscan convent. Pop. almost entirely Magyars and Bulgarians 3500

ALVINGHAM, a par England, co Lincoln area, 1940 sq. m. N.E. Louth on the Navigation Canal. Pop 317
ALVINGTON par England co Monmouth 2553 sq. Pop. 270.

ALVITO 1 A small tn, Naples, prov Terra di Lavoro dist. of, and 5 m. S.E. from Sorra on the declivity of a hill. It has an hospital and several *spaccio-deposito* for the marriage of poor young women. P. 2540.—2 A small tn, Portugal prov Alentejo, 19 m N.W. Beja with an old castle, on the small river of the same name an affluent of the Beja. Pop. 1570

ALVOR, a tn Portugal prov Algarve, on a streamlet of the same name, 8 m. N.E. by R. Lagos, about 3 m. from the S coast of the province. It is well built and exports excellent salt. Pop. 1260

ALVORNINHA a tn Portugal prov Estremadura, 54 m N. Lisbon. Pop. 1630

ALWALTON a par England co Huntingdon area 1040 sq. Pop. 332

ALWINGTON a par England co Devon 2655 sq. 4 m. S.W. Budeford. Pop. 574.

ALYTH, a vil and par Scotland, coes Perth and Forfar. The vil is pleasantly situated on the rising ground on the N side of the valley of Strathmore, 17 m. N Dundee, and is intersected by the streamlet Alyth. It consists of four principal streets, all rather narrow and crooked, but tolerably well kept. The houses are of red sandstone, roofed with blue slate, and substantially built. Excellent water brought in pipes from a distance, is abundant and the town is well lighted with gas. The parish church which was erected about 10 years since, at a cost of about £7000 is a handsome building with a very elegant spire. The ruins of the old parish church, consisting of three arches, which stand conspicuously on an eminence in the centre of the town and are said to have been built by a bishop of Dunkeld, are still entire, and in good preservation. There are also a Free church a United Presbyterian church an Episcopal chapel, the parish school the Free church school two female schools, and a private school. The manufacture of coarse linens, chiefly for exportation, affords employment to the majority of the population. There is also a small factory for carding and spinning wool. Considerable quantities of shoes are likewise made here. Alyth is the market town for an extensive agricultural district. It was erected into a burgh of barony in 1489 by James III. and is governed by a baron ballie, who holds a court on the first Tuesday of every month. The par is about 12 m. in length by 3 in breadth. The scenery in the vicinity is exceedingly beautiful. Pop of vil (1841) 1846 of par (1851) 2152.—(Correspondent in Alyth)

ALZANO MAGGIORE a tn Venetian Lombardy co. dist. of same name, prov of, and 4 m. N.E. from Bassano on the bank of the Sile. It is handsomely built, with wide clean streets and has a magnificent church, adorned with rare paintings and sculpture. Manufactures—Linen, woollen, cotton and silk fabrics, paper and lace. Pop. 2154.—The narrower comprising the S extremity of the Val Serena and its adjacent hills is extremely picturesque and productive. Grain, wine, oil, fruits, and vegetables are raised in vast quantities, and of superior quality. The mulberry tree is also much cultivated and the hill sides covered with forests of oak, pine, and chestnut. Pop. 13,082.—(Dress. For. Italia)

ALZENAU a market tn Bavaria, on the Kitzbühel, 10 m. N. Aachenbach and 30 m. E. Frankfurt-on-the-Main. It is the seat of a local court, and has a royal castle some mills, and manufactures of hats. Pop. 1041

ALZEY [anc. Alzeu], a tn, Hesse-Darmstadt, cap. hill of same name, on the Salza, in the centre of a valley encircled by hills, 18 m. S.W. Mainz. It is walled; has three churches, two Protestant, and one R. Catholic a handsome market place, brick works and manufactures of leather, linen, and stockings. Its common and castle ruins are of considerable importance. The ancient Alzeu destroyed by the French in 1699 Pop. 4890.—The R. Alzeu produces corn and rye, chiefly the latter and some excellent wine. Pop. 20,000

AMACUSA, or AMAKUSA, an isl. in the Japanese empire, off the W coast of the Island of Kionosiro or Kionosiro. The centre of Amakusa is about lat. 34° 30' N.; lon. 150° 10' E. Its extreme N.W. point is 18 m. S.E. Cape Nooka.

VOL. 7

AMADIYAH a tn Asiatic Turkey in Kurdistan co. cap. of an independent principality of the same name, 76 m. N.W. Mosul. It stands on a rocky terrace of limestone and is of considerable size but is now nearly in ruins not more than a third of the houses being habitable, while a fourth part only of the bazaar can be made use of the remainder being in a state of decay. It is entered by two gates, and is defended at various points by guard houses, towers and irregularly-constructed bastions, and by a castle, in which a garrison is maintained. The town contains a solitary minaret, and the residence of a pasha, the lower part of which is built of stone the upper mud. The Jews, who are the most numerous body in the town, occupy 70 dwellings and have three synagogues.—(Ainsworth's Visit to the Chaldeans)

AMAGER, sometimes erroneously called AMAX, an isl. Denmark, separated from the ist. of Seeland and city of Copenhagen merely by the harbour of the latter part of which is 6000 and the suburb of Christianshavn, are built on it area, about 20 sq. m. It is flat, well cultivated, and may be regarded as the kitchen garden of the capital, with which it is connected by means of bridges across the harbour. Its inhabitants exclusive of Christianshavn, about 6500 are descended chiefly from 24 Dutch families, who settled down here from N. H. land in 1616. Lime burning and the manufacturing of wire and candles, soap, and printed manure, are carried on.

AMAL, a tn Sweden 114 of, and 49 m. N.E. from Wenersborg in Dalarna advantageously but not beautifully situated on the N.W. shore of Lake Wenner lat. 59° 58' 39" N. lon. 12° 41' 56" E. (L.) It is intersected by a small stream, is built with tolerable regularity and has a rather handsome church. The harbour is convenient and the inhabitants, 1457 in number are chiefly occupied in boat traffic on the lake, in retail trade, and agriculture.

AMALFI a city and seaport, Naples, prov. Principato Citra, on the Gulf and 9 m. W.S.W. from Salerno lat. 40° 48' N. lon. 14° 37' 10" E. (C) The city whose position is extremely picturesque, extends over the summits of a series of lofty rocks still crowded with embattled walls and ruined towers—memorials of its former greatness. The public buildings are now a remarkable. Amongst them a large cathedral,

THE CATHEDRAL, AMALFI.—From Hotel Metropole in Florence.

of Byzantine architecture, dedicated to St. Andrew whose body was deposited here in 1308. The city has an arsenal, some paper mills, several manufactures of serge, and an iron work. Its trade, which, at one time comprehended that of all the Levant, has now almost entirely disappeared; and with it, the greater proportion of the population, which has fallen from 50,000 to less than 4000. Amalfi rose early into importance, having attained the height of its prosperity during the 11th century at which time it was the great mart for all kinds of Eastern merchandise. It assumed the form of an independent republic, and continued to retain its rank as a commercial and maritime city for several centuries, when it fell into a decay.

from which it never afterwards recovered. Amalfi took an active part in the crusades and, for its zeal on that occasion was rewarded with the title of *Defender of the Faith*, by Leo IV. At this period the Amalfitans founded, in Palestine, the hospital of St John of Jerusalem; from which arose the famous military order of Malta. Amalfi was twice captured and plundered: first, by Robert Guiscard, the Norman conqueror, in 1073, and again, in 1190, by the Fieschi, on which occasion the latter found a copy of the Pandects of Justinian. It is the birthplace of Flavio Gioia, to whom the invention of the mariner's compass has been assigned, though his merit is limited to that of having greatly improved it: and of Masaniello, the fabricator of Naples. Pop. 8439.

AMALLAPOORAM a tn. Hindostan, in the Circars, on one of the mouths of the Godavary 65 m. E.N.E. Masulipatam. Its inhabitants, who exceed 5000 are engaged in weaving cotton fabrics.

AMAMBAHI of AMANABAY a mountain range and river S. America. The mountain range stretches from the serris Galbanon Thrill, in the S. of prov. Matto-Grosso, in a S. direction into Paraguay till it meets with the Cordillera de Maracay running S. and W. It is about 700 m. long, forms the watershed between the Parana and the Paraguay rivers, and from its E. slope flows the river of the same name, E. to the Parana, where it joins about lat. 28° 15' S. lon. 54° 30' W. after a total course of about 140 m. direct distance.

AMANA—1 A river, Venezuela, prov. Cumana, rises a little W. of lat. 9° 40' N. lon. 64° 18' W. from wh. it flows, first in a E.E. direction then N.E. and falls into the Gulf of Paria, lat. 10° N. Its entire course being about 140 m.—2 A lake, Brazil, formed by a deflection of the Tijuca, itself a stream flowing out of the Japara an affluent of the Amazon from the N. 11 leagues in lat. 2° 35' S. lon. 64° 58' W., and is about 30 m. long by 10 m. broad. About 8 m. N. from the lake is a vil. of the same name.

AMANAPOOR, a military station in the 1st Ceylon standing partly on the top, and partly at the foot, of a steep mountain 2000 ft. high in lat. 7° 15' N. lon. 80° 45' E.

AMANCE, several places France.—1 [unc. *Amance*.] A tn. and com. dep. Haute-Rhine, 10 m. N.W. Vesoul has potteries. The wicks, and pile of white mud used in glass making. Pop. 1032.—2 A vil. and com. dep. Aube, 13 m. from Bar-sur-Aube manufactures good pottery. Pop. 550.—3, [unc. *Amance*.] A vil. and com. dep. Meurthe 37 m. N.W. Nancy formerly a fortified place. Pop. 549.—4, A small river dep. Aube, rising a short way above the village of Amance, and falling into the Aube below Basse-Fontaine.

AMAND (fr.) several villages and communes, France.—1 A vil. and com. dep. Manche, 9 m. from St. Lo. Pop. 1407.—2 A vil. and com. dep. Maine, 6 m. from Vitry le François. Pop. 1820.—3, *St. Amand-de-Coly* a vil. and com., dep. Dordogne 15 m. from Salnt. Pop. 1071.—4, *St. Amand-le-Mans*, a tn. and com., dep. Nièvre, cap. com. manufactures of pottery. Pop. 1845.—5, *St. Amand-Magnennes*, a vil. and com., dep. Haute-Vienne, 17 m. from Bellac. Pop. 1802.—6, *St. Amand-sur-Sèvre*, a tn. and com., dep. Deux-Sèvres, 15 m. from Breteuil. Pop. 1491.—Besides these there are several others all small.

AMAND (fr.) or *St. AMAND-MOURET*, a tn. France, dep. Cher on the Marmande, a tributary of the Cher near the junction of those streams cap. com. and arrond. of same name; 24 m. E.S.E. Bourges. It is newly built; the seat of a tribunal of primary jurisdiction, and of a communal college. There are here manufactures of wooden clogs, and of oaks and other kinds of leather and in the neighbourhood are iron forges cannon foundries, and porcelain works. A lively trade in grain, wine, chestnuts, timber iron, slaves, hemp leather goat skins, and the cattle of the district, is also carried on. A branch of the Grand Canal crosses St. Amand with a Montignon, and the old mines of Commeny. At no great distance are the ruins of the Castle of Montbrun originally fortified by the Duke of Sully the celebrated minister of Henry IV. and formerly regarded as one of the strongest places in the kingdom. Pop. 6947.—The arrond. contains 17 cnes and 125 coms. Pop. in 1846 103,732.

AMAND-LES-BAUX (fr.) an eme. tn. France, dep. du Nord 1 m. S. of the Scarpe, cap. com., 7 m. N.W. Valenciennes. It has a communal college, and is the centre of the flax-growing district and possesses manufactures of porce-

lain lace thread, leather soap flannel oil, woollen stockings, cotton covarets, and shawls with several distilleries and tanneries and some boatbuilding yards. A considerable trade is carried on in oil, wine, linen, soap, thread, cotton and woollen goods, lace, &c. About 8 m. from the town are mineral waters and mud baths, which have been celebrated for two centuries and still continue to be well frequented. The water is clear and not very unpleasant, but has a strong smell of sulphuretted hydrogen. It is said to be very efficacious in paralytic and nervous affections. The walks in the vicinity are finely wooded. A Benedictine abbey founded here, in 834, by St. Amand, was destroyed at the Revolution and all that now remains of it is the chapel, which was built in 1638, and has a height of 900 ft. Pop. 5812.

AMAND ROCHE SAVIRE (fr.) a tn. and com. France, dep. Puy-de-Dôme, cap. com., 9 m. S. Clermont. In the vicinity are chalybeate springs and lead mines. Pop. 2376.

AMANS (fr.) several towns, villages, and communes, France.—1 A vil. and com., dep. Aveyron, cap. com., 14 m. from Epoufex. Pop. 1331.—2 *St. Amans-Beauregard*, a tn. and com., dep. Tarn, cap. com., on the Thoré, which separates it from the town of St. Amans Valroze. Manufactures are cloth, bonnets, wool, and chess ware, and brick. It has a Protestant church, and is the birthplace of Marshal Soult. 1 op. 2686.—3 *St. Amans Valroze*, a vil. and com., dep. Tarn, on the Thoré, 1 m. from Castres. Pop. 1826.—Besides these there are several others, all small.

AMANTEA, a seaport in Naples, on the Mediterranean prov. Calabria Citra, dist. Paola, 14 m. S.W. Cosenza lat. 39° 15' N. lon. 16° 20' E. It is surrounded with walls, has an old castle, four parish churches, several convents, and a high school founded by Ferdinand IV. There are some hot springs in the vicinity. The town is believed to be built on the site of the ancient Syzaca. Pop. 2814.

AMARANTE, an eme. tn. Portugal prov. Entre Douro e Minho on the Tamega crossed here by a handsome stone bridge, 84 m. N.E. Oporto pleasantly situated in a fine district, and forming the residence of several noble families. It is well built, and has two churches, a Latin school, an hospital and poor's house but is a dull decayed place. Pop. 1809.

AMARAPURA, or *AMARAPURA*, a city Burmah formerly cap. of the empire on the l. bank of the Irrawaddy 10 m. N.E. Ava; lat. 22° 0' N. lon. 95° 18' E. founded in 1783 by the Burmese monarch, Mindonpra Pwa and made the capital instead of Ava—the ancient, and recently again the capital. The city lies about three-fourths of a mile from the Irrawaddy and consists of a large fortress, with extensive suburbs, stretching for about 4 m. along the river. The houses are generally of wood, with tiled roofs but some have mats and bamboos covered with shingles, or thatch and a few chiefly belonging to the royal family are of brick and mortar. Those of the chief persons are surrounded by a wooden enclosure, and along the ridges of every house are ranged earthen pots, filled with water to be used in case of fire. The fortifications are, the sides of which are about 2400 yards, having large bastions at the angles and along each side 11 smaller ones, and three gates. The whole is of brick, surrounded by a ditch 50 ft. wide, and 15 deep, crossed by causeways leading to the gates. It is almost impregnable by the natives, but would soon yield to the force of artillery. In the N.W. angle is placed the royal library, the books being kept in about 100 wooden closets, curiously ornamented. Throughout the city there is a great number of temples and pagodas, which, from the expensive gliding of their roofs, have a very splendid appearance. In 1800 its population amounted to 175,000, but the seat of government having been removed back to Ava in 1819 it has greatly fallen off, and does not now exceed 80,000.—*Crawford's Embassy to Ava Hamilton's East India Co. Asiatic Journal*.

AMABGURA an isl. and volcano, S. Pacific Ocean, one of the Friendly Islands lat. 17° 56' S. lon. 174° 16' W. (n.) The volcano, which is 1600 ft. in height, has only recently become active.

AMARIBO or *MANA*, a river in French Guayana, rises about lat. 2° 55' N. and after a course, nearly due N. of 145 m. falls into the Atlantic 20 m. E. the embouchure of the river Marony or Marawina.

AMASREE *AMASREEH*, or *AMASTRA* [anc. *Amastri*], a town in Asiatic Turkey on a rocky peninsula on the Black Sea 188 m. E. N. E. Constantinople; lat. 41° 48' N.; lon. 33° 20' E. Here are Grecian, Roman, Byzantine and Genoese remains. The town overlooks the sea to the N., but its greatest exterior fronts E. Pop. nearly 1000.

AMASIA [anc. *Amaseia*] a town in Asiatic Turkey 60 m. N. from the city of the Irons [anc. *Arslan*] cap. from its embouchure at Cape Tekeshchik, on the Black Sea, 51 m. N. W. Tokat; lat. 40° 58' N. lon. 36° 15' E. It is picturesquely situated in a deep valley overhung by lofty precipitous rocks, through which flows the Irons, crossed within the limits of the city by four bridges, one of which is very old and apparently of Roman construction. The streets, like all those of eastern towns, are narrow and tortuous; the principal are lined with Saracenic buildings, either in ruin, or used as mosques. Many of the houses are built of stone, but nearly all of them have a mean appearance. The houses are small and ill supplied. One of the most disagreeable and yet striking sights frequent in this town, is presented by the number and horrid tameness of the large white vultures, which perform, with alacrity and zeal the disgusting office of street sweepers and scavengers. (Hamilton) The castle and Acropolis are situated on the summit of a lofty rock on the opposite side of the river the banks of which are fringed with gardens, wherever its waters could be raised for the purposes of irrigation. Of the Acropolis

Greek geographer was born in this city of which he gives a very lively and graphic account, much of it applicable to its present condition. The number of houses in the town are about 4000 of which 350 are inhabited by Armenians. (Hamilton's *Asia Minor*).

AMATACA. See YORK ISLAND.

AMATITLAN or *AMATITZAN* a town and lake Central America, state Guatemala. The town, about 15 m. S. the city of Guatemala, lat. 14° 30' N. lon. 90° 17' W. is irregularly built and none of the houses have more than the ground story and are principally constructed of mud, beaten hard with a wooden mallet, after being put into a wooden box of the dimensions of the walls, which box is moved from place to place till the desired height, length, and breadth are attained. Each house has a large yard and a plantation of cactus attached to it, the leaves of which are cut and ranged in long narrow sheds to preserve the cochineal insect in the winter season. The walls in the town are all brickish and most of those in the vicinity particularly in low situations, being hot, but perfectly clear and free from impurities. Amatitlan is a place of some antiquity having been one of the principal seats of the Jesuits, who had large sugar estates in the vicinity. The inhabitants nearly all mulattoes and mestizos, are active, industrious and enterprising. Pop. from 10 000 to 12 000. — The LAKE is close by the town to the S. E. It is about 11 or 12 m. in length, between 2 and 3 m. in breadth and is of great depth. Immense quantities of pumice stone may generally be found floating on its waters, and lying on its shores. In many places around springs of boiling water gush out, some of them emitting large volumes of steam. Two streams enter the lake, and one larger than both united, runs out of it. It contains a great abundance and variety of fish including a species of small size of exquisite flavour. — (Dunlop's *Central America* Hissel's *Guatemala*).

AMATITZAN a town, Naples, prov. Abruzzo Ultra II 91 m. N. W. Aversa, on a hill close by the sea of the Tronto. It has five parish churches, two *monte-di-pietà*, a high school, and manufactures of blankets. Pop. 5000.

AMAXICHI or *AMAKHCHIKI* a town, cap. Santa Marta one of the Ionian Isles, on its N. coast lat. 38° 50' N. lon. 20° 40' E. It stands on a sandy Arctian plain in the neighbourhood of unwholesome salt marshes, and is subject to frequent earthquakes. It has one wide street, houses generally of wood and a square, in which is the governor's house, and an ancient marble statue. It is the seat of a Greek bishop, and has numerous churches, two harbours for small vessels, manufactures of cotton and leather and a considerable trade. At the distance of about 1½ m. from the town on a low sandy peninsula, is the castle of Santa Marta, which was taken by the British in 1810 and is now generally occupied by a British garrison. A few miles from the town are still to be seen some remains of the ancient *Leucas*. Pop. 5000. — (Murray's *Handbook* Balbi, *Abregé de Géographie*).

AMAXICHI a river Florida, U. States, having its source in the Seminole swamps lat. 28° 15' N. lon. 81° 57' W. It flows first in a N. W. direction, then S. W. and W till it falls into the Gulf of Florida, about 4 m. S. from Green Island lat. 28° 30' N. Its whole course is about 80 m.

AMAY a rural cant. Belgium prov. Liège on the road from Liège to Namur traversed E. to W. by the Meuse. The inhabitants are principally brickmakers and in spring leave their houses in hundreds to ply their trade in distant quarters returning in winter. The soil is low, some works, and some trade in wood and dried fruits. Pop. 3848.

AMAZON *AMAZON* *ORIELANA*, or *SOLIMOS*, the various names given to a large river in S. America, but better and more generally known by the first. It rises in the Andes on the W. coast of S. America, traverses the entire breadth of that vast continent from W. to E. and falls into the N. Atlantic Ocean, about 100 m. S. W. distance, including the windings of the stream, of 4000 m. It drains an area, according to some authorities of two millions and a half and according to others of one million and a half of square miles is navigable for 2200 m. from the sea, and is 96 m. wide at its mouth. It is thus the largest river on the globe as regards the volume of its waters, which is so powerful as to force its way into the ocean, without meeting with the latter to a distance of 800 m. but according to Berghaus, it is inferior to the Missouri-Mississippi in the length of its course, which

AMASIA.—From W. J. Hamilton Asia Min.

nothing now remains but a portion of the walls and towers, and an ancient subterranean passage of 500 ft. in depth at the bottom of which is a well of clear cold water. In remote times, a flight of steps led to this subterranean fountain but these are now either entirely worn away or filled up with mud. On the highest point of the rock on which the Acropolis stands, are some remains of two Hellenic towers of beautiful construction. The other objects of greatest interest in this ancient city are the tombs of the kings, described by Strabo who was born here. They are five in number and consist of excavations in the steep face of the rock on which the castle is built, about 100 ft. above its base. Three of these caverns face W. and E. the former are very accessible being approachable by an open gallery scooped out of the perpendicular face of the cliff and protected by a low parapet of rock which has been left. The import trade of Amasia is insignificant, but a considerable traffic is carried on in wine, grain, madder cotton, and particularly silk, the quantity of which, produced in 1841 was 132 000 lbs. European agents exported about 14 000 lbs. the same year. The raw silk of Amasia was long badly prepared, and thought unfit for the English market, the quality has lately much improved. Nothing is known of the early history or foundation of Amasia, beyond the information imparted by its ancient coins, that after the conquest of Asia Minor by the Romans, and during the whole continuance of the empire, it bore the title of Metropolis of Pontus. On the earlier coins, the name is spelled *Amaseia*, and on those struck under the early Roman emperors, *Amasia*. As already mentioned Strabo the ancient

taken by the windings, although greater when taken in a direct line. The numbers given by him are—Amazon, direct course, 1781 m. winding, 3548 m. Muscum-Mississippi, direct, 1881 m.; winding, 4096 m. Some geographers assume that the sources of the Amazon to be the Tanguara and Uçayali and others, the Uçayali and Aguarica, the former originating in the Lake Lencachaca, Peru lat. 10° 30' S. lon. 76° 25' W; the Aguarica, the principal head stream of the Uçayali, rising in lat. 15° 35' S. lon. 75° 0' W about 80 m. W the Lake of Titicaca. From the junction of the Tanguara and Uçayali, which takes place near St. Joaquim de Omeana, after their having been increased by numerous large tributaries about lat. 4° 35' S. lon. 72° 30' W to the junction of the Rio Negro, the river is frequently called the Solimões; and from the junction of the latter stream to the ocean, it bears the name Amazon or Amazonas. The course of the river may be described generally as W to E from the junction of the Uçayali and Tanguara, though not without occasional and sometimes wide deviations. During its course, it is joined by various tributaries from both the N. and S., some of them very large streams. Of this class is the Rio Negro, which flows from the N. and falls into the Amazon in lon. 69° W after a course of 1400 or 1500 m., and the Madeira not greatly inferior in size to the Amazon, which from the S. which joins the latter in about lon. 58° 30' W., after a course of about 1800 m. The head stream of this affluent, the Rio Grande, or Guapari, which unites with the Beni in forming the Madeira, rises S. of the Andes of Cochabamba, in the same plateau from which flows the Pichumayo, an affluent of the Paraguay, and the sources of the Guapari, on E. branch of the Madeira, flow within 3 m. of the waters of the Aguarica, one of the head streams of the Paraguay, by so narrow a watershed are the waters of the Amazon and La Plata at these localities parted. Two other large tributaries are the Coquiza or Japura, which flowing from the N. falls into the Amazon in lon. 65° W and the Napo which proceeding also from the N. joins it at 71° 30' W. At this point, which is about 125 m. from the junction of the Tanguara with the Uçayali its breadth is 900 fathoms, and its depth more than 100 fms. Between the confluence of the Negro, lon. 69° W, and the Madeira, lon. 58° 30' W, its breadth is about 5 m. extending occasionally to twice that breadth where islands are numerous, as they are indeed, throughout the whole course of the river. The width of the river gradually increases towards its embouchure, until its opposite banks can hardly be discerned. Its general depth from the sea to

subject to great floods being, on an average, about 2½ m. per hour in some places it is 4 m. per hour in others less than the lowest velocity named. In the last 700 m. of its course it falls but 12 ft. or one-fifth of an inch per mile. In the dry season, its rapidity is greatly diminished. The river is perceptibly affected by the tides as far up as the town of Orléans, or about 400 m. from its mouth. The singular phenomenon, known by the name of the bore, occurs at the mouth of the Amazon two days before, and two days after the full moon. This is the rushing of the waters of the ocean into the river in the form of huge waves, of from 10 to 15 ft. perpendicular height, three or four of which follow each other in succession, with irresistible force. The great river traverses a region thickly covered with dense and lofty forests, inhabited by wild animals and numerous small tribes of savages. It abounds in fish and in turpentine, and large alligators are frequently seen lying motionless on its muddy banks. The Amazon being navigable, as already remarked for 3200 m. from the sea, and having a communication with the Orinoco by the Casiquiare, the S. arm of its bifurcation, which falls into the Rio Negro, presents in conjunction with its principal tributaries all of them also navigable for great distances from their junction with the main stream—a system of inland water communication more extensive than is to be found on any other part of the globe.

Tributaries.—The known tributaries of the Amazon worth noticing, besides those already named, are the Hyabary or Juary which joins the Amazon at lon. 68° 30' W the Jutay at lon. 67° W; the Jurua, at lon. 65° 30' W the Telle, at lon. 65° W the Cuvary, at lon. 64° W the Mama, at lon. 63° W the Turu or Furu at lon. 62° 30' W the Tapaya, at lon. 55° W and the Xingú the last of the large tributaries, at lon. 52° W all proceeding from the S. From the N. the only river of note that joins the Amazon, so far as is known besides those mentioned elsewhere namely the Napo the Japura, the Negro, the Putumayo, which falls into it at lon. 68° W after a course of about 1000 m. All these rivers unite with the Amazon below the junction of the Uçayali with the Tanguara.

The mouth of the Amazon was discovered in the year 1600, by Vincent Fares Pinzon but the first European who descended its stream was Francis Orellana, a Spaniard who, in 1539 sailed from the Rio Napo to the embouchure of the Amazon. It was this adventurer who first reported the existence of a community of female warriors on the banks

of the river who were without the right breast, which they had removed while young, in order to permit of a free use of the bow and hence the name Amazon, which signifies, 'wanting a breast, now the popular name of the stream. The name Orellana, by which it is also known, was derived from the Spanish adventurer above spoken of. The origin of its third name Marañon, is uncertain, but is believed to be derived from that of an Indian name

by which some parts of its banks was inhabited.—(Bonville's *Physical Geography* Lyell's *Geology* Lieut. Bayly's *Account of the Rivers Amazon and Japura*; E. Parry's *Travels in Asia, Persia, and on the Russian River*, Humboldt's *Aspects of Nature* &c.)

AMAZUMA, a large cr. W Africa, E. bank of the Niger about lat. 5° 10' N; lon. 6° 18' E. It is beautifully situated,

the Rio Negro, or from lon. 50° to 60° W about 50 m. in a straight line, as now is less than 20 fathoms higher up, it varies from 10 to 12 and is navigable by the largest vessels up to the junction of the Tanguara and Uçayali. Beyond this point some drawing more than 50 ft. water can proceed with safety the Uçayali, which flows through the Pompa del Sacramento, is so obstructed by rapids and cataracts, as to render navigation far

above its junction with the Tanguara quite impossible. The navigation of the Amazon is in many places not without danger from numerous shoals, from the narrowness of its channels, and, in the lower part of its course, from floating trees brought down by the Madeira. In 1848, a steamer succeeded the river as far as the Rio Negro. The rapidity of the stream is considerable, especially during the rainy season, when it is

and has a cheerful and cleanly appearance.—(Allen's *5000* Expedition.)

AMBABICOOI, a vil Lower Egypt, 66 m N W Cairo lat. 30° 17' N lon. 30° 21' E in the Natron valley

AMBALEGA, a to. Isl. Madura, Indian Archipelago It lies near the centre of the island, is surrounded by fine wood, has a temple, and 4000 inhabitants

AMBATIKI an Isl. S. Pacific, one of the Feejee group, of some shape, and rising to a height of 750 ft. lat. 17° 49' S lon. 179° 11' W (s). It has little wood, but produces yams, and other edible vegetable productions in abundance. Pigs are also numerous but the natives do not willingly part with them. When visited by Commander Wilkes of the U States Exploring Expedition, there were 500 inhabitants on the island whom that officer represents as being civil, letting them have tere and yams in plenty

AMBATO or **HAMATO** (ARUNTO D. a to. Ecuador 100 m. S E Quito It was destroyed in 1808 by an eruption of the volcano of Cotacachi. It was rebuilt shortly afterwards, and soon became more flourishing than before. It has some good buildings, and an active trade in grain, sugar and cochineal; the latter being produced in the vicinity in abund and, and of excellent quality

AMBAU or **AMBOU** a small Isl., S. Pacific, one of the Feejee group, connected with a larger island by a coral reef fordable at high water lat 16° 30' S; lon. 178° E It is only 1 m. in length, and about half a mile in breadth, but is of importance from having a large town of the same name, from its being the seat of a kind of sovereign authority and from its chiefs having obtained a political ascendancy over the neighbouring islands. The town entirely covers the island. The inhabitants, like those of the Feejee Islands generally are savage and treacherous and have, on more than one occasion, murdered the captains and crews of vessels visiting the island previously throwing them off their guard by professions of friendship

AMBLELAKIA or **AMBLAKIA** a to. European Turkey prov. Thessaly or Trikala on the S. slope of Mount Ossa, above the pass of Tempe, 15 m N E Larissa. Amblelakis was at one time famous for its cotton yarn spinning, and dyeing but the former has been nearly annihilated by the cheaper productions of England. The trade was, at the time above alluded to, carried on upon joint-stock principles the work people sharing in the profits but misunderstandings amongst themselves, allowed abroad, and the successful rivalry of Britain put an end to the prosperity of the town. The town is still, from its romantic site, and the fine scenery around, a place of interest to the traveller. The heights in the vicinity are covered with vineyards, from the produce of which an excellent wine, resembling claret, is produced. The pop. in 1788 was 4000 it rose to 8000; and has now sunk below 8000 Many of the inhabitants are said to be Germans, though all wear the Eastern dress

AMBER, or **AMBERICA**, a to. Hindostan, the one cap. of the Jeypor territories in Ammer lat. 26° 27' N lon. 75° 40' E about 5 m N by E. Jeypor now the capital. The town has on the bank of a small lake surrounded by steep mountains. It is now in ruins, and nearly depopulated, but its former grandeur is attested by its lofty pagodas, large reservoir and numerous arches and pavilions through which a narrow winding street leads to a second steep ascent, paved with granite, and conducting through several Gothic gateways to the summit palaces of the rajah, still in good preservation. The stone and marble sculpture, and other ornaments of the interior of this edifice, are surpassed only by those of the celebrated Tapa Mahal, at Agræ. Higher up the hill stands a grim-looking edifice, formerly used as the public treasury but now as a state prison. The royal gardens occupy a small island in the lake, and part of its E. bank.—(Hamilton's *East India Soc. Hobbs's Journal*.)

AMBERL, Ammer, or Ammo (CARE) Madagascar of which it forms the N extremity lat. 11° 57' 30" S lon. 49° 19' E. (s). It is a low point of land, consisting of a ledge of rocky islets, having 15 islets close to them and 20 or 25 Atoms about half a mile distant. The currents set generally strong to the W all the year from this point.

AMBERG a to. Bavaria, formerly cap. of Upper Palatinate, on both sides of the Vils, which divides it into the upper and lower town; 35 m. E Nuremberg. It is enclosed

within a double wall, now used as a public walk, is well built, and has broad and clean streets; it contains a lyceum, gymnasium, theological seminary normal school, public library, several well-endowed hospitals, 10 churches, convent for noble ladies, theatre, and houses of correction. Among the principal buildings are the palace royal arsenal salt magazine, church of St. Martin, and the guildhall. It has a royal manufactory of arms, which produces yearly from 10 000 to 20 000 muskets of the best quality, and also manufactures of cotton stuffs, hats, playing cards, tobacco, and stoneware with a considerable trade in salt. The principal glassworks of Bavaria are here but the town is chiefly indebted for its prosperity to its iron mines, which annually produce about 8000 tons of ore. In the vicinity there is a seam of coal and both porcelain clay and fuller's earth are found. Here, on August 24 1796, the Archduke Charles defeated the rearguard of the French army under General Jourdan 10 p. 11 000

AMBERGIBIS ISLAND an Isl. off the coast of Honduras and in the bay of that name 30 m. N N E Dulles. The E or Reef point is lat. 18° 8' N and lon. 87° 50' W (s), the N and admitting a passage for boats between that and the main. It is about 20 m. in length and 3 broad running N N E and S S W

AMBERLEY a par England co. Sussex 2900 ac Pop 671

AMBERT a to. France, dep. Puy-de-Dôme (Auvergne) on the Dore, cap. arrond. 36 m. S E Clermont. It is, in general well built, but the streets are narrow and crooked, and have rather a dull and gloomy appearance. Ambert is rather a stirring place. It is the seat of a court of primary jurisdiction, and one of commerce, and has a communal college, a chamber of manufactures, and an agricultural society. Manufactures.—Woolen stuffs flag bonnets for ships, blankets, serges, ribbons lace, hosiery, pins and a laying cards. Above 60 factories are employed in making fine printing paper. Ambert is the principal mart for Auvergne goods, which are much consumed in France. In the neighbourhood are the cold mineral waters of Thiers. The arrond.—area about 170 sq m.—contains eight cans. Pop. arrond. 92 940 in. 36 8.

AMBLANGODDE a large vil Ceylon, about 33 m S. Calcutta, and 19 N Galle. The houses are mostly covered with tiles. The inhabitants are employed in fishing and in the coasting trade between Ceylon and the coast of Coromandel. There is a school here belonging to the Wesleyan missionaries.—(Ceylon Soc.)

AMBLAU a small Isl. Indian Archipelago, one of the Moluccas, 12 m. S E Boero, and 45 m. S W Ambona lat. (N E point) 4° 49' S lon. 137° 10' E (s). It is egg-shaped hilly intersected by various streamlets and is the most fruitful island in the Dutch government of Ambona. On its shores and coasts, shell fish and various kinds of sea fish are found but the poor inhabitants derive the principal part of their food from the neighbouring island of Boero. It was at one time populous but now contains only about 2000 inhabitants.—(Van der Aa.)

AMBLESIDE, a market tn. and chapelry England, co. Westmorland. The town is 11 m. N W Kendal picturesque situated on the steep declivity of a hill near the head or N extremity of Lake Windermere. It is very old and is irregularly built; but in the immediate vicinity there are many handsome houses and villas with beautiful gardens attached and in the town are a church rebuilt in 1813 and a free school, founded in 1721. Woolen cloth is manufactured here to a considerable extent and petty sessions are held in it. It is also one of the polling places for the county. Market day Wednesday two fairs annually for horned cattle and sheep. A number of Roman remains have been found here at various times. Pop 1592

AMBLESTON a par S Wales, co. Pembroke area, 3906 ac. 8 m N by E H. strifordwest. Pop 598.

AMBLETEUSE, a small seaport in France formerly of some importance, but now much decayed dep. Pas de Calais, 5 m N Boulogne-sur-mer. In 1804, Napoleon, during his threatened invasion of England, made much use of Ambleteuse for his flat-bottomed boats and he gave orders for the improvement of the harbour but the accumulations of the sand rendered the attempt fruitless. James II on his flight from England in 1690, landed here. Pop 573.

AMBLEVE, a river which rises in the Prussian prov. of the Lower Rhine 30 m. E.B.E. Biezenbach, flows W., and enters Belgium by Prov. Liege, and falls into the Ourthe at Dinant, 11 m. S. Liege. It has a course of about 50 m., of which the last 7 are navigable.

AMBOINA, or **AMONTA** (Malay *Jabon*—Gow) an isl. Indian Archipelago the most important, though not the largest, of the Moluccas, esp. of same name, lying S. of Ceram, and E. of Boeroo isl. (Allypourt) 8° 48' S. lon. 127° 59' E. (N.). It is the seat of the Dutch governor of the residence or government of Ambona, which includes, besides the island of Ambona, Boeroo, Amilang, Sammpa, Kilang, Esusa, Haroko, Hoo men or Saparoon, Moos-lant or Hils, m. all of which are under governors, and military posts. The island of Ambona is composed of two sections, the N.W. and larger Hiton, and the S.E. Letimur united by the narrow isthmus of Bagovola, not more than half an hour's walk across. Between these two peninsulas is a deep bay forming the roadstead of the capital Ambona. The island is about 30 m. long, by 10 m. in breadth, at its broadest part, though generally it is not above 5 or 6 m. area, 332 sq. m. It is

subject to earthquakes, and of primitive formation grants in some localities rising even to the summits of the mountains while in others it underlies serpentine and recent calcareous deposits. In the valleys the soil is a reddish clay mixed with sand. The island is rocky and hilly, some of its heights are rounded and covered with a rich verdure, some of medium altitude, have the tops bare of vegetation and others are only covered with ferns. But the dark valleys and the shore tracts, have a rich and vigorous vegetation. The size of the island does not admit of large rivers, but there are numerous brooks and torrents, and good water for culinary purposes is plentiful. Still the island is not very fully cultivated in fact, when compared with Java, the cultivated tracts may be said to be as rare as in that fertile island are those that are uncultivated. This state of things probably arises from several causes. Though the valleys of Ambona are rich and capable of growing almost all tropical plants, yet a great part of the island is arid and rocky unsuited for general agriculture, though admirably adapted for raising the clove tree to the cultivation of which the small surplus of the native population have been in a great measure exclusively directed by the Dutch Government, at one time even by compulsion. Cloves, consequently are the staple produce of the island, the annual quantity produced being about 500,000 to 600,000 lbs. The tree (*Chromolaena odorata*) from which this valuable spice is obtained, is about 30 to 40 ft. high, branches not much spread, leaves small, oblong, bark dirty white and does not yield the clove until 15 years old. The average annual produce of a tree is variously stated at 3 to 6 lbs. gathered in October and November. Another reason for Ambona not being more extensively cultivated is the ease with which the people obtain sugar, the favourite food from the palm which grows plentifully in the woods. The pepper plant grows on the island and coffee cotton, indigo, and cinnamon, are cultivated with success, rice has been neglected, and is imported from Celebes. Among the trees of Ambona are ebony, rosewood, casuarina, sugar palm, cocoa nut, sago, yut building timber is

scarce and has to be imported from Java. The fauna of the island is poor. It has no sacrovervian animals, the rodents are only the Mus domesticus and one allied species, rodents there are none, pachyderms, only the wild hog and the horse the deer represents the ruminants, the dugong the antelope and sperm whale, the cetaceans; and there are no monotremata. Birds are more abundant than mammiferous animals, though by no means numerous in species. The most remarkable is the megapodidae, a small gallinaceous fowl found also plentifully in Australia. Insects are numerous, the class lepidoptera being more especially rich in species, of the most brilliant hues. The sea around the island teems with molluscs, in the shells of some species of which a considerable trade is carried on.

The animal world of Ambona has been supposed to be much more varied than it really is, from specimens in European collections having that island ascribed to them as their habitat while in reality obtained from other localities—they have merely been brought to Ambona, and shipped there. The climate of this island is healthier and more agreeable, than the generally of intertropical localities. The natives, of Malay race are of medium stature, mild, though very proud easily led, though quarrelous and generally very sober capital crimes are rare. They make good soldiers and are fond of military life. In costume, they resemble the Malays of Java. Many of the natives have been converted to Christianity under the care of the Dutch and are distinguished from the Mahometan population by a peculiarity in their dress. Considerable attention is paid to education, of which Ambona is the head quarters for all the surrounding islands. Native indolence and apathy, however, present strong barriers to rapid progress either in religion or education. The Mahometan religion was established in Ambona in 1615, the year in which the island was discovered by the Portuguese, who took possession of it in 1664 and introduced the Catholic faith. In 1605 the Dutch coveted the island, and expelled the Portuguese, and introduced Protestantism. In 1798 it was captured by the British, and was restored to the Dutch in 1801, at the peace of Amiens, but the island taken in 1810 and finally restored to Holland in 1814, at the treaty of Paris. Besides Ambona the capital there are several villages and two or three forts on the island. Pop. in 1841 29,569.—(Tomlinson, *Coup d'oeil sur l'Inde Néerlandaise* Van der Aa's *Nederlandsche Monument des Indes* Crawford's *Indien Archipelago*.)

AMBOINA or **AMONTA**, cap. ul. above named and of the Dutch residence or government of Ambona, Moluccas; lat. (Fort Victoria) 3° 41' S. lon. 127° 10' E. (N.) on this part of the island called Letimur, 3 E. side of the Bay of Ambona. It is of a triangular form and is clean, neat and regularly built, with straight and wide streets, intersected by numerous streams, planted on either side with shrubbery. The houses, built in the Dutch fashion, are generally of one story on account of the frequency of earthquakes. It has a governor's palace, townhouse, two Protestant churches, one for European the other for native Christians, an orphan hospital, theatre, and a large covered market place. A public garden is attached to the town, and a range of houses adorned by a double row of matting trees, and occupied by the principal inhabitants, terminates in a long esplanade, leading to the citadel of Fort Victoria, an irregular bastion built by the Portuguese, which, besides the usual appointments of such strongholds has stores for the annual produce of the clove plantations. The population of Ambona is composed of Malays, Europeans, and Chinese. The latter reside principally on the W. quarter where there is a large and well-stocked market, supplied with most of the luxuries and necessities of the climate. The bay of Ambona is about 20 m. long, by 2 to 7 broad, the route secure and commodious, and the anchorage good vessels may move close to the wooden jetty on which goods are discharged, in from 20 to 45 fathoms. The outer bay has neither shallows nor reefs dangerous to vessels, and everywhere it has a depth of about 50 fathoms. Pop. of it (which seems to be decreasing) in 1841, 8966.—(Montener des Indes Van der Aa. &c.)

AMBOISE [anc. Ambona] a tn. France, dep. Indre-et-Loire, 13 m. E. Tours on the railway between that tn. and Orleans, 1. bank of the Loire, whose bed is here divided by a long narrow island, connected with the opposite banks by two bridges, one of them a handsome wooden structure, with stone

place. The town, though picturesque situated at the foot of a considerable acclivity crowned with an antique castle (the site, it is said, of a fort built by Julius Caesar) is not well built, and has rather a dull appearance. The castle, already mentioned which is the most remarkable building near Ambouse, was the residence of several successive kings at stands in a terraced garden, about 90 ft. above the level of the town and is flanked by two enormous towers. It was in

AMBOUSE.—From the observatory, in Saint Hippolyte at Philippeville.

this castle that the unhappy Huguenots, engaged in what is known as the Conspiracy of Ambouse met their doom. So great was the carnage that the stench of the dead bodies, which hung as headless trunks on the castle walls or lay scattered along the river drove away the court. In a cliff a little above the castle, near the old Convent des Minimes, are two caverns, called Caesar's granaries, hewn out of the rock. They have such fine stories access to which is obtained by means of a stone stair and are all regularly paved and vaulted with stone, and carefully plastered over with fine cement. The belief is, that Caesar having fortified a camp on the cliff above, employed these caverns as storehouses. Within the town, the only building worthy of notice is the parish church of St. Dennis, which was built by St. Martin and in the cemetery of which there is a very singular allegorical group, consisting of seven standing figures, in eastern costume apparently representing the solemn scenes of our Saviour's burial but said to be exact likenesses of some of the worst courtiers, male and female, that figured in the licentious court of Francis I. The manufactures of Ambouse are drabs, drug get, and bombazine also files rasps, and blunted steel which last bears a high name. The chief commerce is in wine, brandy and vinegar. It was in this town, in 1660 that the Calvinists first were called Huguenots a word of German origin, and intended as an epithet of contempt and disgrace, but which merely signifies *confraternities*. Pop. 4869.

AMBOISES BAY and ISLANDS, on the S.W. coast Africa north of Mozambique. The bay is about 17 m. N.W. the mouth of the Cameroons river and directly opposite the N.E. extremity of the island of Fernando Po lat. 4° 0' N. lon. 9° 12' E. The district in which it is situated is extremely mountainous, its isolated peak near the bay rising to a height of about 5000 ft. while the highest summit of a range a little further N. attains an elevation of 13,760 ft. The peak of this mountain says Capt. Allen, which the natives call Munga-mu-Lobah, or God's Mountain, from its great height and from its having been seen, as they assert, to emit fire was often lighted up most brilliantly by the morning sun, while the dark shadows thrown across its base involved all the lower part in gloom, hiding the deep ravines which furrow its rugged sides. The hills are clothed to within a third of their summit with beautiful forest trees, and are intersected by valleys covered with the richest soil. The entire region around the bay is evidently of volcanic origin, although it appears to have been in a state of repose for ages. The salubrity of this particular part of the African coast is spoken of by Capt. Allen in strong terms of commendation.—THE MOUNTAINS in the bay are all small, but the appearance of some of them is exceedingly picturesque. The largest and most

beautiful Mendoloh is about half a mile in length; it rises abruptly from the sea to a height of about 200 ft. and is steep on all sides. It is covered with a rich soil of decomposed basalt, and with very little labour yields yams, plantains, cocoa nuts, &c. magnificent trees of bombax, African oak, camwood, ironwood &c., also abound in it. There are likewise several springs of water. Notwithstanding these advantages, the island is but thinly peopled. Abobbi or Pirate Island is a mere accumulation of huge fragments of rock piled upon each other in the wildest confusion; but numerous clusters of native huts nestling in the crevices, or perched on open spaces, overlooking by cliffs crowned with beautiful foliage, give it a singularly picturesque appearance. Capt. Allen's account of his landing on this wild rocky islet is amusing. Having previously propitiated the chief with a bottle of rum the captain, accompanied by two officers, landed on a small pebbly bay. Here, in consequence, we looked in vain for a path leading to the summit or inhabited part, which was already covered with black holes, maliciously watching our progress. Two lugs met us, and showed a narrow ledge, which seemed to be perfectly inaccessible, except to goats. They were desired to lead the way and we followed up what appeared to be the edge of a basaltic dyke, where hands were so much in requisition as feet. We scrambled up, however, as fast as their more practiced *Montagnes* to the great

admiration of the crowd on the summit. It was rather a nervous feat, as one false step would have dashed us to atoms. The congested huts were found to be swarming with children goats dogs, pigs &c. The people are robust and healthy looking having, apparently abundance of the necessities of life they chiefly subsist by fishing exchanging the produce of the sea for vegetables, bananas, yams, &c. with their neighbours on the mainland. The other principal island is called Damoh. The habitations of the people here are superior to those of Abobbi or Pirata's Island. They occupy the centre and highest part of the island the sloping sides afford good browsing to numerous goats. There is no cultivation, and but a poor supply of water. The inhabitants are civil and industrious, and live also chiefly by fishing. Previous to 1853 no European intercourse existed with these islands.—(Allen's *Yeger Expedition*.)

AMBOLO or AMBULU, a rich and beautiful valley with a tn. and stream of the same name in Malagascia prov Anony. The valley produces in great abundance, rice, manioc, sugar cane, coffee, citrons cloves, and other spices, besides grazing numerous herds of cattle. It contains also lot springs, of a high temperature, and medicinal quality and mines of iron. The town lies in lat. 24° 15' S. lon. 47° 0' E.

AMBOLON one of the smaller Thulemye Islands, S.W. Mindoro, lat. 13° 9' N. lon. 121° 14' E. (p.)

AMBRIERES, a small in France, dep Mayenne, and 21 m. N.E. Laval well built, and pleasantly situated on the Mayenne. It has some manufactures of calicoes and possesses excellent market halls, formed out of the buildings of an old castle which itself is not without interest. Pop. 1221.

AMBRIZ (Cala and Bay) Africa, W. coast. The cape is in lat. 8° 2' S. lon. 13° 10' E. The bay lies to the N. of the cape it is difficult of entrance, but affords good anchorage within.

AMERBROOK ISLAND a small isl. Russia, prov I. vovle, in the gulf of that name on the Baltic, about 21 m. N.E. Donames Point.

AMERBROOKEN a par England on Oxford, area 4866 sq. m. P.N. by R. Beoster. Pop. 387.

AMERBROOK (Br.) an isl. R. Pacific Ocean, about 500 m. W. from Chili, and 12 or 14 m. E. the Island of St. Felix lat. 28° 21' S. lon. 80° 30' W. (p.) At a distance it appears like two small islands, but on a nearer view the two parts are found to be connected by a reef. About 4 m. to the N. is a large rock called, from its appearance, the Bell Rock. Seals, crabs and crew fish, abound on the island, on which traces of volcanic eruptions are visible.

AMBROSETOWN a par Island, co Wexford area, 1187 sq. Pop. 773.

AMBREY or **AMBRIN** an Isl New Hebrides, S Pacific, about 35 to 40 m. E. the Island of Mallicolo or Maré, lat. 16° 14' S.; lon. 168° 54' E. (n.) This island is the seat of an active volcano, forming one of the Australian volcanic series. It is fertile, and contains a fair proportion of inhabitants.

AMBUKOLA and **AMBIA**, I bank Nile lat. 18 4 31 N lon 31 54' 46" E. (n.) about 6 m. W from which is a waste named Haagarlat, the superficial stratum of which is coarse sandstone, containing many siliceous fossil trees parts of which are splintered off by the papyrus and used as gun flint. The trees appear to be the down palm *Ocoteva* *Thaetoid*.

AMED AMID, EMIR, of KARA AMID, that is, Black Amid a name sometimes given to Diarbekr (which see).

AMELAND an isl. Holland, prov Friesland, from the N shore of which it is about 6 m distant, and 3 m. E the Island of Schelling lat. (heaven) 58° 37' N lon 5° 45' E. (n.); length 13 m.; greatest breadth 3 m. It is a flat island, subject to inundations, that of 1825 carrying away 140 head of cattle. It is not well cultivated, though rye, barley, wheat, beans, peas, and potatoes are grown, rye affording the best return. It has good pasture land, on which cattle and horses for export are reared, but the major part of the population subsists chiefly by fishing and sea-faring. Ameland has three Calvinists and one E. catholic church, and five places of meeting for Baptists, who constitute nearly the half of the whole population. It has also four schools, an hospital three storehouses for stranded goods a royal breeding stand, and two cornmills. The inhabitants are a healthy stout, affable race, and the females are famed for their beauty by some being reputed the best looking in Holland. Most of the young women, when they attain the age of 16, proceed to the mainland as domestic servants and return after a few years their wear dress alm figures, and blooming countenances, insure their ready employment. The island has three villages, Holijm, Balhus, and hse. Pop about 2100

AMELIA or **AMERICA** a small in Papal States detachment of, and 12 m. S.W. from Spolito, upon a small hill the seat of a bishopric, erected in 841 erected a cathedral, three churches, and some convents. It was the most ancient, one of the oldest cities of Umbria, and the birthplace of Rhaecus, the celebrated Roman actor so frequently mentioned and so much admired by Cicero. In the neighbourhood are grown the best grapes in Italy known by the name of *pascolio* Pop. 3500.

AMELIA an isl in the Atlantic Ocean, E. coast of U States, Florida, co Nassau, at the mouth of St Mary's River lat. 30° 42' N lon. 81° 38' W (n.) It is 15 m. long and 4 broad. The capital is Pensacola, formerly also the capital of the country. The soil is fertile.

AMÉLIE-LES-BAINS, or **AMÉLIE-LES-BAINS**, a vil. France, dep. Pyrénées-Orientales, 8 m. W Ouel, L bank of the Moudon, famous for well-frequented thermal springs, of a high temperature, strongly impregnated with sulphuretted hydrogen. Pop. 467

AMENI, or **AMERY** one of the Læonides Islands lat. 11 57' N lon. 74° 41' E (n.) It is of a circular form, 1 or 1½ m. in diameter and surrounded by rocks to a small distance, close to which, on the W side, there are soundings.

AMERICA, one of the great divisions of the globe, and with exception of Asia, the largest. It stretches from Point Barrow lat. 71° 24' N (n.) to Cape Horn, the most S. point of the continent, on the Straits of Magellan, lat. 53° 58' 7" S. (n.) Horn Island on which Cape Horn is situated and the other islands forming the Archipelago of Tierra del Fuego, and which are considered as forming part of S. America, stretch between 5 and 18 degrees farther S. It consists of two vast peninsulas, called respectively North and South America, connected by the isthmus of Panama or Darien, which, at its narrowest part is only 23 m. in breadth its general width being about 40 m. The near approach to entire separation between the two peninsulas is effected by the Gulf of Mexico, and the Caribbean Sea, which appear like vast excavations in the centre of the continent. The whole length of the American continent, in a straight line, is about 9000 m. Its greatest breadth, S. of the equator is between

Cape St. Roque in Brazil and Cape Parica in Peru, between lat. 4 and 7 S. where it is more than 8250 m. wide. N of the equator the greatest breadth is near the parallel of 45° between Cape Corno in Nova Scotia, and Cape Lockhart, where it is more than 8100 m. in width. It is bounded on the E. by the Atlantic Ocean, N and S, which separates it from Europe and Africa, and on the W by the Pacific Ocean N and S, which divides it from Asia and Australia. From Asia, however it is separated by a narrow channel only called Behring's Straits not more than 43 m. in width at the narrowest part. The physical features of this great division of the globe are on the most gigantic scale. Here are the largest rivers and lakes in the world, the largest valley and the loftiest mountains, with exception of the Himalayas which however they greatly exceed in length the most extensive forests, and the tallest trees. Here, also, is exhibited the greatest development of volcanic phenomena, the chain of the Andes furnishing the most magnificent example of linear volcanoes of any region in the world. Out of 270 active volcanoes, the estimated number of all in that state on the surface of the globe, 190 are on the shores and islands of America, being upwards of two-thirds of the whole. The climate of America is said to be colder than that of the opposite continents of Europe and Africa, the difference, it is alleged, being equivalent to about 8 or 10 degrees of latitude. In bodily conformation, the aboriginal tribes of America present remarkable similarities but their languages, though presenting many points in common are exceedingly various, amounting in number to no fewer than 600. Though differing considerably in general contour the two great peninsulas present some remarkable points of resemblance. Both taper towards the E. extremities, and the form of both seems to have been in a great measure determined by a range and by a system of mountains on the W by the Andes, and their continuations the Rocky or Oregon Mountain, stretching from Tierra del Fuego to near the Arctic Ocean and on the E. by the mountains of Brazil and the Alleghany or Appalachian Mountains the former in S., the latter in N. America. Both also are to a great extent composed of three great river basins N. America by those of the Mississippi-Missouri the St. Lawrence, and the Mackenzie S. America by those of the Rio Plata-Parana, Amazon, the Orinoco. Many other points of resemblance between the two peninsulas could be named, but it is thought unnecessary to do so, here, as both their corresponding and distinctive features will be noticed under their respective heads.

Besides the two grand divisions of America above spoken of, namely N and S a third called Central America, is recognised, comprehending those countries which lie between the 8th and 18th parallel of N lat. and between 82° 30' and 94° W lon. To avoid perplexity this division will be found treated of as a subhead, following N America, to which it properly belongs.

NORTH AMERICA has between the 20th degree of N lat. and the Arctic Ocean. It is of more irregular form than S. America, but of greater and more uniform breadth and, consequently of larger area. It is also more deeply indented with gulfs, bays, and islets. Two extensive mountain chains run near and parallel the one to its E., the other to its W. coast. Between these lies a vast plain, the largest in the world stretching N and S, from the Gulf of Mexico to the Arctic Ocean. In this plain are situated the great lakes of N. America, and over its level surface flow its majestic rivers, including the Mississippi, the Mackenzie, and the St. Lawrence the one forming a S. the other a N. and the third an E. outlet for its superfluous waters. The more remarkable of its coast indentations and islets are Baffin's Bay Hudson's Bay and the Gulf of St. Lawrence, on the E. coast the Gulf of Mexico, on the S. and the Gulfs of California, Georgia, and Cook's Inlet, on the W. Owing to its irregular form, the coast of N. America is very extensive its length from Hudson's Straits to the Florida Channel, being about 4800 m. and from the latter along the inland sea to Panama, about 4600. The whole length on the Pacific side to Behring's Straits, including the Gulf of California, has been computed at 10,600 m. Of the extent of the N. and N.E. shores no conjecture has yet been heard, but it cannot, probably be less than 3000 m. The entire extent will thus be, perhaps, about 22,800 m. Amongst the more remarkable physical characteristics of N

America are its sandy deserts, treeless steppes, marshes, and prairies, the first stretch along the base of the Rocky Mountains to the 41st degree of N lat. having an average breadth of 400 to 800 m. The steppes form another cheerless and extensive region in the N parts of the continent, being perished in summer by scorching heat, and frozen in winter by intensely cold winds from the Rocky Mountains. The marches of N America occupy a large space, those towards the mouth of the Mississippi extending over 35 000 sq m. The prairies or savannahs peculiar character of N America, occur chiefly in the Mississippi valley. They consist of extensive, elevated, and generally irregular tracts, without trees though sometimes capable of producing them, covered in the spring with long grass, intermingled with fragrant flowers. They are often however entirely barren, and may be traversed for many days without a shrub being met with, except on the banks of streams. Wet tracts are also occupied by forests, comprising probably not less than from 600 000 to 800 000 sq m. Notwithstanding these large desolations millions of acres of rich and fertile soil remain for the subsistence of man.

Mountains—Of these there are four principal systems in N America. The Oregon or Rocky Mountains—a continuation of the Andes, the *Ses Alps* of California, the *Ses Alps* of the N W coast and the Alleghenies or Appalachian Mountains on the E coast. The Oregon Mountains stretch along the W coast at a distance varying from 50 to 300 m. from the sea. The highest part is between lat. 42 and 52 N where several peaks rise far above the snow line. Of these, Mount Hooker attains an elevation of 15 700 ft. and Mount Brown 15 900 ft. Further N they decrease to 4000 and 5000 ft. The *Ses Alps* of California, and those of the N W coast run parallel to the Oregon, but nearer to the sea, and are connected with the latter by transverse ridges the principal of which are the Snowy Mountains said to equal the highest part of the Rocky Mountains in elevation. The Alleghenies or Appalachian Mountains stretch along the E coast. They consist chiefly of four separate groups crossing the country in the same general direction from N E to S W. Their mean elevation does not exceed 2000 ft. To this chain belongs the group of the White Mountains in which is situated Mount Washington, 6020 ft. high, the culminating point of the entire system. Their whole area is computed at 2 000 000 sq m.

Rivers and Lakes—The principal rivers are the Missouri, Mississippi, and the St. Lawrence. The first is the largest river in N America, and one of the greatest in the world, comprising with its tributaries, the whole of the S. portion of the great central basin of this continent. It has its origin in the junction of streams from the Lakes Itasca and Umbagog, on the declivity of the Rocky Mountains between lat. 43° and 45° N and falls into the sea in the Gulf of Mexico N lat. 27° N. Its whole course which is from N to S, reckoning the Missouri as the principal branch, is estimated to exceed 4400 m. It has obtained its double name from the Missouri forming about two-thirds of its earlier course. The St. Lawrence runs under the name of the St. Louis, in lat. 47° 45' N Jan. 23° N flows N.E. by N and falls into the Gulf of St. Lawrence at Gaspe's Point, by a month more than 100 m wide. The other rivers ranking next in point of magnitude are the Arkansas, Red River, Ohio, and Mac kenzie, all excepting the last, tributaries of the Mississippi and having their sources in the Rocky Mountains. The Mackenzie issues from the Great Slave Lake, from which it flows nearly due N., and falls into the Arctic Sea about lat. 69° 10' N. In the number and magnitude of its lakes, N America is unequalled by any other quarter of the globe. They form one of its grandest natural features and, in conjunction with its rivers, present a medium of commercial intercourse which no other country enjoys. The principal lakes are Lake Superior, Michigan, Huron, Ontario, and Erie, which together cover an area of 90 700 sq m. The largest of these is Lake Superior the mean length of which is 400 m. mean breadth, 80 m. The deepest are Lakes Michigan and Huron the mean depth of which is 1000 ft. or about 187 fathoms. Following the chain of lakes which crosses the country in a N W direction, there occur Lakes Winnipeg, Woolston, Deer Lake, Athabasca, Great Slave Lake, and Great Bear Lake. There are, besides these, many smaller yet consider-

able lakes, such as St. Clair midway between Lakes Huron and Erie, and the Lake of the Woods, between Lakes Superior and Winnipeg.

Islands—In the Atlantic Ocean the principal are Newfoundland, Anticosti, Prince Edward's Island, and Cape Breton, all at the mouth of the St. Lawrence; the Bahama Islands off the peninsula of Florida and the Gulf Stream and the W India Islands, Cuba, Hayti or St. Domingo, Jamaica, Porto Rico, Santa Cruz, Antigua, Guadeloupe, Martinique, St. Lucia, Barbadoes, St. Vincent, Tobago, Trinidad, and several others. On the N W coast, the principal islands are Vancouver's Island, with an area of 80 000 sq m.; further N Queen Charlotte's Island then King George III (4 Archipelago, which contains, besides a number of small islands, Prince of Wales Island, Sitka Island, and Admiralty Island. Next follow the Aleutian Islands stretching W from the peninsula of Alaska. In Behring's Straits are the group of Pribyloff and Vonnorok, belonging to Russia. In the Arctic Ocean, there are a vast number of islands of which little or nothing is yet known. Besides these, there is a multitude of small islands and rocks scattered along the W coast particularly between Port San Francisco and Cape St. Lucas.

Geology *Mineralogy* &c.—A remarkable analogy exists in the structure of the land in N America and Central and N Europe. Gneiss, mica schist and granite prevail over wide areas in the Alleghenies on the Atlantic slope, and the N latitudes of the American continent and in the high and middle latitudes, the siliceous strata extend over 2000 m. Crystalline and alluvial rocks form the substratum of Mexico for the most part covered with plutonic and volcanic formations and secondary limestone. The Rocky Mountains are mostly alluvial, except the E ridge which is of stratified crystalline rocks, amygdaloid and ancient volcanic productions. The coast chain has the same character with immense tracts of volcanic rocks both ancient and modern, especially abundant. In N America volcanic action is entirely confined to the coast and high land along the Pacific. The principal minerals are gold, silver, copper, iron, lead, and coal. The first three are found in greatest abundance in Mexico where there are nearly 9000 mines of gold and silver alone. Since 1848, however the great field for gold panning has been California, where large quantities have been obtained with little trouble and both silver and quicksilver have in the same quarter been found to abound. The silver applied by the Mexicans value is extracted from a great variety of minerals, pure or native, a few being of compound, very rare occurrences. Previous to the revolution of 1810 the annual average produce of the American mines amounted to 25 100,000 after the revolution the amount fell to 23 237,500 the exports of species falling of course, in proportion. The principal deposits of gold in the U States, besides in California occur in the primary rocks between the river Mississippi and Virginia, and the Coosa in Alabama, but it has also been found as far N as Bancroft in Vermont. The gravel is washed by negroes who collect each about five pennyweights a day. The gold sent from this district to the mint of the U States, between 1825 and 1838, amounted to \$4,377,500 but the actual produce was estimated at twice this amount. The coal fields of N America are of prodigious extent the Appalachian stretching without interruption 770 m. with a maximum breadth of 234, and occupying an area of 63 000 sq m. The Pittsburgh seam 10 ft. thick, exposed on the banks of the Monongahela, averages however only 235 m. in length, and 100 m. breadth and covers an area of 14 000 sq m. The coal is generally bituminous, similar to British but anthracite is also met with. Besides the coal fields named there are various others of great extent in different parts of N America, including New Brunswick, Nova Scotia, and Vancouver's Island. Iron also is worked in many parts of the States from Connecticut to S. Carolina. Salt is likewise widely diffused throughout great part of this continent.

Climate—The predominating character of the climate of N America is intense cold although in some parts, an oppressive heat prevails during a portion of the summer. In British America the thermometer rises, in July 20 degrees higher than in London. Again, above the 50th degree of lat., the cold is so severe as to render the country all but uninhabitable; while frosts occasionally occur as low down

as the 30th degree of lat. In winter a keen and piercing N W wind prevails throughout all N America, adding greatly to the natural rigour of the N climate, and carrying its chilling influence into the more southerly regions. The transitions from cold to hot, or from winter to summer are very sudden, especially in Canada, where there is little or none of the intermediate season of spring. The principal causes assigned for the greater degree of cold prevailing in N America than in corresponding latitudes in other countries, are its immense chains of mountains with their coverings of perpetual snow. Its prodigious forests which prevent the solar rays from reaching the earth, and to the great breadth of it at portion of it that lies within the Arctic circle. The sudden and extreme transitions from hot to cold, for which the climate of N America, generally is remarkable, is not perhaps, so easily accounted for. These transitions, however are said to be less frequent in the Lower Canada, where the contrasts are greater, it is more healthy than Upper Canada, and the latter than the U States, where they are least, though still sufficiently marked. In the S. portions of N America, some of which are within the tropics, the heat is occasionally excessive, but even there the chilling influence of the N regions are manifest, keen frosts being often experienced between 15° and 2° N lat. As having, probably some connection with climate, the singular fact may be mentioned that all over America the teeth are subject to early decay.

Vegetation.—The forests of N America are of vast extent, and the individual trees of the most magnificent dimensions some of the former covering an area of 60 000 sq. m. and many of the latter attaining a height of 300 and 300 ft. with a circumference of 80. The forests of Canada consist chiefly of pines, oak, ash, hickory red beech, birch, and the lofty Canadian poplar. Those of the U States, of spruce, chestnut, black walnut, hickory maple, white cedar wild cherry red birch, locust tree, oak, ash, etc. and the tulip tree the pride of the American forest. The arctic flora of America has much the same character with that of Europe and Asia.

Maize, or Indian corn the only important farinaceous plant peculiar to the new world, has a very extensive range in N America although a strong heat, of considerable duration, is necessary to its successful cultivation. Millet, oats, pimento, vanilla, copaliba, onchobana, yalap, maceira, nut vomica tobacco, and the cochineal plant (*Dactylis coccinifera*) etc., are also indigenous. So likewise is the potato, now so widely diffused throughout Europe. Wheat, barley oats, peas, and rice abound well throughout large portions of the continent. So also do various kinds of fruit trees, such as oranges, peaches, lemons and apples but the native fruits are mostly of the nut kind. Sugar coffee, and cotton are amongst its staple vegetable productions. The vine and tea plant have been tried, but hitherto without success.

Zoology.—The largest and most powerful of N American beasts of prey are bears of which it possesses, besides those common to Europe, a species peculiar to itself called the grizzly bear (*Ursus ferocis*). This is the most formidable animal of the N American continent, and is so far from being that it can drag, with ease, the carcass of a buffalo of 1000 lbs. weight. It is of a fierce and vindictive disposition and will readily attack any one who comes in its way. When irritated, it rears itself on its hind legs, emitting a loud, harsh and rapid sound. It is said to extend as far S. as Mexico, and is known to inhabit the Rocky Mountains and their eastern plains, at least as far as lat. 61° N. The white, or polar bear though not peculiar to America, is found in great numbers on its northern coast, attaining a higher latitude than any other known quadruped. It is usually seen at any distance from the ice, and seldom or never further S. than about the 55th parallel. The black or American buffalo (*Bos Americanus*) the largest native quadruped of the new world, is distributed over a great portion of the temperate regions of America. Its chief haunts, however are the prairie lands of the Rocky Mountains, where they have been seen in herds of 10,000. They are, on the whole, unoffensive animals though dangerous when roused. The bull has sometimes attained a weight of 3000 lbs. but the average weight is from 15 to 16 cwt. It measures about 84 ft. in length, and above 6 ft. high at the fore quarter. The flesh is juicy and well flavoured, and the tongue and hump considered delicious. The musk ox (*Ovibos moschatus*) is a

small sized animal, weighing only about 800 lbs. exclusive of offal. It inhabits a great extent of barren land N of the 60th parallel. The flesh is well flavoured, resembling that of rein deer but coarser in the grain, and smelling strongly of musk. The hair or wool is remarkably fine. Several species of the deer tribe are found in N America. Of these, some inhabit marshy forests some the wooded borders of rivers or the sea, and others the bleak sides and barren valleys of mountain districts. The most remarkable are the moose deer or elk (*Cervus alces*) a gigantic animal when full grown 6 ft. in height, with broad solid antlers, a single one of which has been known to weigh 50 lbs. and the rein deer, the most northerly of all the ruminating animals. On the Rocky Mountains are found a race of sheep, and another of goats, peculiar to those elevated regions. The former the Rocky Mountain sheep, is much larger than the largest varieties of the domestic breeds, but short, fine, and flexible; and flesh said greatly to exceed in favour the finest English mutton. It dwells amongst the most elevated and craggy ridges. The Rocky Mountain goat also inhabits the highest and least accessible summits. Its flesh is hard and dry and rendered unwholesome by a strong musky flavor. It is covered with long hair but beneath that there is a coating of wool of the finest quality. The wolves and dogs of America are numerous, and some of them peculiar. The former are there, as everywhere else, savage and ferocious, especially when pressed by hunger. They will run down and devour deer and foxes and have been known to break into huts, and to kill and carry off the dogs they found there. The prairie wolf (*Canis latrans*) hunts in packs and is an animal of great swiftness. It occurs on both sides of the Rocky Mountains, but is most numerous in the plains of the Missouri and Saskatchewan. On the banks of the latter river great numbers of the prairie wolves are seen to start from holes in the earth on hearing the report of a gun, being on the look-out for the offal of the slaughtered animals. The ferocious tribes of the canine race there are several remarkable varieties in the northern regions of America. Amongst these are the well-known Newfoundland dog, and the Mackenzie river dog, a small, slight animal of a playful and affectionate disposition. All the others are large and fierce. *Foxes* are also numerous, and of a great variety of species. The most worthy of notice are the American red fox (*Canis fulvus*) which inhabits the woody districts of the fur countries, and from which about 8000 skins are annually imported into England the kit fox, and the Arctic fox. Beavers otters, raccoons, opossums, hares, musk rats, marmots, squirrels, and porcupines, are amongst the smaller quadrupeds of N America. The elephant and camel are unknown here and monkeys are confined to the southern regions. Beasts of prey are few and, with exception of bears, far from being formidable. Reptiles however are numerous, especially in the U States, and some of them dangerous. The most noted of this class is the rattlesnake (*Crotalus*). The longest attain a length of 6 ft. their bite is fatal to the largest animals, and to man also unless a remedy is immediately applied, and even in this case the bad effects of the wound are said to be terrible. The one animal secured against them is the hog which feeds upon them. The pike-muzzled cayan (*Procyon lotor*) is a native of the southern States and is found in the Mississippi. It grows to the length of 14 to 15 ft. Frogs and toads are also numerous; the former include the bull frog from 6 to 8 inches long and so voracious that it will swallow young ducks and geese whole the latter the *Pseudoeurycea* genus, or gigantic salamander measuring from 15 to 18 inches long. Turkeys also abound in various parts of the U States and sea turtles are found on the warmer parts of the coast.

The birds of this continent are very numerous there being 471 species in N America, of which number 371 are peculiar to that country. The list includes a variety of the eagle tribe, vultures, hawks, and owls. Wild turkeys are found in vast flocks in the woods of both America. Fish also abound in the N American rivers, but none of them are sufficiently remarkable to require any special notice here. They include the well-known kinds, sturgeon, salmon, trout, pike, and other *Rose of Sea*.—The origin of the American race is wholly unknown although there has been no want of conjectures on the subject, most of it more plausible than satisfactory. This, however is certain, that America was inhabited by a people

who lived long antecedent to the present race or tribes by which the soil is occupied, and regarding whom neither history nor tradition have preserved any record; although many evidences remain (see *Aztécatlan* in *Artides MEXICO* and *Yucatan*) not only to prove the fact of their having existed, but to show that they had attained a degree of civilization altogether unimagined by the present native inhabitants. Amongst these evidences are stone walls, of regular masonry and made of brick, found in digging the Louisville Canal; medals of copper and silver, swords, and implements of iron. The Indian tribes of America, with exception perhaps, of the more westerly Esquimaux, have all so strong a resemblance to each other in physical formation, and also though in a less obvious degree, in intellectual character, as to leave no doubt of their being of one family and their having a common origin. They are, with the exception just made, of large size robust, and well proportioned; of a bronzed or reddish complexion—hence the name *red man*, which they have bestowed on themselves—black hair long coarse and shining thin beard, low forehead, high eyebrows, prominent cheek bones, nose a little flattened but well marked. Head of a square shape face broad, and tapering towards the chin features viewed in profile prominent, and deeply sculptured. Their moral character has been variously represented, sometimes better and sometimes worse, than it really is. Excepting extraordinary powers of endurance, they seem to possess precisely the virtues and vices common to all savages, along with some good qualities, more rare, perhaps, amongst uncivilized tribes. They are grateful, hospitable, and capable, sometimes of a savage magnanimity but they are also vindictive, cruel and treacherous. Amongst their vices, of a more venal nature, is an unquenchable passion for spirituous liquors. An idea very generally prevails that they are singularly grave and taciturn. Washington Irving gives them a very different character as will be found in the following quotation from his *Year in the Forest*: "The interest and novelty of which will be a sufficient apology for its length:—They (the N. American Indians) are taciturn only when in company with white men, whose good will they distrust, and whose language they do not understand and that, when among themselves there cannot be greater gossip. Half their time, he goes on to say is taken up in talking over their adventures in war and hunting, and in telling humorous stories. They are great runners and buffoons also and entertain themselves incessantly at the expense of the whites with whom they have associated and who have supposed them impressed with profound respect for their grandeur and dignity. They are curious observers, noting everything in an allusion, but with a keen and watchful eye occasionally exchanging a glance or a grunt with each other when anything particularly strikes them but reserving all comments till they are alone. Then it is that they give full scope to criticism, satire, mimicry and mirth. In the course of my journey along the Ozouler I have had repeated opportunities of noting their excitability and monstrous merriment at their games and have occasionally noticed a group of Osage sitting round a fire, until a late hour of the night, engaged in the most animated and lively conversation and at times making the woods resound with peals of laughter. During the war in which we were engaged with the French in Canada, about the middle of last century and during the contest of the Anglo-American colonies for their independence, Britain adopted the policy of securing the Indian tribes as allies and, with this view created a department called the Indian department, the duties of which were to maintain the friendly relations between Great Britain and the former by distributing presents rewarding services, and providing for the disabled and for the widows and children of the slain. Previous to 1816, \$160 000 a year had been distributed in this way amongst them, chiefly in articles of personal comfort and utility such as blankets the most useful of all articles to an Indian dwelling &c. The sum is now reduced to about £20,000 a year; the number of elements, some of whom come from a distance of 1600 m. to receive these pledges of our friendship being between 18,000 and 19 000. Not is the gratification of female vanity overlooked in the selection of these gifts. In a list of articles, contained in a Report to Parliament regarding our connection with the N. American Indians, are 5898 pairs of silver 'ear-bells, 1185 silver brooches, 88 dozen looking glasses 9123 horn ivory and box combs, 709 silk

handkerchiefs, 5384 yards of ribbon, and 3887 ounces of vermilion.

The Indians of N. America have been considered as inferior race, intellectually and they have not, perhaps, made advances in general civilization, or in the arts, commensurate with their opportunities but to change the habits and modes of life of an unenlightened people, not from one stage of refinement to another but from an original state, or state of nature, with its freedom and its excitement, to a factitious one, with its constraints, its monotony and, to the Indian incomprehensible motives of action is not the work of a day nor of a century. Yet manifestations of advancement are not wanting. A portion of the Mohawks, who separated from their tribe many years ago, have become tolerable farmers, and some of them have assumed the dress of Europeans. The Chippewas and Mississaugas have also evinced a strong desire to adopt the habits of civilized life. In Upper Canada, the Mohawks and Six Nations have retained 350,000 acres of good land, on which they raise Indian corn, beans and potatoes, and some of the more industrious several kinds of English grain. They have, besides considerable numbers of horses, cows, oxen, sheep, and swine, and in some of their villages there are schools in which their children are taught reading and writing. The Cherokees, a numerous nation are making still more satisfactory advances in the right direction. In 1851 about 200 of that nation had attained a very complete English education, and 500 children were in progress learning English. About the same time the Gospel of Matthew and a collection of hymns had been printed in Cherokee, and a newspaper published in the same language, of which the characters had been invented by a native named Giese.

A large portion of N. America is still in possession of the aboriginal tribes comprising the N. parts of Spanish America the W. parts of the U. States, and the N. W. parts of British America. Their entire numbers are supposed to amount to rather more than half a million, of which 813,000 are in the territory of the U. States. The language of the Chippewas is the most prevalent among the Indian tribes and is spoken in most of their general councils and negotiations.

Political Division.—The great political divisions of N. America, exclusive of Central America, are the U. States British America, Russian America, and Mexico, which lie in about between lat. 15° 30' and 54° 0' N. bounded W. by the Pacific, and E. by the Gulf of Mexico. The territory of the U. States extends from the British possessions to the Gulf of Mexico, and from the Atlantic to the Pacific Ocean. The S. boundary line of the U. States territory now includes the whole of Upper California, the line coming as far S. as lat. 32° 30' N.

British America comprises Upper Canada and Lower Canada, New Brunswick Nova Scotia, Cape Breton, Prince Edward's Island Newfoundland Hudson's Bay Territory and the island of Anticosti.

The boundary of Russian America, as settled by treaty in 1825 commences at the S. extremity of Prince of Wales Island, in lat. 54° 40' N. and about lon 152° W. All the American coast lying N. of this point, and all the islands off that coast, are recognised to be Russian territory.

Discovery of N. America.—In the department of discovery N. America has a history of its own wholly distinct, in all its circumstances, from that of S. America, the scene of the discoveries of Columbus, and to which, so far as regards this continent, they were entirely confined. The first discoverer of N. America was John Cabot, a native of Venice who resided in England in the reign of Henry VII. as a letter patent granted by that monarch, and which included Labrador three times Sebastian, then in the 19th year of his age, Louis and Sanchez. John Cabot, the father accompanied by his son Sebastian sailed from Bristol and about five o'clock on the morning of the 24th of June 1497 came in sight of N. America the coast, it has been conjectured of Labrador. This was a year before the discovery of S. America by Columbus which took place in May 1498. In the summer of 1498, Sebastian Cabot sailed from England with two ships, fitted out at his own and his father's expense, and directing his course by Iceland, reached Newfoundland which he called Terra de Baccharos, from the great quantities of fish so named by the natives, by which the surrounding seas were filled quantities so immense, says the old historian, Peter Martyr

that they actually impeded the sailing of the ships. The next adventurer who touched the N. American shores was Gaspar de Cortesal, a Portuguese nobleman who sailed for and subsequently surveyed between 600 and 700 m. of the coast of Labrador in the year 1500. He returned to America shortly after but having excited the enmity of the people, by having carried off on his first voyage, a number of natives as slaves, it is supposed that he and his ship's crew were destroyed as they were a greater slave lord of a similar fate befell his brother who sailed in search of him in the following year. And in 1603 another expedition fitted out by the king of Portugal to ascertain the fate of the brothers, shared the like destiny. Cortesal who was a bold and determined man, eager to distinguish himself, had been incited to his enterprise by the achievements of Cabot. He sailed on his expedition from Lisbon with two ships, touched at the Azores, and, as already related, arrived on the coast of Labrador which was subsequently called Terra Coterale, afterwards changed by the Portuguese slave merchants to Terra de Labrador in consequence as has been conjectured, of the superior qualities of the natives as laborers, and of whom they expected to make large profits by selling them as slaves. The Portuguese affected to consider the Cortesals as the first discoverers of Newfoundland and the adjacent coasts of N. America, and attempted to establish a claim to these territories on that ground, but the evidence of their having been anticipated by the Cabots was sufficient to cause to render the attempt unavailing.

In 1512 Melancton Cabot sailed again for America, with a small squadron under the command of Sir Thomas Port, fitted out by Henry VIII. but a mutiny on board his vessels, together with a want of resolution on the part of the commander compelled him to return before more had been accomplished than a visit to Hudson's Bay. In the same year Florida was discovered by Ponce de Leon. The next name that occurs in the history of American discovery is that of Giovanni Verrazano, a Florentine navigator of great skill and celebrity who was sent out by Francis I. of France, in the year 1494, and who sailed upwards of 2000 m. of coast, completing the whole of that of the U. States, with a large portion of that of British America. Verrazano gave the name of New France to U. a region he had discovered. In a subsequent voyage, he and his party were surrounded by the savages and put to death. Ten years afterwards Jacques Cartier an enterprising seaman of St. Malo sailed from the latter place for Newfoundland, the N. coast of which he surveyed and minutely described. He performed several voyages afterwards, in one of which he entered the St. Lawrence, being the first European who had done so, and ascended the river as high as Montreal. An attempt was afterwards made by the Seigneur de Roberval a nobleman of Picardy to form a settlement in America, but the attempt was unsuccessful the only result being a fort which the French erected near the present site of Quebec, and named Charlesbourg. This fort however was the first European settlement formed in that part of America. Roberval and his brother sailed on another voyage of discovery some time after and perished neither they nor their ships, having ever been again heard of. Previous to this, the Spaniards had conquered Mexico, and a desire to extend their dominion in N. America led to further discoveries in N. America. The coast of California was discovered by Jimenez, a pilot who, with Mendana, a captain whom the former murdered during the voyage, had been despatched by Cortes on a voyage of discovery. In 1539 the Gulf of California was first entered by Francisco de Ulloa, another adventurer also sent out by Cortes, who spent a year in examining its coasts and harbors. The Spaniards performed several voyages afterwards, but they were unattended by any results worthy of notice till the years 1596 and 1602 when Sebastian Vizcaino proceeded along the coast as far as the river Columbia. These discoveries were followed by those of Davis in 1585, Weymouth in 1605, Knight in 1616, Hudson in 1610, Button in 1612, Bylot and Hall in 1616 from the latter of whom Hall's Bay has been named. The first in point of time among the more modern voyagers to the shores of N. America were Capt. Behring and Tshirikoff his lieutenant, both natives of Russia who were sent out in 1725 by the Empress Catherine to survey the N. coasts. They made several important dis-

coveries, besides settling at rest the disputed point whether Asia and America were two separate continents. The claims of Russia to the American coast N. of lat. 55° N. is founded on the voyages of these two enterprising seamen. In 1770, Capt. Cook, accompanied by Capt. Clarke surveyed the N.W. bound area of America, tracing the coast from lat. 50° N. till he came to Cape Prince of Wales, when he steered a N. E. course till arrested by ice islands in about lat. 70° N. The remaining names associated with American maritime discovery are, Henry Vancouver, Kotzebue and, more recently, B. de Parry, Franklin, and Bechey Indian travellers and discoverers Hearne, M. Kossel, Deek, Rae, and Simpson most of whom have published accounts of their discoveries.

CENTRAL AMERICA is the narrow tortuous strip of land which unites the continents of N. and S. America, extending from about lat. 7 to 18° N. but as different limits are assigned to it by various authorities, these cannot be said to be exactly determined. Its entire length may be about 800 or 900 m. with a breadth varying from between 50 and 80 m. to 800 or 400. Taking the limits above stated, Central America will be found to comprise the Isthmus of Panama, Guatemala, British Honduras, and parts of Mexico some an isthmus include also Yucatan. It is bounded E. and N.E. by the Caribbean Sea, and W. and N.W. by the N. Pacific Ocean. It is traversed throughout its whole length by a chain of mountains, which connects the Andes of S. America with the mountain ranges of Mexico and the Rocky Mountains of the U. States. This chain is divided into three groups the Costa Rica group, the Honduras and Nicaragua group, and the group of Guatemala. The Costa Rica group traverses the Isthmus of Panama. Some parts of this range towards the S. attain an elevation of 9000 ft. and the volcano of Irazu rises to 11,478 ft. but there are others said to be of still greater height. The more general elevations however are from 3000 to 6000 ft. The Honduras and Nicaragua group is separated from the former by the Lake of Nicaragua, and the river San Juan. On the S. side of the lake, the border of the plateau forming the W. limit rises suddenly to a height of 8200 ft. The Guatemala group is remarkable for containing with exception of the island of Java, the greater number of active volcanoes, known to exist within similar limits, on the surface of the globe. The highest in Central America is Agua, which is said to attain an elevation of 15,000 ft. The others vary from 1000 to 11,000 ft. but a few only of these heights have been ascertained. The volcano of Agua has obtained its name from its smoking torrents of steam and stones, instead of fire. The mountains of Central America do not generally attain an elevation equal to those of the two adjoining continents with exception of the volcanoes. The coasts are generally narrow and in some places the mountains and high lands come close down to the water's edge. The rivers of this territory are small and have necessarily from the narrowness of the land, short courses, the longest not exceeding from 200 to 300 m. while many of them are not more than 50. Of the latter are those that fall into the Pacific of the former those that the Atlantic, both having their sources in the mountainous regions of the country the one flowing N. E. the other S. W. The largest river is the Caucazuca, which falls into the Gulf of Campanche. There are about 50 other rivers worth noting, many of which are navigable for several miles into the interior. The principal lake is that of Nicaragua, which is upwards of 100 m. in length, and about 50 m. in breadth. The other considerable lakes are those of Managua or Leon, Gaito Dolio, Golifere, Pocon, Atitlan, Amatlan Gulf, and Ocotingo. Climate.—The climate is exceedingly various, owing to the inequality of its surface. The plain on the coast of the Caribbean Sea are exposed to violent tropical heats, and are very unhealthy but on the table lands any temperature according to altitude, may be obtained all the year round with a salubrious climate. The dry season lasts from October to May the rest of the year is called the wet season although the rain falls during the night only the days being fair and cloudless, and the air pure and refreshing. In March and April, the thermometer sometimes rises to 90° but usually ranges between 74° and 82° in the middle of the day.

Vegetable Productions.—These are as various as the climate. On the higher parts of the table land, the grains, fruits, and vegetables of Europe are raised. There are here, likewise,

plantations of a kind of ale, called *negassy* from which a spiritlike liquor named *polque*, is extracted. The lower and warmer districts produce, in great abundance, Indian corn, sugar cane, bananas, mandiocas, all sorts of tropical fruits including the chermoya, and the most exquisite of fruits and sweet potatoes, indigo, cochineal, tobacco and cotton. The mountains are covered with a variety of mahogany, pineapples, watermelons, yams, and the black banana commonly called a *craven* banana, from having been brought to Europe by way of *Para*, together with various other drugs, gums, and valuable woods, including logwood and lignum vitae. The forests of *Panamá* contain at least 97 different kinds of trees, and grow luxuriantly in moist hot climates, and are not subject to frost.

Zoology.—The zoology of Central America differs little from that of the other countries of America. The only animals peculiar to it are the manate found at the mouth of the Rio Juan; the winged squirrel, and various kinds of quail and rumsu. Amongst the birds, the most remarkable are the toucan bird, the quetzal whose feathers are of a bright emerald green, the great macaw and several others of the most splendid plumage. Serpents are numerous, some of them dangerous, especially on the thickly-wooded coast of the Pacific. Two species of locusts are known here, a brown and a green; the former is particularly destructive. The rivers, lakes and seas abound with fish.

Geology. *Museums.* The geology of Central American little known. Granite, gneiss and schists, form the substrata of the country, but the abundance of igneous rocks bear witness to strong volcanic action, both in ancient and in modern times. Gold alluvial from lead, and mercury are found but the first three only are worked. Jasper and marble are worked in Honduras and brimstone is collected near the volcano of Quetzaltenango. There are also many salt springs and salt is procured in large quantities on the shores of the Pacific.

INHABITANTS—The population of Central America consists of three classes—whites and creoles, mestizos, or the offspring of whites and Indians and aboriginal natives. The proportions of this population have been estimated at one-twelfth whites, four-twelfths mixed races, and seven-twelfths Indians. Mortality is at the lowest ebb among all classes, especially the whites and creoles. While ignorance, vice, and superstition prevail to an extent unsurpassed in any other part of the world.

Alonso — In 1503 Columbus visited the island of Hispaniola, and the Intercontinental Assembling along the shores of Honduras, the Mosquito territory, Costa Rica, and Veragua, when the clamorous demands of his crew, the Costa resistance of the natives, and the decay of his ships, compelled him to return. In 1503, two or three years after the conquest of Mexico, Cortes despatched a lieutenant, Pedro Alvarado one of his most distinguished officers to subjugate Central America, which he effected in two years. From that period it remained subject to Spain till 1821, when it was transformed into a federal republic, and became independent. The confederacy comprised the states of Guatemala, Nicaragua, El Salvador, and Costa Rica. Dissolved July 1839, and reorganized as a "divisor."

The commerce of Central America is very trifling, and the value of its exports has declined since the revolution. Trade, however, is perfectly free in all the states, and foreigners possess all the privileges enjoyed by natives. The ordinary revenue in the different states is derived from duties on imports, a duty of 5 per cent on the transfer of real property and a monopoly of the sale of spirits and tobacco.

and hydrology of its lake or spring was unique.

The second of the three rivers flowing from the Llanos de Moxos into the Amazon basin is the Beni River of Panama, thus connecting the Atlantic and Pacific Oceans and thereby avoiding a dangerous and circuitous navigation around Cape Horn, as it excites no surprise to learn that it has been entrained for upwards of three centuries! During all that time however no attempt was made to accomplish this desirable object. But there is now every probability of its being effected. Already a railway is being laid across the isthmus from Chagres on the E. coast, to Panama on the W. and three lines of water communication are at present (1895) under consideration across the isthmus, one through the mountains of Panama; another through the lowlands of the Gulf of Panama; and a third through the lowlands of the Caribbean Sea, across the Lake of Nicaragua to Rualgo on the Pacific and a third from the mouth of the dry Cuzco-Canoas to Tabasco-Verac.

SOUTH AMERICA is a vast peninsula of a triangular form, with its apex extending in length about 12, 13° N. to Cape Horn, and lat. 55° S. (p. 1). Its greatest length, from N. to S. is 4,800 m. its breadth, from E. to W. is 2,400 m. About three-fourths of it lies between the tropics the remainder in the temperate zone. Its coast lines particularly the W are comparatively little broken or interrupted by indentations excepting towards the S. extremity where considerable inequalities occur on both E. and W. shores. Here, also is a group of mountainous islands forming the archipelago of the *Mal de Fuego*. There are no rivers of great extension but a few of moderate size, of sea, or fresh, ending often in placers formed from the snow on the summits of snow-tops 6,000 ft. high. I see mosses cover the higher declivities of these mountains, and dense forests their flanks. The mountains are elevated. Tracts of this continent are chiefly limited to the borders of the Pacific and Atlantic Oceans the intervening spaces being occupied by a wide, low, and level plain or rather series of plains, which are rugged and broken in some places, so low and flat that at a rise of 100 ft. the Atlantic Ocean would submerge the greater part of the entire no highest

The first part of the Andean orogenic belt extends from S America, the most remarkable of which is the Andes that stretch along the W coast from S to N in one continued chain of 4190 m in length in a straight line and 4870' when measured along the highest part of the system commencing at the Straits of Magellan or Magalhães the latitudes of Pata gona. They are of immeasurable width but attain great elevations ranking in this respect next to the Himalaya mountains the highest of the former Acacigna, 23,310 ft. the highest of the latter Kumbhak grange, being 28,178 ft. The second system is that of Parí or Pirama also called the Ligneas de Guayana, consisting of numerous irregular groups of mountains scattered over a wide land not more than 2000 ft. above the sea, which extend to the N, E and S, separating the basins of the Rio Orinoco from those of the Rio Negro and the Amazon. The principal group ex tends from the parallels of lat. S to 8° N and from the meridians of lon 68° to 63° W. The main direction of the ranges is N. 85° W and the separate chains generally more or less direct N. The culminating points of this system are the Maricao, about 10,500 ft. high, and the Duida, 7149 ft high. The third system is known under the general name of the Coast Cordillera of Venezuela the N chain of which contains the culminating; Imitate the Illa de Guanay—which attains an elevation of 8160 ft. The fourth is that of Brazil which consists of two great ranges running parallel to the coast at various distances from the sea, and of numerous smaller stretches lying far to the interior and crossing the country in different directions. The principal range runs from N. to S, exactly like the Andes from S to N, those of the interior form ridges, whose chief direction is from E to W. The culminating point of the highest chain of a mountain in Brazil is Imbué 9990 ft. high.

There are altogether upwards of 80 volcanoes in 8 lines on a state of activity. They all belong to the Andes, a few east of three separate and distinct series, the series of Chile of Peru and Bolivia, and of Quito. The loftiest of these burning mountains in Guatemala or Sakama, one of the Peruvian Bolivian series lat. 50° 13' S. lon 86° 1' W; height, 22 000 ft. The heights of the others vary from 13 000 to 18 000 ft. The latest eruptions occurred in 1871 with the volcano Pinchinot, one of the Quito series lat. 0° 13' S. lon. 78. 50° 30' W.

Plains.—The plains of E. America are, as elsewhere, more timbered, of vast extent stretching for many hundreds of miles without exhibiting the slight surface perceptible inequalities in the rainy season they display a surface of beautiful green but in the dry season assume the appearance of a desert. Then the grass crumbles into dust the surface of the soil is rent the crocodiles and large serpents remain imbedded in the dried up mud till the first showers of spring restore them to their torpidity. When, says Humboldt, on the eastern coast of the Gulf of Mexico, the sun is in the tropic of Cancer, the average annual temperature is 70° Fahrenheit, the wind blows of moment then with a violent noise, like the outbreak of a small river, so that it is heard on earth in each inch into the air.

the air and forth issues a glistening water-sprinkle or a gently breeze. The great plains of S. America are variously designated the Pampas of Buenos Ayres, the *Sierras* of the Amazon, and the *Llanos* of the Orinoco and the *Yacumayo*. The Pampas of Buenos Ayres are about 300 m. in breadth occupy a surface of 315,000 sq. m. and is about 1000 ft. above the sea. Marked by its vegetation and other characteristics, from E. to W. it has four distinct regions. The first, which extends 180 m. W. from Buenos Ayres, is covered with *thistles* and *lucerne* of the most vivid green, so long as the moisture from the rain lasts the second extending 450 m. is covered with long grass, intermixed with *grassy* flowers the third is a tract of *savanna* and *hops* the fourth a border of *thorny* bushes and *dwarf* trees reaching to the Andes. The grassy plains of this level territory are occupied by thousands of wild cattle and horses, who find there inexhaustible supplies of food. The *thistles* of this region attain an extraordinary size shooting up to a height of 10 and 11 ft. with stems so strong and armed with prickles so formidable, as to form an impenetrable barrier. The *Sierra* of the river of the Amazon lying in the centre of the continent, forms the second division of the S. American lowlands. They are covered with wood forests their name and so densely that the country can be penetrated only by sailing up the river or its tributaries. They extend 1500 m. along the Amazon varying in breadth from 350 to 800 m. The heat is suffocating in the deep and dark recesses of these primeval forests where not a breath of air penetrates while a death-like stillness prevails from sunset to sunset, when the forest suddenly resounds with the loud and wild roar of the animals by which it is inhabited. At midnight a profound silence again prevails, and continues till dawn, when the discordant uproar recommences. The *Llanos* of the Orinoco and the *Yacumayo* form the third division of S. American lowlands. They occupy 153,000 sq. m. between the deltas of the Orinoco and the river Coqueta and are so perfectly flat that frequently there is not an eminence a foot high in 200 sq. m. They are nearly destitute of trees, excepting the banks of the Orinoco, which are thickly wooded. The *Llanos* present various aspects at different seasons of the year. Soon after the termination of the rainy season in October and the subsidence of the swollen rivers, they are clothed with fine grass affording abundant pasture to the countless herds with which they are covered. But in the dry season, namely between November and February they are converted into desolate wastes all vegetation is destroyed the waters are dried up, and the earth is rent in deep and wide cracks—a result, however, of procedure, rather than the absence of moisture from exposure to heat which, although very intense, is not so great as during the wet season.

Besides these three great tracts of level country there is the desert of Patagonia, occupying 1,620,000 sq. m., the most barren of all the plains of S. America being for the most part, composed of sandy sterile dunes intermixed with stones and gravel occasionally diversified by huge boulders of lava of brown glass, low bushes armed with spines, bruce lakes, incrustations of salt white as snow and by black basaltic plateaus. The climate of these plains is very cold especially in winter. The country is subject to great and sudden changes of temperature.

Rivers.—The principal rivers of S. America are the Amazon, the Orinoco, and the Plata. The first is the largest river on the globe. It rises on the table land of Paezo, in Lake Lauricocha, and after a course of 4000 m. falls into the Atlantic at the equator in about lat. 51° W. and is 96 m. wide at its mouth. It is navigable for about 2200 m. from the sea. The Orinoco rises nearly in the centre of the Parana Mountains, but its source has not yet been visited by any European although Humboldt has explored the greater part of its course. Its length is estimated at 1800 m. The affluents of the Orinoco are numerous, and some of them very large streams. The latter river is connected with the former through one of its affluents, the Rio Negro, by a natural canal called the Casiquiare presenting in this connection one of the most remarkable phenomena of physical geography. The Plata (Rio de la Plata) is not so much a river as an estuary formed by the confluence of the rivers Parana and Uruguay. It is about 185 m. in length and is in junction with the sea, between Punta del Este and Cape San Antonio, its width is about 180 m. Its navigation is difficult, owing to its

shoals and strong irregular currents. Its waters are so turbid that they lagoon the sea visibly for 300 m. from the embouchure. There are a number of other rivers in S. America, which though not so large as any of those above named are equal if not superior in size to most of the greatest rivers of Europe. Amongst these are the San Francisco, the Rio Negro Colorado, Zaquebala, &c. The water in some of the rivers in equatorial America is white in others it is of a deep coffee colour or dark green, when seen in this shade and when ruffled by a breeze, of a vivid green.

Lakes.—The lakes of S. America, of any considerable size, are few and with exception of the Lake Titicaca are rather vast morasses than lakes the large mixed water in Colombia, called the Lake of Maracaybo, being a mere inlet from the Caribbean Sea and not a true lake. The Lake Titicaca is situated near the N.W. frontier of Bolivia or Upper Peru; it covers an area of about 4000 sq. m. is elevated 12,796 ft. above the sea, and is said to be 120 fathoms deep in many places. Some of the temporary lakes, alternately inundated and dry or in a marshy state even when flooded vast tracts of country, that of Xarayes on both sides of the Paranaqui and nearly in the centre of the continent, extending over 36,000 sq. m. In the elevated mountain valleys and table lands of the Andes, there are many small lakes, of the purest blue and green colours, and some of them intensely cold being near the base of perpetual congelation.

Climate.—There are no parts of S. America so hot as we should be led to expect from its geographical position—a result produced by the operation of the trade winds atmospheric influences of the huge chain of the Andes and other physical causes. The burning heats of the plains of Arabia are unknown on the new continent. In the stupor of the Caracacas, the hottest region of S. America, the temperature of the air during the day is only 98° in the shade while it rises to 111° in the sandy deserts around the Mad Nea. Throughout the whole basin of the Amazon which comprehends between 2,000,000 and 3,000,000 sq. m. the climate is neither very hot nor unhealthful though under the equator. This arises from its being shaded by lofty woods and from the prevalence of a cool easterly breeze, a branch of the trade wind, which ascends the channel of the Amazon following all its windings nearly to the foot of the Andes. Brazil and the country extending westward from it, enjoys also an equable and temperate climate. At Rio Janeiro, the mean temperature is only about 74°. At Lima, the temperature varies from 51° to 82° but the mean for the whole year is only 72°. At Buenos Ayres, the mean annual heat is 68° and in the Straits of Magellan the temperature of the warmest month does not exceed 48° or 49° while snow falls almost daily. The narrowness of the continent towards the S. the immense tracts of ocean which lie on either side of it, and its exposure to the rigours of the polar regions, sufficiently account for this intemperance. On the W. coast, there is a rainless district of nearly 10,000 m. in length from N.W. to S.E. It lies between lat. 7° and 22° S. and lon. 65° and 68° W. The various climates, which so large a continent must necessarily possess, will be treated of more in detail in the articles on the various countries of which it is composed.

Geology and Mineralogy.—Granite forms the base of the whole continent, having gneiss here and there associated with it, but mica schist is the most common of the crystalline rocks. Quartz rock is much developed, generally mixed with mica, and rich in gold and specular iron. The Pampas of Buenos Ayres are entirely alluvial, the deposit of the Plata Parana. Granite prevails, to the extent of 3000 m. along the coast of Brazil and with syenite forms the base of the table land. The superstructure of the latter consists of metamorphic and old igneous rocks, sandstone, clay slate, limestone, in which are large caverns, with bones of extinct animals and alluvial soil. Porphyry and red sandstone abound all over the Andes. As Mexico is the principal seat of the mineral wealth of N. America, so Peru that of the S. continent. Chilt, of which the former is but a continuation, is also famous for its mines of gold, silver and copper. The provinces of Minas Geraes, in Brazil, is likewise, as its name implies, exceedingly rich in mines. Several of the most valuable gold mines here are wrought by an English mining company organized in 1825. Besides the mines there are some valuable gold and silver washings in Brazil and other parts of S. America. The last

returns, of any authority which have been given of the produce of the American mines are nearly half a century old, and are, therefore, no longer to be depended upon particularly as they precede the revolutionary struggles of 1810 which totally altered the state of the mining interests of the country. The entire produce of the gold and silver mines of S. America has been recently estimated at between \$8,000,000 and \$4,000,000 sterling but it is impossible to say how correctly Brazil produces more diamonds than any other country.

Vegetation.—Extending through so large a space and possessing in consequence, so great a variety of climate, no special character can be given to the vegetation of S. America. As in the case of N. America, the most distinguishing feature of the former is its prodigious forests, which cover about two-thirds of the whole continent; a large portion of them so dense, and so choked up by twines, shrubs, and sharp-edged grasses, that a hatchet is necessary at every step to clear the way. These forests are, in several remarkable particulars, wholly different from those of the Old World. The trees are much more various more graceful and have more distinctive characters and many of them, even the largest, are adorned with the most brilliant flowers—scarlet, purple, blue, rose-colored, and golden yellow are blended with every possible shade of green. Throughout the whole of tropical America, vegetation is on the grandest scale, combined with great beauty and fruitfulness. In those regions where there are due proportions of heat and moisture the magnitude of the trees and the splendour of the flowers are extraordinary.

Individual plants, says Humboldt, languishing in our hot houses can give but a very faint idea of the majestic vegetation of the tropical zone. Fruits also abound including oranges, lemons, guavas, pine apples, mangoes, bananas, pomarines, mammoons, pyramidal jumbas, aracas, muskates, and many others. Southward of the line are found the quassia bitter the fragrant tanga bean the beauteous rosewood, and the cachauba tree the rind of which is what is called Jesuit bark and Indigo, coffee, sugar cane, maize and the cacao tree, from whose seeds chocolate is prepared, are amongst the products of S. America. The culti-ation of tea also has been attempted in Brazil though hitherto without success. The capitalists seem still to hope that they shall be able ultimately to compete with China, even in foreign markets. Further S. in I. America, vegetation gradually loses its tropical character and finally assumes the aspect of northern vegetation.

Zoology.—The most formidable beast of prey peculiar to S. America is the *Felis onca* or jaguar. It is larger and stronger than the panther but inferior in size and ferocity to the Bengal tiger. The yuma or American lion is found in both N. and S. America. Apes and monkeys abound in the tropical forests of the latter but are an inferior race to those of the Old World. Amongst the winged mammals is the vampire, an enormous bat, which lives on blood attacking the largest animals, and even man when asleep. These dangerous creatures are, fortunately, not numerous and are almost wholly confined to Guayana, Colombia, and Brazil. In the marshes and swamps of tropical America, the low contributor is found of enormous size. Immense centipedes, scorpions, and spiders also abound in these regions. Azis, tarantulas, and locusts also swarm the latter to a frightful extent, especially in Buenos Ayres, and some of the neighbouring provinces sometimes covering the ground for a distance of 200 m devouring every green thing, even the grass, to the very roots. During a visitation of these destructive insects, all the gardens, says Miers, consisting of extensive plantations of maize, pumpkins, melons, and water melons, beans, and other vegetables had been completely swept off the surface of the earth. They enter the houses, and devour every edible thing they contain; even curtains, clothes and furniture are attacked by them and much injured, if not rendered wholly useless, and, in one night, gardens, on which much pains and expense have been bestowed are utterly destroyed by these rapacious creatures. The mosquito is also a grievous infliction in many parts of S. America, especially in Venezuela and along the banks of the Orinoco. The chigoe, another much dreaded insect, abounds in the same localities. Of the birds of S. America, the most remarkable, for size, is the condor a species of vulture. The largest specimen yet met with measured somewhat less than 14 ft. between the

extremities of the wings, though they rarely exceed 11. The body of the largest individuals is generally from 8 to 14 ft in length, from the tip of the beak to the extremity of the tail. They inhabit the most inaccessible parts of the Andes. Indulgently exaggerated accounts of the size and power of these birds were current, until their fleshhood was detected and exposed by Humboldt and Bonpland. S. America possesses, in common with other countries, eagles, vultures, falcons, and other birds of prey. It also possesses many birds of argl, its plumage amongst these, the tiny humming bird, and the graceful couroucou (Trogon pascuensis) with its splendid robe of green.

The seas, lakes, and rivers of S. America abound with fish of various kinds and many of the latter in the tropical regions, with enormous llards and alligators. The electric eel is found in the lakes of the Caracacas.

Amongst the domesticated native animals of S. America are the llamas and pacos both used as beasts of burden. The horses, asses, oxen, sheep, goat, and pig were all conveyed from the Old to the New World, none of them being indigenous to the latter. Horses and cattle however have now increased in all parts of America, that of horses may be bought for from \$4 to \$25 each, and the latter are valued principally for their hides and tallow the most being comparatively of little account. The slaughter of oxen for the hide alone, is a principal business of many extensive provinces, more especially in La Plata, Uruguay, Paraguay and Brazil.

Races of Men.—As elsewhere remarked there exists a very striking general physical resemblance between the native inhabitants of America throughout the whole of both continents from Cape Horn to Behring's Straits. They are almost all of a reddish brown or copper colour with long black hair deep-set black eyes aquiline nose and often of handsome slender forms. In S. America many are half civilized but a greater number are still in a state of utter barbarism. The original population of Indian L. is known generally by the name of Americans, more advanced in civilization than the Indians of the Pampas. They associate in small communities, have fixed residences, cultivate the ground, and subsist chiefly on the produce of their husbandry. They save the art of weaving and produce a well-learned cloth says Dr Lefebvre which, for fineness of thread, evenness of weaving, durability, brilliancy of colours and elegance of pattern is superior to anything of the kind I have ever seen. The arts of spinning, weaving, and dyeing are practised solely by the women. Both men and women are hard workers, but the latter are by far the more industrious. They are a well-disposed people have few of the vices of other savages and possess firmness and courage in a remarkable degree. They are, however, fond of spirituous liquors, and manufacture a kind of spirit called chicha, by fermenting different fruits but chiefly apples. They possess no written language, nor any other means of putting ideas on record, their language itself is poor harsh & difficult to pronounce and inexpressive. I see all the other Indians throughout S. America, they have been long acquainted with the art of working in metals especially gold and silver.

The *Tempe Indians* are of a very dark complexion with long, thick, coarse black hair which generally hangs loose over their shoulders. Their eyes are black sunken and owl-like and are placed widely apart; foreheads low and broad, faces flatish, high cheek bones and large jaws they have no beard, are of rather low stature, and ill made, but muscular and athletic. They are expert horsemen and can slip round and suspend themselves under their horses' belly when at full speed merely clinging by their hands and feet, and can regulate their seat at pleasure, without shaking the animal's speed. They are still in a very savage state, subsisting on raw animal flesh, and leading the roving life of hunters. They do not cultivate the ground, nor apply themselves to any sort of labour. In manner they are boisterous, and in disposition cruel and ferocious, settling their disputes with the knife, in the use of which they are singularly expert.

Of the Indians that inhabited the province of Brazil, there are said to have been no fewer than 200 distinct tribes. A few of these may be named, and the principal physical and moral characteristics alluded to. The *Tupac* robust, well made and copper coloured long, sleek, black hair paint themselves, and pierce the under lip for the purpose of intro-

among a ring of other ornaments the greater part of them sold to have been cominals. The Tupis or Tupinambas inhabit chiefly the coast from the river Camana to that of San Francisco. They also paint their bodies. The Cafusos, a mixture of Indians and negroes, remarkable for an extraordinary peculiarity in the hair of the head, which rises perpendicularly from the forehead to the tip of a foot or a foot and a half, giving them a very strange and disagreeable appearance. The Paris the most voracious and rapacious of all the Indians of Brazil. The Botocodas, another cruel and savage race, inhabiting the territory lying between the Rio Doce and the Rio Ardo. The Indians of Brazil are generally of a short or middle stature and mostly of a robust build. They all paint complexion darker or lighter copper skin fine, soft and shining.

South of lat. 38° S. we have the huge Patagonians. The stature and bulk of the race, however though still remarkable, have been much exaggerated. Their average height is about 6 ft. heads and features large, hands and feet small colour dark copper brown hair black thick and coarse. They lead a nomadic life living in tents formed of poles and skins, and subsisting on the animals they kill.

Political Divisions.—S. America comprises the following states:—Columbia, now divided into the republics of New Granada, Venezuela, and Ecuador. Guyana—British French, and Dutch republics of Peru, Bolivia, and Chili. The united provinces of La Plata, the empire of Brazil Paraguay, Banda Oriental or Uruguay, Patagonia, Tierra del Fuego and the Falkland Islands. Of these states, Paraguay is the smallest, comprising only 74,000 sq. m. and a pop. of 200,000; and Brazil the largest, its area being 443,380 m. with a pop. of 1,170,000.

Discovery.—The first discoverer of the continent of S. America was Christopher Columbus a native of the city of Genoa, where he was born in the year 1451. On August 3 1492 he sailed from Spain with an expedition fitted out at the expense of Isabella the Queen of that country on the first of those voyages of discovery which have rendered his name immortal. On the 12th of October following, Columbus reached an island in the New World, one of the Bahamas, on which he bestowed the name of San Salvador and of which he took formal possession in the name of the Castilian sovereigns. Having explored this island and taken in a supply of wood and water he sailed in quest of further discovery, and soon after found himself amongst a number of beautiful islands three of which he named—Santa Maria de la Concepcion, Fernandino, and Isabella, with the scenery of all of which he was enraptured. Prosecuting his adventurous voyage, he came in sight of the island of Cuba, on the 28th of October. Of this island he also took formal possession giving it the name of Juana, in honour of Prince Juan. From Cuba, he proceeded to Hayti or St. Domingo, to which he gave the name of Española, from an idea that the features of the country resembled those of Spain. Having left several of his crew here at their own request, Columbus set sail for Spain on January 4 1493. The illustrious navigator was received by Ferdinand and Isabella with every mark of honour and respect. A second voyage was proposed and eagerly seconded by the court of Spain. An expedition composed of 17 sail, large and small of which Columbus had chief command, left the Bay of Cadiz on September 25, 1493. In this voyage, the principal discovery was the island of Jamaica. On May 30 1494 Columbus set sail from Spain with a fleet of six vessels, on his third voyage, and now added the island of Trinidad to his former discoveries. From thence he proceeded to the mouth of the Orinoco, where he landed, and thus achieved the honour of being the first discoverer of the continent of S. America. With a mind singularly susceptible of the liveliest impressions from a contemplation of the beauties of nature, Columbus expresses his admiration of that which the New World revealed to him in the following beautiful and simple language—“The beauty of this new land far surpasses the *Campanie de Cordoue*. The trees are bright with an ever verdant foliage, and are always laden with fruit. The plants on the ground are high and flowering. The air is warm as that of April in Castile, and the nightingale sings

more melodiously than words can describe. At night the song of other smaller birds resounds sweetly and I have also heard our grasshoppers and frogs. Once I came to a deeply-enclosed harbour and saw a high mountain that had never been seen by any mortal eye, and from whence gentle waters (*fuente aquea*) flowed down. The mountain was covered with fire and variously-formed trees adorned with beautiful blossoms. On sailing up the stream which supplies itself into the bay, I was astonished at the cool shade, the clear crystal-like water, and the number of the singing birds. I felt as if I could never leave so charming a spot, as if a thousand tongues would fail to describe all these things, and as if my hand were spell-bound and refused to write. In 1503 he undertook a fourth voyage, but it was unattended by any remarkable results. He reached the coast of Honduras, and, subsequently the Gulf of Darien from which he returned to Spain where he died four years afterwards, namely in 1506. The adventurer who followed next in the track of Columbus was Alonso de Hojeda, a young, bold and enterprising Spanish cavalier who, inspired by a similar spirit with that which animated the great navigator and partaking in some degree, of his genius, fitted out, at his own expense, an expedition of four ships, with which he pursued the course taken by Columbus. Having reached the continent of S. America, near the equator he passed the mouths of the Essequibo and Orinoco, examined the whole coast of Venezuela, as far as Cape Vela, and thus ascertained that the land along which he sailed was part of a continent. Hojeda was accompanied in this voyage by Amerigo Vesputi, a native of Florence, an experienced mariner and a man of considerable talents and acquisitions.

(In the return of the latter to Spain in the year 1500, he published an account of his voyage, and, it is said, claimed the merit of being the first discoverer of the continent of S. America.) His book was read with all the interest and avidity which its extraordinary disclosures were so well calculated to excite, and the author's name silently but indubitably affixed to the New World—an allusion to the memory of Columbus which it would have been gratifying to have seen repeated but which it is now too late to attempt.

Brazil was discovered in 1500 by Vincent Yanes Pinzon who had accompanied Columbus in his first voyage. Steering N. he explored the mouth of the Amazon and noting with amazement the immense body of water which it poured into the ocean, correctly inferred that so mighty a stream could be found only in a continent of great extent. Towards the close of the year above named Rodriguez de Bastidas explored the coast from Cape Vela, the point at which Hojeda's progress terminated, to Puerto del Natario, where that of Columbus closed, and thus connected the intervening continent. In 1507 Pinzon and Juan Diaz de Solis, an able navigator were sent out by the Spanish Government to explore the W coast of S. America. Arriving on the shores of Brazil beyond which discovery had extended but a little way they followed the coast towards the S as far as the 40th degree of S. lat., landing at various points and taking possession of the country for the crown of Castile. Several adventures of smaller note than those named sought to earn wealth and reputation by making discoveries in the New World, but without success.

The pop. of America, North, Central and South, and including the islands, has been estimated at between 44,000,000 and 46,000,000.—(Murray's *Historical and Descriptive Account of British America* Nicol's *History of the U. States* Tylor and Wilson's *N. Coast of America* Humboldt's *Treasures and Resources in America* Ritter's *Sketches of Brazil* Mart's *Treasures in Cuba and La Plata* Washington Irving's *Tour to the Tropics* Do. *Life and Voyages of Columbus* Norman's *Romance in Yucatan* Caillet's *N. American Indians* Penny Magazine Penny Cyclopædia Bell's *Geography* Geography of America London Geographical Journal, vol. 9 Bonmarville's *Physical Geography* I yoll's *Geology* Humboldt's *Aspects of Nature* Do. *Cosmos*.)

† Humboldt repels this supposition on the ground of Vesputi, and says, that after a careful study of certain documentary evidence bearing on the question, he has concluded that the charge is devoid of foundation; and that the name of America has originated in a distinct region (as, for instance, in France or Germany) owing to many concurrent circumstances which appear to remove all suspicion from Vesputi.—(Humboldt's *Cosmos* vol. 2. p. 400, note.)

These recent languages have transferred the honour of having been the first land made by Columbus to the New World, from San Salvador to Cuba's island, 330 m. to the S. E. of the latter.

AMERKOTE, or **ORERKOTZ**, a tn. and fort India, in Sindh, 90 m. E. Hyderabad lat. 26° 18' N. lon. 69° 47' E. in the E. desert. It was at one time one of the independent principalities of Dhat, and in 1818 was taken by the Amers, from the rajah of Jodhpur. It is celebrated as the birthplace of the Emperor Akbar. The fort is about half a mile from the town. It is a square of 500 ft. with a mud wall 40 ft. high, defended by four round and six square towers, and has but one gate.

AMERONGEN a vil. Holland, prov. of, and 91 m. S. E. from Utrecht. It is a nice-looking village, which has at various times suffered much from war. Its inhabitants are employed chiefly in cultivating tobacco and corn, and in rearing cattle. Pop. about 1500.

AMERSFOORT [Lat. 52° 16' N. lon. 5° 10' E.] a tn. Holland cap. of a prov. and one of same name, prov. of and 12 m. N. E. from Utrecht on the Rhen, which are famed by the confluence of several small streams and is navigable throughout to the Zuider Zee. Amersfoort is the seat of a court of first resort and of commerce. It was once fortified, and still has several gates, called *poorte*, but its fortifications have been converted into public promenades. It is of an oval shape and has one long street running from end to end and its houses, though good, are more remarkable for their size and projecting gables than for their beauty. It has a large quadrangular open market place called the great market approached by seven streets and a fish, vegetable, and a pig market. Outside the Koppelpoort is the harbour. The town possesses a Calvinistic church built in the great market, one Lutheran one Remonstrant two R. orthodox, and two Jesuit churches and a Jewish synagogue an orphan hospital and a cavalry barracks. It has also a Jesuit secondary school of industry for carpenters smiths, architects, &c. a Latin school, and 10 common schools. It formerly had also the Potboone, a benevolent institution, where a pot of warm food was kept always in readiness for distribution among the necessitous. A principal branch of business in Amersfoort is the trade in grain, for which there is a weekly market, more especially hawthorn grown extensively in the neighbourhood. Tobacco also extensively cultivated in the vicinity is manufactured here, and exported to France and Italy from which last country a considerable quantity is re-exported to Holland in the form of snuff. The manufacture of woollen goods, such as dimity bombazine, &c. is carried on to some extent there is likewise a soapboiling establishment, and a good trade in dunn and red herrings, which are rather famed. Besides the markets at ready referred to an annual fair is held in October for horses, cattle, &c. Amersfoort has suffered frequently from both fire and water and is the birthplace of the celebrated statesman Johan van Oldenbarnevelt, commonly called Barneveldt, grand pensionary of Holland who, to gratify popular clamour was beheaded in 1619 at the age of 73 and of Pieter Both, the first governor general of Dutch East India. Pop. 12,000. —[Van der Aa's *Reisgids*.]

AMERSHAM a market tn. and par. England co. Buckingham, 37 m. S. E. by town of Buckingham, and 25 m. N. by W. London pleasantly situated in a valley traversed by a stream called the Musburne, an affluent of the Calne. It consists principally of one spacious, well-paved street, crossed by a smaller. The church, erected in the 16th century is a spacious building of brick coated with stucco and contains some handsome and interesting monuments. The only other buildings worthy of notice are the town-hall surrounded by a lantern and clock, and the Union workhouse, in the Elizabethan style. There are places of worship for Baptists and Quakers a grammar school, with writing school attached a Sunday school national, British and infant schools and an almshouse for six poor widows. Manufactures:—Silk crapes, black lace, cotton straw plant, and wooden chairs. Amersham was a Parliamentary borough by prescription but was disfranchised by the Reform Bill. The par. contains 10,544 ac. and is in general till. Pop. 8692.

AMESBURY a market tn. and par. England, co. Wilts. huns. Amersbury. The town lies in a narrow valley on the Avon 78 m. W. S. W. London, and 8 m. N. Salisbury. It is built, and consists of two streets only. Near it are the remains of an ancient encampment, called Vespasian's Camp, although evidently not of Roman origin. At the paragon house of Milston, in the vicinity Addison was born in 1672.

VOL. I.

The rudiments of his education were acquired in Amersbury Area of par. 5690 ac. Pop. 1173.

AMGA a river Siberia, gov. Yakutsk. It rises in the foothills of the Yakutsk Khibits mountains about lat. 59° 0' N. lon. 128° 30' E. flows N. E. and falls into the Aldan in lon. 125° E., after a course of about 466 m. At Amginsk, where it flows between steep rocks 30 ft. in height, it is 8000 ft. broad. In winter it is frozen over the ice forming a bridge even for heavily-laden vehicles. —[Erman's *Travels*.]

AMGINSK, a vil. Siberia, gov. Yakutsk lat. 58° 10' N. lon. 137° E. on the bank of the Amga, which is here about 8000 ft. wide. It is a posting station and ferry on the way between Yakutsk and Okhotsk. The dwellings are yurts or huts, of the Yakutian model but the inhabitants are Russians, and have built here a Greek church. —[Erman's *Travels*.]

AMHARA (Kisimodok ov) formerly a prov. of Abyssinia (which see) now an independent kingdom. Its boundaries do not seem to be well defined but it may be said generally to lie between lat. 10° and 14° N. and lon. 35° 10' and 38° 30' E., having part of the country of the Gallas on the S. the country of the Riangalla negroes on the N. Tigre on the E. and Abu Hamla and other little-known territories on the W. Nearly in the centre of the kingdom is the great lake of Tzana or Dombae, and along its S. limit flows the Blue Nile. The plains in this province, as of several others in Abyssinia, contain a large portion of good soil which yields abundant crops of barley and rich pasturage. The principal plains are those of Dombae, Biengulder and Mischo. The first which lies around the lake of the same name has been called so elsewhere mentioned the granary of the country on account of its fertility and the blandness of its climate. In the vicinity of the lake the land is wholly in pasture and is covered with numerous herds of cattle. The plain of Biengulder lies on the E. side of the Lake Tzana, and is also in great part, under pasture but excellent grapes are grown on the declivities of the mountains. The plain of Mischo stretches to the W. of Lake Tzana. The botany, zoology, &c. is the same as mentioned in the general article, *ABYSSINIA*. The capital of the kingdom is Gondar (which see).

AMHERST, a seaport in India beyond the Ganges prov. same name, the most N. of the Tenasserim provinces (which see) lat. 16° 5' N. lon. 97° 38' E. s) on a triangular peninsula, on the E. side of the Gulf of Martaban, 81 m. S. Moulmein. When the town of Amherst was raised to the Burmese, agreeably to treaty at the conclusion of the war the spot on which Amherst is built, and which was then covered with jungle and fruit trees was chosen by the British April 5, 1825, as a military and commercial station and also as an asylum for intending native emigrants. On the higher grounds are the fortifications, governor's house, and other public buildings, and the houses of the Europeans and Chinese, the lower being assigned to the natives. The harbour within is spacious and secure, though it has a dangerous bar with only 6 ft. of water at neap tide is described as being perfectly calm for two hours both before and after high water and well suited for wet docks having at no time a less depth than 5 fathoms, while vessels may safely anchor within 100 yards of the shore. The town and vicinity are well supplied with good water which is readily procured within 6 ft. of the surface. Pop. in 1838 6000.

AMHERST a tn., U States, Hampshire, Massachusetts, 83 m. W. Boston. It is the seat of Amherst college, a flourishing institution, founded in 1821, and incorporated in 1825. It has a president and 10 professors, or other instructors. The whole number of students is 613. It has 15,000 volumes in its libraries a very complete set of philosophical apparatus, and a cabinet of natural history including mineralogy. There are, besides, in the town, an academy with 87 students, and eight schools with 538 scholars. Pop. 2550. —[AMHERST is the name of a society a township, and of several post towns ships in the U States.]

AMHERST ISLES a group lying W. of the S. W. ex. trinity of the Korean Peninsula, and distant from it about 80 m. lat. 34° 25' N. lon. 126° 0' E. —There is another island of the same name off the S. W. coast of Arracan between the island of Cheduba and the mainland lat. 18° 45' N. lon. 94° 0' E. —In the Tong Hai or Eastern Sea, off the coast of the Chinese province of Kiang, there is a dangerous ledge called Amherst Rocks in lat. 31° 10' N.

AMHERSTBURGH a garrison in Upper Canada, W. Ont., near the N. bank, Detroit, 5 m. above its junction with Lake Erie, 225 m. W. of W. Toronto lat. 42° 7' N. lon. 82° 9' W. The streets are generally narrow and the town contains a courthouse, five places of worship, Episcopalian R. cathedral, Presbyterian, Methodist, and Baptist; a reading room, and a market place. Two annual fairs are held in virtue of a charter obtained in 1815. It has a good harbor with 54 fathoms water. Sumo ore steamer; touch here. Pop. (1858) 1890—Smith's *Canadian Geo.*

AMICIU or **ASRUCU** a lake in America, in Venezuela, prov. Cumana situated in a level tract, between the rivers Marumayo and Yocota. It is of small extent in the dry season, being scarcely three m. in length, and almost covered with reeds but after the rains, it inundates the adjacent low districts. The country in which this lake is situated was the E.1. theatre of the days of Queen Elizabeth and was then known as the Great Lake with golden banks and within a few miles of it was supposed to stand the fabled Imperial and golden city of Manoa, the object of the unfortunate expedition of Sir Walter Raleigh.

AMIEHS (anc. *Amiens*) a town in France, cap. dep. Somme on the railway from Boulogne to Paris, in the centre of a pleasing and fertile district, and covered by the Somme which, within the town, is subdivided into 11 canals, and affords great facilities for its numerous manufactures. It was once a place of strength and still possesses a regular citadel but as other fortifications have been dismantled and the ramparts have been replaced by boulevards, lined with trees, which, encircling the town, have a circumference of about 3 m., and form not the least important of its decorations. Amiens is divided into the upper and the lower town. The former has wide and regular streets lined with houses with few exceptions built on an uniform plan and generally of two stories. The latter has narrow streets, houses ill, without being properly ancient, and is throughout so intersected by the ramifications of the Somme and the numerous bridges over them as to have made Louis XI give it the name of his little Venice. The most magnificent edifice of Amiens is its cathedral of European fame. It was founded in 1220 and not completed till 1288. Its N. front, which is said not to be a been finished till a century later, is flanked by two quadrangular towers, and is decorated in the richest Gothic style. The spire or light and airy form is 420 ft. high. The entrance is by three magnificent porches covered

with marble. The entire length of the edifice from E to W is 415 ft. length of the transept from N to S, 122 ft.; breadth of the nave, with its aisles, 78 ft. 9 inches; breadth of the transept, 42 ft. 9 inches. Among the other buildings of note are the Hotel de Ville, with the painted screens which line its hall, and the large covered hall, adorned with statues of the kings, the royal college, formerly the abbey of St. John; the Hotel Dieu or general hospital, in the Rue St. Les; the grand anniversary with its magnificent stair and columned chapel the *Chateau d'Em. Mahomed*, occupied by the exchange and school of design; the theatre and the Bibliothèque Communale, a handsome edifice, with a peristyle of Doric columns, containing 40,000 printed, and 400 M.B. volumes. Amiens having an opening to the sea by the Somme, which is navigable for vessels of 40 or 50 tons, is well situated for trade, and has numerous important manufactures. From 70 000 to 80 000 pieces of cotton velvets—the particular species of it called velvets of Utrecht alone employing 400 looms—and 130,000 pieces of fine tulle, with considerable quantities of serge, plush drapery, cambric, tapestry and other cotton, linen and woollen stuffs, in great variety are annually produced. The spinning of flax and worsted also is one of the great staples of Amiens. The former employs 8000 looms, while the wool worked up by the latter amounts to 450 million kilograms, equal nearly to 1000 millions English lbs. or 40 million packs. Among the miscellaneous works, in which numerous hands are employed may be mentioned dye, soap and beet-root sugar works, bleachfields, and paper mills. One peculiar product for which Amiens has long been famous is duck paste, known by the name of *Paté de Canard* and largely exported to all quarters. Among historical recollections may be mentioned that here St. Louis gave judgment, as arbiter in the quarrel between Henry III. of England and his barons, relative to the statutes of Oxford and that here, during the struggles to repulse the Holy Land, the kings of England France, Aragon Navarre, and Bohemia, met to concert a new crusade. Here, too, to come down to more recent times, was signed, in 1803 between Great Britain and France the short-lived peace which bears the name of Amiens. Pop. 47 000

AMIRANTES a group of small islands Indian Ocean S.W. from the Seychelles between lat. 4 and 6° S. and lon. 164 and 166° E. about 800 m. N.W. the ad. of Malagascor. They differ little from each other being generally from 13 to 24 m. in length situated on coral banks, and seldom exceed 20 or 25 ft. in height but they are crowded with trees. They are thinly inhabited and manifestly cultivated but the coasts abound with fish, and the islands furnish vessels in passing with water coconuts, buffaloes, sheep, and turtles. By digging 12 or 14 ft. water very generally be obtained. Calms, and uncertain currents, with the want of good anchorage, make it desirable not to approach these islands with large ships. The group has belonged to Great Britain since 1814.

AMISUR, an anc. seaport, Asia Minor on the Black Sea lat. 41 18' N lon 26° 20' E. Few vestiges of it now exist. The principal are the remains of its ancient city composed of large blocks of a volcanic conglomerate, some of which measure 18 ft. by 6 or 8 inches in thickness.

AMJEKAH a town Hindoostan prov. Malwa, 56 m. S.W. Oojein, and 12 m. W. Dhar lat. 23° 28' N lon 75° 18' E.; situated in a large valley 1800 ft. above the sea. It has good houses, plentifully supplied.

AMLAJ or **AMILA** one of the Aleutian Islands Fox group lat. (25. poln) 58° 6' N lon 172° 50' W (n.).

AMLWCH (pronounced *Amloch*) a bay seaport, and per N Wales, N coast of Anglesey. The town lies on a rising ground on the sea-shore, 14 m. W. by N Bangor about 14 m. N.P. by F. Holyhead and 50 m. W. by N Liverpool lat.

VIEW OF LEU AND HOTEL DES AMIENS—From Place Neuveville at Paris.

with numerous bas-reliefs on which scriptural and allegorical subjects are admirably represented. This magnificent structure, of once light and bold in design, is in the form of a cross, composed of a nave and choir in the one direction, and a transept in the other. The broad and lofty windows are ranged in two tiers, and so closely that hardly any wall is

58° 54' N. lon. 4° 19' W. It consists of one main street, about a mile in length, and of several branching lanes and alleys. The houses are generally well built of stone, which abounds in the vicinity. The principal buildings are the church, the national school and the scientific hall, all plain edifices, without any pretensions to architectural elegance. There are, besides the church two Calvinistic chapels one Independent, one Baptist, and two Wesleyan. The most important school is the national school, in which (March 1860) about 900 children are educated. There are also three day-schools, and an excellent literary and scientific institution with a library and museum attached. The staple article of commerce is copper ore, obtained in the neighbouring Parys mountains, the working of which gives employment to about 1000 persons though not so flourishing at present as formerly. The shipping interest of the place is in a more thriving condition. At the head of the pier which is of stone there are 90 ft. at spring and 18 ft. at low tide within there is a dock capable of holding several vessels. A small white lighthouse stands at the end of the N. point, exhibiting a fixed light, which may be seen in clear weather 4 m. off. Amman is united with the Beaumaris district in returning a member to the House of Commons. Area of pop. 9221 sq. Pop. of in. (1841) 1948 pop. (1851) 4818. —(Correspondent in Amman).

AMMAN or **AMMON** (the *Tabach* of Scripture, and *Phoenicia* of the Greeks) a ruined and deserted city, Syria, near Damascus, 16 m. E. of Hama, and 53 m. N.E. of Jerusalem lat. 33° 6' N. lon. 36° 20' E. Its ruins are scattered along the N. bank, and near the source of a small stream called Mous Amman, a tributary of the Taurus or Taurus (as *Tabach*) and sufficiently attest its former grandeur. There are the remains of a spacious church, several temples and columns a high bridge over the river on each side of which there are walls like quays, and whose channel is paved and a castle on a hill N. of the city. South of the river stood a large theatre, 804 ft. in diameter with forty two tiers of seats, built on the declivity of a hill, and partly excavated in the solid rock. The whole plain on which the city stood 1 m. long by 14 m. broad, is covered with the remains of all kinds of edifices exhibiting traces of different ages and composed of a calcareous stone, ill suited to resist the action of the elements. —(Bartholomaeus *Travels in Syria* Kito's *Physical Geography of Palestine* &c.)

AMMER, a river Bavaria it rises at the head of Gravening valley on the frontier of Tyrol flows in a crooked course N. E. forms about 22 m. N. W. Munich, the Ammersee (Lake Ammer) 10 m. long by 24 broad, and falls into the Isar near Moosburg after receiving the waters of several affluents. Total length, about 100 m.

AMMERSCHEWITZ, or **AMMERWATER** a small in France, dep. Haut-Rhin about 5 m. from Colmar. Both red and white wines, of excellent quality are made in the vicinity. Pop. 8169.

AMMITOK, an isl. N.E. coast of Labrador between 70 and 80 m. S.E. the entrance into Hudson's Straits lat. 59° 28' N. lon. 68° 0' W.

AMMOO a river Persia. See *Oxus*.
AMMOAR, or **AMWAR** [anc. *Amman* and *Nicopolis*] a small town or vil. Palestine, on a conical hill, about 10 m. N.W. Jerusalem. It was at one time a bishop's seat. Both this and Al Kibnab, a village about half the distance of Amman from Jerusalem, have been confounded with the *Furnaces of Scripture*, the site of which is now unknown. There is another village of Palestine named Amman or El Hamman beside the lake, and near the town of Tiberias, celebrated, from remote antiquity for its hot springs which are of a high temperature, and possess medicinal qualities. This place, and its vicinity, exhibit the remains of many ancient *becks* from which it has received its name. Over the springs has been more recently erected, by Ibrahim Pasha, a large circular bathing house, with a dome, similar to the one of Constantinople. —(Robinson's *Biblical Researches* Kito's *Palestine* &c.)

AMOL, a town Persia the third in importance in prov. Mazandaran, 27 m. W. W. Balfoord lat. 36° 30' N. lon. 52° 33' E. on the Haraz, a full and rapid stream, about 15 m. above its embouchure in the Caspian Sea. Amol, which is without walls or defences was formerly a flourishing place, as extensive ruins in the neighbourhood testify among which is the once splendid mausoleum of Seyid Qasim a

Deen, once Sovereign of Seres and Amol, who died in 1878 erected by Shah Abbas, one of his descendants. In the suburbs are a grand palace, which belonged to Shah Abbas and three towers and to have been temples of the ancient Guebres, or fire worshippers. The number of houses altogether is between 4000 and 5000. The bazaars are large, and well supplied but beyond mere local traffic, there is little or no trade. The inhabitants cultivate rice and cotton, or are employed in the iron forges and cannon foundries of the district. In summer they retire to their *yahtals* or summer houses, in the mountains, which approach to 5 or 6 m. of the town on the S. In winter, when it is fallow Amol is supposed to contain a population of from 35,000 to 40,000.

AMONEBLRG a town. Heese-Cassel 11 m. E. N. E. Marburg on a basalt hill in which are numerous springs. It is partly surrounded by a wall with towers and by a ditch irregularly and badly built, and has a church and a spacious market place. Pop. 1143.

AMOR, **AMOR** or **AMORHAI** a large river Asia in the Chinese prov. Manchuria. It is formed of the rivers Shikha and Argun which unite in lat. 53° 30' N. lon. 120° E. on the frontiers of Russia and China. The former of these is formed by the Ingoda and the Oor; the latter being the main stream, and rising about lat. 43° 50' N. lon. 110° E. in the Kienlai Khan, a branch of the mountains S. E. Lake Dalai called Khing-Khan-ooli by the Chinese, and Yablonoi Krolui by the Russians. Its sources are in the Russian gov. Irkutsk but it crosses the Chinese frontier and again returns to Siberia, in which it continues with a N. E. course till it joins the Argun on the frontier under the name of the Shikha, as already stated. The Argun—in the early part of its course named the Kerulen Kerlon or Lu Khia—rises about 30 m. S.E. from the sources of the Onon and in the same mountain range that gives rise to that stream follows a N. E. course, about lat. 43° N. lon. 110° E. forms Lake Kelen, and from 25 m. N. E. of that lake, till it unites with the Shikha in forming the Amor constitutes for 300 m. the boundary between Russia and China. The Amor from the junction of these two streams, flows S. E. to Telen where, from the S. it receives the Bongzar lat. 47° 45' N. lon. 171° 40' E. thence it flows N. E. to its embouchure in the Gulf of Segul or Baghulien opposite the N. W. end of the island of the same name, lat. 52° 2' N. lon. 140° 0' E. Besides the Bongzar, the Amor receives from the S. the Ousari, lat. 48° 30' N. lon. 134° 20' E. and from the N. the united waters of the Fushien and Silimpi near Segul-ooli, lat. 50° N. lon. 156° 30' E. It has likewise numerous smaller affluents. The whole course of the Amor including its windings is estimated at 2380 geo. m. and the area of its basin, 552,880 geo. sq. m. It is a rapid stream, navigable from the junction of its two head streams and is annually frozen over its navigation, long kept strictly by the Chinese to themselves, was in 1847 opened up to Russia, to whom was then conceded the right to trade in its waters.

AMORANG or **AMORASO** a bay and vil. same name, Isl. Celebes. The bay is on the N. W. coast lat. 1° 11' S. lon. 124° 86' E. it is about 14 geo. m. long inland, and about 6 geo. m. broad, shaped something like an open-mouthed bag, and having anchorage for large vessels.—The vil. lies at the head of the bay 25 geo. m. S. W. Menado.

AMORRACH, a town Bavaria, circle Lower Main, at the confluence of the Main and Elbach, 44 m. S. E. of Frankfurt-on-the-Main lat. 49° 58' N. lon. 9° 11' E. It has a palace, in which the Prince of Loungeburg resides, and which was once a richly-endowed abbey of Benedictines two churches, a school of design, infirmary and almshouse. Manufactures—Linen, paper gunpowder flour and oil. It has two saw and two tilling mills. Pop. 2900.

AMORGO (anc. *Amorgos*) an Isl. Greece Archipelago between Naxos and Stampsalia, about 44 m. long by 5 m. broad lat. 36° 50' 42" N. lon. 26° 55' 42" E. It is mountainous and rocky, but its valleys are fertile, producing grapes and olives. It has a town of the same name, with a castle and a large harbour called Santa Anna. Near it is a Greek convent, built on a steep rock overhanging the sea, and accessible only by ladders. Amorgo was formerly a populous island, with some considerable towns, and was the birthplace of the poet Simonides. Its present population, of whom a considerable proportion are French and English amounts to 2500.

AMSTELVEEN, a vil. Holland prov N Holland 8 m. S. Amsterdam in a moorish country betwixt the Amstel and the Lake of Haarlem. It consists of one long street, and has a neat church, a school a poor's house, and an annual horse market. Pop. about 2500.—(Van der Aa.)

AMSTERDAM, formerly **AMSTELDAMUM**, or **AMSTERSDAMMUM**, and also **AMSTOR** [The dike or dam of the Amstel; Latin *Amstelredamum*] an important commercial city cap. kingdom and prov Holland at the confluence of the Amstel with the Y or IJ [pronounced Eyn] an arm of the Zander Zee connecting with the Lake of Haarlem lat. (middle) 52° 22' 30" N lon. 4° 53' 15" E (N.) It is the largest and most important town in Holland, constitutionally its capital, and in it the ceremony of coronation is performed but the seat of government and residence of the sovereign is at the Hague. Amsterdam lies on soft wet mossy ground under which, at a depth of 50 ft. is a bed of sand into this sand the piles are driven on which buildings are reared. Below the sand is a stratum of hard clay. The sea front of the city forms nearly a direct line along the Y flanked at either end by extensive docks and near the centre intersected by the Dam Rak, the principal water of the Amstel, which entering the city on the S.E. takes a winding course through it, dividing it into the old and new side (*Oude en Nieuwe Zijde*) and falls into the Y by the two numerous other courses. Towards the land, the walls of the city form a semicircle, surrounded by a ditch 90 yards wide, bordered by a row of trees. The ramparts have been pulled down, and on the eight and twenty bastions have been erected so many windmills, for grinding corn and other purposes. In the walls are eight handsome stone gates, named from the towns to which they lead, I. trecht gate, Haarlem gate, &c. Outside the walls, the city is surrounded by grassy meadows, and to the W. are spreads of 500 acres. Towards the sea, and on both sides of the Amstel, the streets are narrow and irregular, but behind this portion there are five main lines of streets following the direction of the walls, and thus describing a semicircle. Of these the principal three, *Haarlem Kaai* and *Prinsengracht* for length, breadth and general elegance, may vie with the streets of any capital in Europe. In the centre of each as in most of the streets in Amsterdam is a canal, either side of which is lined with broad brick paved quays, planted with trees, the minor streets run at right angles across these like the radii of a wheel, and many of them are very narrow—those in which are the houses of some of the first merchants not being over 17 ft wide all are paved well lighted, and kept very clean. The houses are mostly constructed of brick, almost all approached by flights of steps many are six and seven stories high, pointed at the top with the gable toward the street, and decorated above with a forked chimney stalk and their curious appearance is further heightened by the numbers that, more especially in the business streets are painted in a garish and tasteless style and by many being awayed from the perpendicular partly by the sinking of the foundation, and partly from the peculiar method of construction adopted many being narrower at the bottom than at the top. The city is cut up into 90 islands by the canals, over which there are 450 bridges mostly of stone, generally provided with a drawbridge at the centre. The vessels to be seen in all parts of the city loading and unloading, and passing to and fro along the canals, the lifting and lowering of draw bridges, the transit of merchandise on sledges, and the general air of business give the streets of Amsterdam an exceedingly lively and cheerful appearance.

Amsterdam has no free public squares, though it has 18 open places and notwithstanding that, as a whole, it is well built, it cannot be said to have any pretensions to architectural beauty even its public buildings will not bear comparison with those of many other European capitals—a fact scarcely to be wondered at, considering the physical difficulties the Dutch have to encounter in the erection of extensive fabrics, from the sinking of the piled foundations under the superincumbent load. In 1822, an event of this description occurred the corn storehouses built originally for the Dutch E. India Company having entirely sunk in the mud and disappeared from the foundation giving way. At the time they sank, they were loaded with upwards of 70,000 cwt. of corn.

Public Buildings—The more remarkable buildings in Amsterdam is the palace, formerly the townhall. It stands in an open square, called *den Dam*, at the head of the Dam-Rak, and is a stone edifice, in form of a parallelogram 263 ft. long 206 ft. broad, and 108 ft. high (roof inclining) resting on 12,659 piles driven 70 ft. into the ground. It was erected by Jakob van Campen and Daniel Stalpart; begun in 1646 and completed in 1655 nearly destroyed by fire in 1782 and again in jeopardy from the same element in 1806. At first

it was occupied by the magistracy of the city for local courts but in 1806 it became a royal palace for which indeed it was originally constructed. It is chiefly remarkable for the great hall, 111 ft. long, 5 ft. wide, and 90 ft. high lined with white Italian marble, an apartment of great splendour. From the tower which rises 60 ft. above the roof a fine view of the city is obtained. In the vaults below the palace were formerly kept the treasures of the Amsterdam bank. The present townhall (*stadhuys*) formerly the Admiralty is a large and commodious building, said to have been founded in the 14th century. The Justice Hall next to the palace, is the finest building in the city. It is a modern structure, in imitation of a Greek temple, and was opened in 1839. Other public buildings are the exchange, a plain but stately tile covered building of freestone, capable of containing 4,000 persons the poor's house, house of correction, the warehouses the general storehouse formerly the Admiralty magazine the Orange-Nassau barracks, capable of accommodating 3000 men the city theatre, &c. Besides these, may be noticed the post office, colonial office, houses of the E. and W. India companies, and various offices and storehouses for public and private purposes, and the three towers named, respectively *Regententoren* founded 1372 as a watch tower, *Rekerijertoren*, or *Moorner's tower* so named from the women coming here to wait for their husbands as they passed by to go on shipboard to the wars, and now used as the office of the dock master and *Mont-Albanentoren*, founded it is supposed as early as 1630. Of the numerous bridges in the city the most important is the Amstel Bridge, 600 ft. long and 30 ft. broad. It had originally 85 arches but in 1822 the two centre ones were taken down, and the space supplied with a drawbridge so that masted vessels might be allowed to pass.

THE DAM-RAK, AND DAM RAK PALACE, AMSTERDAM.
From Dany's View of the Kingdom of Europe.

The churches of Amsterdam are generally characterized by plainness and simplicity of structure. The finest in the city and, according to the Dutch one of the finest in Europe, is the New church (*Nieuwe Kerk*) N. of the palace, founded 1408. It is 350 ft. long, by 210 ft. wide across the transepts the upper part rests on 52 stone pillars, and the church is lighted by 76 large windows, some of which are finely painted. It contains the tombs of *Adriaen de Balter* who sailed up the *Meuse* and burned the English fleet at Chatham of the famous Dutch poet *Vondel*, and of various other notable individuals. In this church the constitution was taken, March 29 1814, and the following day the king was crowned as a sovereign prince. The Old church (*Oude Kerk*) founded in the 14th century is only remarkable for three finely painted windows, and for containing the tombs of several Dutch admirals, and an organ, said to be second only to that of Haar-

lem. Besides these two, the Calvinistic, recognized as the State church, possesses eight other chapels and churches. The Evangelical Lutherans, numbering about 28,000 have two churches. The Scotch Presbyterians, Free Church of Scotland, and the English Episcopalians, the Moravians, Baptists, Friends and Greeks, have each places of worship. The R. Catholics, numbering about 45,000 have 16 churches and the Jews, numbering in all 21,500 have two principal, and seven subsidiary synagogues. Of these, one belongs to the Portuguese Jews, about 2500 in number and the remainder to the Dutch Jews.

Within the city there are eight churchyards (*kerk-hof*) of which one, St. Peter's, is chiefly used for the poor, more especially for those who die in the poor's house. The mode of sepulture being somewhat remarkable, we extract the following description of it. The churchyard usually adjoining the church, is surrounded by a wall to the height of 12 or 14 ft. The coffins are placed in rows, one above another till they are nearly level with the top of the wall, a little more is then spread over them and the *kerk* is closed till the bodies are sufficiently decayed to be removed. The process is hastened by exposure to the atmosphere but the nuisance to the neighbourhood is intolerable. When Holland was in possession of the French an attempt was made to do away with some of these disgusting ceremonies, and to provide more suitable places for the reception of the dead but the burgh-masters yielded the expense as the soil being so marshy it would require immense quantities of sand to make it solid enough for the purposes of interment, and strong embankments to protect it from the floods, and ultimately succeeded in maintaining the old method. When the *kerk* has remained closed several years, while another has been filling it is again opened the coffins are broken up, and the fragments tied up and sold as firewood the furniture is collected and sold to dealers in old iron the remaining bones are wheeled away in barrows, and thrown into a vault beneath the church and the rest is left to the farmers for manure. The *kerk* is then swept out, and ready to receive new inmates. — (*Saturday Mag.*)

Charitable and Benevolent Institutions, &c.—Amsterdam is remarkable for the number and excellence of its benevolent and charitable institutions. There are above forty of them many possessing buildings of considerable elegance. Among these are hospitals for the poor the infirm, the aged of both sexes, orphans, widows, foundlings, the insane &c. and institutions for the blind and for deaf-mutes. Many of these being devoted to the members of one religious community the result is several hospitals of the same description thus the Calvinists, Lutherans and Baptists, have each their hospital for old men and women the R. Catholics have various similar institutions for their own members and the Jews, in like manner have hospitals for the sons of Israel. Other benevolent institutions are the humane society for saving drowning people, founded by Jakob de Lierou in 1767 and the first of its kind in Europe the N and S. Holland society for saving shipwrecked people the society for the moral improvement of prisoners the cowpock inoculation, &c. Besides these, there are a Bible and two tract societies a society for furthering religious education among foundlings and orphans, and one for the promotion of religious education among the slaves and people of colour in the colonies the Magdalene asylum, and the sphinx or workhouse, a department of which was formerly appropriated to the reformation of domestic offenders. Extravagant wives were sent here by their alarmed husbands, to receive more sober and thrifty habits ill-conducted handmaids by their indignant wives, to learn better manners and dutiful daughters, to be taught obedience to parental authority some of the latter it is said, being often of high families.

Educational, Literary Scientific, and Artistic Institutions—Amsterdam possesses numerous and excellent primary schools and other educational institutions, both of a general and special kind. Like the benevolent institutions, some of these are for particular religious denominations. Among the most important may be named the *Algemeene School*, with library, botanic garden, and school of anatomy and chairs of art, law, medicine, and theology the city Latin school the universities for educating preachers belonging to the Remonstrants, Evangelical Lutherans, Baptists and Dutch Israelites

and the medical and classical school. Of institutions of literature, science, and art there are the royal academy of the fine arts, founded 1830, and having 450 pupils the music school founded 1784; the naval school the royal Dutch institution for science, literature, and the fine arts; the society of literature and fine arts, called *Felix Merito* from the first words of a Latin inscription upon the front of the building. This last society has 400 members, all merchants and citizens and is divided into four sections: 1. Literature commerce, navigation, agriculture, and architecture. 2. Natural history; 3. Drawing and design. 4. Music. Besides these, there are several other societies of a smaller kind, but the most important one of the whole is the society for the promotion of the public good (*de Maatschappij Tot Het aan v. d. Gemeen*) established, in 1784 by J. Nieuwenhuisen a Baptist minister at Monnikendam, and having 18,000 members and branch societies in almost every town in Holland. It has for its object the moral and religious improvement of the working classes, and their instruction in such branches of education &c. as seem necessary for enabling them to play the part of good citizens the improvement of school schools, the establishment of Sabbath schools savings banks public lectures, &c. Last, but not least must be named the museum of pictures, founded 1798, by a person named Trip from whom the building is called *Trippenhuis*. It contains a fine collection of the works of the Dutch masters and one of the most remarkable collections of prints in Europe occupying 300 portfolios.

Amusements—For in-door amusements there are three theatres, and various other places of entertainment and for out-door recreation there are the Plantage, or Plantation, in the E. end of the city not far from the dockyards the banks of the Amstel outside the Utrecht gate and the dike round the docks all of which are very resorted to in good weather. A favourite amusement likewise, is boating on the Amstel and the I.

Fishes and Water—Amsterdam has three fish markets the greatest are the river fish and the Jews market. In the first, as its name imports sea fish are sold, in the second the produce of the Amstel and other streams brought there by the peasants (*Boeren*) and hence called sometimes the *Boeren* vishmarkt while the third or *Jodenmarkt* is for the supply of the Jews quarter. There are likewise in the city a cattle and sheep market, a pig a butcher and various other markets called by special names. A marketable article of great importance in this city is fresh water which is very scarce. From the nature of the soil, none can be obtained from wells. The inhabitants are therefore, supplied either by rain water collected in cisterns or by water carriers, whose heads lie in the canals, at who fetch it from the river Veesh, or from springs at Utrecht. Arising from this state of water, the quantity of Seltzer water mixed with Rhineish or Bordeaux wine consumed is very great.

Manufactures and Commerce—Amsterdam has long been and still is famous for its banking establishments and for its insurance companies the amount of business done in both branches being very considerable. Its manufactures, though not very extensive are still important. They consist chiefly of linen, woollen cloth and cotton in a limited extent thread calico printing, dyeing, bookbinding, soap, oil, canvas, cordage the refining of salt, sugar and other substances glass blowing brewing distilling gas, commenced in 1846 steam engines and machinery and tools of various kinds boilers iron steamers and other kinds of iron vessels and shipbuilding. Amsterdam, however ranks much higher as a trading than as a manufacturing town.

The quantities of the chief articles imported in 1851-52 are shown in the following table—

	1851	1852	1853
Sugar	151,410,000	158,100,000	168,000,000
Indigo	1,168	2,178	2,308
Cochineal	567	588	518
Tobacco	5,621	9,080	4,168
Wine American, &c.	12,300	14,000	16,000
Wine	10,284		
Other goods	9,080	9,184	998
Wool—Crawfish	758,168	851,000	1,000,000
Java, Aracan &c.	1,006		
Palm-oil	8,500	4,513	1,000,000
Paper			

	1880	1900	1910

Grains of all kinds, quarters	6,000	7,100	8,000

The exports consist of refined sugar (in 1885) 35,038,958 lbs. raw sugar (in 1885) 35,038,912 lbs., coffee, spices, thread, cheese, butter oil, dyes, colours, corn, and meal. The countries chiefly traded with are Britain, the Hanse towns, U. States, Italy, Prussia, Russia, Norway, Denmark, Hannover, France, Dutch India, E. and W. The largest exports are to Germany and along the Rhine amounting to nearly one-third of the whole, but from these localities the imports are very limited. The following table gives a condensed return of the shipping clearedwards and onwards, by the customs authorities of the port, in four recent years—

A ship in	Tonnage	Revenue	A ship in	Tonnage	Revenue
In 1880	1028	\$14,084	In 1890	1846	\$26,795
1881	1381	\$24,201	1891	3146	\$69,218
1882	2354	\$74,413	1892	3246	\$69,004
1883	1846	\$30,412	1893	1947	\$39,478

The port of Amsterdam is about a mile and a half long and is

defined from the encroachments of the Y by a double row of piles driven into the ground, and connected by horizontal beams. At either end are the E and W docks, capable of holding 1000 vessels. The approach to the port by the Zuider Zee being impeded with shoals, a canal, called the Nieuwe Drog, was completed in 1825, leading from Ballehoek, on the opposite side of the Y to the N Sea at the Helder, a distance of 50 m. This immense canal is 125 ft. broad at its surface, 36 ft. at the bottom, with a depth of 20 ft. 9 inches. It is on the level of the high tides of the sea, from which it derives its supplies of water.

Means of Communication.—By the Amstel, the Zuider Zee, and various canals Amsterdam has water communication with all parts of Holland, and by railway it communicates on the one side with Haarlem, the Hague, and Rotterdam, and on the other side with Utrecht, Arnhem, and France.

Health.—The canals by which the city is intersected in all directions, however convenient as highways of business, and however picturesque in general appearance, exhale damp vapours, making the atmosphere very malarial. These canals are the receptacles of all kinds of filth. The water in these is stagnant, and generally of an olive-green colour. It is

generally 8 or 9 ft. deep, and below it are 5 or 6 ft. of mud, which, being stirred up by every vessel that passes, exhales mephitic odours. Great care is taken to cleanse these canals and the town generally. The water at them is, as far as possible, discharged into the Y and supplied anew from the Amstel as frequently as possible, but the level of the latter being only 1½ ft. above the level of the former, the tide of the latter this mode of cleansing must necessarily be imperfect. In some of the canals, to prevent stagnation, the water is kept in motion by mills that, at the same time, draw off large quantities of mud, which is sold for manure. With all these disadvantages, few towns possess more healthy and robust inhabitants than Amsterdam. Whatever effect, therefore, the damp and stid vapours may have upon strangers, they do not appear to act in a prejudicial manner on the health of the natives.

Government.—The government is vested in a senate or council of 86 members, and 19 burgomasters. The members of the council act during life, and fill up the vacancies that occur in their own number by their own suffrages. The burgomasters, who are chosen by the citizens, out of a double number first nominated by the council, maintain the active magistracy of the city in rotation the government of each lasting only three months and the four who are to preside during the year being annually appointed. Incompetent magistrates have the keys of the back deposited with them. There is also a court of burgomasters which decides all criminal causes, but in civil cases there is an appeal to the provincial council. The police is under excellent regulations, and street robberies and house breaking are seldom heard of. Very few beggars are seen in the streets, and these are generally the aged and infirm.

History.—Early in the 16th century Amsterdam was a mere fishing village, with a small castle, the residence of the lords of Amstel. Towards the middle of that century it was constituted a town, and in 1598 was wrested by William III. Count of Holland, from the lords of Amstel. In 1240, William IV. bestowed on it a municipal constitution, and 40 years afterwards it became a place of some importance. In 1489 it was walled and fortified. It was subsequently attacked by the Goldenleaguers, who burned the suburbs, and a number of vessels in the port. A party of Anabaptists, headed by a shoemaker called John of Leyden, attempted, in 1575, to surprise and take possession of the town during a siege, but they were repulsed. Its career of real prosperity commenced about the year 1578 when it became a part of the United Provinces, although previously to that period it had nearly monopolized the trade of the Baltic. Additional privileges were granted it by the Prince of Orange in 1601 while the siege and consequent decline of Antwerp in 1585, and the shutting of the navigation of the Scheldt in 1648, were the means of raising Amsterdam to the rank of the first commercial city in Europe. Although its prosperity was checked by the ravages of a pestilence, which in 1602 cut off about 60,000 of its population by the wars of Cromwell in 1653, and by other disasters, it continued to flourish till the stormy period of the first French revolution. During its time of prosperity the burgomasters had acquired such authority in the assembly of the States, as to rival that of the stadtholder himself; the reputation of its merchants for honesty and frugality had greatly contributed to the establishment and increase of its trade; its harbours were always filled with ships; laden with the productions of the E. and W. and the city had become the wealthiest in Europe. But the French Revolution, and the temporary alliance and complete incorporation of Holland with France, had almost annihilated the commerce of Amsterdam both foreign and domestic. After the changes which took place in 1813, it began to revive, and has since steadily improved. Among the numerous famous individuals to whom Amsterdam has given birth, may be named the philosopher Spinoza, the naturalist Swammerdam, the painter Adriaen and Willem Van de Walle, and John and Michael Van Huisum, and Admiral de Ruiter. Pop. (1850) 224,785; of which above 30,000 are Jews.—(Van der Aa's *Nederlandsche Overzigt van den handel van Amsterdam*, in 1847 *ingeleit by de leden der Kamer van Koophandel en Fabrieken van Haven, Burgomaster en Welvonderder der Stad Amsterdam*. *Stadly Tour through S. Holland*. *Diat. Geo. et Stat.* Murray's *Handbook* *Saturday Map*.)

AMSTERDAM—1 A small volcano id. Indian Ocean, lat. 37° 52' S lon. 77° 35' E. (a.) discovered by Van Ynaming a Dutchman, in 1693. It is 3780 ft high about 4½ m. long, and 2½ broad but a great portion of its area is occupied by a basin, about 2 m. in circumference, formed by the sea in the extinct crater of a volcano. The sides of the basin rise at an angle of 65° to the height of 700 ft above the water which, in the centre, is 174 ft. in depth. The only access to the island is through the opening made by the sea, about 300 ft. wide. From the sloping sides of the basin issue several hot springs, of a temperature from 160° to boiling heat. The soil of the island is entirely volcanic its only vegetation moss and a few grasses and its only inhabitants several species of aquatic birds. The surface, in various parts, contains swamps and pools of a temperature from 80° to 180°. The sea around abounds with fish, and numerous seals resort to the coast.

—2 A small id. India, in Falk's Strait, off the N.W. extremity of Ceylon about 5 m. long and 2 broad lat. 9° 40' N lon. 80° 0' E.—3 A small id. Arctic Ocean, W. coast, Spitzbergen, lat. 79° 30' N lon. 10° E.—4 Several places in the Dutch foreign possessions.—A small id. Indian Archipelago, N. coast Java, out from the roads of Batavia inhabited only by a few fishermen.—A fort, id. Ambona.—A fort, id. Celebes.—A fort, Surinam lat. 5° 48' N lon. 55° 9' W (a.)—A fort W. Indian id. Curacao; lat. 12° 6' 18" N lon. 69° 54' W (a.) near which is anchorage for large vessels.—A fort, W. Indian id. St. Esprit, near the town of Orange.—A fort, Upper Guinea, on the Gold Coast, E. part, kingdom of the Fante.—(Van der Aal.)

AMSTERDAM (New) a tn. and port, British Guiana near the mouth of the Berbice river along the E. bank of which it extends about 1½ m. immediately above the junction of the Cayne lat. 6° 15' 30" N lon. 57° 21' W (a.) cap of the colony of Berbice. It was begun in 1798 and is built in the Dutch style and intersected by numerous canals, which communicate with the sea. Each house, mostly of wood or bamboo, has an allotment of ½ ac. which contains a garden and is completely separated from the neighbouring houses by a trench or ditch, filled and emptied with the tide which preventing the accumulation of impurities, tends much to the preservation of the public health. The town has English Scotch, and Dutch churches R. Catholic and Wesleyan chapels a free school, established in 1829; eight private schools, a courthouse and barracks with many commodious wharfs and warehouses and two commercial banks. The entrance to the river is defended by three strong batteries and the passage to the harbour is obstructed by a sand bar across its mouth, over which there is only 7 ft. water at low tides. Though intricate in its access, the harbour is good. Pop. about 8000.

AMTSCHEITKA one of the most western of the Aloutian Islands (which see); lat. 51° 43' N lon. 178° 45' E. (a.)

AMUCITTA or **AMOUKITA** one of the Aloutian Islands, Fox group lat. (centre) 52° 28' N lon. 170° 45' W (a.) It contains an extinct volcano.

AMUTAGWEIN a small tn. and harbour Arabia, W. coast of the promontory of Maada or Maadon, at the entrance into the Persian Gulf; lat. 25° 30' N lon. 65° 42' E. The town was at one time a place of some importance, but is now deserted. About 2½ m. N.E. from the town, is a large quadrangular tower in ruins, surrounded with straggling date trees.

AMWELL (GREAT) a par. England on Herby 2487 ac. 1½ m. E. by W. Ware. Pop. 1652

AMYUN a tn. Syria, south of and 10 m. S.E. from Tripoli lat. 34° 30' N lon. 35° 50' E.

ANABARA a river Siberia gov. Tobolsk it rises in about lat. 68° 30' N lon. 107° E. and falls into the Arctic Ocean lat. 73° 40' N lon. 113° 30' E. The Anabara is joined, at its embouchure, by the Olca or Oba, which runs nearly parallel with it for between 200 and 300 m. The entire course of the former is about 400 m.

ANACAPPI a tn. Naples, id. Capri, Gulf of Naples dist. Capri a Mare on the N. side of Mount Solaro the highest of the two lofty masses of calcareous rock into which the island is divided, and standing nearly 3000 ft. above the level of the sea. The town can only be reached by a flight of 553 steps, cut into the living rock, called *la scalinata*. It contains a church and convent. In the neighbourhood are
Vol. I.

the remains of several ancient structures, some of them said to have been built by the Emperor Theodosius. It is affirmed that the inhabitants are so much attached to their beautiful place of residence, that many of them have never descended the steps that lead to it. Pop. 1459

ANACHUANA, a vil. and bay on the N. coast of the Isthmus of Panama lat. 6° 41' N lon. 77° 38' W.

ANACLACHE, a narrow or snowy peak of the Bolivian Andes, supposed to be upwards of 18,000 ft. high. It forms a rugged ridge of considerable length, in the direction of the axis of the cordillera, and is in lat. 18° 18' S lon. 69° 30' W.

ANACLOAN a par. Ireland, on Down 5644 ac. Pop. 2658

ANADIA, a small tn. Brazil prov. Alagoas, 46 m. E. the city of that name. It has a church, townhall and prison and carries on an active trade in cotton, brought from the interior. Its inhabitants are chiefly employed in the cultivation of the necessities of life, and of cotton, which is exchanged for European goods, &c. Pop. 1800

ANADIR, or **ANADIR**, a navigable river Siberia, rising in Lake Irtyska runs W. and then E. traverses the country of the Tchukchik tribe, and falls into the Gulf of Anadir 8 of Behring's Straits its whole course being about 540 m.

ANADIR (GULF) on N. Asia, S. of Behring's Straits having Cape Tchukotski to the W. and Cape St. Thaddeus to the E. Width, at the entrance, about 200 m. lat. 6° N lon. 177° 0' E. The upper part of the gulf is called the Bay of St. Croix.

ANADOLIA, or **ASIA MINOR** See **ASIA MINOR**

ANAGNI [lat. *Anagnini*] a walled town in Papal States, delegation of, and 12 m. N.W. from Frosinone on a hill near Mount Cassa n. the hillside of Bonifacio VIII. and the seat of a bishopric created in 487. Pop. 5600

ANAGOUNDY a tn. Malacca, Nizam territory prov. Beangpur 1. bank, Toongabedra, a branch of the Kinta, 128 m. W.R.W. Kurnool lat. 15° 24' N lon. 76° 32' E. opposite the fine ruins of Ilamgar or Vidyamangar, once the capital of a large kingdom embracing a large portion of the Deccan. A ruined bridge still connects these towns.

ANAH a tn. Asiatic Turkey pass Bagdad r. bank Euphrates 180 m. W. W. the city of Bagdad on a fringe of soil between a low ridge of rock and the r. or the site of the ancient city of Anath is upon the opposite bank a little below the present town. Situated in a district fertile in rice, corn, fruit, wine, and cotton Anah forms a convenient trading place for the caravans which traverse the great desert of Mesopotamia. It is however exposed to the desert winds, locally termed *fak* (whirlwind) which blow with great violence. During the Euphrates expedition in 1856 the ship Tigress was lost in one of these hurricanes. In 1807 Anah was sacked and burned by the Wahabites. The pop. chiefly a branch of the Ommeades or Beni-Ommayah is estimated at 8000 or 4000.—(*Four Voy. Ges. Soc.*, vol. vii. &c.)

ANAHILT a par. Ireland on Down 6777 ac. Pop. 3210

ANAJAZ a river Brazil, id. of Joazeiro or Marajo between the mouths of the Rio Para and Amazon. It rises a little E. from Sigardo, and after a W. course of about 80 m., falls into the estuary of the Amazon, in lat. 0° 52' S lon. 01° 30' W.

ANAKIA or **ANAKIA** a fortified tn. and port, Muscat, in Muscat, E. coast of the Black Sea, 1 bank Fingura, and near its embouchure lat. 42° 22' N lon. 41° 38' E. It contains a custom house and carries on some trade with Turkey.

ANAK-SOONGI a small state, W. coast, id. Sumatra, between the rivers Marjokta and Urei! Its cap is Moco-moco.

ANALATIVOL, a small id. W. of Jafna, Ceylon, formerly known by the name Donna Clara, having belonged to a lady of that name in the time of the Portuguese. Its soil is sandy but productive in palm trees, plantains, and cotton the latter of which is largely cultivated. Pop. about 1000 formerly considerably more.—(*Ceylon Ges.*)

ANAM or **AS-SAM** (Siam) a country of S.E. Asia, occupying the E. portion of a great promontory N. E. the Malay Peninsula, from which it is separated by the Gulf of Siam, between lat. 0° 40' and 2° 22' N and lon. 102° and 109° 30' E. It is 965 m. in length, N to S. breadth irregular being at the narrowest part, which is in the centre, only 25

about 85 to expanding N to upwards of 400 m. and S. to about 270 m. It comprises three distinct territories, and a part of a fourth. These are Tonquin, which occupies the whole N part of the empire, Cochinchina Proper, Champa, and the E. portion of Cambodia, together occupying the entire and its extremity. It is bounded W by Laos or Siam, and S by China, and on all other sides by the sea. The whole of the coast is considerably indented especially at the mouths of the rivers, where it affords many safe and commodious harbours and the view which the country presents from the sea is that of a varied landscape, composed of bold headlands, picturesque valleys, well-cultivated slopes extensive downs, and low plains frequently terminating in sand hills, with a background of rather lofty mountains in the distance. Along the coast there are numerous groups of islands.

TONQUIN is mountainous on the N but in the E. is nearly level, terminating towards the sea in an alluvial plain. It is generally fertile, yielding good crops of rice, cotton, fruit, ginger and spices, with a great variety of variegated trees, acacias, &c. The principal river is the Song-cou, which flows from the interior in a S.E. direction, and falls into the Gulf of Tonquin by several outlets. It has numerous tributaries, and several branches are joined together by canals both for irrigation and commerce. Its periodical overflows fertilize the rice fields within the reach of its waters. The other principal streams are the Kou-ko or Tonquin, and the Kok-hok, the former N from the Song-cou, and the latter S. The climate resembles that of Bengal but participates in the oppressive heat and very disagreeable cold of China. It is peculiarly subject also to typhoons, which sweep the land with irresistible violence. The inhabitants of Tonquin are a short, stout, ill-favoured people, but extremely industrious and good tempered. Those living on the coast are chiefly employed in fishing and hunting the alligator which is used as food, the flesh being sold in the bambines. It is by no means uncommon, says Dr. Gurditch, to see five or six of these monsters in the courtyard of a fisherman's hut with their mouths gagged. The fishermen are a sturdy hard-working race, and though exposed to all sorts of hardships and sufferings, are always cheerful. Their customary diet is the refuse of the fish which they catch with a little rice and salt. Their females are ugly and of filthy habits. Tonquin is the only part of the empire that is rich in metals producing large quantities of gold, silver copper and iron. A great deal of gold is found also in the sands of the rivers, thousands of people being employed in collecting it. The principal town or capital is Kachou, on the E. bank of the Song-cou, about 100 m. N.W. from the Gulf of Tonquin.

COCHINCHINA PROPER, lying between lat. 12° and 18° 30' N. and averaging about 50 m. in breadth, is bounded on the W by a range of lofty barren mountains hitherto unexplored by any European. The country is, for 10 to inland a complete desert, and is generally sterile, but contains many fertile spots its sandy soil also bears productions peculiar to this region including the eagle wood, which attains greater perfection here than anywhere else. In the more favoured districts grain leguminous plants, and all the articles of sustenance used by men, are produced in great abundance, including sugar and cinnamon the latter of superior quality. The coast is beautiful and grand being indented with numerous bays backed by mountains which rise to a height of several thousand feet, and are broken into innumerable valleys and ravines. There are a number of rivers, but none at all considerable. Cash in China is destitute of metals, so far as yet known. Its principal foreign trade is with the Chinese. The people of this territory are of small stature, not very dark, and of agile frame. The women are well formed, have fine eyes, and beautiful jet black hair. The dress of both sexes consists of trousers and a coat, which reaches to the ankles with women, and with workmen to the knees. The men rarely shave or cut their hair. Their principal food is fish and rice milk, better and cheese, they hold in abhorrence. They are cheerful open, and kind hearted. Their dwellings consist of mud or bamboo huts, with straw roofs, low uncomfortable, and filthy. The cap of the Prov. is Hae, on the E. bank of a river called by the natives Fua-thu-thien by foreigners, Hae or Sun-Hae. It is well fortified both most of the houses are mud. In the neighbourhood which is romantic and beautiful there are several palaces summer residences, and

royal retreats. The pop. of the city including the military is estimated at 50,000.

CAMBODJA, or KAMPONG, about one-half only of this territory is within the limits of the empire of Anam, the other portion being in Siam. The former is a cultivated flat of rich alluvial soil full of navigable rivers, one of which, the Mekong (which see) is amongst the largest in S. Asia. Agriculture is much behind here yet such is the fertility of the land, that Cambodia is considered the granary of Cochinchina. It produces vast quantities of rice, betel nuts, aniseed, and cardamoms, all esteemed of the best quality. The araca palm, teak tree, and various dyed and hard woods, also grow here some of the latter susceptible of a beautiful polish. Cassia, and a variety of sweet-smelling resins are peculiar to this country. Sticklac, a substance used in dyeing red, is also amongst the products of Cambodia. The mulberry tree is in some regions extensively cultivated, to furnish food for the silkworm, the manufacture of which is well understood by the natives. The climate is in general temperate, excepting during the rainy season—May and September—when it is often very sultry. From October to January the weather is extremely hot, and typhoons occasionally occur but are neither so frequent nor so violent as in Tonquin. The inhabitants of Cambodia are below their neighbours, the Siamese, in point of civilization their features are coarse, and their complexion dark. The men go half naked, and the women also dress very sparingly they are moderate in their diet, and capable of enduring much fatigue, though inclined to indolence. They are patient under oppression, and have a slavish veneration for their superiors. They are persevering agriculturists, but have no manufacturing skill. The animals of this territory are the buffalo, bullock, horse, both of the latter small the rhinoceros, elephant, a formidable species of tiger the leopard, monkeys innumerable, and pigs.

CHAMPA occupies the southern extremity of the empire. It is extremely fertile, consisting in great part, of sand hills without any vegetation peaks, with attenuated shaggy granite formations of every description and a reddish disintegrated mass of stones its coast, however abundant in excellent harbours and it yields at least one valuable production—the eagle wood (*Albizia albizzioides*)—which is much esteemed all over Asia for its pungent fragrance, and in this account, in constant use in burning incense to drive N.W. of Champa, and between Cochinchina and Cambodia, is a bleak and wild mountainous tract, inhabited by the Mof, a savage race, who live chiefly on wild fruits and roots, and mostly sleep in trees some, however construct rude huts, and live in small communities, but there are no large villages. They are a hardy and warlike race and are on this account often captured by their neighbours, and sold as slaves.

Geology.—The geology of Anam presents little variety its prevailing formations being primitive, and consisting mainly of granite or sienite, with the occasional occurrence of quartz, marble limestone, and hornblende. As elsewhere mentioned iron, gold, and silver are found in considerable abundance in Tonquin, but in no other part of the empire. There, also, great masses of beautiful white marble, with blue streaks, are found. The singular mountain at Cape Vauille, in Cochinchina, one of whose peaks has the appearance of a huge broken and falling column, is supposed to contain some veins of silver and at about half its height there is a thermal spring of very high temperature. The alluvial soil of the country consists of clay, loam or sand which alternates or is mixed with gypsum and ferruginous matter and the sand, in many parts, accumulates extensively upon the coast, and forms large lagoons and dangerous shoals.

Manufactures.—The principal branches of industry practised by the natives are spinning of cotton and silk the weaving of these into coarse fabrics, the preparation of varnish the manufacture of lacquered ware, the smelting of iron, the manufacture of firearms, and the construction of ships or junks.

Commerce.—The internal trade is conducted chiefly on the rivers of Tonquin and Cambodia, along the sea coast, or by the lagoons skirting the latter, which form a kind of natural canals, and furnish a means of communication for about 200 m. Goods are conveyed in junks, which are well constructed and managed, and average 40 or 50 tons burden. The trade between Hae and Tonquin, as well as a great portion of the

foreign trade is in the hands of the Chinese. The latter is chiefly with China, and the British settlement in the Straits of Malacca, from the ports of Keng-Kao and Saigon in Cambodia, Keoh in Tonquin, and Y-trang or Ahe-trang Phayen, Quinhon, Faifo, and Hoi in Cochinchina. The exports to China consist chiefly of cardamoms, areca nuts, coco-nut oil, sugar, fancy woods, eagle wood, ebony cotton, silk, rice, sticklac, ivory, palmyr hides, horns, deer antlers, feathers, cinnamon, swallows nests, dried fish, yam, gold and silver bullion; the imports—wrought silk, tea, opium, cloth, porcelain, dried fruits, confectories and toys. Exports to British settlements—rice, salt, sugar and raw silk; imports—opium, gambier, catechu, iron, fire arms, wools, and cottons. Exports to Siam—gambier, cardamoms, ivory, hides, horns, dried venison, salt fish, nuts, and silk, raw and wrought imports—Chinese, European, and Indian goods, iron, wrought and unwrought tobacco, and opium. The importation of opium, and the exportation of coin, bullion, copper, eagle wood, rice, salt, wax, and waxes, are prohibited by law. The prohibition is in most cases evaded by the dexterity of the Chinese merchants and rice may be exported by special license. There remains every year for exportation more than 100,000 piculs (19,047 cwt.) of rice, 83,838 cwt. of sugar, a great portion of which finds its way to the Y ports of China. 71,438 cwt. of cotton, 47,033 cwt. of cinnamon, 5,571 cwt. of betel nuts, and 1,190 cwt. cardamoms. There are, besides large exportations of coco-nut oil, sticklac, gambier, and eagle wood, the last of which is a royal monopoly. Fish also, to the amount of about 231,068 lbs. are exported.

Coin and Measures.—The coin is made in imitation of the Chinese but of baser metal. The gold and silver pieces are mostly of an oblong form, like Chinese ink, and bear the name of the reign in which they were cast. The measures of length and capacity are nearly the same as in China.

Government, Military.—Although nominally patriarchal the government of Anam is actually despotic, even the nobility deriving their name and power from the sovereign. There are two classes of mandarins, civil and military, divided into 10 orders, two of which compose the king's council. The general administration is conducted by that council as supreme, and six ministers of state, namely the minister of ceremonies and religion, the keeper of the records, the minister of war, the treasurer, the minister of justice and the minister of woods and forests. There are, besides, three superior officers called *Kao*, one being the viceroy of Tonquin, another viceroy of Cambodia and the third termed minister of elephants, acting both as prime minister and minister of foreign affairs. Each province is governed by a military mandarin and two civil mandarins as deputy and sub-governor and is divided into three departments termed *zuyen*, each of which is subdivided into several districts named *soe*, and comprehends an indefinite number of villages. The system of jurisprudence is that of China, but not so well or so judiciously administered as in that country. Every superior whether natural or official, has the power of inflicting corporal punishment on his inferiors. The most usual weapons being with the bamboo and the assegai or wooden roller. Fathers and mothers punish their children; husbands their wives; superior officers their inferiors and these the soldiers. Capital punishment, besides being the penalty of higher offences is inflicted for robbery, adultery and sometimes for malversation and corruption. In military affairs the Government claims the service of every male inhabitant from 18 to 60 years of age. The guards consist of 86,000 men divided into 40 regiments, of 10 companies of 80 men each, classed in five brigades. There are, besides, 25 regiments which, with the former constitute the actual force of the service. As the horses are insufficient, there are no cavalry but 800 elephants are substituted, some being attached to every regiment. The entire army consists of about 60,000 men but has occasionally amounted to more than double that number. The soldiers all wear uniforms—a red tunic but the officers wear the ordinary dress. The former are well armed, and perform their manoeuvres with great regularity and precision. They are badly paid, receiving only about 2s. 2d. a month. A lieutenant gets only double, and so on in proportion to the higher grades, and the soldier, however above a bare subsistence. For the protection of the coast marine regiments are formed, to act as sailors and soldiers on board the men-of-war. These

consist of sailing boats, which sail with great rapidity and are chiefly worked with 40 to 100 oars. They have also galleys that sail and row, carrying from 4 to 16 cannon, vessels half junk and half ship, from 10 to 24 cannon and sloops of war according to our model. The discipline of the navy as well as army is according to European principles. The revenue is principally derived, as in China from the land. There is also a poll tax of a little more than 2s. 2d. for each adult male subject not employed in the king's service with sundry other contributions from the industry or consumption of the inhabitants. The land tax is partly paid in kind, and the produce hoarded up in the granaries of the capital.

Religion, Ceremonies, Language, Literature, &c.—The mass of the people do not care for supernatural worship, and are subject to the most ancient superstition. The doctrines of Buddha are professed by a few but they have hardly either any temples or priests. Veneration for the departed dead is general and the temples containing their tablets are the most sacred spots of worship. This reverence for the dead is manifested by an interminable series of solemnities and obsequies, and a reckless expenditure. A remarkable instance of this propensity occurred on occasion of the death of the late king Thiệu Tri, who died on November 8, 1847. The funeral ceremonies on that occasion were of the most sumptuous description. When the body was deposited in the coffin into which quantities of gold and silver and other precious articles together with provisions had been previously placed it was carried to a nobly ornamented house, canopied expressly for the purpose and there lay in state for seven months the coffin being hermetically closed to prevent the exhalation of offensive smells. During this period, numerous sacrifices were made of buffaloes, swine and other animals, and the king's son came every day clothed in mourning to prostrate himself before the body of his father. Every day also, wax candles were lighted, or incense burned. The road along which the body was conveyed to the river by which it was to pass to the place of interment, was covered with mats, carpets, and Indian tapestry of silk. The banks of the river also, were adorned with silks and lined with soldiers and, at frequent points of the progress, there were large altars, on which were burned wax tapers and perfumes. The bark in which the coffin was deposited was of the most magnificent description and, when the latter was placed in the tomb large quantities of gold and silver as offerings to the spirits, were shut up along with it. After the interment the royal barge, a splendid vessel and which a train of valuables had been previously placed, was burnt as were also two superb palaces of wood with rich furnishings and in all things similar to the palace which the deceased monarch had inhabited. So solemn and slow was the progress of the funeral procession and so encumbered was it with tedious ceremonial that it was three days in reaching the place of interment though only 8 m. distant from the city. The language resembles the Chinese, from whom, as they have no national literature they receive all their books. It is with considerable inflexion and allows a great mass of monosyllabic words. It is by no means mellifluous, and is spoken with extraordinary rapidity by the natives. In writing they use the Chinese character with considerable difference, however in some of their combinations. A complete dictionary of the Anamite language was composed by the Bishop of Adran with explanations in French. Marriage is a matter of traffic the price of a wife being usually from 28 lbs to £10 16s but sometimes, among the lower classes, 28 Rs to 24, 6s and among the higher 231 12s. to 243 4s. Among the former the usual age for marriage is, with males, 20 or sometimes 30 and with females 17 to 20 but the rich often marry as early as 15. Polygamy is allowed, but the first espoused is considered the wife. Although adultery is punishable with death, and marriages are indissoluble except by mutual consent, breaches of chastity or conjugal fidelity are not considered as crimes and both before and after marriage women have more liberty than in other E. countries. They are, however, in many respects, the more slaves of man, performing all kinds of household and outdoor work, and acting as shopkeepers, brokers, &c. and are generally treated with rigour and neglect. Men are, in a great measure supported by female labour and such is the anomalous state of

the marriage relation, that women are said to prefer strangers, especially Chinese, as husbands.

History.—According to the historical records of China—the only sources of information on the subject, Anam was conquered and colonized by the Chinese in 314 A.D. After a series of revolts against their conquerors, the Coshin Chinese, in A.D. 883, regained their independence, but remained tributaries to China. In 1290, the Tartar Khans of the latter in effectually attempted again to possess themselves of the Coshin Chinese territory. In 1406, the Chinese occupied Tonquin, but abandoned it in 1438 and in 1471 the Tonquinese made the conquest of Coshin China. In 1640 Tonquin became a tributary lordship of the celestial empire and in 1553, Coshin China threw off the yoke of the former, and again became independent. From that time till 1748 Tonquin was nominally under a sovereignty of its own, termed a *Dona* or *Dona*, but was actually ruled by the Chinese or prime minister. In 1748 the sovereign recovered his authority but a period of anarchy succeeded, and was terminated only by an intervention which broke out in 1747, and completely revolutionized the kingdom. The great agents in this revolution were three brothers called *Tepone* (mountain) of the name of Quachoh who, having been driven to a robber's life by the oppression of the Government officials, and having soon collected numerous adherents in a country already ripe for revolt, defeated the armies both of Anam and of China, yet to defeat their king and his eldest son, and made themselves masters of the whole country with exception of some of the S. provinces. Gu-long the king's second son placed himself under the protection and guidance of Pigneux de Behaux, Bishop of Aden, a French Franciscan missionary at that time stationed in the country. In 1781 he attempted to regain possession of the throne, but being defeated by his rebel countrymen, and deceived by the King of Siam he took refuge in the island of Quadirol and in 1787 sent his son to France along with Pigneux, to ask the assistance of Louis XVI. The latter sent over some French officers, whose experience enabled the king to organize an army construct fort, and finally re-enters himself in all his dominions. The succession to the throne was lately disputed by two rival claimants, but was settled in 1843 by the installation of the rightful heir. The population of Anam is supposed to be between 13 000 000 and 15 000 000.—(Crawford's *Annals of Anam and Coshin China* Hamilton's *East India Gaz.* Gaillard, *Diet. Geo. et Stat.* Dr Gustaf in *Four Voy. Geo. Soc.* vol. xix. *Four Ind. Archip.*)

ANAMRAS, a group of 10 islands, China Sea, off the E. coast of the Malay peninsula, and belonging to the kingdom of Johore. They lie between lat. 2° 30' and 3° 30' N. lon. 104° and 110° E. and are usually divided into E. Middle, and S. Anamras names unknown to the Malays, who call them *Suntan*, *Jumrah*, *Sarawan*, &c. Sarawan is that which lies nearest Borneo, in lat. 2° 30' N. and is sometimes called S. Natuna. The largest island is Dumar in the middle group lat. 2° 44' N. lon. 105° 20' E. (n.) All the islands are illidly and appear sterile. They are inhabited by pure and poor Malays, who support themselves by the cultivation of rice, sugar, sago, coconuts and fishing trading. The larger islands abound with tropical fruits and vegetables. The natives are said to be treacherous. Pop. about 1500.—(Ritter's *Asiatische*, Harburg's *East India Directory*)

ANAMIRAPCCU a river Brazil prov. Para. It is formed by the junction of the rivers Wahoai and Amanas the latter leaving its sources in the mountains forming the S. boundary of French Guiana, the former in the Serra Velha. The junction of these streams takes place in lat. 1° 8' N. lon. 64° 18' W. from which point the Anamirapccu flows in a S. E. direction, and falls into the estuary of the Amazon, its lat. 0° 15' S. lon. 60° 55' W. Its whole course is about 200 m.

ANAMUOL, or **ANAMUOL** (Cape) the most S. point Anatolia coast of Karamania, opposite Cyprus lat. 36° 45' the Black Sea lat. 44° 54' 6" N. lon. 37° 18' 30" E. (n.) being on one side quite inaccessible, while the other is fortified by a castle and outworks, extending from the summit of the cape to the level of the sea. Near it are the remains of a town, supposed to be the ancient *Anamurum*, remarkable for the number of its splendid tombs. The modern castle of Anamur the residence of a Turkish Aga, is on a small rocky eminence, close to the sea, about 5 or 6 m. E. of the cape.

ANAPA, a seaport and fortified town. Russian Cherson, on the Black Sea lat. 44° 54' 1" N.; lon. 37° 18' 30" E. (n.) The port is tolerably good for small vessels, but the outer road is unsheltered and is safely accessible only in the fine season. The fort was constructed in 1784 by the Turks, when the Russians took possession of the Crimea and island of Tuman. In 1791 the Russians carried it by storm. It was afterwards restored to the Turks who strengthened the fortifications. By a subsequent treaty the Russians again acquired possession of it, and have retained it till now (1860).—The exports are grain tallow hides, honey and wax. The inhabitants Chircassians Tartars, Greeks, Turks, Jews, Armenians, Russians, &c. and the pop. exclusive of the garrison, about 8000.

ANATHI or **NAUPHIO**, an Isl. Grecian Archipelago lat. 36° 22' N. lon. 25° 47' E. (n.) It is about 7 m. long and from 1 to 2 broad. It is composed chiefly of rocky barren mountains, and it has no port. There are some level tracts, but they are far from being fertile, a little wheat and oil being their sole productions. Wax and honey are, however, obtained in considerable quantities. Pasturage abounds and it has some springs of excellent water. The inhabitants who are miserably poor amount to about 1500, the greater part of whom reside in a village on the N. coast. A few miles S. of Anaphi is the island of Anaphi Psulo, surrounded by a group of barren rocks.

ANAPLI, correctly **NAUPHIA** (which see)
ANARAJAPURA, **ANARAJAPURA**, or **ANORADINDRA** (see ANARAJAPURA).

ANASTASIA.—1 An Isl. U. States, F. coast, Florida lat. (light, N. point, 29° 52' N. lon. 81° 45' W. (n.) It is about 18 m. long by 14 m. broad.—2 **ANASTASIA** (SANTA) a vd Naples dist. of, and 6 m. E. from Naples. Pop. 6451.

ANATOLIA, or **AKADOLIA** a pass. Turkey in Asia, forming the W. portion of the peninsula called Anatolia or Asia Minor. Like other Turkish passelike, its extent is indefinite varying with the caprice of the sultan or the energy and cupidity of the governing pasha. Generally speaking it may be described as comprehending the tract from the Black Sea to the Mediterranean, bounded, W. by the Greekian Archipelago and E. by an irregular narrow line drawn from the Black Sea, about lon. 38° E. to the Mediterranean, about lon. 31° 30' E. It thus extends over about a half of Anatolia or Asia Minor in the description of which the physical features, products &c. of the passelike are included (see the following article). It is the largest and richest province in the empire, and the most populous in Asia. Its valleys are fertile, but all cultivated its mountains produce excellent timber in large quantities, and its climate in the low countries, is mild and genial. The capital is Kütaya. Anatolia comprehends the old provinces of Bithynia, Phrygia, Galatia, Phrygia Epictetia, Mysia, Phrygia Minor Aolia Lydia, Ionia, Lycia, Caria, Pamphilia, and parts of Phrygia Major and Pisidia.

ANATOLIA **ANADOLIA** or **NATOLIA** (Greek, *Anatolē*—the East, or Levant) the pentagonal-shaped W. extremity of Asia, identical with Asia Minor—an inappropriate term, of uncertain but comparatively modern date, and unknown both to the Greeks and Romans. It comprehends the Turkish passelike of Anatolia, including Karamania, Manak, Syria or Roum, and Trublad. Anatolia is included between the 26th and 41st N. parallels, and between the 26th and 41st E. meridians, being bounded, N. by the Black Sea, Sea of Marmora, and the Dardanelles W. by the Grecian Archipelago and S. by the Mediterranean Sea while its E. boundary which is more arbitrary, is usually defined by a line connecting the Akon-dagh near the Bay of Iskenderoon, with the Epictetia, and thence up to its source, whence it runs down the Taurus to the Black Sea. Its greatest length, from the Gulf of Adramyde E. to the Epictetia, somewhat exceeds 700 m. and its greatest breadth, from C. Anconoor, in Karamania, to C. Kermak, in Anatolia, is about 420 m. supposed area, about 270,000 sq. m. The N. coast facing the Black Sea, which presents few striking irregularities, is bold and steep, with very deep water close to the shore seaward, but gradually falls as it approaches the Bosphorus. The W. coast, from the Bosphorus downwards, presents an outline as jagged and irregular with cliffs nearly as high and precipitous, as almost any coast in the world including the Gulfs of Adramyde, Fongos, Beyma, Sula-mora,

Mandalyah, and Koe within which, however there are low alluvial shores. While the S. coast presents a bold irregular outline, with steep and lofty rocks closely approaching the shore, no chief bays or indentations being the Gulfs of Maelid, Phazeka, Adha, and Iskenderoon. The principal headlands N are Capes Dajeli and Kerampu. W Capes Baba, Karabournon, St. Mary Antara, Aricivalla and Cua and St. Capes Aleppo, Ghilnal Seven apas, Toogh-bournou, Khelidima, Anaseoor Cavallera, and Karabash.

Mountain Chains and Plateaus.—The surface of Anatolia, which is extremely irregular may be termed an elevated plateau, supporting still higher elevations, dotted with salt lakes, and subdued by two ranges or offshoots of the Armenian mountain system, the Taurus and Anti-Taurus, running E. and W., not far from the shores of the Levant and Black Sea, respectively. The S. range, or Taurus, commences close to the Euphrates, about lat. 38° N. lon. 39° E., where Akjah-dagh reaches an elevation of about 10,000 ft. and running W. with a very irregular course through Karamania and the S. part of the peninsula of Anatolia, generally speaking, parallel to the Levant, terminates in the islands of the Grecian Archipelago. It has numerous offshoots both N. and S., which, as well as various portions of the main range, are known by special names, as Allah-dagh, Bulghar-dagh, Jebel-kurin, &c. The N. or Anti-Taurus range stretches from the Tchorak W. parallel to the Black Sea, and at no great distance from the shores, and terminates at the Bosphorus, an offshoot tending S.W. comprising Mount Olympus (8500 ft.) and terminating in Mount Ida (9400 ft.) at the Gulf of Adramytti. Between these two main ranges there are many smaller ones, some of which attain a great elevation and indeed everywhere lofty mountain masses more or less connected so as to meet with. Of the loftier summits may be named the volcanic peak of Erylsch-dagh (18,000 ft.) the highest in Anatolia situated about 12 m. S. Kasserah or Kassar. Besides which there are various others attaining an elevation of 7000 to 10,000 ft. The centre of this peninsula is an extensive plateau uniformly elevated of the mountains on it, averaging about 5000 ft. In height, about 30 m. in length from N.E. to S.W. and about 100 m. in breadth, partly drained by the rivers flowing into the Black Sea, but covered also with salt lakes, marshes, and rivers having no visible outlet.

Lakes and Rivers.—The great number of salt and fresh water lakes is the most remarkable feature in the geography of Anatolia. The largest of these is the Tons-Giluel (anc. *Tartessus*) about 70 m. N. E. Konieh, and, according to Hamilton, about 65 m. long and from 3 to 15 m. in breadth. It is shallow and much reduced in summer by evaporation. Its waters are briny and the incrustations on its shores supply the surrounding districts with salt. The other principal lakes are, the Kara-bisler Ak Shehr Egerdir Bey-Shehr Boghla Chardak, and Buldur all between 37°–39° N. lat. and 30°–35° E. lon. Besides these, there are the Lakes Manyas and Abullente, near the shores of the Sea of Marmara, and a few others of smaller extent. The largest rivers of Anatolia flow into the Black Sea, but their courses have been very imperfectly explored. The largest is the Kizil Irmak (anc. *Halyk*) which is supposed to rise about 40 m. E. N. E. Swan, and, after a most tortuous course, first W. and then N. E., entering the Black Sea at lat. 41° 45' N. lon. 36° 0' E. total length at least 600 m. E is the Jeshil Irmak (anc. *Iris*) a much smaller river flowing W. N. W. and entering the sea about 18 m. E. Samsoom. In the N. W. of Anatolia is the Sakaria (anc. *Sagorasis*), rising in the table land not far from Angora, flowing S. as far as Singhit, and thence N. into the Black Sea, which it enters after a supposed course of about 300 m. about 80 m. E. the Bosphorus. The only important rivers flowing towards the Grecian Archipelago are the Bakir-chal (anc. *Caucas*), the Gedik-chal (anc. *Horvus*), once a famed auriferous stream, flowing into the Gulf of Smyrna, after a course, W. by S. of about 200 m. and the Boguk Mender-chal (anc. *Meander*) after a most tortuous course S.W. by W. of more than 800 m. forming the sea close to the ruins of the once famous Miletus. On the S. along the Levant, and proceeding E., are the Doloman-chal (anc. *Gablos*) Kodje-chal (anc. *Zamblos*) Ak-Ba Kapru-Su (anc. *Zeygurech*) the Ghil-Ba (anc. *Cylochorus*), the Taurus-chal (anc. *Cydus*) but now a mere torrent, the Rhoom-chal (anc. *Horos*) and the Jychoon-chal (anc. *Pyramus*); though

none of them are of any considerable size except the last two, which have a length, respectively of 200 and 180 m.

Geology. *Horizontal*—It may be said generally that granite, serpentine, and schist form the substance of the upper and lower regions of the lower regions of Anatolia, trachyte trachyte being also found E., which are succeeded W. and partly overlaid by black volcanic breccia, interspersed with angular blocks of trachyte while the extreme W. parts of the peninsula, and its S. coasts, consist almost wholly of calcareous rocks belonging to the chalk formation. The most curious feature, however in the geology of this country is the volcanic region of *Calceopontus* (*Calceopontus* [anc. *Calceopontus*] between lat. 38°–38° 40' N. and lon. 29° 30'–30° 10' E.), which is thus described by Mr. Hamilton:—"West of us, a black dome-shaped hill of scoria and ashes, the Karadaviz or black mound; the volcano of Konla, rose about 500 ft. above the plain, and was so steep, that to ascend its slope of clinders seemed wholly impossible. In front, a black and rugged stream of lava extended from right to left the surface of which, broken up into a thousand forms, looked like the breakers of a sea converted into stone and the fury of a gale, and forming, as it issued from the base of the cone, a striking contrast with the rich plain through which it seemed to flow."

(*Researches on Asia Minor* vol. I. p. 186.) These volcanic cones, and other unquestionable traces of igneous action, extend over a considerable space and earthquakes still occasionally occur such as those that destroyed Laodicea, Apamea Cibotus, Sardis, and other cities of antiquity. Anatolia contains also numerous thermal and sulphurous springs, those near Erzik in lat. 37° 40' N. and lon. 34° 2' E. are found on a long ridge of calcareous hills, on the summit of which are narrow cracks or fissures, whence the springs issue. In many places, little conical hills have been raised by the gradual deposit of the earthy matter held in suspension by the water but speedily solidified by evaporation. The expansive power of the confined water and gases is indicated by its bubbling underground where there is any obstruction to its escape. Some of these springs deposit pure salt round their orifices, others pure plaster and others sulphate of lime &c. &c. There is also much difference in the heat of the springs, some being quite cool, and others nearly 160° (Hamilton's *Researches* vol. II. p. 308). Mining is not carried on to any great extent. Copper mines, however are wrought at Bakir-Kurash Tiraboli, Tokat, and a few other places. Iron and rock alum are wrought near Unlek and lead, with silver at Denick, a little E. of the Kizil-Irmak. Nitre is got at Karaburnu about 60 m. E. Konieh, and rock salt, everywhere plentiful, is especially so in the tract near Angora. Marble exists in great abundance, an advantage which the sculptors and builders among the early Greek colonists turned largely to account. Coal also has been found lately along the coast of the Black Sea but has not hitherto been worked to advantage, owing in part to the unskilfulness of the Turkish miners.

Climate.—The climate of Anatolia, so much lauded by the ancients, admits of no general description owing to the diversity in the elevations of its surface, which presents winter and summer within one day's journey. The W. shores have been celebrated in all ages for their genial warmth; the thermometer in summer ranges from 84 to 100° F. rain falls but rarely but this defect is in some measure supplied by heavy dews. The coast along the Black Sea is almost equally favoured as to temperature, and enjoys the additional advantage of frequent rains. The elevated plains of the interior which rise about 3000 ft. above the sea, exclusively of mountains towering some thousands feet yet higher are extremely cold in winter but salubrious. Summer here is of short duration, and the snow lies pretty deep for about four months in the year. The climate of Karamania, unlike that of the N. part, is oppressively hot in summer very little rain falls and hence, from April to November the inhabitants have little water except what is preserved in tanks and cisterns. The cold, in the passes of the Taurus, is intense.

Vegetable Productions.—The N. slope of the central plateau so abundant with forests of oak, beech, plane, ash, and almost all other building timber that the Turks have called one of its forests the *Ayedik-Daglar* or Sea of trees. It is 120 m. long by 40 m. in breadth, and is the chief and all but inexhaustible source of supply to the Turkish navy. The trees here are of larger growth than in most other countries

under the same parallel especially in the sheltered valleys of the S W. On the coast there are entire woods of walnut, cherry, mulberry, pomegranate, peach, apricot, plum and quince trees, especially the last in the celebrity of which the ancient *Coccyzus*, now *Koccosun* owed its name. The plains bordering the Kizil-irmak, Sakarya, and Menderes, afford a similar vegetation with the coast of Syria and rich game excels from the trees, among which is the styx, yielding the stork. The Taurus mountains comprises numerous kinds of forest trees, including a great variety of pines, amongst which is the stone pine. Thousands of fine trees, of the pine tribe, are annually destroyed by having fire applied to them, to quicken the flow of sapwood. In the more elevated districts pine splinters have been long used in boxes of lamps and candles. Sugar canes grow in Pamphylia, but do not ripen to crystallization a portion of them being used as a vegetable, and the pith as a sweetener and wine, olives, and figs, are abundantly raised in the S. valleys especially throughout Lycia, which plentifully supplies the markets of Smyrna with figs, olives, and raisins. The poppy also is grown in very large quantities, a variety in the opium trade, which however is strictly a government concern, the preparation of the opium requires great care and is chiefly conducted by females. The flora of W and S Anatolia, in all the valleys, is extremely beautiful, and will bear comparison with that of Sicily and Spain. Shrubs and evergreens are abundant the latter including the myrtle—which here attains an immense size—bay, laurel and a variety of holly. In strong contrast with all these countries, are the vast and frigid plains of the interior which produce only stunted shrubs, saline plants, wormwood, sage, and some of the ferns. There are other tracts, the only vegetation on which is two species of broom. The wheat of Anatolia is of the bearded kind. Oats are seldom seen, the grain supplied to horses and other animals is usually barley. Maize is raised to some extent.

Animals—Anatolia has few large beasts of prey except a species of panther called *bigliar* by the Turks. Jackals are very common in the less frequented regions and there are a few bears, wolves and wild dogs. Bees are used for draught, especially in Cilicia and the fowls supplies the place of the cow which is scarce, in furnishing milk. The horses are strong and well shaped, and the asses faster and larger than usual but in the transport trade of this, as of other Eastern countries the camel is mostly employed. The long-haired or shawl goat was once peculiar to this country but it has travelled east, and is known equally in Persia and Upper India. The sheep are usually of the broad-tailed species. Among the more common birds are the eagle, hawk, hooded crow, bustard, stork and heron, quail, partridge and others known to Europeans. Land tortoises, lizards, frogs (including the *Bana arborea* or tree frog) are more or less common in various parts and locusts are so plentiful that they form an important article of the export trade to France and Italy through Smyrna. The coast abounds with many varieties of fish especially the cattle fish. Butterflies of innumerable varieties, and of uncommon and very gaudy colors, are to be seen in great numbers.

Ethnography—The Ottoman Turks, who form about nine-tenths of the population, are not only the original branch of the Turkish family but also the largest and most civilized nor have they for many centuries, varied to any considerable extent from their primitive type. There are many thousands, however of so-called Turks, who are not so really but descended from Greek ancestors. About one-twentieth part are Greeks, an unprincipled, dishonest race and the remainder comprises Jews, Armenians, Kurds, and Yirukhs, but an almost wholly pastoral life and are found, for the most part, in the hilly districts. I gypsies are found, and the women occasionally wear their hair in spreading wigs and working it and combs hair into carpets, shawls, etc. In the rural districts they throw off the veil, which is always

worn in towns. The Anatolian Turks are personally handsome, well-sansered and scrupulously clean, the latter habit being induced, perhaps, by their religious professions. As respects character all show them the virtues of hospitality and generosity; and Sir O Fellows gives them additional credit for downright honesty, singleness of heart, and constancy of disposition. But the vices of avarice and avarice, with which they are almost universally charged, would seem hardly compatible with these virtues. Their carelessness, too, has become proverbial. Unlike the Turks of other countries, however they are a social people, fond of gossiping, dancing, and singing, with less of religious prejudice than prevails in European Turkey.

Agriculture, as a practical art, is wholly unknown. Irrigation, manuring, and cropping, are little practiced, and all the implements of husbandry are in the most rude and primitive state. Notwithstanding these drawbacks, however nature has been so bountiful to the lower lands in Asia Minor that with exception of the cereal products, its agricultural returns may vie with those of Greece and European Turkey. Grazing forms a staple employment, and large flocks of sheep and goats are to be found on the lofty plains of the interior, whose wool and hair form an important article of commerce between Smyrna and Angora.

Manufactures and Trade—The principal industry of Anatolia consists in growing wine and oil, and in weaving carpets, shawls, and making fur caps, etc. The trade will be best discussed in the articles *SMYRNA* and *TRABZOND*.

Roads and Caravan Routes—Asia Minor was so well known to the Romans, that it was traversed by them in almost every direction. Of these roads however, by far the most important were the two that led into Syria—1. By *Amyra* (Amara) and Tarsus to Antioch and 2. That through *Assara* (Mamre) to Commagene of Cappadocia, and Samosata to Zeugma on the Euphrates. There was a well-frequented road, likewise, by *Nicomedia* (Iznik) and past *Heli* to *Knepo*, *Trebizond*, and *Sivas*, to *Bagdad* and another led S. near the shore of the Propontis, and across the Troad to *Smyrna*, *Ephesus* &c. In all these lines there are ruins, bridges, &c. clearly marking their former existence and use. As respects the present times, roads, as understood in Europe, are wholly unknown but relays of horses are maintained, as in the days of *Xerxes*, at distant intervals, and are stationed at the large towns of the leading routes. The most frequented road is that from Smyrna to Constantinople which passes by way of *Magnesia*, *Al-hisar* (anc. *Thyatira*) and *Moukalech* another goes by *Mediasch* *Braia*, the *Olympus* range, *Kutaya*, *Afrin*, *Kara-Hisar* *Kimesh* *Karman*, and *Guhar* and a third route, extending in the same direction from the *Bosphorus*, takes at *Eski* (anc. *Thyatira*) exactly due E. to *Angora* and thence to *Oncoz* and *Kiliseh*. Besides the above routes, a pilgrim road leads from Constantinople S E through the peninsula and there are two principal caravan routes—one through *Ala-Shehr* *Afrin*, *Kara-Hisar* and *Koush* the other by the *Al-dagh* or *White Mountains* to *Adana*, and the other S. provinces.

The principal cities of Anatolia are *Smyrna*, *Trebizond*, *Iskenderson*, *Adramytil*, *Angora*, *Sivas*, *Vanse*, *Samosata*, *Koush*, *Kiliseh*, and *Afrin* *Kara-Hisar*.

Anatolia or Asia Minor was the seat of the Seven churches which are in *Asia*—*Ephesus*, *Smyrna*, *Pergamos*, *Thyatira*, *Erdi*, *Philadelphia*, and *Laudicea*. These were all places of great note in apostolic times, though only some of them are so now and that only in a modified sense—1. *Ephesus* was long the metropolitan see of *Asia* its ruins lie two short days' journey S.E. *Smyrna* and still holds some magnificent Greek and Roman remains—2. *Smyrna*, a city of *Ionia*, is situated upon the shore of the *Zeygan* Sea, as the mouth of the *Meha*, 50 m. N. *Ephesus*. The modern city called *Esmer* by the Turks, contains scarcely any traces of the ancient—3. *Pergamos* was an important city of the *Greater Mysia*, on the river *Caicus*, about 50 m. from the sea. The modern *Bergama* is built on or near the site of *Pergamos* it is a large place, and has some antique remains—4. *Thyatira* is completely obliterated though many architectural fragments are strewn around. The modern Turkish town of *Al-hisar* built east or near its site, is a large place,—5. *Erdi* was the once flourishing capital of ancient *Lycia*, situated at the foot of *Mount Tmolus*, in a fertile plain, watered by the

golden-sanded Ptoleus. It is now a heap of ruins. A miserable Turkish village called *Sart*, partially preserved in its name, and actively in its walls recall the splendor of ancient Bards.—6. *Philadelphus* stood about 25 m. S.E. Sardis, in the valley formed by the *Kodas*. Hard by its site is the Turkish *Ala-Shehr*.—7. *Laodicea* was the capital of the Greater Phrygia. Its site, now deserted, was near the rivers *Lycus*, *Asopus*, and *Cepus*, tributaries of the *Mesander*. No trace of it remains.—8. *Satala*, *Asia Minor*. See C. Fellows' *Excavations* (1893-40). *Aluworth's Papers to the Four East Sea-Land*. *Dictionnaire des Dates*, *Harmadire de Hall's Survey of the Black Sea*. *Beaumont's Survey of the S.W. Coast of Hamalton's Researches in Asia Minor*.

ANATOLICO a tn. Greece, in *Attolia*, Bay of Anatolico, off the Gulf of Patras, 8 m. N.W. Mesolonghi. lat. 38° 24' N. lon. 21° 13' E. built on piles on a low island. The surrounding water of the bay or rather lagoon, is extremely shallow rarely exceeding 9 or 4 ft. in depth.

ANAVA, or **GUANAJAU** a river Brazil, Portuguese Guiana, a tributary of the Branco or Pacima. It rises in the Serra Arlona or Anacy the S.W. boundary of British Guiana, about lat. 2° 0' N. lon. 59° 20' W. whence it flows W.S.W. till it falls into the Branco at lat. 0° 50' N. lon. 51° 50' W. Its whole length is about 200 m.

ANAVELHANA a river Brazil Portuguese Guiana, an affluent of the Rio Negro. It rises in about lat. 0° 10' N. lon. 59° 50' W. flows nearly due S. and falls into that river near Porcena lat. 5° 0' S. lon. 60° 15' W. The length of its course is about 220 m.

ANAZO a considerable river Abyssinia, formed by the junction of the Molee and the united streams of Ancova and Balakale. The junction occurs in about lat. 12° 0' N. lon. 40° 00' E. from which point the Anazo flows nearly due E. taking the name of the Yasso, latterly till it comes within 10 m. of the Sea of Bah-el Mandeb, when it sinks into the sand.

ANÇÁ a to and par Portugal prov Douro dist. of, and about 8 m. from Coimbra. It possesses a spring remarkable for its copiousness and valuable qualities of a fine stone, partly pure white, and partly bluish which admits of being saved, and has, for a long period, been extensively exported. Pop. 1036.

ANCASTER, a par England, co. Lincoln area, 2800 ac. 5 m. N.E. Grantham. Pop. 589.

ANCEMBIS (anc. *Andesomus*) a tn. France, dep. Loire Inférieure, r. bank, Loire, here spanned by an elegant suspension bridge 20 m. N.E. Nantes, cap. can and around of same name. It stands on a flat, subject to the inundations of the Loire, surrounded by vine-clad hills and overlooked by a Gothic castle, which commands the river. Principal buildings—the handsome college and the barracks, formed out of a convent of Ursuline nuns. Manufactures—Salt of tartar. Its port, which in the 15th and 16th century is said to have been reached by the tide, and to have had depth of water sufficient to allow ships of war to be built at it, is now chiefly used as an entrepot and station for the boats plying on the river. Its trade is in corn, wine, vinegar, coal, iron timber and cattle. During the revolutionary war in La Vendée, Ancenis was the theatre of some severe and exterminating combats. Pop. 2296.—The arrond. is divided into 5 cans. and 27 cosses. Pop. 47,397.

ANCEVILLE—1. A small tn. France dep. Meuse, 13 m. S.W. Bar-le-Duc. The chief trade is in *Kirsch-wasser* a spirit distilled from cherries, of which a considerable quantity is made here. Pop. 2108.—2. A vil., dep. Moselle, 12 m. from Metz. Manufactures—Hardsol. Pop. 566.

ANCHOLME (anc. or) See *ANCHOLME*.

ANCHOR ISLAND—1. A small isl. New Zealand N side of the entrance into Dusky Bay S.W. extremity of New Zealand lat. 45° 46' S. lon. 166° 13' E.—2. Two islands off the E. coast of Brazil prov Rio Janeiro, 3 m. E. Cape Frio.

ANCHORITES, a group of small islands S. Pacific Ocean, about 280 m. N. New Guinea. The central is at lat. 0° 50' S. lon. 145° 50' E.

ANGIAENE, a tn. Portugal, prov Trás-os-Montes, 73 m. N.E. E. Oporto de Moncorvo. It is walled, and has a castle and sulphurous mineral waters. Pop. 1900.

ANGIAO a small tn and par Portugal prov Douro, dist. of, and 13 m. N.E. from Coimbra, on a hill near the river of the same name. Pop. 1340.

ANCOLAN ISLANDS, a group of small islands in the N. Pacific Ocean, off the N.W. coast of the S. end of Sumatra, one of the Philippine Islands. They lie close together about 13 m. from the shore in about lat. 14° 20' N.; lon. 123° 20' E.

ANCOVA, one of the most important maritime cities of the Papal States, on the Adriatic 132 m. N.Y. Rome lat. 43° 57' 42" N. lon. 18° 30' 30" E. [a.] cap. delegation of same name, built on the slope of a hill in the form of an amphitheatre, between two hills, on one of which stands the cathedral, and on the other the cathedral. It is divided into two parts—the *Città Vecchia*, and the *Città Nuova*. The former occupies the higher ground and is inhabited by the poorer classes, the latter is situated along the shores of the Gulf. The streets, with one exception, are narrow dirty and irregular. Ancova is the seat of a civil tribunal, of a tribunal of primary jurisdiction, of a court of appeal and of a bishop, and is governed

ANCOVA FROM THE BARRACKWATER.—After Th. A. Smith.

by a delegate who is a prelate of the Roman church. It has a college, two hospitals, 10 churches, 16 convents and a lazaretto. Among the most remarkable buildings are the government palace, the townhouse, the merchants' hall, the cathedral, built on the site of an ancient temple of Venus the exchange, a stately building in the Gothic style and on the mole the triumphal Corinthian arch of Trajan, built of Parian marble. In 1732 Ancova was declared a free port, and with exception of Venice, it has a larger trade than any other port on the same coast. In 1845, its exports consisting of wool, skins, silk, salted raw grain, alum, sulphur, fruit, and Venetian soap, amounted to £438,919. The imports of the same year amounted to £1,020,770 consisting of manufactured goods, hardware, porcelain, stoneware, glass, yarn, cloths, tobacco, wax, spirituous liquors, timber, coal, metal goods, hides, leather, meal, and berries. Of these, imports to the value of £271,473 were from Britain and of the exports £28,065, mostly oak for shipbuilding. The number of vessels that sailed from Ancova, in 1843, was 1249 in tonnage 84,740; the number that arrived 1284; tonnage 139,783. In 1846, the number of vessels that arrived at Ancova was 1456 tonnage 103,970; value of total imports, £990,586 exports £447,808. Of the imports, £255,306 were from Britain, and £281,806 from Austria. Of the exports £29,163 were to Britain and £116,941 to Austria. Considerable quantities of British manufactures which compose about one-half of the imports from this country find their way into Austria through Ancova. Ancova is an entrepot for European goods for the Levant, and the chief point for

the steam communication between the latter and the Adriatic. The port, which is the only good one on this side the Adriatic, between Venice and Manfredonia, is formed by a mole and a breakwater. A former run out from the N. west of the city nearly 2000 ft.; it is 68 ft. high, and 100 ft. broad; on its extremity there are a battery and a lighthouse; the latter runs out from the lazaretto about 2100 ft., and the total space enclosed measures about 8000 ft. by 2700 ft.

Three or four frigates may lie well sheltered from all winds, inside the lighthouse, moored head and stern but nowhere can large vessels swing at their anchors. A new bosoon was erected, in 1842 on the Volpe, or Wolf Rock, near the entrance to the harbour. Wood provisions, vegetables &c. are plentiful, cheap and good.

Ancona is supposed to have been founded by a Doric colony or by a band of Etruscan patriots, who fled from the tyranny of Diomedes, about 400 B.C. It subsequently fell into the hands of the Romans, being taken possession of by Caesar. The Emperor Trajan and (tempest XII) improved and beautified the harbour. In 1798 it was taken by the French and in the following year it surrendered to the allied Russian, Turkish and Austrian army after a long resistance. In 1832 it was again taken possession of by the French, who did not evacuate it until 1848. All religious sects enjoy here complete toleration. Pop. 36,000.

ANCEKE. See ALBERT.

ANCEKE M a par and vill Scotland co Roxburgh area, 8316 ac. In this parish was fought the battle of Anceken Moor in 1544 between the Scotch and English, in which the latter were defeated. Pop. 1654.

ANCEKE. See ANCONA.

ANCEKE KHA V or ANCONA a considerable town in dependent Tartary territory of Kokan, on the bank of the Salween lat 41° 30' N. lon. 71° 27' E. 60 m. E.S.E. the city of Kokan, situated in the midst of gardens.

ANCEKE. See ANCONA.

ANDALUSIA [Spanish *Andalucía*] a dist. in the S of Spain, celebrated for its fertility and picturesque beauty between lat. 36° 0' and 39° 40' N. and between lon. 1° 40' and 7° 35' W. bounded, N. by Extremadura and New Castile E. by Murcia, S. by the Mediterranean Sea, and W. by Portugal. Length from E. to W., 330 m. average breadth 140 m. estimated area, 27,221 sq. m. It comprehends the ancient Moorish kingdoms of Cordova, Seville, Granada, and Jaen, and the modern provinces of Seville, Huelva, Cadiz, Jaen, Cordova, Granada, Almeria, and Malaga. It is of very uneven surface, being traversed through its whole extent by mountain ranges. The Sierra Morena runs along the N. coast and in the S E. runs the mountains of Granada and Cordova, including numerous ranges which run E. to the mouth of the Guadalquivir. Many summits of the latter ranges are covered with perpetual snow the Mulhacén rising 11,483 ft. and the Pico de Veleta 11,385 ft. above the sea on the summit of these is the Lake of Caldera, 10,112

ft. above the sea. The great road from Madrid to Seville and Granada cuts the Sierra Morena at the pass called the Desfiladero, 7660 ft. high. The geological features of Andalusia exhibit a great prevalence of mass slate, gneiss, and other primary and transition rocks on the elevated tracts, both in the N. and S., with tertiary and more recent formations in the large intervening river valley. All the mountains abound with mineral wealth, yielding silver and lead, antimony, copper, iron, vitriol, sulphur, coal, and marble. The principal river of Andalusia is the Guadalquivir which rises in the E part of prov Jaen near Cazoria, and thence flows S.W. by W., and below Seville, S.E.W. for about 330 m. entering the Mediterranean at San Lucar. Its principal affluents being the Guadalquivir, Guadalquivir, and Guadalquivir and the whole basin covering an area of 15,040 sq. m. or considerably more than half Andalusia. The rivers S. of the Sierra Nevada are quite insignificant. The vegetation is of the character peculiar to the extreme S. of Europe and the N. districts of Africa the *maestro* (*Pinus leucodermis*) myrtle, olive, palm banana, &c. grow abundantly in the valley of the Guadalquivir which are replaced S. of the Sierra Nevada by saffron cotton, and the sugar cane. Wheat, maize, barley many varieties of fruit, and different kinds of grapes, grow here, almost spontaneously besides which honey silk and colonial form important articles of culture but the arts of husbandry are in the most backward state, and the metayer system of letting land combines with the people's natural indolence to prevent any improvement. The accompanying view of a farmstead near

ARABIAN FARMSTEAD
From *Donat Dufour* *Voyage Photographique* *Espagne*.

Puerto Santa Maria, 6 m. N.E. Cadiz, will convey an idea of the appearance of buildings of this kind in Andalusia, and the S. of Spain generally. Situated, as it is, amidst a scene covered with a strong defence of prickly aloes, the features it presents are more likely to attract the eye of the painter than to please that of the skilful agriculturist. By far the largest portion of the soil is left for pasture land or abandoned unimprovable wastes. The horses are the best breed in the peninsula, partaking very much of the Arabian character the bulls of Andalusia are sought after over all bull fighting Spain sheep (*trasmontanos*) are reared in vast numbers, and bear an abundance of good, but not fine, wool and the hogs reared on the acorns of the mountain forest furnish hams and bacon unsurpassed in any part of Europe. Wolves and bears are only now and then found and there are no venomous reptiles. Game, including deer, hares, rabbits, partridges, bustards, and plovers, is abundant. The chief manufactures of this extensive tract, which depends almost exclusively on the soil for its wealth are woollens, silk, and leather which are by no means extensive. The Andalusians are descended in part from the Moors, of whom they still preserve the leading types, being dark in complexion black eyed, of exquisitely rounded shape and stalwart figures, with quick wit, ready repartee, and love of exaggeration. They are eminently superstitious and imaginative—gossaming, fawning, cowardly and cruel and their intellect and energy wither under the perpetual slapping on patterned skirts and on to their work for them. The dress, both of males and females, is gaudy and picturesque. Education is in a low state, and smugglers and robbers

about. Pop. 1745 858. (Widdington's *Spoken Ford's Headbook for Spain*, 1861.)

ANDAMAN ISLANDS, or **ANDAMAR**, a chain of islands on the E. side of the Bay of Bengal, consisting of four principal islands, and a number of smaller, the former called, respectively North Andaman, Middle Andaman, South Andaman and Little Andaman; the latter separated from the others by a channel of about 45 m. in width called Duncan's Passage. The three first-named islands are separated by straits so narrow that they are often considered as one. The whole chain extends from $10^{\circ} 25'$ to $14^{\circ} 05'$ N; lon $92^{\circ} 23'$ to $94^{\circ} 15'$ E. In this extent, N and S. are included the island of Probaris, uninhabited, except by sea fowl, squirrels and apes, and the islands of the Cow and Calf, which, by some, are excluded from this group. The largest island Middle Andaman, is from 55 to 60 m. in length, and from 15 to 20 in breadth; N Andaman 48 m. in length and 15 in breadth; S. Andaman, 60 m. in length and varying from 10 to 30 in breadth; these three forming an all but continuous island of upwards of 150 m. in length. Little Andaman is about 30 m. in length, by about 18 to 20 m. in breadth. In the centre of the largest island there is a mountain, called Saddle Peak, about 3400 ft. high. These islands are mountainous, and form the continuation of the volcanic line from Sumatra. The only active volcano, however in the group, is on Barren Island which is uninhabited, and sparingly covered with shrubby vegetation. It is 1700 ft. high and its last recorded eruption took place in 1792.

There are no rivers in any of the islands, but only brooks, which in the rainy season are swollen into torrents and in the summer season are quite dry. Wells, however, are numerous. The chief riches of the group consists in wood, with which about nine-tenths of their surface is covered. Teak, sambar red wood, iron wood, ebony, the turpentine tree, casahuate, cotton, melons, also bamboo, cane, and vast quantities of coconuts, whereas two of the islands are named, constitute the most important vegetable productions. There are few wild animals, the principal are the rat, the snake, the gaur, or lizard, and a number of diminutive swine. Birds are neither numerous nor in great variety. The Hirundo aculeata builds in the sea cliffs its edible nests. Fish are very abundant, more especially during the N.E. monsoons and constitute along with shell fish the principal food of the inhabitants, who are true ichthyophagi, resorting to wild fruits, roots, rats, snakes, and lizards, only when fish are scarce. The natives do not eat their animal food raw, but roast it on the coals. They are of the Papuan race, generally about 5 ft. in height, of a deep black complexion with woolly hair.

Vol. I

flat noses, thick lips, small red eyes, and protuberant bellies. They are no covering. Live in the modest huts composed of four poles intertwined with rattans, their bed a heap of dried leaves; they have no implements of iron their spears and arrows being pointed with fish bones, or wood hardened in the fire. They carry bows 4 or 5 ft. long, and to protect themselves from insects, smear their bodies daily with mud which added to the red ochre with which they besmear their hair gives them a most hideous appearance. The canoes with which they fish and which they manage with dexterity are made of bamboo, but when visiting the islands they use small rafts. In 1791 the English effected a settlement near the S. extremity of the Great Andaman but in 1798 removed it to Port Cornwallis, on the E. side, and near the N. extremity. The object of the undertaking was the procuring of a good harbour to shelter ships during the N.E. monsoons and to receive convicts from Bengal, but in 1796, the situation was abandoned as unhealthy. All the sites fit them or subsequently made to establish any kind of intercourse with the natives proved ineffectual as on every occasion, they manifested the most hostile disposition. The poj of the entire group does not exceed 8000.

ANDAY, or **ANDALIA**, a river. See an affluents of the Francisco, prov Minas Geraes runs in the Serra Mata Gorda, about lat $19^{\circ} 10'$ S. flows N.E. by N and falls into the Francisco at lat 18 $10'$ S. its whole course being about 120 m.

ANDAYE, or **HENDAYS** a small seaport in France, dep. Basses-Pyrénées 12 m. N.W. Bayonne on r bank, 11 d'arcua a little above its embouchure. It has a small fort and several distilleries, in which excellent brandy is produced. It was near this place that the Duke of Wellington crossed the Bidassoa in 1814, and gained the first victory footing in the French territory. Pop. 470.

ANDEER a m. Switzerland can Grisons, 1 bank Rhine 14 m. S.E. V. Corra. It stands about 3400 ft. above the level of the sea. has a pretty situated wetish climate and mineral springs, at which a bathing establishment has been created. The springs are very copious but not much frequented. A very large landslide or *bergsturz* occurred above Andeer in 1895. Pop. 549.

ANDEJAN See **ANDAD KHAN**.

ANDELFINGEN a vil Switzerland can. of and 16 m. N from Zürich esp. hall of same name 1 bank, Thur over which is a covered bridge. It is the seat of a civil court. The inhabitants are chiefly occupied in agricultural pursuits. Several engagements took place in the vicinity 1799 between the Austrians, Russians, and French. Pop. including that of some adjacent hamlets 2400. — The **RAIL**, which has on both sides the Thur and borders on Solothurn and the Rhine, is well cultivated, fruitful and produces good grapes, grain and hemp. Pop. 14,480.

ANDREJ a small river France, dep. Seine Inférieure It rises near Farges and falls into the Seine a few miles below Pont-de-l'Arche, after a course, from N to S of about 30 m.

ANDELYE (Lam) two tes. France, called Le Grand and Le Petit Andely distant half a mile from each other dep. Eure, r bank Seine 19 m. S.E. Rouen, and 4 m. from the Paris and Rouen Railway cap. arrond. of same name. Grand Andely was formerly fortified, and part of its defenses still exist. Its houses are ill built, and its streets narrow, but its church is one of the finest in the department. Petit Andely which lies nearest the Seine here spanned by a suspension bridge, owes its origin to Richard Cœur de Lion which, in 1194, built here, on his return from Palestine the chateau Gaillard, in its time one of the strongest fortresses in France, and in which David II. King of Scotland, found an asylum in 1334. This interesting building is now wholly a ruin, it having for a considerable time been used as a quarry whence to obtain stones for building convents. Manufactures—Flax cloth, cambric, cotton net linen, cardenware, woollen and cotton thread. Trade in grain wool cattle, linen, &c. Pop. 3406.

ANDENNE a m. Belgium cap. can. of same name prov. of and 15 m. E. Namur r bank, Meuse. It has a church five chapels, and a townhouse, but none of them buildings of note. The great staples are silk wares, porcelain, and tobacco pipes, for all of which Andenne is famous. It has also a paper mill and a cotton mill, both driven by steam. a

19

principle, several blacksmiths, tile works a work for making stoneware (red lead or varnish) and a blast furnace. In the neighbourhood are beds of pipe clay, quarries of marble, and mines of lead iron, and a kind of coarse coal called *serpentine*. The railway from Namur to Longe passes near *Anderab*. Pop. 4285.

ANDERAB or **ANDERAB**, a Territory in Batakoban, about 55 m. N. E. of Sabah, lat. 5° 45' N. lon. 114° 55' E. (L.) It lies at the junction of the rivers *Anderab* and *Kiaman* at the foot of a hill, and surrounded by fine gardens, fruit trees, and vineyards. It is a populous place and contains the storerooms in which are kept the silver brought from *Harau* and *Bendjehar* supposed to be a mine, or mines. (Ritter's *Erdbesch.*)

ANDERABIA or **ANDERABIA**, a small isl. Persian Gulf lat. 20° 41' N. lon. 55° 39' E. (L.) It is 4 m. long level and narrow; separated from the mainland by a strait 1½ m. broad, the navigation of which is very dangerous. Vessels are supplied here with fresh water.

ANDERBY a par. England to Lincoln 1846 ac. J. W. E. Allen. Pop. 250.

ANDERMAT or **ANDERMAT** a val. Switzerland ca. 171, 50 m. E. *Altair*, on an elevated plain, 540 ft. above the sea level, on the great route over the St. Gothard into Italy. It has a pretty church, two chapels, a convent of Capuchins, and a townhall. Cattle raising and the transit trade are the chief occupations. The cheese produced here is highly esteemed but from its softness is unsuitable for transportation. Though a mere village, *Andermat* is much visited by strangers, on account of the interesting scenery of the valley. But the principal object of attention is the celebrated *Devil's Bridge* which spans a fearful chasm at the bottom of which the Rhine rushes downwards with great violence. The old narrow arch and to be a construction of the 12th century rises 76 ft. above the stream. This rugged pass was in 1789 the scene of some desperate skirmishes between the Austrians, Russians, and French. Pop. 563.

ANDERNACH (anc. *Andernachum* or *Aufhausen*) a tu. Prussia, prov. Lower Rhine, gov. of 10 m. W. from Coblenz, in a plain, Rhine. It is surrounded by a strong wall, with bastions, which give it an air of great antiquity but its streets are narrow and dirty. It is of Roman origin, *Dromas* Caesar having encamped on the spot before the *Germani* era, and built a bridge over the Rhine. In 355, it was pillaged by the *Alamanni*, and, four years after was restored by the Emperor *Julian*. The building most deserving of notice in *Andernach* is the Dom, or parish church of the 15th century highly ornamented with bas-reliefs, and interesting specimens of sculpture. In the interior is a Roman tomb. The *Coblenz* gate is an elegant Gothic structure. Near it, on the *Coblenz* road are the ruins of the castellated palace of the *Archbishops* of Cologne, and not far off close to the river stands an old gateway supposed to have been built by the Romans. *Andernach* has long been famous for the production of two peculiar articles—*millstones* and *brass* or *brass*. The former were used by the Romans and are still exported to all parts of the world. They are composed of a species of basaltic lava, which is easily cut into large slabs, and used as door posts, etc. The iron is a species of *tafe*, which is chiefly found in the neighbourhood of *Brühl*, and is supposed to have been formed either by a torrent of volcanic sand, or showers of pumice and ashes which, falling into a lake, have then mixed with the materials deposited by it, and been converted into stone. To prepare it for use, it is ground to powder by mills, and then possesses the property of hardening under water. The ancient used it in the solid mass for armorial plates, and in the quarries of *Brühl*, where slabs, with Roman inscriptions, have been discovered. In addition to the millstones and iron, *Andernach* has a variety of products—paper, leather, potash, earthen pipes, wood charcoal, and mineral water resembling saltwater but still more effervescent, obtained from a spring in the neighbourhood. Near *Andernach*, various reefs of timber which descend the Rhine are collected into one great float, 1000 ft. long and 90 ft. wide, destined for Dordrecht in Holland. Pop. 3300.

ANDERLEIGH a suburb of Newcastle (which see)

ANDEROT *See* *Umanor*

ANDERSON a par. England, co. Dorset; 570 ac. 7 m. S. W. Blandford. Pop. 59.

ANDERSON the name of several places U. States:—1. A dist. and vil. S. Carolina.—2. A co. Kentucky.—3. A co. Tennessee.—4. A township, Ohio.—5. A township, Iowa.

ANDERSON (Clare) the E. point of the island of St. Lawrence, at the entrance of *Belknap's Strait* lat. 55° 0' N. lon. 158° 30' W.

ANDERSON'S INLET Australia, S. coast. A strait between *Cape Lupton* and *Patterson*. It is full of mud banks, and available for boats only.

ANDES (Tire) a range of mountains, of such vast extent and altitude, as to render them one of the most remarkable physical features of the globe. It commences at a point about 50 m. N. of the Straits of *Magalhães*, and about the same distance E. from the shores of the Pacific. From this point it proceeds in a continued line along the W. coast of S. America, at a distance from the sea varying from 20 to 160 m. the former occurring in *Bolivia*, about lat. 18° S., the latter in *Chili*, between lat. 35 and 40° S. Passing through *Peru*, it enters *Columbia*, where, about lat. 2° 28' N. lon. 76° 31' W. near *Papaya*, it throws off two branches, taking a N. E. direction towards the *Caribbean* sea. The main range, continuing its N. course, and then presenting much lower altitudes, traverses the isthmus of *Panama* or *Darien*, the state of *Nicaragua*, *Guatemala*, *Mexico*, and passing throughout the entire length of N. America from S. to N. under the names of the *Oregon* or *Rocky Mountains*, terminates at *Point Barrow* on the *Arctic Ocean* about 100 m. N. W. from the mouth of the *Mackenzie* river their whole length, thus considered amounting, to about 10,000 m. The name *Andes* is, however, usually restricted to that part of the chain belonging to S. America. It does not, however, consist of a single ridge, but of a series of ridges, narrow, more or less parallel to each other between which are several elevated plains or table lands. These mountains are known, also, in several places in S. America, by the name of the *Cordilleras* but a strict and well-defined appropriation of these names has not yet been made, they being called indifferently by the one and the other and hence a good deal of confusion and inaccuracy. A late intelligent traveller J. J. von *Tschudi* suggests that the name *Andes* should be restricted to the E. end, and that of *Cordillera* to the W. or that passing through the Pacific.

The *Andes* extend through so great a space, and present such a variety of aspects and conditions that in order to describe its ranges with more accuracy it has been customary to divide this immense chain into four portions—the *Patagonian*, *Chilian*, *Peruvian* and *Bolivian* and the *Columbian* *Andes* from the names of the countries through which they pass.

1. The *Patagonian Andes*, which extend about 800 m. are generally considered to commence in *Tierra del Fuego*, on the involved *Cape Horn* (3000 ft.) to lat. 55° 59' S. and lon. 67° 21' W. The mountains of this matter group, however seem to be distinct from the continental chain, which accordingly we reckon as extending from lat. 48 to 43° S. The range presses close on the Pacific Ocean and the average elevation scarcely exceeds 3000 ft., though several summits rise some thousands of feet higher notably *Monte Melimayo* (7400 ft.), *Tayaltas* (8090 ft.) and the volcanoes of *Coronado* (7510 ft.) and *Mitumadum* (8000 ft.). The lower portions of the W. slope are clothed with dense forests. Of the other side we have no knowledge, although the width of the chain scarcely reaches 40 m.

2. The *Chilian Andes* commence opposite the S. end of the island of *Chile*, and extend N. about 1750 m. to lat. 24° S. with an average width of about 180 m. They form a simple chain as far as the 35th S. parallel N. of which at the volcano of *Potocera*, a double range may be traced, a portion of which is called the *Parramilla* range, running parallel to the main chain and separated therefrom by the longitudinal valley of *Aspineta*, a barren district only 15 m. wide, but extending about 150 m. N. as far as the river *San Juan*. This chain seems to be connected, further N. with the *Pennine* range, E. of which is the *sierra Vilana*, province of *Boyle*, in *La Plata* and also in the province of *Catamarca* and *Bata* there are numerous offshoots and parallel ranges. The principal peaks, proceeding N., are the volcanoes of *Antuco* (16,000 ft.), *Mayra* (15,000 ft.) and *Tupungabo* (15,000 ft.), but the culminating point, not only of this portion, but of the entire range of the *Andes*, is the giant porphyritic *Sierra de Aconcagua*, which rises, according to *Capt. Flinck* and

Deeply 23,910 ft. above the sea, and is distinctly visible from Yalparaiso, 100 m. distant. The line of perpetual snow in these latitudes, is about 14,000 ft. above the sea. The Chilian Andes, under the 85th E parallel are about 150 m. from the Pacific but this distance decreases to about 80 m. in the latitude of Yalparaiso. Between the Andes and the shore are extensive plains, elevated from 1000 to 1500 ft. above the sea, and these are mostly clothed with forest trees and a rich vegetation, but the more elevated mountain regions are rocky and almost wholly without plants.

8. The *Purman* and *Bolivia* Andes comprise that portion of the range which, from the 24th to the 6th S parallels, include a length of 12-0 m. From its S. end to the Cerro Chiriquito, in lat. 21° 7' N. on 85° 40' W. which is about 95 m. S. by W. Potosi the Andes form one grand and continuous chain, but N. of this point the range bifurcates intercepting a lofty table land or longitudinal valley of the Desaguadero and Lake Titicaca. Both these parallel cordilleras—the W. or coast ranges which is called the cordillera of the coast, the other or E. the cordillera of Bolivia or Aconcagua—are of very great elevation and were once thought to comprise the highest summits of the whole range. But Mr. Peckham's observations in his second survey (1858-59) have proved this conclusion erroneous.

The following list comprises some of the principal summits on each side of the range, together with their position and altitude as given by that gentleman:

	Name.	E. lat.	W. long.	Alt.
1. Cordillera of the Coast.	Pelumbuco	18° 17'	69° 37'	23,250
	Parimacocha	18° 10'	69° 17'	22,000
	Umbelito	18° 13'	69° 17'	22,000
	Desaguadero	18° 13'	69° 3'	21,700
	Volcano of Arica	18° 10'	71° 23'	20,400
	Copacabana	17° 45'	69° 45'	18,400
	Chimbo (alt. snow)	18° 30'	67° 48' N. peak	21,100
2. Cordillera of Bolivia or Aconcagua.	Do	—	—	—
	Aconcagua	1° 52'	69° 33' N. peak	21,043
	Chimborazo	1° 52'	69° 33' N. peak	20,944
	Desaguadero or Illimani	18° 10'	69° 10'	20,400
	San Pedro de Atacama	18° 30'	67° 58'	19,200
	Monte Nevada	18° 10'	68° 14'	19,000
	Copacabana	18° 30'	69° 10'	18,100
	Chimbo	14° 57'	69° 10'	1,800

Hence it will be seen that, even in this district, the highest are W. not E. of the Desaguadero and Lake Titicaca, as was long thought by the most eminent geographers and, among others, by Humboldt, and by Peckham himself. (See his paper on the Bolivian Andes, *Ann. Jour.* vol. v. pp. 70-89). These parallel cordilleras, however, the widest breadth of which nowhere exceeds 120 m. are united in various points by enormous transverse groups or mountain knots, or else by single ranges crossing between them like dikes. The descent to the Pacific is exceedingly steep, the dip is also very rapid to the E. whence effects diverge to the level plains. The table land of the Desaguadero, thus enclosed, has itself an absolute altitude of 12,000 ft., a length of 400 m. and an area of 150,000 sq. m. A large E. offset, the sierra de Cochabamba, leaves the E. cordillera under the 17th parallel bounding the rich plain of Cochabamba N., and ending nearly under the 63d W. meridian at Santa Cruz de la Sierra. The two main cordilleras once more unite in the group of Vilcabamba, in lat. 16° S., about 120 m. S.E. of Cuzco, which is itself 8,300 ft. above the sea, and the united range then runs about 280 m. N.W. to the town of Huancayo whence it runs N.W. in two ridges, enclosing a plain 11,000 ft. high named Pisco or Huancayo, in lat. 10° 40' S. where the Andes separate into three nearly parallel chains—the E. Central and W. cordilleras, which enclose between them the rivers Huallaga and Upper Marañon. The W. or coast cordillera running N. as far as the group of Liza, near the S. extremity of Ecuador.

4. The *Columbian Andes* or *Andes of Quito*.—This portion of the range may be considered as commencing 6° lat. S., opposite the Point Agaña, where it takes a course nearly S. forming as in Chile, a double series of highly-elevated summits, enclosing longitudinal valleys, one of which, that of Cuzco, in the group of Aconson is 15,530 ft. high or nearly within the region of perpetual snow. N. of this point the chain again divides, the W. range comprising Monte Chimborazo (21,424 ft.), Illimani (17,890 ft.) and Pichincha (15,924

ft.) while on the E. range are the volcanoes Sangay (16,138 ft.), Tungurahua (16,434 ft.), Cotopaxi (16,875 ft.), Antisana (19,137 ft.) and Mount Cayambe (19,535 ft.) Shortly after entering New Granada, crossing the equator the chain, in lat. 1° 5' N., again meets in the knot or plateau of Los Pastos, on which are the volcanoes Cumbal (15,020 ft.) and Chiles but a little N. of the city of Pasto it once more bifurcates, enclosing the mountain plain of Abasco comprising the volcano of Parí (17,094 ft.) on its E. branch, and finally somewhat N. the town of Popayan. The Andes separate into three distinct ridges—the sierra de Chocó, running N. to the Isthmus of Panama, the sierra de Quindío, running E. of the river Cauca, and the sierra de Boma, extending E. of the Magdalena to Lake Maracaybo and the city of Valencia in Venezuela. N. of the 5th N. parallel, the only summits within the snow line on these cordilleras belong to the E. chain, which also is very precipitous on its S. slope. The plain of Bogotá lies at an elevation of 8,900 ft. On the Quindío or central chain is the volcano of Tolima (16,030 ft.) in lat. 4° 46' N. 75° 27' W. The Chocó or coast chain is of comparatively small elevation, its highest point not exceeding 9,000 ft. The mountains of Panama, which join the Andes N.W. may be considered as a continuation of the sierra de Chocó.

Passes and Roads of the Andes.—This gigantic mountain chain is traversed in its different parts by numerous roads or passes at heights almost equal to those of the extreme summits of the European ranges. Most of them are narrow rugged steep, and sometimes all rocky and dangerous, passing through gorges, across yawning chasms and up nearly perpendicular rocks. nor can they be attempted with success, except by the active and well practised native, or the enterprising, courageous and well-proved traveller. It is worthy of remark, however, that nearly all these roads cross the ridge, run transversely and direct, not as is sometimes the case in the Alps by a circuitous course through the longitudinal valleys. Subjoined is a list of some of the known mountain passes, with their position, exact localities, and highest elevation commencing with the Andes of Chili those of Patagonia being as yet quite unknown—

	Name.	Port
1. Chilean Andes.	Porfillo, lat. 23° 40' S., from Santiago to Retacada.	14,810
	Panguenza, do. do. do.	14,510
	Cumbal, lat. 23° 10' S., from Yumbal to Molino.	14,510
	Pass of Tropicana, from Potosi to Oruro.	14,100
2. Bolivian Andes.	Pass of Condor Pacheta, do. do.	14,040
	Pass of Pucallpa, do. do.	14,040
	Pass of Guallanca, lat. 17° 40' S., from Africa to La Paz.	14,750
	Pass of Chilio, do. do. do.	16,160
3. Peruvian Andes.	Pass of Alto de Toluca, lat. 12° 29' S., from Arequipa to Pisco.	16,600
	Pass of San Mateo, lat. 12° 40' S., from Tarma to Tarma.	16,700
	Pass of Tarma, lat. 12° 40' S., from Tarma to Tarma.	16,700
	Pass of Tarma, lat. 12° 40' S., from Tarma to Tarma.	16,700
4. Colombian Andes.	Pass of Tarma, lat. 12° 40' S., from Tarma to Tarma.	16,700
	Pass of Tarma, lat. 12° 40' S., from Tarma to Tarma.	16,700
	Pass of Tarma, lat. 12° 40' S., from Tarma to Tarma.	16,700
	Pass of Tarma, lat. 12° 40' S., from Tarma to Tarma.	16,700

Headen the routes just mentioned a great commercial road runs longitudinally along the Andes the whole distance from Truxillo, lat. 8° 5' S. to Popayan, lat. 2° 30' N., in the valley of the Cauca, not much less than 1,000 m. It runs by Loja (8,770 ft.) and by a pass over the Páramo de Aguayo to Cuzco (11,500 ft.) whence it proceeds by the Páramo de Bolina (15,500 ft.) to Pisco and Amargura (7,440 ft.) and Popayan (7,720 ft.). Six roads are reported to cross the sierra de Chocó, but they are difficult and steep, practicable only by carriages on the backs of the natives. These most used are from Cali on the Cauca to Port Buenaventura, from Cariego to Novita, and from Antioquia to the Rio Atrato. Many of these roads are exceedingly difficult to traverse, not only from the great height to which they ascend, but likewise from their roughness, unevenness, and narrowness, so that they often do along trunks of enormous precipices, and presenting so limited a pathway that frequently it becomes necessary to re-adjust the burdens on the mules' backs, lat, being left an inch or so too broad the poor animal may be driven over into the gulf below. Subjoined is a view of the pass near Tarma, a village in the Bolivian Andes, on the road between Arica and La Paz, and situated 15,600 ft. above the sea level. The pass itself is understood to be 14,400 ft. above

the sea though *Llano Alto* made it by the boiling point of water 18 000 ft. The nearest truncated peak is the volcano of Chiriquí, 19 740 ft high. These paths lead across quebradas or ravines, bridged sometimes by frozen snow on which

TAQURA PASS.—From *Quito*. Sketch by *John A. Smith*.

the mules cross. At times also progress is completely impeded by the large masses of rock that fall down and block up the path, frequently preventing for a time the passage of mules. In such cases or where the road has been swept away or where the path is inaccessible to four-footed animals, mules are borne by the *cargueros* or *curriers*, who not only transport baggage from one valley to another but also, in a chair strapped to their back, carry the traveller. I know of no easy mode of locomotion and not dangerous, though if a *carguero* generally takes the steepest declivities, when, were the traveller not to lie back in his chair both he and his bearer might be precipitated to the bottom. The accompanying view is of a remarkable pass between *Tacora* and *Lake Titicaca*. It is about 10 m. long, and the river which has formed it lies at the same time, cut the rocks into curious castellated forms. The pathway is blocked up by a fallen mass of rock. The difficulty of traveling in these

ALMORAR PASS.—From *Quito*. Sketch by *John A. Smith*.

regions presents a serious obstacle to the progress of commerce and of general improvement, and tends much to preserve the primitive habits of the people, by shutting them out in a great measure from intercourse with the external world.

Rivers and Lakes.—From the Andes rise two of the largest water systems of the world—the Amazon and its affluents, and the *La Plata* and its affluents. Besides which, in the N. from its slopes flow the Magdalena to the Caribbean

Sea, and some tributaries to the Orinoco and in the S. the rivers Colorado Negro, and some smaller streams. All these rivers flow towards the Atlantic Ocean. The mountain chains cross flow from the W. slopes. The number of lakes interspersed through this vast mountain system is not great. In this respect presenting a striking contrast to the *Sierra Alpa*. The largest and most important, and only one worthy of notice is that of *Titicaca*, on the Bolivian plateau. It is 12 850 ft above the sea level, about 115 m. long, by 35 broad surrounded by lofty mountains. On its banks are some considerable towns, and its waters are navigated.

Geology.—In considering the geology of the Andes the first fact that strikes the observer is the vast development of volcanic force along the whole length of the chain, and even continued N. through Guatemala and Mexico. These volcanic vents seem to occur in linear groups, the most S. of which is that of Chili, extending from the 42d to the 33d parallel and comprising besides, more than a dozen extinct volcanoes. It still is a state of *Ignition* the more remarkable of which are *Tupungato* (15 100 ft.) *Antuco* (18 000 ft.) and *Minchinmadon* (8000 ft.) From the 30th to the 27th parallels, no volcanic action is to be found but in the Bolivian Andes, and principally W. of *Lake Titicaca*, are eight active craters, among be mentioned *Gualatieri* (22 000 ft.) *Atacama* (19 740 ft.) and *Arequipa* (18 400 ft.) as far as the 24 S. parallel there are no active but here we arrive at a cluster of highly volcanic character comprising eight lofty summits now in an *igneous state*—*Bangay Tungaragua*, *Colapaz*, *Anahuta*, *Imbabura*, *Cumbal*, *Pasto*, and *Parícuta*. As respects the geological formations of this gigantic range granite, which is abundant in *Tierra del Fuego* and *Patagonia*, seems to be the base of the whole but it comes so rarely to the surface in the N. parts of the chain that, according to *Humboldt*, a person might travel for years in the Andes of Peru without meeting this species of rock and he never saw any at a greater absolute elevation than 11 500 ft. Granite is sometimes found in connection with the granite but mica schist is by far the commonest of all the crystalline rocks. Quartz is likewise extremely abundant, generally mixed with mica, and rich in gold and specular iron. Vast tracts of red sand stone, with gypsiferous and siliceous marls, occur near *Quito* and not only on various parts of the main range, but in E. Colombia and Venezuela they spread over immense tracts here and there associated with coal, as in the Andes of *Parícuta* in Peru. Porphyry and gneiss occur about all over the range at every elevation, both on the slopes and extreme ridges and trachyte is almost as abundant as porphyry both in Peru and Chili great masses of it, from 14 000 to 16 000 ft. thick being visible on *Chimborazo* and *Pichincha*. Basalt, of columnar structure, enclosing olivine, and overlaid by thick beds of clay is found on the table land of *Quito*, near *Popayan* and on the W. bank of the *Cañon*. As respects volcanic products, the W. face of the Andes presents immense quantities of lava, tufa, and obsidian none of which are found on the E. side this remark applies especially to that part of the chain lying between Chili and the equator. Fossil remains are by no means common but in the *limestone* strata of the coast, towards the N. extremity of the range, *Humboldt* found many marine shells, of the latter others of the same era, at a height of 17 500 ft. on *Mount Ambato*, in Bolivia, as well as in several other parts.

Earthquakes.—Many of the volcanoes, as before observed are in a state either of constant or occasional action; it cannot, therefore be matter of surprise that there should be frequent and violent earthquakes. All the districts of the Andes system, but Chili especially have suffered more severely from these oscillations than any other part of the world and among

an period about 80 m. from the coast) and *Pastland* observed others of the same era, at a height of 17 500 ft. on *Mount Ambato*, in Bolivia, as well as in several other parts.

the towns either destroyed or greatly injured by these visitations may be mentioned Bogota, Quito, Riobamba, Lima, Callao, Valparaiso, and Concepcion. In 1819, Copacabana was entirely overthrown not a house being left standing. Concepcion was twice destroyed—in 1780 and 1781. And on Nov 21 1822 an earthquake was felt on the same day not only there in lat. 37° N. but at Lima, in lat. 12° N. more than 1700 m. distant. It was on this occasion that Valparaiso, Malpalla, and Quilima, were all but completely annihilated. This earthquake, too, had the remarkable effect of upheaving the land on the coast, upwards of 100 m. in extent, to the height of 8 or 4 ft. and elevating a portion of the shore above high water mark. These shocks continued at brief intervals till the autumn of 1823 and since that time the volcanoes of Maypú until then for many years quiescent, have had frequent eruptions. In fact, earthquakes, slight or more serious, are of yearly occurrence, and faint oscillations of the soil are regarded with scarcely more attention than a bad storm in the temperate zone. When they assume a serious and destructive character however they strike natives, as well as travellers, with impressions of awe and dread, which no familiarity with their occurrences can at all weaken. The natives, when aroused from sleep by the shock, rush forth in terror into the open air and the traveller although he may before have treated the matter with levity and mocked at the fears of those around him is in turn panic-stricken and involuntarily seeks safety in flight (*Revue des Proux*, pp. 169-172).

Mineral Products.—The Andes are rich in the precious metals than any country in the world excepting the plateau of Mexico, and the rivers of California but, however great the supplies that have been obtained from them, there can be no question that the produce of the mines would be immensely increased, if a rational and scientific method of operation were substituted for the present rude and clumsy mode of working. In Chili, the largest gold diggings are in the districts of Potosí, Copacabana, and Copalpo; the richest in Peru are in the provinces of Potosí and Huancabamba, and on the banks of the Tizayasu of the Lake Titicaca, and in New Granada, the most productive lavaderos or washings are in the provinces of Antioquia and Cauca, on the valley of the river Cauca, and on the Pacific in the district of Barrocas. The largest piece of gold ever found in New Granada weighed 25 lbs. but near La Pasca, one has been found of nearly double that weight. As respects the annual produce of this metal no very exact estimate can be formed, but it probably somewhat exceeds in value £2,000,000 sterling. Silver occurs in Chili, on the Cerro de Uspallata 34 m. N. by W. Mendoza, where the ore yields about 50 per cent. of pure silver. The Peruvian Andes have numerous silver mines scattered over their whole extent, from the province of Cajamarca S. to the confines of Chili but incomparably the richest are the mines of Llanos de Chila, in the Cerro de Potosí which have been worked upwards of two centuries. The returns fluctuate exceedingly but they may average annually about £500,000 oz. which, at 4s. 6d. per oz., are valued at £2513 500. The mines of Chota likewise, which are situated on Mount Huancayo (15,800 ft.) are productive. The ore, which is richer even than that of Pasco lies either on or very near the surface and the returns may average annually about £70,800 oz. of the value of £184,800 sterling. Close to the Pacific, at Huancabamba, in the district of Arica, are several mines celebrated for the quantity of virgin silver found therein, sometimes in masses of great weight. But of all the mines of S. America, the most famed are those of the Cerro de Potosí lat. 19° 35' S. which is perforated, in all directions, by thousands of openings, some of which are within 100 ft. of the summit (15,000 ft.). In order to drain the lower mines of Potosí an adit has been constructed 1½ m. long, and 14 ft. in height and width. In New Granada, likewise, there are rich veins of silver; but no mines have as yet been opened whose products pay the expense of working. As respects the entire amount of silver in all the districts of the Andes, it is not possible to arrive at any exact statement but it will not probably be far from the truth to estimate it as equal to 2,900,000 sterling less than one-half of its amount half a century ago! If this be correct, the grand total value, annually of the precious metals, gold and silver produced in the Andes, S. of the Isthmus of Panama, may amount to £2,140,000 nearly one-third less than it was, as estimated by Humboldt, in 1804. Subjoined is a statement of the estimated produce

of all the gold and silver mines in 1840 and probably these numbers are not far from being correct as regards the present time:—

	Dols.	£
Peruvian mines	4,370,000	1,046,000
Bolivian mines	2,000,000	500,000
Chilian mines	5,500,000	600,000
	12,870,000	2,146,000

It must be recollected, however that a very considerable quantity of gold and silver is exported by contraband traders, without being sent to the mint to be coined, this may amount to one-fifth more, making the total equal to £2,570,000.

Quicksilver is found in several parts of the Andes, but impure in combination with sulphur forming the red sulphuret of mercury commonly known as cinabar. Near Asogod 15 m. N. by E. Copacabana, the ore is found in an immensely thick bed of quartzite sandstone containing fossil wood and asphaltum. Formerly the quicksilver mines of Mount Ismael Barba (12,800 ft. high) near Huancabamba, were in high repute for their amazing productiveness they were situated in a compact sandstone resting on a bed of magnesian limestone and were said to yield, on an average 800,000 lbs. of the metal annually. In 1789 however the mine was destroyed through the ignorance of a stupid manager who ordered its pillars of support to be dug away and the roof consequently fell in, and closed it. Copper is found both in the E. and W. cordilleras of Peru but the E. chain is too far from the coast to admit of mines being profitably worked. The mines of Chili are the most valuable. They are situated chiefly in the N. provinces of Coquimbo and Copacabana but also in the district of Araucano, and the total produce may average, annually about 14,000,000 lbs. which are exported to the U. States, China, and many parts of Europe. Tin also wrought in Chili forms an article of export but lead and iron though plentiful are not wrought.

Climate and Meteorology.—Snow of course is a fall between the tropics except on the tops of very high mountains. In the Andes, near Quilo the lowest level of perpetual snow is 15,795 ft. above the sea, and from this it varies very irregularly both N. and S. Under the 18th N. parallel, in Mexico it descends to 14,772 ft., while on the S. it rises to 18,000 ft. In some of the N. cordilleras of Bolivia, owing to the intense solar radiation from the plains and valleys beneath. Rod Pentland and Phipps however found the snow line generally between 11 and 17 ft. to be at an elevation of about 17,000 ft. It sinks to 13,800 ft. at Copacabana to 12,780 ft. near Yalparaiso it is only 8300 ft. at the S. extremity of the Chilean Andes and finally as low as a height of 5400 ft. in the Straits of Magellan (*Bonnaville's Phys. Geog. vol. i. p. 80 81*). Notwithstanding, however the great number of snow and snow-mountain glaciers are of rare occurrence in the Andes, being found only and then of but small extent, in the narrow ravines which furrow the sides of some of its giant summits. It is worthy of observation also that Mr. Darwin on crossing the Furells in the Chilean Andes, found the *Proteozoa muscosa* or red snow so well known from the account of Arctic navigators (*Advent. and Beagle vol. II. p. 304*). On the W. side of the range, little or no rain falls, except at the S. extremity and scanty vegetation appears only on spots, or in small valleys, watered by streams from the mountains while, on the opposite slope, excessive heat and moisture combine to give the range a thick covering of tangled forest trees and dense brushwood. Currents of cold W. and N. winds blow nearly all the year from the wet-topped cordilleras, on the plateau beneath, daily accompanied, during four months, by blinding lightning, and more storms. The thermometer during the cold season (here called summer) ranges from 58° at midday to 31 during the night whereas, in winter the mercury rarely falls, even in the night, below freezing point, and ascends at noon only to 48°. The mean temperature, however cannot be precisely determined for the heat, within a few hours, will often vary from 40° to 45° and the cold is the more sensibly felt from being usually accompanied by distasteful biting winds, so keen as to cut the skin on the face and hands. Currents of warm air are also occasionally found on the crest of the Andes they usually occur two hours after sunset, being both loud and roaring like the hot blasts in the Alps not exceeding a few fathoms in width they run parallel to each other and so closely that five or

als of them may be passed in a few hours. They blow chiefly from S. W. to N. N. E. and are especially frequent in August and September (Viehard's Peru, p. 803). Dr. Pöppig, on crossing the Chillan and Peruvian Andes twice observed a curious kind of earth light, an indescribable reddish light, not seen in winter or on sunny days, and ascribed by him to the dryness of the air which is, from the same cause, singularly transparent and highly charged with electricity. My flannel waistcoat, says Mr. Evering, when rubbed in the dark, appeared as if it had been wet with phosphorus every hair on a dog's back crackled, and even the linen of coats and trousers straggled of the saddle when handled, emitted sparks. — (Vol. I, p. 598.)

Vegetation.—In the low burning places that flank the bases of the Andes ridge the banana, cyano, plantain, *Theobroma cacao* *jatropha*, producing the cacao and manioc whence comes sapota, the cotton tree indigo and coffee plant, and sugar cane, all of which are extensively and profitably grown below the altitude of 4000 ft. Maize is likewise plentiful and may be said to form the bread of the Peruvians. It is of three different kinds and, according to Humboldt, is cultivated 100 ft. above the sea. Within the same limits also are found either wild or cultivated, the pine apple, pomaragon, shaddock, orange, lime, lemon, peach, apricot, the delicious cherimoya, butter-like pella, the granadilla, tamar, and paeony together with olives, fig or pepper plants, tomatoes, and sweet potatoes, and gum opal copaliba balsam carana, dragon's blood casapilla and vanilla. To these groups succeed in the humid and shaded clefts on the slopes of the cordillera, the tree fern, and cumbous or masticella, from which we derive a feather bark and quinine. Between the heights of 6000 and 9000 ft. is the climate best suited for the European cereals. Wheat, on the Peruvian and Colombian Andes, will seldom form the ear lower than 4500 ft. or ripen higher than 10,000 ft. of absolute height, but barley and rye being more able to bear the cold rise 2000 ft. higher. The agriculture of the sierra is wholly consigned to the natives, who either labour on their own account or on very low wages for the half castes or mestizos, the ground is ploughed and sown in September and October the crop is reaped in April or May. The barley however grows as fodder grass, even higher than lucerne, which is not found above 11,200 ft. To this may be added the guano (*Caesopodia guano*) a most useful production for domestic use. In this region also and a little above it grow the potato indigenous to Chili, and the ones introduced into Europe; and its tuberoses congeners, the manio, yuca, and manio, all of which are pretty extensively used as food and here likewise grow the chick pea, broad bean, cabbage, and other European vegetables. Within the cereal limits are found the oak elm ash, and beech, which never descend lower than 5500 ft. and seldom rise higher than 9200 ft. above the sea. Above this level the larger forest trees, except the pine, begin to disappear and on the Andes of Quito the acacia form the highest limit of trees at a level of 11,600 ft. The highest of shrubs, terminate at 15,400 ft. above the sea, above which, in cold and barometrical verdure, rises the zone of the grasses, one vast savanna, extending over the immense mountain plateau, and reflecting a yellow almost golden tinge to the slopes of the cordillera. Where the naked trachyte rocks pierce the grassy turf and penetrate into those higher strata of air which are supposed to be less charged with carbonic acid we meet only with plants of an inferior organization as Heliconia, Ilex, and the brightly coloured, daisy-like *Lepanthes*, scattered around in circular patches. Traces of fresh ferns more varying in form and extent, across the last fertile traces of vegetable development, and to these succeeds the region of perpetual snow. — (Humboldt's Cosmos, vol. I, p. 14.)

Zoology.—The fauna of the Andes is still very imperfectly known. Among the mammiferous animals, the principal are the jaguar puma, ounce, ocelot, and wild cat. There are also bears, tigers, racoons, wild dogs, foxes, and others, with both red and rose deer. The characteristic animals of the Andes, however are the llama and its different congeners—the guanaco, vicuña, and guanaco. They are the chief basis of burden on the Andes and especially in the sierra where they are of the most important service, as they frequently carry the metal from the mines, in places where the declivities are so steep that neither mules nor mules can keep their footing. The burden carried by them should not exceed 125 lbs. for

otherwise they will lie down and refuse to carry it, and their daily journey must not be more than eight or nine miles. The alpaca is smaller than the llama, and of more elegant shape, but differs little in habits and nature. Its fleece is peculiarly soft, and very long, sometimes exceeding four inches; and of this wool the Indians make blankets and ponchos. It is also largely exported to Europe, and is now in great use as a material of dress. The guanaco is the largest of the American camellids, but has coarse wool and is with difficulty tamed as a beast of burden. Few more beautiful however than any other of the family as the vicuña, which, unlike the rest, has a beautifully soft, short, and curly wool it runs wild in the mountains and is regularly hunted by the Indians. The forests of the warmer regions abound with marmosets, monkeys, and rabbits. Many varieties of serpents are found lurking in the grass, or beneath the dead leaves several of which are more or less poisonous, but the most deadly of all is a small viper found in Peru whose bite will destroy human life in two or three minutes. Bats are likewise exceedingly numerous, and of large size, some measuring nearly two feet across the extended wings. The vampire (*Desmodus*, D'Orbigny) seeks its food in houses and stables and is frequently a source of great annoyance to the horses and mules, the injury being generally not so much owing to the loss of blood, as to the inflammation afterwards ensuing. The condor a kind of large vulture, soars over the highest summits of the Andes, and makes its nest among the highest and least accessible rocks. The turkey vulture, and gallinazo are also frequently met with wild mountainous turkey parrots, and parrots are common in the woods, and there are many varieties of smaller birds. — (Viehard's Peru *Voyage of the Beagle* Humboldt's Cosmos and *Humboldt's Pamphlet of La Laguna de Titicaca* *Somerville's Physical Geography* *Jour. Roy. Geo. Soc.*)

ANDEYORI RANTE, or ANDEYORISTO, a large vill or town, 11 miles, Madagascar. L. bank, and near the entrance of a river of the same name lat. 19° 0' S. lon. 49° 0' E. The town consists of about 500 houses and the pop about 2000. The inhabitants both male and female, are of a lively and active disposition neat and clean in their persons, and well clothed. Their houses also are more commodious than those in most other parts of the island. This property they owe chiefly to the fertility of their soil which produces rice in great abundance, and to an extensive intercourse with Europeans, who come there to purchase rice.

ANDIARY the name of two vill, W. Africa Bonde country lat. 14° 0' N. lon. 13° 0' W. One of them is a large and thriving place, with neat houses. The people possess large flocks. In the environs palm trees abound.

ANDKHOO ANDKHU or ANDKH a small Independent Tur territory cap of a small Khanat of the same name, N. slope of the Hindu Kush mountains about 70 m. W. Balkh lat. 36° 54' N. lon. 66° 22' E. The Khanat of Andkhoo consists of a small territory 80 m. square, ruled by a petty chieftain who is generally dependent on Cabool. The capital lies on the banks of a considerable stream which rises among the Hindu Kush, and is lost in the plains of Bokhara. It is advantageously situated on one of the great commercial routes between Bokhara and Afghanistan, but the district is scantily supplied with water. The number of houses is about 4000. Pop. composed of Soones Mahometans, 25,000 to 30,000.

ANDLAU ANDLAU, a town in France, dep. Ha-Rhin 10 m. N. N. W. Rohrbach on the Andlan foot of the Vosges mountains, at the entrance of a narrow valley enclosed between hills plain level with rivers. Potash is made here. There are also flour and bark mills, and a mill for spinning worsted. Pop. 1486.

ANDO or ANDOR one of the Lofoden Islands, off the N. W. coast of Norway 35 m. in length from S. E. to N. W. and about 10 m. breadth (N. point) 89° 20' N. lon. 16° 5' E. (s.)

ANDOAIN a small town, Spain, prov. Biscaya, 6 m. San Sebastian on the Orta, and near the point where the road from San Sebastian falls into the great line of road from Biscaya to Madrid. It is one of the stopping places of the French mail. The church is spacious, and constructed chiefly of paper with curious painted staves of alamo wood. There is an iron foundry in the town. Pop. 1480. — (Hughes *Spain and Portugal*.)

ANDORA, or **MARINA D'ANDORA**, a tn. Sardinian State, territory Genoa, cap. dist. Albenga, on a hill near the sea, on the W coast of the Gulf of Genoa lat. 43 57 N lon. 8 19 E. 8 m. S. S.W. Alamo. Olives and vines are cultivated in the vicinity.

ANDORRA LA VELLA, a tn. Sardinian State, prov. Biella, 18 m. N.E. Ivrea on the Cervo. It lies in a valley which contains 10 villages and 12 000 inhabitants, the greater part of whom are engaged in the iron copper and lead mines of the neighbouring mountains. It is the birthplace of the painter Gagliati.

ANDORRA LA VELLA, the cap. of the neutral state of Andorra, 36 m. S. Fox in France, and 11 m. N. Urgel in Spain. It lies at the confluence of the torrents Enladré and Ordino affluents of the Segre. Pop. 2500.

ANDORRE or **ANDORRA** [*Andorra*, *Andorra* A place thick with trees] a small independent neutral state, comprised in three mountain valleys, in the N of Catalonia in Spain, on the S side of the Pyrenees, and N. of dep. Arriège in France, extending from N. to S. about 80 m. and somewhat less from E. to W. with an area of about 191 sq m. This district, which is among the wildest in the Pyrenees, is watered by the Enladré, Ordino and Os, affluents of the Segre, which is itself tributary to the Ebro. It comprises very little arable land, but extensive pastures and the mountain sides are well clothed with building timber which is floated down the Segre and Ebro to Llorca at Cades, also there are thermal springs. Andorra is governed by its own civil and criminal codes and has its own courts of justice, the legislative power being vested in a council of 24 representatives, elected by the six communes into which this state is divided, and presided over by a syndic or procurator-general who holds his office for life. The laws are administered by two *sucers* or judges one of whom is chosen by the republic of France, the other by the Bishop of Urgel in Spain and both of whom act on occasion as supreme military commanders. All the male inhabitants are liable to military service, and provided with firearms, each parish company being commanded by a captain and two subalterns.

The commerce which is wholly free from import, is confined to a few necessary articles and the Andorrans enjoy the additional privilege of annually receiving from France duty free, a certain quantity of cattle, sheep, hogs, horses and mules, salt, fish, corn and cloth. Iron is wrought in several mines its manufacture into tools and implements being also conducted to some extent but this, and every other branch of industry is carried on in the rudest and most primitive manner. The inhabitants, all of whom are strict Catholics are extremely simple and austere in their manners ignorant and indifferent to the luxuries of cities their wealth consisting either of cattle and sheep, or a share in the iron mines and in very few being owners of any land beyond a small plot adjacent to their cottages. Their clothing too is equally simple and rough, composed of coarse brown woollen cloth of home manufacture. Each family has a chief determined by primogeniture and these always choose their wives from families of equal rank with their own. The young men always reside with their parents until they marry and, unless married, they are allowed no share in the management of public affairs. Education is at a low ebb but in each parish there is a school, in which the children are taught gratuitously. The common language of the people is a dialect of the Catalan. In person, the Andorrans are strong and well proportioned almost unacquainted with disease and nearly equally so with crime. The total pop. of the state is estimated at 18,000. This remarkable little republic owes its independence to Charlesmartin, who gave the people the privilege of governing themselves with their own laws and these rights were further confirmed by his son Louis le Delfinnaire, who, nevertheless, ceded the spiritual superintendence to the Bishop of Urgel. These rights have ever since been respected by the French whom they accordingly hold in high esteem.

ANDOVER, a par. bor. market tn. and par. England co. Hants. The town is beautifully situated near the Anton 11½ m. N. by W Winchester and 6½ m. S. W. by W London, on the great road from the latter city to Salisbury. It contains three principal streets, is completely built with paved, lighted with gas and amply supplied with water. The church, which was recently completed at a cost of nearly £30,000 is

a spacious edifice in the early English style. There are, besides, four Dissenting chapels a free grammar-school national and British schools for boys and girls, an infant school and almshouses for a certain number of poor people of both sexes. The townhall is a large handsome building, with a Grecian front supported by arches under which a considerable corn market is held every Saturday. The chief business of the town consists in the manufacture of silk, which has superseded shalloon, its former staple and the timber trade which was formerly carried on to a considerable extent, has for some time been discontinued. The town is governed by a mayor four aldermen and 12 councillors. It returns two members to the House of Commons. Neglected alms-houses (1650) 352 there fairs annually chiefly for horses, sheep cheese and leather. Near the town are several ancient castles and some beautiful specimens of Roman pavement have been discovered in the neighbourhood. Andover gives the title of Viscount to the Earl of Suffolk. Area of par. 7070 ac. 1 sq (1641) 4941.

ANDOVER, a tn. U. States, Massachusetts co. Essex 23 m. N. W. Boston beautifully situated on the river, Merrimack. Its manufactures are considerable but it is chiefly remarkable for two educational institutions—Phillips Academy founded in 1788 and the Andover Theological Seminary founded in 1807. Each institution has about 130 students. The Theological Seminary is conducted by a president and four professors, and the library contains about 18,000 volumes. A normal seminary for the training of teachers was founded at Andover in 1830. A railway from Woburn to Haverhill passes through the town which is about 7½ m. from the former 10½ in 1840 5207—(C. States Genl.)

ANDRAIX or **ANDRACH** a tn. Spain, al. Mayence, W side 14 m. W. by S. Palma. The squares and streets are generally well constructed clean and spacious. In the town are a parish church chapel endowed school, and a town house of the fourth class. The male inhabitants are chiefly occupied in fishing and agriculture the women in spinning wool and flax. Pop. 4609.

ANDRAKILL a tn. Sweden prov. of a 144 m. S. W. from Christianstad, 9 m. W. from the shores of S. of Ballo. The manufacture of alum is carried on here to a considerable extent, the annual product being about 4167 barrels.

ANDRATA HAY Madagascar E coast, about 60 m. S.E. Cape Amber lat. (1 very head) 12 58' 48" S lon. 48° 56' 30" E. It is about 1½ m. in extent, of circular form with an island in its middle of the circumference, level ground of from 4 to 6 or 8 fathoms on either side, but reefs project from the N and E extremities of these islands. The bay is open to N and N. E winds but there a year or so ago good shelter from E. winds, in 4 or 5 fathoms at the N. extremity of the bay.

ANDRE (St.) with or without an affix, the name of numerous places in France, of which may be named—1. *André-d'Arles* (St.) a tn. dep. Charente, 12 m. N. N. W. of the sea near the r. bank of the Dordogne. It has an ancient church, and some trade in grain four horses, poultry and cattle. Pop. 1554—2. A tn. dep. Hérault, 13 m. N. W. Montpellier. It has a considerable trade in fruits and rough grain. Pop. 9079—3. A tn. and com., dep. Gard, 13 m. N. E. of Nîmes among the mountains, on one of the branches of the Garonne d'Anduze. Pop. 1820—(Murray's Handbook for France.)

ANDRE or **ENDRE** (St.)—1. A market in Hungary co. Pesth r. bank Danube, 11 m. N. Buda. It has a R. cathedral and seven Greek churches, although the members of the latter do not exceed 1000. This originated in the immigration of the Serbians under Leopold I. when each found its own place of worship. The inhabitants are principally occupied in the cultivation of the vine, from which they produce excellent wines. Pop. 8000—2. A tn. in the Danube, opposite to the town, 14 m. in length, and 1 in breadth remarkable for its great fertility.

ANDREA (St.) a vil. Naples, prov. Principato Ultra, 5 m. S. E. Capua. Pop. 2500.

ANDREAS a par. England, Isle of Man, 3 m. N. W. Ramsey. Pop. 2165.

ANDREASBERG a tn. Hannover, in the mining dist. of, and 16 m. N. E. from Klausthal 18 m. S. W. Elbergrunde on

the declivity of the Andrefberg, at the S. foot of the Brocken, 1636 ft. above the sea. It is the second in importance of the mountain towns of the Upper Harz, and owes its origin to the valuable mines of iron, silver lead, copper cobalt, and arsenic, which exist in the neighbourhood, and was first placed at the commencement of the 16th century. The silver furnace, which stands about 1½ m. S.W. Andrefburg, on the Spess-Lutter and at the foot of Mount Andrefburg, produces annually 5273 silver marks nearly £2500 sterling; 80 tons lead and 2 tons copper. In 1294 a piece of silver ore, weighing 80 lbs. was found in one of the mines near the town, and was preserved in the cabinet of natural history at Göttingen, till 185, when it was stolen. The town is divided by the market place into the upper and lower towns, and has been much improved since 1795, when, after a great fire it was rebuilt, with much wider and more regular streets. Still most of the houses are of wood, and have shingle roofs. The best buildings are the church the townhouse, the poor's house, and a school for boys and girls. Among the employments of the place may be mentioned the roasting of canary birds, by the miners, while their wives spin yarn, and wool lace. The climate of Andrefburg is severe. In winter the snow lies long and deep. Considerable numbers of cattle are raised in the district and though agriculture is not in an advanced state, crops of oats barley summer rye and potatoes, are obtained. Pop. 4300.

ANDREFVA or ENDEMI in a Russia, gov. Circassia, principality of Koonkue 40 m. S. Azhar. It is the chief place of a Tharar district formerly governed by chiefs really or nominally subject to Russia. There is some trade in the place including a traffic in slaves. There are here some Muslim seminaries for Circassian youths. Pop. of the about 12000.

ANDRENOVIAN ISLANDS, a group of the Aleutian Islands (which see).

ANDRELO (Sax) a tn. Canary Islands, in a beautiful and healthy little valley in the E. of the island of Palma. A few of its houses are grouped together in the centre, but the remainder are scattered. It has a church, four lemniscates, a school and a *monasterio* and in the vicinity wheat, barley maize, sweet potatoes, lemons, arch, grapes, and other fruits are raised. Pop. 2630.

ANDELITA a small tn. Naples, prov. Principato Citra, dist. of 5 m. E. from San Angelo de Lombardi pretty situated on a hill. Pop. 4699.

ANDREVA (Pr) — A par., S. Wales, co. Glamorgan 5 m. S.W. Cardiff 5149 ac. 1 sp. 498 — *Andres* (St) A par. S. Wales Glamorgan new Glamore 1 sp. 10 — 3 A par. S. Wales 4012 ac. 1 sp. 2543 — 4 *Andres* (St) Hereford, a par. England co. Suffolk 3 m. S.E. Bungay 1694 ac. Pop. 505.

ANDREWS (St) an ancient city and seaport, Scotland, co. Fife on the German Ocean between the mouths of the Forth and Tay lat. 56° 21' N. lon. 2° 45' W. about 43 m. N.E. Edinburgh by sea, and about 31 m. direct. The city is agreeably situated on a flat table land, about 60 ft. above the level of the sea, and, though presenting many unobtrusive indications of decay, has a handsome appearance, the houses being all stone, generally well built, and of considerable height. It contains three principal streets, diverging from the cathedral one of which, called South Street, is spacious, well paved, and about three-fourths of a mile long. It is well lighted with gas and is amply supplied with water which, however though of good quality requires, or at least is the better to be filtered after rain. From the number of its spires, pinnacles, and large public buildings, and the numerous gardens and shrubberies that surround and intersperse with the ancient walls and edifices, it presents, when viewed from a little distance, a singularly pleasing and picturesque aspect. It contains a number of interesting remains of antiquity the principal of which are the ruins of the cathedral situated at the E. end of the town. This once magnificent structure, founded in 1160 was destroyed at the Reformation. When entire, it was 370 ft. long, 65 ft. broad, with a nave or transept 180 ft. long. Its style was a mixture of Roman and Gothic. The roof was covered with sheets of copper. A lofty square tower, and a portion of a chapel standing alone by the ruins, are believed to be the most ancient remains of ecclesiastical architecture in Scotland. The castle

or Episcopal palace, situated on an eminence overhanging the sea, was founded by Bishop Roger about 1300, and was originally a place of great strength. There are a number of

ST. ANDREWS CASTLE.—From sketch by D. G. H. H. S. S.

other ruins, of less note, in various parts of the town and many ancient edifices, no longer in existence, are spoken of by historians and topographers. The University of St. Andrews, the oldest in Scotland, was established by Bishop Wardlaw in 1413. It consisted at one time of three colleges instituted at different periods—St. Salvador's, in 1405 St. Leonard's in 1512 and St. Mary's, in 1537 but in 1748 the first two were united, and the buildings of St. Leonard's converted into dwellings. It has 84 bursars, whose aggregate value is about £1000 a year divided among 84 students. The principal of St. Mary's College must be in the case of Edinburgh University be a clergyman as his lectures in systematic theology. This institution is appropriated exclusively to the study of theology and has seven bursaries aggregate value, £2000 enjoyed by 17 individuals. The United College, which stands in a different part of the town and is, excepting as regards a few cases an entirely separate and distinct establishment is appropriated to the study of languages, philosophy and science. There is a library containing 45 000 volumes, common to both colleges. The two institutions have, together 13 professors. Next in importance to the older colleges, as an educational institution, is the Madras School founded and endowed by Dr. Bell of Madras, a native of the town, who bequeathed the sum of £46,000 for the noble purpose of affording gratuitous instruction to the poor which is the principal object of the establishment, although small fees are taken from those who can afford to pay them. This school is attended (March, 1850) by upwards of 800 young persons of both sexes. There are also two boarding or day schools for ladies, an Episcopal chapel, Free church Burgher Independent, and Baptist places of worship, a subscription library and two reading rooms. The harbour, which is on the E. side of the town is a very indifferent one, being difficult of access and dry at low water. Some attempts have been made lately to improve it, but with no good result. There is no trade in the town, and no manufactures worthy of notice. It is the place of residence, however both permanently and temporarily of a number of genteel families of limited means who have been induced to resort to it on account of the cheapness of living, and of education. Its society is thus, in general, more refined than is usually to be met with in other towns of similar size. St. Andrews has been long famous for the practice of the old Scottish game of golf, for which its downs are well adapted. Between 8000 and 9000 golf balls are manufactured in the city yearly, about half of which are exported, the other half being used on the spot. St. Andrews is of great antiquity and its history from a remote period, is blended with the civil and ecclesiastical annals of the kingdom. Its origin is uncertain but it was constituted a royal burgh by David I. in 1140 having however been a place of religious celebrity long prior to that period. From the beginning of the 13th

century till the Reformation, it gradually increased in social, political dignity and importance, and finally became the metropolis of Scotland. Previous to the Reformation, which arrested the career of prosperity it was one of the most populous towns in Scotland. After that event it rapidly decayed, the revenues of its religious establishments being alienated to different purposes. This ancient city has born the same, at various periods, of many remarkable events, and is connected with the history, more or less intimately of a long series of the most remarkable men of their respective times. It was here that the Scottish Parliament met to swear allegiance to Edward I. after the subjugation of Scotland and here the same body assembled a few years afterwards to support the claims of Robert Bruce to the Scottish throne. It was here that the earlier martyrs to the reformed religion, including Patrick Hamilton and George Wishart, suffered death; a fate which the celebrated George Buchanan barely avoided by escaping from the castle of St. Andrews, in which he was confined, and in which the notorious Cardinal Beaton was shortly afterwards murdered. St. Andrews was the principal place in Scotland to which the first printed English New Testaments were secretly sent, in 1526 from Cologne, whither Tyndale, the translator had fled. In 1645 the Scottish Parliament held its meetings here and amongst other proceedings, condemned to death the Robert Spotswood, son of the archbishop of that name, and three other gentlemen who had been taken prisoners at the battle of Philiphaugh and who were afterwards executed in the principal street of the city. Four years afterwards, namely in 1679 James Sharp, Archbishop of St. Andrews, was murdered on Magus Moor near the W. extremity of the parish by a party of Covenanters. Amongst the earlier persons of celebrity connected with St. Andrews by residence or otherwise were Andrew Winton, author of a historical chronicle of Scotland and John Major author of a history of Scotland, and of various theological works which attained in their time. The more distinguished names between the Reformation and Revolution are those of Spottiswood, George Buchanan, Andrew Melville, Samuel Rutherford, Robert Blair and James Gregory. Since the era of the Revolution, the more celebrated names are those of Thomas Hayburn, Principal Madox, Principal Tulloch, Professor Wilkie, Principal Watson, Professor Dorn, Dr. Wilson, Dr. James Playfair, Dr. George Hill, Dr. Adam Ferguson, Dr. Andrew Bell, and the late Dr. Chalmers. With few exceptions all these eminent persons were connected with the university and all distinguished by their literary attainments. St. Andrews unites with the two Anstruther, Orkney, Cupar, Kilmory and Pittenweem in returning a member to the House of Commons.—The PARISH is about 10 m. in length, with an average breadth of about 3 m. the area comprehending a space of between 17 and 18 m. It has about 6 m. of sea coast. The ground nowhere rises to any great elevation nor does it present any features of particular interest. Pop. of the burgh in 1851 4218 of the parish 6740.

ANDREWS (Sr).—1. A seaport in New Brunswick, cap. Charlotte co. at the N.E. extremity of Passamaquoddy Bay on a narrow strip of low land facing sea, 60 m. N.W. by St. John, and 3 m. from the shore of the U. States lat. (S. point, high) 45° 4' 15" N. lon. 67° 8' W. (n.) It contains two principal streets, which run parallel to each other and of several smaller crossing them at right angles. The houses are all of a substantial and respectable appearance. There are several churches a courthouse, a jail a grammar school, a chamber of commerce, an agricultural and emigrant society's savings bank, a Bible society a barracks, and many handsome private buildings. It is conveniently situated for commerce, and especially for the fishing trade, which is carried on here to a large extent. The lumber trade and shipbuilding are also actively prosecuted. It is abundantly supplied with provisions of every description. The harbour is commodious, but rather difficult of access. Pop. about 7000.—2. A vill. Prince Edward's Island, British N. America 8 E. part of the island, at the mouth of the little river Montserrat. The inhabitants of this and the neighbouring settlements chiefly emigrants from the W. of Scotland and the Highlands, are principally employed in shipbuilding and in the exportation of timber. The soil around is good, and yields large crops of wheat, barley &c.

ANDRIA, a town Naples prov Terra di Bari, 50 m. W. N.W. Bari. It is built on a plain, is noted for its bishopric and has a fine cathedral founded 1048 by Peter Norman, count of France. It possesses also a college and three monks' *de-petit* its supply of water is very deficient and it has a good trade in almonds. Pop. in 1842 31 825.

ANDRO (anc. Andros) an island Grecian Archipelago, cap same name, about 25 m. long and 6 or 7 m. in breadth lat. (Mount Korvati, W side) 37° 50' N. lon. 24° 50' E. (n.) It is in general mountainous, rising in the centre to the height of 3200 ft. but it has many fruitful valleys. It is well watered, and altogether one of the richest and most productive islands of the Archipelago. The inhabitants rear cattle, horses, and silkworms and cultivate wheat, barley, vines, olives, oranges, citrons and pomegranates the produce of most of these forming the materials of a pretty extensive traffic. In Andros or Castro, the capital, situated on a hill on the E. coast there are manufactures of silk and carpets the former constituting the staple commodity of an active commerce. The town which is situated by a strong cove, has a large port suited, however only for small vessels, an inferior to that of Gattuso (anc. Gassano) on the W. coast. It was for a considerable period subject to the Turks; but since the revolution, has formed, once more a part of the kingdom of Greece. Pop. of the island in 1800—5000 (Gaimbert, Dict. Geo. et Stat.)

ANDROM ISLANDS, a group of islands belonging to the Bahamas lying between lat 23° 41' and 25° 10' N. lon. 77° 30' and 78° 32' W. The passages between these islands are intricate and dangerous. The principal island, Andros, which gave its name to the others, is about 70 m. long by 10 broad at its broadest part. The interior of the largest of these islands is composed of extensive salt marshes and fringed water swamps, in which are islands valuable for their timber consisting mostly of cedar of superior quality. The sea board only is habitable during the summer months owing to the myriads of mosquitoes and other insects that infest the low ground. The total amount of water land in the Andros Islands amounts to 1 046,506 ac. In Andros Island there is a school which was attended in 1847 by 52 pupils 27 boys, and 25 girls. The progress of the scholars is said to be slow. There is a teacher of needlework attached to the school. The soil is infertile but when carefully cultivated yields fair crops of cotton and coffee which are exported to Europe. It sends a member to the House of Assembly of the Bahamas 1 op. 709 nearly all coloured.

ANDROY a territory Madagascar comprising the S. extremity of that island. It consists of two countries called respectively the country of the Amphitres and that of the Caromboulas. The former is flat and covered with wood, presenting, however extensive intervals of excellent pasture, on which great numbers of wild cattle of a small size feed. The Amphitres produce large quantities of milk and cotton, and make articles of commerce of the more valuable kinds of trees, and of apples. Water is so extremely scarce in this district, as to be considered one of the most precious commodities and when obtained is treasured up accordingly. Malava, however has in this respect the superiority of this necessary life, by furnishing it to natives with a kind of root, the internal parts of which somewhat resemble a water molen. But not being in sufficient abundance to supply both the people and their cattle the latter suffer severely being always on a stated and very stinted allowance of water. The principal village called Fanglea, consists of about 100 houses or more, with a pop. of about 600 and is well fortified. The country altogether has a desolate appearance, there being few villages, and all of them small. The country of the Caromboulas is much less fertile than the other portion of the district, and the inhabitants are little better than savages.—(Desrochers, Hist. et Geo. de Madagascar.)

ANDRYCHOW ANDRYCHOW or ANDRZEWOW a town Austria, prov Galicia, 200 m. W. Lemberg. It has considerable manufactures of damasks and other drapery and important mines of sulphur yielding annually about 9122 cwt. Pop. 8000.

ANDUJAR, or ANDOLAN a town Spain, in Andalusia prov of and 20 m. N.W. from Jaen, at the foot of the Sierra Morena, in a wooded plain, a bank, Guadalquivir which is here crossed by an old dilapidated bridge. Its tolerably regular and cheerful looking houses form irregular streets.

and squares, paved with stones in fragments of which are to be seen various medals, marble of different kinds, and some confusion and rock crystal evidencing the proximity of a district rich in such productions. The finest building in the town is the municipal chambers though the abbate and the stonemasons are not wanting in elegance. Anduze likewise possesses six churches, several convents, a Jesuit theological seminary and six primary schools on satisfactory foundations. A fine road lined with trees leads to the river and in the vicinity are several almshouses. The manufactures of earthenware, soap, leather tiles, and bricks, and various sorts of coarse woollens, is carried on to a limited extent but agriculture is the principal occupation of the people who raise wheat, barley, legumes, sunn hemp, and a few fruits produce exquisite oil, and rear cattle and bees. Some export trade is done in grain, fruit, and cattle and in numerous numbers of porous stoneware, bottles, and jars, for the purpose of cooling water. It is an unhealthy town experiencing great extremes of heat and cold. Pop. 9363. (Madon.)

ANDUZE (Latin *Andusia*) a town in France dep Gard 20 m. N.W. Nîmes. A bank garden from the violent overflow of which it is protected by a strong dike forming a fine quay as well as an agreeable terrace and promenade near the middle of which the river is crossed by a stone bridge. The town lies at the foot of the Cevennes, steep mountain, looking rocks on the one side and hills planted with vines and olives on the other. It is on the whole ill built, its environs, which are cultivated like a garden are delightful. The chief articles produced are silk thread hats, bonnets, and stockings, all of silk, serge draps, shawls, earthenware, leather and glass. In the vicinity there is a beautiful grotto with stalactites. The majority of the inhabitants are Protestants. Pop. 4412.

ANEGÁ one of the Virgin Islands W. Indies belonging to Spain, 90 m. N. E. Porto Rico. Lat. (W. point) 18° 45' N. lon. 64° 21' W. (n) Its greatest length is 10 m. greatest breadth, 4½ m. The surface is for the most part a dead level but on the E.E. side the ground rises gradually to the height of about 60 ft. The whole N. side is exposed to an inclement sea. The island contains numerous large salt ponds, which, when undergoing evaporation during a long course of dry weather yield an exceedingly offensive effluvia. Great quantities of salt are subsequently obtained from the ponds. The island produces various crops and some cotton and has great abundance of fresh water in almost every part even in the immediate vicinity of the sea, and surrounded by salt ponds. On the N. side of the island there is a range of shell holes, varying from 3 to 6 fathoms in depth and from 10 to 25 inches wide, called the Wells, filled with fresh water (Schomburgk's *Narrative on Anegáda*, in *London Geo. Jour.* vol. ii. p. 165). There is a considerable trade besides, in underwood rendered valuable by the great quantity of rum at command. But the chief dependence of the inhabitants is on the wreck of vessels, for which the island has an unhappy celebrity. The scene of these disasters is a reef extending from 10 to 12 m. in a S.E. and S. direction from the E. extremity of the island. The total number of vessels lost on this fatal reef, since 1811 is 67 of which 21 were American 1 W. Indian 15 Spanish 9 British, 2 French, 2 Swedish and 1 Portuguese.

ANET (German, *das Lat. Inseln*)—1 A vil. Switzerland, cant. of and 16 m. by N. from Bern. It is built upon an extensive 4 m. N. Lake Mont. 8 m. N.E. Lake Neuchâtel, and 2 m. S. of that of Blonay whence the name *Insel* (the island) from its position between the lakes the whole surrounding district was formerly called *Inselgauen* (the island district or meadow). Anet commands a fine view of the surrounding scenery and also of the distant Alps. The inhabitants cultivate the vine and have a considerable trade in wine and corn. Pop. 1150.—3 A town and com. France, dep. Eure-et-Loir 8 m. N.E. Dreux. It is situated in a highly picturesque valley watered by the Eure, and contains the ruins of the superb castle built, in 1559, by Henry II for Diana of Poitiers and demolished in 1792 during the fury of the French Revolution when part of the facade was removed to Paris, and re-erected at the Ecole des Beaux Arts. Anet has some trade in grain, wine, and fodder; and in the neighbourhood are iron works and paper mills. Pop. 1409.

ANET a par. and vil. Ireland, co. Limerick 9248 ac. contains some interesting ruins. Pop. 3450.

ANGAR. See **ANGAUM**.

ANGARA, a large river Siberia, which issues from Lake Balkal at lat. 51° 30' N. lon. 107° 45' E. and, passing the N. of Irkutsk, pursues a N. and W. course for about 750 m., when it is joined by the river Tchikobets in lat. 57° 30' N. lon. 97° 0' E. at which point its name is changed to the Tunguska, by which it is known for about 320 m. when it falls into the Yenisei at lat. 67° 10' N. lon. 93° 0' E. It is navigable, but much obstructed by rapids. The scenery on its banks, particularly on the left is described as extremely picturesque the latter being adorned by magnificent forests of cedar and other trees.—Another small stream of the same name falls into Lake Balkal at its E. extremity.

ANGARABÉ, a prov. Peru. See **HUANGAYACA**.

ANGAUM or **ANGAR**, an isl. at the entrance of the Persian Gulf lat. 26° 37' N. lon. 65° 54' E. (n). It is from 5 to 8 m. long, and contains several fresh water wells, although formerly believed to have none. Extensive garden ground and ruins of houses in different parts of the island would indicate its having once been a more important and more flourishing place than it is now. At the N. part of the island are the remains of a considerable town with 18 tanks or reservoirs for holding water, about half of them are still arched over and lined with brick, but filled with clay and sand. Wild goats are numerous.

ANGAZIJA the native name of the isl. of Camero. See **COMOHO INLAND**.

ANGEJA a town and par. Portugal prov. Douro, dist. Estarreja 23 m. S. Oporto on the Cumma at the extremity of an extensive fertile plain. It has a large church with stables; and a monthly corn and cattle market. Pop. 1860.

ANGELES LOS, a town, Chih. prov. Coahuila, 90 m. N. of the town of that name, and about 15 m. N. the Rio Rio F. lat. 33° 1' 54' S. lon. 71° 41' 30' W. Streets wide and regular.

ANGLIN or **ANGLEN** (Latin *Angli*) part of the duchy of Schleswig, Denmark, included between the river Eider and the Gulf of Flensburg. The district is named from the ancient Angli or Angles, a German nation and tribe of the heathen, who at a very early period migrated to Denmark. It is said that their assistance having been asked by the Britons against the Scots and Picts a number of them passed over and, in course of time, gave the name of Angles (*Engli*) to the inhabitants, and of Anglenland (*England*) to the country. The present inhabitants are distinguished among the Danes for bodily strength independence of spirit in industry and morality. Anglen is partly under good cultivation but its roads are bad. Pop. about 30 000.

ANGELO (San) the name of several towns and villages, Italy.—1 A town Austrian Lombardy on the river Lambro m. S.W. Leoni. Pop. 6000.—2 A vil. Austrian Lombardy 14 m. N.E. Padua. Pop. 2200.—3 San Angelo in Fado a vil. Roman States on the Metaura 13 m. S.W. Urbino the seat of a bishop. It has some woollen manufactures. Pop. 2,000.—4 San Angelo de' Lombardi, a town, Naples, prov. Principato Ultra 22 m. E. Avellino the seat of a bishop. It has two churches and a college. In 1664 it was nearly destroyed by an earthquake. Pop. 6400.—5 San Angelo Panella, a town, Naples, prov. Principato Citra 20 m. S.W. Capua. Pop. 2698.—6 San Angelo di Brolo, a town, Sicily 5 m. W. Patù. Pop. 3641.

ANGERA, or **ANGELINA** (Latin *Angleria*) an iso. in Venetian Lombardy cap. dist. of same name, S. shore of Lago Maggiore prov. of and 25 m. W. from Como. It is tolerably built, with a castle, church, and townhouse. Pop. of the 1965 of dist. 7,691.

ANGERBURG a town, Prussia, cap. of its circle, prov. E. Prussia, on the Angerap, 80 m. S.E. Königsberg. It has a handsome church, good schools, linen and woollen manufactures, a considerable traffic in wood and fish, and four annual fairs and cattle markets. The extensive Lake Angerburg or Masur famous for its fish, is in the neighbourhood. Pop. 8160.

ANGERMANNLAND an iso. prov. Sweden, divided into N. and S. Angermannland, comprehending 45 parishes, and now forming part of the lan. or district of Wester-Norland (which see).

ANGERMANN A or **ANGERMANN R** a river Sweden which rises in Lappmarken, not far from the borders of Norway, and at first consists of two branches, which unite in lat. 64 50' N. Thereafter proceeding in a S.E. direction, it becomes the principal river and gives its name to the district of Angermannland, and forming a considerable estuary falls into the Gulf of Bothnia, N. of Harboresund. Its chief tributaries are the Fellejo and the Södra Adala both of which it receives on its right bank. It has a course of about 160 m. and is navigable for 60.

ANGELMÜNDE, a tn. Prussia prov. Brandenburg esp. circle of same name, on the Lake Münde, 42 m. N.E. Berlin. It contains three churches and has manufactures of hats, cloth, woollen stuffs, and tobacco. Pop. 3607.

ANGERS, a large anc. and important city France, cap. dep. Main-et-Loire in the former prov. of Anjou of which it was the capital situated in a fertile plain on both sides the Mayenne, a little below its junction with the Sarthe, and about 5 m. above its embouchure into the Loire. 150 m. N.W. Paris. It stands

in the form of an amphitheatre, on the summit and declivity of a steep hill and is divided by the Mayenne into the higher and lower town the city proper being on the left bank of the river while a considerable suburb, termed the Droue, occupies the right bank. In the old quarters of the town, the streets are narrow and crooked and many of them so steep as to be inaccessible to carriages. The houses generally are of wood covered with slate. Many of them also are either faced with or built of slate a circumstance which gives the town so dark and sombre a hue, as to have obtained for it the surname of Black Angers. The two principal edifices are the castle and the cathedral. The former the ancient residence of the Dukes of Anjou stands on a steep rock the base of which is washed by the Mayenne. It consists of an immense parallelogram, surrounded by high walls flanked with 16 large round towers, which bulged toward the top and bottom and narrowed in the middle and built of black slate, intersected horizontally by stripes of white, have a very singular appearance. It is now used as a prison barrack and powder magazine. The cathedral, finished in 1240 stands on an eminence in the centre of the town and is in the form of a Latin cross. Its portal which is richly decorated in the Romanesque style, is surmounted by two lofty spires, which have each a height of 225 ft. The exterior consists of a single nave without aisles, and two transepts. The former one of the largest in France, is, including the choir 800 ft. long 53 ft. wide, and 110 ft. high the latter have each a length of 40 ft. and nearly the same width. The windows—of painted glass of the richest colours, and as ancient as the building itself—form one of its principal ornaments. Among the objects worthy of notice in Angers may be mentioned the picture gallery recently furnished by the modern French school the museum the tower of St. Aubin now converted into a shot tower and the extensive boulevards, planted with trees, and lined with elegant houses occupying the site of the old walls of the town, and communicating with the *Champ de Mars* which forms a spacious promenade.

The manufactures of Angers are numerous, and consist chiefly of sailcloth, canvas, serge, handkerchiefs, hosiery, hats, leather worsted and cotton twist, leather goods, wools, &c., besides establishments for bleaching wax, and sugar refineries. A considerable trade is carried on in corn, wine, brandy, flax, honey wax, honey flour and dried fruits. In the neighbourhood are extensive slate quarries, from which

slates are exported to the value of £38 500 annually. The principal pit, called *Le grand carreau*, about 4 m. from the town, is nearly 400 ft. deep, and occupies an area of more than 4000 yards. Angers is surrounded by numerous and extensive nursery gardens and vineyards, and in the neighbourhood are mines both of coal and iron. The markets are well stocked with provisions, but there is a great deficiency of good water.

Angers is the see of a bishop, suffragan of Tours and the seat of a *Cour royale*, for the departments of Main-et-Loire, Sarthe, and Mayenne of a prefecture and of several important law courts. It has an *Académie d'agriculture*, a royal college or high school, an asylum for the deaf and dumb a diocesan theological seminary a secondary school of medicine, and a public library of 28,000 volumes, with some curious old MSS. a botanic garden and an agricultural society. It has also five hospitals one of which the hospital of St. John, on the Droue side of the river is said to have been built by Henry II of England. There was formerly a military college here at which Lord Clive and the Dukes of Wellington received part of their education but, about the end of last century it was removed to banner and the building was converted into cavalry barracks. The university of Angers, which was founded in 1248 and long continued to be one of the most renowned universities in Europe, was destroyed at the Revolution, as was also a royal academy of belles lettres, established by Louis XIV. in 1685. The castle was surprised by the Huguenots in 1666 and in 1793 the city was

attacked by the Vendean army 90 000 strong when it became the scene of several sanguinary conflicts. In the siege that followed the inhabitants endured many privations. An appalling accident happened here on April 14, 1850. While a regiment of French infantry were passing along the suspension bridge across the Saine Maine, the bridge suddenly gave way when the greater portion of the men were precipitated into the river and between 200 and 300 drowned. A rail way connecting Paris with Angers, has been completed. The population was in 1870 about 50 000. After the revocation of the edict of Nantes it gradually declined and, in 1789, before the Revolution, was only 7596. Since 1815 its prosperity has revived. Pop. in 1848, 35,592.

ANGERSLEIGH or **LEZARD MOUNTAIN**, a par. England, co. Somerset 4 m. S.W. Taunton 408 ac. Pop. 41.

ANGHIARI (anc. *Centurus Angulani*) a tn. and com. Italy in Tuscany prov. of and 8 m. S. by N. from Arezzo on the slope of a hill in a well watered fertile district near the left bank of the Arno. It has a church and municipal offices. Pop. tn. and com. 6358.—(*Dizionario* Lodi, Italia).

ANGIHIARI a tn. Austrian Lombardy prov. Verona r. bank, Adige, 5 m. N.W. Legnago. Pop. 1460.

ANGHOCOS, a tn. Brazil prov. Rio Grande do Norte, near the Concha, about 80 m. from its mouth. It has a church, an industrial school a townhall and a prison. Its inhabitants are engaged in the cultivation of cotton, rice, French beans, and manioc and in carrying on a little commerce in the first of these products. Pop. tn. and dist. 2000.

ANGISTRI a small isl. Gulf of Aegina 5 m. S.W. the island of that name lat. 37° 42' N. lon. 23° 30' E.; about 3 m. in length, and 1 m. in breadth.

ANGLE, a par. and vil., R. Wales, Pembrokeshire, near the entrance to Milford Haven 4581 ac. Pop. 437.

ANGLESEY an isl. and co. England N. Wales in the Irish Sea, separated from the mainland by the Menai Strait. It is 20 m. long and 1 m. broad and contains 74 parishes.

ANGERS. — From Paris. View on the Loire.

area, 271 sq. m. or 173 440 ac. It is divided into three cantons, and each of these into two *cunhais* equivalent to the English hundreds. The surface of the island is comparatively flat and the climate, though milder than that of the adjoining coast, is unfavourable to the growth of trees. There are no streams of any importance, but the coast affords some natural harbours, the principal of which are at Beasmaria and Holyhead. The soil is almost everywhere fertile, and the principal crops are sugar, wheat, rice, potatoes and turnips, are also grown. Cattle and sheep are the staple productions of the island about 8000 of the former and 5000 to 7000 of the latter being annually exported. Of minerals, Anglessey contains copper lead, and silver ore, limestone, marble, coal, and granite. The copper mines at Pwys and Mona (see *ANGLWEN*) once so celebrated and productive, have now nearly decreased in value. The inhabitants carry on no manufactures but those of coarse cloths, &c. sufficient for their own use. The principal road through the island commences at the Mona Strait, which is crossed by a magnificent suspension bridge 660 ft. between the piers and 100 ft. above high water mark, allowing the largest vessels which navigate the Strait to sail under it. The great Britannia Tubular Bridge for the conveyance of railway trains across the Mona Strait, was opened for the first time, with great ceremony on March 5 1849 (For a more full account of this extraordinary work of art, see *MIRAL BRILLANT*). The chief towns are Beasmaria, Holyhead, Llangwyl, and Amwlch, which unite in returning a member to Parliament, while the county also returns a member Beasmaria is the returning station for both. On the coast are several smaller islands, the chief of which are Holyhead and Penrhyn or Puffin Island Anglessey (see *Mona*) was successively under the domination of the Britons, Romans, Welsh Saxons, Normans, and English. Its traditional relics, which are almost its only antiquities, sufficiently indicate the religion of its original inhabitants. Pop. 17,300.

ANGOLA, a Portuguese colonial prov W coast, Africa cap. Luanda. This province comprehends all the Portuguese commercial empires Angola, Benguela, Namibia and Congo Pop. estimated at 400 000 of whom 12 000 are whites

ANGOLA, formerly Domo, or *Angolox* a country on the W coast of Africa, commencing about lat. 8 20' S. and extending to the river Congo, in lat 9 20' S. lon. 14 to 19° E. Along the coast, the country is flat and sterile, but mountainous in the interior though nowhere attaining any great elevation. It is copiously watered by various rivers, with their numerous tributaries amongst the former are the Congo, the Bengo, and the Dande. Situated near the equator the heat is very great, but not so oppressive as in other places of the same latitude, being tempered by the trade winds. It is on this account considered more healthy than any other part of tropical W Africa. The dry and rainy seasons, into which the year is usually divided in these regions, do not seem to maintain the same regularity in Angola, neither the periods of their recurrence nor their duration being correctly ascertained. The nights are cool and the dews sufficiently copious to promote vegetation. The soil of the plains on the seashore is, as already stated poor and meagre, and incapable of cultivation, but in the interior it is extremely fertile, yielding an extraordinary abundance, and almost spontaneously rice, millet, sugar cane, manioc, yams, potatoes, and nearly every kind of tropical fruit known. In various parts of the country iron is found in others, gold and copper but the produce has hitherto been trifling. Here are met with specimens of nearly all the known wild animals of Africa, including lions, tigers, hyenas, elephants, rhinoceroses, hippopotami, &c. The birds and reptiles are also the same with those found in other tropical regions, including several exceedingly venomous kinds of serpents. The waters on its coasts and in its rivers also teem with animal life, the former with whales, sharks, dolphins, &c. and the latter with formidable crocodiles, and numbers of other creatures little known to Europeans. Amongst the useful animals are horses, rabbits, antelopes, stags, goats, and hogs the larger domestic animals, the cow, horse, and man, have been imported from Europe.

Angola has long possessed an infamous notoriety for the extent of its slave trade which still appears to be active as

ever notwithstanding all the efforts that have been made for its suppression many thousands of slaves being shipped annually to Brazil. In 1840, no fewer than 70 to 75 vessels, each capable of carrying from 500 to 600 slaves, traded to this part of the coast, each vessel performing four or five voyages in the year. The natives, though black, are distinguished from the other negro races by their superior physical conformation being well limbed and regular featured with a marked general resemblance to the Portuguese, of whom great numbers are settled here. Besides the slave trade with Brazil Angola carries on a large traffic with Luanda in ivory and other native products the imports from the latter in return are chiefly wine, brandy, oil, pork, and other provisions, with silks, linens, cottons, woollens, earthenware, hardware, &c. The central or principal town of Angola is the Portuguese town of St. Paul de Luanda, on the coast lat. 8 43' S lon 13 8' E in which the Portuguese have a garrison, consisting of about 800 men, mostly convicts with a corps of cavalry. At one time the force maintained at Luanda consisted of a regiment of the line, 1000 strong 800 cavalry and 200 artillery.

The coast of Angola was first discovered in 1485, by the Portuguese, who soon after began to form settlements on the Zaire, and at various points E of that river. They still occupy the country having a number of forts and commercial establishments at different places in some instances extending many hundred miles into the interior where the Portuguese colonists and natives meet for the purpose of trading. The religion is Feticheism Pop. estimated at 8 000 000

ANGOLIOI A, a tn Abyssinia, kingdom of Shoa. 24 m N W Ankobar lat. 9° 40' N lon 39° 37' E. It lies at the confluence of two rivers flowing N W one of which is named Choa-Chia, is a considerable stream. Linethow Abyssinian towns, it resembles a large village and consists of circular huts arranged on two eminences, one of them being reserved by the king for his own use on it has been erected for himself and his officers about 500 huts, surrounded and defended by six rows of palisades. Angoliola is a new town commenced in 1834 by King Sahle-Ballasi—(Harris's *High Lands of Ethiopia* Harleout *Poy dans le Roy de Shoa*)

ANGORA or *Angora* (see *Angora*) a in Anatolia Turkey 215 m S.E. Constantinople lat. 40° 28' N lon. 33° 20' E () It is surrounded with ramparts, and contains an old dilapidated castle. It is divided into 24 districts, each having its mosque or *jamé*. There are 17 or 18 *khanes* three *hamams*, and a market place, once handsome but now in ruins considerable remains of Hymettian architecture belonging to the ancient city and a few relics of earlier times, both Greek and Roman. Some of the latter have been thought to be remnants of the *Monasterium Angorensem*, raised in honour of the Emperor Augustus who much embellished the ancient city. Angora is celebrated for the long-haired goats bred in its vicinity called by the Arabs the *chamo* or camel goat, meaning silky or soft. The hair is about 8 inches long, and is shorn twice a year. All the animals of this region are long haired especially the dogs, cats, and rabbits and it appears that all degenerate, and lose this peculiarity when removed to a distance. The quantity of skins wool exported was estimated, by Mr Anstruther at 1 250 000 lbs. of the only 600 000 lbs. worth of the first quality. More recent accounts give much lower returns. The trade of export next in importance are muslin, wax, and goat hides. *Goats* stuffs, principally madder and the yellow berries of the *Eleonora casbahensis* muslin, brags, and other gums also honey and wax. British manufactures are imported to some extent but there are few or no European houses here, the trade with the West, formerly more considerable than it is now being mostly in the hands of the Armenians who form an important section of the population. Angora is the seat of a Greek bishop. The pop. has been variously estimated but is probably about 35 000 of whom nearly 10,000 are Greeks and Armenians.

ANGORNOW or *Angorox* a large and populous tn W W Africa, kingdom or territory of Bornoe on the S.W. shore of Lake Chad, 20 m S.S.E. Kouka; lat. 12° 56' N lon. 14 50' E. Various overland routes pass through it from the N. S. and E.

ANGOSTA, or *Angorox*, a dist. and three islands, S W Africa, Mossambiqua Channel. The district is extremely fertile, and is watered by a river of the same name. The islands

lie a short distance off and parallel to the coast; they are all of coral, more or less wooded and abound in fish and turtle, as well as the most beautiful shells and corals. The most W. is called *Caldera*, lat. $15^{\circ} 58' 48''$ S. lon. $88^{\circ} 46' E$ (N.). The most E. named *Macanilla*, is lat. $16^{\circ} 20' 30''$ S. lon. $40^{\circ} 4' E$ (N.). Like the other islands, it consists wholly of coral with a thin covering of sand and is not more than 8 ft. above the level of the sea, yet it is covered with a grove of stately casahuate trees, some measuring about 10 ft. in circumference, most of them perfectly straight, without a branch the 80 or 40 ft. above the ground and many 150 ft. high rendering them visible from the main head from a distance of 15 or 18 m. All the Angosta Islands are small none of them exceeding 2 or 3 m. in extent and usually surrounded by reefs.—(Capt. Owen Horsburgh)

ANGOSTURA, or BARRIO TOMAS DE LA NUEVA GRANADA, a city Venezuela, S. America, cap. prov. of Guayana at a narrow pass or strait (Angostura) bet. bank Orinoco about 240 m. from the sea. lat. $8^{\circ} 8' N$. lon. $68^{\circ} 55' W$. The streets are regular and well paved and the houses in general good being built for the most part of stone, with terraces on the tops. There is here a college, an hospital and a magnificent hall in which the second congress commonly called the congress of Angostura was installed, Feb. 15 1819 the ninth year of the independence of Venezuela. The pass in which Angostura lies is defended by fort San Rafael situated on a hill across the river from the town. From the mouth of the Orinoco to this city the voyage occupies 30 to 35 days back again, 5 to 15 days. Angostura exports cotton, indigo tobacco coffee, &c. The average value of exports, 1840-43, amounted to £100,208 in 1844 it was £298,854. The imports 1840-43 averaged £294,160 but in 1844, they fell off to £227,793. British goods are much in demand, and the exportation of cattle to British colonies is increasing. The climate is warm but healthy. Pop. in 1840, 5500.

ANGOLLEME, a city France, cap. dep. Charente, and formerly of the department 1. bank, Charente, 60 m. N. E. Bordeaux, and 925 S. S. W. Paris. It stands on the summit of an isolated rocky hill, at the foot of which is the suburb Hommes, through which passes the high road from Paris to Bordeaux. The town, though 321 ft. above the river is now well supplied with fresh water pumped up by machinery. The air is pure and healthy and the views from the fine terrace walks, formed on the site of the old ramparts, and nearly encircling the city are extensive and beautiful. The old part of the town is all built, and the streets are narrow and crooked but in the new quarters the houses, of white stone are well constructed and the streets straight and spacious. In the market place, in the centre of the town, stands the old castle, once the residence of the ancient Counts of Angoulême but what remains of it is now converted into a prison. Queen Marguerite of Navarre, sister of Francis I. the most accomplished princess of her day and no mean writer was born within its walls and there, too, Marie de Medici found a shelter after the assassination of her husband. The cathedral dedicated to St. Peter a curious old building restored in 1190, suffered much at the Revolution. Among the modern structures worthy of notice are the Palais de Justice, the bridge over the Charente and the columns erected, in 1816, to the Duchess d'Angoulême but since, in 1830 re-dedicated to Liberty (*la liberte*).

Angoulême is the see of a bishop, suffragan of the Archbishop of Bordeaux and contains a court of assizes, a tribunal of primary jurisdiction, a royal college, a society of agriculture and commerce, two hospitals, a *depot des mendicants*, a library with 16,000 volumes, and a museum of natural history. The royal naval school, established here in 1816, and suppressed in 1830, has been transferred to Brest. The buildings which are very extensive, are now occupied by the royal college.

The staple manufacture is paper made in numerous mills in the neighbouring valleys. In all about 85 mills are at work, producing annually on an average about 100,000 cases of paper, called papers d'Angoulême, and esteemed among the best made in France. There are also manufactures of woollen stuffs, linen, and earthenware; brassy distilleries, sugar works, tanneries, tallowworks, and iron forges. A considerable trade is carried on in wine, brandy and fruits and particularly in cherries, saffron, and salt. The port of

Angoulême, on the Charente, is the entrepot of the commerce of Bordeaux, and most of the S. departments. One article for which Angoulême is celebrated in its *pays de perdrix aux truffes*—partridge pies with truffles. Pop. in 1846, 17,337.

ANGOUMOIS, a former prov. France, cap. Angoulême, comprehending the three districts, Angoumois proper, Aunis, and Saintonge, now comprised principally in depts. Charente and Charente Inférieure.

ANGOZHA or ANGOZA. See ANGOZA.

ANGRA, a seaport in belonging to Portugal, S. side of Terceira, one of the Azores of which it is the cap. lat. (mean house) $38^{\circ} 55' 54'' N$. lon. $27^{\circ} 18' 45'' W$ (N.). It is well built and regular and its situation beautiful. The streets are broad, and have flagged footways, but are much infested with pigs, every house having several of these animals. The houses are mostly three stories in height. There are here magazines of arms for the use of the royal navy, and for merchant vessels stores for the trade of the island, and the maritime affairs of the island are under the inspection of an officer who has a number of subordinates, including pilots to conduct vessels into the harbour and to execute the other duties connected therewith. Angra is the seat of the local government of a bishop's court, which extends its jurisdiction over all the Azores and is the residence of English, French, and Dutch consuls and may therefore be considered the cap. and only of Terceira, but of all the Azores. The harbour to which it is situated the only good one in the island, indeed of the whole group, is of the form of a crescent and commanded at either extremity where the passage is very narrow by a strong battery. It is however safe only in the fine season in the stormy months being exposed to furious tempests, which render it so dangerous that vessels on the least appearance of a gale run out to sea, there being no safety for them otherwise. Its chief exports are wine and grain. Pop. 10,000.

ANGRAB a river Abyssinia, taking its rise in Dumbon, a little N. from Gondar, whence it flows in a N. W. direction and falls into the Taccaze at lat. $14^{\circ} 30' N$. Its whole course is about 120 m. in length.

ANGRA DE CINTIA BAY Africa, N. W. coast. The S. point of the bay is lat. $23^{\circ} 58' N$. lon. $16^{\circ} 30' W$. The opening into it is about 7 m. wide and from 7 to 9 fathoms deep its extent inland, about 4 m. It abounds with fish which are taken in great quantities by vessels from the Canary Islands.

ANGRA DOS REIS, a seaport, Brazil, on a bay of the same name, prov. of and 70 m. W. from Rio de Janeiro lat. $23^{\circ} 4' S$. lon. $44^{\circ} 30' E$. It lies facing the sea at the foot of a kind of promontory which, rising up behind it, limits in some degree its facilities for increasing in size. All its streets with one exception, are narrow crooked, and badly paved some, indeed, are not paved at all. It has three churches, a townhall an hospital a convent of Carmelites and another of Capuchins, and a public fountain at the end of the only straight street in the town. The inhabitants are supplied with excellent water from springs in the hills behind. The port in front of the town forms a semicircle, the extremities of which are defended by forts and the roadstead, which is shut in from the Atlantic by the Ilha Grande affords anchorages for the largest vessels. Angra dos Reis carries on an active trade with Rio de Janeiro principally in coffee. Pop. rather above 8000.—(Dra. Geo. Jap. Dresel).

ANGRA DOS REIS, a bay Brazil prov. Rio de Janeiro in that part of it called Ilha Grande, from the island of that name, which shelters the bay from the Atlantic. It extends to W. about 75 m., and has along its shores a number of small, cultivated, and partially inhabited islands. The bay is well sheltered from all winds, but more particularly from the S. and S. W. winds, which are especially dangerous on the coasts of Brazil. It affords anchorage for the largest vessels.—(Dra. Geo. Jap. Dresel).

ANGRA PEQUENA [Little Bay] or SANTA CROIX, on the S. W. coast of Africa, 150 m. E. by W. from the embouchure of the Gariep or Orange River. lat. $28^{\circ} 24' S$. lon. $15^{\circ} 8' E$ (N.). It has from $2\frac{1}{2}$ to 5 fathoms water the best and deepest anchorage on the S. side of the inlet at its entrance, in 4 or 4½ fathoms, sheltered from all winds. About 70 m. to the N. E., on the E. bank of the Fish River is the missionary station Boteti.

ANGUILLA, or **SNAKE ISLAND**, the most N of the Caribbean Islands, belonging to the British, lies N. E. Martin, from which it is distant about 5 m. lat. (eastern base) 18° 15' 12" N. lon. 65° 4' 12" W. (n.) It is about 20 m. long, and 5 broad, but is so low and flat that it cannot be seen from a greater distance than 10 or 12 m. The soil is calcareous, and not very productive. A little sugar cotton tobacco, and some are grown on it, but it is deficient both in wood and water. In the centre of the island is a saline lake, which yields a large quantity of salt the greater part of which is exported to America. The climate is healthy. The chief occupations of the inhabitants are breeding cattle and gathering salt. The town is situated on the E. side and near the N. E. end of the island. It is a small place, with little trade. Anguilla was first settled by the English, in 1650 and has since continued in their possession. It is governed by a magistrate elected by the colonists, but subject to the approval of the governor of Antigua. The pop. is about 2181 of which 880 are whites 320 coloured, and 2461 African.

ANGUILLARA a tn. Austrian Italy on the Adige, 23 m. S. Padua. Pop. 2800.—This is also the name of a tn. in the Papal States on the Lake Bracciano, 16 m. N. W. Rome. Pop. 700.

ANGUS a co. Scotland. *See* FORBES.
ANHALT a country of N. Germany forming the three duchies of Anhalt-Bernburg Anhalt-Köthen, and Anhalt-Desau. It lies partly in the plain of the middle Elbe, and partly in the alluvia and uplands of the E. lower Harz, and is bounded N. by the Prussian prov. of Brandenburg E. and S. by Prussian Saxony S. W. by the Lordship of Mansfeldt and N. W. by the territories of Brunswick and the Prussian circle of Magdeburg, area, 1918 sq. m. greatest length, 80 m. breadth varying from 13 to 16 m. The soil throughout is fertile and well cultivated. All sorts of grain wheat especially are grown in abundance also flax rape, potatoes, tobacco, and hops. Some madder is also produced. Garden fruit abounds, and in the valley of the Saale the vine is cultivated. The inhabitants are principally occupied in agricultural pursuits, and in rearing cattle and sheep. In the vicinity of Bernburg are several mines and ironworks, the products of which are not very great. The manufactures, which are not important include worsteds, flannels, broad cloth linen cloth yarn, leather tobacco, sugar wax soap, candles, stoneware, &c. The trade in raw materials and objects of art has much increased since the opening of the two railways passing through Köthen—the one from Berlin, the other from Leipzig. The three duchies furnish a contingent of 1024 men to the army of the Confederation, and of that number Anhalt-Bernburg supplies 270. The total revenues of the triple principality amount to £149,600 and their public debt to £292,000. Pop. 149,085 of which it is computed that Anhalt-Desau has 61,793 Anhalt-Bernburg 46,302 and Anhalt-Köthen 41,090.

ANHANDURY MIRIM & **ANHANDURY-GUAZU** the names of two rivers in Brazil prov. Mato-Grosso. Both rise in the Serra Galheira within 27 m. of each other and flow E. Both fall into the Rio Vermelho the former about lat. 20° 30' S. the latter in lat. 21° 20' S. or at a distance of about 60 m. the course of the one being about 150 m. in length, the other about 300 m.

ANIID a par Ireland co. Limerick area, 861 sq. Pop. 360.

ANHOLT—1 A small isl. Denmark, in the Kattegat, about 7 m. long by 4½ broad, generally unfertile, and surrounded by sandbanks and dangerous reefs. One of these reefs stretches from the E. corner of the island, in an E. direction for 7 m. and a lighthouse, erected so early as 1562 stands on that corner in lat. 56° 44' 16" N. lon. 11° 39' 15" E. (n.) As an additional security a floating light has anchored in 15 fathoms water about 1 mile E. of the reef, and continues there from the beginning of March to the end of December. The inhabitants, amounting to 200 live chiefly in the little village of Anholt-by on the W. side of the island and depend for their subsistence on fishing and the picking up of stranded goods. In 1800, the British took possession of the island, fortified the tower of the lighthouse, and erected casemates for a garrison of about 300 men. An attempt to dislodge them proved unsuccessful, and they maintained possession, employing the place as a head station till the peace.—2, A tn. Prussia, prov.

Westphalia, gov. Münster 18 m. W. Bielefeld, upon the Old Yssel esp. of the herony of Salin, and the residences of the Prince de Salin-Salm. Pop. 800.

ANIANE, a tn. France, dep. Harault, 16 m. W. W. Montpelier in a lovely and fertile plain watered by the Herault. The first nucleus of the town was a monastery which was founded by St. Benedict in 780, and finally endowed. The church of the monastery is now the parish church, and the other part of the building has been converted into a cotton mill. Beside the cotton twist thus produced, Aniane has manufactures of leather crems of tartar verdigris, black soap, perfumes, and other chemical products. It has also limestone quarries and glass kilns, and an annual fair for cattle, leather and goats skin. Pop. 2615.

ANIBA, a small river Brazil Portugues Guayana. It runs in the territory Araguai, about lat. 1° 37' S.; lon. 58° 40' W. and, after a course of about 100 m. forms, with other small affluents of the Amazon, the island of Namoc, in lat. 2° 36' S.

ANICHE, a tn. France dep. Nord, about 9 m. from Douai lies in the principal coal field which France possesses, and in this circumstance owes all its importance. The mines in the neighbourhood employ about 500 persons. The manufactures are best sugar and window and bottle glass. The chief export is coal. Aniche men enjoyed the singular privilege of levying from every stranger who came to live within its bounds, the best article among his luggage. Pop. 1818.

ANICURS, a small river Brazil, prov. Goias, rises in the Serra Escalvada, about lat. 16° 22' S. lon. 51° 40' W. and after a course of nearly 200 m. in a S. and S. W. direction falls into the Gurupa, lat. 15° 51' S. having been previously joined by the Passadão.

ANIEL *See* ANXEN.
ANILORE, a small river Brazil prov. Para, rises in lat. 6° 51' S. lon. 60° 10' W. falls into the Madaria, lat. 5° 10' S. lon. 60° 40' W. after a N. N. W. course of about 130 m.

ANITU or **AKUTU** (CHAKRA and LESSER) two rivers, N. E. Siberia country of the Tchukotka the former rises in lat. 67° 10' N. and, after a W. course of 2 m. falls into the Kolima by the outlet, at lat. 68° 10' N. The latter rises in lat. 66° 30' N. and, after a N. W. course of about 250 m. also joins the Kolima, at nearly the same point with the Greater Anny; the two rivers gradually converging till they meet at their embouchure. The banks of the larger stream present a dreary appearance for a considerable way from its outlet, but latterly begin to improve, the pastures presenting a more verdant appearance. The right bank is higher than the left, and consists of steep sand hills, 80 or more fathoms high and held together only by the perpetual frosts which the summer is too short to dissolve. The current is in some places very rapid and the bottom is strewn with rough and sharp-pointed stones very dangerous to craft navigating the stream. The Lesser Anny being a mountain stream, is subject to violent and sudden overflows, carrying away islands and forming new ones, and sometimes altering its course for many miles. Its fisheries are of little importance.

ANIVA (BAY or LAKE) an isl. Saphem E. coast, Assam lat. 48° 2' N. lon. 145° 8' 10" E. (n.) It is enclosed by two projecting tongues of land Cape Cullion and Cape Aniva, distant from each other 60 m. There is good anchorage at the N. extremity of the bay.

ANIZER a tn. Arabia, prov. Nedjd Proper lat. 26° 34' N. lon. 35° 25' E. beautifully situated in a valley. It is extensive, amply supplied with water and well built. Being situated in the heart of Arabia, and at the junction of many principal caravan routes including those of Bagdad, Damascus, Bussrah, &c., towards the Persian Gulf—and Medina Mecca, &c. towards the Red Sea—it is a place of great commercial importance. Merchants, chiefly from the Gulf of Persia, assemble at this place, bringing Indian rice and goods to the bazaars. It is the birthplace of Abd-ul Wahab, founder of the sect of the Wahabites.

ANJAR, a small dist. and tn. Hindoostan, prov. Cutch. The district was ceded to the British in 1816, and is governed by a commissioner deputed by the Bombay Government. It is a dry sandy tract, irrigated by wells or tanks. Anjar the capital, is situated on a slope, 10 m. from the Gulf of Cutch lat. 25° 8' N.; lon. 70° 11' E. The fortifications

form a polygon, and are 6 ft. in thickness, but have no ditch or outworks. In 1816, the town surrendered to the British under Col. East, and, in 1819 it suffered severely from an earthquake the first with its towers and guns, having been hurled to the ground in one common mass of ruin, together with 3000 houses. 160 lives also were lost on this occasion. In 1820 the pop. was estimated at 10,000.—(Hamilton's East India Co.)

ANJE-DIVA, or **ANJONKA**, an isl. on the Malabar coast, Hindoostan lat. 14° 45' N lon 74° 5' E. (v.) It is about 2 m from the shore, and is about 1 m. in length; it appears on the outside barren and rocky but has an attractive aspect on the side next the land, where it is fortified by a wall and some towers. Close to it, on the outside, the depths are 10 and 11 fathoms.

ANJEH. See **ANJON**.

ANJENGA or **ANJONKA**, a small seaport, S Hindoostan, prov. Travancore, about 70 m. N by W Cape Comorin lat. 8° 59' 54" N lon 76° 45' 12" E. (v.) In 1684, the East India Company obtained permission from the reigning prince to fortify Anjenga, and establish a factory but, having been found an unprofitable possession it was abandoned in 1813. Its principal exports are coral cables made of the fibres of the Laccative cocco nut pepper coarse piece goods, corals and a few drugs.

ANJER, **ANJERIN**, or **ANJER**, a well known maritime town, Java, in Sumatra Strait lat 6° 8' 12" S lon 106° 57' E. (v.) being the westernmost part on the island. It is populous, and well fortified. The natives of this town, and other places on this part of the coast of Java, drive an extensive trade in natural curiosities among the passengers of homeward bound Indian ships. At Anjer especially says Capt. Belcher a fair of the most remarkable character is held under the shade of a magnificent banyan tree, where for a few dollars, may be purchased long-armed apes, hideous baboons, pigmy monkeys, Java fowls, doves, parrots, quacks, and lovely birds, and splendid peacocks. Ships may be conveniently supplied here with water and other refreshments, such as buffaloes, poultry, turtle, fruit, vegetables, &c. In the canoes that venture also g side the ship with these supplies says the authority above quoted "amusing monkeys may be seen sitting among heaps of fruit and vegetables, chattering and making grimaces and huge turtles lying bound at the bottom of the boats. The canoes are occupied chiefly by women, who present a very singular appearance, their heads being protected from the sun by large hemispherical bamboo hats, and their long black shining hair streaming down their backs. The country around is extremely fertile but too thinly peopled to do it justice. Col. Cadzant, who died on his way to China as ambassador in 1780, is interred here.—(Sir E. Belcher's *Voyage of the Samarang*.)

ANJOS, a vil. Brazil prov. São-Pedro-do-Rio-Grande, beautifully situated on the Buzinaqui, an affluent of the Jacay. It has a church and some schools the inhabitants live by fishing and agriculture. Pop. 2659.

ANJOU [Latin *Andegavorum*] an ant. prov. France, now forming dep. Maine-et-Loire and parts of Mayenne, Sarthe, and Indre-et-Loire.

ANKAILLY, a tn. Hindoostan N. Cochin, 24 m. W by S, Yagapuzam lat. 1. 41' N lon. 68° 11' E. It is a large place, nearly 1 m. in length, and wide in proportion, with a good bazaar and thickly interspersed with trees.

ANKARA a country or kingdom N. end, isl. of Madagascar extending on the E. side of the island, from Cape Amber to lat. 14° 26' S and on the W side to the river Samborau. The country is generally elevated formed by small hills and plateaus, disposed like an amphitheatre, and cut up by deep ravines. A chain of mountains runs nearly equidistant from either coast, and terminates in the high mountain Amboulitch a little way S British Sound or Dugbo Bourne Bay. The sides of this chain and its offshoots are covered with fine wood, among which are several species suitable for ship building and some which yield turpentine and gums. From both slopes flow numerous, mostly rapid streamlets, in courses generally much inclined. On the W coast are the little rivers Ankara, Mahavavy and Samborau. The whole coast is deeply indented with extensive well-sheltered bays. Those on the E are Yokamere, Andraya, Mangavari or Leven, Lookerlingvato or da Elgny and Antombank those on the W are

Aspenbank or Jamkinson Ambavau-Bé or Fort Liverpool, Anstet, Ampague-Ara or Fort Chancelier and a great number of smaller inlets and creeks. On the W coast are also several groups of islands, of which may be named Nosel Ara, Nosel-Lava, Nosel-Mitaton, Nosel-Fall Nosel-Comba, and Nosel-Bé Rice manure, maize, and betanias are cultivated, but not in sufficient quantity to admit of any being exported. From the sugar cane, which is also grown to some extent, a kind of agreeable fermented liquor named bane-bane, is obtained, by infusing the juice with certain bitter herbs several kinds of palm wine, including the cabbage palm, abound. Cattle are abundant, but about 80 000 are exported annually to Bourbon and Mauritius, either alive or salted.

In Ankara polygamy is practised the most petty chief having three wives the first being the wife proper to whom is committed the charge of the house the second is a kind of concubine, generally pretty and liable to be dismissed when her beauty begins to fade the third is commonly a slave, who recovers her liberty as soon as she becomes a mother. The men build houses and canoes, fish and make wax. The women till the fields, and perform all other kinds of labour. During leisure hours, they make palm-leaf mats weave a kind of cloth suitable for clothing and for making canoe sails, and make earthenware. The religion of the inhabitants of Ankara (called Antankara) is a mixture of 1.olythiam and Fetichism the belief in two principles called Zanahar and Angahat predominating. They pay great respect to their dead and believe in the transmigration of souls. The country is now subject to the Hovas, and is almost depopulated the shores and the banks of the streams being almost the only parts inhabited. The decrease in the number of the people has arisen partly from numerous intestine wars and partly from emigration many having left and settled in Nosel-Bé, an island on the W coast taken possession of by the French.—(Guillem *Documens sur l'histoire, la géographie et le commerce de Madagascar*.)

ANKARSGERRY or **ANKORSGERRY** a tn. Hindoostan N. W. territories, 40 m. S E Bangalore lat. 12° 59' N lon. 78° 6' E.

ANKLAM, a tn. Prussia, prov. Pomerania, gov. of, and 49 m NW from Stettin cap. circle of same name. It is a town, which is here navigable. It is surrounded by an old wall with three gates, leading to three suburbs, and has three churches, three hospitals, and a college. The manufactures are woollen clothes, cotton stuffs homely leather soap tobacco and snuff boxes. It has, besides several breweries some distilling and a brick trade in corn, wood and glass. In 1819 Anklam was admitted into the Hans League and it still possesses some important privileges but never has a town been more frequently subjected to the greatest calamities—fire, pestilence, and war which make its history a succession of the most fearful disasters. From 1384 to 1896, fires seven times laid great part of it in ashes. It was five times visited with pestilence. From 1626 to 1611 it was besieged sacked, and plundered by all parties successively—Danes, Imperialists, Swedes and Russians. In 1702 on the peace which concluded the seven years war its fortifications were dismantled, and from this period its greatest prosperity may be dated. Its ships many of them built within its own port, have rapidly increased. 1 op. 78000. The climate has an extent of about 190 geo. sq. m. and a pop. of 25 000. It is watered by the Pénne, and contains numerous lakes. The surface is generally flat, and is in some places sandy stony and unproductive. It, however produces all the ordinary grain and pulses crops also flax, potatoes, and good pasture.

ANKORAE, or **ANKORAE**, a tn. Abyssinia, cap. Kingdom of shoo, built chiefly on the acclivities of a steep conical hill 8200 ft. high, in lat. 9° 34' N lon. 39° 30' E. The houses are constructed chiefly of wood with tapering thatched roofs and are generally surrounded by a garden. The upper part of the town is hedged to with long stakes interwoven with boughs as palisades, and on the summit is the king's palace an extensive structure built of stone and mortar, with a thatched roof. The whole appearance of the town is singular the conical thatched roofs of the houses making them resemble so many horns and hay cocks. The rich vegetation, however with which it is surrounded, together with the coolness and purity of the atmosphere, render it an exceedingly agreeable place. A market is held every Saturday when

ANNAGELIFFE a par Ireland, co Cavan; 6800 ac. Pop. 4061

ANNAGH the name of two small islands three parishes a village, and small lake, in Ireland—1 **Annal W** coast, between the island of Achill and the mainland of this co Mayo lat. 53° 38' N lon. 8° 38' W It is about 4 m in circumference, and though rugged, has good pasturage for sheep.—2 A small ill. Lough Conn co Mayo—3 A par co Kerry partly in the barony of Carraigunilly and partly in that of Trillickanagh 13,756 ac. Pop. 6173.—4, A par co Cavan partly in barony Longlough Lower and partly in that of Tullygarvey 190,817 ac which includes 837 ac of water.—5 A par co Mayo 20,810 ac Pop. 6105.—6, A small vil co Cork, between Charleville and Lissacrol.—7 A small lake on the confines of King's and Queen's counties

ANNAGHLONE or **ANACLOAN** a par Ireland 1 co Down 5644 ac Pop. 2546

ANNAGHDOWN a par Ireland co Galway 19,050 ac Pop. 4041

ANNAGHONY a small dist. and in Hindoostan prov Bengal the former lying along the bank of the Teesta river, on which the town also stands. The surface of the country is wild and hilly interspersed with much wood. For some miles round the town, the soil is encumbered with vast piles of granite rock. The town is 110 m. W.S.W. Kurnool

ANNAH a tn. Asiatic Turkey esp. sanjak r bank Lepusates where the river makes a slight bend to the N.E. lat. 34° 10' N lon. 41° 50' E. It is on the caravan route from Bagdad to Aleppo and is distant from the former about 160 m. N.W. and from the latter 14 or 16 days journey. It consists of a long narrow winding street on the bank of the river and at the base of the hills which here line the E. phazies. There are two mosques in the town, and a beautiful minaret 80 ft high a manufactory of coarse cloth, and some flourmills. The number of houses is about 1800

ANNALAND (8r) or **ANZELAND** a vil Holland pro Zealand on the ist. and about 9 m. N.W. the tn of Tholen It is the prettiest village on the island and has a church and good haven used at times by passing vessels as a place of refuge in stormy weather. The inhabitants are chiefly engaged in agriculture. Pop. 1634

ANNALONG a vil and fishing harbour Ireland N. coast, co. Down between Duntrium Bay and Carlingford Bay. It affords convenient shelter for small fishing vessels, and is, on this account, much frequented by them

ANNAMABOLE, a seaport tn. with a fort, Gold Coast, W. Africa lat. 5° 10' N lon. 1° 7' W 10 m. E. from Cape Coast Castle. The town consists of houses irregularly buddled together generally built round a court seven yards square some having clay benches, in the form of sofas running round the wall inside the court. It was at one time a principal market for slaves in trafficking in which many of its inhabitants became wealthy. A considerable trade in gold is now carried on here. The country around is thickly wooded, and the soil is excellent, but little cultivated the natives depending for their subsistence upon yams, vegetables, &c. brought from the interior and bought in exchange for fish which are very plentiful on the coast at certain seasons. In 1808, the town was burnt by the Ashantis on which occasion nearly two-thirds of the inhabitants were slain. The fort, however, which was garrisoned by some 30 or 40 soldiers only resisted the efforts of the entire Ashanti force, consisting of 30,000 men, for several days, and, after receiving a small reinforcement by sea, compelled them eventually to retire. Pop. about 8000.—(Duncan's Travels in W. Africa.)

ANNAMALLAY or **ANNAMALAY**, a tn Hindoostan, Malabar coast, 20 m. S.E. by E. Trichoor and 70 m. S.E. Calicut, 25 m. from the coast. lat. 10° 25' N lon. 76° 55' E. 1. bank, Alima, amidst extensive forests of valuable timber opposite the wide passage between the Ghauts of the Carnatic and the hills to the S. It derives its name, *Annamallay* 'Elephant Hill' from the great number of these animals that inhabit the vicinity

ANNAMOOKA *ANMOCKA*, or **ROTHENDAM** one of the Friendly Islands, Pacific Ocean about the centre of the group lat. 20° 15' S lon. 175° 2' W (s.) It is of a somewhat triangular form, from 12 to 20 m. in circumference, and

Vol. I

rounded by islets, shoals, and sunken rocks, which extend to a considerable distance from its shores. It exhibits some traces of volcanic action and has at its E. side a large lagoon about 1 m. in circumference. The island is well watered and produces abundance of yams, yams, apples, bananas, coconuts, and bread-fruit. Its cultivation and artificial decorations display a tastelessness rarely found among savage tribes. Even when discovered in the 17th century there were observed in the interior several pieces of cultivated ground or gardens, in which the beds were regularly laid out into squares, and planted with different kinds of trees and shrubs arranged in straight lines. Private property is exactly ascertained, and sacred possession is neatly fenced with a beautiful Chinese railing. Highways and roads leading to public places are bounded by suitable walls and hedges and many of the houses have a handsome approach in the form of a gravel walk lined with shrubbery tastefully planted. The inhabitants however who resemble those of Tonga, are described as ignorant, superstitious, thievish and almost destitute of any kind of worship but regarding with reverence snakes, flies and other animals. They have a king or chief but his power seems to be very limited. Theft is punished in various ways; but the most effective is shaving the delinquent's head which causes him to ridicule. Annamooka was discovered by Tansan in 1648, and by him named Rotterdam. The memory of the Dutch navigator who supplied the natives with dogs and hogs is still preserved by oral tradition. The island was visited in 1773 and 1777 by Capt. Cook. In 1791 Annamooka was reached by Capt. Edwards in the ship *Pandora*. Since 1829 the inhabitants have been partly christianized by the efforts of British missionaries. Pop. about 2000

ANNAN a river Scotland formed by the union of the Moffat water which flows from Loch Skene, S.W. and the Fyvie water which rises in the upper part of Lamack lrs, and flows N.E. These streams unite 3 m. S. of Moffat, and intersecting Dumfriesshire in a S. course fall into the Solway Firth about 1 m. S. Annan. Total direct course from the junction of the Moffat and Fyvie, about 21 m.

ANNAN a borough seaport in and par Scotland co. Dumfriesshire. The town lies on the bank of the river of same name, near its confluence with the Solway Firth, 23 E. Dumfries. It is well cleared and well built, and contains many good houses and handsome shops. The streets are spacious and well paved and the whole town presents a cheerful and thriving appearance. The public buildings are the parish church and townhouse each of which has a handsome square the academy a remarkably fine structure and a bridge over the river of three arches erected in 1824 at a cost of about 28,000. Amongst the more conspicuous edifices are also some dissenting meeting-houses. There is a subscription library in the town and several benevolent and religious societies. The manufacture of cotton, rope-making, and ship-building are carried on here the first and last to a very considerable extent. There is also a pretty large trade in the curing of bacon and hams, for the Newcastle and London markets and an extensive export of corn, fat cattle, and sheep. The harbour a natural one has been much improved by the construction of an embankment, extending about 13 m. down the river from the lower extremity of the town. At its lower termination, this embankment is 19 ft. high and 130 ft. broad at the base. At the lowest tides there are 14 ft. water in the harbour and in the lowest spring tides 23 ft. at high water but the depths are often much greater particularly when a westerly wind has prevailed for a day or two. Vessels of 60 tons can proceed up as far as the bridge. Annan is governed by a provost three bailies, a treasurer, dean of guild and 16 councillors. It joins with Dumfries Lechnaburn, Sanquhar and Kirkcubright, in sending a member to Parliament constituency 173. Pop. 4570.—Area of burgh (1841) 174 sq. m., or 11,100 imperial acres Pop. (1851) exclusive of the town 1278

ANNANDALE a dist. Scotland Dumfriesshire through which the Annan flows, and which gave the now extinct title of Marquis to the family of the Johnstones.

ANNA PAROCHE (8r) **St ANNAEKE** or **St ANNA** a vil. Holland, prov. Friesland 7 m. N.W. Lelwarden and 5 m. N.E. Franeker. It consists of two double rows of houses, intersecting at right angles in the church, a handsome octagonal building, and has a large school with school-

32

master's house attached. The vicinity consists of well-cultivated clay land. Pop. 1900. — (See for Ann.)

ANNAPOLIS (Pop. 1900) — A seaport in 1 bank river of same name, Nova Scotia, 92 m W Halifax lat. 44° 40' N. lon. 65° 30' W. The harbor is commodious and safe, but the entrance is through a difficult strait, called the Gut of Annapolis; lat (Point Prim) 44° 41' N. lon. 65° 45' W. (A) The shores on both sides of the strait are iron bound for several miles, and rise to a great height, causing violent currents and gusts of wind. On entering the harbor, much beautiful scenery is presented, and many thriving and extensive farms appear. Of late years, the herring fishery of Annapolis has risen to such consequence, that the merchants of Halifax and St. John give them a decided preference for foreign markets. There is a regular packet established from hence across the Bay of Fundy to St. John in New Brunswick. This is one of the oldest European settlements in N. America, having been founded by the French, in 1604 under the name of Port-Royal, changed to Annapolis in compliance to Queen Anne the province having been added to England during the reign of that princess. It was the capital of the province till the foundation of Halifax in 1759 when the seat of the provincial government was removed to that town. It is now a mere village of not more than 60 houses. Pop. of township including a part of Dalhousie settlement, in 1877 2578 — 2 The county of Annapolis extends along nearly the whole coast of the bay of Fundy. The soil is chiefly marsh and upland, the former composed of fertile alluvial tracts on the rivers and bays, protected from inundation by dikes, the latter long ridges of small hills called by the natives mountains, the summits of which, when cleared of wood and cultivated, are very productive. Pop. of county in 1851 14,285 — 3 The river of the same name rises in the township of Cornwallis, King's County about 60 m. W. Halifax and flows from the N.E. parallel with the Bay of Fundy, expands into a wide estuary and falls into the sea at Annapolis, after a course of about 70 m. It is navigable 20 m. above its mouth for ships of 100 tons, and for about 10 m. for vessels of any burden. The tide flows between 30 and 40 m. up — 4 A city and port of entry. U. States cap. of the state of Maryland, 2 m. from the mouth of the Severn, on its R. bank, and 31 m. N.E. Washington with which and Baltimore it is connected by railroad lat. 38° 55' N. lon. 76° 40' W. In the streets, which diverge from the state-house, and the episcopal church, are regularly laid out. The town contains several public buildings deserving notice amongst these is the state-house, in which the American Congress held some of its sittings during the revolutionary war. It contains also a state library county buildings an episcopal and a Methodist church a market-house bank and theatre several schools and academies including a United States naval academy established in 1845 at John's College, a branch of the university of Maryland was established here in 1845 The trade of Annapolis has been injured by that of Baltimore. Pop. (1850) 3011.

ANNATOM an isl. in Pacific Ocean one of the New Hebrides; lat. 20° 11' S. lon. 161° 45' E. (N.) about 240 m. E. N. E. Queen Charlotte's Point, New Caledonia. It presents undulating hills, but no remarkable peaks or striking features. Productions — yams bread fruit, and cocoa nuts.

ANNB (B?) — A. tra. and bay lat. Nakabwah or Kooa beval, one of the Marquesas S. Pacific Ocean lat. 9° 55' S. lon. 140° 6' W. (A) — A small isl. near to, and on the E. side of the isl. of Mahé, one of the Seychelles Archipelago lat. 4° 36' S. lon. 55° 33' 45" E. (A) — 3. A river and in Lower Canada the former joins the St. Lawrence about 50 m. W. S. Quebec the latter is situated on the S. bank of that river lat. 49° 8' N. lon. 66° 25' W. — There are several other rivers of the same name in this territory — 4 Mountains Lower Canada, the N.E. one lat. 46° 52' N. lon. 65° 49' W. (A) 3073 ft high. A mountain, France, dept. Orne, 8 m. from Alençon on which is a chapel, frequented by great numbers of pilgrims.

ANNEX a. to. Sardinia in Savoy dep. of the former prov. of Geneva, pleasantly situated at the N. end of Lake Annecy 1473 ft. above the sea level, 31 m. S. Geneva. It has a cathedral, a church, 10 convents and monasteries, a library and a college, a handsome episcopal palace, and hospital. Manufactures — cotton, silk straw hats, earthenware,

glass, hardware, sculpture of copper (tinned iron, and steel. Four fairs are held annually. Annecy is overlooked by an old castle in a ruinous state, which was formerly the residence of the Counts of Genevois. Anciently occupied by the Romans, the name is said to have been derived from *Andevio* one of the Roman governors of the province. It was once destroyed by the Goths and twice by fire, the last time in 1659.

Pop. 5700.

ANNELI (LAKY) kingdom of Savoy between 8 and 10 m. in length, from 1 to 2½ m. in breadth, and about 1400 ft. above the level of the sea. It is 20 m. S. Geneva, and is surrounded by mountain scenery of the finest description and at its lower extremity there is a beautiful promenade where fairs and public amusements are held.

ANNELAND See ANNALAND.

ANNESLEY a par England, on Notis 3360 ne Pop. 380.

ANNERTOWN a vil and seaport, Ireland co. Waterford Pop. 182.

ANNET one of the Scilly Islands, E.W. coast, England, off the Land's End, about 2 m. from the N.W. extremity of the isl. of St. Agnes. It is now uninhabited but the foundations of ancient houses which may be traced at low water and other evidences show that it formerly contained a pretty large population. Encroachments of the sea are supposed to have been the cause of its desertion. It now supplies the other islands with furs and turf for fuel and grasses a considerable number of sheep, but the latter are small, and in very indifferent condition.

ANNI AKI or **ANNI** an ancient and deserted in Turkish Armenia, about 20 m. E.S.E. Kars lat. 40° 23' N. lon. 43° 5' E. It was built in a triangular form on a rocky peninsula overhanging the Arpa-dial and was fortified by strong and massive walls in some places 40 and 50 ft. high, defended by numerous round towers, the whole beautifully built and carefully variegated with ornaments in black stone. The entire side of the town is covered with the ruins of private houses and public edifices the latter chiefly churches and chapels. One of the former a large Christian church, built in the form of a Latin cross, is still in good preservation. There are also the remains of an extensive building, which Mr. Hamilton supposes to have been the palace of the Kings of Anni. It is of excellent masonry and the gateway is in rich Sassanian style, while the walls are adorned with elaborate mosaic patterns, in various coloured stones. The history of this ancient city is imperfectly known, but situated on the frontiers of Armenia and Georgia it became in the fifth or sixth century the capital of the Pakradian branch of Armenian kings. In the 11th century it was taken pillaged and its inhabitants massacred by the Tartars. Soon after it was altogether abandoned, and has never since been occupied by a civilized people. — (Hamilton's *Ass Minor* &c.

ANNIMALLAY See ANNAMALLAY.

ANNIVIESE (A. L. V. S.) (German, *Engelried*) a valley Switzerland can Valais formed by two ranges of mountains branching off N.W. and N.E. from the Weisshorn and shutting on the Upper Rhone, opposite the village of Elferd. The valley is watered by the Lœza, a wild mountain-stream it is about 12 m. long presents wild and varied scenery and its upper end is terminated by the snow-capped Weisshorn. The inhabitants from 4000 to 5000 in number and to be described as a troop of Titans, are of powerful make, simple habits, hospitable, and laborious they cultivate the soil, which in some parts is fertile, but the chief source of support is cattle-rearing and the making of butter and cheese.

ANNOBON or **ANRO BOM** a small but beautiful isl. belonging to the Spanish on the W. coast of Africa, S. of the Right of Buata, and about 100 m. W. Cape Lopez lat. (N.W. point) 1° 34' 18" S. lon. 5° 25' 42" E. (A) It is about 4 m. in length, and 2 m. in breadth, and rises abruptly from an unfathomable depth to a height of 8000 ft. One lofty peak, about 4000 ft. above the sea, the ascent to which is difficult and dangerous from its extreme steepness, and the summits of the slopes with which the slope is covered. The lake is about 8 ft. deep in the deepest part, and the water

sweet. Capt. Allen speaks in the warmest terms of this little island. "We coasted," he says, "along this bright Isle, opening a mosaic of little valleys, with fine outlines of steep mountains, richly clothed with wood, while every ledge and cranny gave nourishment to a rich luxuriance of vegetation and other foliage, and the precipitous surfaces were tinged with every variety of colour. Little villages appeared nestled in fertile spots, but these were few and sometimes only gazed at by the gracefully-curling smoke. At another place he says, "At our last rest-place in the lower part of the valley, we enjoyed a deliciously cool hill, under the shade of palm trees, the cooling and intersecting ribs of which formed a more exact representation of the Gothic arch than any of the types that have been imagined by architects to be the original of that excellent style. Vessels touch at Annobon for refreshments, of which the supply is abundant, including pork, cotton (which is small, but well-favoured), goats, pigs, fowls, bananas, plantains, cassava, sweet potatoes, peas, and tamarinds. Guinea-fowl are particularly plentiful and afford excellent amusement to the sportsman. The plumage of these fowls here is richer, the birds larger and the flesh of a much finer flavour than that of English game. Cassava, cotton, sugar-cane &c. are cultivated with care and success by the natives the grounds appropriated to these productions being carefully enclosed and neatly fenced off. All articles are procured much more readily by barter than for money. Cheap laundry handkerchiefs old clothes, muskets, fish-hooks, cutlery, trinkets, rum and tobacco being the objects chiefly coveted. Water is abundant, but in some places not easily procured by digging on account of the heavy surf on the shores. At others it is obtained more readily. The wood in most abundances on the island resembles in appearance the cotton tree but is unfit for fuel on account of its spongy nature. Near the N.E. point of the island is a considerable town composed of several irregular streets or lanes of detached huts, the latter rudely constructed of rough withered boards, of grass, mud, &c. The principal street, however is tolerably straight and leads through the town to the church having crosses planted at intervals. Here is the only safe roadstead for shipping round the island. The bottom is rocky and the bank of soundings is about one-third of a mile in breadth, and sheltered from all the prevailing winds except during the tornadoes, against which the chief precaution is to ride with a chain to prevent the cable being cut. In taking up a position, the rule is not to anchor in less depth than 17 fathoms with the highest summit of the island bearing S.W. & W. (magnetic) when the distance from the shore will be little more than half a mile giving room to wear to the strength of a tornado. The government, according to Capt. Allen is an oligarchy vested in 5 persons who manage office by turns, strangely enough assuming its tenure by the arrival of ships, the chief magistrate holding his during the period of the arrival of them. The natives are a harmless indolent people, extremely poor of which they are in the habit of making the most pathetic complaints to their visitors. The climate is represented by Capt. Allen to be extremely healthy but a less favourable account has been given by others. The regular winds are from the S.W. excepting during the rainy season. The rainy season is confined to April, May, October and November. Besides the town already adverted to, there are a few villages at other parts of the island. Annobon was discovered by the Portuguese in 1478 and was named from the new year. Pop. estimated at 8000—(Allen's *Niger Expedition* London *Geo. Jour.*, vol. II p. 270, et seq.)

ANNUELIN a to. France, dep. Nord, arrond. of, and about 11 m. from Lille. A good deal of flax is hand-spun in the town, which has also manufactures of leather and hat-making; paper, brick works, an oil and a corn-mill. Pop. 8040.

ANNONAY (Lyon, *Annecy*, *Annecy*), a to. France, dep. Ardèche, in the Vivarais (Langedoc) 20 m. S.W. Lyons. Its site at the confluence of the Giron and Douze, which join the Rhone about 8 m. below is pleasing and picturesque. The best view of it is obtained from the top of St. Denis, a steep rock in the vicinity. The town, which is of a straggling and irregular form lies immediately below occupying the tops, sides, and intervening valleys of seven small hills. The most prominent object is the Gothic church of Trachet, with a fine lofty spire. Near it stands the

extensive and massy structure of the Ursuline monastery. In another part is seen an old castle in ruins, once the residence of the Princes of Soissons. Behind, the Douze pursues a rapid and noisy course along its rocky bed and further off in the same direction, the view is commanded by a mountain range. Within the town the most interesting object is a monumental obelisk to the celebrated astronomer, Joseph and Stephen Montgolfier natives who made their first ascent here, in 1783 and have a still stronger claim on the gratitude of their townsmen for their celebrated paper-mills, which have made the paper of Annecy famous over Europe. The other buildings worthy of notice are the college, the town-house, containing valuable busts of the Montgolfiers, the public library of 10,000 volumes and the museum. Besides the paper which it produces annually to the value of £120,000 and of which about a third is exported to foreign countries Annecy can boast of numerous other manufactures: woollen cloth, worsted caps, retinas, wax silk and cotton thread and particularly tanned leather made chiefly from the skins of unwashed kids, and partly also of lambs. These skins are imported from all quarters of the world. A large part is from the S. of France, and the skins of the last also from Spain and Italy though the best of these two countries is said to make the quality inferior. No important is this branch of manufacture, that it employs 1200 workmen, and yields a produce little short of £700,000 annually. The chief markets for the leather which is used for the finer sorts of gloves are Grenoble, Paris, and different towns in England. The surrounding district is covered with mulberry plantations and produces large quantities of silk. Indeed, the greatest part of the very fine white silk which is employed exclusively in making blouses comes from Annecy. Pop. 5995.

ANAWIHLER a to. Bavaria, cap. of its dist. circle of the Rhine, in a beautiful valley of the same name, on the banks of the Queich 8 m. W. Lander. It has a Catholic and two Reformed churches, an hospital and grammar school. Its public works are tanneries, colour-works, brush making, factories, paper-mills, and distilleries of *Kirschwasser*. On the top of a remarkable hill of sandstone, which overhangs the town and is 1422 ft. above the level of the sea, stands the ruined castle of Trüben, which was once one of the places of great strength and importance, Frederick Barbarossa, and indeed many Emperors both before and after him holding their court in it, and making it the depository of the *regalia* of the empire, and which still possesses a deep interest from containing the subterranean dungeon to which Richard Coeur de Lion was treacherously confined in 1192. The sandstone rocks in the vicinity of Annweiler possess, in their fantastic shapes and remarkable fissures a peculiar attraction for the geol. student.

ANAWIHLER, or **ANAWIHLER**, a to. Hindostan, prov. Agra, 1 m. S. of Agra, 72 m. S.E. Delhi lat. 28° 28' N. lon. 78° 10' E. In 1800 it was a populous town, consisting of a mixture of brick and mud buildings, and surrounded by a mud wall 20 to 30 ft. thick.

ANUTTA BAY N. coast, Jamaica, co. Surrey about 30 m. from the N.E. end of the island. There is good hold ing-round in 7 fathoms water about a quarter of a mile from the shore.

ANSE—1 A to. [Ann. *Ann. Foulon*] France, dep. Rhone, in a lovely valley near the junction of the Aaregne with the Saône 15 m. N.W. Lyons. Under the Romans, in the time of Augustus, it had a garrison of four cohorts (about 2400 men). The ruins of a palace of that Emperor and traces of the Roman fort, still remain. In the 11th and 12th centuries not fewer than six comtels were held here. Anne possesses five fountains, four of them flow constantly and the remarkable circumstance is, that the fifth is dry in wet, and begins to flow only in very dry seasons—a fact, it is said, which enables the inhabitants accurately to predict the nature of the coming vintage. The country between Anne and Yllembrun is so rich and beautiful as to have made a proverb of the dog's tail—

De Yllembrun à Anne,
De plus belle terre de France.

Anse has some trade in cattle, corn, hemp, and wine. Pop. 1750—3 A to. N. coast, Martinique, in a dangerous bay. Pop. 4500—3, *Les Isles d'Arlet*, a vil. Martinique, S. of Fort Noye.

ANS-ET-GLAIN a tn. and com. Belgian prov. Liège, on the railway between Waremme and Liège, and rather more than 2 m. N. W. the latter town. The com. has an area of 1864 sq. km. and is watered by the Liège, richly called *Ri de Coq Fontaine*, and possesses two wind-mills, and several flower mills. Pop. 401.

ANSLEY a tn. Engla. Lincs. W. with 2800 ac. 1 sp. 700

ANSON BAY—1 A bay Australia, N. W. coast, having Cape Ford on the N. and Channel Point on the N. width of entrance 30 m. It is about 220 m. N. E. Cape Lombard and 90 m. W. Clarence Strait—2 A bay W. coast, Korea lat. 32° 25' N. lon. 122° 50' E. N. 1—3 A bay in Tishin Lala Ladrones lat. 14° 50' N. lon. 135° 37' E. (N.) In this bay water and refreshments for ships are to be had but the anchorage is bad, and only for small vessels.

ANONIS ISLAND (LORON) an isl. S. Pacific Ocean, called by the natives Bonka lat. (most N. point, 5° 0' S. lon. 154° 34' E. separated from Bongalaville Island by a narrow strait. Shores rocky and free pinnas, crowned with cocoa trees, dense groves of which extend to the centre of the island.

ANSPACH or **ANSBACH** (originally *Onolbach*) a tn. Bavaria, cap. circle of same name, and of gov. of Middle Franconia, prettily situated at the junction of the Holtsbach with the Lower Main, 24 m. W. N. W. Nürnberg. It owes its origin to the monastery of St. Gumbert which was founded in the eighth century and in the church of which it is the burial-place of the margraves of Anspach. It has one R. cathedral and two Reformed churches, a Jewish synagogue, several important educational and charitable institutions, a picture-gallery and a public library of 15,000 v. lames. The building perhaps most worthy of notice is its old deserted palace of the margraves of Anspach surrounded by gardens, which form an agreeable promenade, and to which is a monument to the poet Us who died here in 196. Its principal manufactures are of woollen, cotton, and silk stuffs having hardware including all kinds of cutlery but particularly surgical instruments, cutlery, white lead, tobacco, orange parchment, and playing-cards. There is also a considerable trade in wool, flax, and grain. Pop. 13,500.—**ANSBACH** got its name to an ancient principality or margravate, which had an extent of nearly 1000 sq. m. and in 1806, contained a pop. of 800,000. Charles Frederick the last margrave, sold his possessions in 1791 to Prussia, and, marrying Lady Craven, took up his residence at Brunstun House, near London where he died in 1850. In 1806, Napoleon transferred the principality to Bavaria.

ANSTET the name of five parishes in Engla. 1.—1 (u) Herts 2170 ac. S. m. B. Barkway 1 p. in 1801 465.—2 Co. Warwick 990 ac. Pop. in 1801 208.—3 Co. Wills 840 ac. Pop. in 1801 357.—4 *Anstet* (East) Co. Devon 2170 ac. 3 n. W. Dalverton 1 p. in 1801 295.—5 *Anstet* (West) Co. Devon 3008 ac. 1 p. in 1801 302.

ASTON a par. and township Engla. co. York W. Riding 4450 ac. 12 m. S. E. Sheffield 1 sp. 1216.

ANSTRUTHER (ANSTRUTHER and WESTON) two small burghs and par. Scotland on the coast to E. of mouth of the Frith of Forth. They unite with St. Andrews Crail Cupar Kilsreay and Pittenweem, in returning a member to Parliament. Anstruther Easter the larger of the two has a custom-house, a good harbour and some trade in tanning, fish-curing, brewing, rope and sail making. It is the birth-place of Dr. Thomas Chalmers. Pop. of 1851—Anstruther West has little trade. It is lighted, well paved and drained. Pop. of par. 442, including 23 inhabitants of 11 islands of May which is claimed also by the parish of Crail. The two burghs are connected by a handsome bridge over the small stream called the Dreal-burn, which forms the boundary between them.

ANTA—1 A tn. Peru prov. of and 25 m. N. W. from Cusco lat. 13° 45' S. lon. 70° 35' W.—2 A small lake, Beni prov. Rio de Janeiro near Cabo Frio.

ANTA, or **AMANTIA**, a small kingdom on the Gold Coast, Africa about 25 to 30 m. in length, and about 25 m. in breadth lat. 5° 0' N. lon. 2° 0' W. On its coast are Axim, Cape Three Points, Akwida, Soccoodoo, Discoo, and Bouri, and many commodious havens and creeks. The

country is in general woody well-peopled, and well-watered, and the soil is considered to be the most fertile on the Gold Coast, yielding rice, sugar cane, and all the tropical plants of that region. Its climate is thought to be less fatal to Europeans than that of any other part of Guinea. Since the abolition of the slave-trade the English have withdrawn the garrisons formerly stationed at Axim, Discoo, and Soccoodoo, and the intercourse with that country has very much diminished.

ANTAKIA (anc. *Antioch*) a celebrated city Syria, 180 m. Axar (anc. *Ovank*) 30 m. from its anchorage in the Mediterranean 2 m. S. E. Iskenderon and 50 m. E. Aleppo lat. 36° 12' N. lon. 36° 5' E. (N.) It stands close upon the river which is here from 100 to 150 ft. wide and is crossed by a substantial stone bridge of four arches. Behind, and bordering close on it, is the N. termination of the mountain called *Jebel Akra* or *Arna*. The houses are built as to plan, but of inferior construction, usually of stone though frequently consisting of a wooden frame filled up with sun-dried bricks, and having a pent roof covered with mud tiles. The streets are narrow with a paved pavement on each side for foot-passengers. The city contains 14 mostly insignificant mosques, with low minarets. A considerable portion of the walls of ancient Antioch still remain with some remnants of a Roman aqueduct and a few catacombs. In the modern town the only objects worthy of notice are the chief bazaar a few mosques, and a new palace, built for Ibrahim Pasha, but which he afterwards converted into an hospital and a large barracks, capable of containing 8000 men. The manufactures of the place are trifling: they comprise silk and cotton stuffs, leather and coarse pottery. There is also some trade in silk tissues, goats wool, bees wax and Turkey leather and in the large cells caught in the Axar which are salted and exported in considerable quantities to various places.

Modern Antakia occupies but a small portion of the site of the ancient Antioch, which was 4 m. in circumference, and was considered one of the most flourishing cities in the world. The inhabitants being at the same time celebrated for their luxury, efficiency and honest senses. Here it was that the disciples of our Saviour were first called Christians. Few places have undergone so many calamsities as Antioch. In A.D. 65 on the breaking up of the kingdom of Syria, it was captured by Pompey and in A.D. 115 it was almost utterly destroyed by an earthquake and in 540 and again in 574 it was captured by Choroas. In 638, it fell into the hands of the Saracens and remained in their possession till 968, when it was recovered by the Umayyad Emperor but it was in 970 again taken by the Saracens, and remained with them till 1098 when it was captured by the Crusaders, who established there a principality which long survived their kingdom of Jerusalem. In 1208 it was wrested from them by Balak the Mameluke Sultan of Egypt when 40,000 Christians were put to the sword and twice that number made captives. Since that period it has remained in the hands of the Mamelukes (*Biographical Cyclopaedia*). In August 1822 Antakia was visited by a destructive earthquake, when walls, houses and houses were thrown down in every direction the streets filled with ruins and between 4000 and 5000 persons destroyed.

Ancient Antioch was the capital of the Syro-Macedonian empire. It was composed of four distinct towns built at different periods and was founded by Seleucus Nicator and greatly enlarged by Seleucus Callinicus, and by Antiochus Epiphanes. For several hundred years it was the residence of the Macedonian Kings of Syria, and afterwards of the Roman procurators of this province. The valley in which the city stands abounds in olive, fig and mulberry trees, and in vines. The rich alluvial lands on the borders of the Axar are however but indifferently cultivated. Pop. in 1835, exclusive of military 6000.—(*Bowring's Report* Paton's *Modern Syria* Chenevix's *Epigraphical Expedition*).

ANTALO or **ANTALOW** a tn. Abyssinia cap. prov. Fodera, in Tigre lat. 30° 20' N. lon. 39° 50' E. on the declivity of a hill, and commanding an extensive view of the country. It contains about 1000 houses or huts of the usual Abyssinian form, and the palace of the sovereign of Tigre who, in order to check the incursions of the Galla tribes, has his residence occasionally here. The inhabitants manufacture spears, and have some trade in cattle hides, butter and milk.

ANTANG a vil. and dist. E end, Isl Java, prov Kediri. The village lies in lat. 7° 45' S.; lon. 110° 0' E about 9000 ft. above the sea. In its vicinity are numerous Hinduo and Buddhist temples, and a large number of small shrines consisting of figures of Brahma, Ganesha, etc. The district is a well watered upland valley surrounded with mountain slopes clothed with dense forests, the lower borders planted with coffee, which is extensively cultivated. Rice is also grown. Pop variously stated at 7627 and 10,000.—(J. P. Indian Archipelago)

ANTARCTIC OCEAN the name given to the expanse of sea at and around the S. pole, within the limit of the antarctic circle, but frequently used in a more extensive sense, to designate the cold oceanic regions round the S. pole without any very positive regard to the limits of the antarctic circle. The mystery in which these all but wholly unknown latitudes were shrouded had invested them with an interest which prompted many a daring adventure, but until recently, without any good result. It is now otherwise, although there is yet much to learn a space equal to double the area of Europe being still unexplored. The expedition, composed of two ships, the *Zwarte* and *Terror*, fitted out by Government in 1839 for purposes of discovery and commanded by Captain, now Sir James Ross, has contributed a large amount of new and interesting information regarding these high S. latitudes. The highest point previously attained was in lat. 74° 15' S. that reached by Sir James Ross was in lat. 78° 4' S. or within little more than 100 m. of the magnetic pole. Several islands had already been discovered by various navigators within the antarctic circle but it was reserved for Sir James to add to these an extensive continent, which he named S. Victoria, a discovery which confirms, in a remarkable manner the sagacious conjecture of Cook—that the greater cold of the antarctic than the arctic regions, is attributable to the existence of a large tract of land between lat. 70° S. and the pole. The interest attached to the discovery and description of Victoria Land which had never before been looked on by human eye nor trod by human foot, will be best maintained by giving the language of the discoverer himself. On the morning of the 11th January 1841, says Sir James, when in lat. 70° 41' S. and lon. 172° 58' E. land was discovered at the distance of nearly 100 m. directly in the course we were steering and, therefore directly between us and the pole. Continuing our course towards this land for many hours, we seemed scarcely to approach it. It rose in lofty mountain peaks of from 9000 to 12,000 ft. in height, perfectly covered with eternal snow, the glaciers that descended from near the mountain summits projected many miles into the ocean and presented a perpendicular face of lofty cliffs. Having taken formal possession of this land in the name of Queen Victoria, Sir James proceeded to trace its coast line. Still ascertaining to be the early the next

Sir James traced Victoria Land from lat. 71° to nearly lat. 78° S. when his further progress was interrupted by a barrier of ice, presenting a perpendicular face of 150 ft. in height, and far overtopping the ships' masts. This apparently end less and unbroken line of icy wall is described as one of the most imposing objects imaginable. Although the further progress of the ships was thus arrested, it was not until they had approached the pole more nearly by several hundred miles than any preceding navigator. Sir James is of opinion that no vegetation exists in these high S. latitudes so traces of it having been visible on Franklin's land, 12 m. long, and 6 broad, situated in lat. 75° S. lon. 168° 12' W. It would appear also that the seas are comparatively shallow in these regions, the soundings of the Erebus and Terror rarely exceeding 400 fathoms and being more frequently about from 200 to 300. Amongst the more remarkable discoveries made by this expedition is that of a permanently low barometric pressure in high S. latitudes over the whole Antarctic Ocean—a pressure inferior by more than an inch of mercury to what is found between the tropics. Another and one of its most important objects was to ascertain the position of the S. magnetic pole, which Sir James has placed in Victoria Land in lat. 75° 5' S. lon. 154° 8' E. It was the opinion of Capt. Cook and is now ascertained beyond doubt that the ice of the antarctic predominates greatly over that of the arctic region, that encircling the S. pole coming nearer to the equator by 10° than the ice around the N. pole. The most distinguished explorers of these high S. latitudes are Capt. Cook, Beilingshausen, who discovered Alexander and Peter's Islands within the antarctic circle, Capt. Weddell, Capt. John Biscoe, the discoverer of Enderby's Land, Capt. Charles Wilkes, Commander of the U. S. States exploring a pole ice who wanted these regions in 1840 and Ross and d'Urville, in 1841.

The extreme points which have been reached by these navigators in their attempts to penetrate to the S. pole are as follows—

	S. lat.	lon.
Niobe, 1831 February 1 —	79° 31' S.	12° 0' E.
Halligby, sep. 1831 J. 3	79° 0' S.	28° 0' W.
Cook, 1774, January 30.	1° 40' S.	1° 40' W.
Weddell, 1843, January	4° 18' S.	31° 0' W.
Niobe 1840 February 2	4° 10' S.	151° 27' W.

—(Ross's Antarctic Expedition Lyell's Geology)

ANTAREE a small vil. S.E. Africa, 1 bank Zambesi which here becomes very narrow not exceeding 20 or 30 yds.

ANTAR, two small rivers, Brazil.—1 In prov São Paulo do Rio Grande an affluent of the Yaguarú. It flows N.E. to S.W. and has a course of about 40 m.—2 In prov Goiaz, an affluent of the Araguaia, and flowing S.E. to N.W.

ANTAY, a town in Andalusia, prov. of, and 40 m. N.W. from Almería, in a plain. It has crooked, unpaved streets; a square, in which are the court-house and prison and also a parish church chapel endowed school and a cemetery. The pop almost exclusively agricultural, is 2300.

ANTEQUERA (anc. Antioch) an important city Spain in Andalusia, prov. of, and 29 m. N.W. from Málaga, on the N. slope of the Sierra de Cazorla. The city which is clean and well built, has eight squares of various sizes and degrees of elegance. In two of which, named Constantino and San Sebastian are situated the municipal buildings. Antequera has, moreover six churches of which that of Santa Maria, a domed edifice, is the finest; an infirmary, poorhouse, lunatic hospital, a general hospital, two collegiate schools, in which all branches of education are taught, a theological seminary, numerous convents, several hermitages, and an extra mural cemetery. In the old town, which lies higher up the hill than the modern city there is a Moorish castle built on Roman

DEADLY MOUNTAIN AND MOUNT EREBUS.—From Sir James Ross's Antarctic Expedition.

morning, the 28th, a mountain of 12,400 ft. above the level of the sea was seen emitting flame and smoke in splendid profusion. This magnificent volcano (1500 ft. higher than Mount Etna) was called Mount Erebus, after one of the ships of the expedition. It is in lat. 77° 55' S. and lon. 167° 0' E. A little further E. another but extinct volcano was seen, 10,900 ft. high and named after the other ship, Mount Terror.

In the Cape of Good Hope Shipping Gazette, of July 28, 1840, it is stated that the barque *Topaze*, hired by the Colonial Government for a scientific expedition, and commanded by Lieut. Moore, had returned to Simon's Bay after having penetrated further to the S. than any other vessel had yet done, completing the whole series of magnetic observations left uncompleted by Sir James Ross. Lieut. Moore confirms the existence of the antarctic continent discovered, and called, by Sir James, South Victoria.

foundations. It is a quadrangular structure, which has been repaired and remodelled at various times and presents few attractions of beauty. The city is well supplied with good

CALLE DE PATIA, ANTIGUA
From Museo Taylor, Tegucigalpa, Tegucigalpa, Tegucigalpa

water from numerous public fountains. The woollen trade is carried on here to a extent there being eight water-mills for spinning wool and weaving; woollen fabrics chiefly being, in the manufacture of which no superior handloom weavers are also employed. There are besides, in Antigua, 10 tanneries, an equal number of earthenware factories, several dyers and silk hats, &c. are manufactured to some extent. The larger number of the inhabitants, however, are agricultural. They wear the moco dress, and are very fond of green valvets, and gilt filigranes. They raise wheat and barley some of which is exported, oil-cake, and grapes, and rear a considerable number of sheep, goats, and pigs of horses, mules, asses, and horned cattle. In the neighborhood plain is a salt lake whence salt is obtained. In 1510 the town was taken from the Moors by the Regent Fernando who was hence called *El Infante de Antigua*. Pop. 11,081 (Malaga).

ANTHEME (Sr) a tn. France, dep. Puy-de-Dôme (Auvergne) 9 m. E. Ambert, and 44 m. S.E. Clermont on the line. Pop. 1003.

ANTHONY (Cape St) a capn. R.W. coast, Arabia, prov. Yemen, near the Strait of Bab-el Mandeb lat. 12° 41' N lon. 44° 10' E. Its summit is 2773 ft. above the sea.

ANTHONY (Falls of Sr) a cataract and rapids in the Mississippi l. States America, about 2000 m. above the mouth of this river. It is 627 yards wide above the falls, and 209 yards below it. The perpendicular fall is 17 ft. high, with a rapid below of 58 ft. An island divides the river into two parts. The entire descent of the stream for three quarters of a mile is 65 ft. The falls and surrounding country especially during the spring floods are exceedingly picturesque.

ANTHONY (Sr) the name of three parishes, England, co. Cornwall.—1 (*In Mesage*) 1410 ac. S. by W. Valmouth. Pop. in 1811 315.—2 (*In Roseland*) 710 ac. S.W. Truro Pop. in 1841 144.—3 (*St. Jacob*) 2860 ac. S.E. St. Germans. Pop. in 1841 2394.

ANTIBES, or AVENTIN (anc. Antipolis) a flourishing port, France, on a bay in the Mediterranean, dep. Var (Provence) near the Piedmontese frontier and 11 m. S.W. Nice, on the opposite side of the bay. It ranked as a military place of the third class its fortifications erected under Francis I. and Henry IV. and improved by Vanban under Louis XIV.

being of considerable strength. The harbour though of small extent, and encompassed by a sandbank formed by the bay, has about three fathoms water and is safe and of easy access. It is of a semicircular form, and along the quay is a range of circular arcades. It is defended by a square fort, with four bastions, on a rocky islet at its mouth and has two lights to guide the entrance one small on the E. extremity of the mole, and one of the first order on the adjacent promontory of the Calompa. The only buildings deserving of notice are the parish church which stands on a lofty rock overhanging the town, and occupies the site of an ancient temple of Diana, near which are two towers, which date two centuries ago, and the town-house, a handsome edifice. The environs are covered with gardens, vineyards and orchards. The olive trees are very fine, and the oil which they produce is of superior quality. The figs are delicious and in high repute. Good tobacco also is raised while orange trees Spanish jessamines, various kinds of tuberose-rooted plants, and a profusion of roses and other odoriferous flowers, furnish materials for numerous factories of perfumery and scented waters. The salery in the bay occupies about 42 vessels belonging to the port, and great numbers of the inhabitants find employment in curing sardines and anchovies. The chief exports are earthenware and pottery, clay perfumery salt fish, olive oil, wine, oranges, figs and citrons. The dried fruits are famous. Antibes was founded 240 years ago by Greek colonists from Marseilles as a barrier against the incursions of the Alpine tribes. The Romans enlarged it, and built numerous public buildings, a fine aqueduct, which conducted the water of a neighbouring spring to the circus, is still in good preservation. Pop. 4615.

ANTICOSTI a large isl. at the mouth of the river St. Lawrence, 125 m. long and 30 m. broad at its broadest part. It lies between lat. 49° 0' and 49° 50' N. and lon. 61° 54' and 64° 30' W. The original Indian name was *Natascoti* which, by a simple but not a very felicitous transposition of letters, has been converted into its present and far less euphonious name. It has an extremely sterile and unimproving appearance, being low and swampy on the S. side and high, rocky, and barren on the N. It is mostly covered with woods of stunted growth, haunted by bears, foam hares, and skunks. Partridges, plovers, curlews and snipes also abound. It has no harbours, but there are a few coves in which ships find tolerable shelter when the wind blows off the land. The island was uninhabited till 1809 when after some disastrous wrecks had taken place, the governor of Newfoundland created residences for two families at opposite ends of the island, for the purpose of affording relief to those who might be shipwrecked on its shores. A light-house also was erected on its S.W. point in 1821 and another afterwards at its N. extremity. The ship channel between the island and Lower Canada is 40 m. broad, but the navigation is rendered dangerous by numerous shoals and reefs. Provision posts have been established on the island by the government of Lower Canada, for the relief of the crews of vessels wrecked upon the island, and direction boards have been placed at different parts near the beach to intimate where these posts are. The island was first discovered in 1505 by Jacques Cartier.

ANTIGUA one of the N. Caribbean, Leeward or W. Indian Islands, 50 m. E. St. Kitts, and the same distance N. Guadalupe, about 28 m. long and 20 m. broad at its broadest part first settled in 1632. Its shores are high and rocky giving but little promise of the beauty to be found within consisting of hill and dale, green fields, gorgeous flowers, and cliffs festooned with elegant heterotropical plants. The shores are indented on all sides by harbours, bays, and creeks, and lined on the N. and E. coasts with a number of small rocky islets. The only elevated land in the island is a range of hills, called the Shoberley Mountains, with no great prospect as their greatest height does not exceed 1,000 ft. Several of the harbours are good but the best is English Harbour on the S. coast lat. (dockyard) 17° N. lon. 61° 45' W. (A) the entrance to it is narrow but it is capacious and safe, being surrounded with hills. It is a naval station in time of war and has a well-arranged dockyard. The crystal, St. John, the residence of the governor of the Leeward Islands is built on the shore of a deep and well-sheltered harbour of the same name, in the N.W. part of the island and is of considerable extent, being about three quarters of a mile in length,

and half a mile in breadth the houses are of stone, and well built. Pop. about 16 000 The island is divided into six

parishes, each of which has a town or village. It contains six churches, as many chapels, and a number of other places of worship belonging to Methodists and other dissenters. The cathedral and parish church of St. John's a new structure, opened for Divine services in October 1847 cost upwards of £25,000. The climate is healthy although remarkable for its want of humidity the drought being sometimes so protracted as to ruin the crops, and reduce the inhabitants to great distress, there being no river in the island, and the few springs it contains being all brackish. On these accounts it is more dependent on the seasons as regards its produce, than any other of the W Indian Islands. It is subject also to violent

ST. JOHN'S, ANTIGUA, from the foreground of the Church—Pencil Drawing by E. P. F. S. S.

hurricanes. One of the most destructive with which it was ever visited occurred on Aug 21 1843, when, besides the injury done to property many lives were lost. The principal exportable products are sugar molasses, rum, clove, arrow root, and tobacco of the last two articles however the quantities exported are small. The entire exports of the island for 1851 amounted to £198,435 and the exports to £219,829 showing a considerable decrease since 1847 when the imports amounted to £217,998 and the exports to £269,590. The revenue of the island for 1851 was £218,98 8s 6d. and the expenditure £21,193 17s. 10d. The legislature not having yet made any grant for the support of schools and parents being unable to do so from the extreme lowness of wages, reduced in 1848, to 6d. per day for field-work, education has hitherto made but little progress in the island. The school

returns for 1847 show that there were 6495 children under instruction of some kind or other in that year. A teaching school was opened by the Moravian mission in 1847 into which children are admitted as boarders, and where it is intended they shall remain until their education is completed, the object being to qualify them for the duties of teachers. The experiment of introducing European agricultural labourers into the island has been an entire failure, a great portion of them having died or left the island for America. The legislature is composed of a governor a council of 12 and an assembly of 25 members. The courts of equity and law are the same as in Great Britain. The legislature totally abolished slavery within the island, Aug 1 1834 dispensing with the intermediate stage of apprenticeship. The compensation allowed for the freedom of the slaves, including those of Anguilla, was £428,047 being £14 12s. 3d. per head. Pop. 1851 including Barbuda, 37 757.

ANTILLES. See WEST INDIES.
ANTILMO (St.) a tn. Naples 7 m N the city of Naples, having two churches some convents, a seminary Government pawn-office, several important fairs, and 7100 inhabitants.

ANTINGHAM a par C gland co. Norfolk 1.09 ac S.W. from N Walsham Pop 251

ANTINOË. See ANAKIA.

ANTIOCH. See ANTAKIA.
ANTIOCHÉ (Pérouse) a strait, W coast, France, breadth about 7 m. between Rochelle and Rochefort separating the Isle of Oléron from that of Ré. It was here that July 15 1816 Napoleon went on board the *Bellerophon*.

ANTIOCO (Island) or ANICO (SAN) an isl. Sardinian States S.W. the isl. Sardinia, from which it is separated by the Gulf of Palmas, and a narrow shallow channel, not navigable for shipping lat. (S. point) 38 58 N lon 8 25 E (N. point) 38 58 N lon 8 25 E. It is about 7 m. in circumference 9 m. long, and 3 to 4 m. broad, and fertile. It was extremely populous in the time of the Romans, who called it *Enona*. A great number of medals, statues vases, marble columns, and other monuments of antiquity have been discovered here. It was once famous for its wild horses but the race has long been extinct. The chief town, San Antico on the E coast, on the Gulf of Palmas, is a military place with a small fort. At Olampone and Calatras are some salt marshes. Total pop. 2210.

ANTIOQUIA a prov and tn New Granada, dep. Cundinamarca. The prov lies between lat 5 40' and 8 N lon. 75 and 76 50' W. It is watered by the Cauca. Is mountainous and extensively wooded, a very small portion being in grass, or under tillage. Gold and silver are the principal products but iron, copper tin, and lead are also found though either not worked at all or only to a very limited extent. The negroes and Zaibos were formerly numerous in the mining districts of this province, but both races have been much reduced by the war of independence. The river properly named *Santa Fé de Antioquia* has on the Cauca, in a deep burning-hot valley 1790 ft. above the sea lat. 6° 38' N lon. 75 W. The houses and churches are pretty well built, and the inhabitants are lively active, and naturally given to handicrafts making good watch-makers, carpenters, and look-smiths. The town is surrounded by maize and sugar plantations and though the heat is great, yet the air is dry and healthy and the plague of tropical insects is not felt. Pop. in 1807 18,680; now stated at 4000.

ANTIPAROS (anc. *Paros*) a rocky isl., Grecian Archipelago about 16 m. in circumference, W of Paros, from which it is separated by a strait 1 to 2 m. wide lat. (S. point) 36 56 N lon. 25° 5' E. (N. point) 36 56 N lon. 25° 5' E. The island is in general flat, containing only a few eminences of no great elevation. It is fertile, and in good cultivation, producing cotton, barley and grapes. It has one small village inhabited by about

100 families with a harbour used only for small craft was suddenly peopled by a colony of Midonians and was the birth place of Phidias and Praxiteles. The wonderful grotto, which has rendered the island famous in modern times, is situated in a high hill about 3 m. from the sea, and 500 ft. from the surface of the sea. The entrance is by a large natural arch of rugged rock overhanging with a variety of trailing plants. The descent into the grotto is effected by the aid of ladders, ropes and torches. The principal cavern is 10 yards long by 11 ft. broad with an average height of 60 yards. It is an immense marble arch the roof and sides of which are covered with stalactites, and innumerable crystallizations assuming the various figures of columns, screens, ramifications of trees, and festoons of flowers, the magnificence of which dazzles the eye and seems almost to realize the idea of the enchanted halls of fable. The stalactite and stalagmite pillars are of great length and thickness. The former dependent from the roof, some meet with the latter rising from the floor and thus form a continuous pillar apparently giving support to the arch. One stalagmite is stated to be of the great thickness of 30 ft.

ANTI PAXO one of the smallest of the Ionian Isles lat. 39° 42' N. lon. 20° 5' 40" E. (a) about 14 or 2 m. S.S.E. Paxo. It is 2 m. in length and half a mile in breadth produces the olive, grape, and other fruits

ANTIPELLOU, now ANTIPELLO a small seaport is Anatolia Turkey territory of Lycia on the Mediterranean 39 m. S.E. Telmessus or Makra lat. 38 1/2° N. lon. 40° 40' E. It has an act. e. trade in firewood and contains the houses of several official persons. The ancient town of Antipellis stood at a short distance on a finely situated promontory which still presents a theatre, tombs, foundations of temples and other buildings. Many of the tombs have remained unopened during the 3000 years they have existed others have been pillaged. Many of them are highly ornamented with architectural designs. The norm of the sarcophagus found here is peculiar to the district of Lycia.—Follows *A. Minor*

ANTIPODES ISLAND a small is. in the S. Pacific Ocean about 740 m. S.E. of the middle island of New Zealand, and so called from its being nearly antipodal to Green which, the latter being in lat. 51° 23' S. lon. 0° 0' 0" the former or Antipodes Island, in lat. 49° 33' S. lon. 179° 31' E.

ANTISANA, a volcano in the Andes of Quito 25 m. S.E. by E. the city of that name, and 80 m. N. N.E. Chimborazo lat. 0° 39' 45" S. lon. 78° 24' 30" W. Its height is estimated at 19,137 ft. Antisana is not known to have had any considerable eruption for the last 200 years. When visited by Humboldt, in 1809 much snow was seen issuing from several passages and an appearance resembling a current of lava was observed by that illustrious person near the summit while on the slope of the mountain pure red-stone and scoria were noticed. There is a village or hamlet of the same name on the mountain 3900 ft. above the plain of Quito and 13,454 ft. above the sea, being, with exception of the village of Tacu in Peru and that of (Alamara in Bolivia, the highest congregation of houses known on the face of the globe, although there are several post stations in Peru at a much greater elevation

ANTI VARI, a N. European port in Albania, on the Adriatic, 17 m. W. Berat lat. (W. point) 42° 2' 18" N. lon. 19° 6' 30" E. (a) It is built on a rocky eminence about 2 m. from the sea, on the banks of the small river Rishiana is the seat of a R. catholic archbishop contains nearly 1000 houses, a bazaar with 100 shops, and is defended by a castle. At the mouth of the river is a harbour for light vessels, by which a considerable trade in exporting oil and leather is carried on. Pop. composed of Turks and Christians 4000

ANTOINE (St.) the common name of at least 16 villages in France, but the only one worthy of notice is a tn. and com. dep. Jéze (Dauphiné) on the Furest, among mountains, about 27 m. W. Grenoble. The only object of importance is the celebrated abbey of the same name, belonging to the Augustine order. It was founded in the 13th century and its church, an interesting and fine edifice, is in good preservation. Some silk stuffs are manufactured here. Pop. 3007

ANTOING a N. Belgian near the French frontier cap. of same name, prov. Hainaut, rather more than 7 m. W. N.W. Tournay on an eminence which overhangs the r. bank of the Scheldt, and commands a view of the battle-field

of F. tenay The only buildings of note are the church of St. Peter the hospital and the old castle of the Princes of Ligne, with a very lofty tower. The high road from Mons to Tournay passes through the commune, and the canal of Antwerp enables Mons to communicate with the Scheldt without entering the French territory. The manufactures are cutlery and salt. Lensed and repeated are crushed for oil, and a good deal of linseed is prepared 1 op. 2104.

ANTONGIL BAY Madagascar E. coast, 290 m. S. Cape Amber or Ambro 50 m. in length E. to N., and about 20 m. in width at the entrance. The depth of water in the bay decreases, as the head is approached to 30 25 10 and 15 fathoms. The common submergence is to the N. or W. of Isle Morone, a small island at the head of the bay Wood and water are readily procured here. There is an excellent harbour also, called by the French Port Choiseul where ships may anchor in 6 or 7 fathoms.

ANTONIE (St.) a vii Holland prov. N. Brabant, 25 m. E.S.E. Hertenbosch (Rois le Duc) on the F. edge of the Peel. It has a R. catholic church and 500 inhabitants

ANTONIN (St.) the name of several places in France but the only one of any note, is a dep. Turn-et-Garonne, in a spacious valley at the junction of the small stream Bonnette with the Aveyron. The town is in general ill built, but the E. portion contains large buildings dedicated to St. Genesvieve, occupied by the civic authorities and the gendarmery. In the vicinity on a lofty precipice above the Aveyron, stand the picturesque ruins of the castle of Adelay. The main store of leather paper woollens, and serges, is carried on 1 op. 2601

ANTONINA a small port Brazil prov. Rio-Paulo, on the Itapema creek S. side the Bay of Paranaigua, from the city of which name it is distant N.W. about 10 m. lat. 23° 09' S. lon. 47° 40' W. It has a church and a school, and is favourably situated as to salubrity in comparison with some neighbouring places. A road across the hills connects Antina with the town of Curitiba whence goods are brought on mules to a river along which they are transported in boats to Antina. The trade of the town consists in rice, manioc flour dried beef hides building timber and cordage. The port which is protected from the winds, and may be entered at all times, has 212 ft. of water 1 op. of town and district above 6000 —(Dic. Geo. Imp. Brazil)

ANTONIO (Pt. ar.) Jamaica 6 m. W. from the N.E. end lat. 18° 18' N. lon. 76° 27' W. (a) It has 30 m. N.E. Kingston and is composed of the E. and the W. harbour divided by a peninsula on which stands the town of Trenchfield, N. of which is Navy Island. The E. harbour has good holding ground for anchorage in 9 to 11 fathoms water but is not so secure as the W. harbour being more exposed to the N. winds, but its channel is broader and not so difficult to take. The W. harbour has good anchorage in 5 to 7 fathoms

ANTONIO (Bar)—1 A cape Spain, in Valencia, one of the most E. points of prov. Alicante and forming the N. extremity of the Bay of Jaban. It is high naked, and precipitous. On the table land at its summit are several wind mills, a small convent, and a watch-tower lat. 38° 48' N. lon. 0° 10' E. (a)—2 A cape, in Cuba W. end. It is low and covered with wood lat. 21° 51' 50" N. lon. 84° 57' 3" W. (a)—3 A cape Brazil at the entrance to the Bay of Bahia lat. 13° 0' 42" S. lon. 38° 31' 45" W. (a) There is a light on this point 140 ft. high —4 A cape, Baenos Ayres, at the mouth of the Rio de la Plata S. side. It is high and steep, and rises almost perpendicularly from the sea lat. 35° 13' S. lon. 55° 45' W. (a)—5 A peak, and N.E. cape on the Kurile Is. Kamishir.—6 A port, lat. 14° 15' N. lon. N.W. side lat. 59° 0' 24" N. lon. 1° 14' E. (a) It has anchorage for large vessels.—7 A large port or bay Tsingoma, with anchorage for large vessels lat. 40° 49' S. lon. 64° 54' W. (a)

ANTONIO (Bar) the most N. and one of the largest of the Cape de Verde Islands lat. (N. point) 17° 18' N. lon. 23° 0' 7" W. It is of great height, its loftiest summit attaining an elevation of 7400 ft. above the surface of the sea, and may be seen in clear weather from a distance of nearly 90 m. This, however, is rarely the case as it is almost always covered by a dense atmosphere. It is extremely fertile, producing large quantities of corn, arch, and cotton. The coast

all around is clear and although there are no ports in the island, there are several anchorages, one of which is Texel Bay, on the W side, where excellent fresh water may be obtained. The best anchorage here is in 85 to 89 fathoms, about one-third of a mile off shore, soft bottom. Pop. about 4000.

ANTONIO DE BEKAR (San) frequently called simply Bekar by the inhabitants, a principal city and once one of Texas, on the river of the same name which runs through the town, and is here upwards of 60 ft. wide, and 12 ft. deep 90 m. S.W. Austin. The town is said to be the most pleasant and interesting in Texas laid out and built with some attention to regularity. The houses are of stone, of one story in height, have thick walls, and but few windows. The climate is pure, dry and healthy and as little rain falls here, the rich and fertile river-margins are intersected by numerous irrigating canals, so that even in the driest season a good crop is obtained. Peach, melons and other fruits are cultivated with success. Although it has suffered severely from revolutionary commotions, and from the incursions of the Indians, it is still a place of considerable trade. Pop. at one period 12 000, now about 8000.—The San Antonio River abounds in fish and is navigable for canoes to its source, and for small steamboats to within 10 m. of La Baha del Espíritu Santo, now called Ciudad.

ANTRIM a maritime co. Ireland prov Ulster bounded E. by the N. Channel, W. by co. Londonderry and Lough Neagh, N. by the Atlantic, and S. by co. Down and Belfast Lough. It extends about 45 m. N. to S., and in general breadth from L. to W. about 28 m. It comprises 722 458 ac. of which 176 325 are mountains and bog 508 288 arable, and 53 288 water the remainder is in plantations, and occupied by towns. One-third of the co. is mountainous, but nowhere rises more than 1810 ft. above high sea level. Estates here are generally large, but the farms except in the hilly districts, are small. Improved implements and practices have been extensively introduced. The principal agricultural productions are potatoes, barley and oats. Wheat, peas, beans, and flax, are also cultivated, but to a comparatively small extent the last in particular has much fallen off.

EXTENT OF LAND UNDER CROPS IN 1861

	Acres.
Wheat	9 300
Oats	86 000
Barley	1 000
Peas and Beans	4 016
Potatoes	41 018
Turneps	13 000
M. liquid-marrow, Carrots, Parsnips and Cabbages	801
Flax	11 918
Meadow and Clover &c.	14 197

Total under Crops

206,197

The cattle are of small size, but the breed has been much improved by crossing with Dutch, Leicester and Ayrshire stock. Not much attention is paid to sheep, but in the mountain pastures are fed numerous herds of goats. Pigs are reared in great numbers and on these the small farmers and cottagers, who also employ themselves in domestic linen-weaving chiefly depend for the payment of their rents. During the milking season, from September to May the number of swine brought to market is immense and the bacon and pork of many thousands are annually exported from Belfast. The staple manufactures of the county are the spinning of flax and cotton yarn, and linen and cotton weaving, in which the great bulk of the population are engaged. The fishery districts are Ballyvaughan and Carrickfergus comprising 121 m. of extensive boundaries, which in 1849 had 686 registered vessels, employing 2061 men and boys. Coals have been found in the former district but the most remarkable feature in the geological structure of this county is the stupendous range of basaltic columnar strata, forming at one part, the celebrated Giant's Causeway about 8 m. N.E. Coleraine, and extending almost the whole length of the N coast. (See GIANT'S CAUSEWAY) Of these perpendicular basaltic columns, magnificent specimens are also seen at the promontories of Bangor and Fairhead. The latter consists of a range of tremendous rocks and precipices, extending in some places an elevation of 586 ft. The lower portion is a inclined plane, strewn with huge masses of rock, thrown together in the wildest confusion above this rises a natural precipice of columnar granitophane 320 ft. in height, the whole presenting a scene of surpassing

Vol. L

grandeur and sublimity. The sea coast is diversified by a succession of projecting precipitous cliffs, here and there

THE FAIRHEAD ANTRIM.—From the Carrickfergus Arsenal

broken by bays and creeks. The county is divided into 14 baronies, and comprehends 77 parishes, and parts of parishes and returns six members to Parliament, two for the county at large (consequently January 1 1849 1814) two for Belfast borough, and one for each of the boroughs of Carrickfergus and Larburn. No county of Ireland includes a larger proportion of Presbyterian Protestants than Antrim many of whom are descended from natives of Scotland and the people of this part of the county have the character of being the most quiet, industrious and orderly of the whole population of Ireland. The principal towns are Belfast, Carrickfergus (formerly Larne Randalstown, Ballymena, and Ballymoney). —ANTRIM is also the name of two baronies, Upper Antrim and Lower Antrim and of a par. all in co. Antrim. Upper Antrim contains 36 438 ac. pop. 14 444. Lower Antrim contains 80 828 ac. pop. 28 608. Area of par. E301 ac. pop. 6074. Pop. of co. 82 264.

ANTRIM a market in Ireland, cap. co. Antrim, pleasantly situated on the Six Mile-Water at the N.E. extremity of Lough Neagh, 15 m. N. by W. Belfast and 18 m. W. Carrickfergus. It consists of two principal streets with several smaller diverging. The houses are mostly of stone, and well built. The supply of water is abundant. The parish church is a modern Gothic structure with a lofty square embattled tower surmounted by an elegant octagonal spire. There are besides, several places of worship for dissenters, a meeting house for the Society of Friends, a R. catholic chapel, and several schools of different descriptions. A machinery society a branch savings bank and a union workhouse. Antrim carries on a considerable trade in bleaching and in the weaving of linen, cotton, and hosiery. In the neighbourhood are two paper-mills, where the first machinery used in the N. of Ireland for making paper was introduced also several flour and meal mills, and malt kilns, as well as a brewery about half a mile from the town is the celebrated round tower of Antrim. It is 95 ft. in height and in good preservation. The doorway is placed at an elevation of about 12 ft. from the ground is but four ft. four inches in height, and is constructed of large blocks of coarse-grained basalt, found in the neighbourhood. This doorway is remarkable in having a paved area within a circle sculptured in relief on the stone immediately over the lintel, in evidence it has been presumed, that these towers were regarded as sanctuaries. Pop. 3722.

ANTRODOCO a tn Naples, prov Abbenze Ultra II, dist. of, and 8 m. E. from Città Ducale 17 m. N.W. Aquila,

25

having a church, and two convents. It is the centre of a considerable agricultural district, and has four important annual fairs. Pop. 8460.

ANTROVA an Alpine valley Italy in Savina, traversed by the Gresson with a market town of same name also villages and iron mines.

ANTROVA a small str or rock, W coast, France, at the mouth of the Gironde, on which is the well known lighthouse called the Tower of Cordouan, one of the most important structures of the kind in Europe. It exhibits a revolving light of the first class, the elevation of which, above the level of the sea, is 90 ft. It may be seen, in clear weather at the distance of 24 m. lat. 45° 35' 2" N lon 1° 10' 0" W (u.).

ANTLCO a volcano and valley Chilian Andes, 140 m. F C neepon lat. 36° 50' S. lon 70° 40' W. The volcano, according to Lyell and Mrs. Hemmerville, is 18,000 ft. high. Immense currents of lava have at various periods issued from the mountain, the last discharge occurring in 1828. This event is said to be an exception to the general rule, few volcanoes in the Andes, and some of those in Quito having been seen in modern times to pour out lava but having merely ejected vapour or smoke. (Yall's *Geology* p. 332). The valley is remarkable for the mildness of its climate, and the beauty of its plants and flowers.

ANTULLY a vil France dep. Rhone-et-Loire arrond. and near Autun. Inhabitants engaged in vine culture. Pop. 1528.

ANTILIA a vil Syria, 180 m. S. N. E. from Acre about 5 m. from the sea. lat. 3° 55' N lon 35° 5' E. It contains a convent and a church.

ANTLERI or **ANTROVERLE** a vil Hunsdon prov. a dist. Candham 10 m. S. W. Boxford formerly surrounded by a mud wall with brick bastions.

ANTWEILL P. a vil I. uen, gov. Goblent in the Elbe mountains with vine culture and mining. Pop. 330.

ANTWERP (German, *Antwerpen*, French *Anvers*) a city and port Belgium cap. 170 and arrond. 170000 n. n. s.

r bank Scheldt, 73 m. by rail N Brussels, and 82 m. E N. E. Ghent lat. (Antwerp) 51° 13' 15" N lon. 4° 24' 15" E. (s) about 12 m. above the estuary of the Scheldt, and about 60 from the open sea. It is situated at an abrupt bend in the river which here is about a quarter of a mile wide with an average depth of 90 ft. Its limits landward, as marked by its fortifications form the segment of a circle, of which the Scheldt is the chord. It is strongly fortified its walls and other defences completely encompassing the city on the land side from the river on the N. to the dike on the S. a distance, following the line of fortification and including the citadel of about 23 m. The latter one of the finest and most complete defences of the kind anywhere existing was built by the Duke of Alva, in 1567. It is a regular pentagon surrounded by a wet ditch 90 ft. broad and has three bastions, each containing a casemate capable of holding 400 men. The other works were erected partly by Philip II. in 1567, and partly by Philip V., King of Spain in 1701. Outworks and forts extend along both sides the river to near the Dutch frontier. The general appearance of the city is exceedingly picturesque—an effect produced by its numerous churches, convents, magnificent public buildings, its elaborate and extensive fortifications the profusion of beautiful trees with which it is adorned and in no small degree, also, by the stately antique-looking houses which line its older thoroughfares. The entire breadth of the city at the widest part, which is between the walls and the river or from E. to W. is about three quarters of a mile its greatest length between the citadel on the W. and the fortifications on the E. is about 13 m. including the esplanade or Place d'Armes on the one hand and the great and small bazars on the other. Nearly all the streets of which there are altogether about 200 are exceedingly tortuous and irregular so much so that a stranger has much difficulty in finding his way. Still many of them from the elegance of their buildings, are imposing. The principal one called Place de Mer will bear comparison with any street in Europe. The squares of which there are several are also fine. At the head of the numerous public buildings with which the city is adorned stands the cathedral one of

ANTWERP CATHEDRAL, FROM THE BOLD MARKET
Photo Francis & Taylor in France and Germany.

the largest and most beautiful specimen of Gothic architecture in Belgium. It is believed to have been commenced in the middle of the 12th century and to have taken 84 years to finish. It was burnt in 1583, but the tower and choir were preserved. The exterior is distinguished by the delicate and elaborate beauty of the workmanship, and the interior by an

imposing simplicity. The height of the spire has been variously stated from 865 ft. up to 468 ft. The entire length of the building is said to be 500 ft. and the breadth 250. The object of greatest interest and attraction in this church is the celebrated masterpiece of Rubens, the Descent from the Cross. The other churches of note are St. James's, St. Andrew's, and St. Paul's. The first is a very handsome structure, surpassing even the cathedral in its internal decorations. Behind the high altar is the tomb of Rubens who resided in Antwerp from his 10th year till his death, in 1640. It is covered by a slab of white marble on which is a long inscription, laid into the pavement. St. Andrew's contains a carved pulpit, of exquisite workmanship. All these three churches are enriched with paintings by Rubens, Van Dyck, Tulpers, and other masters. The churches of St. Michael, of the Carmelites Augustines, and Jesuits, may also be named as fine edifices. Amongst the other public buildings are the Exchange, built in 1683 and said to have been a model for the old London Exchange, and for that of Amsterdam, neither of which, however, equalled it; the Hotel de Ville, a splendid edifice of marble, rebuilt in 1581; the Maison Anseele or Hall of the Hansas Towns, a large and magnificent structure and the palace, intended for the King and royal family when they reside at Antwerp. Its medallions comprise academies of painting of the fine arts, and of the sciences, a gallery of sculpture, a picture-gallery with 200 pictures, many of them the finest works of the first masters of the Flemish school, a public library with 15,000 volumes, a botanical garden and numerous learned societies and schools and several hospitals, asylums, and workhouses. The quay along the Scheldt forms a pleasant promenade, broad, spacious, and finely shaded by elms. Of the docks, dockyards, and basins, constructed by Bonaparte, at an expense of £1,544, of £2,000,000 the last only remain, the former having been demolished after his downfall. The area of the great basin is 17 a., and that of the small ones 7. They are now converted into commercial docks, and are lined with spacious warehouses. The harbour thus formed is one of the finest in the world. It admits vessels of any size, and can easily hold a thousand. The principal manufactures of the city are blank silks and velvets for which it is particularly famed. Cotton laces, lace carpets, hats, and umbrellas are also manufactured to a considerable extent. There are also sugar refineries, and a good deal of shipbuilding. The trade and commerce of Antwerp are extensive and for centuries it is one of the most important markets in Europe. The number of foreign vessels that arrived there in 1846 was 1970 tons, 286,474. Of these 959 were English, 704 German, 875 Danish, and the remainder other foreigners. Besides these, there arrived Belgian ships 243 tons, 82,815. Total, 2215 tons, 829,287. In 1853 the number of ships that entered the port was only 1,182 of which 937 were English, and the whole ton, 992,035. The exports chiefly consist of laces, lace cottons and linen manufactured goods, glass, wine, oak bark, grain and seeds, lace, refined sugar (in 1847 187,692 cwt.), caudled sugar (in 1847 23,652 cwt.). The principal imports are hides, coffee, sugar, cotton stuffs, and other manufactured goods, corn, raw cotton, leather (timber, tobacco, wool, rice, dyestuffs, salt, wine, fruits, &c.). The following list exhibits the quantities imported, in 1846 and 1847 of a few of the principal articles—

ARTICLES.	1847	1846.
Wine	675,000	841,400
Coffee	970,000 lbs.	822,000 lbs.
Cotton	80,000	30,960
Cashmere	1,611 bales	
Alum	25,000	
M. Iron	11,160	
Rice	26,888	
Foodstuffs	165,794	
Wool	250 tons	
Wool	2,650 bags	
Dyestuffs	1,254 tons	
	151,680 cwt.	60,000 cwt.
Sugar (Raw)	40,000 bags	31,620 bags
	1,000 barrels	1,000 barrels
	1,076	11,208
	1,000 bales	2,791 bales
Tobacco	800 cwt.	415 cwt.

A large proportion of the imports are by transit, and are forwarded with the utmost facility by means of canals and railways. The passenger traffic of Antwerp is also very considerable, between 4000 and 5000 arriving annually, from

England by the steam-packets, of which there are nine plying between Antwerp, Hull and London. It has, moreover, become an important point of embarkation for emigrants, 2961 having sailed from this port in 1844, 5275 in 1845, and 10,170 in 1846. Ships of the largest burden come up to the town, there being from 22 to 40 ft. water in the river at ebb tide, with a rise at springs of from 18 to 14 ft.

Antwerp is a very ancient city and had a much larger population, and a much more extensive foreign trade in the 15th and 16th centuries, than now. Its inhabitants then numbered 200,000 and 2000 vessels entered the port annually. Its first reverse occurred in 1576, when it was pillaged for three entire days by the Spaniards; nine years afterwards, it was besieged for 14 months by the Prince of Parma, and in 1648 the navigation of the Scheldt was closed in accordance with the terms of the peace of Westphalia, which added to other calamities, completed the ruin of a city. In 1794 it fell into the hands of the French, and was surrendered by them to the allies in 1814. On the revolt of the Belgian provinces in 1830 the Dutch garrison, consisting of 4500 men, commanded by General Chassé, refused to evacuate the citadel and continued to hold it for the King of the Netherlands. To compel the evacuation, the fortress was invested in 1831 by the French, under Marshal Gérard, and after 24 days after the breach was opened. Pop. about 79,000. —(Moor's *Belgium*, *Allgemeine Encyclopädie*, *Moniteur des Indes*.)

ANTWERP a prov. Belgium, bounded N by Holland, E by prov. Limburg, S by S. Brabant, and W by E. Flanders length, about 40 m. breadth about 20 a., about 520,000 a. It is divided into three arrondissements, Antwerp, Mechlin and Turnhout and these are subdivided into 22 cantons, containing 145 communes, among which are the four principal towns or cities, Antwerp, Mechlin, Louvain, and Turnhout. Since 1830 it has formed one of the nine provinces into which the kingdom of Belgium then created has been divided, sending four members to the Senate, and nine to the Representative Assembly. The province is almost an unintercepted flat, composed chiefly of fertile soil but partly also of an extensive tract, called Campine, consisting of loam and barren moor with some woods of fir. It is bordered by the Scheldt, and numerous by the Great Nete, the Mole-Nete, the Little Nete, the Nyele, the Ruppel, the Senne, and several smaller streams. The soil is in general light and sandy with a wet clay subsoil, but is by no means infertile. Good crops of wheat, rye, barley, buckwheat, pulse, rape, flax, hemp, hops, madder, alfalfa, beet potatoes, sunflower, and lucerne, are raised and fruit also of every kind, a fine good deal of tobacco. In 1841 the number of acres under cultivation was about 394,000. Cattle, sheep, and horses, are reared in considerable numbers, fish abundant in the streams, and honey of excellent quality is produced throughout the district. The trade, both internal and external, is very important. The principal manufactures are lace, silk, cotton linen, woollen and silk stuffs, soap, spirits, ale and beer, tobacco, refined sugar and malt, leather and oil. Numerous printfields produce goods which vie with those of Switzerland, Germany, France, and England. The agriculture and many features of the province have been considerably improved, by several establishments for the employment of prisoners and mendicants, and by the formation of what is called the free colony of Werelt occupying an extensive moorland tract between Antwerp and Turnhout. Still more important improvements have been effected by the increased facilities of transport, both by land and water. The canal of Willembroek carries its produce to the capital while more recently the railway from Antwerp to Mechlin or Malines, has brought it into immediate connection with all the great towns and mineral and manufacturing districts in the S., E., and W. Pop. in 1826, 530,125. In 1844, 886,173. —(Moor's *Belgium*.)

ANURADHAPURA, or ANARADHAPURA, the same as Ceylon, but now a mass of ruins. It lies about 45 m. S. E. of Trincomalee and 48 m. N. of Batticaloa, on the road between these two places, about lat. 8° 20' N. lon. 79° 57' E. A few ruins are left, but no inhabitants of this once densely populated city and it is questionable if even these would long remain in the place, were not Anuradhapura the seat of a district court, and a Government agency. The country around is desolate unhealthy and naturally uninteresting, and the

ruins are surrounded by dense masses of jungle. The walls of Anuradhapura were built about the year A.D. 60 and their remains still exist. They enclose a space of 16 m. sq. or an area of 256 sq. m. and are built in N and S, E and W. In this vast space, besides the buildings of the city, there were of course included extensive gardens, water-courses, &c. The ruins are characterized by an immense number of stupa pillars, generally square, which meet the eye on every side. These pillars in great multitudes some in the form of balustrades, and of lava heads and portions of sculptured columns lie scattered about in all directions, evidencing the state of refinement to which the inhabitants of this once populous city had attained. The main streets appear to have been as broad as the widest streets in London at the present day. One of the earliest existing buildings, which is in an excellent state of preservation is the Thuparamaya Dagoba,* erected A.C. 307. It consists of a dome-shaped mass

DAGOBA OF THUPARAMAYA.—From Major Fortes's Ceylon.

of brickwork surmounted by a tapering spire, and stand on a square-bazged platform. The entire structure is about 40 ft. high. It is surrounded by long, slender wall proper topped columns each consisting of two blocks of granite, the one forming a square base and octagonal shaft, both together about 22 ft. long the other forming the capital, a cylinder decorated with small human figures standing round the lower part of the projecting ornament and adding about 2 ft. to the height of the pillars. There were originally 108 of these pillars, standing in four rows, on the platform round the dagoba. This day-bah though by no means the largest, is the most elegant structure of the kind in the city and is, besides, one of the finest extant remains of Singhalese art. Probably the most remarkable ruin in this ancient capital, are the remains of the numerous pillars which formerly supported the Loma Maha Paya, a house placed for the purpose of the one of the largest buildings that ever existed in the East, and built 150 years before our era, by Dasinganona. It was 25 ft. square, and of the same height supported by 1600 stone pillars, forming a square, with 40 on each side. The pillars are nearly all standing, though in very various states of preservation. Time, and the wants of some of the later monarchs having made great havoc among them. They are generally about 12 ft. high. Those in the centre being twice as thick as those outside. From the small interspace it is evident they were intended to be built upon and history informs us, that, when first erected, the Loma Maha Paya consisted of nine stories in height each containing 100 apartments. In the centre of this palace stood an ivory throne, having a representation of the sun, in gold on the one side a similar emblem of the moon in silver on the other and above, the stars in pearl. It was called the brazen palace, from being

From *Dagoba-geha*, the word is cognate of a relic. Dagobas are monumental relics of the relics of Buddha. Their characteristic form is bell-shaped, surmounted by a small spire and a small cell or hollow space in the centre, they contain fragments or emblems of Buddha's very few, as pearls, precious stones, figures of Buddha, &c.—(Langdon's *History of Ceylon*.)

roofed with metal in place of tiles. To particularise all the interesting remains of this city would greatly exceed our limits. We must, however, pass over its domes the Dagoba, originally 270 ft. high, and standing on a platform paved with granite, 800 ft. square; nor the granite fount, said to have been made for Dasinganona, for the purpose of holding his elephants' food, and at which six of these animals might feed without accommodating each other composed of a single block of stone, and having an excavation 9 ft. long by 4 ft. broad, and 2 ft. deep. It is to be remarked, that in all these interesting remains of Singhalese art and evidences of Singhalese refinement and power the more ancient structures are decidedly superior to those of a more modern date. Anuradhapura appears to have been founded about A.C. 540, by Anuradha, a follower of Wijaya, who had shortly before invaded the island. It was greatly enlarged and improved by the usurper Pandukabhaya, who, in A.C. 437 made it the capital of the island. He appointed 500 chandala or people of low caste, to be scavengers in the city 200 to be night men, 150 to be carriers of corpses, and an equal number to be engaged at the cemetery. In the year A.C. 307 in the reign of Tissa, the sacred Bo-tree of Gotama was transported from the banks of the Ganges to this place. From this period to the Christian era and for three centuries thereafter the city seems to have been in its most flourishing condition. The first blow to its prosperity appears to have come from the wavering monarch Mahasen who reigned in the third century. He became attached to the heterodox Buddhistic sect and employed his power in the destruction of the great buildings occupied by the more numerous and more orthodox community. Subsequently his opinion changed, and he endeavored to restore what he had formerly destroyed. Its prosperity received a further check in the fifth century from a 24 years struggle between several Malabar invaders and the royal race. It was finally deserted by the royal line in the year A.D. 69. An unsuccessful attempt was made to restore it by a Singhalese monarch, in the 11th century—(W. Knighton in *Jour. Asiatic Soc. Bengal* 1847.)

ANWICK, a par. England co. Lincoln 1820 see L.N.E. Standard. Pop. 807.

ANWOTH, a par. Scotland co. Kirkcubright 1903 ac. contains two ancient structures. It is a castle of Carolines and tower of Racer. Pop. 900.

ANZIOLE BAY S. Australia, having Cape Radstock, lat. 32° 12' S. lon. 134° 15' E. (N) on the N.W. and Waldegrave Point on the E.E. 125 in N.W. from the entrance into Spencer's Gulf.

ANZA, a river, Sardinia, Piedmont, having its source in the glaciers, on the E. side of Monte Rosa. It traverses the beautiful though narrow vale of Anzasca, in a direction E. by N. and falls into the Toca near Ynguna after a course of about 20 m. The scenery along its banks is exceedingly picturesque. There are several mills on it for crushing the ore obtained from the gold mines in the vicinity. The inhabitants of the valley of Anzasca are remarkable for cleanliness and industry, and the females especially for the beauty and symmetry of their persons.

ANZARCA, VAL. See Anzasca.

ANZI, a tn. Naples prov. Basilicata, dist. of 12 m. E. from Potenza, on a high mountain. It had its name of Anzi or Anza from the Romans and was famous for its impregnable position. It has a parish church and a convent. Pop. 3397.

ANZIN a tn. France dep. Creuse (Flanders) about 1 m. N.W. Valenciennes, in the centre of the most valuable coal mines of France. The coal field of the surrounding district is a very extensive tract but what is properly called the Consommation of Anzin includes about 118 L. (518 sq. m.) and is worked by 11 coal pits giving employment to 3000 persons, of whom nearly two thirds are miners, and raising annually about 2,261,462 bushels of coal. Some of the pits at Anzin are 150 fathoms deep. The seams are very numerous. About 50 have been counted, with a thickness varying from 8 ft. to 20. The coal is of a rich caking quality in general tolerably free from sulphur well adapted for the smelting. The ample supply of fuel has led to the establishment of numerous public works at Anzin—one blast furnace, several forges, with apparatus for making steam and iron plates, glassworks, breweries, distilleries, salt-refineries, and works for firebricks. A good deal of sherry also, is prepared. Pop. 3193.

ANZO, or **ANNO** (anc. *Andros*) a small seaport in Italy. Papal States, 31 m S S E Rome. It is beautifully situated, and enjoys a mild agreeable climate. The ancient port, built by Nere, still exists, but has decreased in depth from sanding up still having, however, 3½ to 5 fathoms. A second port, formed by a jetty built by Innocent XII. is so shallow as to admit only of small boats. Its commerce is small and inhabitants few. It was a favorite Roman watering-place, and the birthplace of Nero and Caligula. In and around Anzo are many fine ancient architectural remains.

ANZUAN or **BRUNIAN** a lat Mozambique Channel.

See JOLEMAN

AOR, or **AUA** (Palo) a small is. in the China Sea, off the coast of the Malay peninsula, from which it is about 47 m distant and from Singapore 116 m. lat. 2° 59' N lon. 104° 34' E. (n.) It is double-peaked, and has the appearance, when viewed from a distance, of being two islands. The highest of these peaks is 1806 ft. the other 1280 ft. The island is only about 3 m. in length and little more than 1½ m. in breadth. Its formation is granitic, and the soil red. It is covered with coconuts trees which fringe its bays and cluster amongst the crevices of the rocks to a height of 1000 ft. above the level of the sea. There are here and there, also, fine fruit groves, in which the durian and mangrove abound. The natives generally are of small stature, and puny appearance. Their principal settlements are on the S W N W and N E sides. Although shy of strangers, they are generally found to be inoffensive, yet it is not considered prudent to venture far into the country without due precautions. On the S W side of the island there is a commodious bay which affords shelter in the N E monsoon and in which vessels frequently anchor in bad weather to await a favorable change for entering Singapore Strait. The island is generally adopted as a point of departure by ships bound to China, which also steer for it on their return. Passing vessels also are supplied here with firewood coconuts and water. Pop. 1400.—(Horsburgh's *Indian Directory Jour Ind Archip.*)

AOSTA (anc. *Augusta*), a cit. in the Savoy States cap. dist. of same name, 50 m N N W Turin. It bank Dora-baleto, in the middle of the Val d'Aosta. It is the seat of a council of judges, under the jurisdiction of Turin, and of a bishop, suffragan to the Archbishop of Chambéry, and possesses a collegiate and three parish churches, two colleges and two hospitals. Amongst its antiquities are a triumphal arch a gate with three arches, and the remains of an amphitheatre. It has some trade in wine, cheese, hemp, and leather. Pop. 7000.—The province, which has the title of a duchy and is intersected by the Dora-baleto, forms one of the great valleys of the S E. slopes of the Alps and is surrounded by the highest peaks of the Pennine and Graian Alps, 1244 geo. sq. m. The thick pine forests of the mountains the rich pastures of the Alpine slopes, the wooded and vine plantations on the steeply cut terraces, and the mines of silver copper and iron, employ the inhabitants in woodcutting the manufacture of turpentine pitch, and the Alpine husbandry vine culture and mining but not in sufficient numbers, there being a scarcity of ground fit for grain growing. The poor people many of whom suffer greatly from goitre, leave their homes in considerable numbers, and wander about as sweeps masons, and suttle returning after a time to their native place to spend their earnings. Pop. 1000.

APAE, or **APAE**, a small is., Pacific Ocean one of the New Hebrides lat. 16° 55' S lon. 168° 10' E. (n.) about 85 m S.S.E. the island of Mallicolo or Malicolo, and 350 m N E. the nearest point of New Caledonia.

APALACHIAN MOUNTAINS. See **ALLEGHANY**

APAM a native cit., N W Africa, Gold Coast, kingdom Ashantee, 40 m E N E Cape Coast Castle; lat. 5° 16' N lon. 0° 30' W. It is situated on a small eminence, and contains the ruins of an old Dutch fort, the walls of which have been kept in a habitable state by a person appointed for that purpose, who has also charge of the fort. The town, with a great number of its inhabitants, was destroyed by the Ashantees in 1811; and shortly afterwards, the fort was pillaged by a native chief the gun-carriages burnt, and the whole building laid in ruins.

APAMAMA, an is. in Pacific Ocean one of the Gilbert Isles, or Kingman group, in lat. 0° 30' S lon. 178° 54' W according to Baper; and in lat. 0° 27' S lon. 178° 57' 30'

W according to Wilkes, Commander of the U States exploring expedition. It is about 5 ft. above the surface of the water and is 10 m. long by 5 m. in breadth. There is anchorage on the S side, the soundings varying from 2 to 5 fathoms, with a broken coral and coral sand bottom. It has a large population, but yields little more than supplies their wants. A small quantity of fresh water may be had by digging on the beaches, but neither wood nor refreshments are procurable for shipping. Apamama is also known by the names of Shumpson and Hopper Island.

APAVORMIA or **APAVORMIA**, a to N W coast of Santorin Grecean Archipelago 7 m N W Somo lat. 36° 38' N lon. 25° 26' E. The only landing place in the Bay of Santorin which is land with lofty precipices, is at this point, and at Thera. (See **APAVORMIA**.)

APATI or **JAM-APATI** a to Hungary dist. Jaig 11 m E Jam-Berdy and 50 m E I. south. It lies in a fertile plain, and has an elegant church. Pop. 7007.

APATIN, a to Hungary near its S. borders in Slavonia, 7 bank, Danube, 13 m S E Borden, and 127 m S. Poth lat. 46° 40' N lon. 16° 5' E. It has a church, some manufactory of woollen cloth and spinning-mills. Silkworms are reared and mulberry produced in the vicinity where there is also some good meadow land. Pop. 7100.

APCHRON See **APCHRON**

APELDOORN a vil and par Holland prov. Gelderland 17 m N Arnhem, and 11 m N W Zutphen on the Grift Canal. From its position on this canal and on the high road from Arnhem and Utrecht to Deventer and Zutphen, it is a considerable thoroughfare. It has a church, school orphan hospital for girls and manufactory of Morocco leather copper plate for brewery and distillery boilers, and for shoemaking ships and of chloride of lime. Pop. of vil 700 of par 5904.

APENNINES (Italian *Appennini*) an Alpine chain of mountains, S. Europe, being the continuation of the Alps into Italy which the chain traverses in its whole extent. It commences in the Basilidian States at the valley of Savona, near the town of that name. W. side of the Gulf of Genoa proceeds N E to near Genoa, then in an irregular line S E E lat. it enters the Papal States after which it runs S. E. in a branching irregular manner till it reaches the boundary between Calabria Citra and Calabria Ultra, where it changes its direction to S W and terminates at the Straits of Messina throwing off some spurs W into what has been called the heel of the boot. The ridge of mountains that traverses Sicily may be regarded as a continuation of the Apennines; the connection being merely interrupted by the Strait of Messina. The total length of the chain from the valley of Savona to Cape Armi on the Strait of Messina, is about 220 m. or following the sinuosities about 287 m. Its broadest part, between Mount Macinao, S. W. of Sinagaglia on the Adriatic, and the mountains of Lombardy in Tuscany is 121 m. but in Liguria and the Calabria it is not more than 18 to 24 m. The average height of the Apennines has been estimated at 4380 ft. and in no part do they reach the limits of perpetual snow though some summits rise upwards of 9000 ft. above the sea. Numerous valleys advance to the coasts of the two seas that wash the shores of the peninsula, dividing Sicily more especially on the N slopes of the Apennines, into a multitude of narrow valleys running perpendicularly to the chain. On the S. slopes, the valleys of the Tiber Arno Garigliano, and Volturno, are the only ones of the chain any of great extent and the rivers that flow through them are the largest that rise in the Apennines, and, indeed, the only ones of importance.

Division.—The mountain chain is usually divided into three great sections, the N Central and S Apennines and three minor sections, called respectively the Tuscan, Roman and Venetian sub-Apennines. The N Apennines extend from the valley of Savona to the source of the Tiber at Monte Corvino lat. 43° 47' N lon. 13° 6' E a total length in a direct line of about 75 to 129 m. passing through the Basilidian States, the duchies of Parma, Lucca, Modena, and the grand duchy of Tuscany. The Central Apennines run from Monte Corvino to Monte Vulture, N of Lake Celano in Naples lat. 42° 9' N lon. 13° 58' 30' E a length without deviation, of 65 to 135 m. and passing from Tuscany through the Papal States, and entering the kingdom of Naples. The S. Apennines extend from Monte Vulture to the termination of the chain at Cape Armi Strait of Messina, a total

length of 56 to 183 m. wholly within the Neapolitan dominion. The Tuscan sub-Apenines are composed of a branch stretching S. from Monte Carmo towards Perugia, surrounding the lake of the same name, and a road as its ramifications over the whole space between the Arno and the Tiber. The Roman sub-Apenines cover the S. portion of the Papal States stretching out from Mount Vulture they come rise all the heights between the Tiber, the Tiber the Liri, and the Gulf of Naples. The Tuscan sub-Apenines run parallel to the principal chain from which they are separated by the upper course of the Colore and Valturco. Vesuvius, however, an isolated mountain, is properly connected with this chain but merely surrounded by it.

The following are the highest summits in each of the three great divisions—

		N. lat.	E. lon.	Height
N. Ap.	Monte de San Teodoro	41° 11' 40"	10° 21' 0"	5180
	—Andria	43 1 15	11 41 13	5794
	—Grano	44 12 0	10 46 0	597

	—Vetico	43 49 0	13 13 0	8188
	—Vetico, N. point	4 13 0	32 0	8188
	—Vetico, S. point	—	—	808
S. Ap.	—Arno, summit of the	4 13 0	—	9251
	—Majella	41 46 0	16 10 27	4670
	—Granito	—	—	5875

Geology.—The S. slopes of the Apenines include several volcanic masses and the only active volcano on the continent of Europe. Vesuvius belongs to one of these masses, that of the environs of Naples. The others are those of Santa-Piera and Viterbo, Roma, Santa Agata and Rocca Mondina. In the same section are numerous springs of warm water and of gas and vapours. The only volcano in the N. slope is Mount Vesuvius, near Naples. The environs of Modena are known for their mud volcanoes. The whole chain is a calcareous granite only appearing towards the S. extremity in Calabria. It is poor in metals though iron is wrought in small quantities and there are some coal seams, but of little importance. Vast mineral deposits exist in the vicinity of Coenza, but the true wealth of the Apenines lies in their building materials, but more especially the celebrated marbles of Carrara, Egoli, Sorrento, and Pietra. The sub-Apenine hills, in many cases are of tertiary formation.

Vegetation.—Under a belt of 3250 ft. the S. flanks of the main chain are covered with varied vegetation, of which oranges, citrons, olives, and palms form the lower zone but pine forests are rare in the Apenines, though they produce pines, bosches, pyramides, laurels, chestnut trees. Above 3250 ft. the mountains are in general dry their summits naked and bare.

Passes.—The principal chain is crossed by numerous passes, of which the most important are the pass of Bochetta (2549 ft.) the Col di Gioia (1589 ft.) on the roads from Genoa to Milan, and from Genoa to Novi; the Col de Canto, between the valley of the Taro and that of the A; that of Monte Carelli or Pietra nuda (5233 ft.) on the road from Florence to Bologna; the Col d'Averno (4669 ft.) on the road from Aversa to Aquila; the passage of Nicastro (1064 ft.) on the way from Nicastro to Caltanissetta and many others, which need not be particularized.

General aspect.—The Apenines do not present the pyramidal peaks of the Alps, the cloudy tops of the Pyrenees, or the steep walls and horizontal lines of the Jura. The forms presented by them are, however, agreeable to the eye, the sub-Apenines are undulating and rounded in their contour while the main chain is distinguished by features much more marked and irregular notwithstanding the beauty of their forms, they do not present the attractions of mountains of the first order. From their limited elevation they have in places the slopes are rarely covered with pines, and their summits exhibit only bare naked rocks. Their valleys are narrow presenting more the aspect of large rugged ridges than of plains.—(Oreographie de l'Europe, Gilbert, Dict. Geo et Stat.)

APENRADE [Danish name] a seaport Denmark dusky Schlegel cap. but of same name on the Little Belt and in the Bay of Apenrade lat 55° 23' 36" N. lon. 9° 25' 15" E. (a). It is beautifully situated in a deep valley surrounded by woody heights and a fertile country. Its streets

are crooked. It has only one church which is a collegiate church and in the vicinity is an old Gothic castle. Apenrade carries on a considerable seafaring trade, and in respect of shipping and commerce, ranks as a Danish port next to Mienburg. The harbour though secure, has only 11 ft. water and the whole town, belonging to the port is about 5077. It has extensive docks for shipbuilding, employs a good many hands in fishing, and since 1819 when baths were established, has been much resorted to for bathing quarters. Pop. 4100.—The RAILWAY has an area of 112 sq. m. Pop. 8200.

APIA a city and harbour lat 12° 10' N. lon. 171° 41' 13" W. (a). The village stands in a grove of bread fruit and coconut trees. It is paved with large black boulder stones, and contains a church in the European style, having boarded floors and glazed windows a store built of stone, and a remarkable native building used for public meetings. The latter is 102 ft. long 22 wide, 21 high and neatly paved with small pebbles. The harbour is small and will not contain more than six moderately sized vessels in fine weather but it is safe. Water and firewood are abundant and easily obtained so also are pigs poultry and yams. It is much resorted to by whalers. (See L'Espresso.)

APICHA, a town Naples prov. Principato Ultra, dist. of about 9 m. N.W. from Arzano on a hill. Pop. 9420.

APPLY a river in Spain to Laredo 1668 at S.W. Wreathy 101 100.

ARU or ARRO—A small island about 12 miles from the Indian Archipelago, both situated between the island of Mindoro and that of Luzon, the N. point of the former being in lat 12° 35' N. lon 120° 25' E. and that of the latter or about in lat. 19° 45' N. lon. 119° 33' E. (Horsburgh). The island is about half a mile in diameter is covered with trees, and lined with white beaches on its N. and S. sides. A reef which projects half a mile, surrounds it. The shoal is 10 m. in length from N. to S. and about 9 m. in breadth. A small reef off the S. extremity of Negros Island, one of the Philippines, in lat. 9° 0' N. lon. 125° 0' W.

APOLAHAMBA a dist. Bolivia, between the river Beni and the S.E. corner of prov. Puno in Peru, intersected by its course by the 15th S. parallel. It is mountainous and is intersected, besides, by numerous rocky heights and ranges of precipitous and is traversed by several considerable streams. The productions are rice maize yam, cotton, cacao, &c. the latter raised with little trouble. Wood also abounds throughout the country and monkeys swarm in the forests.

APOLDA a town grand duchy Saxo-Weimar-Muehlend. circle Weimar-Jena, 9 m. N.E. Weimar on the Werthe. It is the seat of a superintendent or Lutheran bishop, and has a castle, with manufactures of woollen, kerseymeres, and stockings. It has also several distilleries, and an extensive bell foundry which furnished Schiller with the subject of his song Die Glocke. 1 op. 8293.

APOLIMA one of the smallest of the Navigator's Islands, situated between the islands of Upolu and Savaii the Orochew and Orochew respectively of Arrowsmith lat. 13° 46' S. lon. 172° 8' W. (a). Apolima is apparently the crater of an extinct volcano, and is accessible at one particular point being with this exception filled all round with perpendicular cliffs. Its highest summit, which is the S. side, is 473 ft. above the sea. The soil in the interior is extremely fertile, producing in great abundance, coconuts, bread fruit, taro, yams, &c. In the centre of the island is a village of about 20 houses having a permanent population of about 75 persons.—(Wilkes).

APOLLONIA or AMANANEA a dist. cape and fort in N. Africa, Gold Coast, Ashantee country. The town which is tributary to the King of Ashantee, lies between the rivers Anobra and Anobra, the one forming the E. the other the W. boundary. It is about 50 m. in length from E. to W. and 10 to 15 m. in breadth. Its coast line consists of a straight sandy beach, behind which is an undulating range of high land. A great portion of the country is covered with dense forests, and is but thinly peopled but for 80 m. along the coast villages are numerous. The soil is naturally fertile and produces in abundance rice, millet, sugar-cane, and yams.

islands while the woods furnish excellent timber for ship building.—**CARACAROTONA**, which is formed of four hills or hummocks, presenting the appearance of a long projecting point, is in lat. $4^{\circ} 40' N$ lon $8^{\circ} 30' W$ (N).—**PORT AROTONA**, a British settlement, and the first European fort, met with after leaving Sierra Leone stands on the beach about 4 m from the cape. It was at one time an important trading station, but is now abandoned, and going rapidly to decay.

APOSTLES ISLANDS, Straits of Magellan where it joins the Pacific Ocean, near Cape Desseada lat. $52^{\circ} 34' S$, lon $75^{\circ} 6' W$. They are twelve in number a circumstance from which they have obtained their name and are all small and barren. Their shores abound with shell fish but are unappealing with dangerous reefs.

APPALACHIAN MOUNTAINS. See ALLEGHANY. **APPALACHICOLA** a river and bay U States. The town which is a port of entry and cap. of Franklin Co. Florida, is situated on a peninsula, at the mouth of the river of the same name. It is regularly laid out, has an Episcopal church two banks and several stores and warehouses. It has a considerable trade in cotton and an admirably jurisdiction. The River Appalachicola is formed by the union of the Ochsatchee and the Flint in Georgia and flows thence through Florida, for a distance of 70 m. into the Gulf of Mexico. It forms at its mouth a broad estuary named Appalachicola Bay and is navigable throughout for small vessels. There were 20 steamers plying on the river in 1844.

APPALACHIE BAY Mann of Florida lat. $30^{\circ} 40' N$ lon $84^{\circ} 20' W$.

APPENZEL I., a can. in the N. E. of Switzerland the 18th in order of the confederation, comprehending the two independent republics of Auser-Rhodod or Outer Rhodes, and Inner-Rhodod or Inner Rhodes length 23 m. breadth at the widest part, 16 m. which suddenly diminishes N. W. to between 4 and 5 m. superficially, about 160 sq. m. wholly enclosed by the territory of St. Gall. It is an elevated district, the lowest part being at least 1400 ft. above the sea while it is traversed in various directions by the outer and lower branches of the Alps of which Mount Rente, in the S. of the canton, is about 8000 ft. high. It has large tracts of rich pasture land extensive forests of pine and is watered by the Rhodod and by several smaller affluents of the Rhine. The prevailing rock is a limestone, besides which, occur whetstone, grit and a species of marble. Salt is found in some localities and there are a few mineral springs. Glaciers occupy the higher valleys. The climate is cold, but healthy. The chief productions of the soil being flax, hemp, and several kinds of fruit, particularly apples, pears, cherries, and grapes, from which are produced either Kirchwasser and some wine, but the wealth of Inner Rhodod which is the more elevated division of the canton lies in its herds and flocks, which are numerous that of Outer Rhodes in its manufactures, consisting of embroidered muslins, gazzos, umbrellas, fells, and other cotton stuffs. Bleaching, dyeing, paper-making, letterpress and cloth printing are also carried on to a considerable extent. Very little machinery has been yet introduced into the canton. Most of the weavers are proprietors of land, and from the great proportion of voters the public assemblies. The more constant objects of the various manufactured articles and of cattle, hinds, cheese, butter, honey and wax. The imports are corn, fruit, wine, brandy, tobacco, salt, raw cotton, colonial produce, dyeing materials, leather, soap, cast iron, steel, pewter tin, hardware, pottery &c. The working classes are divided into four different sections, namely, manufacturers, weavers, winders, and embroiderers. The first are of every grade from the individual who manufactures the quantity only which himself and his family can weave, to those that employ 100 weavers or embroiderers. All the weavers here, as throughout Switzerland, make use of coffee, milk, oatmeal and potatoes which compose their principal food. A few indulge themselves with meat and half a pot of cider on Sundays. They work from 12 to 14 hours a day but do not constantly weave, devoting a portion of their time to cultivating their farms and taking care of their cattle. Schools are numerous, particularly in Outer Rhodes, in which all children above six years of age are obliged to attend, no person being admitted to the sacrament who cannot read. Writing, arithmetic,

grammar singing and drawing form the chief branches of instruction. After children have left the public schools at the age of 13 they continue to receive, every eight days, and afterwards once a month, until the age of 17 lessons of repetition. At the age of 17 they receive the religious instruction necessary to the holy sacrament, after which they are declared of age, assist at the popular assemblies and perform their part of military duties. For the richer classes, and those in easy circumstances there are here as in all the other cantons, public schools, where, independently of the dead languages, German, French, Italian, English, geography, mathematics and geometry, natural history and drawing form the basis of instruction. There are several orphan institutions in the canton and savings banks have been established in almost every parish, but they are little used by the working classes who prefer buying furniture, servants, artists, and children through their parents, however deposit their savings in those banks. Each parish is bound by law to take care of its respective poor but each has at the same time, its own particular regulations and customs as to the extent and manner of affording relief. The people are, in general, moral and well behaved. Those of Inner Rhodes are Catholics, those of Outer Rhodes Protestants. The separation between them took place in 1597. The two however count but as one canton of the Swiss confederation, and have only a single vote in the federal diet, to which they send deputies each in its turn. Both governments are pure democracies. The supreme or legislative power is established by a general assembly of all the male natives above 17 years of age called the Landsgemeinde, which meets once a year. The manner of voting is by raising the hand. Every individual comes armed to this assembly the right to bear arms being the test of citizenship. All handicrafts, purveyors, &c. are excluded from its assembly. The principal towns are Appenzel, Trugon, Hunsryd, Herms, and d. Gals. Appenzel is next to Geneva, the most densely-peopled canton of Switzerland, in proportion to its extent. Pop 51,400.

APPENZEL I., a Swiss canton, cap. of Inner Rhodes, the R. catholic division, can Appenzel 7 m. W. S. W. Trugon about the same distance S. E. by E. St. Gall and 105 m. N. by N. Berne. Beautifully situated in a rich and populous

APPENZEL.—The town Trugon, Canton of the interior.

valley it bank Sitter about 2500 ft. above the sea. Its houses chiefly of wood are ill built, and it contains a town-house, several capuchin convent, and a nunnery. It is the residence of the principal magistrates of the canton and the place in which the Landsgemeinde, or supreme council of the Inner Rhodes, annually meets. The inhabitants are partly employed in agriculture, but principally in weaving and shoeing, and have a considerable trade in linen, cotton, silpica, wheat, mineral springs and baths of Wusthal, and N. the villages of Gals both noted resorts of invalids. Pop 1450.

APPIANO a town Venetian Lombardy cap. dist. of same name, prov. of S. and S. W. from Como and 20 m. N. W. Milan. It is tolerably built, has three churches, and carries on a considerable trade in silk, which is here manufactured of superior quality. The vicinity produces grain, fruits of all kinds, and vegetables, cattle and sheep are also reared. Pop of the town, 3117 of the district, 22,085.—(Ditch. Des. Italia.)

APPIN—a large dist. Scotland, co. Argyll, lying chiefly along the N. side of Loch Linnhe. In that district is the valley of Glencoe, which derives a melancholy interest from having been the scene of an atrocious massacre in the reign of William III.

APPINGEDAM a market in Holland, prov. of, and 14 m. N.E. from Groningen on the Dansterdiep, which passes through the town. It is the seat of a court for the around, and sea. of Appingedam, and has a townhall, a vicarage, and a R. catholic church. 1 Jewish synagogue, three schools and a Bible society. Important horse markets are held here in July and August, a salt market in September and cattle markets weekly during summer. Pop. 900.

APPLEBY—1 A bor and market in par Appleby St. Michael or Bonigate, Rutland, co. Westmorland. The town is sep of the co., and lies on the slope of a hill 1. bank Eden 28 m. S.E. Carlisle, and 21 m. N.N.E. Keston. It is compactly built, and consists of one principal street and several smaller the former terminated at the upper end by the castle, at the lower by the church of St. Lawrence. On the opposite side of the river is a suburb called Bonigate connected with the town by an ancient stone bridge of two arches. It is well lighted and abundantly supplied with good water. Near the church is the market-house, rebuilt in 1811 in the Gothic style. The town all situated in the main street is spacious and commodious, close by is the jail. There are here a chapel for the Wesleyan Methodists an excellent free grammar school founded by Queen Elizabeth and an hospital or almshouse for 13 poor widows founded by the Countess of Pembroke. The town has very little trade, and no particular kind of manufacture and cannot be said to be in a thriving condition, nor to be in any way improving. The corporation consists of a mayor 12 aldermen 16 common councilmen and other officers. Both the Lent and summer fairs are held here, and poetry recitations every Saturday. The borough returned two members to the House of Commons up to the passing of the Reform Act, by which it was disfranchised. Three fairs annually chiefly for linen, cattle sheep and horses. Area of par. 14,500 ac. 1 op in 1851 1256.—Local Corr. correspondent.—2 Appleby St. Lawrence a par. co. Westmorland E. Ward area 535 ac. 1 op in 1851 1458.—3 A par. co. Lincoln wapentake Manley parts of Lindsey area, 614 ac. 1 op in 1851 461.—4 A par. counties Derby and L. Leicester area 258 ac. 1 op in 1851 1181.

APPLECROFT (anc. *Camarach*) a par and 11 Scotland co. Ross 900 ac. Pop. 2709.

APPLEDORE—1 A small sea-coast in England co. Devon near the mouths of the rivers Taw and Torridge, 7 m. S.W. the town of Barnstaple. It stands on the side of a hill and contains a chapel of ease, and an independent chapel. It has of late years become a favorite bathing-place for which the beauty of its scenery and the great extent and excellence of the beach peculiarly adapted it.—2 A m. and par. co. Kent. The town on the banks of the river Rother is a clean and neat little place and though now nearly 8 m. from the sea, it once was an important maritime town of the Anglo-Saxons. Area of par., 3901 ac. Pop. 621.

APPLEDRAM a par England, co. Sussex 119 ac. Pop. 150.

APPLEGARTH a par Scotland co. Dumfriesshire 11,500 ac. Pop. 918.

APPLESHAW a par and vil England co. Hants 697 ac. E.S.E. Ludgershall. 1 op. 818.

APLETON—1 A par and township, England co. Berks 1991 ac. N.W. Abingdon. Pop. in 1851 540.—2 Appleton-le-street a par co. York N. Riding 4715 ac. W.N.W. New Malton. Pop. in 1851 942.—3 Appleton upon Wharfe a chap co. York N. Riding 1827 ac. S.W. W. Yarm. 1 op. in 1851 506.

APULIA a river Brazil prov. Rio-Grande-do-Norte it rises in lat. 5° 35' S. above N.E. and falls into the Atlantic in lat. 4° 37' S. after a course of 150 m. It receives several affluents, among which the most important is the Upanema which joins it 20 m. above its mouth.—(Dic. Geo. Imp. Brazil.)

APPONG or **PADANG** one of three large islands, N.E. coast, Sumatra, in the Straits of Malacca, about 90 m. N. by E. Singapore, separated from Sumatra by Brouwer's

Strait, or Salat Pandang which is from 1 to 5 m. in width, and navigable for large vessels. The coast line of the island is low and swampy as are those of the others. Appong is celebrated for its sago, which is reckoned of superior quality. It is made by a people who inhabit the woods, called Orang Utan, the well-known name also of a large species of ape, common in Sumatra and Borneo. There are 350 persons employed in the cultivation and preparation of the sago for which they could produce, it is believed, about 400,000 lbs. annually. According to Carpent's map of Sumatra, the island lies between lat. 1° 0' and 1° 30' N. and lon. 102° 10' and 102° 34' E.

APRICEVA, a tn. Naples prov. Capitanata, dist. of, and 7 m. N.N.E. from San Severo. Pop. 4080.

APRIGLIANO a tn. Naples, prov. Calabria Citra dist. of, and 5 m. S.E. from Cosentino on a steep hill. Pop. 1012.

APHERON (*TRINIDADA* and *CARRA*) on the Caprian Sea, W. coast, formed by the most E. branch of the Caranense. Its heights and cliffs are composed of shaly rocks, upon which here and there repose masses of a sort of brown fire stone. The shaly rock exhibits, in great numbers, petrifications of the same kinds of fish that still exist in the Caprian Sea. About 26,000 lbs. of prepared saffron are annually exported from Apheron. There are 10 salt lakes on the peninsula, from several of which considerable quantities of salt are taken, but much more might be obtained. There are also a number of sulphur pits, black and white, which are wrought by the Russian Government. The peninsula of Apheron has been celebrated for many centuries in all the E. countries as a sacred soil and the fire-worshippers still make pilgrimages to adore the fires which there issue from the earth, arising from the ignition of the naturally-formed sulphur. The cape is in lat. 60° 39' N. lon. 60° 30' E.

APSELEY RIVER, Australia, New S. Wales dist. New England, a branch of the river Murrumbidgee. It flows through a ravine in the upper edge of from 2 to 3 m. apart, while the width at the bottom does not appear to exceed 300 ft. This tremendous gulf is upwards of 3000 ft. in perpendicular depth.

APSELEY STRAIT a narrow channel between Melville and Bathurst Islands, N. coast, Australia. It is about 40 m. in length with a breadth varying from 2 to 6 m. The land is low on either side, and the shores from one end of the strait to the other bordered by a broad belt of impenetrable mangroves, and indented by numerous salt water creeks, which present the appearance of rivers. Alligators of enormous size abound in the strait, many of these measuring from 14 to 17 ft. in length. A settlement was formed in 1824 on the Melville Island side of the channel about 8 or 10 m. from its N. entrance but was subsequently abandoned.

APT (anc. *Aples Juba*) a tn. France, dep. Vaucluse (Provence) 80 m. E. Avignon 1. bank Calavon, in a fruitful and beautiful valley. The river is spanned by a remarkable Roman bridge of a single arch, which stands unruined by the floods and storms of 19 centuries and the valley is hemmed in on all sides by hills clothed to their summits with vines and olive trees. The town is surrounded by old walls, of massive structure. The houses in general are well built, and the streets, though in the older quarters narrow and crooked are, in the more modern parts, wide, clean and adorned with fountains. The most remarkable building is an ancient Gothic cathedral. The leading manufactures of Apt are woollen and cotton stuffs, wax tapers of superior quality and cutlery. Excellent porcelain, and common earthenware, are also made and a good deal of silk is spun. There are also several wax refineries, tanneries, and distilleries. Before the introduction of petroleum-lamps, the gasworks of Apt were in great demand. 1 op. 4377.

APULIA **APUGLIA** or **PUGLIA** an anc. prov. S. Italy kingdom of Naples now comprehended in the provinces of Capitanata, Terra di Bari and Terra di Otranto. To the whole or a part of this district, the name La Puglia is still given. Originally it was called *Terra Japygia*, *Japygia*, *Pontolia*, and *Messapia*, and formed part of Magna Græcia or Great Greece. Here is the vast plain lying between the Apennines and the sea, called La Tavoliere di Puglia, composed nearly wholly of pasture lands, all belonging to the crown, and on which upwards of 1,000,000 sheep are fed.

APURE a river Venezuela, formed by the junction of several streams which issue from the Sierra de Merida, a part of the E. chain of the Andes of New Granada; and, after an E. course of about 800 m. falls into the Orinoco at Capachina lat. $7^{\circ} 40' N$ lon. $66^{\circ} 47' W$. It is one of the principal tributaries of the Orinoco into which it rushes with such violence as to agitate the current for nearly 8 m. below its junction. The Apure is navigable for nearly the whole length of its course, and furnishes to the provinces of Caracas, and the neighboring provinces of Venezuela, a ready way for carrying to Guiana, for the coffee, cotton, and indigo which they produce. The river is infested by crocodiles, and its banks abound with manes wild horses, and cattle immense numbers of which, particularly the wild horses perish by its inundations, being swept away before they have time to reach the rising ground of the llanos or plains.

APURIMAC a river S. America, which rises from a lake in the Andes of Peru in lat. $15^{\circ} 38' S$ lon. $76^{\circ} 30' W$ among the savannahs of the plain of Condorcan, N from Arequipa, and W from the Lake of Titicaca. It flows through a mountainous country in a N direction and joining the Yacay or Vilcanota at lat. $9^{\circ} 15' S$ lon. $72^{\circ} 30' W$ forms the Ucayali, one of the principal tributaries of the Amazon. Numerous streams flow into the Apurimac, the most considerable of which are the Pachachaca, Pampas Manturo, Puncacurto, and the Uribambas. Its whole course, till it meets the Yacay is between 600 and 600 m.

AQUAMBE or **AKAMBE**, a petty state in the interior of the Gold Coast of Africa, formerly independent now subject to Dahomey. It lies on the E. bank of the Volta.

AQUARA a tn. Naples, prov. Principato Citra, dist. of and 16 m. S.E. from Campagna. Pop. 2897

AQUILA, a tn. Naples, cap. prov. Abruzzo Ultra II dist. Aquila, on a hill, at the foot of which runs the Aterno 27 m. S.W. Teramo and 110 m. N.W. Naples. It is fortified, has a cathedral, 24 churches, several convents, a royal college, founded by Ferdinand IV and transferred from Sulmona in 1816 an academy an hospital, two charitable institutions, and an elegant theatre. It is the seat of a court of justice and of a bishopric contains several paper-mills, and manufactures of linen and wax, and carries on an extensive trade in saffron grown in the neighbourhood. Aquila was founded by Frederick II. King of Sicily in 1240 and was for a long time one of the most populous as well as one of the wealthiest towns in the kingdom. Its walls are 8 m. in extent with 12 gates, nearly all of which are now blocked up. It could then boast of above 100 churches with numerous monasteries and nunneries. It is still the residence of many noble families. It suffered considerably from earth quakes in the years 1708 and 1709. Of all its ancient fortifications only one small fort remains which was taken by the French in December 1798 after a feeble resistance. In the neighbourhood are the ruins of the fortress of the Romans, the native place of Sallust the historian. Pop. between 7000 and 9000.

AQUILEIA, or **AQUILIA** a small tn. Austrian States, Illyria, 21 m. N.W. Trieste, near the shore of the Adriatic. It is encompassed by a wall and ditch, and has a good church. The inhabitants, 1460 in number support themselves chiefly by fishing. In the times of the Roman Emperors, it was a flourishing commercial town, and, on account of its wealth named Roma Secunda. In 452 it was destroyed by Attila when a portion of the inhabitants fled to sea and founded the future Venice.

AQUINO [anc. *Aquino*], a tn. Naples, prov. Terra li Lavoro, dist. of and 16 m. S. from Benevento the see of a bishop who resides at Rocca Secca. The town, which was a Roman colony is now little else than a series of ruins however it still preserves its cathedral. The town was destroyed by it's Lombards in the sixth century and has long been in a state of decay. It is the native place of Juvenal the satirist and of Thomas Aquinas. Pop. 800.

AQUIRAB, a small, poor vll. Brazil, but the oldest in prov. Ceara. It has on the Pacific, between Lake Aguaras and the ocean has a church, and brandy distillery and sugar factory. Its district is sandy dry and badly watered. Pop. of dist. about 5000.

AQUITAINNE [Lat. *Aquitania*] one of the four great divisions of Gaul or France by the Romans. It subsequently

Vol. I

took the name of Galliena, and at present forms the departments Gironde and Lot-et-Garonne.

ARA, a small river Spain in Aragon rising on the S. side of the Pyrenees, prov. Huesca, near the boundary of the kingdom of France and, flowing in a S.E. direction, it unites with the Cinca, 2 m. S. Ansa, after a course of about 45 m.

ARADAT a tn. Russia, in a Crimean, gov. Simferopol on the shore of the Sea of Azov 70 m. N.E. Akmesar or Simferopol on a narrow peninsula, which separates the Sea of Azov from the Black Sea. lat. (E. station) $46^{\circ} 17' 9'' N$ lon. $35^{\circ} 29' 5'' E$ (u.) It contains principally of one long street, is fortified and contains a mosque.

ARADAT EL MATFOON See ARADAT.

ARABGIR, ARABKIR, or ARABKUM [anc. *Arabis*], a tn. Asiatic Turkey east of and 102 m. S.E. from Silvas lat. $39^{\circ} 5' N$ lon. $38^{\circ} 56' E$. Originally a small town, with a fortress, it owed its enlargement and prosperity to the Armenians, and is said to be well built of soapstone. It is especially noted for its manufacture of goods from English cotton yarn conducted by the Armenian inhabitants and can employ about 1000 looms. It contains 6000 houses, of which 4800 are occupied by Turks, and 1200 by Armenians. The district around is rough and hilly but intersected by well watered valleys inhabited by Turcomans.

ARABIA, the south westmost part of Asia, is called by the natives Jazirat el Arab that is the peninsula of the Arabs and by the Turks and Persians, Arabistan. In early times it was called by the Hebrews simply Kedar or the East, and its inhabitants Duni Kedar or people of the East. The name Arabia, as it first occurs in the Scriptures (as in Gen. xxvii. Arabians and the prince of Kedar) is evidently applied not to the whole peninsula, but only to the territory of some pastoral tribes. Ptolemy's Arabia is compassed on three sides by the sea, namely on the N.E. by the Persian Gulf on the S.E. by the Indian Ocean, and on the S.W. by the Red Sea. Its most S. point, Ras el Arab (the Cape St. Anthony of some maps) stands in lat. $12^{\circ} 55' N$ lon. $48^{\circ} 56' E$ (u.) The shoals and patches of rock stretching E. from this cape render its vicinity dangerous to mariners. Thirty miles to the W. of it are the Straits of Bab el Mandeb. The most E. point of Arabia, Ras el Had, stands in lat. $23^{\circ} 25' N$ lon. $59^{\circ} 05' E$ (u.) A line drawn from the head of the Gulf of Suez to that of the Persian Gulf and marking the limits of the Arabian peninsula on the E. will be found to run nearly in the 80th parallel of λ true. But beyond, or W. of this line, extends a vast and desert region, which, being now occupied chiefly by Arab tribes, is also called Arabia. It is bounded on the E. by the valley of the Euphrates on the W. by the depressed tract in which the valley of the Jordan and the Dead Sea, while towards the N. it gradually contracts till it terminates in the vicinity of Tadmor or Palmyra, in about lat. $34^{\circ} N$ so that Arabia extends in length from N to S. through 21 degrees of lat. or nearly 1400 geo. m. while its average breadth may be assumed to be about 600 m. It includes also the peninsula of Sinai between the Gulf of Suez and that of Akabah. The whole area of the vast country thus described does not, probably fall much short of 750 000 geo. sq. m. or about eight times that of the British Islands.

Notwithstanding the early reputation of Arabia and the interest attaching to a country the inhabitants of which has so early and so important a part in the early commerce and general history of mankind, we still remain very imperfectly acquainted with it. European travellers have hitherto penetrated but partially and to a short distance only from its coasts. Nor are the difficulties opposed to its complete exploration likely to be soon surmounted or overcome. Immense tracts of unexplored stony desert the risk of meeting with bands of predatory and merciless Bedawins; the rapacity of guides and the exorbitant demands of petty officials when they have once got the stranger in their power; the jealousies perpetually reigning among the small communities into which the interior of Arabia is divided with the bigotry and fanaticism of the people these together with the heat of the climate, and the forbidding aspect of the desert, are enough to deter the most courageous and indefatigable traveller. The only European who has as yet traversed Arabia quite across from sea to sea, is Capt. Sadlier who was sent, in 1819 by

23

the Government of Bombay to congratulate Ibrahim Pasha on his victory over the Wahabys. He proceeded from Katif, on the shores of the Persian Gulf, to Derrayah the ruined capital of the subdued fanatics, and so forth, that the conquerors had withdrawn, continued his journey to Yanbu on the Red Sea. We know however that Arabia, taken collectively as an arid sun-burnt wilderness, the hills, naked rock, the plains, rough stones or a few scattered trees, in this dreary waste may be traced, here and there, particularly near the mountains in the S half of the peninsula, some green spots which receive the beft of the annual rains, and the wadis or valleys, descending from the rain-collecting heights, figure only as so many green lines more or less strongly marked in this dazzling sun-burnt prospect. But it is seldom that the tracts of cultivated land even in the plains, attain a width of 20 m. so that all the irrigated Teldmas or lowlands, and all the green wadies of Arabia taken together bear but a small proportion to the whole peninsula.

Deserts.—There is much discrepancy in the accounts of native writers respecting the territorial divisions of peninsular Arabia and the limits of those divisions which they concur in establishing appear to have fluctuated much at different periods, if indeed, they were ever ascertained with precision. The first of the divisions met with in proceeding down the Red Sea is *El Hija*, which, as it includes the desert cities Mecca and Medinet is always set forth conspicuously by Arab geographers. It extends a short way within the mountain barrier and terminates S in about lat. 20° N. Next comes Yemen which according to some writers, embraces the whole of S Arabia but the name is now generally used in a confined sense Yemen proper occupying the S W part of the peninsula, and comprising a Teldmas or maritime lowland on the shores of the Red Sea, with an elevated inland district of considerable breadth. As pertaining to Yemen in Aden saw a free port in the hands of the British. Next to Yemen E, and separated from it by a short five days' journey to width, is Hadramaut, which commences on the coast at Makallah. The E limits of this province are variously assigned by authors, some extending the name nearly as far as Oman while others confine it to a district only 100 m. in length. Beyond it, along the coast, lies Mahrah but across this tract and apparently included at one time in Hadramaut extends the principally of Shehr or Shahr at the E termination of which near the coast is the royal seat of Dhakr which has occasionally figured as an independent state. At the E angle of the peninsula is situated Oman, the chief port of which, Maskat now carries on a considerable trade with British India. On the S. shores of the Persian Gulf is Bahrain from which, towards its head of the gulf extends the maritime district of Hajaz while at a short distance S W in the interior lies the fertile district of El Ahsa erroneously written Lahes or Lachis. The interior of Arabia from Hijaz and Yemen across to the vicinity of the Persian Gulf is comprised, by Arab geographers, under the simple name of Nejd Towards the N W and N are the deserts of Buzul and those of Sham, Jizrah and Irak (Syria Mesopotamia and Babylonia).

Mountains.—The cultivated tracts of Arabia are generally in the vicinity of the mountains the torrents from which in the rainy season collect soil, and endow it with fertility. The proximity of the green fields however to the rocky heights, depends on the rapidity of the streams, and the configuration of the country. There are also some arid or productive spots in the interior surrounded by deserts, and which seem to indicate that the waters of streams lost in the sands higher up are here again collected and brought towards the surface. The mountains exceeding this beneficent influence on the land, rise, as far as we have any knowledge of them at no great distance from the sea-shore, and form, with their ridges, a kind of elevated frame, which encloses the greater part of the peninsula. On the W along the shores of the Red Sea, from the Gulf of Akabah to the Straits of Bab-el Mandeb a distance of 1000 m., the Arabian mountains are conspicuous throughout, presenting peaked summits of naked rock, from 5000 to 8000 ft. in height, and varying from 15 to 60 m. in distance from the coast. This range falls so abruptly to the W., that it may be said to present towards the sea a series of inaccessible cliffs. The only two passes at present known through it are, respectively at Tayf in lat.

21 12° N and above Reda, in lat 16° N and consequently 800 m. asunder. Elsewhere there are only steep and narrow paths, readily climbed by the mountaineers on foot, but utterly impracticable for beasts of burden. Jebel Mofrah near the entrance of the Gulf of Akabah, rises to a height of 7000 ft., thus matching in elevation the group of Sina on the opposite side of the gulf, and both exhibit the same mineral formations, gneiss and porphyry in vertical strata, rising above hills of sandstone and gypsaceous rock. Jebel Kora, near Tayf attains an elevation of perhaps 5500 ft. while Gurned or Sef yda, about 80 m. S E. of the former has an estimated height of 6000 ft. Again Schar the highest point of the elevated ridge which rises on the N E above the Straits of Bab-el Mandeb and commands a fine view of the Abyssinian coast, is supposed from its vegetation to attain a height of 7000 or 8000 ft. Further to the N E the maritime chain of mountains between Aden and Shahr have a height varying from 3000 to 5000 ft. the highest points being above Shidra and Magadall. In Oman where the coast between Ras-el Had and Cape Musandam runs from S E to N W towards the Straits of Ormuz, the maritime chain extending close to the shore, seldom rises above 3000 ft. but the Jebel Alkhdar or Green Mountains behind these, striking from W to E, attain in double that height. Other mountains in the interior of the peninsula as Jebel Shamr, on the route from Bagdad to Mecca, are described by Arab writers, but without any indications of height, and there is no reason to believe that they equal in elevation the maritime ranges.

Rivers Lakes Deserts, &c.—The sterility of Arabia is sufficiently proclaimed, when it is stated that that vast country has no considerable, and scarcely any permanent rivers. A few small streams indeed, in Oman as the Massara and Sib, are said to be constant that is, to contain water and to flow throughout the year from their sources to the sea. But these, supposing their permanence established, form after all but rare exceptions. Arabian rivers in general are either consumed in irrigation or absorbed by the sands, even in crossing the narrow Teldmas or lowlands of Hijaz and Yemen before they reach the sea-shore. Hence too the interior of Hadramaut has fertile and populous valleys, while the coast is comparatively barren and desolate, but groups of villages with plantations of dates along the latter mark the points where the rivers of the interior swelled by heavy rains, occasionally force their way downward to the sea. In the most elevated part of Nejd the principal rivers (in the local language *Wadi*) are the Turab, which, in the parallel of 21° N separates that country from Hijaz. In course to the N N E but as nothing more is known of it, we may infer that the stream soon disappears in the sands. A degree further S flows the Thard in the same direction and terminates in a lake on the borders of the desert. This river marks the N limit of the cultivation of coffee. A day's journey E of this, the Ramrah flows N E, and under the 15th N parallel the river of Buhrah waters copiously a fine country and, running to the N N E sinks in the sand. Some of the Arab report that this river flows through the desert to the gulf of Bagdad. Others again, say that it enters a lake in the Wady Seilemeh, and thence runs through El Ahsa into the Persian Gulf. But we may regard it as a point ascertained that there is no river flowing through El Ahsa, or entering the sea on the adjacent coast. Besides it is obvious that a permanent stream or even a water-course, frequently filled, and crossing the Arabian peninsula, would necessarily be accompanied by a series of towns and plantations, and by a commercial route which would not allow such a natural feature to remain in obscurity. It appears, nevertheless that Arab geographers have been misled by fanciful accounts of the Wady Elahab, or some other of the occasionally copious streams flowing from the same region and hence they have described a great river Afsar or Afsa (for the original Arabic name is doubtful) as flowing permanently across the country from the W mountains to the Bay of Bab-el. The lakes of Arabia are like the rivers but of short duration. After heavy rains pools are formed which being rapidly evaporated, leave the ground enriched with salt. As to the wastes and oases of this country Arabia is collectively a desert and the cultivated tracts throughout are all so many oases surrounded by sterile and irremediable wastes. The desert of Ahkak (the waves of sand), however is of a peculiar character, swallowing everything which falls

on it, and is supposed by the natives to be the shade of dances or of the children of Ad. A recent traveller (the Baron von Wied) reached the confines of El Aklat, N. of Hadramaut, and throwing into the sea a weight with 60 fathoms of line attached to it, saw the whole disappear in five minutes.

Geology.—Respecting the geology of a country so imperfectly explored as Arabia, we cannot of course know anything beyond some incomplete and unconnected details. The chain of mountains on the W. side of the peninsula from Adl Labesse to Bab-el Mandeb, is granitic throughout. Its elevated summits present to view only pale or bare rocks. The exposed surface of the granite is generally blackened by the heat of the sun, and assumes a metallic gloss. The narrow valleys between these dark masses of rock display not carpets of fresh green but white lines formed of drift sand. At the base of the granitic chain on the W. are found limestones of various kinds and generally of recent formation. The hills bordering on the coast, however, consist of sandstone, in which shells and madrepores are embedded in abundance. Such is the general character of the W. range but towards the S. angle of the peninsula, where Yemen exhibits a wide extent of elevated land volcanic rocks make their appearance, and Mount Sâber which rises above all the neighbouring mountains, and attains a height of perhaps 7000 ft. is a mass of trachyte. Proceeding along the S. coast, we find limestone predominating and forming ridges of 5000 or 6000 ft. in height. But the elevated plains in the interior of Hadramaut, which rise still higher are said to be formed of sandstone. In Omân the limestone formation attains its greatest height in Jebel Akhdar but further W. volcanic rocks again make their appearance, and the N. angle of Arabia, at the Straits of Ormuz, is composed, like the S. angle at Bab-el Mandeb of trachyte and basalt. It was the broken and undulating coast of volcanic formation which harboured the pirates.

Climate.—In considering the climate of Arabia, it is necessary to bear in mind first, the position of that country between the burning deserts of Africa on the one side, and the cold western India on the other. Not that we can suppose the climate of the interposed peninsula to depend on those of the adjacent countries but because it is evident that Arabia comes under the influence of those meteorological conditions which have consigned to drought and sterility a wide belt of country across the Old World, from the shores of the Atlantic nearly to those of the Pacific Ocean. This tract of desert, it is true, lies for the most part beyond the tropic and, towards Central Asia, it bends much to the N. the Arabian peninsula on the other hand extends several degrees N. of the tropic. But, secondly the intertropical portion of Arabia falls within the domain of the monsoons or periodical winds, peculiar to the Indian seas. Now the monsoons not only interrupt the ordinary course of the trade-winds (which blow from the E. with an inclination to the equator) but they also interfere with that general law of intertropical climate, by virtue of which the rain falls soon after the sun has passed the zenith and the hottest season is also the rainy season. In S. Arabia on the other hand, the hottest months of the year are comparatively dry and cloudless, and the rainy season falls chiefly in the winter when the atmosphere, being less heated, is also less loaded with aqueous vapours. In Omân, the rains fall from October till May three or four times in the month, on the lowlands but more frequently on the mountains. The same seasons obtain along the S. coast, the period of the rains being abridged, however towards the W. so that the wet season at Aden lasts only from November to February. But the interior of Yemen seems to be exempt, in some degree from the influence of the monsoons, and to enjoy the regular tropical rains—a circumstance to which may be attributed the superior productivity of that province. At Sanaa, the capital of Yemen some rain falls in January as on the coast but the heavy rains take place in June and July with alternating S.E. and N.W. winds. In the Tefeloh of Abn Arab, also, going N. from Yemen, the wet season coincides with the hottest months. But N. of Yembo on the Red Sea, rain falls only in the winter from November to February and never abundantly it falls totally absent once in four years.

Temperatures.—To the extreme dryness of the atmosphere, and its freedom from cloud or vapour—conditions tending to accelerate evaporation and the radiation of heat—may be ascribed the remarkable degree of cold occasionally felt in

Arabia and which has given rise to very erroneous conjectures respecting the elevation of that country. At Teyel east above 3000 ft. in absolute elevation, and only in lat. 21° 11' N., snow is said to fall once in every four years; and the mountains in the neighbourhood, from 6000 to 8000 ft. high are annually covered with snow. Further S. less and snow are of frequent occurrence on mountains ranging from 6000 to 8000 ft. in height while in Abyssinia, on the opposite side of the Red Sea, they are hardly known at the height of 12 000 ft. On the S. coast, in like manner, we hear of snow and ice at moderate elevations and in Omân the Jebel Akhdar only 6000 ft. high and lying nearly under the tropic, are frequently covered with snow in winter. Yet Maskat, on the sea-coast of Omân, is perhaps the hottest insulated place on the earth—a distinction which it owes in a great measure to its situation beneath bare cliffs, which reverbstrate the heat. At this place the thermometer in the shade, in June, generally rises above 100° Fahr. towards the afternoon. The heat of Maskat, also and the adjacent Tefeloh, is to Yemen as insupportable in summer. In general the violent changes of temperature which occur frequently in Arabia, are propitious to health. The humid S. wind, the cold and dry N. wind, and the storms from the W. attended with clouds of fine sand, all bring with them the seeds of disease the N.W. wind alone is regarded as salubrious and refreshing. The coast of the Hédjâz is thought to be particularly unhealthy and of late years since the campaigns of the Egyptian army against the Wahabîs the plague, from which Arabia previously seemed to be exempt, has been added to the list of endemic diseases. Here it is as well to remark, that the imminent danger supposed to attend the occurrence of storms of wind in a desert—the sherry (surocco, or east wind, loaded with fine sand, and the simoom or hot poison wind, from the south)—exists only in the tales of credulous travellers. Whatever inconvenience must be endured on such occasions by men and cattle, yet it never happens that they are suffocated by the pestilential blast nor are the caravans ever hurried in overhasting season.

Zoology.—The wild animals of Arabia are few in number. A country so ill provided with wood bush and pasture and where the scanty waters are so closely beset by an active population is necessarily unable to support such herds of large animals as roam through the interior of Africa. The lion inhabits the rocky heights the wild ass, and antelope of moderate size, the plains. The ferocious and harts are seen even in the midst of the bare wastes. Apes, chiefly of the species called Hamadryas, are numerous in the woods which clothe the edge of the mountains, particularly in Yemen. It was stated in the beginning of the 17th century that the road from Tmes to Aden was rendered dangerous and difficult by the numbers and audacity of the apes infesting it but this has not been confirmed by more recent accounts. The beasts of prey are panthers, ounces, and hyenas. In domestic animals, Arabia possesses advantages which may be ascribed in some degree to the great heat and attention which the austere nature of the country admits absolutely indispensable for the support of any kind of live stock. The camels of Nejd are famed for their speed and beauty in size and strength they are much inferior to those of Egypt, and therefore less fitted for carrying burdens but for riding they are said to be unrivalled. Mahary also, boasts of its swift domesticated, called Mahary (commonly written Maherry) which are those most highly prized in the African desert. Nejd possesses, also the finest breeds of horses, large numbers of which were exported to India in the beginning of the present century. These horses unite perfect symmetry of form with great spirit but they are small and it is not improbable that the value of the breed is over-estimated by its enthusiastic owners. In Yemen, the ass is a handsome animal, nearly as large as a mule, with a sleek coat, and bearing a high price. As to horned cattle and sheep, S. Arabia, particularly Yemen now draws and probably has always been in the habit of drawing large and regular supplies from the Somali coast, near the N. angle of Africa.

Domestic.—The form of Arabia presents but little novelty. It seems to be made up of contributions from Africa, India, and Armenia. The sea-coast, where it is not absolutely barren, exhibits generally plantations of the date-palm, which thrives even where the ground is covered with incrustations of salt. On the S. coast towards Omân, the mango and coco-nut are occasionally met with. Further inland grows

the fig-tree, the tamarind, the almond and in Omda, the orange lemon, and olive. The wild bushes are chiefly zinnia, euphorbia and the sidr or lous nebia. With these grow lavender wormwood, jessamine, and other scented plants. As the mountains are ascended, the vegetation assumes a more European character. *Aprocta* plants, some geranium, and grasses, are found at the height of 8000 or 4000 ft. and above these, the sides of the mountains are covered with forests of juniper, less properly called cypress. The cotton plant and the sugar-cane grow in the Tehama, the sumach or gum Arabic, the aloes, and the ossea fistula, prefer the hills and the tree which yields the oilbanna or frankincense (*Boswellia*) abounds on the mountains of Shehr or Shehr in Mahrah.

Agriculture.—The Arabs cultivate for food wheat, rice, barley and durrh or helous vulgare (the powers of India) besides bananas, water-melons, and other garden produce, but their chief dependence is on their date plantations. These occupy everywhere the irriguous land the level margin of the stream the low sea-marsh, or the hollow watered by land-springs. The borders only of these favoured spots, if they admit of having water occasionally led to them, are given up to the cultivation of grain. Near every large date plantation there is ordinarily a fort, with high walls and dry ditch, round which is collected nearly the whole population of the district or wady. As the success of field labour depends here wholly on irrigation the Arabs have learned from necessity to attain this object by very elaborate and ingenious means. They conduct the water through tunnels or subterranean canals (*qanats*), in the singular (*qanat*) so as to prevent its being dissipated in its transit by the ill-rev superficial soil and the sun's powerful rays. These *qanats* have, in Omda an extent of many miles, with a height which allows a man to walk upright in them. Yet, notwithstanding the care bestowed by the Arabs on their date plantations, to which as well as to their horses &c. camels, they are ardently attached, the total produce seems unequal to the demands of the population. While W. Arabia receives provisions not only sheep and cattle, but millet and other grain also from the Somali coast. S. Arabia imports annually notwithstanding the boasted fertility of its numerous valleys, so and thousand tons of dates from the Persian Gulf. In Yemen, however the cultivation of coffee, and of khat (*Cassia* of Lin.) is found more remunerative than that of the necessaries of life. The former of these thrives only in a warm and humid atmosphere and screened from the sun's rays, but on being planted only under the shade of trees, it is confined to the well wooded part of Yemen, from the neighbourhood of Moha, S. to Mount Sabea. The cultivation of coffee was introduced into Arabia from S. Abyssinia, and it is now well known that the best coffee exported from M. kha, even at the present day is in fact the produce of Abyssinia. The khat, also a kind of tea-plant, is originally Abyssinian but the use of it as a stimulant seems as yet hardly to extend beyond Yemen yet there, such is the passion for it that it bears a very high price. The tender shoots and young leaves, constitute the best khat. If chewed when quite fresh, they are capable of intoxicating the denomination and price of the khat depend on its age and tenderness. At every festival or social meeting, the master of the house presents to each of his guests a twig of khat and if the accounts given of its virtues, in promoting social felicity, security of temper, vigilance, and power of enduring fatigue, be true, it is to be regretted that so general a restorative is not more widely distributed.

Manufactures and Trade.—Manufacturing industry can hardly be said to exist in Arabia. Handicraft trades are there few in number. The weavers are the only smiths whose work exhibits skill. The town of Haas, in Yemen is famous for its pottery, because it is the only place in Arabia where the art of glazing earthenware is understood and practiced. Camelots are woven in Wejd silk and woollen stuffs

are made in Omda; and cotton cloth is said to be manufactured in Hadramaut. The cotton plant, as well as saffron orubul, and other dye-stuffs, is certainly cultivated in the interior. But the Arab looms are unable to meet the demands of the house trade. The Hadrami procures his supplies of cloth, oil, and other luxuries, in exchange for ivory, musk, ostrich feathers, and other trifles, but chiefly for his horses and camels. The trade in coffee, khat, almonds, balsam, senna, and gums, excites a few proprietors but generally speaking the chief mercantile wealth of Arabia is and always has been derived from the carrying trade. The Arab is the active factor who distributes the cotton cloth of India throughout half-civilized Africa, and carries back ivory, gums, and dyewoods in return. The productions of Arabia are as a source of wealth quite insignificant in comparison with the advantages of conveying the goods which connect India with Africa and Europe. There are however treasures on the Arabian coasts, which though not absolutely large, when considered as sources of national revenue, are yet important when compared with the much vaunted sweets and perfumes of the interior. The pearl banks in the Persian Gulf extend from Bahrein S. above 800 m. These give employment to nearly 80,000 men in above 3000 boats, and yield about 250,000 yearly. The pearls are nearly all bought by the Banyans, who export still more completely the produce of the pearl fishery in the Red Sea, on the coast of the Hedja. On the S. coasts of Arabia the fishermen collect much ambergris and tortoise-shell. They take immense quantities of fish particularly on the line of coast between Mahrah and Omda, with which they supply the interior and they are not only lethyrophagists themselves but if we are to believe the statement of a celebrated Arabian traveller they feed their horses too, on fish. It is certain however that they are actively engaged in the shark-fishery from which their chief gains are derived that they launch forth on a rough sea, riding on a plank supported by blown skins, and with bare legs thus exposed hasten with paddle and harpoon, to encounter the most formidable monsters of the deep. They kill the sharks for the sake of the tails and fins which are sent to Haakat, and thence find their way to the Chinese market.

Kajika.—Although the carrying trade between India and the shores of the Mediterranean Sea has long since sunk into comparative insignificance, yet enough remains to show the importance as the foundation of the monopoly of it once enjoyed by the Arabs. While navigation was in its infancy that patient and enduring animal the camel—so justly entitled the ship of the desert—offered the most convenient and economical mode of conveying goods from the Persian Gulf and

TRAVELLING IN ARABIA.—Drawn by H. W. Jones.

S. Arabia to Egypt and Phenicia, whence they were distributed through the world. It seems certain that the trade routes of the Arabs in the earliest ages—in the flourishing days of Tyre and Sidon—nearly coincided with those followed in the days of the Caliphs, when the caravans started from Bahrain for Bagdad, and thence crossed the Syrian deserts to Aleppo, Damascus, or Egypt or from Dhoofar and the ports of Hadramaut, they passed through Yemen on their way. The establishment of the Mahometan religion had the effect of reviving this truly Arab branch of industry for the Hajj or pilgrimage to Mecca, which was enjoined on all true believers, drew crowds annually to the sacred shrine from all

striking indifference to the precepts of the Koran. This release is to Mahometans not only an exposition of religious faith, but a code of laws also. In Turkey and Persia, the voluminous decisions of the Ulema or learned, and of the Fakahs (plural of Fakih) or doctors of the law have runned a vast superstructure on this slender foundation, but among the Bedawin, the Sheikh is supposed to be a competent lawyer and pronounced summary decider, without appeal or in large communities he pays a Cadi to discharge this office.

Physical Appearance and Dress.—The Arabs in general are characterized by a light and active figure, oval face, regular and finely-turned features, and a forehead neatly formed but somewhat narrow. Their look is bold, but often inclines to melancholy. They have ordinarily a dark brown complexion, yet on Mount Saker in Yemen, and on the Sabahan mountains, in Malabar, dwell tribes who are not darker than the inhabitants of E. Europe. On the other hand, the native population of the maritime districts are frequently owing to the mixture of African blood nearly black. On the shores of the Persian Gulf in particular the slave population (chiefly from the E. coast of Africa) is numerous, and the fair-skinned Arab comparatively rare. The ordinary dress of the well-conditioned Arab is a cotton short cotton drawers and a woollen mantle called Abayah, which is sometimes exchanged for a blue cotton frock with very wide sleeves. To this the wealthier sort add a caftan of cloth. Round the head is bound a fringed kerchief striped green and red over which a shawl is worn in winter as a turban. The Bedawin often cover their

BEDAWIN ARAB WOMAN CARRYING COIN.—Illustrated by G. Warren.

heads only with a leppet of cloth round which they tie the last cord of their matlocks. They decorate the straw hats worn by the cultivated areas of the ground. The men of all classes wear mandals. The women however who when young have a very engaging appearance, and are much finer than the men go bareheaded, with rings on their toes. Their brows and eyelids are darkened with antimony, the palms of their hands and their nails stained red with henna. For increase of their attractions, they rely chiefly on henna and the scent of *juwaze*. The married women among the Bedawin wrap themselves, so as to conceal the face, in black cloaks, which leave the arms exposed, and have a very unprepossessing look. The young girls on the contrary have but little to think, and are content to adorn themselves with shells strung together. The men pride themselves chiefly on their arms, their jembe or long dagger they sword, from India or Persia, their tight spurs, tucked towards the head, with horse hair or ostrich feathers and their matlocks. In the commercial towns may be seen all the fashions of Turkey, India, and Persia. The battered heads of the Bedawin meet there the perturbed heads of foreigners and even the wild tribes of the interior exhibit considerable diversity of costume.

Manners.—The Arabs may be all divided into three classes, which rarely commingle or change places one with another, namely the inhabitants of towns, the cultivators of the soil, and the Bedawin, or people of the wilderness (from *bad*, a desert plain). These last are considered as the type of the

nation. Their independence, in which they glory but which is founded on their poverty; their attachment to ancient habits, and their incapability of change, conduce to nourish in them a strong national spirit. The whole wealth of these wandering herdsmen consists in their camels and horses, their kins, sheep and goats. They live indolently in tents, made of a coarse kind of dark coloured cloth, woven by their own women drawn over poles fixed upright in the ground, the larger ones having several compartments, so as to have separate rooms

VARIOUS FORMS OF ARAB TENTS.—From Palestine.

for the men, women, and domestic animals and keep by one locality till the pasture around is exhausted and necessity compels them to change their position. Thus they wander in the course of a year over a large tract of country. They have no industry and though in appearance all energy and fire, are incapable of patient exertion. Their only occupation besides the care of their cattle, is pillage for they are all robbers, cruel treacherous and vindictive—it is a principle of blood for blood maintaining among them perpetual and destructive feuds. Such are their vices which are hardly atoned for by their well known hospitality. To a stranger within their tents is safe from injury for him they kill the lamb or kid and grind their best corn. The Bedawin themselves eat, and indeed the Arabs taken collectively are the most temperate and abstemious people, perhaps, on the face of the earth. They can subsist on a fifth part of the food consumed habitually by Europeans. Numbers live half the year on nothing but camel's milk. Others on a few dates dipod in glue, or melted butter and some even live wholly on wild honey. A handful of meat, moistened with water suffices for an Arab during a long journey.

Dwellings.—The agricultural tribes inhabit villages, which are frequently enclosed within square walls, the houses abutting on the walls, while at the centre is an open space for the herds and flocks. Near the date plantations there are usually forts, with double walls, towers, and dry ditches and near these stand the villages of the inhabitants. The houses, sometimes two stories high, are built of stone or sun-dried bricks of large size, and have flat roofs, covered with clay. In Yemen, which anciently attained a higher degree of civilization the castles of the chieftains resemble the baronial mansions of Europe in the Middle Ages and the houses of the opulent merchants are large and commodious. Considering the general frugality of the people, it may be concluded that the population of Arabia is large in comparison with the natural resources of the country. It is difficult, however exactly to estimate its amount, as the people elude all such inquiries from a superstitious dread of immortality. Chiefly on cultivated grounds, therefore, the population of Arabia is supposed to amount to 12,000,000.

Language and Literature.—The Arabic belongs to what is called the Semitic family of languages (spoken by the posterity of Shem) and is, therefore, cognate with the Hebrew; it is, however less impaired than the latter and preserves more completely its primitive form. The Hamyaritic, or language of S. Arabia, of which have recently come to light, is said to be in this respect still more complete, and to retain, in a remarkable degree its original construction. Of Hamyaritic literature, if such ever existed, nothing now remains; the inscriptions lately found in that language seem to be all of a

date subsequent to the Christian era. The history of the northern or Euphratic Arabic cannot be traced back long anterior to Mahomet. We know that the western dialects held the gifts of eloquence and facility of rhyme in high estimation: the ready poet or story-teller was a welcome guest in every tent. At the fall of Orklay, in Hagar, poems were given for effusions of this kind and some of the most thus distinguished in the pages age of the Arabs are still preserved. In the case of things, the publication of the Koran wrought powerful effects: and language of the Koran in which it was so much studied, was a dialect of the Arabian peninsula, tend to polish and enrich it. The sacred volume was originally written in the old Syriac character, called *etranghulo* which is, *as-mat-nag* the writing of the gospel which the Arabs had recently learned but a few years later when the prophet's successors had founded Kufah on the Euphrates, and the copying of the Koran became the business of the place, modifications were made in the *etranghulo* which resulted in the *etranghulo* which is called *Kufic* after the city in the fourth century of the Hegira; that the current writing called *Naschi* which continues in use at the present day first came into fashion in Bagdad. In a few ages after Mahomet, Arabic was the most widely diffused language on the face of the earth. It has undergone, however in the course of time, that wear and degradation to which all languages are liable, particularly where conquest or trade forces the use of it on strangers. The vulgar Arabic of the present day has thrown aside many of the grammatical forms of the old language and has become a mere jargon, which the learned have wrought such a transformation, that the illustrious Arah, though he learns to read the Koran, rarely understands it.

The civilization, fairly abundant in the arts and less of literary activity. As soon as the victorious apostles of the new faith had sheathed their swords, they began to apply themselves with great ardour to learning and particularly to the study of the Greek authors. Every Mahometan court, from Seville and Cordova, to Balkh and Samarcand, had its crowd of poets and prose writers. But the attempt to force learning and refinement thus suddenly on the children of the desert, proved a failure. The literature of the Arabs is remarkable alike for its extreme abundance—catalogues consist of nearly 20,000 Arab authors—and its want of masterpieces. Their historical works are not without value, though dry and occasionally prejudiced; their geographical and astronomical works are usually trivial in substance, and often exhibit a redundancy to petty scientific verbal display and shallow vain bluntness which may be referred with probability to the original habits of the nation.

Arabic Derivations.—The Arabian peninsula was divided by ancient geographers into two parts, namely Arabia Deserta, embracing the modern Hejaz and Nadj, in the widest application of the latter name and Arabia Felix or Yemen and Hadramaut. As to the E districts, it is not easy to determine how they are to be placed under this vague division. Ptolemy at a later period, added also Arabia Trochaea which embraced the Syrian desert and those of Bina, taking its name from the city of Heira, situated among the hills E of the city of Al-Basra. It must be observed, that the name Arabia was applied by the ancients with a latitude which does not now belong it, for the entire region on the E side of the Nile, between that river and the Red Sea, was called by them Arabia, in contradistinction to Lybie, which lay on the W or opposite bank. This mode of speaking remained in use till the latest period of what may be called ancient geography in reference to the open country on the right bank of the Nile but the line of demarcation it is formed by the river was, by the time of Ptolemy, and still more by the time of the interesting Herodotus, in his description of the camasson-bearing Arabia, round Cape Zardanelon represents Arabia and Ethiopia as continental countries. And there can be no doubt that this extensive application of the Arabian name was etymologically just for if we trace the Nile up as far as the ancients were acquainted with its banks, and then draw a line in connection to the coast at the equator, we shall find that the coast was lying E of the limit thus drawn, and that the country was, in fact, an Arabian country, by tribes of Bemitic origin, who generally succeeded in obtaining an ascendancy over the Aborigines.

It was an etymological error of the Greek and Roman writers, to give to the country at the N.W. angle of the Arabian peninsula, embracing *him* and the Wady el Akabah the name of Arabia Petraea. Modern geography has carried still further: In supposing this to mean the Stony Arabia, a name equally applicable to any part of the peninsula. The epithet Petraea was derived from Petra, the Greek name of the capital of the Nabataeans, who are called by ancient writers *Arabes Nabataei*, though, in fact, they were not Arab at all. It is enough to derive the Nabataeans from Nabatish or Idumean, to show that they were not Nabataei, and, in fact, when the popular misapprehensions regarding this people are set aside it becomes plain enough that they were of Aramean race, and a colony of the Nabat, who occupied the low lands on the banks of the Euphrates, and who trading with the Gharra: on the N.E. angle of the peninsula, perceived and seized the advantage derivable from possessing the N.W. angle. Like the Himaeyas in the E. they were the first to establish a station in the wading region, carrying the centre of their mainfairs to the wading region, and thus in the desert, admirable even as ruins, must have been transcontinental at all times in the eyes of their mutual neighbours.

History. The Arabs and the Persians appear to have retained the habits of Bedwiness they were wild Arabs, the possessors of Moccas and the Kaaba were their sole boast, and they made no figure in history till the time of Mahomet. The sons of Yaktan, on the other hand, in S. Arabia, advanced in civilization suggested in commerce and had a regal form of government. Thus we find it stated characteristically enough that Arabia (N) and the princes of halat offered lambs, and rams, and goats—pastoral products while the merchants of Sheba (the Sabaeans) dealt in spices, precious stones and gold. According to the Arab tradition however Sheba (Sheba was not the son of Kahnan (Ioktan) but the third in descent from him, the gemsmithing being Kahlan's (Sheba's) father, and Sheba the king) and many of her subjects were of the Hamitic race. The kahlan and his descendants of the former called Hamyarites or Hamyarites (the *Homerites* of the Greeks and Romans) were not, therefore, identical with the Sabaeans, but only a branch of that race. Of the early history of the Sabaeans nothing now remains but a few obscure traditions. The greatness of the nation appears to have been closely interwoven with the construction and maintenance of the great dam at Marah, in the interior of Yeman which collected the waters of several mountain-streams, and formed a reservoir whence the neighbouring country was irrigated. The construction of this great work dated from a period long antecedent to that of authentic history. Some ascribe it to Ba'ila the Queen of Sheba who visited Solomon. The following is the account, which is probably a good deal older than the one of the same subject which appears in Arab history. It was connected with a dispersion of the tribes of Yeman many of whom young N and associating with the Ishmaelites, eventually acquired the ascendancy among these people.

In the fourth century of our era, a king of Ymen embraced Christianity, and persecuted the Christians within his dominions, putting several thousands of them to the sword. Him awakened the hostility of the Abyssinians (the Axumites) and at length, in A.D. 530, an Ethiopian army crossed the Red Sea into Ymen and put an end to the Hamyaritic dynasty. The Ethiopians remained masters of the country, and sent a Persian army to subvert the throne of the king of Persia, but without success in expelling them. It was during this occupation of Ymen by the Ethiopians, that Atricha marched against Necos with a Christian army and a troop of elephants, but was induced to return by the intercession of the Jews of Yathrib. This event gave rise to the Arab story of the Elephant, and is the most memorable because it took place about 511 (A.D. 512). The story of the Elephant is very curious, we have no doubt, borrowed upon by the context of religious doctrines which inspired Arabian myth at that age. In tracing the chief epochs of Arabian history we must not omit to mention, that the Arabs were first united by the Arabs and Mahometanism in general (Muhammad) as reckoned from the prophet's departure from Mecca, July 16, 622. With the diffusion of the new faith a new destiny was opened up to the Arabs. The Arabian Peninsula, which had been so paralysed in history. Within the course of a few generations, Arab dynasties were established from Central Asia across the frontiers of India, to Samarcand, Balkh, and

Caled, to the shores of the Atlantic, in Morocco and Spain. In the fourteenth day of the Khalifa (monarch), the Arab merchant visited China, the interior of Africa, the shores of the Baltic, and N Siberia. In truth, Arab commerce embraced at one time nearly the whole of the Old World. But this wide-spread superiority was in its nature transient. The power of the Khalifa was extinguished after many a struggle, by that of the Ottomans and in trade the Arabs were gradually and completely supplanted by W nations. The Arabian peninsula derived but little advantage from the historic splendor of the Arab name. Bagdad, Cairo and Granada became centres of a civilisation which exercised no influence on the remnants of the desert. The most remarkable event in the history of Arabia since the age of the prophet, is probably that which closed the career of the Wahaby, a sect of religious reformers, founded by the Sheikh Mahomet Abd-el-Wahab, whose life extended from 1686 to 1791. Towards the end of the last century his followers in Negd threatened not only Bagdad, but Mecca, and thus provoked the hostility of the Pasha of Egypt. The enthusiasm of the Bedawin, roused by the appearance of an Egyptian army in Negd made the contest for some time doubtful and the Turks were defeated in three successive campaigns. But perseverance and artillery gained the victory at last. In 1818 Darrayah the capital of the Wahaby oh of in the heart of the peninsula was razed to the ground and the spirit of the Arabs was completely quelled. Since that event, Heyra, and a part of Yemen have remained under the rule of the Pasha of Egypt.—(The Travels of Burckhardt and Wladis in Arabia Niebuhr Descrip de l'Arabie Wolf's Missionary Journey Captain Sadler in Trave of the Lat Soc. of Bombay Cruttenden and Harrie, in Jour Roy Geo Soc.)

ARABIAN GULF See RED SEA.

ARABIAN SEA a large expanse of sea, S.W. coast Asia lying between the peninsula of Hindostan on the E. Arabia on the W. and the coast of Baluchistan and Sunda on the N. The distance from shore to shore or from the Arabian to the Indian coast, may be, at the broadest part about 1500 m. The Sea of Bab-el Mandeb, and Ircan Gulf are both ramifications of the Arabian Sea, which is itself a portion of the Indian Ocean.

ARACAN or ARACHAN (Rakhang) a maritime prov. British India beyond the Ganges presidency of Bengal. It is a strip of coast bounded N. by Chittagong from which it is separated partly by the river Naf, E. and S. by the Burman empire, on the W. and S. by the Bay of Bengal lying between lat 18 25 and 21° N. The natives restrict the name to what is the present district of Akyah one of the three districts into which Aracan is divided. This portion of the country which is called Aracan proper lies between lat. 20 and 21 10' N., on the sea-coast, extending in the interior to 21 40' N. area variously estimated from 11 000 to 16 000 sq m. The province is divided into the districts of Akyah, Ramree and Sandoway. The chief towns are Aracan the former capital. Akyah the principal port, near the capital of the prov. Sandoway and Kyauk Phyo the chief military post and having a spacious and beautiful harbour. Aracan is separated from Burma and the valley of Irawadi by an extensive mountain range, which extends, from Cape Negras N. along all to E. frontier and is named the Aracan Yamadong or Anamodopon Mooma m, lying parallel to, and in some places approaching very near the sea-coast. These mountains consist chiefly of granite, schist, and limestone, yield iron and small quantities of gold and silver and have an average elevation of 4000 ft. the highest peak the Table Mountain rising 8340 ft. above the sea, and separating the valley of the river Aracan from that of the Mion or Mayo. This range, which on the W. is generally abrupt and broken by numerous ravines, is said to be crossed by no fewer than 22 passes, of which more or only five are as the best of these, the pass of Arang being 4604 ft. above the sea. Elevated forests, wooded valleys, rivers and small lakes, form the general features of the interior mountain district which extends about 80 m. W. of the main range. Between the mountains and the sea the province is very narrow in the S. portion, but becomes wider towards the N. It is covered with thick wooded jungles, which are so unconnected by rivers, lakes, streams, and inlets, as to render land communication from town to town exceedingly difficult. It is watered by numerous streams of which

may be named the Nant, Mayo or Mion the Kaidyna or Aracan, the Arang and Sandoway all of them navigable to a greater or less extent. Along the coast are the islands of Cheduba, Ramree, Akyah, the Broken Islands, and numerous detached islets and rocks. In Ramree and Cheduba are mud volcanoes. The soil of the higher grounds is a rich loam that of the lower and most extensive portion chiefly alluvial—white on the rivers and on the coasts there are large accumulations of sand. Oak, fig, teak and lambour, of all sizes are found in the forests, and throughout the country there is abundance of pine apples, plantains, mangoes, jack, sweet lime, cocoas nuts, and almost all tropical fruits with the exception of oranges which are scarce. Among the other vegetable productions are rice sugar-cane hemp cotton indigo, onions garlic, and turneps. Almost the only wild quadrupeds of which we have any account are the elephant, tiger buffalo deer and goat. Wild fowl, poultry and fish, are abundant and bees and silkworms are indigenous. With respect to climate, the country except among the hills is considered exceedingly unhealthy. The mean temperature is about 80° Fah. and the quantity of rain that falls is very great. The wet season continues from May to November and the other third part of the year can scarcely be called dry as much rain falls in December January and April. The abundance of moisture and the high temperature, render the country peculiarly adapted to the cultivation of rice which is accordingly its staple production, and of which there are three distinct kinds grown. From the year 1830 the province produced rice enough only for the consumption of its scanty population now 6 000 tons are annually exported and have been yearly since 1838. The shipments which it is understood were first sent to the Coromandel coast, were then extended to China, Hongkong, and the Mauritius and latterly to Malacca, France, and Belgium. The quality of the grain is excellent. Other objects of cultivation are cotton, sugar-cane, hemp, tobacco, and indigo, and the fertility of the district is manifested by the largeness of its crops. Agriculture however is little practised, the inhabitants being more addicted to hunting, fishing and trafficking. The principal article of manufacture and of export, next to grain is salt. The only other exports, the produce of the province, are sandoway tobacco leaves wax honey raw cotton, hides, horns, sugar cane and wood oils at silk fish, salweena, oil, clays, figs, cows, bullocks and yokes. The quantities exported of most of these commodities are trifling. The wood oil of Aracan is, as regards this country a novel article of commerce although long well known if roughness India. It is the production of a lofty tree (gums Dipterocarpus) which abounds in the country and is obtained by cutting a large aperture, 3 or 4 inches deep, in the tree, near the root. A fire is then kindled in the orifice, by which the sap-veins are stimulated, and on the oil begins to drop slowly into a hollow formed for its reception at the bottom of the aperture. Some European goods along with rice and other native products, are exported to Burma in return for silver copper lacquered ware, &c. The inhabitants are a large indigenous race, tall, intelligent, and have an independence of manner which strikingly contrasts with the obsequiousness of the Asiatic. They are far from being civilized, but few can read and write. Their language is the same as that of the Burmans, with a look on the Aracanese as the prime stock from which they themselves are descended. In religion they are Buddhists, and the priests employ themselves almost entirely in educating the young, the schools, of which there are two or three in every village, being open to all. They are of filthy habits, and use all kinds of animal and vegetable food their houses are usually made of bamboo covered with mats, and raised on piles about 4 ft. from the ground. Limestone, procured from the island of Cheduba, was formerly only employed in building temples, it is now for private buildings being forbidden Aracan was an independent kingdom till 1788 when it was overrun by the King of Ava who attached it to his dominions as a province. In 1825 it was conquered by the British. In 1836 by treaty it was ceded by Burmah to the E. India Company. In 1795 the population was estimated at upwards of 2 000 000. Since that time it has greatly decreased, but latterly has begun again to increase. Immediately after the British conquest it was reckoned at 100 000 or 120 000. In 1831 the pop. amounted to 173,228.—

(*Crawford's Embassy to Ava. Jour. Roy. Geog. Soc.* vol. I. viii. *National Mag.* Ritter's *Kirghizland*.)

ARACAN a tn. British India beyond the Ganges, prov. Arawac, of which it formerly was the capital situated on the river of the same name 50 m. from the sea about lat. 20° 45' N. lon. 98° 10' E. in a valley surrounded by coastal hills and intersected by streams or water-courses one of which divides the town into two. It was at one time a place of considerable importance having had a population of 50,000; but it is now so much reduced that in 1886 its population was estimated at from 8000 to 10,000. This decrease is to be accounted for by the unhealthiness of its situation, and the rise of Akrah (which see).

ARACATÍ or **ARACATÍ**—1 A river-port, Brazil prov. of, and about 65 m. S.E. from Ceará, r. bank, Rio Jaguaribe (river of omnes) 10 m. from the sea lat. 4° 31' S. lon. 37° 45' W. (s.) It consists principally of one long broad street with several minor ones branching to the S and contains a handsome townhall a prison three schools, and five churches. The houses are built of a framework made of the stems of the *Carnahuba* palm, filled up with brick and are generally two stories in height. The principal exports are cotton and indigo, nearly all brought from the interior. Of the former about 5000 bags, or 25,000 arrobas, of 32 lbs each, are exported annually, and of the latter 2000. With exception of one hill situated about 2 m. S.W. of the town, and a few sand-hills near the coast, the country around is extremely flat. In the rainy season, the river which runs close to the town often rises 12 ft. above its ordinary level. The bar at the mouth of the river which has a depth of 8 ft. at low water is narrow and dangerous owing to the sand banks on each side, on which the surf is very violent. The river without within the bar and forms rather a open bay but, from the uncertainty of its depth owing to its shifting sands cannot be depended on. Pop. about 4000.—2 A river Brazil prov. Ceará. It flows S. to N. and falls into the Atlantic by two mouths named Aracati Aqu and Aracati Mirim in lat. 5° 10' N. after a course of 120 m.

ARACENA a tn. Spain, in Andalusia, prov. of and 47 m. N. by E. from Huelva, in a valley and having four squares, and straight clean, and well paved streets two churches, four convents, three schools an hospital barracks public schoolhouse, and a police of old fortification. Manufactures—linen and oil but the chief occupations are agriculture and cattle-rearing. Pop. 2500.

ARACLAHI a river Brazil prov. Minas Geraes. It rises in the Serra Embaraldia, N. of Villa-do-Principe, flows N.E. and falls into the Jaguaimbuim, in lat. 18° 4' S. 8 m. W. of Teocoyo, after a course of upwards of 200 m. It is tolerably deep, and might be rendered navigable for more than half of its course. In it are found clay-pits and other precious stones.

ARAD—1 A market, in Hungary on the Maros, 145 m. S.E. Pesth, and 77 m. N. Temeswar divided by the river into Old Arad (Old Arad) and New Arad (New Arad). The former is an open town cap. dist. of same name, not very well built but yet possessing some good houses. It is the seat of a Greek non-united bishop, and contains a Greek theological seminary a R. catholic gymnasium, and Wallachian normal school. Manufactures—linen and wool. It has an important fair, second only to the fairs of Pesth and Debreczen, and a considerable amount of trade is carried on in cattle, and in lumber grown in Szababrigas or Transylvania and floated down the Maros. N. of New Arad lies across the river from Old Arad in the Banat of Temeswar a bridge which connected the two was destroyed during the late revolution. New Arad is chiefly remarkable for its extensive fortress, one of the strongest in Austria, and used also as a prison for political offenders. The united pop. of Old and New Arad is 20,400 the former 18,400 of whom 6283 are R. catholics, 6386 non-united (Greek), 191 of the Reformed or Calvinistic church, and 725 Jews the latter 4000 chiefly Germans, who are the leading persons, and hold the official stations of the town.—The *Donator* which has an extent of about 1700 geo. sq. m. and a pop. of 251,600 is finely diversified with mountains and valleys the former containing marble quarries, and mines of copper and iron; and the latter producing in abundance wheat, maize, melons, and other fruits, flax, tobacco and excellent wine.

Vol. I

—**ARAD**, bounds the above, is the name of four small places in Hungary not deserving a separate notice.—2, One of the Bahrein Islands (which see).

ARAFAT (Mount) or **JEBEL EL RAHMA** (the mountain of mercy) a granite hill Arabia 15 m. S.E. Mecca at the foot of a higher mountain, in a plain about 1½ m. in diameter surrounded by barren heights, but separated from them by a rocky valley. It is about 1 or 1½ m. in circuit. Its sides are sloping and its summit is nearly 800 ft. above the level of the plain with broad stone steps leading to the top. It is one of the principal objects of pilgrimage to Mahomedans, who affirm that it was the place where Adam first received his wife Eve, after they had been expelled from Paradise, and separated from each other 120 years. On the summit the place is shown where Mahomet used to take his station during the pilgrimage. The mountain not being large enough to accommodate all the devotees that go annually on pilgrimage to Mecca, the law declares that the plain in its immediate neighbourhood of the mountain may be regarded as comprised under the term Mount of Arafat. Burckhardt, who was present during the pilgrimage in July 1814 estimated the number present on the occasion at 70,000 with at least 40 different languages amongst them. The camp covered a space of between 2 and 4 m. long and from 1 to 2 m. broad containing 3000 tents, and from 20,000 to 25,000 camels. A sermon delivered by a priest, from a platform about the 50th step of the mountain constitutes the main ceremony of the pilgrimage, and entitles all who hear it to the same and privileges of a Hadj.

ARAGON a r. or stream in Aragon, rising in the Pyrenees, near Caucenne, prov. Huesca, on the borders of France. It flows S. for about 20 m. to Jaca, thence W. N.W. to Huesca, then S.W. through Navarra, and after a course of about 110 m. being augmented by the Agra and several other tributaries, it falls into the Ebro of which it is one of the most important affluents.

ARAGON or **ARAGONES** an anc. kingdom Spain bounded, N. by France, E. by Catalonia, S. by Valencia and New Castile, and W. by the Castles and Navarra length about 240 m. average breadth 90 m. area, 21,878 sq. m. It is now divided into the three provinces Huesca, Saragossa or Zaragoza, and Teruel. It forms a basin accompanied by mountains the Pyrenees, the crest of Monte Alcantra Molina, and Bona, while others from these chains traverse the interior in all directions. Several peaks of the Pyrenees rise upwards of 11,000 ft. above the sea, their tops are covered with perpetual snow. Their sides are clothed with forests of oak, beech and pine while lower downs are rich and extensive pastures with many beautiful and fertile valleys. The largest level tract is formed by the valley of the Ebro, which entering on the W. flows S.E. dividing the province into two nearly equal parts. The Guadalquivir the Xucar and the Tagus, have their sources in the extreme S. and the Aragon an affluent of the Ebro, on the N.W. of the kingdom. The climate is variable though generally healthy. On the mountains, and especially among the Pyrenees, it is extremely cold, becoming much warmer in the valleys near the Ebro and the Cinca. High and piercing winds from the N.W. and S.E. however frequently prevail those which come sweeping down from the hills of Montany being peculiarly piercing. The mountains and forests abound with game and the rivers with fish. The flora of Aragon is varied and extensive but, like that of the rest of Spain, little known. Its minerals are marble jasper red coal copper iron lead quicksilver cobalt, and alum. Fertile tracts are wholly stony and barren while others, though capable of cultivation are entirely neglected. Soil where proper means are employed, excellent crops are obtained, of grain and fruit, saffron, flax and hemp. Silk-worms are reared in considerable numbers. Manufactures—woollen cloth linen drapery cordage leather spirits, wine, oil and soles—most of which, with grain and other products of the soil, form articles of exportation. The commerce is limited the principal means of transport being by the Ebro, and the great canal of Aragon, which commencing near Tudela in Navarra, joins the Ebro 30 m. below Saragossa. It is 9 ft. deep, and 64 ft. broad at the surface. It was commenced in 1573, by Charles V. and, after having been abandoned for more than two centuries, was recommenced and finally completed towards the close of the 18th century.

24

The Aragonese are hardy, active, but a little hard-headed but accordingly obstinate, hard-hearted, and prejudiced, lovers of self, and religious haters of foreigners, especially of the French. They have also a peculiar dress—knee breeches, broad aiken sashes, and broad brimmed slouched hats. The favorite national air and dances is the *polka Aragonese*, which is brisk and jerky but highly spirit-stirring to the native, on whom, when from Aragon, it acts like the jurek on the exiled Highlander or the *Ranz-des-Vaches* on the Swiss, creating an irresistible nostalgia, or homesickness. Aragon is thinly peopled the total population amounting to 847,105. (Madras Murray's Handbook, &c.)

ARACONA, a small town, Sicily, prov. and dist. of Girgenti from which it is distant 8 m. N. E. Its old castle contains a fine gallery of pictures and some interesting relics of its history. In the neighbourhood is the mud volcano of Macculina. The district grows great quantities of almonds. Pop. 6530.

ARAGUA, a valley and river, Venezuela, prov. Caracas. The valley lies S. of the mountain range which skirts the sea along the N. of prov. Caracas, and adjoins the lake of Tacarigua or Valencia, into which the river falls, after a N. W. course of about 30 m. The valley produces a great quantity of sugar, sugar-cane, European wheat, and abundant crops of tobacco. (Aspects of Nature, Abbot.)

ARAGUARI, a river, Brazil, prov. Para in Brazil in Guiana. It rises in the Serra de Tucuruquara in lat. 3° 52' S. W. 52° 3' W. and receives several small tributaries. It flows several small lakes, and falls into the Atlantic, 121° 50' W. opposite Ulu. A branch of it flows N. E. and falls into the sea N. of Ilha Coelho. Another branch flows N. E. and falls into the Ilha. Total course about 150 m.

ARAGUAIA, a large river, Brazil, the principal affluent of the Ilha Tocantins which it joins at Ilha-Joko-da-da-Harra, about lat. 6° S. lon. 49° 30' W. It rises in the name of Copampio, in mountains of the same name about lat. 16° 30' S. lon. 53° W. and flows N. forming the boundary between the provinces of Goias and Mato Grosso as far as they are concerned, and bifurcates about lat. 12° 40' S., its arms uniting again about lat. 8° 30' S. and forming the island of Ilha da Barra or Ilha da Barra. It has numerous affluents on either side, the principal one being the Rio das Mortes, which it receives from the left, opposite the island of Ilha da Barra. The whole course of the Araguaia stretches over about 13 degrees of lat. 1° 11' of lon. but it is navigable for the vessels of the country. (The Geo. Imp. Brazil.)

ARAHAL, a village in Andalusia, prov. of Seville, 8 m. S. E. from Seville on an eminence, the summit of which forms an extensive flat. The houses are all constructed of the worst materials and it has two squares, three churches, the townhouses in which is a prison, a hermitage, a storehouse, a Latin school, seven other schools, philosophical society, hospital, and cemetery. Manufactures—felt hats, soap, gypsum earthenware, and a mill and wine. Fruits and other produce are exported and colonial produce imported. Many of the inhabitants are engaged in agriculture and in rearing cattle. Pop. 6988.

ARALECH (Aralec) or ARASHKE the pleasure-garden (see Aralec) a town, Morocco, prov. Fez, on the steep S. point of Wad al-Aralec, or of the bay or winding river, lat. 32° 12' 45" N. lon. 6° 5' W. In 1765 the French entered the river with the intention of bombarding the town, but being induced by a fleet of the Moors to advance too far they were surrounded and destroyed. Al-Aralec had formerly a number of good houses, paved streets, several mosques, a bazaar with stone piazzas, and a fort with two batteries. Its large castle on the summit of the hill, the lofty towers of the mosque and the fortifications, still give it an imposing appearance when seen from the sea, but on a nearer approach the whole is found to be little more than a heap of ruins. The survivors are laid out in pleasure-gardens and orchards, from which the town received its name, but they are now neglected. The once flourishing commerce of the port is also gone. At the entrance of the river is a bar with 9 or 6 ft. water at low tide, with in which there is a good port about three quarters of a league by a quarter of a league with a depth of 24 ft. Pop. in 1830 and 1834, stated at 4000, but, in 1865, 2000 and said to be 1000 sold out, and 2500 Jews. (The Geo. Soc. vol. vi.)

ARAKAN, see ARACAN.
ARAKHOVA, a small town, N. Greece, 18 m. W. N. W. of Ivalia on a declivity of Mount Parnassus, in an extremely fertile district. Pop. 2000.

ARAL SHA, an extensive lake or inland sea, Independent Tartary, lat. 43° 42' 41" to 45° 44' 42" N. lon. 68° 18' 45" to 61° 46' 44" E. and next to the Caspian Sea, from which it is nearly 300 m. the largest lake of the E. hemisphere having a length N. E. to S. W. of 205 m. a central breadth of 162 m. and an area of 17,600 sq. m. Its water is salt.

though not unpleasantly so, may be used for millary purposes and is freely drunk by horses. It regularly freezes in the N. in other directions the ice is seen covering the shores as far as the eye can reach and probably therefore, may in very severe winters, extend over the whole expanse. Towards the S. the sea narrows, and finally becomes divided into two very unequal portions by the island of Kug-Aral which stretches across it W. to E. for about 25 m. leaving between it and the mainland only a very narrow channel to the W. and a passage of about 17 m. wide to the E. The portion of the sea N. of the island has an area of about 1600 sq. m. and is called the Little Sea or Little Sea. In contradistinction to the main expanse which is called the Ulu-Dzung or Great Sea, and is ten times larger than the other portion having an area of 16,000 sq. m. The Little Sea is of very irregular shape and divides into two great arms which penetrate far inland the one N. E. forming the bay of Kary-Tashaganak and the other N. W. forming the different bays of Perovskiy, Paskovitch, Dakhadil, and containing several islands. The bottom of the Little Sea is muddy and the depth in many parts exceeds 12 fathoms the coast, which is deeply indented presenting many peninsulas and headlands, in some parts low and sandy but generally consists of hills varying from 100 to 800 ft. in height, and chiefly composed of clay and salt. The Ulu-Dzung or Great Sea is of an irregularly circular form, having nearly the same length and breadth. Among its peculiar features are the tremendous number of low and sandy islets which line its E. and the islands, in much smaller number but of far larger dimensions, which lie at some dis-

ing into each other by the interposition of a wide, level upland valley. The summit of the Great Ararat lies in lat. $39^{\circ} 43' N$; lon. $43^{\circ} 38' E$, and is 17,323 ft. above the sea level, and 14,830 ft. above the plain of the Aras. The N.E. slope of the mountain is about 14 m. in length and the S.W. about 30 m. On the former visible even from Erzurum, 58 m. distant, is a deep, gloomy crater-like chasm. The mountain is covered with perpetual snow and ice, for about 8 m. from its summit downward in an oblique direction. On the entire N. half from about 14,000 ft. above the sea, it shoots up in one right crest to its summit, and then stretches downward on its S. side to a level not quite so low forming what is called the Silver Crest of Ararat. Little Ararat rises 13,033 ft. above the sea level, and 10,140 ft. above the plain of the Aras and is free from snow in September and October. Its declivities are greater and steeper than those of the Great Ararat; and its almost conical form is marked with several delicate furrows, that radiate downwards from its summit. The top of the Great Ararat was first reached October 9 1829 by Professor Parrot, who reports it to be a gently vaulted, nearly coniform surface, of about 300 paces in circuit, which at the margin sloped off precipitously on every side, but particularly towards the S.E. and N.E. Formed of eternal ice, without rock or stone to interrupt its continuity. It was the entire alvery head of Old Ararat. Towards the E. this summit is connected by means of a flat-topped depression with a lower summit, distant 527 yards and, in like manner covered with ice. After remaining on the summit three-quarters of an hour determining the height, and making various observations, Parrot descended to the monastery of St. James the third day after he left it. The observations of Parrot have been in every respect confirmed by another Russian traveller named Abich, who reached the

summit of the Great Ararat without difficulty July 23, 1845. He, with six others, remained an hour on the top, without experiencing any inconvenience from cold, so much did his Parrot and his companions. Abich, previous to making the ascent, had his tent for some time pitched on the upper slope of the mountain, in the valley between the two peaks, nearly 9000 ft. above the sea. He reports the important fact, that from this point the ascent can with facility be accomplished, few obstructions interfering with the progress of the traveller compared with those met with on the ascent from the monastery of St. James. It would appear even that the ascent of Mount Ararat is easier than that of Mont Blanc: for the height of the latter above the valley of Chamouni, is 12,000 ft. while that of the former above the point where Abich pitched his tent, cannot be above 9000 ft. and the limit of perpetual snow is lower on the Ararat than on the Armenian mountain. The season most suitable for the ascent is the end of July or beginning of August, when the summer attains its greatest heat, and when there is usually a period of atmosphere quiet, accompanied by a clear unclouded sky. So soon, however as the first days in the earlier part of August are over the atmospheric war commences in the higher regions of the air the strife being hottest between the two great peaks. Then there is no certainty of fine weather: for sudden thunderstorms, always on the higher parts of the mountains accompanied by hail and snow endanger the life of the traveller. This continual elemental strife has left, on the summit of the Little Ararat, an enduring memorial of its rigour in the lightning-tubes with which the rocks are bored. These tubes are covered with a greenish glass, which was formerly supposed to be obsidian. So numerous are they on the highest peaks, that they impart to the rock the appearance of worm-bored wood.

ARARAT FROM THE PLAIN OF ERZURUM. From Painting by J. Balthus From St.

Wholly isolated on the N., S. and E. sides, this enormous mass shoots up abruptly from the plain on which it stands, in stupendous grandeur to the eye exceeding in height the peaks both of the Himalaya and the Andes. The N.W. slope of this mountain is partially connected with a chain which, running W. into Turkish Armenia, borders the entire E. bank of the Aras in W. end, wheeling round the head waters of that river touches Erzurum, and gives to the E. bank a mountain-barrier similar to that which exists on the right. All travellers attest the volcanic nature of the Ararat mountains as evidenced by the stones found on all their slopes, undoubtedly the products of a crater. They are composed chiefly of trachytic porphyry and on them pyrites and various descriptions of lava have been met with (Parrot, p. 198). Reliquies attest that he saw the Great Ararat send forth smoke and flames for three days, in 1785, but this is believed to be one of the many rumours which that traveller has related. No such occurrence was remembered, in 1845, by individuals resident on the mountain at the period indicated, and no eruption is found recorded in the chronicles of the monastery of

Echmiadzin, though they extend back over a period of 800 years. All doubt as to the volcanic nature of the two Ararats was put to rest on July 2 1840 when an eruption took place from the head of the great chasm, which destroyed the monastery and chapel of St. James the village of Arguri and their inmates (see Ararat). Dr. Wagner an enterprising German traveller and naturalist, who visited the spot in 1845 gives in substance the following account of that event, as related by Bahadur Chotchaloff, brother to Stephan Agn, village elder of Arguri, honourably mentioned both by Parrot and Debole, and confirmed by other two eye-witnesses.—On July 2 1840, half an hour before sunset, the atmosphere clear the inhabitants of Armenia were frightened by a thundering noise, that rolled loudest and most furiously in the vicinity of the Great Ararat. During an undulating motion of the earth lasting about two seconds, which rolled from the mountain E. and N.E., and wrought great destruction in the districts of Sharur and Nakhichevan, a rent was formed in the end of the great chasm, about 5 m. above Arguri, out of which rose gas and vapour hurling with immense force stones and earth

over the slope of the mountain down into the plain. The vapour rose very quickly higher than the summit of Ararat, and seems to have been wholly of aqueous composition; for in the same night a heavy rain fell in the vicinity of the mountain—an unusual occurrence in this country during summer. The vapour at first was of various colours in which blue and red prevailed. Whether flames burst forth could not be ascertained, but the pillars of vapour or smoke had a red tint, which, had the eruption taken place during the night, might possibly have exhibited flames. The blue and red tint of the vapour soon became dark black, and immediately the air was filled with a very disagreeable smell of sulphur. While the mountain continued to heave, and the earth to shake, with the accompanying thunder along with the subterranean cracking and growling might be heard the whist, as of bombs, caused by the force with which stones and large masses of rock, some upwards of 50 tons weight, were hurled through the air. Likewise, the shock of the stones as they met in the air in their flight, could be distinguished from the thundering noise heaving from the interior of the mountain. Where these large stones fell, there in general they lay for in consequence of the gentle declivity of the ground at the foot of the mountain, to roll far was impossible. The eruption continued a full hour. When the vapour had cleared away and the shower of stones and mud had ceased, the rich village of Argut, the monastery and chapel of St. James, were not to be seen. All along with their inmates, were buried under the mass of stones and mud that had been ejected. The earthquake which accompanied the eruption destroyed 8000 houses in the neighbouring districts of Nakhichevan, Shurur and Ardubad. Four days after a second catastrophe occurred, which speed still further the work of destruction at the foot of the mountain. After the rent in the chasm whence issued the vapour and stones, had closed, there remained in the same place a deep basin filled with water by the melting of the snow by the rain, and by a sequester from above, so as to form a small lake. The mountains and clay, which formed a rim, and surrounded the lake like the edge of a crater, were torn by the weight of water and poured down the declivity of the mountain with irresistible force a stream of thick mud, which spread into the plain, and partly stopped up the bed and altered the course of the small river Karasu. A part of the gardens of Argut that had escaped the eruption, were destroyed by this stream of mud, which carried trees, rocks and the bodies of the inhabitants of the village, down into the plain, and to the bed of the Karasu. This stream of mud was three times repeated and was accompanied by subterranean noises.

A document, purporting to be an account of this remarkable occurrence, was drawn up by a Russian officer, Major Wokobolnikoff, who, however did not approach the mountain nearer than Erivan, where he obtained his information solely from inhabitants of that town, who had visited the place after the eruption. He narrates, that the mass which covered up St. James's monastery and Argut was loosened by the earth quake from the highest regions of the mountain. This version document, preserved in the town archives of Tiflis gave rise to the erroneous report that a part of Ararat had fallen and that the snowy summit had considerably sunk, which story Dr. Wagner distinctly contradicted, not only from very perfect evidence derived from a minute investigation of the locality but also from the concurrent testimony of numerous individuals who had spent their whole life on Ararat, and in its vicinity. Another fable, which has gained some currency is that this mountain forms a landmark for the navigation of the Caspian Sea, to which a sufficient indication is furnished by the fact, that the nearest point of the Caspian is about 260 m distant. There are several glaciers on the Great Ararat, from one of which flowed the stream that passed through the village of Argut; the lowest begin about 10 000 ft. above the sea level.

The farms of Ararat is very poor, the only mammal, according to Wagner being the common hare—rather agile prey for the tiger. Tournefort avers that he saw, and even when caught, collected to form but a scanty repast for such an animal. Birds are tolerably numerous till about half way up the great chasm, beyond which they do not ascend. The most celebrated is the rose-staffing (*Sturnus roseus*) famed as a house-sparrow. Insects are numerous, among which, so

penuliar may be noted the curiously-formed coleopter, Calliostoma Araratensis. One reason for the small number of the mammals is, doubtless, the want of water on the mountain, which at the same time causes a scant vegetation. Still, many forms of plants are to be met with. The Great Ararat, on its N side at all events, has no trees. But on the Little Ararat, the birches form quite a forest, due no doubt to the greater moistness of the soil. In autumn, yellow ashles, white scabious, and different kinds of compositae, chiefly of red tints are prominent. A few specimens of *Juniperus oxycedrus* and *Conium maculatum* are to be seen. The Alpine vegetation is the same as on the Caucasus; and the most frequently to be met with are *Aster alpinus* and *poliobolus*, *Chrysanthemum saxifraga*, *Pyrethrum caucasicum*, and *Candollea poliochorda*.

That Noah's ark rested on the top of Mount Ararat is not to be credited, the difficulty of the descent, and the low temperature of the atmosphere, which must have killed many of the animals alike preclude the supposition, and moreover Scripture does not say it rested on the top, but merely on the mountains of Ararat. If this be the mountain then referred to, which is somewhat doubtful seeing that the olive does not grow near it, the ark must have rested on one of its lower slopes.

The name Ararat is said to be derived from Aral a king who lived 1750 years B.C. He fell in battle on an Armenian plain which was hence called Aral-Arat—the fall of Aral. Before him reigned Assanis the sixth son of Japhet, who called the country Armenia, hence the name Ararat, by which alone Armenians in the present day know the mountain. By the Turks and Persians it is called Agradagh. The third syllable *agh*, means mountain, but philologists are not agreed on the signification of *Ar*.—[Parrot's Journey to Ararat, Wagner's Reise nach dem Ararat, Dubois, Voyage autour du Caucase, Die Bestimmung des Ararat, aus July 20 1845 durch H. Abich, St. Petersburg, 1849.]

ARARATMA a salt-water lake, Brazil, prov. Rio de Janeiro, length, E. to W. 2½ m. greatest width, 1½ m. It communicates with the ocean which it lies parallel to, from which it is separated by a strip of land about 4 m. broad and has a depth, according to the state of the tide, of from 26 to 80 ft. It receives the waters of several streams. At its E. extremity is the town of Cabo Frio, whence the sugar cane, millet, French beans and coffee produced plentifully on its banks and brought chiefly from the small ports of Capote-Mor and Matareua, are transhipped to Rio de Janeiro.—[Dic. Geo. Imp. Brazil.]

ARARITE (Santal) an elevated table-land, Brazil, between 4 and 6 m. S.W. the top of Crato or Crato, is about lat. 6° 30' S. lon. 38° 30' W. It forms a semicircle round the undulatory plain on which Crato is situated, and is the source of a great many fruitful streams. In some places the ascent is steep and rugged. In the serras de Araripé, George Gardner Esq. late superintendent of the Royal Botanic Gardens of Cayman, found the chalk formation which, it was previously believed, did not exist in any part of the continent of S. America.

ARAS (anc. Araxes), a large river, W. Asia. It rises in Mount Ban-Ghul, about 10 m. S.E. Erzerum in Turkish Armenia lat. 39° 47' N. lon. 41° 40' E. Its course is E.N.E. for 150 m., when it enters Russian Armenia, and descends to the S.E. round the base of Mount Ararat, turns again N.E. about lat. 37° N. and continues in that direction till its junction with the Kure at Javal or Djavat in lat. 39° 54' N. lon. 43° 30' E. after a course of about 500 m. It is a rapid dirty river, and opposite Mount Ararat is described as having high steep banks and a bed of clay-slate filled with limestone shingle. From the steepness of its banks its water cannot be used for the purpose of irrigation, which the country round Mount Ararat stands greatly in need of, the whole plan of the Aras being here nearly destitute of vegetation. In some parts, however a hard kind of grass (*Deschampsia leucodes*) occurs, on which large quantities of a species of the colonial insect are found. There is a ford possible all the year at Yedn Balook, near lon. 43° E., where the bed is from 3 to 4 m. across. It was known to Herodotus under the name of Araxes, but this must not be confounded with the Araxes of Xenophon, which is the Chaboras of Strabo, and an affluent of the Euphrates.—[London Geo. Jour. Parrot's Journey to Ararat.]

ARARAIG a vil and dist. floodland co. Javerana, W coast; the name also of a promontory in the district, lying between two inlets of the sea. Loch Nannagh on the S. and Loch na Gaid on the N. In the village there is a most S. catholic chapel. Steamers call regularly of this place.

ARATICA or **CAZARUNA** an isl. S Pacific, one of the Papeete group or Tahiti Islands, about 810 m. N. E. by E. from Tahiti, W. point lat. 16° 28' N; lon. 145° 38' W (N).

ARAU *See* **ARAUCO**

ARAUCANIA, an independent territory S. part of Chili, between lat. 37° 29' and 40° 18' S., having the Andes on the E. and the Pacific on the W. Its S. and N. boundaries, however, not being precisely known, are somewhat differently stated by different authorities. Its entire length taking the limits above assigned to it, is about 900 m. Its breadth from 90 to 180. As it differs little in its physical features, climate, or productions, from other parts of Chili (which end, this article will be limited to an account of its inhabitants, who, though greatly overrated by the Spanish writers, form one of the most remarkable perhaps, of all the uncivilized or semi-barbarous races. With some of the vices common to all savage nations, the Araucanians possess many noble qualities. They are generous and humane towards the vanquished, courteous, hospitable, benevolent, and grateful, enthusiastic lovers of liberty and ever ready to sacrifice their lives in the service of their country the independence of which they have successfully maintained for centuries by their indomitable courage, and singular aptitude for war. Boasting the evils of which gold is the cause, the Araucanians, after they had expelled the Spaniards from their country by force of arms, closed their mines, avowing the most profound contempt for that precious metal as the source of misfortune, cruelty, mutual enmities, and degrading servitude. They are highly susceptible of mental culture, but despise the rudiments of civilization all of those who have been educated in the Spanish colonies having embraced the first opportunity of resuming the habits and habits of their nation. They cultivate poetry and rhetoric, and are so desirous of excellence in the latter art that their boys are brought to their public assemblies to hear speeches, and to learn to speak in public. Their style of oratory as might be expected in a people of a semi-barbarous people, is highly figurative and allegorical in imagery and sentiment, and lively bold and original. This remarkable race are of ordinary stature, but muscular robust, and well-proportioned. Their complexion is of a clear reddish brown, face round, eyes animated and expressive, mouth handsome teeth even and white, with little or no beard, all traces of which when such appear are carefully removed, although the hair of the head is unobscuredly cultivated. Possessed of great strength of constitution, neither the symptoms of decay nor the infirmities of age appear until they are far advanced in life. Their sight, teeth and memory remaining unimpaired till the latest period of their existence. Their most prominent vices are drunkenness, debauchery and presumption.

The Araucanians have divided their country into four territories or districts, corresponding to the natural divisions of the country namely the maritime country the plain country the foot of the cordilleras and the Andes. Each of these is governed by a *mapu* or territorial independent of each other in the civil administration of their respective territories, but confederated for the general good of the whole country. Each *mapu* is divided into nine provinces, commanded by *apudencas* and these, again into nine districts, presided over by *chacans* or *prefects*, who are subject to the *fermes*. All these offices are hereditary in the male line, and the limits of their authority carefully defined. The criminal jurisdiction is very imperfect, and not at all in accordance with the general intelligence of the people. Justice, when administered at all, is administered in a tumultuous and irregular manner, but is often left to the caprice of individuals, whence arise intolerable feuds, and mutual incursions on each other's possessions, attended by great destruction of property but without effusion of blood, as, though a warlike and violent people, they rarely employ arms in their private quarrels. The military government is more rational and better systematized than the civil. They maintain no standing army; but, as every Araucanian is born a soldier, no sooner is war proclaimed than all offer their services, and thus a force of 5000 or 6000 men is quickly in the field. Their army

consists of infantry and horse (the former variously armed with muskets, clubs, pikes, bows and arrows, and darts the latter with swords and lances). Their system of fighting is to close with the enemy as soon as they can, which they do with tremendous shouts and yells, and with a fierceness and ferocity which no ordinary resolution can withstand. The army is led by a commander-in-chief appointed by a grand or general council who selects his subalterns and is implicitly obeyed by all ranks.

The Araucanians have little commerce of any kind and all their transactions are conducted by barter. The articles which they usually give in exchange for goods are horses and horned cattle. In these dealings they always act with perfect good faith. When a trader from Spanish Chili comes amongst them the Araucanians take what he wants without being required to give at the time the equivalent agreed upon. Sometime afterwards, the trader having visited all the huts dispersed over the part of the country he is in, intimates that he is about to return, when no one fails to bring to the place appointed generally the cottage of the chief, whatever he had bargained to give in exchange for the goods he had taken which consist generally of edge tools, tins, and wine.

Polynesian features amongst the Araucanians, and ethnicity is considered incongruous. Their external ornaments have little formality consisting in little more than carrying off the hair by pretended violence. The women pay great attention to cleanliness in their houses, which are swept several times a day and all their utensils carefully washed immediately after being used. They are equally cleanly in their persons, so are also the men, and all are partial to frequent bathing. Their dress is made of wool. That of the men consists of a shirt, a vest, a pair of short close breeches, and a cloak called a poncho, the whole of a greenish blue, the favorite color of the nation. In the case of the upper classes, however, the poncho is of various colours. On their heads they wear a bandage of embroidered wool which, on going to war is ornamented with a number of beautiful plumes. The common people go barefooted, persons of rank wear wooden boots of various colours, and leather sandals. The women are modestly and simply attired. Their dress consists of a tunic, a girdle, and a shawl or mantle on front with two long sleeves. They divide their hair into tresses, which flow gracefully over the shoulders. The Araucanians subsist chiefly on grain, pulses, and potatoes, of the last of which they have cultivated a great variety from time immemorial. They eat but little fish or flesh. Their usual drinks consist of various kinds of beer or cider. They use also great quantities of wine, of which they are extremely fond, but having paid no attention to the raising of vines, they are obliged to purchase it from the Spaniards. Their religion is simple. They acknowledge a Supreme Being, whom they believe to be attended by some inferior deities, who execute his behests. They believe also in the immortality of the soul, but have some absurd notions regarding the future state. It is somewhat remarkable, however that they have among them a tradition of a great deluge, in which only a few persons were saved, who took refuge upon a high mountain called *Thagheg* (the thundering) which had three points, and still, whenever a violent earthquake occurs, they fly to the mountain in their thousands and will again remain and overwhelm the world. Their funeral ceremonies, which are both numerous and complicated, are striking manifestations of the absurdities in which they believe. Araucania is the subject of a laudatory epic poem by Don Alvaro de Ercilla, a Spanish poet of the 16th century entitled *Araucana*. It comprises 87 cantos or 42 000 verses and, though not wanting in lofty feeling, is so destitute of animation and of all poetic enthusiasm, and so overloaded with proper names, as to have been likened to a newspaper in rhyme. The pop. of Araucania has been estimated at 100,000.

ARAUCO a vil Araucania, near the mouth of the Trepal, at the head of a bay 80 m. S. Comoplen. It is about 300 yards square enclosed by a wall 12 ft. high, and guarded by towers at two of the angles and consists of about 50 or 60 houses, arranged in rows.

ARAURE, a city Venezuela, pleasantly situated, 1 bank, Acarigua, an affluent of the Portuguesa, 90 m. N. E. Truxillo lat. 9° 17' N. lon. 68° 38' W. The streets are straight, and the houses well built. It contains a handsome square, and church. It is esp. of a well watered, fertile district, which

yield cotton and coffee, and *Asperatus* numerous herds of cattle. Pop. 10,900

ARAVULLI MOUNTAINS, a range of mountains which traverses the territory of Rajpootana, N.W. India, from S.E. to N.W. extending from lat. 24° 0' to 28° 0' N. or about 900 m. It nowhere attains any great elevation, the highest summit not exceeding 5000 ft. above the level of the sea, but its declivities, especially those to the W. are so steep, that it is nearly inaccessible. The range is composed of rocks of primitive formation, granite, quartz, compact dark-blue slate, gneiss, and sienite. Several kinds of valuable stones are found here, including garnets, rock-crystal, and an inferior sort of emerald. The southern extremity of the chain is united to the Vindhya by a hilly and broken country.

ARAWA (Ez.) a tn. Sahara, territory of Zawi, 125 m. N. Timbuctoo lat. 18° 55' N. lon. 8° 0' W. Forty m. S. from this town is the spot on which Major Laing was murdered, in 1826, on his return from Timbuctoo.

ARAXAS, a tn. Brazil formerly in prov. Goyas but by decree of April 4, 1816, transferred to prov. Minas Geraes. It lies W. of the Matto Grosso Mountains, 220 m. S.E. Goyas, and about 240 m. N.W. Villa Rica lat. 19° 0' S. lon. 48° 30' W. It has a church, townhouse, and prison. The district attached to it has mineral springs in three different localities; and abounds in the pastures on which numerous cattle are reared and land fitted for growing cotton, which is cultivated to some extent. The inhabitants manufacture cotton cloth and dispose of it in the trading towns of Minas Geraes. Pop. of tn and dist. the latter extensive 5000.—(*Dict. Geo. Imp. Brazil*.)

ARAXES, see *Aras*.

ARBEH, an isl. in the Adriatic Gulf of Quarnero, belonging to Austria, 113 m. in length; and, at the broadest part, about the centre, 4 m. across. Some parts of it are mountainous and uninhabited; but it contains several extensive and fertile valleys, which produce corn, olives, wine, and figs, and afford good pasturage for sheep and cattle. Its chief exports are sheep, linen, horses, hides, wool, fish, and wine. The principal town is on the S.W. side of the island; it is built on a hill and contains a cathedral and collegiate church. Pop. between 4000 and 5000.

ARBEH, *Arar*, or *Arar* (anc. *Arabe*) a tn. Asiatic Turkey in a fertile plain, r. bank, Little Zab, 56 m. S.E. Mosul. It derives its chief interest from the celebrated battle of Arabe, in which Alexander the Great defeated Darius, and decided the fate of Persia, B.C. 331. It subsequently formed part of the dominions of a family of Persians or Arabic princes and is now the capital of a sanjak in the Turkish pachalik of Bagdad. It was at one time a large and important city defended by a strong fortress built upon a conical hill and capable of containing a large garrison. The town stands on a large mound 60 or 70 ft. high 900 ft. long and 600 wide. It is enclosed by a brick wall with bastions, and contains three large mosques, and two lazarets. At the foot of the mound is another town surrounded by a mud wall, and nearly ruined and deserted. Pop. 6000.—(*Royal Geo. Jour.* vol. viii.)

ARBIL, see *Amur*.

ARBILLOT a par. Scotland, co. Forfar 5050 ac. contains a mineral spring held in regalia. Pop. 990

ARBOE a par. Ireland co. Londonderry and Tyrone 2504 ac. contains an ancient abbey and ornamented stone cross. Pop. 6773.

ARBOGA, a small tn. Sweden, 124 of, and 80 m. S.W. Westerås beautifully situated on the navigable river Arboga, by which it is intersected and near the Arboga Canal which unites the river with Lake Hälmar. It has two churches and a small library, mineral springs, iron-works, a house-building, and some coasting trade. It is one of the oldest towns in Sweden in its vicinity many antiquities are found and within its walls the Diet frequently sat. Pop. 3018.—(*Pomer. Handbuch für Schweden* Skildberg, *Beckerfing* *Archiv für Kunde der Naturg.*)

ARBOIS (anc. *Arboisium*) a tn. France, dep. Jura (Franche-Comté) 45 m. S.E. Dijon. The hills around form the sides of a cup, in the centre of which the town is situated. The lower slopes of the hills are covered with gardens, the higher with vineyards, from which wines of great celebrity

are obtained. These wines are generally white, and are made from white grapes. They are all good and are sent far and wide but those in one surpassing all the rest, called *vin de grise* (front wine) because always made late in autumn, after the first frosts of winter. The manufactures are chiefly leather and paper. There are here several sawmills driven by water and part of the ground is laid out in nurseries. In the neighbourhood is a good vein of nitre. Pop. 6780

ARBOLZAR, or *ARBOLZ*, a tn. Spain, in Andalusia, prov. of, and 41 m. N.W. from Almería, near the r. bank of the Almanzora, on a declivity 20 m. from the sea. Its streets are rough and steep. It has a square, a church, town and court-house, prison, two schools, and a public storehouse. Manufactures:—silk, fine soap, gypsum, linen, counterpane, and horse-clothes. It exports fruit, horses, and eggs, and imports oil. Pop. 2375.

ARBOLLETES, a small seaport on New Granada, on the Gulf of Darien lat. 8° 55' N. lon. 78° 25' W. It is described by Alonzo as a rocca at once beautiful, capacious, and quiet; covered with trees, sheltered from every wind and irrigated with a small river of delicious water.

ARBON (anc. *Arbor Fusa*) a small tn. Switzerland cant. Thurgau, cap. circle of same name, N.W. shore, Lake Constance, 7 m. N.W. St. Gall chiefly remarkable as the site of a Roman fortress, and of the ancient castle of the bishops of Constance. It has potteryworks, dyeworks, cotton and silk manufactures and a small port upon the lake. Flax, vines and fruit trees are cultivated in its neighbourhood, which is picturesque. Pop. of tn and par. composed almost equally of Protestants and Catholics 1130

ARBORFIELD, a par. England co. Berks, S.W. Wokingham area 1466 ac. Pop. 318

ARBROATH, formerly *ARMARNOCK* a seaport and manufacturing tn. Scotland co. Forfar or Angus at the mouth of a small stream called the Brothock, whence the name of the town, the prefix, *Aber* (Gaelic) designating the mouth of a river or its point of junction with the sea lat. 56° 53' 42" N. lon. 2° 30' W. (a.) 15.16 m. N.E. Dundee on the Dundee and Arbroath line of railway now connected with the railways to the N. and S. of Scotland. It consists of one spacious street, thence half a mile in length, running N. to S. and a number of smaller intersecting each other all well lighted with gas. Many of the shops are handsomely fitted up and well stocked. The houses are generally well built, and the whole town has a cleanly and prosperous appearance, but is indifferently supplied with water. It contains several respectable modern public buildings, including a neat and tasteful tower called the Royal Tower for communication with the celebrated Ball Rock lighthouse (see *LIST* *ROCK*) about 13 m. distant. The places of worship are the parish church, with an elegant spire, three Free churches, three United Presbyterian churches, an original Secedon Episcopalian (Scottish) N. catholic, Wesleyan Methodist, Congregational, and Baptist. There are public reading rooms in the town, with a well-supported public library and several excellent scientific, educational, and charitable institutions. The principal manufactures are yarn, spun from flax and hemp, canvas brown and bleached linen, leather castles and bonnet-duct. There are 16 spinning-mills, most of them very extensive, and four power-loom factories. The leather manufactures are very important and shipbuilding is likewise carried on to a considerable extent. Arbroath is a free port, and owns about 18,000 tons of shipping being an increase of 5000 tons since 1841.

A new harbour has been erected and completed within the last eight years. It consists of a basin 124 yards long, by 80 broad. At the entrance, which is at the S.W. corner, there are 16 ft. water at spring tides, and 9 or 10 at neap tides. Though small, it is secure, but of rather difficult access. A small light, of red colour is shown on the N. pier head, on the seaward side on entering the harbour. It is lighted by the pilot only when vessels are in the bay in order to show the proper time of the tide for them to enter and commonly visible 3 or 2 m. off when the weather is clear. The roadstead has nearly a mile off the town, and has from 9 to 10 fathoms water. The total revenue of the harbour in 1849 was £2350. The exports are trifling compared to the imports, the latter of which consist chiefly of flax, from the Baltic and other places, not ashes, yitrol and manganese, for the bleaching-works and

spoke from Keweenaw and Frith of Fort. The number and tonnage of vessels that entered the port in the year ending December 1847 was 735, ton. 48,574 cleared 341 ton. 15,990. The town owes its rise, if not its origin, to an important monastic institution founded there in 1178 by William the Lion, who was subsequently interred within its precincts. It is now in ruins, having been destroyed at the Reformation, but some imposing and interesting fragments still remain to attest its former grandeur. Archbishop Anders with Breckin, Berrie, Parker and Monro, in sending a member to the House of Commons. Here, as at many other places on the E. coast of Scotland, the sea has largely encroached on the land, many gardens and houses having been carried away by it since the commencement of the present century. Pop. of par 10 080 of its 8302. (Correspondent in Arbus.)

ARBUS, a to. 1st Berdina, 34 m. N.W. Cagliari. In the vicinity are lead and silver mines, in which most of the inhabitants are employed. Pop. 2000.

ARBUOTHOT a par Scotland, co. A. near 9438 ac Pop. 1002.

ARBU (see, Chocoma).—1. A river France, which rises at lat. 45° 29' N. lon. 5° 46' E., on the confines of dep. Yver and Bouches-du-Rhône. After a W course of 85 m. passing not far from Aix, it falls into the Lake of Berre, near the town of this name. The ruins of a Roman aqueduct, from the Arc to the town of Astruc, still exist at a place called Cap d'Arc.—2. A river Berdina, Berre, Bay of along at the foot of Mount Iseran, in lat. 45° 25' N.; lon. 7° 6' E. thence flowing S.W. to St. Michel thence N.W. to Agueville, 4 m. below which, after a course of about 70 m., it joins the Isère.

ARBUCHON a bay France, S.W. of dep. Gironde, with a coast line of about 30 m. in extent. At Cape Furet, near the N. entrance of the bay is a lighthouse 150 ft. above the sea level, and visible 14 m. off. The fishing in the bay is good, and fishermen are employed to the inhabitants of the numerous villages which lie along its shore. The largest of these is Pétit-de-Buch, to which great additional importance has recently been given by the construction of a railway between it and Bordeaux. The harbour of Arbuschon is much frequented, particularly by foreign vessels which there take in cargoes of resin and pitch which the neighbouring districts furnish in large abundance.

ARCAIDIA a nome or prov. Greece, of irregular form in the middle of the Morea bounded, N. by the nome of Attica and part of Argolis, E. by Argolis and the Gulf of Neapolis, S. by Laconia, and W. by Messinia and Attica; lat. 37° 14' N. lon. 21° 42' E. (a). It is divided into the eparchies or dioceses, named, respectively Gortyna, Mantinea, and Karyenia and is mountainous, intersected by narrow valleys, which are frequently flooded so as to form small lakes and unproductive marshes. Much of the province is a table-land, which in March, is frequently covered with snow. Arcadia is well watered and produces in abundance, oak, pine, and chestnut trees, and yields excellent pasture for the numerous flocks, the breeding of which forms the chief occupation of the inhabitants now as in ancient times. Its capital is Tripolizza.—ARCAIDIA is also the name of a division of Ancient Greece, of some what more comprehensive limits than the modern nome.

ARCAIDIA (Gulf of) Greece, Morea, W. coast. It is shallow and open, has Cape Katoia on the N. and Cape Katoia on the S. distant from each other 65 m.

ARCAIDIA (Gulf of) (Sav.).—1. A to. Naples, prov. Benevento, 10 m. W. Turin, having two churches, a monastery and 8800 inhabitants.—2. A vil. Papal States, delegation Forlì, 7 m. W. by N. Rimini, the birthplace of Clement XIV.

ARCAN.—1. A group of small islets or rocks in the Gulf of Mexico lat. 20° 12' 36" N. lon. 91° 59' 15" W. (a) about 100 m. W. the peninsula of Yucatan.—3. A small isl. at the mouth of the Rio Grande, Sonora, Mex. W. Africa lat. 11° 40' N. lon. 12° 38' W. and nearly in the centre of the river about 5 or 6 m. distant from either shore.

ARCE, a small to. Naples, prov. Terra di Lavoro, dist. of, and 11 m. S.W. from Nola, cap. com. on a high hill. It has a collegiate and two other churches. Pop. 4540.

ARCHANGEL, or ALEXANDROVSK, a gov. Russia in Europe, extending from the Ural Mountains on the E. to Finland on the W. comprising Russian Lapland a distance of about 260 m. and from Vologda and Olonets on the S. to the

Arctic Ocean, about 400 m. It is thus, including the White Sea, which occupies a large space nearly in its centre, about 400 m. longer than Great Britain, and more than twice its width, except where the latter is broadest. It comprises, besides, the large island of Nova Zembla, 630 m. long, by 160 m. wide, and several others in the Arctic Sea. Its most N. limit is about lat. 66° E. and its most W. 59° 54' E.; its most E. point is in lat. 61° 10' N. and its most N. the extreme point of Nova Zembla, in lat. 70° N. The entire province is nearly one continuous flat, and nearly all, an unvaried scene of desolation and sterility especially in the N. parts, where the ground remains frozen for nine months in the year. Nor are the S. portions much more inviting. Here mangrove pastures, marshes, swamps, and extensive forests, occupy nearly all the surface, leaving but little for cultivation. Almost the only crops raised are hemp, flax, and some rye, neither the climate nor soil admitting of the cultivation of oats or wheat. The climate is excessively cold in winter, and oppressively hot in summer with sudden transitions from the two extremes. The small quantity of grain produced being inadequate to the support of the inhabitants, they are compelled to mix their grain with man, scrappings of the bark of the pine, and spruce roots, and of this compound to make their bread. In the N. parts they cannot command even this miserable substitute for the staff of life, but must be content with dried fish. On some parts of the banks of the Dwina, where the pasture is a little more luxuriant than in most other places, some cattle are reared, and their hides sent to St. Petersburg where this particular kind of wool is much esteemed. The whole live stock of the country has been estimated at 35 000 horses, 90 000 horned cattle, 100 000 sheep, and 450 000 rein-deer—the domestic animal of these regions. The timber of the forests is valuable, and forms the principal wealth of the government. Game abounds, and the lakes and rivers are well stocked with fish. Gold is found in this country particularly in the district of Kola; and in those of Kone and Finska Lapland and saline springs occur, the latter producing annually about 2714 tons of salt. Amber and the pearl oyster are met with on the shores. The industrial occupations of the thin and widely-scattered population comprise the weaving of coarse linen, manufacturing cordage, fishing, hunting, shipbuilding, preparing tar, charcoal and potash, making mats, tanning leather, cutting wood and floating it down to Archangel. The government is partitioned into eight districts: Archangel, Kola, Kholmogory, Kola, Mezin, Onega, Finska, and Solovetsk. The names of land communications in all parts of the territory are very imperfect, but a great government road was, in 1859-60, constructed along the borders of the White Sea, through Kemi to Tumen, which has since been prolonged to the frontiers of Norway. Pop. in 1846, 253,000, all Russians, with exception of about 7000 Samoyeds, 6000 Gyransians, and about 1700 or 2000 Lapons.

ARCHANGEL, a seaport in Russia in Europe, cap. of the above government, r. bank, Dwina, 30 m. from its mouth in the Bay of Archangel, and 670 m. N. E. St. Petersburg. lat. (Trinity church) 64° 52' N. lon. 40° 39' 59' E. (a). It stands on a low flat, and extends about 2 m. along the river. It is ill built, and consists of two principal and very irregular streets, connected by narrow lanes and paved with wood. The houses are mostly of wood and two stories in height; those of the wealthier classes being handsomely and comfortably furnished. The most remarkable buildings in the town are the great bazaar or mart, surrounded by high walls, and the marine hospital. The former is very extensive and wholly of stone. There are 11 churches in the town, 10 Greek and one Protestant, an ecclesiastical seminary with nine professors, a gymnasium, and schools for navigation and gunsmithing. In and near the town there are a sugar refinery the produce of which is sent mostly to the interior, a royal dockyard some shipyards for building merchant-ships and coasting vessels, rope-walks, &c. There are, generally two or three men-of-war ships on the stocks here, and a body of 5000 or 6000 seamen of the Imperial navy stationed in the town and neighbourhood. The harbour is at the island of Solovolsk about 1 m. from the town. The river below the town branches out in several streams, forming islands between. At its mouth there is a bar with from 12 to 14 ft. water on it, so that vessels drawing more than that depth,

must be partially loaded outside from lighters. The Dwina is here about 6 m. broad, and is navigable by small craft for about 800 m. above Archangel. The produce shipped at the port is brought down the river and its branches, chiefly from the government of Vologda, being floated sometimes for great distances on rafts or in boats which are afterwards broken up. The trade of Archangel extends as far as Siberia, and along the coast of the White Sea, E. and W., but is greatly dependent on the demand from the more southern parts of

Europe, and especially from England, for corn accordingly in the dear years of 1846-7 the quantities shipped were very great, amounting in the latter to 83,900 qrs. wheat 165 268 qrs. rye, 10,480 qrs. barley and 198,170 qrs. oats. The other exports consist principally of muslin, flax, tow, tallow, train oil, maza, dale, bottoms and ends, pitch and tar. The imports chiefly of articles for domestic use, such as coffee, spices, salt, woolens, hardware, &c. A considerable quantity of sugar also is imported, but mostly for the refinery. There being no factories, materials used in manufactures are not required nor is there a population to consume foreign articles which are looked upon as luxuries. The number of vessels cleared in 1846, was 624 of which 866 were British the value of their cargoes amounted to £1 063,700. The coasting traders bring fish, furs, some salt and other commodities from Norway which are afterwards sent to various inland towns. The trade of Archangel must always labour under a serious restriction from its high N latitude, and the consequent severity of its climate, the navigation being interrupted by the freezing of the Dwina for about six months in the year. This is one of the oldest ports in Russia, having been founded in 1584, and was long the only one. It is the seat of an archbishop, and the residence both of a civil and military governor. Pop. (1849) 12 129

ARCHANGEL (RAY ov) Russia, opens to the White Sea, having Cape Kharokov on the N E and Cape Ozege on the S. W., distant from each other 86 m., which is the width of the bay at its entrance. It penetrates inland about 65 m. The centre is at lat. 65° N. lon. 39° 10' E.

ARCHANGEL (NEW) See SYRKA

ARCHENA a. to. Spain, prov. of and 15 m. W W from Murcia, on a plain, 1 buic, square. It is tolerably well built, has a square, a church, town hall, prison, cemetery and a curious old palace of the Corners family. The place, however, is chiefly celebrated for its mineral baths, whose waters are impregnated with hydrochlorate of soda, magnesium, and some other substances, and charged with sulphuretted hydrogen gas. Pop. about 8000.

ARCHI a. to. Naples, prov. Abruzzo Citra dist. of and 17 m. W from Vasto. Pop. 2400

ARCHIDONA, a. to. Spain, in Andalus, prov. of, and 34 m. N from Malaga, built on the S. slope of a lofty and rugged mountain, 10 m. W N W Loja. The principal streets, running E and W., are level and commodious, but the lanes, which cut them at right angles, are narrow and steep, and

during wet weather the water from the hills above rushes through them like a torrent, cutting up the paving and leaving large furrows. The houses are good; and there are several churches, a medical college, church seminary two primary schools, a large hospital, prison, and the remains of an ancient fort. In the neighbourhood are rich orchards, giving occupation to many of the inhabitants who are also employed in weaving, expressing oil, and curing bacon, which they export in large quantities. Pop. 7610.—(Madox).

ARCHIDONA, a small to. Ecuador 124 m. S E Quito; lat. 0° 22' S.; lon. 77° 10' W.; on an affluent of the Napo. The houses are constructed of wood and thatched. It was nearly destroyed in 1744 by an eruption of the volcano of Cotacachi, which is distant W about 100 m.

ARCHIPELAGO a name which, although neither its origin nor precise signification have been ascertained is now generally understood to mean a sea interspersed with numerous islands or islets; but formerly applied more especially to the islands scattered over the tract of sea (Grecian Archipelago) lying between Greece and Asia Minor called by the Greeks and Romans the *Ægean Sea* (which see). The other principal groups of islands to which the term is now applied are, 1 The *Aleutian Archipelago* (see *ALEUTIAN ISLANDS*); 2 The *Chagos Archipelago* (see *CHAGOS ISLANDS*); 3, *Low or Dangerous Archipelago*, a cluster of islets, chiefly coral in the S. Indian Ocean, E of the Society Islands, between lat. 14 and 26 S and lon. 120° and 145° W.; 4, *Cornwall Archipelago* (see *CORNWALL ISLANDS*); 5, *Great Cyclades Archipelago* (see *NEW HEBRIDES*); 6 *Laodivide Archipelago* (see *LAODIVIDE ISLANDS*); 7 *Louisiade Archipelago* (see *LOUISIAD ISLANDS*); 8, *Caribbean Archipelago* (see *WEST INDIES*); 9 *Maldives Archipelago* (see *MALDIVES ISLANDS*); 10 *Queen Adelaide's Archipelago* (see *ADRIANUS (QUEEN) ISLANDS*); 11 *Archipelago de la Reunion*, a scattered and intricate labyrinth of reefs and islands on the S coast of W. Australia, between Dendal Island Bay and Cape Puley and between lat. 33 45' and 34 0' S., they are all barren, and the largest only about 4 m. in length; 12 *Solomon Archipelago* (see *SOLOMON ISLANDS*); 13 *Sooloo Archipelago* (see *SOOLOO ISLANDS*); 14, *Eastern, Indian Malay or Asiatic Archipelago* (see *article below* namely *ARCHIPELAGO EASTERN*).

ARCHIPELAGO (EASTERN INDIAN MALAY or ASIAN) the various names given to the extensive system of islands in the Pacific Ocean, lying between lat. 11 S. and 19° N. and lon. 95 and 125 E. or between Australia S. and the coast of China N., New Guinea E. and Sumatra, including that island, W. It also includes a portion of the Malay Peninsula (which see). The whole archipelago being situated within the tropics, the equinoctial line running nearly through its centre, there is necessarily a general uniformity in climate, in animal and vegetable productions and in the character of the different races of inhabitants. The islands vary much in external aspect some being low and sloping gradually to the water while others are mountainous and rise abruptly from unfathomable depths. Many of the smaller coral islands it has been conjectured have been reared on the summits of sub merged volcanoes. The grandeur and beauty of the scenery of this great group of islands, says Captain Blackwood, can hardly be surpassed while the richness of its productions in the animal and mineral kingdoms is great, and, in a vegetable kingdom unequalled in beauty, rarity and value to man. To this description it may be added that the sea in this favoured region are singularly transparent, and generally smooth and placid. A prevailing feature of the entire system is the indication of volcanic origin in some instances apparently recent, while in others lofty peaks are in active combustion. The intensity of the volcanic force in this region is also remarkable. The noise of the explosions of a volcano in the island of Sumatra, in 1816 was heard at the distance of 870 m. while the ashes it emitted were carried to a distance of 1100 m., for 800 of which the darkness during the day was as deep as midnight. The minerals include gold, silver, tin, iron, copper sulphur and diamonds, the last, however being confined to Borneo. Most of the islands are eminently beautiful their soils fertile, and their vegetation of the most luxuriant kind, displaying all the bright colouring of the tropics, particularly yellow and red while many of them are covered with deep forests of stupendous trees. The most rare and valued spices, and the most exquisite fruits, are amongst them.

productions of this favored region. The latter include bananas, oranges, lemons, bloodcloves, pineapples, pine apples, guava, tamarind, mango, &c., besides two or three species of delicious fruits peculiar to the archipelago; the former the above, nutmeg, black pepper, cassia, &c. The cereals chiefly cultivated are rice and maize; the latter, however, being but a small proportion comparatively to the first, which forms the staple article of subsistence. A great variety of plants with nutritious roots are also cultivated, including the sweet potato and yam. The latter has been grown in the islands from time immemorial but is not held in much esteem by the natives, who greatly prefer the sweet potato. The coco-nut tree abounds, and is carefully tended by the natives chiefly for the sake of the oil which they extract from it, and which they use largely in their cookery. The plantations and several other oil-yielding plants are also extensively cultivated. The sugar-cane, cotton, tobacco, capsicum, citrus, and cucumbers are likewise common articles of culture. The sugar-cane abounds. The gums, of natural production, most abundant, are benzoin, ointment, camphor and obisumum. The principal branches of manufacture practiced by the islanders are weaving cotton and silk fabrics, which is entirely conducted by females; cloth-dyeing and painting, working gold, silver, iron, and other metals; pottery building, and making salt, salt-petre, and gunpowder.

The inhabitants consist of two distinct aboriginal races, Malay and Papuan, the one brown-complexioned, with black hair, the other black or sooty colored, with woolly hair. Further particulars respecting these races and their offshoots, will be found in the articles BORNEO, JAVA and PAPUA. The principal islands in the archipelago are Sumatra, Borneo, Java, Celebes, the Moluccas, Luzon, Mindanao, the Solos, Timor, Flores, New Guinea, Palawan, Banca, Lombok, &c. (all of which see under their respective names).

ARICUDI or **ARICUTI**, one of the smallest of the Ionian Islands, 4 m. N. E. the most N. point of Ithaca lat. 38° 37' N. lon. 20° 42' E. 9 m. in length, from N. to S.

ARICUDOSO a town and com. Italy in Tuscany prov. Grosseto, 8 m. W. by N. Radiceofani. It has a square, three churches, and a palace of the Counts of Aldobrandeschi. The commune is well watered; yields grain, grapes and olives, and good pasture. Pop. 4990. (*Dizionario Univ. Italiano*).

ARICUS-ARICUS (anc. *Arice*) a city of France, dep. Aube (Champagne) cant. Aube 17 m. N. Troyes. It was originally built of wood, but two castles, in 1730 and 1773 having laid the greater part of it in ashes it was rebuilt in a more substantial form, and is now a tolerably handsome town, with wide streets, well laid out. From its central position it seems well fitted for trade and is the natural entrepot, on the one hand, for the grain of the surrounding districts the timber of Upper Aube and the forest of Orient, the minerals of the Vosges, and the exports from Switzerland for all of which it has a navigable outlet by the Aube and the Seine as far as Paris while, on the other hand, the same channel enables it to bring back all the commodities which these exporting districts import in return. The manufactures of Arice are not of much importance. The chief of them are cotton thread, which employs seven mills, and hosiery which employs 2000 stocking-loom. During the campaign of 1814 Arice was the theatre of a fierce struggle between Napoleon and the allies, when a third of it was laid in ruins. G. Danton, the martyr of the first revolution, was born at Arice. Pop. 2965.

ARCO or **ARONA**, a small N. Austria, in Tyrol, is a beautiful valley on the Sarus, 7 m. N. W. Rovereto, and 3 m. N. Lake Garda. It has a richly ornamented parish church and on a height immediately behind stands the old palace of the Earls of Arco, built in 1175. The district around is healthy and one of the finest in the Tyrol. The inhabitants, about 2000 are chiefly engaged in spinning silk, extracting olive oil, and quarrying marble in the vicinity.

ARCOLI, a village in Switzerland, 15 m. S. E. Vevay, in a bank (Alpines) celebrated for the battles of Nov. 16, 16, and 17 1798, fought between the French, under Bonaparte, and the Austrians, in which the latter were defeated with great slaughter. Pop. 900.

ARCONA, *San Arzono*.

ARCONES DE LA PUERTERA (anc. *Arco-coloma*) a city Spain, in Andalusia, prov. of and 30 m. E. by N. from Cadix, a bank,

Guadalete, which is here crossed by a stone bridge. The massive rock on which the town, in form of a bow is placed, rises 570 ft. above the level of the river by which it is washed on three sides. The houses are massed; the streets paved, but generally steep and narrow; and the moat walls and defenses are in a ruinous state. On the highest part of the rock stands the castle of the Duke of Arcos, almost inaccessible, and partly in ruins. The two Gothic fountains of one of the two principal squares occupy one side of Constitution Place or Square on other two sides are the theatre and the chapter-house—medieval buildings; and the fourth side which is only enclosed by an iron railing, overlooks the perpendicular S. side of the rock, and affords a fine view of the richly cultivated valley of the Guadalete, and of the hill country of Medina-Sidonia. There are, besides, in Arcos, a townhall, prison, althor granary two general hospitals a porchouse and foundling hospital, a patriotic society (*de amigos del pais*) several primary schools and outside the town, two badly-kept cemeteries. The principal manufactures carried on is that of leather esteemed the best made in Andalusia but there are also manufactures of thread, combs, and cordage of agave, of esparto, and of hair. The vicinity is rich in wheat, barley grapes, olives, legumes, and fruits of all kinds a few sheep are reared, and the bulls and horses are famed for their vigour and their magnetic appearance. Pop. 11,272—(Mador Willkomm's *Spanien*).

ARCOES DE VAL DE VEA, a town Portugal prov. Minho, dist. Ponte do Lima, is a hilly but fertile territory on the Vea, 19 m. N. Braga. It has a monastery two churches and a porchouse. Pop. 1640.—Several other small places and parishes in Portugal have the name Arcos.

ARCOOT a dist. S. Hindostan, in the Carnatic, presidency Madras, consisting of two smaller divisions, called N. and S. Arcot, respectively comprehending an area of 12,200 sq. m. The N. division is bounded, N. by Cuddapah and Meliour, E. by Chingleput and the Bay of Bengal S. by Arcot and W. by the Belaghat of Cuddapah. The S. division is bounded, N. by N. Arcot E. by Chingleput and the Bay of Bengal S. by Tanjore and Trichinopoly and W. by Salem and the Belaghat Carnatic. The surface of the country in the N. parts is mountainous, but in the S. and E. near the sea it is more level, and better adapted for cultivation. The lands throughout both districts are for the most part held by small proprietary cultivators, either in severally or in joint village communities. Irrigation is effected by means of artificial water-courses, wells, and tanks. The cotton manufactures of these districts have been nearly annihilated by British competition, but a little still continues to be done at Pullicat, a place once so famous for its cotton stuffs, as to give name to a particular and well-known description of muslin. The principal trading ports are Cuddalore, Pondicherry and Portenore. Arcot was ceded, in 1801 to the East India Company by Amur ul Omrah, nabob of the Carnatic and has since been greatly improved in every respect. Pop. of both districts (1851) 1,485,678.

ARCOOT or **ARICUTI** a city S. Hindostan, Malabar division, of the Carnatic, 8 m. N. W. by S. Madras lat. (fore) 12° 54' 14" N. lon. 75° 22' 23" E. (N.) It was first established as capital of the Carnatic in 1716. In 1749, it was taken by Chanda Sahib who favoured the French interests, and, in 1761 a few companies of British and sepoy, under Oliva, took possession of the place, which had been evacuated by the natives, and for 50 days successfully defended it against a much superior force. It afterwards changed hands more than once, and ultimately in 1801 along with the whole district, was ceded to the East India Company. The town, which is inhabited chiefly by Mahomedans, is of modern erection, enclosed by walls and contains a few buildings worthy of notice. The palace of the nabob is a heap of ruins, with the exception of the principal gateway which is still entire. The *Jumma Masjid* is a handsome mosque, with seven arches in front, and two smaller elegant minarets. There are several other religious edifices of tolerable architecture, and numerous tombs, of which that of Saadat Colla alone is remarkable. The fort of Arcot was an extensive structure, but the greater part of it has been demolished, and the space it occupied is covered with scattered ruins and patches of rough soil the cancer-kill plant. On the side next the river where channel, though half a mile wide, is, during

the hot season nearly dry the ramparts are kept in good repair and form the only defence of the town against the periodical invasions. Pop., 10, and its diet. (1851) 56,474

ARCTIC HIGHLANDS, a country situated in the N.E. part of Spitzbergen, on the W coast of Greenland, between lat 76 and 77° 40' N., and lon. 68° 30' and 74° 30' W. discovered by Captain Ross in 1818, who gave it the name it now bears. The coast trends S.E. and N.W. extending 110 m. On the N and E hills are seen rising to the height of upwards of 1600 ft., covered with ice, and separated by ravines filled with snow. The coast also is ice-bound and is only about the bases of the rocks, chiefly granite and gneiss, close by the sea, that a stunted and scanty vegetation is to be seen. In the interior nothing is found growing but moss and lichens, a thin waxy sort of grass, and furze. The soil is bare, stony, white boulders, and rain-drops. The shores and neighbouring seas are frequented by seals, sea-horses, and whales. The inhabitants are Esquimaux, and have a close resemblance to the Greenlanders, but have rather larger heads. They are clothed in the same way, with seal-skins have the same manners and customs, and speak a dialect of the same language. They are a gentle and inoffensive people, and so simple and ignorant, that when first visited by Captain Ross, they believed themselves to be the only human beings in the world, and that, beyond their own country there was nothing but ice. Their sledges are drawn by dogs, whose flesh serves them for food in winter when the ice prevents them obtaining the marine animals, aquatic fowls, and other produce of the sea, on which they subsist during the summer. They construct sledges, but have no canoes, and their knives consist chiefly of pieces of sharpened reindeer.

ARCTIC OCEAN in its widest sense. Is that portion of the N. Sea which extends from the arctic circle (lat 66° 30' N.) to the N. pole, but more restricted from about the 70th degree of N. lat. Assuming the former limit, the Arctic Ocean is found entering deeply in the form of gulfs, bays &c., into the N. parts of the continents of Europe, Asia, and America. The principal of these indentations are the White Sea, in Europe; Sea of Kara Gulf of Ob and Yenisei, in Siberia; and Baffin's Bay in N. America. It is united to the Pacific by Behring's Strait, and to the Atlantic by a wide sea, extending from Greenland on the W to Norway and Lapland on the E. The portion of the Arctic Ocean contains one of the largest archipelagos on the globe. The middle of it is occupied by Greenland and on the E. is the extensive group of islands known under the name of Spitzbergen, the small island of Jan Mayen and Iceland. West of Greenland, and divided from it by Davis's Strait and Baffin's Bay there are a considerable number of islands of great size, with which we are yet but imperfectly acquainted. The regions embraced by the more restricted limits of the Arctic Ocean namely from lat. 70° N. are the most dreary and dismal on the face of the globe. Their shores are covered with eternal snow, and the entire surface of their seas with large fields and huge masses of floating ice, in perpetual motion, and whose constant and tremendous collisions are attended with the most appalling sounds. Dense fogs, violent storms and endless nights, add to the horrors of the scene. In the region of Spitzbergen the sun is not seen for several months in the year and the thermometer rarely rises above 45° Fahr. while there is but one month in the year—July in which snow does not fall. The only or at least the greatest degree of light, the inhabitants enjoy during their long winter, is from the latter end of September to the beginning of May. It is that which proceeds from the snow-blink, the aurora, the moon, and the stars. The Arctic Ocean freezes even in summer and during the eight winter months a continuous body of ice extends in every direction from the pole filling the area of a circle of between 3000 and 4000 m. in diameter. Some of the masses of ice that lose the shores of this ocean, extend many miles in length, and present sea-fronts of 200 ft. in height; while fields of ice, 50 or 80 m. in diameter and from 10 to 40 ft. in thick, are frequent and sometimes extend over 100 m. so closely packed together that no opening is left between them. They are also often found to have a violent rotatory motion, by which they are dashed against one another with tremendous force. The lowings, of which vast numbers are seen floating about, vary from a few yards to miles in circumference, and rise to many hundreds of feet in height. The ice in these

regions is very transparent and compact, and remarkable for the variety and beauty of its tints, the most prevailing of which are blue green, and orange. The water of the Arctic Ocean is extremely pure, shall be being distinctly visible at a depth of 80 fathoms. It also presents rapid transitions of colour, chiefly from ultramarine to olive green, the latter produced by the presence of myriads of minute animals. It exhibits equally sudden changes from purity to opacity. The pressure of its water at a depth of 1½ m. was found to be 2809 lbs. on a square inch of surface.

The history of adventure in the Arctic sea presents a striking disproportion between effort and achievement. All that human daring can do has been done to open up the mysteries of these dreary regions but hitherto without any good practical result. The first attempt to explore the polar seas was made in 1553, by Willoughby and Chancellor who were sent out with instructions to ascertain if there was a N.E. passage, or if they could reach China by passing to the N. of Europe and Asia. Willoughby reached Nova Zembla but he and all his crew were frozen to death. Chancellor sailed the White Sea, and then opened a communication with Russia. Capt. Cook reached Icy Cape, from the Pacific, in 1778. In 1807 Capt. Hudson was sent out to attempt to discover the N.W. passage, and reached the latitude of 81° but was under the necessity of putting back on account of ice. In 1778 this experiment was again tried by an expedition under the command of Capt. Phipps, who advanced about as far as Capt. Hudson had previously done; and a similar attempt was made in 1818 which proved equally unfortunate under Capt. Buchan. In 1837 Capt. Parry was sent out to reach the Pole in boats and sledges over the ice and he attained about 82° 40' the highest latitude yet reached in these seas, and was obliged to return by the motion of the fields of ice to the south. In 1818 Capt. Ross attempted a N.W. passage, and passed through Lancaster Sound. In 1819 Capt. Parry reached lon 110° W. and in 1821-23 examined the coast to the N. of Hudson's Bay. In 1824, he reached Prince Regent's Inlet. In 1826, Capt. Franklin was sent overseas to explore the N. coast of America, to the W. of Mackenzie River and at the same time Capt. Beechey was detached to meet him in Behring's Strait. The two expeditions approached each other within a distance of 148 m. but returned without meeting. In 1839-40 Capt. Eschscholtz called upon Prince Regent's Inlet. In 1845 Sir John Franklin sailed with the *Erebus* and *Terror* in search of the long desiderated N.W. passage. No tidings of this expedition having reached this country in 1848, numerous searching expeditions were sent out at intervals up till 1853, under Sir John Richardson Dr. Rae, Sir James Ross, Sir John Ross, Capt. Kellett Austin, Penny Masson Collinson, Sir E. Belcher Dr. Kane &c. the last of which returned in the close of 1855 without having discovered any traces of the missing vessels. Dr. Rae however in the spring of 1854 ascertained that, in 1850 a party of white men—proved, by letters obtained from the Esquimaux, to have belonged to Sir J. Franklin's expedition, and most probably including Sir John himself—had died of starvation near Point Ogilby, at the mouth of the Great Fish River. Though these expeditions were thus fruitless in the main purpose for which they were sent out, they have added largely to our knowledge of the inhospitable regions which they visited and Capt. Masson who entered the Arctic Ocean by Behring's Strait returned to this country in 1854, by Lancaster Sound, having thus solved the geographical problem of the existence of a N.W. passage. Among the numerous islands of the Arctic Ocean there are doubtless several water-ways connecting the Atlantic and the Pacific oceans but navigation in all of them being impeded by ice, none of them is ever likely to become of commercial importance.

ARCEURIL [anc. *Archeus*, *Archeus*], a vil. France, dep. Seine, about 4 m. S. Paris, on the Marne from which it was named; founded, built by Mary de Medici, in 1624, to supply water to the fountain of Paris. Arceuril is one of the greatest holiday resorts of the Parisians. It has a casino—a print-work for callions, and numerous blacksmiths. P 1910

ARCY-SUR-CUZE, a vil. France, dep. Yonne (Burgundy) 17 m. S.E. Auxerre, and famous for its graptolites. These are found in a limestone rock; consist of a series of ovals opening into each other and sometimes even standing in

masses over each other and abounding with columns and other curious forms of stalactite. The numerous caverns in some of the formations are constantly flooding the bottom of the grottoes, and it has been calculated that two men could walk in to check them up, and convert them into fine quarries of alabaster. Pop. 1496.

ARD (Loon), a beautiful lake, Scotland, co. Perth. It occupies property of two sheets of water called, respectively Upper and Lower Loch Ard. The former is about 3 m. long, and three quarters of a mile broad the latter somewhat less than 1 m. in length, and about a quarter of a mile in width. Its peculiar characteristics are peacefulness and seclusion. The E. extremity of the lake is about a quarter of a mile N. Aberdeen.

ARDABIL. See ARDEBIL.

ARDAGH an ancient and decayed vil. and par. Ireland, co. Longford, 2½ m. S.S.W. Edgeworthstown, and 6½ m. S.E. Loughard. It was at one time a place of considerable importance, but is now a mere hamlet. There is here a church, a plain commodious building with a square tower and close by are the ruins of the old cathedral which seems to have been a small structure, rarely built of fragments of rock. The place derives its name from its elevated situation, and its origin has been ascribed to the fifth century when its church was founded. Pop. par., 2804. Area of par. 11 417 ac.

—**ARDAGH** is the name of another village, of other four parishes, and of a barony in Ireland.—1 A par. barony of Imokilly co. Cork area. 280 ac. Pop. 1616.—2 A par. co. Limerick, partly in the barony of Glengarriff and partly in that of Blinard area, 9080 ac. Pop. 1751. In this par in the vil above alluded to it consists of one long irregular street, in a ruinous condition. Three fairs, however are held in it annually in May August and November chiefly for cattle, pigs, and poultry.—3 A par. co. Mayo, barony Thrawley area 5494 ac. Pop. 1496.—4 A par. co. Meath, partly in the barony of Morgallion and partly in that of Blinn Lower area, 3690 ac. Pop. 1371.—5 A barony co. Longford area, 46,218 ac. Pop. 16,719.

ARDALES, a vil. in Spain, in Andalusia, prov. of, and 81 m. N.W. Malaga, on an elevated plain. It is tolerably well built, but has several badly paved streets. It has a church, two schools, a townhall and a prison. Pop. 2900.

ARDANINE, a par. Ireland, co. Wexford 4215 ac.; contains a large and ancient ruin, called the Moat of Ardantine. Pop. 1507.

ARDATOW two towns, Russia in Europe.—1 A town, cap. dist. of some name, on the Lemet, gov. of, and 80 m. S.W. Ryss-Forgovod. It has a church and courthouses. The inhabitants, about 600 are mostly laborers, many being employed in the neighbouring iron-works.—2 A town, cap. dist. of some name, on the Alszy gov. of, and 96 m. N.W. Smolensk. It has two churches. Pop. about 1400.

ARDEACAN a vil. and par. Ireland, co. Meath 2½ m. N.W. Narin, and formerly a bishop's see. It has a very fine parish church and Episcopalian palace, with two parochial schools. Pop. 2768, partly employed in agriculture, partly in linen and cotton weaving. Area of par. 5491 ac.

ARDCANDRIE, or ARDCANDRICK a par. Ireland co. Wexford; 1237 ac. Pop. 776.

ARDCANNY a par. Ireland co. Limerick 3629 ac. Pop. 698.

ARDCARNE, a par. Ireland co. Roscommon shores of Lough Key 19,100 ac., abounds in limestone and freestone. Pop. 5168.

ARDCATH par. Ireland, Meath; 4880 ac. Pop. 1461.

ARDCAVAN a par. Ireland, co. Wexford 2456 ac. Pop. 917.

ARDCLEATHAN a dist. co. Argyle, Scotland consisting of the united parishes of Ardchattan and Mackinn, together 20 m. in length, and from 15 to 80 m. in breadth. The surface is mountainous, and intersected with numerous streams abounding in trout. A great part of it is covered with wood. Game is plentiful, and red deer numerous. The cultivated parts yield abundant crops of oats, barley and potatoes. Some remains still exist of the ancient priory of Ardchattan built in the 12th century where it is and Robert Bruce held a parliament, in which the disunion was conducted in the Gaelic language. Pop. of par. 1926.

ARDCLEACH a par. Scotland co. Kain. Pop. 1778.

ARDCLEACH, or CLOONTOOTHIGAN a par. Ireland co. Roscommon 854 ac. Pop. 1417.

ARDCLEINIS, a par. Ireland co. Antrim 15 692 ac.; contains much running water. Pop. 1672.

ARDCOLLUM or ARDCOLLIN, a par. Ireland, co. Wexford 2285 ac. Pop. 884.

ARDCRONEY a par. Ireland, co. Tipperary 5429 ac. Pop. 1028.

ARDEBEE, ARDAMI, ARDEZVI, or ERDEH, a town, Persia, prov. Arschajan on the Karas, 100 m. E. Tabreez, and 40 m. W. the Caspian Sea. lat. 38° 14' N. long. 48° 51' 35' E. [s.] It lies near the E. side of the great plain of Ardebil which is about 40 m. long by 40 broad, and 2000 ft. above the sea level; in great part uncultivated, and sparingly inhabited. The town, built from the ruins of a former city is surrounded by a ruinous mud wall, flanked by towers in a like state of decay. The houses are mean and small, built of mud or sun-dried bricks, with flat roofs. The fort is a regular square, constructed according to the European system of fortification. The only objects of interest in the town are the tombs of Shakh Shafar, Sultan Kader, and Shah Ismael, forming a collection of domes and oblong squares, once richly adorned with inlaid tiles. There are no gardens round Ardebil the strong N.E. winds from the Caspian being very prejudicial to certain kinds of vegetation, especially fruit-trees. The climate is cold, and not considered healthy yet in many localities around more especially on the banks of the Karas abundant crops of rice, wheat, and barley are raised. Fraser gives the pop. at 500 or 600 families. Todd, who visited the place in 1897 found it in a most ruinous condition, in consequence of a visitation of the plague, and much ruined in population.—(Fraser's Travels on the Shores of the Caspian, D'Arcy Todd, Itinerary from Tabreez to Teheran, in Jour. Roy. Geog. Soc., vol. viii.)

ARDECHE, a dep. France, deriving its name from a river which rises within it, and, with exception of a single canton, the very same as the old division of Vivarais in Languedoc. Boundaries, N. departments Loire and Loire W. Loire Haute-Loire, and Lozère S. Gard, E. the Rhone, and S. the Mediterranean. Area, 538,888 hectares, nearly equal to 2110 sq. m. or 1,350,000 ac., of which about 320,000 are arable, 110,000 meadow and pasture, 320,000 woodland 70,000 vineyards, orchards, and garden ground, and about 400,000 swamps and morland wastes. The whole department is of a mountainous character. Mount Meaume, in the W. the highest in the department, forms a central point for several mountain-chains, particularly that of the Cevennes which send ramifications into the N.W. and S., forming, in the N. the mountains of Bouillies, in the W. the mountains of Colron, and in the S. the mountains of Tauxigne. In the W. the mountains have usually a nucleus of granite, and are overlaid by huge masses, evidently of volcanic origin. In the E. and along the course of the Rhone, calcareous rocks predominate. Throughout the department numerous volcanoes must have been in active operation at no very remote geological period. Several of the strata still retain sulphur vapours, and the warm springs issue from their sides. Many of these mountains exhibit ranges of basaltic columns, of great magnificence. The most important of the numerous streams are the Ardèche, the Erioux, and the Doze. They have all an E. course, and belong to the basin of the Rhone. The Loire, however rises in the department, and empties within it for the first 16 m. of its course, but it is only as a mountain-torrent. Among the mountains various metals have been found; silver (a mine of which gives its name to the town of Argenteuil, and was at one time worked) antimony several mines of lead, and more valuable than all, iron which is now extensively wrought in the E. of the department, near La Voulte; and, in connection with the limestone and valuable coal-field of Ardèche, supplies fuel for iron and forges, which rank as the most important works of the kind in France. The prevalence of basalt makes it the chief building stone of the district but the calcareous rocks contain good marble, which is extensively quarried. At one time the whole of the W. district was covered with vast forests. Though now greatly reduced, they are still large,

and furnish much timber chiefly of pine and beech. But the most common, and at the same time the most valuable tree, is the Spanish chestnut, which covers extensive tracts, and yields excellent chestnuts, known in commerce as the chestnuts of Lyons. The annual produce is estimated at 400 000 bushels, of which one half are consumed within the department as food, and the other half either employed there in feeding vast numbers of swine, or exported. The hazel and walnut also cover considerable tracts, and furnish a good deal of oil. In the S. both the fig and the olive thrive and the whole department abounds with mulberry trees which supply food for silkworms, the rearing of which is carried out to a great extent, and ought, perhaps, to be regarded as the staple of the district. The vineyards are numerous, and a large quantity of wine is produced; some of it, particularly that of Limony St. Joseph Cornas and St. Peray being in great request, and well known over all Europe. Agriculture has its chief seat in the S. in the extensive valley of Ardèche and in the N. in the valley of Erienz. There all the ordinary grain and pulse crops are abundant. Along the valley of the Rhone are rich pastures, covered with cattle and sheep. Horses mules and asses are not numerous, and the breed generally are of an inferior description. Much attention is paid to the rearing of bees. In addition to the different kinds of industry already mentioned, notice seems due to the tile-works of Thell the ferrat-dick of Vans, the figured vases of Montpeut the worsted cloths of Burest, the blonde silk, glove-leather and fur-trimmed paper of Annonay. The inhabitants of Ardèche are frugal and industrious, sober of strict morals, and strongly attached to their homes and families. One of the worst birds on the ruins of Louis XIV. is the relentless persecution to which the fine peasantry on the S. frontier of this department, amongst whom Protestantism had taken deep root, were subjected on the revocation of the Edict of Nantes. Ardèche is divided into three arrondissements, which are again subdivided into 81 cantons. Pop. 865 000. — (*Dic. de la France*)

ARDECHE, a river France, largest stream in the dep. to which it gives its name. The source is at a place called Cap-d'Ardèche, among the mountains of Cévennes. It first flows N., then, turning abruptly S., presents a winding course to St. Alban where it receives the Besune from the N.W. and shortly after from the W. the Chasseaux the largest of all its tributaries. Now becomes an important river it proceeds S.E. and, after a course of 45 m. falls into the Rhone rather more than a mile from Pont St. Esprit. It is properly navigable for only 6 m. from its mouth but for a much greater length abounds of the floating of timber and firewood, which are sent down in large quantities from the forests of St. Roman. Nothing can exceed the magnificence of the scenery on the Ardèche in the earlier part of its course. In one part, where a current of lava had flowed down from a neighbouring crater into its bed, it has cut a passage for itself over one side, laying bare majestic columns of basalt, which extend with few interruptions, for 14 m. below. In another part it plunges over a precipice called Ray Pic, which is almost perpendicular and is above 100 ft. high. Below this cataract is the bridge of Arc, justly regarded as one of the most remarkable natural curiosities in France. It lies 2 m. S. Vallon, about 11 m. above the confluence of the Ardèche with the Rhone, and consists of a natural arch of grayish limestone, 40 ft. thick, running across the river, and forming a kind of vault 80 ft. high, and 180 ft. wide through which it passes. Near the bridge are several stalactite caves which were often resorted to for concealment during the civil wars of France.

ARDEE a market in. barony and par Ireland, co. Louth. The town is pleasantly situated on the small river Doe, in a fertile corn district, 36 m. N.W. Dublin. It consists of one principal street, with several lanes branching off, and has some good houses, with many wretched others. It was formerly a walled town, and still has a castle, now used as the courthouse to which is attached the county jail. In the centre of the town is another old castle, now converted into a dwelling-house. The spacious parish church, still in good condition, was formerly the church of an Augustinian monastery. In the town there are likewise a R. catholic chapel, corn-market, two charity schools, a savings-bank, a union workhouse (opened in May 1842) and a considerable barracks. Making is extensively carried on, and a consider-

able quantity of corn is sold at the weekly market, held on Tuesday. Pop of tn. 1752. — The amount is about 11½ m. in length; breadth 7 m. area 56 323 ac. Annual valuation under the Poor-law Act £26 796, 18s. Pop. 22 274. — Area of par. 4826 ac. Pop. 5944. — There is also a market called ARDEN, ARAPE, or LITTLE ARDEN, in the co. Kil-dare, Area, 323 ac. Pop. 104.

ARDEMU ARDEXCO, or ARDEXAN, a in Persia, prov. Khorassan two days journey N.W. Yezd. It has 1000 houses, a good harbor which owes much of its prosperity to the manufacture of the place; for here are woven the cloth used for the tents of the royal household and caravans, checked with blue and yellow.

ARDELAN a prov. Persia, forming the E. portion of Kurdistan bounded N. by Aserghun, S. by Lariz, W. by Asatiz Turkey and E. by Irak; about 267 m. long, N. to S. by about 180 to 150 m. wide, R. to W. its capital as well as all of Kurdistan, is Sena, where resides the Walee or governor. A Kurdish chief paying tribute to Persia but in reality almost independent, and possessing the power of life and death over his subjects. The province is divided into two districts, the N. or Ardelan proper, and the S. named Kermanshah from its local capital. Both districts are mostly composed of high lands and the climate is so severe, that it is only in June, July and August, that the flocks can remain in the summer stations. The villages in the narrow valleys are few and sparingly peopled the inhabitants being chiefly nomadic. Little agriculture is carried on, the manure being the rearing of sheep, herded cattle and horses, the last of which are famed for their heavy speed, and power of enduring fatigue. The woods yield excellent oak and fine gull species, the latter of which are exported chiefly to India. — (*Hittor's Atlas*, Chassey's *Expéditions Expéditions*).

ARDENNES, a frontier dep. N. France, deriving its name from the ancient forest of Ardenne, which traverses the N. division cap. Mézières; bounded, N. and N.E. by Belgium, E. by dep. Meuse, S. by Marne, and W. by Ardennes length about 66 m. N. to S.; breadth 87 m. E. to W. area, 517 886 hectares, or about 1965 sq. m. A ridge of the Fennic mountains a branch of the Vosges chain, running in a direction from E.E. to N.W. divides the dep. into two parts, the one belonging to the basin of the Meuse, and the other to that of the Seine. The principal rivers are the Aisne and the Moselle, both navigable and connected by the Canal of Ardennes and the Bar river. The soil is not all equally fertile. Some of the plains in the S.W. are naked and arid while the districts in the N. are traversed by mountains covered with wood and heath the forests occupying more than one-fifth part of the whole area. Of arable land there are 768,550 ac. meadows, 120,476 ac.; vineyards, 43,510 ac. orchards nursery-gardens and gardens, 24,500 ac. heath and barren land, 27 050 ac. In the central valleys which are extensive and fertile corn is grown particularly in the valley of the Aisne, one of the finest corn districts in France. But though the quantity of grain produced is greater than formerly it is not equal to the consumption of the department. The vine is cultivated only in the S. districts especially around Reims, Sedan and Vouziers. The pastures are excellent the domestic animals breed strong generally small and the cows give but little milk. The sheep, of which there are large flocks, afford excellent mutton, and yield wool of a fine quality. The department abounds in game particularly roebucks, wild boars, hares, and rabbits.

The inhabitants are in general industrious intelligent, and enterprising, though somewhat unpolished in their manners. Mining and manufacturing operations are carried on by them with great activity the extensive forests supplying fuel in abundance for forges and factories. The minerals of the department consist of iron, lead, calamine, and some coal with marble, freestone limestone and slate of excellent quality of which there are extensive quarries at Fumay and other places; also potter's clay and sand for the manufacture of glass. Iron-works are numerous, and yield annually upwards of 400 tons of bar and upwards of 500 tons of cast iron. Chief manufactures — fine cloth, and other woollen stuffs at Sedan and Reims cutlery, tinware, nails, fire-arms, and soap, at Charleville leather glass, and earthenware, at Montmédy; with hosiery tape, straw, copper, brass, and porcelain, at various places. Rail-making is likewise carried on to a

considerable extent, employing upwards of 6000 persons. Trade is carried on in the agricultural and manufactured products of the department; the Meuse, the Aisne, and the Canal of Ardennes furnishing great facilities for intercommunication. The department is divided into five arrondissements, 30 cantons, and 478 communes. Pop. in 1846, 236,825.—(*Dict. de la France, French Official Publication*).

ARDENNES, an extensive tract of hilly land, forming a distinct continuation of the Vosges, stretching northwards only over a large portion of the N.E. of France and S.W. of Belgium. One branch proceeding N from the forest of Argonne, reaches the sources of the Meuse, Sambre, and Scheldt, while another branch, still more considerable, commencing E. among the valleys of the Moselle, Esne, and Ourthe, proceeds W and is finally lost in the plains of Champagne. None of the hills attain a great elevation. The highest, La Barroque Michel, is 1750 ft. but the average height does not exceed 1540 ft. The prevailing rocks are micaceous, and in some places furnish extensive quarries of excellent roofing slates. Limestone occurs very rarely and only in thin beds. Anciently the whole tract formed one immense forest, and possesses considerable interest both in history and in the drama of Shakespeare, under the name of the Forest of Ardenne. Extensive districts are still under wood, but large portions have been cleared, and are now sown with populous towns and cultivated fields. In general however the surface is elevated, cold, and bleak, and the soil, even when it would admit the plough, by no means well adapted for cultivation. It is more favourable for pasture, and rears great numbers of cattle, and a breed of horses, which though small, are hardy and active, and much used for light cavalry. Among minerals, lead, antimony and manganese are found, but the only mineral which seems to admit of being extensively worked to advantage is iron.

ARDKRAA a par Ireland, co. Wick 777 ac. Pop. 266.

ARDERSYR or **ARDROSS**, a par Scotland, co. Inverness 8458 ac. Pop. 1941.

ARDESE, a large vil. Venetian Lombardy prov. of 18 m. N.E. from Bergamo, and 4 m. N by W Glusone having a handsome church with a lofty spire, a chapel built in 1607 as hospital, and school. The inhabitants are engaged in working iron and steel making cheese, dressing wool, and in silage. Pop. 2118.—(*Desc. Oss. Italia*).

ARDEY, a m. and par, W. coast, Ireland, co. Kerry The town is 4 m. N.W. Tralee, and was anciently the capital of Kerry the seat of a university and a bishopric, and sent two members to the Irish parliament but now it is a ruinous and insignificant village, its noo having long since been united to that of Aghaloe. Near the town are the picturesque ruins of a Franciscan monastery. There are two free schools, and a dispensary in the town. Pop. of it in 1851, 608.—The parient is partly in the barony of Trillickmuckmy but chiefly in that of Glanworth. Area of both, 10185 ac. Pop. in 1851, 8191.

ARDFIELD a par Ireland co. Cork 2645 ac. Cop- per ore exists in this parish. Pop. 1836.

ARDFINNAN a par Ireland, co. Tipperary 1813 ac. contains the ruins of a castle built by King John in 1184. Pop. 777.

ARDGLASS, a small decayed seaport tn. and par Ireland co. Down. The town is 7 m. S.E. Downpatrick and about 78 m. N.E. Dublin pleasantly situated on the E. side of the tongue of land which separates the Bay of Kilgobbin from that of Ardglass. The town consists of one long street, nearly semicircular with several smaller streets branching off. A free school, on the foundation of Edmund Smith, educates about 90 boys and 60 girls. There are also four private schools, and a dispensary. Ardglass is inhabited chiefly by fishermen and possesses a good quay fishing-boats and yachts, besides a few sloops. Several packets also ply from it to the Isle of Man, and others, and others, in consequence, numerous vessels assemble during the fishing season, there being frequently from 300 to 400 in the harbour at one time, from various parts of both England and Ireland. The pier has a light-house, and in the harbour there is sufficient depth of water at any time of tide for vessels of 500 tons. On the quay are extensive stores for corn, in which a considerable

trade is carried on. A quay and pier for fishing boats have been erected at an inner harbour called Kilmannepert. Ardglass was in former times an important and flourishing place, but its commercial privileges, &c. having been transferred to Belfast, its trade rapidly declined. There are here a constabulary police force and a coast-guard station a municipal court is held for crimes to the amount of £100 and there are an excellent weekly market and four annual fairs. Area of par., 11187 ac. Pop. in 1851, 974.

ARDILLATS a par France, dep. Rhone (Bourjois) pleasantly situated on the Ardille, about 16 m. N.W. Villefranche, and possessing a fine paper-mill, which was originally established by the celebrated alchemist Montgolfier, whose improvements in the manufacture are said to form the foundation of the still more important processes which have since been introduced. Pop. 1112.

ARDINGLEY a par England, co. Essex 3817 ac. N.E. Chelmsford. Pop. 668.

ARDINGTON a par England co. Bucks 1775 ac. E. Wantage. Pop. 875.

ARDISH *See ARDICH*.

ARDJAH **ARDJAH** **ARDJAH** or **KUETRA-DE-ARDJAH**, a decayed in European Turkey cap. dist. same name, prov. Wallachia, 1 hour Ardjah 80 m. N.W. Bucharest, on the road leading through the Rothernium Pass into Hungary. It has six churches, and a large monastery the church of which is considered the finest in Wallachia and the ruins of a strong castle, formerly the residence of the lords or princes of the district. *See ARJAH*.

ARDKEEN a par Ireland co. Down 4801 ac. Pop. 1021.

ARDKILL, a par Ireland, co. Kildare 5848 ac. Pop. 822.

ARDLEIGH a par England, co. Essex 4906 ac. N.E. Colchester. Pop. 1787.

ARDLEY a par England, co. Oxford 1469 ac. N.W. Banbury. Pop. 153.

ARDMAYLE, a par Ireland co. Tipperary 4941 ac. Pop. 1907.

ARDMORE a tn. and par Ireland, co. Waterford on the Irish Channel. The town lies 5 m. E.N.E. Youghal and 33 m. W.W. Waterford. It has Protestant and R. Catholic churches and was formerly a bishop's see. In the parish churchyard is one of the ancient round towers and S.E. the church are the dormitory and well of St. Declan both of which are held in high veneration. There is a fine beach, and the country around being beautiful renders Ardmore admirably adapted for sea-bathing. Pop. of par. 5677 acru, 24,315 ac. Pop. of tn. 686.

ARDMORE HEAD a promontory S. coast Ireland co. Waterford N.N.E. Youghal harbour lat 51° 52' N. lon. 7° 40' W.

ARDMULCHAN a par Ireland co. Cork 8563 ac. abounds in limestone. Pop. 818.

ARDNAGEENY a par Ireland co. Meath 16,338 ac. 1 op. 8217.

ARDNAMURCHAN (TOIR OR) a cape or headland, Scotland, co. Argyll the most W. point of the mainland of Britain. A lighthouse has been recently erected on this point, the lantern of which is 120 ft. above the level of the sea. It is a fine light of the natural appearance, and may be seen in clear weather from a distance of 18 or 20 m. It was exhibited, for the first time, on the night of Dec. 1 1849. lat. 56° 48' 45" N. lon. 6° 13' 30" W. Pop. of par. 5448.

ARDNAREE, a par Ireland co. Sligo on the Moy over which is a stone bridge of 16 arches, which unites Ard-naree with Ballina, of which it forms a suburb (*See BALLINA*).

ARDNUCHER or **HOMELMAR** a par Ireland King's co. and co. Wexmouth 12,013 ac. contains the ruins of several ancient castles. Pop. 2504.

ARDOCK a small vil. Scotland, co. Perth about 8 m. S.W. Crieff, celebrated for the Roman camp in its vicinity one of which is the most entire of any in Scotland. There are here vestiges of three distinct Roman camps of different dimensions, and, apparently constructed at three different periods, the largest and first supposed to be constructed by Agricola, in his campaign in A.D. 84. Besides these camps, there is, opposite the bridge over Knap water a strong fort surrounded by five or six acres and comprising about 500 ft. long by 430

Ardo. The vicinity of Ardara, near which stood Liodum, a town of the Dani, one of the aboriginal tribes of Britain, was the scene of many conflicts during the Roman period. The interesting remains above alluded to have been enclosed by the proprietors of Ardara by a high stone wall, to protect them from dilapidation.

ARDORE, a tn Naples, prov Calabria Ultra I. dist. of, and 7 m. S.W. from Gerace, situated upon a hill, in a fertile country. It suffered much from an earthquake in 1789 and was rebuilt by Ferdinand IV. Pop. 2959.

ARDOYE, a vil. Belgium, prov W Flanders, about 12 m. S. Bruges. It gives its name to a rural com., which has an area of 4500 ac.; a pop. of 7843; and possesses several breweries and malt-works, brick and tile-works, and a blacksmith.

ARDOYNE, a par Ireland co. Wicklow and Carlow; 6578 ac. Pop. 1651.

ARDPATRICK a par Ireland co. Limerick 624 ac. Gold ore has been found in this parish. It contains ruins of an ancient monastery and round tower. Pop. 67.

ARDQUIN a par Ireland co. Down 3048 ac. Pop. 818.
ARDRAH or **ARNA**, a tn Africa, cap prov of same name, Highland of Delnaly. lat. 6° 52' N. lon. 43° E. about 30 m. from the sea-coast on the shores of a lake. Pop. 10,000.

ARDRAHAN par Irel Galway 17 848 ac. P 2887
ARDES [*anc Ardus*] a fortified in France dep Pas de-Calais (Puy-de) 9 m. S. E. Calais, in a marshy district, at the extremity of the Canal of Ardres and on the railway from Calais to St. Omer. It was a place of considerable importance during the early English wars, and the splendid ruins given at the interval which took place here between Henry VIII and France I. are commemorated by the name of *Champ du Drap d'Or* [field of the cloth of gold] which the spot still bears. Ardres has some manufactures. P. 1129.

ARDRISHAIG a small vil. and seaport, Scotland co. Argyle, 20 m. S.W. Invertry W shore of Loch Fyne at the entrance to the Crinan Canal with a boat-building yard, and two quays. Inhabitants principally engaged in fishing. Remains to Glasgow 42 daily. Pop. (1861) 800.

ARDISTRA a par Irel Carlow 1571 ac. P. 454.

ARDROSSAN a seaport and par Scotland co. Ayr. The town is 80 m. by railway S.W. Glasgow and 18 m. N.W. Ayr. The streets are wide and straight, and the houses mostly of two stories are neat and well finished. There are also many handsome villas in the vicinity. It is much frequented in the summer season by sea-bathers. The harbour which is on an extensive scale, was begun by the late Earl of Eglinton, who expended £100,000 on it. It is still incomplete but is capable of accommodating a large number of vessels. The pier and break-water the former 900 yards in length, completely protect the harbour from S and W winds, an island, called the Horse Island protecting it from the N.W. At the extremity of the break-water there are 36 ft. at spring ebb, and at shoals gradually to 15 ft., where the quays commence. There are two small red lights one on each pierhead. A branch line, about 4 m. in length, connects Ardrossan with the Glasgow and Ayr Railway at K.H. station. Steamers ply regularly between Ardrossan and Glasgow Ayr Belfast, and Fleetwood. Pop. of par 5581 area, 11,547 ac.

ARDRAILL AGH or **ARDRAILLA**, a par Ireland co. Monagh 1789 ac. Pop. 304.

ARDBKEAGH a par Ireland co. Cork 1929 ac. Pop. 154.

ARDLIFY —1 (Wad n par England, co. York W Riding 2250 ac. N.W. Wakefield. Pop. 1439. —2 (*East* a par adjoining the above) 1630 ac. Pop. 895.

ARDSTRAW a par Ireland co. Tyrone, on the Mourne a branch of the Foyle, S. Lifford and N.W. Omagh; area, 51 702 ac. Pop. 16,199. —**ARDSTRAW** BARON is the name of a vil. in this par on the river Derry and on the road from Dublin to Londonderry. Pop. in 1841 184.

ARDVAE (Lout) an arm of the sea, Scotland, W coast, co.utherland; lat. 56° 14' N. lon. 6° 4' W. It is a small but safe harbour for small vessels. In the proper anchorage there is water enough for the largest ships to ride, but in the narrow part of the channel leading to it, there are not above 8 ft. at low water spring tides.

AREAS, or **SÃO MIGUEL DAS AREAS**, a small tn. Brazil,

prov Rio Paulo, 150 m. N.E. Santos, and 110 N.W. Rio de Janeiro, on the confines of the prov. of that name and on the road to the city of Rio Paulo in a fertile district, with a moist climate. It has a church, townhouse, and prison. and in its vicinity are cultivated coffee in large quantities, millet, rice, French beans, mandarin, and sugarcane. The principal commerce of Areas consists in coffee and sorgho, which is transported on mules to Rio de Janeiro. Pop. tn and dist. 6000. —(*Diã. Geo. Imp. Brazil*.)

AREBO or **AREON** a tn. Benin, W Africa, on the river Forcados, about 87 m. from its mouth lat. 5° 58' N. lon. 6° 8' E. The English and Dutch factories, formerly existing here, have been abandoned.

ARECHAVALETA a tn. Spain, prov Guipuzcoa, 27 m. N.E. Vittoria, on the high road from Madrid to Bayona, having two churches, a townhall sulphurous spring (temperature 71 Foh.) with an attached pump-room. The people are chiefly engaged in making rural implements, coarse linen fabrics, and in agriculture. Pop. 2480.

AREE EL-AAREED, JERRE, ARIDEH, or TWAKIRY a mountain range, Arabia, traversing N.E. S.W. to N.E. from about lat. 25° 50' N. lon. 41° 41' E. to about 104 m. N.E. Mecca, to lat. 22° 50' N. lon. 48° 50' E. about 150 m. S.W. Meccah, a total distance of upwards of 550 m. At El Derayah (lat. 25° N. lon. 46° E.) an offset, called Jebel Tunk, leaves the main chain in a N.W. direction having a total length of about 280 m. Jebel Aridh and its offsets form the hill country of Nejd (which see).

ARELEY two parishes England; —1 (K. 99) Co. Worcester 1449 ac. S. by E. Berwyck. Pop. 467. (*Upper*) Co. Stafford, 9919 ac. N.W. Weyling. Pop. 878.

AREMBERG MEPPEN (DUNY) or a political division of Hanover between Oldenburg and Holland area, 544 geo sq. m. It is traversed, S to N by the Ems, and consists chiefly of sandy wastes, moors, and heath. Its principal riches consist in turf. Agriculture is little attended to but the culture of bees is pursued with advantage. Formerly constituting part of the bishopric of Munster, in 1803 it came into the possession of the Duke of Armburg. In 1810 it was united to France. In 1815 it was given to Hanover, and, in 1824 it was erected into the duchy of Armburg Meppen by George IV. of Great Britain. Pop. 49,000.

ARENAS [Spanish *Sands*] the name of a number of islands, capes, &c. in various parts of the world. —1 An isl. or rather mudbank off the N coast of Colombia, in the middle of the Bay of Galera de Zambia. lat. 10° 46' N. lon. 76° 30' W. —2 A low isl. Gulf of Mexico, 8 m. long by 2 m. broad rocks all round lat. 22° 8' N. lon. 91° 25' W. (a.) —3 A bay or cape, off Cape Isabella, E coast, Hayti the cape being in lat. 19° 58' 40' N. lon. 71° 8' 50' W. —4, A Cay N America, Bay of Honduras; lat. 71° 12' N. lon. 83° W. —5, A sandy point, N coast, Colombia, Gulf of Darien at the entrance (E. side) of the Bay of Choco lat. 8° 23' N. lon. 76° 56' 10' W. —6, An isl. and point, N.E. coast, Guatemala, E. side, Gulf of Matina, or San Juan lat. 10° 58' 42' N. lon. 85° 45' 10' W. (a.) —7 A sandy point N coast, Yucatan, E side of the entrance into the Lake of Maranyto; lat. 11° 7' N. lon. 70° 57' W. (a.) —8 A point W coast, Gulf of Looe, lat. 16° 11' N. lon. 119° 4' E. (a.) —9 Point Arenas, the most W extremity of the isl. of Margarita, Caribbean Sea lat. 11° 0' N. lon. 64° 30' W.

ARENDAAL, a seaport in Norway prov. of and 88 m. N.E. Christiansand on the Skager-Rak lat. 56° 22' 12" N. lon. 6° 53' 30" E. (a.) It lies at the mouth of the Åta River and is built on rocks projecting out into the commodious haven formed within the islands Troms and Hiseid, between which is the narrow channel leading up to Arendal. The buildings of the town are of wood clustered in suburbs, and scattered up the surrounding heights, one of which is crowned by a handsome church. Long ranges of white buildings, the dwellings of the merchant's line, the broad wall laid-out quays, descending from the sea, an imposing appearance and along the shores are neat houses and stores, close to which vessels lie the water in the harbour being very deep. The town has a commercial and two other schools, a custom-house, and three yards for ship-building—a branch of industry here carried on extensively. On the banks of a lake, N the town, are some celebrated iron mines. Arendal is a place of considerable trade, possessing nearly 300 seagoing ships, chiefly employed in exporting

timber and in importing grain and other kinds of food. Much of the timber shipped here is brought a direct distance of about 100 m. from Upper Tellusmarken, with which there is water communication. In 1842 373 vessels arrived at the port; tons, 39 674 departed, same year 309 tons, 35,548. Outside the islands, and about 4 m. from the port, on Island Torungen, is a fixed light, 130 ft h-h lat. 33° 2' N.

stone bridge spans it. It enjoys a delightful climate, and is esteemed one of the best built and most beautiful towns of S. America. It has a square surmounted with an elegant bronze fountain, a cathedral square church, three universities, six convents, a college, and an hospital. The houses and public edifices are all built of red earth, and the streets are paved with thick walls and varnished roofs, to resist the shocks of earth- quakes, which are frequent here, and so destruc- tive as to have laid the city in ruins on four different occasions, besides the damage done by the violent convulsions of the sea. The principal manufactures are of woollen and cotton stuffs, and gold and silver tissue, with an active and flourishing trade. In the neighbourhood are several gold and silver mines and the district round the town is fertile and well cultivated. Cove Mallendo was formerly the port of the city, but the commerce of the place has since the filling up of that port the harbour of Ilay has been adopted in its stead. Pop about 30,000.

—THE DEPARTMENT of Acrequia extends between lat. 16° 30' and 41 28' N and consists of seven provinces—Canaán, de Chulucayo de Acrequia, the de Chucabamba, de Aricaquia, Moncorvi, Acha, Tumbaco, and Caylloma.

AREQUIJA a volcano of the Peruvian Andes, about 12 m E the city of that name
lat. 16° 30' S. lon 71° 55' W. Its height

lat. 12° 30' S, long. 71° 35' W. Its height, according to Pombal was 20,320 ft. The summit of the mountain which is in the form of a stupendous cone, is generally covered with snow for about 600 ft. downwards. It has a deep crater from which ashes and vapour are constantly sent to issue. In the immediate vicinity of the volcano, there are other two mountains of great height: Pichu Pichu and Chacabu which are also generally covered with snow. They are composed of trachytic rocks, and are supposed to have formed a portion of the walls of a very extensive eruption-crater. In the midst of which the more recent eruption-cone of Arequipa has been raised.

Altea, a tn and seaport, Spain in Fah is prov of a d
17 m S.S.W from Coruña, tolerably well built, having a
cl arch, townhall and the ruins of a castle and fortification.
Fishing and curing fish are carried on Pop. 1850

ARFTHUSA a celebrated fountain of Sicily in the city of Syracuse. It springs from the earth under a natural arch.

to 85 J. E. B. Irons (1840) suffered a good deal of damage by fire which however has since been repaired, much to the improvement of the town. In 1835 the pop. of the town proper was 1980 including estates Calhoun, Struensee, Salvigren, and Tromsø 4000. In 1848, the town proper had increased to 3,02 including estates, 4500 — [Sjölberg, *Beskrivning öfver Skandinaviska Ulfen* for Foster a Norway in 1848-9 Munich, Hart over det sydlige Aroel.]

AREADONCK a tn. Belgium chief place both of town and com. of same name, prov. of sud 82 m. E. from Antwerp. The manufacture of stockpens and worsted caps occupies a fourth of the inhabitants. Of the former 200,000 pairs are annually made. Area of com. above 600 ac. 1 op. 3488

ARENDSEE a small town, Prussian Saxony gov. of, and 5th in Vm from Magdeburg on the R. side of Lake Arund, which abounds with pike and eels, and in which petrifications and amber are occasionally found. It is divided into the old and new town and has a Lutheran chapter with seven prebendaries, an hospital, a brandy distillery and several breweries (see p. 116).

ALBENBURG a seaport in European Russia, gov. Leningrad cap. and S.E. end of it is of Obed. lat. 60 15 0 N. lon. 23 27 E. E. 7/8 It is the most important Russian port in the Baltic. The exports are grain, timber, cattle, linens, furs and other goods. The trade of the place is chiefly carried on with Lübeck, Sweden, and Holland, in small vessels of which from 20 to 30 arrive annually. The anchor at about 5 m. from the town at a place called the Kettle. The cargoes are loaded and unloaded by small cranes or pulleys, and from the town the water is raised by a screw pump for a series of burdies. P. 18429. 5.11

ARNSWALDE. See ARNSWALDE.

ARENS DW. MAR., a tin brazier, in Catanzaro prov. of and 26 m. N. E. from Barvelone, on the coast of the Mediterranean Sea, in the middle of a rich vine district, tolerably well built, and having well-arranged streets, a square, a parish church. Latins and other schools, a hospital theatre and prison. Loom-making weaving coarse cotton fabrics, distilling brandy making soap, and other chemical operations, are carried on. Wine, charcoal, wooden hoops, barrels, and timber are exported and grain, alcohol &c. imported. Pop 4780

AREQUIPA acety Peru, cap. dep. of same name; 4500 m. S.E. Lima, 200 m. S.W. Cuzco, and about 40 m. from the shores of the Pacific lat 17° S. lon 74° 18' 30" W (P.). finely situated 7850 ft. above the sea level on the plain of Quilon, on the river Uite which is here crossed by a hand-

A.I.N.U.E.—From *Amurum Naga* (Amurite) *Parum*

PUBLISHED BY AUTHORITY OF THE GOVERNMENT OF CANADA. Printed at the Queen's Printer, Ottawa.

from the rock, within a short distance of the sea, being supported by the latter by the city will only. The water disappeared by some means having as pure as a sweet, is now brackish only from the sea being found access to it, and is used for washing only. The fish spoken of by Cicero have also disappeared, together with its sacred groves and temples. The fountain is named *Alphesius* after the nymph *Arcthesia*, who according to Greek fables was bathing in the river *Alpheus*, in Peloponnesus, when she was carried off by one of the Argonauts, and was afterwards married to a king of Boeotia. The nymph, in consequence of the assistance of her patron goddess *Diana*, who immediately transformed her into a fountain, and the nymph, then, seeking to communicate his waters with those of the metamorphosed nymph, *Diana* opened a passage under

ground, by which her favourite escaped to where the fountain now exists the island of Orygia, a part of Syracuse. The story goes on to say that Alpheus still pursued her either underground or through the sea, without mingling his waters with those of the ocean, consequently that substances thrown into the Alpheus, in three miles in due time appear in the fountain of Arethusa.—(Ovid's *Metamorphoses* v 572.) Pausanias gives a somewhat different version of the story (v 7).

ARETTE, a tn France, dep. Basses Pyrénées, about 11 m. S.W. Oloron in a fine forest at the foot of hills which form the first slopes of the Pyrénées. It is an ancient place, and several of the houses are interesting from their antiquity.

AREVALO a tn Spain, in Old Castile prov. Ávila 10 m. N.W. Madrid, partly enclosed by ruined walls, well built, and having a handsome suburb with a church, townhall, seamen's-house, two prisons, a storehouse, hospital, Latin and other schools, &c. Pop. chiefly agricultural, 2200.

AREZZO [anc. *Arrathina*] a city Tuscany cap. of prov. and bishopric of its own name, on the slope of a hill in the plain of Chiana, 7 bank. Castro, an affluent of the Arno. It is surrounded by walls 1½ m. in length, has paved regular and for the most part, well built streets, a large square, a noble Gothic cathedral, containing some fine pictures and manu-

UNION OF SANTA MARIA AREZZO.—From Gaily Kuhn's Renaissance Architecture

ments several churches, municipal buildings, four hospitals, a university academy of arts and surgery, a public library, museum, theatre, medical and other schools, also an episcopal palace, a palace of the Altoposti family, an aqueduct, the remains of an ancient amphitheatre and citadel and the monument of Meocenes. Of the churches the handsomest, as well as the most ancient is that of Santa Maria. The whole building though irregular and somewhat fantastic in its details exhibits an elegance and facility of style which is extremely pleasing. Manufactures—hats, combs, cutlery, nails, implements of husbandry, pins and earthenware, also woollen stuffs for the army, the making of which employs more than 1000 persons. Dyeing, tanning and engraving oils are carried on. Four annual fairs are held. Arezzo was an important Roman military station and once famous for its terra cotta vases. A few ruins are all that now remain of the ancient city. It is the birthplace of Meocenes, Petrarco, Guido Pope Julius II and was long the dwelling-place of Dante. Pop. 11,716.—(*Dante Uita Italia*.)

AREZZO a prov. Tuscany (exp. Arezzo) bounded, N. by prov. Florence and the Papal States, E. by the Papal States, S. by Grosseto, and W. by Siena, with an area of 1776 sq. m. E. and N.E., the Apennines form a natural boundary to the province, and over its surface ramify the Tuscan sub-Apennines, for the most part clothed with chestnut, beech, pine, and other trees and shrubs, and some of them yielding coal and sulphur. The valleys have a rich alluvial soil producing abundant crops of grain, fruits, vegetables, wine and oil. Horned cattle, pigs and sheep are reared and turkeys, fowls, and game of all kinds are plentiful. Agriculture, brass-making, preparing wool, and exporting wine and oil are the principal employments. There are numerous benevolent institutions in the province, and the education of youth is more attended to than formerly, crimes against the person are comparatively rare. The people are lively, active and

Vol. I

intelligent, fond of music, dancing and amusement. Pop. in 1836, 328,411.—(*Dante Uita Italia*.)

ARGA a river Spain, in Navarra, rising in the Pyrénées near Iruia, and flowing E. and S.W. It falls into the Aragon at Villafraña after receiving several tributaries. Total course 60 m.

ARGAMASILL A DE ALERA a tn Spain, in New Castile, prov. Ciudad Real 84 m. S.S.E. Madrid on the Oreadian, ill built, and having a church, comestory prison and some schools. Pop. 1600.—Also, **ARGAMASILLA** (DE GALATRAYA) a tn 13 m. N. Ciudad Real having a church, townhall, prison and storehouse. The inhabitants are much employed in lace-making for the traders in Almagro (which see). Pop. 4020.

ARGANA or **ARGANA MOUNTAIN** a populous tn. Turkish Argama, pass Diarbekir 1 bank, Tigris, near its source, 36 m. W. N.W. Diarbekir cap. dist. of same name lat. 38° 13' N. lon. 37° 10' E. It is situated on Mount Taurus, on a declivity so abrupt that the houses appear to be piled one above another, and in winter the torrents rush down the streets with a violence that often renders them impassable. Its wretchedly built, and is inhabited by Kurds and Turks. At an elevation of 3644 ft. above the level of the sea, there is a rich copper mine. The surrounding hills are covered with vineyards. Pop. 4000.

ARGANDA DEL-REY a tn Spain in New Castile, prov. of and 18 m. S.E. from Madrid, on the high road thence to Valencia, ill built, and having a church and two chapels, with a comestory townhall, hospital, prison, schools, and some schools. The inhabitants are employed chiefly in tillage but also in soap-making and oil mills. The neighbourhood is celebrated for the excellence of its red wines. 1 op. 2 90.

ARGANJ a tn and par. central prov. Buena Vista, 31 m. N. Comisura. It contains a parish church and a poorhouse, and 1½ m. from annual fair. 1 op. 1616.

AIK EL-BAS or **AIK EL-BAS** a tn France dep. Hantes I yndées cap. arr. dist. of its name, 17 m. S.W. Turbot in the beautiful valley of Lay, one of the finest in the 1 yannes 1 bank, have d'Amm, near its embouchure into the Gave de l'As. The town is not built clean, but it contains a handsome square, and groups of pretty slated houses some of them adorned with marble and interspersed with patches of rich verdure, would have a very pleasing effect. The only manufactures are steel, cutlery and cutlery are prevalent throughout the district. 1 op. 1 18.

AIK EL-BAS, a river France, with three different sources which unite at Chateaufort, dep. Var. The chief source is at the foot of Mount Sellaon. The river owes its name (pendent alluvies) to its limpid waters, which are almost always silvery white. Near the chapel of St. Michel, between Vaulaubert and the Thoronet, it precipitates itself over a lofty rock and forms a magnificent cataract. Losing itself in the abyss into which it falls it disappears, and again emerges about half a mile below. In its course which is about 60 m. it receives numerous small tributaries and falls into the Mediterranean about 2½ m. S.W. Frejus. It is not properly navigable, but an immense quantity of pine is annually floated down it, and cut up in planks at the sawmills of May and Frejus, to be afterwards carried to Toulon and Marseilles.

ARGENTAN (anc. *Argentan*, *Argentanum*, *Castrensis*) a tn France, dep. Orne (Normandy) pleasantly situated on a height in an extensive and fertile plain which is bounded on the E. by the forest of Argentan 28 m. N. N. Argentan. The town which is traversed by the Orne, is clean, has well built houses, and regular streets, and is surrounded by ramparts, which form a promenade. The old castle of Argentan, an extensive massy structure of the 15th century has been converted into a court of justice and a prison. The churches of St. Germain and St. Martin are interesting edifices of the same century. The manufactures are chiefly linen, silk, leather and lace. Pop. 4700.—The *Argentan* of Argentan includes 11 cantons. The chief products are corn, cattle, poultry and cheese. The last, in particular, bears a high name. The district also has been long famous for its horses. The famous Haras du Pin, to which the superiority of the Norman breed is mainly attributed is near Argentan.

25

fish and oil on which the inhabitants, 60 in number in 1844, entirely subsist. The only quadrupeds known are white rats and the only birds huchas, which nest in great numbers. The heat is sometimes very great, but the climate is healthy. Arguin is supposed to be identical with the Island of Carac, where Hanno settled a colony during his celebrated voyage of discovery. — The BARK or bark of Arguin comprises about 19 m. S. Cape Blanco, and stretches S. for upwards of 130 m. breadth at the broadest part which is in the centre about 40 m at either end the breadth does not exceed 10 m. It is a hard, sandy soil, generally covered with broken shells. Its outer edge has been fixed at 7 fathoms, which lessens 2' or towards the S. to 4 fathoms. Close to the breakers, on some parts of the bank there are not more than 10 ft. water and the bottom is composed of shells and small *Amphipoda* shells amongst these that of the *Fruscula fragilis* is common. A tn. of same name on the coast opposite the island. It was formerly a French settlement; and is the termination of the caravan route across Timbuctoo.

ARGUN or ARGON a river of N. E. Asia. See AMOON.
ARGUNSK, a fort, Siberia gov. Irkutsk I bank Argun
from which pearls are obtained 180 m. N. Northern lat.
50 50' N. lon 120° 15' E. A considerable trade is carried
on here and in the vicinity silver and gold are obtained and
from several lakes salt is procured. Pop 800

ARGYLE an inland co. of New South Wales, 60 m in length from N. to S. and 36 in breadth area, 1,248 600 sq. It consists of extensive ridges and swelling hills, with irregular plains between. and is traversed by streams branching from the Hawkesbury and Moulumberrg rivers. It is more recently supplied with timber than most of the other counties, there being a tract called Goulburn Plains consisting of 85 000 ac without a single tree. The plains of this county are exceedingly fertile, and the scenery in general picturesque. The county town Goulburn, is 125 m S.W. from Sydney. This county sends one member to the Legislative Council. Pop. 5000.

ARGYLE an inland co. of New South Wales, 60 m in length from N. to S. and 36 in breadth area, 1,248 600 sq. It consists of extensive ridges and swelling hills, with irregular plains between. and is traversed by streams branching from the Hawkesbury and Moulumberrys rivers. It is more recently supplied with timber than most of the other counties, there being a tract called Goulburn Plains consisting of 85 000 ac without a single tree. The plains of this county are exceedingly fertile, and the scenery in general picturesque. The county town Goulburn, is 125 m S.W. from Sydney. This county sends one member to the Legislative Council. Pop. 5000.

ARGYLE or ARGILL, an extensive co. in the S.W. of the Highlands of Scotland, comprising partly of mainland and partly of islands bounded N by Inverness E by Perth, Dunbarshire, the Firth of Clyde, and hill-country round S. by the North Channel; and W by the Atlantic Ocean. Area, about 2,483,000 ac. of which 808,000 are under cultivation. Greatest length of mainland about 115 m. breadth exceedingly irregular being about 60 m. near its N. and not much over 10 m. at its S. extremity. From the windings

of the numerous bays and creeks with which the land is everywhere indented, it is supposed to have more than 600 m of sea-coast. Its principal inlets are Loch Shiel, Loch Sunart, Loch Lannha, Loch Etive, Loch Finn, and Loch Lomr.

Argyle is divided into five districts, Cowall, Lorn or Argyll proper, Conynry, Morven, and Banter. Of these there are various subdivisions, such as Apple Gleneloch Ardru northward, and Knoydart. The county includes the islands of Three Coll Moll Islay Jura, Skye, Inna or Teindmill Canine, Ruar, Muak Lismore Lorn, Kerrera, Eile Easdale, Luing, Rhinn, Lunga, Scarba, Colonsay and Oronsay Gigha, Barra, Gometra, and Uivra. The chief towns are the capital Inverary Campbellton, Oban Bownore Lochgilfhead and Tobermory. For a long time this county severely formed part of the kingdom, being subject to the Macdonalds of the Isles who assumed regal and independent sway over it. The estates, titles and jurisdiction of the lairds however subsequently fell to the Clan Campbell, to whom they still belong. The Argyle, however, whose seat is at Inverary is progenitor of the royal house of the monarchy and shone in the fear of the highest nobles of the country and of the family of Campbell. The general features of the county are varied and striking consisting of lofty mountains, deep glens and mists of the sea running far into the land. Lowland it is not it exhibits the wild grandeur characteristic of the W. Highlands of Scotland.

The W. truncatum of the great Grampian range is within the county. The mountain masses which stretch N. from the river Awa into the shores of Firth and Inverness consist chiefly of granite which also extends along the N. shore of Loch Linnhe into the districts of Suir and Moray. In almost every part of the mainland (especially among the Grampians) and in the islands, the coarse and irregularly bedded, and often highly jointed, gneiss is the principal rock of the country, and is extensively quarried. Limestone, chiefly of the earlier but partly also of the more recent formation and sometimes in the form of tolerable marble, is found and a small coal field is partially worked in the neighbourhood of Campbellton. The earth called Breccian was first discovered at the village of that name in the county and there two veins of the same name were discovered in several localities, and were of one type.

The climate though variable is on the whole mild. The hills and farms abound with follow-down cattle, sheep, and almost every sort of game. The coast although rocky being indented with numerous deep bays and lochs, affords abundant scope of safe and excellent harbours. In the interior there are several lakes the largest of which is Loch Awe. The county is intersected by many rivers streams, but none of importance. Both lakes and streams abound with fish. The soil is of a mixed character the pasture various, much of the hills being covered with heath while others are green to the summit. The numerous lochs and rivers are the source of the salmon which the fisher as occupies the chief attention of the inhabitants. Some of the glens are fertile and in good cultivation particularly Glendaruel the finest in the county. Agricultural produce is chiefly confined to barley, oats, and potatoes but wheat, rye, peas, beans, and flax are also cultivated to a small extent. The chief articles of export are sheep, cattle, horses, fish, slate and grain. The principal manufactures are leather the weaving of wool and smelting of iron ore. One of the most important branches of industry is the fishing of herring and cod, and trout, which on the coast, and some inland lochs, is carried on to a great extent, and is generally good. It has also internal water communication by the Caledonian and Crinan Canals the latter lying wholly within the county and shortening the passage from the Firth of Clyde to the W. Highland by 120 m. Nothing has given a greater impulse to the agriculture and industry of Argyllshire than the extension of steam navigation. By this means the most distant parts of the county are brought into easy communication with one another and with Glasgow to which the inhabitants can now send their stock and produce with the certainty of a ready market. Among the requisites for the prosperity of the country are the abundance of the minerals of the earth, the fertility of the soil, the remains of a Christian population in Ormsay and the castle of Dunstaffnage on Loch Ewe, Ardshearnach on the Sound of Mull, Slievean in Canbyrie, and Kilchurn on Loch Awe. The most potent of its natural attractions are the

humble columns and arches of shaft. Argyre is the birthplace of Ovidius and the scene of many of the occurrences recorded in his poems. The cave of shaft still bears the name of Fingal's Cave. The population of the entire county which in 1801 was 81 2 7 in 1851 amounted to 89 298. Parliamentary constituency for 1844-5 1768. Valued rental, £12 406, 6s 10d; annual real value in 1815, £287 485.—(*New Stat. Acc.*) *Forryth's Bonnet of Scotland*. Hon. Mrs Murray's *Guide to Bonnet of Scotland*. Anderson's *Guide to Highlands* &c.)

ARGYRO CASTRO or ENOS CASTRO (Turkish, *Birgöl*) is a European Turkey in Albania, 1 hour Eagle or Argo, 40 m N W Janina. This town, fortified by an extensive castle perched on a rock of conglomerate, and commanding the mountain-pass of Derband is situated on several ridges of rock broken up by deep ravines, and connected by stone bridges. The houses are scattered over an irregular and broken surface, giving the town a singular and a romantic appearance. The place was taken and fortified by Ali Pasha in 1812. It was then a place of much greater consequence than it is now its population being in 1813 estimated at 13,000 but decay of trade, visitations of the plague, and the war of Greek independence, had reduced the inhabitants in 1839 to 2000 Albanians and 200 Turk families; most of the

by a patriot force, and nearly deserted by its inhabitants. The port is small and landing difficult, on account of the great swell of the surf except in the halist, or double canoes of the country which are constructed of inflated seal skins, and being

BOAT OF INFLATED SEALS.—From *Illustration* Voyage dans l'Asie Mineure Nord-Est.

managed by the natives with great dexterity will live where an ordinary boat would be swamped. On these Eagle barges all kinds of goods are landed. At the entrance to the roads of Argo lies the island of Gumea so thickly covered with the manure of the same name as to communicate no very agreeable odour to the prevalent W winds blowing over the island, right on the ships at anchor.—The distance of Argo is about 480 m long N W and R E and about 40 m average breadth L. to W. It is in general, extremely barren, consisting principally of sandy deserts with a few cultivated spots. In some of the valleys, Gumea pepper wheat, maize, and other crops are grown. Pop of the town about 8500 though once estimated at 80 000.

ARICATL See ARACATL

ARICATL a fishing port, Cape Breton Island 1° side Miramichi Island about lat 45° 28' N lon 61° 3' W. It contains several considerable establishments for prosecuting the fishery. The trade is for the most part in the hands of Jersey merchants who employ 40 people in the neighbourhood in taking fish. Large exports of which, both dry and pickled are made to the West Indies, to America and to Europe. Pop. between 1500 and 2000.

ARID a small Isl Indian Ocean, about 70 m S W Pascaud Island lat 46° 06' S lon 47° 20' E.

ARIEGE a river France supposed to derive its Latin name *Augere* from the grains of alluvial gold found in its bed. It has its source in Lake Embois at the foot of the Pic de Bramet, in the L. Pyrenees flows N W through dep. Arge, enters Haute-Garonne, and falls into the river Garonne at Tournai, about 6 m S Toulouse, after a course of about 83 m. It becomes navigable at Castelnau, 17 m above its mouth where Lord Hill, with a portion of the British force, crossed the Arge in 1814. The river abounds in excellent salmon trout, ale-fish, &c.

ARIEGE, or ARIGNON, a dep France, on the Spanish frontier comprehending the former *Comté de Foix*, nearly the whole of Couserans in Gascony some communes of ancient Languedoc, and a considerable portion of the Pyrenees; bounded W and N by Haute-Garonne, E by Aude, S E by Pyrénées Orientales, and S by the valley of Andorre and the Pyrenees. Area, 1 124,816 ac two-thirds of which are covered by mountains length E. to W 64 m; breadth, N to S 48 m. The mountains rise gradually from N to S and reach their greatest elevation on the extreme frontier in the Pyrenees. The principal summit is Montcalm 10 668 ft high. The others range from an altitude of 10 611 to 6289 ft. the height of the Puy Marous. The various branches stretching from E to W separate the department into two valleys, the one watered by the Arge, and the other by the Salat. These two rivers are the only navigable ones. Among numerous other streams are the Volp, the Arze, the waters of which pass under ground in

ARGYRO CASTRO.—From *Illustration* Voyage dans l'Asie Mineure Nord-Est.

few Turks there resident being government officials or soldiers. The vale of Argyro Castro which is of a pastoral character is 30 m long and from 4 to 5 wide.

ARIAN (1) a town Naples prov Principato Ultra, 44 m N E. Naples, on a steep hill in one of the most frequented passes of the Apennines on the main road from Naples to Puglia. It is the residence of a superintendent of education and of a suffragan bishop. It contains a handsome cathedral, 12 parish churches, several convents, an academy, a hospital, several mills, and some earthenware manufactures. It suffered greatly from earthquakes in 1406 and 1792. Pop. 11 18.

ARICA a maritime town Peru cap dist of its own name dep. of and 200 m S.E. from Arequipa 200 m N W Potosi situated in an agreeable valley upon the coast of the Pacific lat (miles) 18 26 0 S lon 70 24 W (h) The houses are chiefly constructed of cane and reeds, covered with mats. Glass beads are manufactured in the town and near it salt is obtained plentifully. Arica was formerly a more considerable place than it is now and had a larger population. From this port, the produce of the celebrated mines of Potosi, in Bolivia, were shipped. It has now fallen into comparative insignificance, and it at various times suffered severely from earthquakes especially in 1839 when it was almost entirely destroyed. It is the principal port through which foreign business is carried on with Bolivia, that country not possessing any other valuable port of its own. The customs revenues of Arica in 1845 amounted to £4,154 and in 1846, to £64,878. During the war of independence in 1821 Arica was much injured by military operations, having been attacked

two places and the Lase all of which flow into the Garama. In the N the climate is mild and temperate, but in the S. the heat is oppressive in summer and the cold extreme in winter. The higher lands in the S. furnish principally wood and pasture, with some medicinal plants the lower are remarkable for their fertility particularly in the N districts about Pansera, % Garama and Maropos. Chief products—corn, wheat, maize, millet, potatoes, hemp, and flax. The arable land in the department extends to 868,692 ac. meadows, 52,835 ac. vineyards, 28,608 ac. wood, 222,664 ac. heath and barren land, 222,664 ac. The vine is cultivated up to the middle of the highest mountains. The wine is of it different quality and is entirely consumed in the district. There are numerous orchards and woods of chestnuts which yield a great deal of fruit. A large quantity of cattle, sheep, and goats, are reared. Bears, wild boars, wolves, foxes, badgers, rosbucks, chamois, pole cats, otters, hares, and rabbits abound in the forests and mountains also eagles and other birds of prey. Baptils and vipers are found in the marshy places, and trout and cray-fish in the rivers and lakes.

The staple trade of the department is iron the principal mines of which are at La Harcel in the V. Idessous which supply nearly 60 furnaces in the one department alone. Lead and copper are procured in various places and also small quantities of silver. Marble, Jasper, gypsum, diatom and coal, are worked. Cloth luxury cotton stuffs, woollens, linens, hats, soap, earthenware, and china, leather paper and glass, are manufactured and iron, cattle, cork, ream, wool, marble, and jasper exported. A considerable traffic is carried on with Spain the goods being transported over the I. pyrenees chiefly on mule or horseback.

The department, of which Felix is the capital is divided into three arrondissements—Felix, Pansera, and St. Groux, and subdivided into 30 cantons and 836 communes. Pop. 2,0155.—(Murray's Handbook for France, French Official Tables.)

ARIFAZO is a Naples prov. Terra d. Lavoro 18 m. N. E. Naples, on Mount Tifon between Naples and Benevento and said to have been founded by the Normans. It has seven parish churches, an hospital, and a *mont-d-pied*. Pop. between 10,000 and 11,000.

ARIGNA a coal and iron dist. Ireland, in the N. of co. Roscommon on the stream of the same name. Attempts have repeatedly been made to work the mines of it is distributed, but hitherto without any advantageous result.

ARINOR, a river Brazil, prov. Mato-Grosso. It rises in the Paracatu mountains, which form part of the N. boundary of the Diamond District, takes a N. W. course, and falls into the river Papajoe an affluent of the Amazon in lat. 8° 30' S. lon. 56° 20' W. after a course of about 700 m.—(Din. Geo. Imp. Brazil.)

ARIFO a small in. W. coast in Caylon Gulf of Mennar Bay of Coadistaly 120 m. N. Colombo lat. 6° 40' N. lon. 80° 0' E. The surrounding country is sterile. To the E. is a bank where the pearl fishing is carried on, in the Gulf of Mennar and during the fishing season the civil and military authorities reside at Arapo.

ARISH or ARANER (Ri) a fort and vil. Egypt near the Syrian frontier 168 m. N. E. Cairo lat. 31° 30' N. lon. 28° 57' 45 E. (N.) on a low eminence about half a m. from the Mediterranean, on a creek and small river of the same name. It has fragments of columns and other architectural remains, and is supposed to occupy the site of the anc. El-nekeles but, in modern times, it is remarkable only as giving name to a convent July 24, 1800, between the Turks and French after the position of the latter in Egypt had been rendered insecure by the battle of the Nile, by which the French agreed to leave Egypt within three months.

ARINPE is a Mexico I. bank, Bocoros, esp. in the bay of same name lat. 30° 42' N. lon. 109° 16' W. about 190 m. E. the Gulf of California. This town, says Major Pitts, is celebrated throughout the kingdom for the vast quantity of gold table usually made use of in the houses and for the urbanity and hospitality of the inhabitants. The pop. has been variously stated from 2400 to 7600 it may probably be between the two.

ARIEL, or LARIEL, a river France, which rises near Puy Jagon among the mountains of Espise, a branch of the I. pyrenees, dep. Arriège, and, after a course of about 25 m.

falls into the Garama opposite Carbonea. Near Mas-d'Ash, in lat. 45° 5' N. lon. 1° 30' E. it traverses Roche-du-Mas, one of the most remarkable caverns of the Pyrenees. Two lofty precipices slanting towards each other meet at their summit and form an immense arch, which is capable of sheltering 2000 men, and under which the Arise flows. The two entrances to this cavern are wide and were at one time fortified by high walls. In 1325, during the religious wars, the Catholics of the surrounding districts took refuge here, and successfully withstood all the attempts of the K. ensoble army to force them to surrender.

ARJISH or ARJONIAN (anc. Arzoe, Arzonia) a small in. Kurdistan, Turkey in Asia, near Van, on the N. W. shore of the lake, and 40 m. N. W. the tn. of that name. It has a castle now in a ruinous condition. In the neighbourhood are some beautiful gardens and throughout the district large quantities of corn and cotton are produced. Lake Van is sometimes called Lake Arjish.

ARJISH or FARKH-DAGH (anc. Argens) a celebrated mountain Asia Minor 117 m. N. by W. from the head of the Bay of Iskenderoon lat. 39° 5' N. lon. 35° 40' E. Its height is estimated, by Humboldt, at 13,137 ft. and by Hamilton at 13,100 ft. It rises up almost to a single peak, from a broad and extented base, consisting entirely of volcanic rocks and numerous sanders of different kinds. Its steep sides are studded all round with numerous cones and craters, the effects of volcanic action at various periods. Being nearly destitute of trees, and exhibiting little or no cultivation it has an extremely inhospitable look an effect which is increased by the black, rugged and sandy appearance of the rocks. The lowest limit of the snow line was found, by Mr. Hamilton, to be 10,800 ft. The elevation of this mountain is so great and so unusual in this part of the world that the inhabitants of the surrounding country look upon it with awe and astonishment, and have associated it with many fables.—(Hamilton's Asia Minor, Anaswerth's Journey from Angora to Jbr.)

ARJONA a tn. Spain in Andalusia, prov. of, and 14 m. N. W. from Jacon on a mountain slope 311 built, but having a pretty promenade, with a church and five schools, a cemetery, a storehouse, hospital and prison. The inhabitants are employed in agriculture, domestic weaving and grinding all Pop. 8000.

ARJONIA A a tn. Spain in Andalusia, prov. of and 16 m. N. W. from Jacon a plain surrounded by hills tolerably all built, and having a church and three schools, a cemetery, hospital, prison, and slaughter. The inhabitants are employed in tillage, tanning leather and making bricks and tiles. Pop. 2400.

ARK or ARCA a small in. in d'l. (Iroquois) Channel Van Diemen's Land between Drume Island and the mainland lat. 43° 17' N. lon. 147° 18' E.

ARKAIO or ARCHAE (Loon) a solitary but beautiful lake, S. part of Inverness-shire Scotland, 16 m. long by 1 broad. It communicates with Loch Looch from which it is only about 2 m. distant, by a dark and sluggish stream. The lake is but little frequented although the scenery around it is of surpassing beauty.

ARKANEAR, one of the southern U. States of America, bounded, N. by Missouri, F. by the river Mississippi, which separates it from the States of Mississippi and Tennessee E. by Louisiana and Texas and W. by the Indian territory. It has between lat. 33 and 36° 30' N. and lon. 89° 30' and 94° 30' W. and is 240 m. long by 228 wide area, 54,600 sq. m. or 34,830,000 ac. The E. part of Arkansas, watered by the numerous tributaries of the M. Mississippi is low flat and marshy thickly wooded, and subject to frequent inundations. The middle is more diversified having an undulating and partly hilly surface, though of considerable elevation. The W. is more hilly being traversed by the Ozark range, which extends into Missouri, and at some points, attains the height of 2000 ft. In various parts there are prairies of immense extent; and extensive forests of large trees, consisting principally of oak, hickory, elm, cotton, linden, maple, locust and pine. The territory is generally well watered though in many parts it is otherwise. Its principal rivers are the Arkansas, the Red River, the White River, the St. Francis, and the Washita or Ouachita, all tributaries of the Mississippi. Near the centre of the state are numerous hot springs the temperature of which, though variable, rises in the driest seasons to the bot-

big point. They are much richer in the chrome and pyritic affections. The highest lands are considered the most healthy and the climate is generally mild but is said to be unfavourable to recent settlers. The soil is various the most fertile being that which skirts the rivers. The staple crops are cotton, maize and cereals but garden plants and fruit-trees are likewise cultivated with success. Wild animals abound, and the domestic species are reared in considerable numbers. Iron, coal, salt, lead and other minerals are found. Manufactures and commerce, still limited, are increasing. The state has no colleges, and few common schools. The Arkansas territory originally and still partly occupied by Indian tribes, was colonized by the French in 1683, under the Chevalier de Tonty. In 1803 it was ceded by purchase to the U States and, in 1810 was made a separate territory having been formerly part of Louisiana. Seventeen years afterwards, its constitution was framed, and it was admitted into the Union. The governor is elected by the people for four years, the senators for four and the representatives for two. The state sends one member to Congress. Arkansas is divided into 54 counties, and contains but few large towns and villages. Pop in 1840 97,514 of which 19,914 were slaves, and 465 free people of colour. Total pop in 1840 209,638. — (*U States Gazetteer* Liverpool *American Gazetteer*).

ARKANSAS, a large river U States, America, rising in the Rocky Mountains, about lat. 40° 30' N lon. 100° W flowing E.S.E. through the Missouri and Arkansas territories, and after a course of 2170 m. joining the Mississippi in lat. 33° 40' N. Its channel is broad and unobstructed by rocks, shoals, or rapids boats may at some seasons ascend the stream for 1400 m. It has numerous tributaries the principal being the Neosho, the N., and the Canadian, with its branches, on the S. Among the upper component streams or rivers, and along the banks of the main river lies an extensive plain of reddish sand, based on a thick stratum of rock salt, and covered in dry hot weather with a crust of white, crystallized salt, several inches deep, and named from these circumstances the salt prairie, grand salin or salt plain. — (*U States Gazetteer*).

ARLINGTON DALE a par and township, England, co York N. R. ing 14 000 ac N. by W. Richmond. Pop. 1243.

ARLINGTON a par England to Dorset 2320 ac A. Rufford Walsby. P. 512.

ARLINGTON a par England to Dorset.

ARKHOUR a par England to Dorset.

ARKIKO or **ARKIKO** a seaport Abyssinia, at the head of the Bay of Massawa lat. 12° 28' N lon. 36° 27' E. It is a small miserable place consisting entirely of mud hovels and is surrounded by a fat and sandy country with a few gardens in the immediate vicinity. It is governed by a nayib or native chief and derives its importance from being the point of the coast nearest to the Abyssinian territories, and through which all intercourse by sea to the N of that country is now carried on. The principal exports are ivory and slaves, sent to Arabia, five arms being taken in exchange.

ARKINSK a Cosack settlement in Siberia, gov of and about 30 m. W from Okhotsk, on the Okhotsk, which a little higher up, receives the Arka. It was originally founded for the purpose of facilitating intercourse with the indigenous population, and is one of the outposts whence the Yakut or tribes levied on the natives is collected. The station export to Okhotsk the name of the steam-ship, a tree which here, though nearly upright in summer lies prostrate, covered with snow in winter and they do also a good business in collecting the soft horns of the reindeer for the Russian traders to Khabarov, where the horns are sold to the Chinese, who make them into a jelly much sought after by gourmands. The native Tungusians also make a jelly of these horns, but they only use it for glue. — (*Erman's Travels*).

ARKLOW a seaport in and par Ireland, co Wicklow. The town lies on the S bank of the Avon, 14 m. S.E. W Wicklow and 39 S.E. Dublin. A bridge of 19 arches here crosses the river which falls into the sea about 500 yards below the town. It is divided into the upper and lower town. The houses of the former are neatly built. The church a handsome edifice, is at the centre of the town which also possesses a R. catholic chapel, and a small Methodist meeting-house. The lower town, built mostly of shagged mud cabins, is inhabited prin-

cipally by fishermen engaged in the herring fishery and in dredging for oysters the latter chiefly sent to Liverpool. The harbour being much obstructed at its entrance by a bar is resorted to by the native fishermen only. The town contains a school for boys, two schools for girls, a savings bank a fever hospital a dispensary and a constabulary and an infirmary barracks. Some little business is done in the malt trade. At one period a considerable portion of the copper ore obtained from the Wicklow mines was exported from Arklow. The principal export is coal. — The RARIST of Arklow at the S.E. extremity of the county 8110 ac. contains the celebrated mountain of Croghan Kinella which about the close of the last century was supposed to possess native gold and mining operations were established there by Government, but the works were destroyed in the insurrection of 1798. They were afterwards resumed but no gold being discovered, they were ultimately abandoned. Pop of in 1830 1000. — (*par* 1122).

ARKONA or **ARCONA** a promontory N coast, in Rugen in the Baltic. There is here a fixed light, 908 ft above the sea level lat. 54° 40' N lon. 13° 20' E.

ARKEBY a par England co York W Riding 5920 ac.

ARKEBY a par England co York W Riding 5920 ac.

ARKUDI a par England co York W Riding 5920 ac.

ARLAN or **ARLAN** a par France dep. Puy-de-Dôme (Auvergne) 40 m. S.E. Clermont. apparently situated on a hill at the foot of which flows the Dore. Manufactures — bladders, beads, and ribbons. Pop. 1632.

ARLANZA a river Spain in Old Castile rising in the Sierra de Buller prov Burgos it flows W and after receiving the Pedrosa and other tributaries, joins the Arlanzon about 8 m. N. E. from its confluence with the Duero, after a course of about 60 m.

ARLANZON a river Spain in Old Castile rising 24 m. E.R.E. Burgos, in the Sierra Utrera, and flowing through Burgos, whence it flows W and falls into the Duero 3 m. N. Y. Torquemada, after a course of about 70 m.

ARIBERG or **ARIBERG** (Eagle's mound) a branch of the Rhodian Alps, in the W of the Tyrol and the Vorarlberg, between the narrows of the Ill and the Lech. The chain is traversed by a road made by the Emperor Joseph II. in 1786, and greatly improved since 1835, along which there is much traffic between Venice, Trieste, and Switzerland. A hospice was erected on the summit in 1866, to shelter travellers from the Alpine snows.

ARLETON a par England, co. Cambridgeshire 6700 ac 643. Whitehaven new church and coal wharves. Pop. 643.

ARLES [anc. *Arletum*, *Arelatum*] a town, France, dep. Bouches-du-Rhône (Provence) cap. arrond. of same name, and of two cantons, 1 hank Rhone, about 24 m. N from the sea, and 17 m. N. P. Arles. It stands a little below the angle of the delta formed by the two branches of the Rhone, on a rocky table of shell limestone, which slopes gradually to the river. Its old ramparts, which are not now used, enclose a space of 193 ac. The streets, though not laid out in perfectly straight lines, are tolerably regular and spacious but the pavement, composed of round flints is fatiguing to the foot, and inconvenient. The squares, which scarcely exceed three in number are of limited extent, but regularly formed. The principal one is the Place Royale which is used as the market place, and occasionally as a circus for bull-fights — a sport to which the youth of Arles are much addicted. The principal ornament of this Place is an ancient obelisk, a mass of granite, the only one executed out of Egypt. It was discovered in 1689, but not set up till 1676, when it had butts, it was crowned by a globe of *Jeux-de-Haut*, and dedicated, by inscriptions on its pedestal to Louis XIV. It is about 60 ft. in height, and being well placed has an imposing effect. Around the Place Royale are a series of public buildings — the Hotel de Ville, an edifice of three stories, decorated with a row of Corinthian pillars, surmounted by a tower and containing on the first story the public library of about 12,000 volumes, the museum, occupying the old church of St. Anne the Gothic monastery of St. Trophime and the ancient palace of the archbishops of Arles. The other buildings of note in the town are the cathedral built by St. Virgilius in the seventh century adorned without by a fine porch and facade, and within by some fine paintings; the church of Notre

Dome, said to have been built on the foundations of a temple of Cybele; the church of St. Honoré which was founded in the sixth century and in which a series of ancient frescoes analogous to those of Pompeii, has been recently discovered. The whole town, indeed abounds in ancient monuments, the most interesting of which is the Roman amphitheatre, which was fitted to contain 24,000 spectators and, both in size and magnificence is supposed to have surpassed that of Nîmes. Arles is the chief place of a *sous-préfecture* and

THE CATHEDRAL, ARLES, from the Grand Place.
From the *Illustration* of *France*.

possesses a court of commerce a chamber of manufactures, an agricultural society a communal college, and a school of hydrography. Its manufactures, which are not of much importance, are almost confined to hats and famous stockings. It has also silk-mills and builds some vessels. Its trade is extensive, and gives it, in respect of exports the fifth place among the ports of France, Arles ranking immediately between Rouen and Nantes. It possesses admirable facilities for trade. Its quays, which are well paved and very spacious, serve as an entrepot for all the merchandise which passes between Lyons and Marseilles. In addition to the Rhone, on which steam vessels passing Arles regularly ply two canals terminate in the town, one connecting it with the Durance and another proceeding S. to the Port de Bouc. To these means of communication, a valuable accession has recently been made by railways. The great railway which is to pass through Paris and connect the Mediterranean with the English Channel has been completed from Arles to Marseilles, while a branch of the same railway proceeds from Arles to Nîmes. Arles possesses great historical interest. It is mentioned by Julius Cæsar who, previous to the siege of Marseilles (Mannha) built twelve war-galleys at the port. It was once an arch-bishopric, and makes an important figure in ecclesiastical history as the place where several celebrated councils have been held. Its ancient magnificence is still amply attested by numerous remains of splendid edifices.—The ARRON of Arles consisting of eight cantons, subdivided into 83 communes, has an area of 690 sq. m. Pop. of 14,289 of around 25,222 —(*Dut. de la France*).

ARLESHEIM a small tn. Switzerland, cant. of and about 5 m. S. from the town of Basel, in a fertile district, 7 km. N.W. 1154 ft above the sea. It is well built, and has some baths but is chiefly remarkable for the beautiful botanic garden. On a hill close by is situated the ancient castle of Bismark. Pop. 600.

ARLES-LES-BAINS a tn. France, dep. Pyrénées Orientales (Roussillon) 30 m. S.W. Perpignan. It contains an ancient church, the front and portal of which are enriched with curious carvings in white marble. Manufactures —saw, hoops, deals, and leather. In the neighbourhood are some iron forges and,

at a short distance, the small fortress and village of Arles-les-Bains, now Arles-les-Bains, whose hot mineral springs are much resorted to. Pop. 1939.

ARLEY a par. England, co. Warwick 1979 ac. W by 8 Nuneaton. Pop. 278.

ARLINCHAM a par. England co. Gloucester 3220 ac. S.E. Newnham. Pop. 737.

ARLINGTON two parishes England —1 Co. De co. 2085 ac. N. N. Barnstable. Pop. 208.—2 Co. Sussex 518 ac. W. S.W. Hailsham. Pop. 814.

ARLON (anc. *Orléans*) a tn. Belgium cap. prov. Luxembourg 104 m. S.E. Brussels, and 10 m. W. N. Luxembourg. It has two churches and a chapel, a town house, an hospital, a court of primary jurisdiction, an atticum, a school of design and several history schools. It is the best corn-market in the district. Its houses are well constructed for clean, leather and on a small scale carbon or delivernance. The antiquary of Arlon is assisted by notes and inscriptions on several busts of heathen deities which have been discovered near it. It has frequently suffered by the ravages of war both in ancient and modern times. Its last disaster was in 1793 when it was pillaged by the French after the victory which they gained in the neighbourhood over the Austrians. Pop. 4508.

ARLSEY a par. England, co. Bedford 2870 ac. A.W. Bedford. Pop. 1095.

ARMA (SANTIAGO DE) a tn. in New Granada prov. Antioquia, on the Arma, a tributary of the Cauca, 71 m. S.E. Santa Fé de Antioquia. The climate is very hot. The district produces gold, and all kinds of grain and fruit.

ARMACAO a small tn. Brazil island of St. Catherine prov. of that name lat. 27° 30' S. lon. 48° 40' W. There is a whole-salting establishment here.

ARMAGH an island co. Ireland, prov. Ulster having the ext. Down on the S. Lough on the S. Monaghan and Tyrone on the W. and Lough Neagh on the N. It is about 34 m. in length, from N. to S. and is broadest at the widest part about 21 m. It contains 323 036 ac. of which 265 243 are arable, 35 117 unencultivated 8908 plantations 17 942 water and 778 occupied by towns. The surface, generally is undulating and flat, excepting in the S.E. where it rises into hills of considerable height, the highest attaining an elevation of 1938 ft. above the sea. Grass is the principal crop. In other parts grassy tracks and slacks are the prevalent crops, while red sandstone predominates along the margin of Lough Neagh. The minerals of the county are considerable but they include a very beautiful description of marble of which there are quarries near Armagh. The soil is in general fertile, except in the mountainous district. The chief crops are wheat, oats, barley, potatoes and flax.

ARMS & LAWS (CHIEFS IN 1821)

	A m.	Brought forward	179 919

There are also a great many productive orchards in the N.E. parts of the county the greater portion of the produce of which is sent to Belfast and occasionally to Glasgow. Some dairy cows are kept, and a considerable quantity of butter is made. Cattle, of a small standard breed are reared in the mountainous districts, sheep few and inferior. The weaving of cotton and linen is carried on to some extent particularly the latter which has long been the staple manufacture. The farms here are smaller than in any other county in Ireland, running mostly from 2 to 15 ac. yet the condition of the lower orders as regards house accommodation, is better than in most other parts of the kingdom their cottages being generally whitewashed well clothed, clean, and comfortable. In 1845, there were 71 national schools in operation in the county attended by 7973 children. The whole number attending the various schools, in 1841 was 12,553. The county is divided into eight baronies and 28 parishes and returns three members to Parliament two for the county and one for the city of Armagh. Constituency of the former in 1849 1242 of the latter 753. Principal towns Armagh

and Lurgan (old) and Pop in 1841 232,383 of which 211,896 is in the rural, and 20,500 in the urban district, being 611 persons to the sq. m. of arable land, and 414 to the sq. m. of the entire area of the county in 1861 198,065

ARMAGH [anc. Irish, *Arda Macha*] a city Ireland prov. Ulster cap. of the above to 70 m N by W Dublin and 55 m S.W. by B. Belfast, finely situated on the sloping sides of a gentle eminence, the summit of which is crowned by the cathedral. The streets are well laid out, regularly built and well kept and lighted. Most of them converge towards the cathedral, others ascend in more oblique directions, and are intersected by those of greater magnitude which encircle the town. The houses are of a hard reddish calcareous stone, and generally slated. A number of the public edifices are of brown limestone, of a vivid colour and are for the most part, advantageously situated. The town is well supplied with water by pipes from a reservoir on an eminence in the neighbourhood. The most conspicuous and most interesting architectural object in the city is the cathedral. Its original foundation is ascribed to St. Patrick in 455, the present building, erected in the 12th century, is in the Gothic or pointed style and to the form of a cross 183 ft long, with a tower and spire, the entire height of the latter from the ground to the weathercock being 150 ft. Some years ago it was repaired and beautified, chiefly at the expense of Lord John G. Bessborough, who contributed £10,000 for the purpose. On an eminence N of the town stands the new R. catholic cathedral, a large and spacious building in the pointed Gothic style. It contains several monuments, but all of comparatively modern date, none of those belonging to the original cathedral being now in existence. There are, besides a Protestant chapel of ease a R. catholic chapel two places of worship for Methodists, three for Presbyterians, and one for Independents. The other public buildings are the county court-house prison as I formerly the district lunatic asylum, which c. £220,000 the royal school, styled the college public library, built and endowed by private subscription, in 1741 containing 14,000 volumes, some accounts say 30,000 a market-house a brown linen hall a yarn-hall and custom buildings the last including a spacious warehouse various hospitals and charitable establishments and a number of schools comprising a national and Sunday school. Near the city is the archiepiscopal palace, with a domestic chapel and extensive and well laid out grounds, open to the public the mall a place of public recreation an observatory with a very superior astronomical apparatus and barracks for 800 men. The principal business of the place arises from the retail trade, for the supply of the populous surrounding district, and the weekly market, where a good deal of agricultural produce is sold as well as the iron made in the neighbourhood. Considerable quantities of corn likewise are sent to it for export and for exportation. There are here a few more several tanneries and flour-mills. There were formerly two distilleries but they have ceased working. Armagh is the seat of the archiepiscopal see of the province of all Ireland whose ecclesiastical province comprises six consolidated dioceses.

The city is of great antiquity. In 446 a synod was held in it by St. Patrick, the canon of which called *Canons of Armagh* or Patrick's canon are still extant. They composed the celebrated Book of Armagh which was considered of such value, that its safe keeping became a hereditary office of dignity in a particular family who held eight town-lands, as remuneration for the responsibility. In the Middle Ages, it was considered the metropolis of Ireland, and so considered that distinction was transferred to Dublin. It is still however the ecclesiastical metropolis of the kingdom. It was at one time celebrated for its college, which long continued one of the most famous seminaries in Europe. Armagh has been at various intervals, from the most remote times, subjected to some of the worst calamities of war having been often captured plundered, and burned, alternately by Danes, Celts, English, Scotch and, not unfrequently by the Irish themselves when at war with each other. On some of these occasions, numbers of the inhabitants were carried into captivity by the victors. Armagh returned two members to the Irish Parliament, but sends one only to the British House of Commons. Constituency 751. Markets are held on Tuesdays for general purposes and on Wednesdays and Saturdays for grain. The population seems to have been on

the decline latterly. In 1841 it was 10,265, of which rather more than one-half were R. Catholics. In 1861 it was 8849.

ARMANÇON a river France, rising in dep. Côte-d'Or and flowing N.W. parallel to, for a considerable distance, to the Bourgogne Canal which crosses it by a fine aqueduct, it passes Tonnare and falls into the Yonne, about 8 m. S.E. Joigny after a course of 118 m. of which about 16 are navigable. It receives as tributaries the Brenne, Armançon, and some other rivulets.

ARMENIA a mountainous country of W Asia, not now politically existing but of great historical interest. It varied in extent at different epochs, and its precise boundaries are not now known but it may be regarded as lying between lat. 36° 50' and 41° 41' N. and lon. 26° 30' and 48° 40' E. It was sometimes subdivided into First, Second and Third Armenia, to which a Fourth was afterwards added but the division by which it was almost universally known was into Armenia Major and Armenia Minor or the Greater and the Less Armenia. The boundaries of each, according to Col Chesney the latest authority on the subject and probably the best are as follows:—Armenia Major commencing at Barmat set, stretches along the Euphrates which bounds it on the W till near Erzingan a few miles to the E. of which it quits the river and keeps the direction of Tarsabuz as far as the mountains S. of Ghannush Khana. It proceeds N.E. along this range then curves the N. extremity of the district of Kara, and passing onward to near Tiflis becomes the right bank of the Kur where course it follows to its estuary in the Caspian which now becomes the boundary on the E. Leaving the Caspian, it turns S.W. in the direction of Tairez, and passes through the districts of Van and Diarbekir on the frontier of which it again meets the Euphrates at Nimselat. Armenia Minor or as it might be called the territory W of the Euphrates, lies along the range of the Koff tagh which runs W almost parallel to the Black Sea, and forms the N. boundary as far as a point on the range of the Hillys or Kind Jemel, not far from its estuary in the Black Sea. Armenia Minor follows the course of this river for about 130 m. and continuing S.W. crosses the Taurus, which becomes its boundary almost to the sea, near Ayas, on the W. side of the Bay of Iskenderoon. From this point it sweeps round the S. side of the districts of Adana and Marash and meets the Euphrates which thus intersects Armenia almost centrally and forms the natural boundary between the two divisions now described. Armenia Major has an area of about 64,000 sq. m. Armenia Minor about 70,000. The territory of this once celebrated kingdom is now partitioned among Turkey Persia, and Russia. The first of these powers possesses the largest share being that which borders on the Euphrates, and includes the N. part of Diarbekir with Moosh, Van, and the jebels of Tarsabuz. The share of Persia forms part of Kurdistan and almost the whole of Azerbaidjan. The share of Russia forms the government of Armenia. It stretches along the river Aras and is sometimes known as the district of Erivan.

The plateaus of which Armenia chiefly consists is mountainous and volcanic. The ridges, of which there are four principal are generally parallel to each other running with sandy deviations, E and W and between them are broad valleys and plateaus that of the Aras at Mount Ararat, being 3250 ft., and many others 5000 to 8000 ft. above the sea level. The mountains are mainly composed of true trap porphyry with slate, limestone &c. appearing on the sides of the chains, and sometimes rising up with the porphyry. Granite is also met with but is not frequent and in the N. in the Turkish province of Akabik, tertiary fossiliferous formation is found. Its volcanoes are all quiescent unless we except Ararat, of which an eruption took place in 1840 accompanied by a disastrous earthquake. A few mountains, as Ararat, Alagheh, and Bangli-dagh, rise above the line of perpetual snow but this is not generally the case and there are no peaks but such as can be crossed in a single day. Silver lead iron and copper are found in the mountains and the last two have to some extent, been wrought in modern times. Rock-salt is plentiful and is exported in considerable quantities, to Persia and elsewhere. Mineral waters abound but little or nothing is known of their constituents, or of their medicinal qualities.

Several important rivers take their rise in Armenia, namely the Kur or Tigris, and its tributary the Aras or Arax, flowing E. to the Caspian Sea the Aksump or Tchorak and the

Ilays or Kidil Irnak, flowing N to the Black Sea and the Tigris and Euphrates, which flow into the Persian Gulf. There are also several minor tributary streams. The only considerable lakes are those of Van, 70 m in length, and about 26 in breadth. Gushik, Savvaga or Sevan, N E. of Erivan, about 40 m long by 15 broad and Crumlyah.

The climate of Armenia is very severe, presenting quite a contrast to that of the warm regions of the lower Euphrates, and to the mildness prevalent on the shores of the Black Sea. Any one indeed leaving the shores of the Pontus in April and travelling rapidly S. may in one week experience the deluges and disorders of three seasons of the year. On the shore of the Black Sea he leaves spring in her most bounteous garb on the plateau of Erzeroum he meets stiff, cold winter and sees before him a wide extent of country covered with snow and ice. In Mesopotamia he finds approaching harvest, and the farmer busy with artificial irrigation to counteract the effects of the burning heat. Winter in Armenia, continues from October to May spring and harvest a month each and the change to summer is very rapid. The heat, especially in the

valleys, during summer, is great and rain seldom falls. In Erivan which is a degree of lat. 8 from Trebizond the thermometer in winter falls 8° Fah. lower than it does in the latter and in summer it rises 24° Fah. higher. On the plateau of Erzeroum summer is still greater indeed, in the town of Erzeroum the snow lies in the streets for eight months of the year. F and S. E. winds in summer W winds in spring and N. E. storm winds in winter are most prevalent. Though severe the climate is, however esteemed healthy. The soil of Armenia is reckoned on the whole, productive though in many places it would be quite barren were it not for the great care taken to irrigate it. To such an extent indeed is the system of irrigation carried on, that in summer many considerable streams are wholly absorbed. Wheat, barley tobacco hemp, grapes, and cotton are raised and, in some of the valleys apricots, peaches, mulberries, and walnuts are grown. From the nature of the country the rearing of stock is carried on to a greater extent than agriculture. The horses are spirited, sleek and fiery. Pines, birches poplars and beeches flourish, but there are no thick forests except in the N. parts of the country. The flora is not so varied as might be expected in such an Alpine country in several respects it resembles the vegetation of the Alps of Tyrol and Switzerland.

The inhabitants are chiefly of the genuine Armenian stock but besides them in consequence of the repeated subjugation of the country various other races have obtained a footing. Of these the principal are the Turcomans, who still maintain their nomadic habits, and from whom the country has received the name of Turcomania. In the S. portion are the predatory Kurds and the Turks on the Taurus, Georgians and throughout the whole country Greeks, Jews and Gypsies. The total number of Armenians has been estimated at 2,000,000 of which probably one-half are in Armenia. The remainder like the Jews are scattered over various countries and being strongly addicted to commerce, play an important part as merchants. They are found over all W Asia about 200,000 are in Constantinople and its vicinity numbers are in Russia, Hungary and Italy some in Africa and America and a large number in India, chiefly in the great marts Bombay, Madras, and Calcutta. Every where they are engaged in banking and trading. In physical structure, they belong to the Caucasian race, and, in general are well made. Their eyes and hair are black, their look lively noses aquiline, and their complexion somewhat swarthy. The women are remarkable for the delicacy and regularity of their features. Like the Jews, whom in many respects they resemble.

Vol. I.

their ruling passion appears to be an insatiable love of gain but they are generally esteemed honest. Their manners and customs are good and those who are educated are distinguished by superior cultivation and refined manners. But the mass of the people inhabiting their native country in consequence of centuries of neglect, are greatly ignorant and superstitious. The Armenians embraced Christianity in the fourth century; and in A.D. 336, separated from the Greek church, being dissatisfied with the decisions of the council of Chalcedon. In doctrine, they hold that there is only one nature in Christ, and that the Holy Spirit proceeded from the Father alone. They have seven sacraments, but in the mode of using them differ in several respects from the R. catholics. They adore saints and images, but do not believe in purgatory. Their hierarchy differs little from that of the Greeks. The catholicos, patriarch or head of the church has his seat at Echmiadzin, a monastery near Erivan. A minority of the Armenians, chiefly those residing in European countries, acknowledge the Pope and conform, in doctrine and church government, to the R. catholic church. They are called United Armenians.

TALARAN CHURCH AND MONASTERY OF ECHMIADZIN
From Diction. V. p. 140. et. de G. m.

The monastery of Echmiadzin, the seat of the catholicos, or head of the Armenian church lies in the valley of the Aras, 13 m. P. Erivan near the village of Yaghrabad which is also frequented by though improperly called Echmiadzin. The monastery is surrounded by a wall 80 ft high and entered by four gates, and flanked by towers, which, as well as the walls are built of brick, crowning the base and furnished with loop-holes giving to the whole structure the appearance of a large quadrangular fortress.

The monastery was founded in A.D. 324 but the church it contains dates from the time of St. Gregory the enlightener who introduced Christianity into Armenia, though various additions have been made to it in later times. The monks have been a restless and a restless, but little good is to be expected from their labours, as they are unlearned ignorant, and superstitious. In a similar condition are the Armenian clergy in general who indeed are scarcely to be wondered at, when we know that any layman who has been chosen by the congregation, and has passed 4 days in the prescribed fastings and ritual observances of the church, may get ordination from the bishop, and may read mass, baptize, confirm marry give extreme unction and have authority too to forgive sin (Pardon). Such a fact makes it easy to understand why ignorance should prevail and the Bible in the vulgar tongue should be prohibited. Parrot not knowing Armenian, expected to converse with the monks and priests of Echmiadzin in Latin but none of them knew either Latin or Greek though of works in these languages, there were numbers in the library. Three of them could speak Russian, but all other European languages were unknown.

The Armenian language belongs to the most distant offshoot of the Indo-Germanic root, but still in its form and structure, has much that is peculiar; and to the east it is harsh and dissimilar. The old Armenian language also called Haezan, which is that of literature may now be considered a dead language. In the new Armenian language, which is divided into four dialects not differing greatly from each other than many Turkish words and the construction of sentences is regulated by the rules of Turkish syntax. With exception of some songs preserved by Archbishop Moses Chorenzisi, no specimens of the earlier Armenian literature have been preserved after the introduction of Christianity a great taste for the Greek language and literature arose, and a number of works in Greek and Syriac were translated into Armenian. Before A.D. 406, the Armenians had no alphabet of their own but used indifferently Greek Syriac, or Persian

chapters. In that year however, Massey Massey invented the Hixian alphabet, consisting of 38 letters (30 consonants and eight vowels) called, from its inventor Massey, and which still continues to be employed along with the modern alphabet. Armenian literature flourished from the fourth to the 14th century. Of this period, many writers have obtained a name chiefly as historians and chroniclers. Their works, which might throw considerable light on the history of the East during the Middle Ages, have hitherto been little consulted. Armenian literature began to sink in the 14th century and since that period scarcely any original work of importance has appeared, but, in all their wanderings, the Armenians have preserved a taste for native literature, and have set on printing-presses wherever they have settled, so that we find Armenian works printed in Amsterdam, Venice, Lophorn, Leuberg, Moscow Astrakhan, Constantinople, Smyrna, Echmiadzin, Ispahan Madras, Calcutta, Batavia, &c. The most interesting colony is that on the island of San Lazaro at Yen-see, founded by Abbot Maron Pedrosian in 1717, who there established a monastery academy and printing-press where important Armenian works continue to be turned down to the present time.

According to the native historians, the name Armenia is derived from Aram the seventh king of the first dynasty who, about a. r. 1800 gave a settled character to the kingdom. The Armenians call themselves Haiks or Haikans, and trace their origin in their old books, to Haac or Haider the father and patriarch of the people, a contemporary of the Arabian king, Belus. Armenia subsequently fell into the hands of different rulers and was exposed to many conflicts. The Romans and Parthians had many fierce conflicts but at last under Trajan, Armenia Major became a Roman province. It afterwards recovered its independence and was under the rule of its own kings. Kapor king of Persia attempted its subjugation in vain, and it remained free until 650 when it was conquered by the Arabs and. After this it several times changed its masters. In 1555, Belshin II. ceded it to the Persians, and the greater part has since remained under the Turkish dominion. Armenia Minor ultimately shared the same fate. Of the cities of ancient Armenia, some ruins are yet to be seen, which display a good style in architecture. The chief towns are Erivan, Erzeroum, Nakhichevan Van Akalick &c. (see note). Of ancient capitals there were several the most important of which was Artaxata on the Aras—(Wagner's Reise nach dem Ararat Farrer's Journey to Mount Diabli, Voyage autour du Caucase Constantinople, Izakoon, Broekman, 9th Edition.)

ARMENIA (RUBIAN) a trans-Caucasian gov. Russia, comprising that part of Armenia S. of Georgia, and V. of the Aras and Mount Ararat, and comprehending the majority of Ecdemadze. It was ceded to Russia, in 1827 by Persia, of which it formed the province of Erivan—a name by which it is still sometimes designated.

ARMENIENSTADT or SAMON LUYAR (Latin, Armenopolis) a town in Asiatic Transylvania. It is in N. E. of Klausenburg, lat. 47° 40' N. lon. 32° 52' E. It is well and regularly built, and the streets spacious and tolerably straight. It contains a neat Armenian church an Armenian school and an orphan hospital and is defended by a strong castle. The inhabitants are mostly employed in weaving and in cattle-breeding. A considerable transit trade is carried on with the interior. In the vicinity are salt springs and salt mines. Pop. 3060.

ARMPYNT EREMY or HERMONTY (Latin, Hermonopolis) a vil Upper Egypt, 1 hour, N. lat. about 8° N. E. of Thebes. It was the capital of the Hermonopolis nome, and in Christian times it was an episcopal see. Apollo and Jupiter corresponding to the Egyptian Mendoo and Amon; the golden Ido, and the sacred bull Bes, were here objects of worship. Its modern inhabitants regard it as the birthplace of Moses. ARMENTIERES (Latin, Armentaria) a town in France, dep. Nord, on the Belgian frontier 10 m. W. N. W. Lille, on the Lys, which has here a small harbour and an active navigation. The town which is well built, has a communal college or high school with factories for spinning flax, hemp and cotton yarn. There are also manufactures of woollen cloth, table linen calicoes, lace, thread best-root sugar and tobacco; bleachfields, distilleries soapworks, tanneries, and salt refineries with a considerable trade in grain, brandy from

tobacco soap, &c. Bricks are made in the neighbourhood in large quantities. Pop. 6675.

ARMENTO a town Naples, prov. Basilicata, 36 m. S. E. E. of Potenza, on the declivity of a rock. It has two *monte di pietà*. Pop. 2670.

ARMIAVSKOI BAZAR, or BAZAR OF THE ARMENIANS, a large vil. S. Russia, gov. Taurida lat. 48° 18' N. lon. 38° 43' E. 81 m. S. E. by E. of Klamon, and 83 m. N. by E. of Simferopol situated on the left bank of the Tauric river 2 m. S. of that town, on the railroad road from Simferopol to the Crimea. It consists of numerous narrow lanes, lined with houses built of stone, or of turf plastered over and enclosed by walls, which form the boundaries of the streets. It has altogether a filthy and mean appearance; but contains numerous and several mosques with wooden minarets, a Greek temple and a Russo-Greek church for the worship of the Tatars, Armenians, and Russians, who compose its population. Upwards of 40,000 earthenware of salt from the salt lakes of the Crimea, pass annually during summer through the village for the supply of the S. of Russia.

ARMINGHAM, a par. Eng. North. 650 ac. 1 sq. ARMITAGE par. Eng. Staffs. 1901 ac. Pop. 1014. ARMLEY a chapelry and vil England co. York, bar. and 2 m. S. W. Leeds on the Aire, with a jail house of correction an iron-plate and several dissenting chapels. It is an important seat of the woollen manufactures chiefly carried on for the Leeds market. 10 p. 6108.

ARMOY par. Ire. Austr. 9866 ac. 10 p. 1934. ARMCHURCH par. Eng. York. 2810 ac. P. 481. ARNA — a town on the W. limits of the Libyan desert, bank, N. lat. 430 m. N. E. from Lake Tzabid. Its precise position however is not ascertained. Arrowsmith place is in lat. 17° 13' N. lon. 21° 30' E. with a quarry and a kloper in lat. 18° 20' N. lon. 21° 40' E. with a similar expression of doubt. — 2 vil. Greek Archipelago on the N. W. where of the vil. of Andros.

ARNAUTS. See ARABIA. ARNAU or RIESSENHART a town in Bohemia, 1 mi. E. of Elbe about 25 m. from its source and 23 m. N. of Kunitzgratz. It is walled and has a castle, a lunatic hospital, townhouse and Franciscan monastery. The inhabitants are chiefly employed in weaving. Pop. 1439. The lordship of Arnau which is the capital lies along the Elbe, is well wooded, and rears a considerable number of cattle. The inhabitants, employed chiefly in spinning and weaving are 10,314.

ARNEY (Latin, Arnen) a town in France, dep. Charente (Maritime) 80 m. S. W. of Angoulême, agreeably situated near the Arnon. It is well built and well paved and has a high school manufactures of cloth and starch, tanneries, tile-works, corn and flax-mills. Its trade is in cattle, grain, wine, vinegar, hemp, wool, leather horse hair and poultry. Near this town Admiral Coligny the celebrated leader of the Huguenots under whom Henry IV. was then making his first campaign in 1570 gained a victory over Marshal Condé-Biron. Pop. 241.

Near this town Admiral Coligny the celebrated leader of the Huguenots under whom Henry IV. was then making his first campaign in 1570 gained a victory over Marshal Condé-Biron. Pop. 241.

ARNEDO a city Spain, Old Castile, prov. of, and 37 m. S. E. from Logroño, near the N. bank of the Ulla, an affluent of the Ebro on a gentle declivity surrounded by mountains. It has level paved streets a spacious square, three parish churches, a townhall, several schools, a large hospital, prison, grammar school and a beautiful palace, close to which a stone bridge spans the river. On the top of a neighbouring hill stands an ancient castle, recently repaired and fortified and now containing a barracks. Agriculture, raising linen fabrics, and distilling brandy employ the inhabitants. At some seasons of the year great numbers are engaged as male troops. Considerable numbers of cattle are reared in the vicinity for which, and various descriptions of merchandise, two annual fairs are held. Pop. 3345.

ARREE or **ARANI**, s in Hindoozan, in the Carnatic, 86 m. W. S. W. Madras lat. 12° 40' N. lon. 79° 20' E. It has a fortress, in which Hyder-Ali deposited his warlike stores during his invasion of the Carnatic, in 1783.

ARRENI, DEN, a small N. Holland, lat of Walsboren, prov Zealand, 8 m. E. Middelburg. It has a townhall, a court-house, and a Calvinistic church, but is very much fallen off in its condition. Formerly it was a place of considerable importance, as a port and a place of trade. Its haven was at all times filled with vessels from every part of the world. In 1495, the Spanish princess Johanna bride of Philip the Beautiful, arrived here with 135 vessels and in 1523 upwards of 160 vessels left this port to fetch Emperor Charles V from England. Its harbour is now dried up; the commerce is gone, and it can only communicate with the sea by means of a canal Pop 1200.

ARNQASK a par Scotland co Perth 6118 ac 10j 689

ARNHEM or **ARINNUM**, an old important and prosperous N. Holland, cap, arched, and one of some name, prov and cap. Gelderland, 10 m N. Myrazen and 54 m E. S. Utrecht, on a rising ground, bank Rhine, about 2 m. below where it receives the IJssel. It is the seat of the provincial court, of the court of the arrondissement and custom, and of a tribunal of commerce. The town was fortified, and the defenses were improved in 1702 by Coehorn, and it still has several gates but, during the reign of William I it was dismantled, and its remains are now public promenades. It is built in the form of a crescent facing the Rhine, which is here crossed by a bridge of boats. The environs are pleasant, the town being surrounded by an undulating country called the Veluwe, by parks, lakes and pleasure gardens and the air is pure on these accounts it is much frequented during summer by visitors. The town which is rapidly increasing, has a townhall, Government-house, courthouses for the province, weigh-house, barracks for 2000 men, civil and military prison and two squares, one of which is the corn-market, and a fish-market. It has also two Calvinistic a handsome Lutheran and two E. catholic churches. Four hospitals for diseased persons and for the sick, two orphan hospitals and one for widows numerous schools among which there is one of design and architecture and a natural history and literary society. The principal business in Arnhem is the transit trade along the Rhine, and connecting streams and canals to Amsterdam, Rotterdam, Amsterdam, Utrecht, &c and the grain trade it also possesses some manufactures in earthenware, soap, cotton, wool-combing and dyeing and has oil and bark-mills. After Lent it has a fair for 14 days, and in August another for eight days, two horse markets and numerous cattle-markets.

Arnhem withstood successfully all the attacks of the Spaniards. In 1586, Sir Philip Sidney died there from a wound received in the battle of Zutphen. In 1790 it was taken by storm by the French who were driven from it by the Prussians in November 1813. It has suffered severely several times by fire. Pop about 15 000. (Van der Aa's Nederlanden).

ARNHEM'S ISLAND the middle portion of the N. coast of Australia, lying W. of the Gulf of Carpentaria. Its limits are not well defined, but it may be considered as N. of lat. 14 S. and as having for its N. limit Groote Eylandt or Island, and for its W. Melville and Bathurst Islands. The whole coast is skirted by isles and islets, of which those named are the largest. It was discovered in 1823 by the commanders of the *Arcton* and *Pawa*, but is still imperfectly known. On Colong peninsula was the Government station, Fort Eslington, soon abandoned. The coasts are low, the rocks being loose sand with ferruginous concretions, and are not very high. In some parts it is well wooded, in others thinly wooded. Its extent is 8000 to 4000 ft. high, lies between lon. 132° and 154 E. and about lat. 15 S. composed mainly of granite. The district is watered by the rivers Adelaide, S. and E. Ah gator and Liverpool. — **ARNHEM BAY** N. E. coast Arnhem's Island between point Dula, lat. 11 38' S. lon. 136° 7' E. (N. and Cape Walsboren lat. 11 58' S., lon. 136 84 E. (N. 40 m. broad at its mouth 30 m. at its upper end, and about 90 m. deep. It is obstructed by numerous coral reefs, and at its mouth are the Wessel and English Company's Islands. —

CAPE ARNHEM the N. W. point of the Gulf of Carpentaria. lat. 12 17' S.; lon. 137 E. (N.)

ARNO [name *Arno*] a river Tuscany one of the largest in Italy having its sources in the Apennines in Monte Falterone and Apennino dal Pizzo, the former about 5 m. N. E. the village of Pontassale. After the junction of the two sources the river flows S. S. E. till it reaches the Chiassi Canal 6 m. N. W. Arno, whence it flows N. W. to Pontassale where it receives from the right the river Sura, after which its course is W. passing through Florence, where it becomes navigable and Pisa, beyond which, about 7 m. it falls into the Mediterranean after a course of about 155 m. By a canal from Pisa to Leghorn the difficult navigation of the lower part of the river is avoided. Besides the affluents named, the Arno receives the Uffra, the Teco, the Rra, and the Elia. Its source is 4429 ft. above the sea level at Fiesole, the level of the river is 387 ft. also o the sea, and at Florence, 50 m. from its embouchure, it is 144 ft. above the sea level.

ARNOLD a vil and par England, co. of and 4 m. N. by L. Nottingham. The village, which is about three quarters of a mile long stands near Harwood Forest, and has a church, three dissenting chapels and an endowed free school.

An annual cattle-fair is held at the end of September. The inhabitants are chiefly employed in cotton-mills and weaving hosiery. Area of par 4670 ac. 1 p. 4704.

ARON a river 2 m. N. of the mouth of the Cher into which it falls near Vierzon, in the department of Cher after a N. N. W. course of 84 m.

ARNHEMPE or **ARNHEMPE** the most S. of the three gaves into which the prov of Prussia Westphalia is divided, area, about 2250 sq. ac. It contains 55 towns, and 3440 villages, with a pop. of half a million being 350 persons per sq. ac. m. Of times 40 000 are Protestants 4000 Jews 100 Mohammedans, and the remainder R. catholics. The surface is hilly particularly in the S. division but none of the mountains are of great height, the highest, lianen bell, ing to the Hohegebirge on the confines of Westphalia and Wittenstein, not being more than 9500 ft. above the level of the sea. Arnberg is watered by the Lippe, Ruhr, Leim, Eder, Lahn, Siege, Rhine, Elbe, Weser, and Rhine. The climate is temperate, almost wholly to the east of the Rhine, only a small portion along the S. boundary belonging to that of the West. About a fifth of the whole government is wooded. In particular the forest of Arnberg occupying an elevated tract from 700 to 900 ft. above the sea, stretches from L. in W. for 7 m. The soil is generally of a clayey texture, and by no means fertile. Sometimes however as in Arnberg, proper it is a substratum of limestone and is productive. The best soil is in the N. mountain valleys towards the S. while N. between the Lippe and Hellweg lies a flat, rich and undulating tract of a marly surface on which great numbers of cattle are reared. But minerals and the productions of the loam are the great staples of Arnberg and give it a prominent place among the industrial districts of Germany. Among the former are iron, copper, lead, silver and calamine. Coal also is raised to a considerable extent and there are numerous quarries both of slate and marble. — 11 e 600000

ARNBERG of Arnberg is divided into 4 circles — *Alten*, *Arnsberg*, *Butten*, *Bochum*, *Dortmund*, *Hagen*, *Ilmen*, *Leipziger*, *Masche*, *Upe*, *Slagen*, *Soest*, and *Wittenstein*. Of these in point both of romantic beauty and architecture Arnberg proper appears to take the lead. It has seven towns, 121 villages and about 30 000 inhabitants.

ARNHEMPE cap both of the above circle and gov. and at one time cap. of the whole duchy of Westphalia, on the spur of a hill half encircled by the Ruhr and immediately below the ruins of an old castle of the same name 44 m. S. E. Münster. It is divided into the old and the new town and has three churches (one Protestant and two E. catholic) a normal and an agricultural school and a gymnasium with eight professors. In the Middle Ages, Arnberg was one of the principal seats of the Yulmics (Yulm-gerichte) which exercised a powerful sway throughout Germany. Pop. 4000.

ARNSTADT a picturesque-located and well built in Germany in the principality of Schwarzwald-Sonderhausen cap. seignior of same name, 11 m. S. by W. Erfurt upon the Ura, which divides it into two parts lat. 50° 45' N. lon. 10° 57' E. It has an old palace, almost entirely ruined, several churches, of which the Franckische dating from 972 has

fine painted windows, and several old sculptures a museum now converted into the residence of the prince a Franciscan monastery now become a school-house and paragonage a gymnasium, a normal school a cabinet of natural history an orphan hospital, a lunatic asylum, and a house of correction. Manufactures—cotton linen and woolen stuffs, ribbons, and leather. There are also breweries, stucco filling, flour and paper-mills. Arnstadt is one of the best markets in Thuringia for grain timber and fruit and has also a considerable trade in wool peltry and colonial produce. Pop. 5000.

ARNSTEIN a tu Bavaria, circle Lower Main, on the slope of a hill near the Werpe, 16 m. N. N. W. Würzburg. It contains two churches, an hospital and a castle and an oil, a stucco, and four corn-mills. Its trade is in wine, fruit and grain. The historian Schmidt was born here. Pop. about 1500.

ARNSWALDE, a tu Prussia prov Brandenburg gov Frankfort-on-the-Oder 30 m. S.E. Scuttus situated between three lakes which abound in fish. It has some cloth manufactures. Pop. 4000.

AROA a small tu Venezuela prov Carabobo about 8 m. from the r bank of the Aroa, 80 m. from the Gulf of Triste, on the Caribbean Sea, and 15 m. N. San Felipe lat 10° 50' 0" N. lon 68° 05' 0" W. The river rises in a Sierra about 50 m. S. W. the town, and after a course of 80 m. in a N. E. direction falls into the Gulf of Triste, in its course fertilizing a large valley. At a distance of about 10 m. from the town S.W. is a range of hills called by the same name namely the Sierra Aroa.

AROCIE a tu Spain, in Andalusia, prov of and 48 m. N. from Huelva, on the S. slope of the Sierra Morena, irregularly built, and partly surrounded by old walls having a church, hospital, townhall, custom house and prison. The inhabitants are chiefly agricultural and hold a fair in August for cattle and the produce of the neighbourhood. Pop. 2,000.

AROLA, a range of basaltic hills New Ulster the N. of New Zealand, on the E. coast. It commences about lat. 37° 52' S., stretches N. and terminates at Cape Colville or Moehau, a distance of 110 m. The hills composing this range are covered with wood.

AROK SZAT I AR, a privileged market in Hungary on the small stream Gyöngyös-Patak, wh. almost encircles the town on which the town stands. It is on the high road from Kaschau to Tschirn from which it is 42 m. E. N. E. It is well supplied with good water but the ground around is fertile, and considerable numbers of sheep and cattle are reared. Pop. 9106.

AROLDSEY a city W. Germany cap of the principality of Waldeck and east of the gov on the Aar 12 m. N. Waldeck lat. 51° 23' N. lon. 8° 52' E. It is well built, and has a handsome palace, the residence of the Prince of Waldeck, containing a gallery of paintings, a cabinet of coins and a valuable museum of antiquities from Herculaneum and Pompeii, and a library of 50,000 volumes. The town possesses three churches in a grammar school with many facilities of warlike and woolen stuffs, and iron-ware manufactures, &c. Its yearly market is numerously attended. The country around is well wooded. Pop. 2000.

ARONA a tu Piedmont, prov Novara delightfully situated on the W. shore of the Lago Maggiore, and near the A. extremity 88 m. N. W. Milan. It is a most and business little town, carrying on a considerable tourist trade between Piedmont and Switzerland, and having a small harbour on the lake, with several shipbuilding yards. It has four churches a gymnasium, an hospital and an old castle, in which was born the famous Cardinal Borromeus, who has been canonized, and in whose honour a colonial statue was erected in 1697. This statue, which is situated on a hill above the town called Monte di San Carlo, is 66 ft high and the pedestal 46 ft. A staircase winds through the figure. The head hands, and feet are cast, and the body made of large stones, covered with sheets of hammered copper. The work was executed by Zenelli and Falconi and is reckoned a highly meritorious performance. Pop. 5000.

AROSA (Harz) Spali Galizia, W. coast about 5 m. N.E. Cape Corrochedo and 16 m. S.E. Cape Finisterre lat. 42° 30' N. lon. 8° 50' W. dangerous place for vessels of all kinds.

AROSBAJA a market in. S. W. coast, in Madras

Indian Archipelago. It is a large, prosperous well-built town, with two Mahometan temples and two large market-places. It carries on with Java a considerable trade, to the prosperity of which the rooney haven on which the town is situated is greatly indebted. (See the A.)

AROLAT (25) a tu A. Africa, cap. about lat. 33° 48' N. lon. 1° 23' E. It is built on the N. and E. slopes of a hill at the foot of which flows the Wady Mal and is composed of from 700 to 800 houses, surrounded by a wall forming nearly a square. It is divided into the E. and W. quarters, each of which forms a separate and often adverse jurisdiction. In the former reside the Wed-Sewin, in the latter the Halls people these last having also a dependent village population. The houses are mostly low whitewashed, and ranged on terraces richly faced with masonry. There are two mosques, a house, or more, and an area, surrounded by arcades, which serves as a public exchange. The people are industrious many of them being smiths, armors, &c. who display their implements in public stores and shops, of a miscellaneous kind, are numerous. Fifteen or twenty Jewish families are employed as wool-dressers, dyers, tincture-makers, &c. The chief articles of native trade are—oil, cap wool, oil grain butter, honey, and sugar these mostly exchanged for gunnies, cutlery agricultural implements, iron wares, weapons, spices, sugar, coffee, glass, small wares, women's trinkets, &c. Besides being a thriving town, the people are reported to be kind to their poor and hospitable to strangers. In the environs are large gardens and plantations, watered by the Wady Lakhr in which grow dates, vases, coconuts, water-melons, cucumbers, &c. in large quantities. There are fine forests on the neighbouring hills. The KHALIFAT of El Arouat is an ancient jurisdiction was alternately dependent on Morocco and Turkey and before the French invasion paid a yearly tribute of 100,000 piastres to the dey of Algiers. Its position was confirmed to the present Khalif by the French in 1844-6. It is bounded, N. by Jebel Amour E. by the territory of Wied el Nal tribe, S. by that of the Beni Mzale, W. by that of El Arouat Kail tribe. It comprises the following towns and villages—El Ouzia, Tadmetout, E. Hanta El Assala, Ain Jaldi and Kar el-Halran. The people comprehend three tribes, namely Arabs (the most numerous) the Wied el Nal tribe, and the Arabes and the Arabes (Sahara) Algeres.

AROUBA an isl. at the mouth of the Gulf of Maracaibo, belonging to the Dutch. See LARUA.

AROUCA a tu Portugal prov Beira, dist. Feira, situated among mountains of granite 28 m. S. W. Lamego. It has a parishes a Latin school and a celebrated Bernardine monastery. A considerable quantity of iron thread coils is rated for its whiteness, is spun here. Pop. 2516.

AROUNDOU a vil W. Africa 1 bank Senegal in the Gambia country lat. 14° 50' N. lon. 12° 14' W. It is situated 5 m. S.E. Bakel opposite Diogonville.

ARIATA a vil Naples, prov Principato Ultra, about 11 m. E. Arzano, between Capua and Benevento; supposed to have been the site of the anc. Caudeve where in the year 111 A.D. a Roman army was compelled to lay down arms to the Samnites but other authority places the scene of that famous disaster in a defile near Avellino, a little to the N. of Arpaia, celebrated as the Feron Caudeve.

ARPAJON—1 A. in (formerly Cadix) France, dep. Seine-et-Oise, 30 m. S. Paris. It is a fertile valley, at the confluence of the Orge and the Remorin is surrounded by trees and shady walks and has a large market-hall. The parish church is large, but not of great antiquity. The Hotel Dieu, an ancient endowment, is well managed. In the town are tapestry cotton-works, and hatteries and some trade is carried on in grain flour poultry, pigs, calves, &c. The Marolles station of the Paris and Orleans Railway is about 1 m. from Arpajon. Pop. 3017—2 A. vil and comm., dep. Cantal (Auvergne), 11 m. S. S. E. Aurillac is well-travelled and important. Pop. 333.

ARPINO (anc. Arpinum) a tu. Naples, prov Terra di Lavoro, dist. of, and 6 m. S. W. from Rome. Agreeably situated on rising ground. It has a royal college, with six professors, a vial church and convents, and manufactures of cloths and woolen stuffs, the best in the kingdom also tanneries, and in the environs is an extensive paper-mill. It was founded by the Volsci, and erected into a municipal town by the

Romans who wrested it from the Samnites. Arpine is celebrated as having been the birthplace of Caius Marius and Scaurus. The surrounding scenery is singularly beautiful. Pop. 11,080.

ARQUA two villages, Venetian Lombardy.—1) Delegation of and 5 m. S.W. from Rovigo, on the canal of Castagnaro. It has an old fortified fortress, surrounded by walls and ditches, built in 1179 by Guilhemus Alardus. 8000 catenars and cattle-rearing are carried on. Pop. 8000.—

2) **ARQUA** or **ARQUARO** (Latin, *Arquaro*). Delegation of and 12 m. S.W. from Padua, dist. Battaglia pleasantly situated in the bosom of the Euganean hills. Here the poet Petrarca spent the latter years of his life, and (July 18 1374) died. Pop. 1800.

ARQUA, a m. in Mexico, state Zacatecas, formerly prosperous, but now falling into decay. It was well built, and contained numerous squares and churches. Pop. about 4000.

ARQUE ENNES, a vil and com. Belgium, prov. Hainault, dist. of and about 18 m. N.W. from Charleroi. It has stone quarries, and iron forges. Pop. 1675.

ARQUEL, a small river France, dep. Seine-inférieure, rising at Montreuil-sur-Mer 6 m. S.E. St. Saen and falling into the English Channel at Dieppe. Its whole course, which is from 88 P. to N.N.P. is 53 m. and of these, 6 m. below the town of Arques are navigable.

ARQUES (Latin, *Arva*, *Arvus*).—1) A m. in France, dep. Seine-inférieure, Normandy; 8 m. S.E. L. Dieppe 91 m. N.W. Rouen, in a beautiful valley on the small river of the same name. It has a handsome parish church with a cotton manufactory and tanneries. Although now a mere village, Arques was, during the Middle Ages, the principal bulwark of Normandy on the N. Its castle, now in ruins, is celebrated for the number of sieges which it sustained and especially for the victory gained beneath its walls in 1589 by Henry IV. with 4000 Huguenots over the army of the League, amounting to 30,000 men, commanded by the Duke de Mayenne. Pop. 810.—2) A m., dep. Puy-de-Dôme, near St. Omer, has a manufactory of starch glassworks distilleries and tanneries. Pop. 1851.—Several other small places in France bear the same name.

ARRACAN See **ARACAN**.

ARRAIOLOS or **ARRIOLOS**, a ls and par l'ortugal prov. Alentejo, dist. Estremoz on a hill of granite 14 m. N.W. Évora. It is not walled but is defended by a castle, and contains a church, two monasteries and an hospital. It has a manufactory of carpets and tapestry and an annual fair which lasts three days. Pop. 1475.

ARRAJAN or **ARRAJAN**, a m. in Persia, now in ruins, prov. Khuzestan on both sides of the Kurdistan, about 1 m. N.W. Babahan or Behloof, and 185 m. N.W. Shiraz lat. 29° 23' N. lon. 50° 40' E. The ruins which consist of the remains of stone and brick buildings, lie scattered along the lofty banks of the river mostly on the left shore but also on the declivities of the bank and partly along the narrow strip of land which separates the bed of the stream from its E. embankment. The houses appear to have been built of one story with vaulted roofs. Both sides of the town were united by two bridges of magnificent dimensions, as their remains, and the eulogies of ancient Arab travellers would indicate.—(Baron C. A. De Bode's *Travels in Laristan and Arrahstan*.)

ARRAN an m. W. coast, Scotland Frith of Clyde, co. Dumb. between the peninsula of Cantyre and the coast of Ayrshire. It is 20 m. in length, N. to S. and about 10 m. in breadth. Its appearance is very remarkable, the N. part being crowded with lofty rocky mountains of a conical form, connected by sharp, serrated ridges, and intersected by deep gullies and ravines. The highest summit, Goatfell is 2900 ft. in height. The E. portion is composed of undulating hilly ground, sloping gently towards the sea, and presenting in the cultivated fields and bright patches of verdure, a singular contrast to the ruggedness and sterility which characterizes the N. half of the island. The prevailing line of coast is low but in many places steep and rocky, and is indented with several bays and harbours the principal of which, Lamlash on the E. side, is considered one of the best in the W. of Scotland. At the N. extremity of the island is a high isolated mass of new red sandstone rock called the Cock of Arran, from a real or fancied resemblance to that bird, and which

forms a well known sea-mark. On the small side of Fiskia, off the E. end of the island, and distant from it somewhat less than a mile, there is a lighthouse, with two fixed lights. The interior of the island, as well as the coast, abounds in remarkable and varied scenery some of it wild and savage, some more bland and picturesque. It was at one time covered in many places with extensive forests which have now wholly disappeared, and with them nearly all the animals of the class by which they were inhabited. The geology and mineralogy of Arran have attracted much attention. The island is divided into two parts by a band crossing its centre behind the village of Brodick, composed of old red sandstone. N. of this line the whole interior of the island is composed of granite, with a margin of mica and clay-slate, excepting on the E. coast, where the latter is formed, in part, of old red sandstone, and the carboniferous series. S. of this line, the island is composed almost wholly of trap, massive porphyry and other uncrystallized rocks, with a narrow margin on the E. coast of new red sandstone and on the S. and W. of alluvium and old red sandstone, with here and there patches of the carboniferous series. The island contains coal and freestone slate, limestone, and ironstone. Rock-crystals, of a beautiful description are found in the granitic mountains and an extensive vein of sulphate of barytes is now and has been for some years successfully wrought at Glen Sannox. Though the hills generally present a scanty vegetation, with few attractions for the botanist the same cannot be said of the low grounds near the shore where is a rich growth, including numerous beautiful species of plants many of them of rare occurrence and without adequate mark are to be found numerous beautiful, and many rare alga. The soil on the E. side of the island is in general light but varies greatly in the valleys which are of considerable extent. On the W. side the arable land is chiefly confined to the vicinity of the sea-coast. The principal crops are oats, barley and potatoes. The whole rural economy of the island has been greatly improved of late years, and the condition of both the larger tenants and smaller tenants much advanced, particularly in their domestic accommodation the houses of the former being a fairer to those of the same class in other parts of the country and the latter greatly superior both in appearance and comfort to those they occupied 20 years ago. The average rent of land is about £1 per acre. Considerable numbers of black cattle and sheep are reared on the hills the former chiefly of the Highland Argyleshire breed, the latter are of the black-faced kind, and are diminutive in size but take on flesh readily and afford excellent mutton. In dairy husbandry the small tenants, though still far behind are rapidly improving. The larger farms of the island presents little variety comprehending only farms and rabbits both of which are plentiful. Some wild cats (the brown rat, which is very destructive and a few deer now to be seen only in the most retired recesses of the mountains. Hares wild boars, and foxes, were formerly numerous, but have been long exterminated. Beasts and others are occasionally seen along the shores. Black game and grouse abound, and partridges are sometimes met with on the summits of the mountains. Several species of snakes are found in the woods, glens, and moorlands. The sea around the island abounds in fish mollusks, scophytes, and other marine animals of numerous species. And the entomologist, no less than the geologist, botanist, or zoologist, may obtain a rich harvest in this delightful island. There are here numerous relics of antiquity including Danish forts, Druidical circles, high cross columns of unknown date, curbs, and symbolical piles within which are usually found a ring enclosing ashes. In this island Robert Bruce and some of his followers found shelter during a season of adversity a cave, called King's Chamber, at Drumdoon, on the W. side of the island being pointed out by tradition as the place of his retreat and residence. On the walls of this cave there is a red-inked-out hunting scene, said to have been done by some of the followers of the fugitive monarch. Tradition asserts, also, that it was from the battlements of Brodick Castle an ancient fortress, situated on an acclivity overlooking Brodick Bay that Bruce saw the light on Turnberry nook, on the opposite coast which taking for a preconcerted signal induced him to cross to the mainland. The celebrated Celtic bard, Ossian, is said to have died here. The inhabitants of Arran are tall, strong, and remarkably well formed. They are distinguished for sound sense, activity

and enterprises. They are frugal and temperate, and, on the whole, of excellent religious and moral character. Gaelic is the prevailing language, though English is very generally understood. There are a number of good schools in the island and a universal desire exists among the people to have their children taught at least the elementary branches of education. The yearly rental of the island, which belongs almost wholly to the Duke of Hamilton, is from £11,000 to £12,000 a year. It is divided longitudinally into two parishes, Kilmorie and Kilmorie, the one comprising the E. the other the W. side of the island. The receipt and expenditure for the relief and management of the poor for the year ending May 1 1817 was—halfpence per (pop 2788) receipt, £164 5s 11d. exp. ditto, £168, 18s. Kilmorie par (pop 3453) receipt, £151 8s 4d. expenditure, £180. Total receipt, £225 13s 5d. total expenditure, £298, 18s. Brodick is the principal village. Total pop. 604.

ARRAN (NORTH ISLAND OF) the largest of the group of islands called the Hebrides, lying off the N.W. coast of Ireland, co Donegal area, 43.5 sq. mi., of which 650 are under cultivation and in pasture; lat 54° 40' N. long 6° 44' W. It is about 3 m. long, and 2 broad. Arran is the highest peak, rises 745 ft. above the level of the sea. The inhabitants chiefly subsist by fishing. On the N. point of the island is a lighthouse, exhibiting a fixed bright light. There is a small R. Catholic chapel on the island. 1 pop. about 1000.

ARRAN (SOUTH ISLAND OF) a group of islands W. coast Ireland, at the mouth of Galway Bay co Galway. The largest, Arranmore, Great Arran, Killybeg or Inishmore is 84 m. long and about 2 broad at the broadest part and contains 7635 ac. including two small islands at its N.W. extremity called the Branch Isles 1 p 2312. On the E. side of this island is a high tower 490 feet above the sea, and visible at a distance of 24 to 2 lat 53° 58' N. long 10° 42' W. (N.). The middle island, Inishmuck, 3 m. long 6 to 2 broad contains 4000 ac. 1 p 507. And the most E. Inishmore is long by 1 1/2 broad 1400 ac. 1 p 518. The three islands form three separate parishes in the diocese of Thama, and union of Ballynagall. There are also included in the group the small rocky islets called Straw Island and Flann-Larchoir or the Western Isles. Arranmore yields good oats and on it the most numerous and the coarsest are reared. The coasts abound with great variety of fish, including whiting, and in agriculture the inhabitants are chiefly employed. A pier 140 ft. long with a landing-quay 326 ft. in extent, was erected by the late Board of Commissioners for the Irish Fisheries at the village of Killybeg on this island where 100 vessels of 40 tons burden may ride in safety. Pop. of Killybeg 21. To the port belong 41 open boats, and 1 row-boat. The islanders use also a boat called a carragh made of osiers, and covered with tanned canvas and provided with a rudder. Their language is Celtic and their costume peculiar including a kind of boot made of untanned leather. The N.F. coasts of these islands present a sloping shingly beach both on the S. and W. are dark and rugged rocky cliffs, abounding with sea-fowl. On the S. Arran Islands are found antiquaries of various kinds and on Arranmore there are, said, at one time, to have been 10 churches, on the other islands five.

ARRAS [aux. Amethouze] a town France, cap. dep. Pas-de-Calais (Artois) in the middle of an extensive and fertile plain, 7 bank Scarpe which here becomes navigable. It was strongly fortified by Vauban and stands partly on a declivity and partly on a flat and consists of four parts the city the high town, the low town, and the citadel. The first and highest occupies the site of the town which Caesar took. The high town owes its existence to a small oratory over which a magnificent abbey was afterwards built. The low town, extending to the base of the citadel, is a fine modern town, regularly built. The houses are of brown stone, several stories high and the public squares are very handsome. The two largest of the latter are contiguous, and are surrounded by houses of Gothic construction, which form a series of pillared arcades. The citadel, though enclosed within the same wall as the other parts of the town, is separated from them by an esplanade. It is in the form of an elongated pentagon, and capable of making a vigorous defence. The chief public buildings of Arras are the cathedral, a large Gothic edifice,

not of much external beauty but with a fine choir which is supported by very slender pillars, and remarkable for the boldness of its construction; the public library an extensive building, and containing 24,000 volumes; the Hotel de la Prefecture the townhouse or Hotel de Ville, theatre, barracks,

THE HOTEL DE VILLE, ARRAS.
From Courty's At in Occidentale del Hotel de Ville.

ARRAS ranks as a fortress of the third class in the seat of a bishop, of a court of first instance jurisdiction and a court of commerce and possesses a chamber of manufactures a communal college, a library and scientific society a school of design, and an institution for the deaf and dumb. Its chief manufactures are ironware, hosiery lace and lace-thread, pottery and earthen pipes, soap, leather and nails. It has also flour mill cotton mills, sail-refineries, oilworks, engine-works, several foundries, and numerous breweries. Its trade is in repeated oil, oil-seeds, corn and flour, wine, wax, dry lace, thread wool and leather. The corn market of Arras is the most important in the N. of France. The notorious terrorist Robespierre was born here. 1 p. 11646 24 321.

ARRAYA, a tu Brazil prov Goyaz, 1° 0' S. L. Naupia, pleasantly situated in a hollow on the table-land of the Serra de Santa Brida, and surrounded on all sides by low grassy hills. It contains a church and three public schools two of which are elementary one for boys, the other for girls in the third Latin only is taught. The greater part of the inhabitants are in great poverty arising chiefly from their extreme indolence they are, however, universally of a kind and obliging disposition. Pop. about 800 and of the district, in which some gold is obtained and cattle are reared rather more than 2000.—(Gardner's Travels in Brazil. See Geo. Ins. Brazil.)

ARRECIPE, a seaport in F coast, Lancoon or Lauzerote one of the Canary Islands, of which it is the capital lat 28° 56' N. long 18° 56' W. It is situated immediately S. of the harbour of Santa. The houses are large, the streets spacious and well paved, and the church handsome and the town possesses two endowed schools, and a cemetery. The greater part of the inhabitants are engaged in the fishery on the opposite coast of Africa and in raising turtles, in which a considerable export trade is carried on. The harbour of Naos is small but secure having two entrances, a N and E the former with a depth, at low water of 12 ft.; the latter 17, with a 9 ft. rise of tide. During the winter nearly all the island

vessels resort to this harbour. Pop 2600.—*How Roy Geo Soc.*, vol. vi p 287 Madras

ARRESSE, a lake, Denmark, in the N of the island of Zealand. It was at one time a bay of the Kattegat but the drift sand, by completely closing its mouth has converted it into a very shallow lake, having a circumference of about 32 m. and an area of about 14 sq m. The shore is fringed with reeds and an area of about 14 sq m. The shore is fringed with reeds and an area of about 14 sq m. The shore is fringed with reeds and an area of about 14 sq m.

ARRESKOV-BYE, a small lake, Denmark, in the N of Fünen, tolerably deep, and abounding with fish

ARRETON a par England on Hamis, Isle of Wight 8888 ac. S.E. Newport. Pop 1902.

ARRIATE a tn Spain, in Andalusia, prov. Málaga, in the vicinity of Ronda. It lies in a plain near the streamlet Toulille, and has a church, prison and two endowed schools. It is surrounded by extensive meadows and grain, olives, and fruit are cultivated of which considerable quantities are exported to Cadix, Málaga, &c. Pop. 8024

ARRIPIANA, a fort, bay and is. S.W. coast, Portugal prov. Algarve the first in lat. 37° 16' N lon 8° 52' W 19 m N by F Cape St. Vincent

ARRINGTON a par England, co Cambridge 1985 ac. S.E. Exeter. Pop 811

ARROAS ISLANDS, a group of small islands and rocks in the Strait of Malacca, about 35 m from the coast of Sumatra, and 65 from that of Malacca. The principal islands are called, respectively the Great or Long Arroa, the Round Arroa and the Western Arroa. The first is in lat 2° 53' 30" N lon 100° 25' E and consists of two contiguous islets that is nearly a mile in length flat, and covered with trees. The second or Round Arroa, is a high round rock with some trees on it lat 2° 49' N lon 100° 25' E. The Western Arroa consists of a group of islets and rocks lying about a mile N. of the Long Arroa, and on the same rocky bank. The Malay fishermen sometimes frequent these islets to fish and procure turtle.—(Hornburgh)

ARROGHAR, or **ARROGHAR** a par Scotland co Dumfriesshire, between Loch Lomond and Loch Lang area, about 48 sq m. On the banks of Loch Lang, near its head where is situated the parish church, a few houses are collected together forming a sort of village, much resorted to during the summer season as a bathing quarter. The scenery around is wild and romantic. Pop 667

ARROE or **HARNISE ISLANDS** a cluster of islands in the Red Sea, about 80 m N.W. Mocha. The S.W. and of the largest, called Great Arroe, or Harnise Island, is in lat. 13° 39' N lon 42° 32' E. It is about 10 m in length and 8 m in breadth at the widest part. The centre rises to a considerable height and presents from some points of view a remarkable bluff. The W side is steep with no bottom in some places, at 100 fathoms close to. There is good pasture in the valleys and antelope abound. 1 little Arroe Island is about 4 m N. from Great Arroe. It is of an oblong shape, of great height, and upwards of 7 m. in circumference very rugged with grass in some parts, and a few antelope. There are a number of small islands and rocky islets scattered around.—(Hornburgh). See also ARROE.

ARROESKIOBING See ARROE

ARROCHES (anc. *Septem Arce*) a tn and par Portugal, prov. Alentejo, dist. of 16 m. S.E. from Portalegre, at the confluence of the Cayra and the Alentejo. It is fortified but not strongly and has two churches, a convent, an hospital, and a postoffice. Pop. 1306.

ARROO

ARROUX, a small river France in depts. Côte d'Or and Saône-et-Loire, being an affluent of the Loire, which it joins on its R bank, 13 m. N. Châlon-sur-Saône. Length about 65 m.

ARROW a par and township, England, co Warwick 4220 ac. S.W. Alesbury. Pop 641

ARROWSMITH (Cairn and River) Australia, the former on the W shore of the Gulf of Carpentaria lat. 13° 15' S lon. 150° 52' E. The latter is in N. Australia, Victoria Land. It rises in Herchel range and falls into the sea in lat. 20° 30' S.

ARROYO DEL JUECO [Pg Brook] a tn Spain in Extremadura, prov. of 10 m. W from Cáceres in an elevated and extensive plain, enjoying a temperate climate. The houses are generally two stories high the streets clean and well paved and there are three large and two small

squares. The town contains a parish church, in which are preserved several fine pictures by Morales, six endowed schools an hospital a palace of the ancient Dukes of Benavente, and several flour and other mills. Manufactures—earthenware, linen and woollen fabrics, oil and soap many of the inhabitants are employed as carriers in conveying earthenware and bricks to the Andalusian and lower Estremaduran, and bringing back iron, geadstones, &c. Pop. 7396.

ARROYO MONJON DE MONTANEROS, a tn Spain, in Extremadura prov. of 27 m. S.E. from Cáceres on the edge of the ridge of Montánchez, the scene of the surprise and defeat of the French by Lord Hill October 28, 1811. The town has a square and crooked, ill paved and dirty streets a parish church, a castle, townhall prison, public granary and several extensive flourmills and in the caverns are a cave and some springs of excellent mineral water. Manufactures—earthenware, all linen and woollen goods figured handkerchiefs and wine. In the village large numbers of pigs are reared the bacon of which is famed and forms a staple article in the trade of the town. Pop 3286

ARRU ARROU or **ARROU ISLANDS** [Dutch *Arce*] a group of islands belonging to the Dutch situated on the N. verge of the Great Australian Bank S. and W. from New Guinea, and N.E. from Timorlaut Island, and extending from N to S about 127 m. According to former maps, they lie between lat. 0° 20' and 7° 0' S. and lon. 154° 10' and 154° 51' E. They are nearly unapproachable from the N. in consequence of the coral reefs by which they are back, consequently many of them have not been visited. The largest are Lobror or Kolroor 60 m by 28 Meoor or Meolay 26 m by 11 Frans or Traza, 54 m. by 20 to 22, Workey or Workey 21 m. by 10 Besides these, there are smaller islands of various sizes, Wokan Wanner Doan Kola Warie &c. and a great number of mangrove islets. They are separated by narrow channels some of which are of great depth and in which the tide regularly rises and falls. The growth of mangrove, which lines the shores of these channels, tends every day to abridge their breadth. The islands are all low and swampy with patches of rock here and there about 20 ft. high but well-wooded and fertile, producing various cereals, fruits, and spices. The trees, withal, about the shores in many places form impenetrable forests, are of great height, many of them reaching to 90 ft. before they begin to branch out. The timber of which there are several kinds is remarkable for durability and for the ease with which it works. The natives, according to Capt. Stokes, appear to be a mixture between the Malayan race and the Gilyanese negro they are a hardy less people, and have a good character for honesty but the greater portion are in a state of poverty owing to an immoderate use of spirituous liquors large quantities of which are brought by the traders from Java and Macassar. Many of these profane Gilyanese having been converted by Dutch missionaries from Ambolha from which place also teachers are still sent for the schools, in which the Christian children are taught the Malay language. The natives seem much disposed to embrace Christianity and to follow the usages, and adopt the manners, of social institutions. They live in villages containing about 20 small thatched houses and great harmony prevails among them generally; their complexion is black their hair long but strongly curled, and their stature about the middle size. Their food consists of sugar, rice, maize, pumpkins, yams, fish, and pork. A small kind of kangaroo similar to those met with on the N. coast of Australia, and here called the P. landak, inhabits these islands porcupines and birds of paradise abound the latter are shot by the natives with blunt arrows which stem them without injuring the plumage. They are then skinned and dried, forming a great article of export. Other productions which form articles of export are trepang tortoise-shell pearls, mother-of-pearl, and edible birds nests. The chief trapping fisheries are on the shores of the island Workey and other smaller islands in the S. of the group. The Arru Islands are much visited by native traders, and a considerable amount of commerce is carried on by merchants from Banda, Macassar &c. and large quantities of British goods are annually imported. Pop. of the group, about 60,000.—(Stokes's *Australia* Earle's *Eastern Seas* Temmink *Coup d'oeil sur l'Inde Néerlandaise* Moniteur des Indes.)

ARRULI, a river which emerges from the S end of Lake Manasar, on the W confines of Sude and after a course of 20 m. joins the Indus. At Schwan, about 4 m. above, it is nearly 100 yards wide, and the depth of the channel in the middle is never less than 12 ft. The banks are fringed thickly with tamarisks and acacias, and an undergrowth of camel thorn and grass. The Lackna hills, part of the great chain of Hale at a short distance from Isbuka, consist of limestone, and a little below the junction contain a great variety of petrified shells, wood, and coral. Among the shells is a large species of nautilus, 18 inches across. In the country through which the Arrul passes, there is a good deal of land under tillage, and numerous hamlets are seen; but the only town of any importance is Schwan which now contains only 2000 families, but is surrounded by an enormous space covered with ruined houses, mosques, and sepulchres, bearing testimony to the ancient magnificence.

ARRAS arr. m. in France, dep. Charente Inférieure. (Annuaire, 19 m. W N W Rochelle on the W extremity of the île de Ré, with a good roadstead and a small port. Salt is procured here, and is refined and exported in large quantities. Beautiful transparent pebbles white, yellow and rose-coloured, are also found. Pop. 2511.

ARSA MAS or **ARSA MAS**, a town in Russia, gov. Nijni-Novgorod, cap. dist. of same name, r. bank Volga, 150 m. F. Moscow. Lat. 55° 20' N. Lon. 43° 43' E. It contains 30 churches, and two convents. Manufactures—silk, leather, silk, linen &c., the greater part of the latter of which is sent to Moscow and St. Petersburg. Pop. (1849) 5838.

ARZIERO a Venetian Lombardy delegation Vicenza, 6 m. N. Sclavo. In the neighbourhood are several paper mills, and quarries of beautiful marble. Pop. 2500.

ARZIZO a village Papal States, 13 m. N E Tivoli. Pop. 2000.

ART or **ARTA** a town in Switzerland, cant. of and 7 m. W from Schaffhausen, in a picturesque valley between the mountains Hugi and Honen, at the N extremity of the Lake of Zug. The town is well built, and contains a convent of Capuchins with a library, the church of St. George, remarkable for its fine architecture, and a large fountain formed of a single block of granite. The inhabitants are employed partly in spinning silk and partly in rearing cattle. They realize considerable gains by furnishing guides and conveniences for travellers ascending the neighbouring mountains. Pop. 2150. (Falkland).

ARTA a city Turkey in Europe, supposed to be the anc. Androsia. It lies about 6 or 7 m. from its own harbour in the gulf of that name. The stream is here about 100 yards broad, and is crossed by a singular bridge, formed of three obtuse angles in place of a uniform curve, thus rendering the passage both difficult and dangerous. It lies in a picturesque but unhealthy locality, and its principal buildings are the palace of the Bey, the mosque, churches, and synagogues. In the commercial quarter each trade has its separate street and lanes. Manufactures—woolens, cottons, Russian leather, embroidery which is brought to great perfection, and a species of cloak or shaggy capote, termed *foocote*, and much esteemed as an article of dress. Chief articles of trade—cattle, wine, tobacco, cotton, hemp, hides, and grain. The market is abundantly supplied with fruit and vegetables. The N part of the city is inhabited solely by Turks who exclude all Franks. The city was nearly destroyed during the Greek insurrection. Part of the ancient walls built of very large stones, still exist.—The straits which runs in the mountains separating Albania from Macedonia, flows N. and falls into the Gulf of Arta after a course of about 70 m. It is not navigable for more than 5 or 6 m. from its mouth. Pop. 7000.

ARTA (GUL OF) [anc. Androsia Sinus] an inlet, Ionian Sea, about 25 m. in length and 10 m. in breadth. It is composed of a larger and smaller basin, the latter forming the Bay of Fraxena, and lying next the Ionian Sea. The entrance to each basin is very narrow, the narrow gulf being contracted at two points, by headlands running out to the N and S. It abounds with excellent fish, and its shores afford a variety of pleasing and picturesque scenery, but rocks and sand-banks render its navigation somewhat dangerous. Near its entrance was fought the famous battle of Arbanon between Anthony and Augustus. See **ARTUN**.

ARTA a town, F. side, Isl. Majorca, 87 m. E. by N. 14 m. at the base of a hill. It is a well built, defended by a castle has wide but rather steep streets, two large squares, a parish church, several chapels, a townhouse, and two schools. The inhabitants are chiefly engaged in tillage, cattle-rearing, and fishing, but also in weaving, dyeing cloth, and distilling brandy. Pop. 4001. In the neighbouring hills pipework and millstones are obtained; and on them are the remains of an ancient Arab castle. The locality is, however, chiefly noted for a natural stalactite cavern, which occupies the hollow of a hill, 6 m. N E the town. The entrance to this cavern is in the form of a harbour, and its interior is divided into two distinct compartments, called *Primera* first, and *Inferno* lower on account of its depth and obscurity. Having passed the vestibule a gorgeous spectacle bursts upon the sight vast columns of crystal ascend to the roof profusely though

INTERIOR OF THE FIRST CAVE OF ARTA.
From Plateau, November 1849, by the Duke of Saxe.

naturally ornamented with representations resembling the different architectural orders, and reflecting innumerable combinations of prismatic hues from the light of the torches. The roof is studded with brilliant stalactites, and the floor strewn with fragments which, from time to time, have fallen there from and studded with large gradually-increasing stalactites in the centre is a small pool of pure water. The second cave, *Inferno*, is even more splendid in all its details than the first, inasmuch as the crystal is of a purer and more dazzling whiteness having been less frequently exposed to the smoke of travellers' torches.

ARTAIN, a par. Ireland co. Dublin 954 sq. Pop. 354.

ARTAJANA, a fortified town in Navarre, 17 m. S Pamplona, surrounded by walls flanked by 12 towers, tolerably well built, and having a church, two schools, an hospital, store-houses, and two prisons. The inhabitants are chiefly engaged in tillage, but also distil brandy, which with wine, oil and grain is sent to Pamplona, Logroño and Burgoa. Pop. 1911.

ARTAKI, or **ARTAKI** [anc. Artycos] a small seaport Asiatic Turkey, W shore of the peninsula of Cyanea, Sea of Marmara, about 80 m. S W Constantinople. It has a small harbour with the remains of an ancient mole, and at Cape Melasos, in its vicinity are some ruins apparently of no great antiquity. The district is covered with vineyards, from the produce of which a wine is made which is much esteemed even at Constantinople.

ARTANA, a tn. Spain, in Valencia, prov. of, and 10 m. S.W. Castellón de la Plana, at the foot of an isolated hill is the centre of the *sierra de España*. It has straight, clean, and generally well-paved streets, two squares, a parish church, endowed school, hospital, and cemetery. On the crest of the hill are the ruins of an ancient castle, with an octagonal tower of Roman workmanship. Tillage, and the manufacture of bone nails and oil, are the chief employments. Pop. 2077.

ARTALAXA, a French exp. settlement, now a mass of ruins, on the Aras, 65 m. S.E. Saragosa. It was built by King Artaxas after a plea by Hannibal, destroyed by the Romans in the time of Nero, and rebuilt by King Thridates under the name of Nervela. About A.D. 344 it again became the residence of the kings, who had left it on account of its unhealthiness. About A.D. 870, it was taken by the Persians, who burned it, and carried to inhabitants into captivity. At this time, it contained 8000 Jewish, and 40 000 Armenian houses, with a population of about 150 000. It rose again after this but, after 798, nothing more is heard of it.—(Duhalde *Tourage autour de Cordoue*.)

ARTEEN a tn. Prussian Saxony gov. Merseburg circle, Saengerhausen on a height 670 ft above the sea level, near the Unstrut, which here begins to be navigable, 27 m. N. Weimar. It is the oldest town in the district, and has a palace and two churches. Salt is made here but the spring which furnishes it is not very strongly impregnated. Pure rock-salt has more recently been discovered and has been reached at a depth of 150 fathoms. Arteen has a distillery a salt-stew-works and a seam of lignite. Pop. 3500.

ARTHINGWORTH a par. England, co. Northampton 1080 ac.; S.E. Market Harborough. Pop. 267.

ARTHUR, a river Van Diemen's Land. It rises in the Surrey Hills about lat. 41° 25' S. and, after a W. course of between 50 and 60 m., falls into the sea, in lat. 41° 10' S. lon. 144° 40' E.

ARTHUR (Power) a penal settlement, Van Diemen's Land. S. extremity of Tasman peninsula, between Cape Rasol and 1st Arthur lat. 43° 9' S. lon. 147° 50' E. (S.) with shelterage and shelter for large vessels. It was first explored by Capt. J. Welsh, who gave it this name it now bears.

ARTHUR (GREAT AND LITTLE) two of the Sully Islands (look see).

ARTHURET a par. England co. Cumberland 17300 ac. Pop. 1066.

ARTHUR'S SEAT a remarkable hill in the immediate vicinity of Edinburgh Scotland rising 822 ft. above the level of the sea. It is of easy ascent on its E. side, but on the W. is steep and rugged. On the S. side of the hill is a remarkable outcrops, called Samson's Tels. It is composed chiefly of trap, and other rocks of volcanic formation, in which spurs, scudrons, jaspers, and agates, are occasionally found. On the E. the strata appear to change and mountain limestone is seen piercing the surface. Separated from Arthur's Seat by a narrow valley called the Hunter's Bog, and nearer the city of Edinburgh, rises a lofty ridge called Salisbury Crags, presenting a precipitous and almost perpendicular front. The upper part of it consists of greenstone, which was at one time extensively quarried for the public roads. This greenstone rests upon a sandstone, which, on coming in contact with it, is strangely scorched and twisted, and exhibits a variety of interesting geological phenomena, which were confidently ascribed to by both parties in the keen controversy long carried on between Wernerians and Huttonians. From the top of Arthur's Seat, as well as from the road which has been recently formed around it, and, in lunette of her present Majesty is called the Queen's Drive, a most magnificent view is obtained.

ARTOIS, a former prov. France, now forming the dep. of Pas de Calais, excepting the arrond. of Boulogne, and a portion of the arrond. of Montreuil.

ATRAMON a par. Ireland, co. Wexford 23.7 ac. has the scenery ruins of a castle and Danish fort. Pop. 787.

ATREIA or **ARTREIA** a par. Ireland co. Tyrone and Londonderry 18 437 ac. a bounds in freestone and limestone. Pop. 10,336.

ARTVIN a tn. Turkish Armenia, post Trebizond sp. dist. Sivrihisar in a valley W. side of the Tchoruk or Akampun. Vol. I.

The houses are all of wood, with exception of a few stone buildings belonging to the Turks. It contains a large R. catholic church, and has some manufactures of cotton cloth, and a considerable trade in better honey wax, olive and oil. Pop. 6500, chiefly R. catholics.

ARUBA. See OCEANA.

ARUCAS, a tn. Spain, on W. shore of Gomera, one of the Canaries, on the slope of a mountain which is upwards of 3000 ft. in height, having a church, chapel, school and spacious public granary. Manufactures—hats, linen and cotton fabrics, thread, and clothing all used in the vicinity but the chief occupation is agriculture. Pop. 4370.

ARUM, or **ARUM** a vil. Holland prov. Friesland, between Harlingen and Bolsward, and 5 m. distant from either place. It lies in a cultivated district and has a handsome Calvinistic church, and a saw-mill. Pop. 1100.

ARUN a river England, co. Sussex, famous for its gray millstone rises in St. Leonard's forest in the N. of the county flows S. near the Rother from the right, 5 m. S.E. Pulworth, passes Arundel, to which it is navigable for vessels of 250 tons, and falls into the British Channel at Little Hampton after a course of about 40 m. Canals unite it with the Wye a tributary of the Thames, and with Chichester harbour. **ARUN** is also the name of a river in Nepal Hindostan.

ARUNDEL, a bor. market to and par. England, co. Sussex. The town is 10 m. N. Chichester and 19 W. Brighton, pleasantly situated on a declivity sloping to the Arun, which is here crossed by a neat stone bridge of 12 arches. It comprises three principal streets, two of which are spacious the third narrow and irregular but all are well kept. The houses are mostly old and timber-built, many of them dating as far back as the time of Elizabeth but there are also a number of handsome, substantial modern buildings. The town is amply supplied with water effectually drained, and well lighted with gas. On the summit of a steep hill, on the N. E. side of the town stands the ancient castle of Arundel of Norman origin, the residences of the present Duke of Norfolk. The church, erected in 1380 is a handsome cruciform structure, with a well built square tower rising from the centre. At the E. end is the collegiate chapel in which are a number of curious and interesting monuments chiefly relating to the noble family of Howard. The townhall in the Norman style of architecture, was built by the late Duke of Norfolk, at an expense of 29000. There are here, besides the parish church, an Independent and a R. catholic chapel. The principal school is the national school, erected by Charles, Duke of Norfolk in 1814 and is supported by voluntary contribution, and affords instruction to 300 children. The trade of Arundel is considerable, the river being navigable up to the town for vessels of 250 tons burthen. The chief imports are butter, bacon, lard, grain and sugar, from Ireland, grain and cheese from Holland, grain, cloaks, wine, fruit, and eggs, from France, timber from the Baltic, and coal from Newcastle and Scotland. The principal exports are oak-timber, corn, flour and bark. The gross customs receipt for 1847 was £2485, 7s. 4d. but this is little more than half the amount of the preceding year. The number of vessels registered at the port on December 31 1847 was 47 tons 4246. The number of vessels that entered the port during 1847 was 229 ton. 21 964 cleared 172 tons 14 638. There are two extensive breweries in the town. The borough was created in the reign of Edward I. The corporation consists at present, of 18 councillors including the mayor and four aldermen. The market is on Tuesday chiefly for corn of which large quantities are shipped and on every alternate Tuesday it is an extensive cattle-market. Previous to the passing of the Reform Act the borough returned two members to the House of Commons since then it sends only one. Registered electors in 1850 221. The par. comprises 1968 ac. 710 of which are pasture 347 in tillage and the remainder in park and forest land. Pop. of bor. and par. 2748.—(Correspondent in Arundel.)

ARYA.—1. A co. Hungary N. of the Danube, between lat. 49° 10' and 49° 55' N. having Galucha on the N. and E. and partly also on the W. area, 797 sq. m. Pop. about 125 600. It is watered by the Arva, occupies higher ground than any other county in Hungary and is not generally very fertile, although its soil is peculiarly favourable for the cultivation of its potato. Oats and flax are also grown in con-

admirable quantities, but its principal resources are its great forests which afford large supplies of timber. The pop is chiefly of Bohemian-Slavonic, or Slavonian extraction.

2 A River Spain, in Aragon, rising near the base of the Sierra de Domingo, prov. Huesca takes a S. course and being augmented by the Arre de Mel and other small streams falls into the Ebro 3 S W Tarazona, after flowing about 45 m.

ARVANA (Str) a par England, on Monmouth 2309 sq. Pop. 432

ARVÉ, a river France, dep. Haute Savoie It rises at the foot of the Col-de-Balme, flows S. W. through the valley of Chamouni to Ballecette, thence past Bonneville N W to Geneva about three-fourths of a m. W. of which it falls into the Rhone, after a course of about 70 m. The waters of the Arve being mainly derived from the melting of glaciers, are consequently cold and turbid from the quantity of pounded rock they hold in suspension. After entering the Rhone, which is clear and pellucid the turbid stream of the Arve may be distinctly traced for about half a mile, holding on its way down the course of the former river and keeping entirely apart from its clear waters. The effect of the transparent and muddy streams thus flowing along together without mingling is sufficiently curious. The latter however finally prevails, discoloring the former throughout. The beautiful pebbles found in the bed of the Arve, renders it interesting to the mineralogist. Some gold dust is found among its sands. The scenery on its banks is beautiful.

ARVÉ (Str) a streamlet France, dep. Haute Savoie an affluent of the Arve which it joins a little above the vil. of Chamouni. It issues from a natural arch in the lower end of the Glacier des Bois, the termination of the Mer de Glace. The size of the arch, and the regularity of its formation, varies with the season of the year.

ARVOREDO ISLAND on the S E coast Brazil prov. Catherina lat. 2 17 N. lon. 48° 22 W. a. off the N. end of the island of St. Catherine, and about 8 or 10 m. from the mainland.

ARZAMAR, a tn. and dist. Russia in Europe, gov. Nizhny-Novgorod. The town lies at the confluence of the rivers Tzouka and Chouka lat. 51 N. lon. 43° 20' E. It has two canals, several churches some castles, dyeworks, and iron works. Two fairs are held annually, and a considerable trade is carried on with St. Petersburg in sailcloth. Pop. 9000.—The district is watered by 7 or 8 rivers above named and produces timber and a considerable quantity of flax. The farmers raise vast numbers of poultry and thousands of frozen or dried geese are sent annually to St. Petersburg. Pop. of dist. 120,000

ARZANO a vi Naples prov. of and 3 m. N. that city It has some beautiful villas and flax and hemp are much cultivated in the neighbourhood. Pop. 4143

ARZHEEG a tn. Bavaria, Upper Franconia, circle of Wunsiedel. It has two churches two sawmills some limekilns, two iron-works and the preparation of alum, leather pitch, &c. are carried on. In the vicinity are mines of iron coal, and cobalt. Pop. 1380.—Auzheko is the name of numerous small towns and villages in Germany and Austria.

ARZEW Assaoz or Assaw [anc. Aracensis] a seaport in Algeria prov. Tlemcen, 24 m. E. N. V. Oran lat. (Str) 35 51 42 N. lon. 1° 17 W. (c) It is ill built, but exhibits many traces of former splendour consisting of fragments of columns, beautiful mosaic pavements, cisterns, &c. The harbour is the best in the regency and is frequently resorted to by European vessels as a place of retreat in winter and autumn. On the fort, on the point of Arzew a fixed light is shown, visible 4 m. distant lighted for the first time, December 23 1844. Corn and salt, the latter obtained from yellow springs in the neighbourhood are the principal exports. Pop. 500

ARZIGNANO a tn. Austrian Italy 11 m. W. Vienna, in a plain surrounded by hills near the Agno. It has manufactures of cloth and spun silk dyeworks, brickworks, and limekilns and an active trade in wool, silk, linen, wine, and cattle. Pop. 3500

ARZILLIA [the Carthaginian Zilia, and Roman Julia Trapezus] a small seaport, Morocco, 21 m. S. Cape Spartal lat. 35° 25' N. lon. 6° 2' W. It is a miserable village, with out trade, wealth, or military. The surrounding country is

well wooded, and partly laid out in gardens. Pop. in 1835, said not to exceed 600.

ASAB. See ASAN.

ASAHAN or ASRAHAN a tn. W. E. coast, Isl. Sumatra, in the Dutch country cap. of a district, and situated on river of the same name, about 20 m. from its embouchure in the Strait of Malacca. It carries on a considerable trade with Malacca, Penang and Singapore. Its principal imports are salt, opium, cotton goods, arms, and gunpowder: principal exports, wood for dyeing, rattans, rice, wax, horses, and slaves.

ASAL. See ASAN.

ASAM. See ASAN.

ASAMA-YAMA, or ASAMA NO-DAKE, a lofty and very active volcano, Japan, in the interior of the island of Nippon, N. E. of the town of Konoro

ASANGARO a tn. and dist. Peru N. bank of Lake Titicaca. The town lies on a river of the same name, about 10 m. from its embouchure in the lake lat. 16° 30' S.; lon. 71 30' W. Potatoes are the principal agricultural produce of the district. Cattle and swine are numerous, forming the chief resources of the inhabitants.

ASAPH (Str) [formerly Lam Elwy] a city and par., N. Wales, partly in co. Denbigh, partly in co. Flint, 6 m. N. Denbigh and 84 m. W. by N Chester beautifully situated on the slope of a gentle eminence between the rivers Clwyd and Elwy. It consists of two principal streets, and several smaller diverging from them, all kept clean and in good order. The houses are all of brick, substantially and well built. St. Asaph is a bishop's see, said to have been founded by St. Kentigern or Mungo, Bishop of Glasgow who when exiled from his country took refuge in Wales. On his return to Scotland he was succeeded by St. Asaph, from whom the see and town are named. The only building of my note in the place is its cathedral, a plain cruciform building, with a square tower in the centre. The interior is striking and impressive—no effect not a little heightened by a magnificent stained glass window in the E. end of the building. The original structure was founded in 1284, and was burned along with the town by Owen Glendower in 1402 it has since been rebuilt, and has undergone various repairs, but is now decayed. The other places of worship are the parish church and the religious Wesleyan, Unitarian, Baptist, &c. chapels. The educational means are an endowed grammar-school, a boys and girls national schools and several private schools. There are also a society for the diffusion of useful knowledge, and several charitable and benevolent institutions. The town has a weekly market on Friday and four annual fairs. It is included in the Flintshire of burghs. Area of par. 10 825 ac. Pop. 3576 city 2041

ASABU' a tn. Sicily prov. Catania, dist. of, and 9 m. S. Micozza. Pop. 5000

ASBEV' a considerable kingdom of Central Africa, about lat. 20° N. lon. 7° E. The inhabitants are said to be Tatarics, of the tribe of Kollari, but very little is known of the country. Asben is also the name of the chief town or caravan station in the kingdom, and the distances are given as follows, in M. Queen's Africa.—Asben to Tripoli, 50 days journey; Asben to Tana two months to Tashik 70 days, and to Murzook, 40 days (See Atlas Supplement, vol. ii p. 1367) ASCALON Assarous or Ascalmar [anc. Ashkelon] a ruined city and seaport, Syria, 40 m. W. S. W. Jerusalem, and about 14 m. N. by W. Gaza; lat. 31 25' N. lon. 34 31' E. (c) Ascalon was originally a city and lordship of the Philistines but afterwards fell into the hands of the Jews, and of various other nations in succession. In the earlier part of the Christian era it was a bishop's see, and in the Middle Ages it bears a conspicuous part in the history of the Crusades. After being several times dismantled, and repaired during the war between Richard and Saladin its fortifications were ultimately destroyed, and its port filled with stones by the Sultan Babur, in 1570. In 1666 it was partly inhabited, but in 1687 it is described as without a human inhabitant, and as exhibiting a scene of utter desolation, and distinctly fulfilling the prophecies of Scripture regarding it. This ancient city lies on an eminence, abrupt towards the sea, but sloping gently landward, and is almost encircled by a ridge of rock, along the edge of which the walls were built. Within are the remains of a temple, of Grecian architecture, supposed to be that of Venus, which

Herodotus states to have been plundered by the Scythians A.C. 480. There exist also the relics of a Roman amphitheatre, and of various churches and other buildings. Ascension was the birthplace of Herod the Great, and of Antiochus the seismologist, and the teacher of Glauco. It is by the Arabs called *Jauran*, and believed to be the residence of evil spirits. A little to the N. is a small market village, named *Solomon*, pop. 400, with a harbour for vessels employed in the coasting trade. (Robinson's *Bib. Researches* *Kites & Palestine*.)

ASCENSION a rocky is., B. Atlantic Ocean, about 8 m. in length, and about 6 in breadth between Africa and S. America lat. (Green Mountain) 7° 57' S. lon. 14° 21' W. (N.) 695 m. N. W. the island of St. Helena, and presenting a very rugged and undulating appearance from the sea. It was discovered on May 20 Assumption Day 1501, by João da Nova Gallegos, a Portuguese, and was visited two years afterwards, by Albuquerque, who gave it its present name. It is of volcanic formation, consisting of a single rocky mountain, named Green Mountain rising to the height of 2820 ft. above the sea level surrounded with numerous craggy peaks of less elevation, and with deep crevices and ravines filled with scoria, pumice-stones and other igneous products. The scanty herbage of the island serves but to support a few goats, whose flesh however is said to be exceedingly delicious. A deficiency of fresh water was long a desideratum on the island, the only supply being what remained after rain in the clefts of the rocks. After many fruitless attempts to remedy this evil Capt. Brandreth who was appointed by the Admiralty in 1829 to survey and report on the island previous to its adoption as a military station, succeeded in discovering a spring at a depth of 25 ft. which yields from four to seven tons of water daily a quantity far exceeding the demands of the island. The coast all around is very steep but at the

turned in one year but from 400 to 500 is the usual number taken within that period. Many of the turtle weigh from 500 to 800 lb. each. They are usually collected in two large ponds or caws, the water of which is occasionally changed. Turtle can now be obtained only by purchase, anyone taking them on the beach or floating near the island are liable to a penalty of £25. The usual price of a turtle is 25 10s. The coast abounds also with fowl of various kinds and is excellent; the conger-eel being the most prized. Another indigenous delicacy of this remarkable island or rather rock, is the egg of the tropical swallow or wide-awake, as it is called, on the island. They are largely used as an article of food; 10 000 dozen being frequently gathered in a week. Wild guinea fowl abound and wild goats were also to be had, but their extermination being considered essential to the successful rearing of sheep and cattle, they are now scarce, and will, in all probability soon disappear. The atmosphere is clear and elastic, and the climate remarkably salubrious. Communication with the shore is frequently rendered difficult if not dangerous, by the setting in of heavy seas or rollers, which rise suddenly in the midst of the most perfect calm and break with tremendous fury on the beach. The cause of this phenomenon is unknown. Some singular fossils have lately been discovered in this island, in a quarry on the N. W. side of the island about 100 yards from the sea. They consist of the eggs of turtles, containing young turtle fully developed. (See *Ray Geo. Soc.*)

ASCH or ASCHA a tn. Bohemia, circle, Elbogen on a streamlet of the same name, and about 4 m. N. the Erzgebirge lat. 50° 14' N. lon. 12° 12' E. It has a parish church and manufactures of linen, cotton and woollen goods. Pop. 2500

—ASCH is the common name of at least 10 small places in Germany.

ASCHACH a tn. Upper Austria, rank, Danube 13 m. N. W. Linz. It has a small church, three benevolent institutions, a fine castle of the Counts of Harrach and a considerable trade in laths, timber, fruit, and linen. Pop. 1240

—ASCHACH is the name of several other places in Germany.

ASCHAFAR, a group of small islands in the Malacca Sea off the W. coast of Yunnan, Arabia, from which they are about 25 m. distant. The 16th parallel of N. lat. passes the most S.

ASCHAFFENBURG a tn. Bavaria, prov. Lower Main, rank, Main, where it receives the Aschaff and on the N. W. slope of the Spessart, 26 m. E. S. E. Frankfurt-on-the-Main and on the proposed railway from Frankfurt to Bamberg. It is the seat of important local and appeal courts, the buildings in connection with which form some of its most conspicuous edifices. It is surrounded by walls on all sides except along the river.

Its most conspicuous building is the royal palace, called *Johannenberg*, a large square red edifice, with five towers, built originally by the Elector-Archbishops of Mainz, and now the usual summer residence of his Bavarian Majesty. It commands a delightful view of the surrounding country, and has a large garden, which is laid out in the English style, and forms one of the greatest attractions of the place. The high church, built in 974, has several fine monuments and sculptures by Vischer and a number of paintings, including one by Grünewald and another supposed to be by Albert Dürer. The other buildings and mansions deserving of notice are the Capuchin cloister the Cistercian hospital with its order of poor sisters the library which is at once extensive, and rich in ancient MSS. the gymnasium and several other educational institutions the grammar-school the school of agriculture, and the school of surgery. The chief articles produced here are cloth, paper common and stained leather red and white gins, soap bricks, pottery tobacco, brandy spirit of wine and *Hagebutte*. The trade is considerable and has been much extended by the establishment of steamboats which ply on the Main between Würzburg and Frankfurt. The antiquity of the town has led some to give it a Roman origin, and to find in its name a corruption of Ptolemy's *Ascherburg*. Pop. 9690

—THE PRINCIPALITY of Aschaffenburg, as existing in 1803 and annexed to the dukedom of Frankfurt, had an extent of 500 geo. sq. m. lying along both sides of the Main, and including the immense forests of Odenwald and the Spessart—parts of the ancient *Hyemum*, mentioned by Caesar and Tacitus. In 1814, it came into the possession of Austria, and passed by exchange and purchase to Bavaria. The counts of Aschaffenburg line an area of about 80 geo. sq. m., and a pop. of 20 190

height of about 80 ft. occurs a level plain, 6 m. in circumference, surrounded by precipitous rocks, supposed to be the crater of an extinct volcano which has gradually filled up. The only good anchorage is on the N. W. side of the island, in a small inlet, called Sandy Bay, opposite Georgetown, and known by a conical hill called Cross Hill. Georgetown, lat. (harsack-square) 7° 55' 30' S.; lon. 14° 23' 30' W. (N.) consists of a fort, military quarters and a few detached residences. Sandy Bay is much frequented by East Indian men and whalers who have been in the habit of depositing letters, enclosed in a bottle, in a certain well known crevice in the rock near the landing-place, called The Sailor's Post-Office, which are taken up by vessels going out or home, as the letters may be addressed. The island formerly belonged to the Portuguese, but is now occupied by the British, who erected a fort, and placed a garrison there, soon after Napoleon was sent to St. Helena. Several English families, from the latter place, took up their residence on the island at the same time. Ascension has been long famed for its turtles, which are caught in great numbers. The season for taking them is between December and June, both inclusive. As many as 2500 have been

ASCHTE, or **ASCHTE**, a tn. Belgium, chief place com. and cen. of same name, prov. Brabant, on the high road from Ghent to Brussels, and 6 m N.W. Brussels. It has breweries, distilleries, tanneries, and sawmills, and is famous for a kind of very fine, light, sugar-coated beer, which has a large sale, and are well known under the name of *coupeur de Aschte*. Pop. 60,000, and com. 5300.

ASCHERLEBEN a tn. Prussia, cap. circle of same name, gov. of 27 and 8.5 W. Magdeburg, on the Elbe, near its junction with the Wipper. It is surrounded by a strong wall with five gates, and has six churches (five Protestant and one R. cathedral), a synagogue, a gymnasium, a poorhouse, and a founding hospital. The chief articles produced are flax, flannel, worsted stockings, leather, earthenware, brandy, beer, and vinegar. In the neighbourhood are several interesting ruins among others the castle of Aschenen, the cradle of the House of Anhalt. — The *circus* (area 120 geo. sq. m.) with exception of a small level tract, is hilly being traversed by the chain of the Harz, which is here of considerable height. The soil of half the circle is good, containing partly of the bed of a large lake which, in 1703, was drained, and brought under cultivation. Pop. of tn. 10,100 of circle, 40,700 of whom only 450 are R. Catholics, and 200 Jews.

ASCIANO an mco. tn. and com. Tuscan prov. of, and 10 m. S.E. Siena, on a facility 1 bank, *Ombrosa*. It possesses a collegiate and two parish churches, in which are some fine pictures of the 16th and 17th centuries and municipal buildings. Pop. 6500.

ASCOLI (anc. *Asculum*), a fortified tn. Italy cap. delegation of same name, R. bank, Tronto 14 m. above its confluence in the Adriatic 90 m. S.E. Rome. The town, one of the most ancient in Italy is well built and contains many handsome edifices and noble mansions. It is the seat of a civil court, and of a bad op. has several parish churches, and a college of Jesuits with manufactures of woollen cloth, cotton of tartan, chamois, leather, wax, paper and glass. It has an active trade, and its port, at the mouth of the river Tronto, is much frequented by coasting vessels. Pop. 12,500. — The *delegation* is 30 m. E. to W., and 22 m. N. to S. It comprises part of the ancient mar. of Ancona and Fermo is mountainous, and has about 8 m. of coast, which is low. It is divided into the districts of Ascoli and Montalto. Pop. in 1838, 78,946.

ASCOLI IN BATHING, a tn. Naples prov. Foggia, dist. of, and 15 m. E.R.E. to be. Built on the site of the *Acidula Apuleia* of the Romans, which was destroyed by the Normans. It contains a fine cathedral, a diocesan seminary, a hospital, and some convents and is the seat of a bishop. It was destroyed by an earthquake in the year 1400 and rebuilt by the inhabitants on its present site. Pop. 5560.

ABOUT THE ATIL, England co. Berks, par. Winkfield about 3½ m. N. the South-western Railway and 6 m. S.W. by W. Windsor. It is celebrated for its race-course formed by William Duke of Cumberland.

ASCOTT *VERDUN*, Wychwood a par. England on Oxford; N.E. Bedford 1.93 on a Pop. 455.

ASDOUD *BAHRI* or *BAHRI* (anc. *Asdud* and *Amos*) a vil. Palestine, 20 m. N. by E. Jassan lat 31° 50' N. lon 34° 49' E. between 3 and 4 m. from the Mediterranean on the top of a grassy hill, surrounded by thick plantations beautiful pastures, and a finely undulating country. Although occupying the site of an ancient city of note, it exhibits no remains either of antiquity or of grandeur. Asdud was one of the five stripes or lordships of the Philistines, who kept possession of it long after the Israelites were masters of the land. In the New Testament, it is mentioned under the name of *Asdud* as the place where Philip was found after his meeting with the Ethiopian eunuch. In very recent times, it is alleged had a large khm or inn. but was remarkable for nothing but the number of scorpions by which it was infested. — (Robinson's *Ind. Researches* &c.)

ASFERBURG, see **ASERBURG**.

ASGARBY two parishes, England, co. Lincoln — 1 Area, 636 ac., R.E. Mansford Pop. 91. — 2 Area, 836 ac. by W. Spidby Pop. 97.

ASHAMPTEAD par. Eng. Berks; 2067 ac. Pop. 458. **ASHANGEE** a lake, Abyssinia, in Tigrai. The centre is in lat. 28° 18' N. lon. 30° 25' E. greatest length, about 25 m.; greatest breadth, about 14 m.

ASHANTEE, an extensive and powerful kingdom W. Africa, on the Gold Coast, Upper Guinea (esp. Coomassie) extending from lat. 5° 0' to 9° 30' N. and from lon. 0° 45' E. to 4° 7' W. bounded W. by the Atlantic, E. by the Volta and Soko, N. by the Kongo Mountains, and S. by the Atlantic. It is thus about 810 m. from E. to W. and nearly the same from N. to S. its general form being pretty compact. It is well watered particularly towards the coast, where the country is intersected by several considerable streams besides those named. The principal are the Benue or Anzobé, called the Bura in the earlier part of its course, the Benue the Anzobé, Benue, and Mitrin. The country is in general mountainous, though it has no systems, nor any great elevations. It is covered with dense forests from the coast to a distance of 200 m. inland. These are wholly impenetrable, excepting by paths which have been opened up in various places with great labour. Ashantee abounds in gold. The richest mines are in Axaman, and its provinces of Human, Bafy and Shorby. In these places the precious metal is found in large pieces, some of about four lbs. weight, called rock gold. The ore is of a deep colour and is dug out of pits from 5 to 9 ft. in depth. About 10,000 slaves are employed on the banks of the Bura for two months in the year collecting gold dust, which is also found in great quantities as well as the solid state. The climate is very unhealthy; the heat great, though perhaps not so excessive as the position of the country would lead us to expect. Vegetable productions attain here the most gigantic dimensions. On the coast *Henri* or the enormous tree, which bears the mangrove, palm and cotton trees, all of which reach the most stupendous size. The country is so extremely fertile, producing abundant crops of rice, corn, sugarcane, and yams, which last form the staple vegetable food of the people. The domestic animals are oxen, horses of a small breed, goats, and a species of hairy sheep. The wild animals are elephants, rhinoceroses, giraffes, buffaloes, deer, antelopes, apes, monkeys, baboons, lions, tigers, leopards, jackals, wolves, wild boars, &c. The rivers swarm with crocodiles and hippopotami and reptiles of all sizes, some of them enormous, and many poisonous abound everywhere. Birds of all descriptions, with every variety of plumage many of extreme beauty are also numerous. Few of them, however excel as songsters. Insects of various kinds abound. Sharks are so numerous on the coast, that they form the principal food of the natives. The rivers are also well stocked with fish.

The Ashantees are warlike and ferocious, with a love for shedding human blood, and inflicting violent and sanguinary deaths, amounting to a passion. In war they spare neither age nor sex, and human teeth and human jaw bones, are worn as personal ornaments. Human sacrifices are made in an extent, with a frequency and accompanied by an atrocity of circumstances hardly credible. Bowditch who was in Coomassie during one of their saturnals relates that a procession entered the town, displaying a number of human heads, and accompanied by two parties of executioners of about 100 each dancing with the most frightful gestures, and clashing their knives on the skulls which they carried. A hundred persons, says the writer were sacrificed in different parts of the town on this occasion, the victims being led to execution with knives thrust through their jaws and tongues, from side to side. The number of death is reckoned with large knives and swords. Slaves are sacrificed over human pits, that their blood may mingle with the charmed ingredients contained in them. The executioners wrangle and struggle with each other for the victims, as they are brought up to suffer death. On the demise of any great personage, or any member of the royal family these horrors are increased tenfold the streets are deserted, and from morning to night, the work of murder goes on. Bowditch passed several bad nights, in whose blood violence were revelling; and Dyer witnessed a royal program, in which the most conspicuous figure was that of a gigantic negro bearing the executioner-stool mounted with

gore, and howling the song of death. The following description, by Lander, of the *fiesta* tree, beneath which great meetings are made every year, completes the account of Ashantee barbarity.—It was the most ghastly and appalling object I ever beheld. Its enormous branches were literally covered with fragments of human bodies and its majestic trunk surrounded by irregular heaps of hideous skulls. Thousands of vultures were just hovering round and over their disgusting food, and new and those poisoning fearlessly on a half-decayed arm or leg. Notwithstanding the singular cruelty of dissection, if a Ashantee is a people of superior intelligence, and further advanced in civilization than any of the nations of W. Africa. They are also by far the bravest and have greatly extended their dominions by conquest. The better classes are extremely cleanly in their habits, their dresses are graceful, and often of rich material. The lower orders, however wear nothing but a piece of cotton cloth, fastened round the waist. The former live on corn, beef, mutton, wild hog deer and monkey's flesh, forming their usual fare, while the latter subsist principally on fish and millet. The common drink is palm wine. Morality is at a low ebb amongst them; the husband has power of life and limb over his wife, and adultery is punishable by death. Polygamy is allowed and marriage effected by paying a sum of money to the parents of the girl, and giving a family feast. The Ashantees excel in the manufacture of cotton cloths and in the brilliancy of their dyes. They also make good earthenware, tin leather and work in iron, making sword-blades of superior workmanship. But it is in the fabrication of articles in gold that they display the greatest skill, these often exhibiting a combination of fine taste, with dexterous manipulation. The chief article of export is gold, with a little ivory and some dyewoods. They also export great numbers of slaves. Their principal imports are—muskets, gunpowder, spirituous liquors, tobacco, iron, tin, copper lead with cotton and Indian goods, the latter chiefly for the extraordinary purpose of being unravelled on account of their colours and being re-manufactured in the native looms. The currency is gold in dust and lumps, and the well-known cowrie-shell. The government of Ashantee is a despotism alleged to be controlled by an aristocracy consisting of four persons and an assembly of cabonors or captains. But this control it does at all exist must be very slight, as it never seems to interfere with the royal will which has all the appearance of being absolute. Of the military prowess of the Ashantees their numerous victories over native tribes is sufficient evidence, but still stronger perhaps, is found in their formidable and often successful resistance to disciplined troops. Though finally defeated and brought under subjection to the British arms, they had, throughout a series of years, afforded them no ground of claim to superiority. Their final overthrow occurred in 1826. The military force of the state, according to Bowditch exceeds 200,000 men. The prevailing religion of the Ashantees is Fetishism (see Africa) but there are also many Mahomedans among them. They appear however to have some idea of a Supreme Being and of a future state, believing that their kings, priests and chief men, go after death to reside with the Great Spirit, receiving their earthly state, which is thenceforth to be eternal. The origin of the Ashantee nation is involved in an obscurity which the interest of the subject would hardly warrant an attempt to penetrate. Taking up his history at an early part of the 17th century we find it then forming a powerful, though small monarchy capable of sending 60,000 men into the field. In the beginning of the following century the King of Ashantee, at the head of a large army invaded the adjoining kingdom of Denka or Dinkia, having been belied thereby by an outrage offered to one of his wives, by the king of the latter kingdom. In this contest, in which it is said 100,000 men fell, the Ashantees were victorious, and the kingdom of Dinkia became a part of the Ashantee territory. After this they conquered in rapid succession, all the states around them until they extended their dominion to its present limits. Bowditch estimates the population of the whole empire, at somewhere about 3,000,000 but this estimate must be in a great measure conjectural, or at best founded on very loose data.—(M. Queen's *Survey of Africa*. Bowditch's *Ashantee Monarchy*. Drury's *History of Ashantee* &c.)

ASHBORN, a market tn and par England so. Dorset

This town is 12 m. N.W. Derby and 88 m. S.E. Manchester in a fertile valley near the L. bank of the Dove. The houses are mostly of red brick; the streets pretty regular, spacious, paved, and well lighted with gas; and the supply of water is abundant. The church is a handsome building supposed to have been erected about the middle of the 18th century. There are chapels here, also for Baptists, and Wesleyan and Calvinistic Methodists, a free grammar-school, a preparatory English school a school for girls under 12 years of age several day schools, and four sets of almshouses one of which is for the widows of four Protestant clergymen. A new jail or lock-up has been recently erected, also a savings-bank, the latter a neat stonework structure. Cotton and lace are manufactured here, the former to some extent, but the chief trade of the town is in cheese and malt, mostly sent to the manufacturing districts in the neighbourhood. There are several news-rooms and libraries, all of which are respectfully supported, and two or three branch banks. The town is governed by the county magistrates who hold petty sessions here every Saturday. Market-day (Friday) eight fairs annually chiefly for horses, cattle, and wool. The rural beauty of the country in the vicinity attracts many visitors. Area of par 7232 ac. Pop. 5087

ASHBY DE LA ZOUCH, a market tn and par England, co. Leicestershire in a fertile valley on the borders of Derbyshire, on the *Ghivichaw* a tributary of the Trent, 18 m. N.W. Leicester. It takes its distinctive appellation from the resident Norman family of La Zouch, who came into possession of the manor in the reign of Henry III. In 1461 it devolved to the Crown by whom it was granted to the noble family of Hastings. The town consists of several wide streets, well paved and well lighted. The principal street is particularly spacious and clean. Many of the shops are handsome, and a number of substantial new houses rising at various directions indicate a progressive prosperity. The church is a handsome

structure, and the town has, besides, places of worship for Independents, Wesleyan and Calvinistic Methodists, and Baptists; several schools, and a small theatre. The manufactures are chiefly of cotton and woollen stockings, and hats. It has also a considerable trade in malt. On the S side the town, at the Travellers, Bath, occupies a splendid position, and abundantly supplied with medicinal waters considered the strongest of their kind in England, and singularly efficacious. On the S side are also the ruins of Ashby Castle celebrated in English history as the scene of many remarkable occurrences. It is of great antiquity having been a place of note as early as the 11th century. About 1 m. N.W. the town are the mounds which Scott has made the scene of the famous passage of arms in his magnificent novel *Ivanhoe*. Ashby was the native place of Joseph Hall Bishop of Norwich and of Dr John Beauchamp. Area of par 6097 ac. Pop including 589 belonging to the chapelry of Blackfordby 6250.

ASHFORD a market town in and par. England co. Kent, agreeably situated on a gravelly eminence, 1 h. back of the Blean which is here crossed by stone bridge of four arches, about 54 m. S.E. London and 20 m. S.E. by E Maidstone. It consists of three principal streets straight well kept and well lighted with gas but indifferent supplied with water. The houses are, in general, of brick, and are well built. The church, which is in the Perpendicular style is in the form of a cross, with a tower 120 ft high surmounted by four pinnacles rising from the centre the latter surmounted in the reign of Edward IV. The other places of worship are a Baptist and a Wesleyan chapel, a chapel for the Countess of Huntingdon's connection and a meeting house for the Society of Friends. The schools are, a grammar-school British and national schools, three ordinary day schools, and several boarding-schools. There are a suite of assembly rooms, lately built two well supported libraries, and a reading room. With the exception of some tanning, the only branch of manufacture is that of table-linen hop-bags, making &c. carried on to a small extent. Market-day Saturday. Corn market, Tuesday. The South Eastern and Dover Railway passes through the parish the station here being half a mile from the town. The branch line to Canterbury Ramsgate Margate, and Deal joins the main line near Ashford station. There is another branch from Ashford to Hastings. Area of par 2780 ac. Pop. of par and in 5007. —Also a vil., co. Derby huns. High Peak par and 2 m. N.W. Bakewell Pop. 777.

ASHINGTON two parishes, England.—1 Co. Somerset; 564 ac. S.E. E. Leobster Pop. 80 —2 Co. Essex 1878 ac. N. Stanning Pop. 223.

ASHKIRK, a par. Scotland, co. Roxburgh and Berwick 3200 ac. Pop. 578.

ASHLEWORTH par. Eng. Gloucester 1710 ac. S. E. 590.

ASHLEY four parishes, England.—1 Co. Northampton; 1190 ac. bounded on the N. by the river Welland. Pop. 448 —2 Co. Bedford 2860 ac. N.W. E. 590.

ASHLEY —3 Co. Hunts 1857 ac. S.E. E. 590. Pop. 894 —4 Co. Wills 945 ac. N. Malmesbury Pop. 54.

ASHLEY —5 Co. Wiltshire a par. England, co. Cambridge 2148 ac. S.E. Newmarket. Pop. 524.

ASHMANHAUGH a par. England co. Norfolk 665 ac. N.W. W. Whitchurch Pop. 159.

ASHMORE, a par. England co. Dorset 2385 ac. S.E. Shaftesbury Pop. 237.

ASHOLT a par. England co. Somerset; 1965 ac. W. by S. Bridgewater Pop. 169.

ASHOVER, a tn. and par. co. Derby pleasantly situated in a deep narrow valley through which the Amber flows, 16 m. N. Derby and 5½ m. from the Stratton station of the Midland Railway. The chief building is the church of All-Saints, which is a large and beautiful Gothic structure, with a square embattled tower from the centre of which rises a hand some spire 69 ft high. This church contains several monuments of considerable antiquity and possesses a curious old leaden font of circular form and ornamented with rude figures in bas-relief. The other places of worship are, one for the Wesleyan and another for the Primitive Methodists. The rectory is neat and spacious and surrounded by gardens and pleasure-grounds. Besides an endowed school there is also a school for girls built in 1846. Lead mines are at one time so extensively worked in the parish but all mining operations have ceased & Ashover has in consequence greatly declined. Limestone is still quarried to some extent and there is a twisting mill for Nottingham lace. Medicinal herbs are grown in considerable quantities. Area of par 11290 ac. Pop. 2211.

ASHOW a par. England co. Warwick 1012 ac. N.N. Warwick Pop. 156.

ASHPRINGTON a par. England, co. Devon 1790 ac. S.E. Totnes Pop. 609.

ASH PRIORS, a par. England co. Somerset 635 ac. N.W. Taunton Pop. 237.

ASHREIGNFY a par. England co. Devon 5563 ac. W. by S. Chumley Pop. 989.

ASHRUFF *ASHRAF* or *ASHRAF* a tn. Persia, prov. Mazanderan, 50 m. W. Astara and about 8 m. from the Caspian Sea lat. 36° 41' 45" N. lon. 58° 33' 50" E. (L.) It was the favourite residence of Shah Abbas the Great who built here an extensive and magniificent palace. This and many other fine buildings that adorned the town are now in ruins, though, however still remains to leave a favourable impression of the Persian monarch's taste. Ashruff is said to have formerly contained 300 buildings within its walls but it has now only 800 houses thinly scattered through an extensive jungle. (Peters, *Borneo*.)

ASHTEAD a par. England co. Surrey 2552 ac. S.W. Epsom. Pop. 684.

ASHTOLA, or *SHAGSHAG* a small desolate Isl. Indian Ocean or Arabian Sea, off the coast of Makran in Belochistan lat. 25° 5' N. lon. 63° 45' E. about 15 m. from the mainland. It is accessible at one point only on the N. side on all others the steep cliffs rise to a height of about 800 ft. When Lieut. Keppelthorne visited it in 1835, there were no inhabitants on it, nor any vestige of human habitation. Great quantities of turtle frequent the island for the purpose of depositing their eggs and immense numbers of the females are killed by the Arabs, who export the shells to China, throwing the carapace away as useless. Ashtola was at one time a favourite rendezvous of the Jowarman pirates, who have committed many savage murders on the crews of the vessels they captured. The remains of their look-out tower are still visible. It is built on a high cliff very difficult of access and commands an extensive view to seaward. —(Keppelthorne's *Notes*.)

ASHTON, seven parishes, England.—1 Co. Devon 1709 ac.—1 N. Chudleigh Pop. 890.—3 Co. Northampton 1790 ac. S. Northampton, on the London and Birmingham Railway Pop. 382.—3, Ashton (Cold) co. Bristol Pop. 1921.—6 Ashton-upon-Mersey co. Cheshire 2592 ac. N.E. Altrincham. Pop. 2854.—7 Ashton (Stoke) a par and townshp on Wilt 6789 ac. E. Trowbridge. Pop. 1867.

ASHTON—UNDERLYNE, a market-tn. par and pari for England, co. Lancaster hna. Salford. The town is 6 m. E. Manchester 160 m. N.W. by N. London, on a gentle declivity E. bank, Tame, and consists of upwards of 200 streets, nearly all of which are perfectly straight, but many especially the older ones, very narrow. The newer streets are more spacious; and all are well paved well lighted with gas and water is plentiful. The houses are in general substantially built of brick and two stories in height, and many of them are hand some buildings. On the N. side of the spacious market place or square stands the townhall an elegant structure, erected in 1840 at an expense of £7506. The banking-offices of the Ashton Salford Hyde, and Glassop Bank, and the Manchester and Liverpool District Bank, are also worthy of notice. Amongst the architectural objects of antiquarian interest in the town are the old manor hall, the manor court-house, an antique circular structure, erected in 1626, on the site of an earlier building of a similar description the parish almshouse, and the manorial cornmills on the river Tame, known to have existed in nearly the same form as now six centuries ago. The ancient parish church of St. Michael which stands on an eminence near the E.E. entrance to the town, was founded in the 13th century. It has frequently been rebuilt, and is at present a fine specimen of ecclesiastical architecture in the later English style. It underwent a thorough repair in 1842 at a cost of £6800. St. Peter's Church erected in 1824 at an expense of £14,000, is adorned with a remarkably fine tower. Christ Church situated on the N.W. side of the town, was erected in 1847 at a cost of £3000. It is a cruciform structure, in the early English style. Besides the parish churches, there are 10 dissenting chapels, most of them neat brick edifices, belonging to various religious denominations. The means of education are 22 private and public day schools with an average attendance of 1859 pupils. The principal are those of the National Society belonging to the three churches of the British Society belonging to the Independents and that connected with the Wesleyan body. There are also four dame schools, in which are 84 children one infant school, in connection with St. Peter's Church, which has an average daily attendance of 148 pupils and 12 Sunday schools, attended by about 4478 scholars. The charitable and benevolent institutions consist of the female benevolent society supported by subscriptions numerous sick and burial societies and sundry bequests, which are defrayed from time to time by the rector and churchwardens. A mechanics' institute was established in 1835. It has a library consisting of 2000 volumes, and a reading-room well supplied with the current literature of the day, also evening classes conducted by competent masters, for the instruction of the subscribers in the various branches of education usually taught in such institutions. Principal manufactures.—cotton-yarn spinning and weaving calicoes by the power-loom. The number of factories at present existing within the borough is 64, working 8538 horsepower and giving employment to 14,877 work people the weekly wages of whom amount usually to about £7900. The consumption of raw cotton is estimated at 1,400,000 lbs. weekly.

The following remarks on the working population of Ashton-under-Lyne and their social condition, by an intelligent local correspondent, will not be found without interest.—The operative classes, which comprehend nearly the whole population of this town, are small in stature, sallow in complexion marry early have large families, and live expensively when in full employment they are deficient in domestic economy fond of attending public assemblies, careless about education and religion, and wanting in forethought and retrospection but they are skillful and industrious workmen, attentive to the due execution of their tasks, and when unexcused by evil influences, are generally contented.

In 1848 a barracks was erected near the town, at a cost of £42,500 in which a battalion of infantry and a troop of horse are permanently stationed, and in 1840 a century company nearly 8 ac. was laid out on the E. side of the town. The principal market-day is Saturday; and, in 1846, a weekly cattle-market, on Tuesday was established markets are also held on Monday and Wednesday. There are four fairs annually and one on the second Thursday in every month for the sale of horned cattle sheep pigs, &c. Ashton-under-Lyne sends one member to the House of Commons. Constabulary in 1850 734.

The increase of the wealth and population of this town within the last half century but particularly within the last 20 years, has been very remarkable. In 1831 its population was 9322 in 1841 it was 21,689 and is now (1851) 29,791 Area of par 2400 ac. Pop. 55,959.—(Correspondent of Ashton-under-Lyne.)

ASIA the largest of the great divisions of the globe. Its mainland is bounded N. by the Arctic Ocean, E. by the Indian Ocean, E. by the S. Pacific Ocean W. by Europe, and S.W. by Africa. Its greatest length is from the Bering strait to Behring's Strait, a distance of about 7500 m. its greatest breadth, from Cape Severo Vostokina, in Siberia, to Point Romana, at the S. extremity of the Malay Peninsula, about 5168 m. Asia is joined to Europe throughout the whole length of its W. limit being separated from it by an arbitrary line only part of which is formed by the Ural Mountains and is connected with Africa by the Isthmus of Suez. On the E. it is separated from Australia by Behring's Strait where the two continents approach within 86 m. of each other. The coasts of Asia are singularly irregular being deeply indented all round by immense bays and gulfs, forming projections of corresponding magnitude. The principal of the former are the Persian Gulf Arabian Sea, Bay of Bengal, and Gulf of Sum, on the E. coast the Gulf of Tonquin, Yellow Sea, Sea of Japan Gulf of Tartary Sea of Okhotsk, and Gulf of Anadir on the E. coast. On the N. the mountains are equally numerous, but with exception of the Gulf of Ob, not of the same extent. The more remarkable peninsulas are those of Hindocush, Malacca, Cochinchina, Corea and Anadir on the S. and E. coasts.

The principal islands and island groups included within the limits of this division of the globe are on the S. and K. the Laccadives, Maldives, the Clagos Archipelago Ceylon, the Andaman and Nicobar Islands, the Merga Archipelago Sumatra, Java, Borneo, Celebes, and the Sumatran and Banda Islands, the Moluccas, Sooloo Islands, Philippines, the Island of Hainan, Formosa, Chusan Hong-Kong the Japanese empire, Haploa or Tzankai and the Kuriles. On the N. Kolobrat, Fadzevat, New Siberia, Lachoy and according to Humboldt, Nova Zembla. The mainland of Asia is comprised between lat. 1° 15' and 78° 20' N. and lon. 27° 0' and 190° 0' E. If its islands are included, its E. limit will extend to lat. 11° S. the most E. point of Rotte a small island S. of Timor. The continents comprise within its limits are Asiatic Turkey Arabia, Persia, Baluchistan, Ochool Punjab Sind, Hindocush, Burmah, Siam, Laos, Annam, Malacca, China, Manchouria, Corea, Mongolia, Tibet, Tartary Asiatic Russia and to these, and to the islands above enumerated, respectively, the reader is referred for such details as may be missed in this article, which to avoid unnecessary repetition, is intended to be merely general.

The vast extent of Asia, the diversity of its surface, and the conflicting accounts given of the physical structure of

large portions of its interior, particularly in Central Asia, render it extremely difficult, if not impossible, to give such a view of its general conformation as should be of some assistance and intelligible. It may, however, be characterized, generally and notwithstanding its enormous elevations, as a *steppe country*; its mean level above the sea not exceeding 1150 ft. while a third part has not more than 256 ft. of mean height. The whole of that portion lying N.W. of the Thian-Shan Mountains, or of lat. 42° N. and N. of the Altai, or of lat. 50° N. is one prodigious plain or tract of lowland, a third larger than Europe, the elevation of which is little more than 200 to 1800 ft. The S. portion again, which stretches along the Indian Ocean, is composed, likewise, of comparatively level regions, so is also a great part of the interior where the elevation does not exceed from 5000 to 4000 ft. above the sea; though formerly believed to be more than double the height of the latter amount, or 9000 ft. a supposition contradicted by the fact that grapes, vines, oranges, and cotton, grow there readily and in great abundance. It may be added, that the heights of several of the other plateaux of Central Asia have been greatly overestimated, and that there is little doubt that, if carefully measured, most, if not all of them, would be found to fall far short of the heights at present assigned to them. Still, while a large portion of Asia is comparatively but little above the level of the sea, many extensive tracts have a great elevation, and no small part of the continent is actually below sea level. The extensive country N. and E. of the Caspian Sea, and around the Lake of Aral, forms a vast cavity of about 55 000 sq. mi., all of which is below the sea level. The prodigious mountain systems of Asia are no less remarkable than its vast plains and deserts. With exception of the Ural Mountains, none of any note occur throughout the whole of N. Asia N. of lat. 50° and W. of lon. 120° E. but E. of that meridian the Altai Mountains, and the Yablonoi and Stanovoi Khibits attain a considerable elevation. S. of lat. 50° and N. of lat. 21° are to be found the principal mountain-systems of Asia, consisting of four great ranges, tolerably parallel to each other and to the equator, the largest extending in an almost unbroken line under the various names of Taurus, Elburz, Hindoo Koosh, and Kunlun, across the Prochorus to China proper. E. of the 100th meridian forming, as a series, the backbone of the continent. The subsidiary systems lie at various angles to the equator but, generally speaking, they run parallel to the coast, the greater number however having a direction S.E. to N.W. as in Arabia, Persia the coast of Malabar the peninsula of Burma and Assam, and Malacca while on the coast of Orissamandel in N. India, China, Manchooera, and N. E. Siberia, the general direction is S.W. to N.E.

Having thus rapidly sketched the physiognomy of the continent, we now proceed to notice its principal physical features in detail.

Mountains.—The great mountain systems of Central Asia are the Himalayas, the Altai, the Thian-Shan or Celestial Mountains, and the Kuen lun, all, generally speaking, parallel to the equator. The Himalaya range, the general course of which is from N.W. to S.E. consists of three parts, the Hindoo Koosh or Indian Caucasus, which extends from the European range, in Afghanistan, to the base of the Himalayas; the range of the mountains, which stretches from the valley of Cashmere to Bhootan, with a semi-circular inflection, and lastly the mountains of Bhootan and Assam. The entire length of the range of the Himalayas is about 1800 m. reckoning from the W. extremity of the Hindoo Koosh, near the river Debal in Cabool, to the Namnapootra in Assam. The mean height of these stupendous mountains has been estimated at from 16 000 to 20 000 ft. The highest summit yet ascertained with any degree of certainty is that of Kanchingboing in Sikkim, which is 28,176 ft. in height. Pyramidal rocks exist to it. But there are several other peaks said to be of equal, and some of even still greater elevation. The number that exceed 21,000 ft. is upwards of 40. Most of the peaks are above 15 000 ft. in height and some of them 18 000 and 19 000. The line of perpetual congelation is at an elevation, on the S. side, of 13,921 ft. on the N., of 16,620 a result precisely the reverse of what would a priori be expected, but which is supposed to be owing to the greater serenity of the sky on the S. side, the less frequent formation of snow in very cold dry air, and the radiation of heat from the neighbouring plains,

which are much nearer than those on the S. The crest of the Himalaya is of crystallized syenitic rocks, especially granite, with large granite veins, and basaltic beds of basalt. The snow, between 15,000 and 18,000 ft. above the level of the sea, is of glacial strain; granite is frequent at the base, and strata of comparatively modern date occur at great elevations. Vegetation is prolonged on the Himalayas to the height of upwards of 18,000 ft. These magnificent mountains are intersected by valleys and ravines of tremendous depth, through many of which rivers and torrents rush with inconceivable impetuosity (see HIMALAYA). The system of the Altai surrounds the sources of the Irisk and Yenisei. The Altai proper forms little more than a fourth part of the entire system extending from W. to E. from the confluence of the Uba and Irisk, to Mount Garbi and the S. of Lake Baikal. Its branches or continuations stretch under various names, first to the Gulf of Okhotsk, and afterwards to Eastern China, where it terminates the whole length being about 4500 m. the breadth varying from 400 to 1000 m. The most prominent masses of this system, attaining the limits of perpetual snow are situated between the parallels of 42° 30' and 51° N. Or the highest known summit, Zinzhiba, in the Russian Altai, which attains an elevation of 11 000 ft. above the sea, a glacier 13 m. in length occurs. A great portion of this chain is unknown to Europeans, especially those branches that enter the Chinese empire. The common distinction of great and little Altai is founded on error and therefore apt to mislead both the name and chain of the great Altai being, according to Humboldt, imaginary.—[See Central, vol. I. p. 251.] **THE ALTAI.** The Thian-Shan or Celestial Mountains run nearly along the 42° parallel of N. latitude, rising in Tartary and terminating in the desert of Gobi in Mongolia. Their highest summit Bogda Oola, or Holy Mountain, is always covered with snow. Indeed, snow lies deep on the whole range in winter. Little is known of the country between the Thian-Shan Mountains and those of the Altai—a space of about 600 m. in breadth. The Kuen lun Mountains run nearly parallel with the former range and in some parts with the Hindoo Koosh also. They rise a little to the E. of the 100th degree of E. longitude, and under the various names of Kulkun, Assam, Kuen-lun, Hindoo Koosh, Elburz, and Taurus, running W. and N.W. closely skirt the Caspian Sea and Black Sea on the S. terminating to the W. of the latter thus forming, with the exception of the American cordillera of the Andes, the longest line of elevation on the surface of the globe.

In the mountain systems of the N.E. of Asia beyond the Altai, the ridges (from S.W. to N.E.) are of little extent and elevation when compared to the four great chains above described, running from E. to W. and which constitute, as it were, the framework of Central Asia. The other principal mountain-systems are the Ural and Caucasus Mountains, both in W. Asia, the former running N. and S. and the latter N.W. and S.E. the Taurus and Anti Taurus in Anatolia, the former S.E. to W. and the latter N.E. to S.W. the Persian mountains and the Western Ghats in the Coromandel, both running S.E. to N.W. the Vindhya ranges, in Upper India, and the Assam chain N.W. to N.E. The numerous other divisions of greater or less extent, existing over the great continent, will be found noticed in the articles on the countries in which they occur.

Volcanoes, Earthquakes, &c.—The continent of Asia has few volcanoes in a state of activity though its islands are crowded with them, Java containing a greater number than any other spot on the face of the globe. In W. Asia, the only active volcano existing is Demavend, 70 m. S. from the S. shores of the Caspian Sea. It is 14 895 ft. in height, is covered with snow and is constantly smoking. The Tableland of W. Asia was at one time the seat of intense convulsion, now restricted to the mountain just named, to Belur-dagh, and Ararat. In the tableland of E. Asia, the only instance of igneous explosion that occurs is in the volcanic chain of the Thian-Shan, where are two active volcanoes at the distance of 870 m. from each other, Fushan, and Ho-shoon. These are the centre of an extensive volcanic district, extending N.E. to the Altai Mountains. Fire-hills and fire-springs are numerous in China, but, so far as is known there are no mountains that eject lava. In Kamtschatka, however, there are no fewer than nine volcanoes in a state of activity. Earthquakes are frequent and violent in many parts of Asia. The

places most subject to these visitations are Asia Minor the Persian mountains, Cahool the region between Lake Balkh, and the province of Horchoot in the S.E. of Turkestan and in the vicinity of Ootsh in Hindoostan. An earthquake occurred in the second of these districts on January 23 1839 the consequences of which were felt throughout a space of about 800 m. in length from N.W. to S.E. by about 450 m. in breadth or from Lahore to near Tashkend in Middle Turkestan. Another occurred in Ootsh on June 16, 1819 which did much damage.

Table-lands, Plains, or Steppes and Deserts.—The table-lands of Asia, like all the other physical features of that vast continent are upon the most gigantic scale. That of Iran in Persia occupies an area of 1,700,000 sq. m. and is generally from 4000 to 7000 ft. above the sea, while that of Thibet comprises 7,000,000 sq. m. at a mean altitude of 11,000 ft. The table-lands of the interior are frequently fertile, and enjoy general climates but in some instances, as in that of the table-land of Thibet, are cold and sterile, snow falling there every month in the year. Among the less extensive table-lands are those of Taxila in the Punjab, of Malwah or Central India, of the Deccan, and of Mysore. Nearly the whole of N.W. Asia is one vast plain or undulating surface, occupying upwards of 7,000,000 sq. m. and in W. Asia, around the Caspian there are extensive tracts of country many feet below the level of the sea.

The great plain or steppe of Irachin in Siberia, extends from the E. slope of the S. extremity of the Ural Mountains across the Tobol to the Irtysh, a distance of about 700 m. It is covered in part with dense forests and abounds in game. Next to the plain is the steppe of Barata occupying the space between the Irach and the Upper Obi. To the S. of these steppes is another of several hundred miles in extent, lying between the Altai Mountains and the E. confines of Turkestan and including Lake Tengis. In the E. of China, again, there is an alluvial plain of 210,000 sq. m. most of its productive and highly cultivated, and in Hindoostan there are plains that extend 8000 m. along the S. slope of the Himalayas. The steppes of Asia generally consist of rich pastures, intermingled with woods barren sands, marshy tracts, and abounding in lakes, pools, and streams of salt and bitter waters. Deserts are numerous in Asia, and many of these of great extent. The most remarkable is that of the Great Gobi or Shamo (which see) of sand, occupying an area of 800,000 sq. m. in the E. extending as far as length as probably not under 1900 m. The great salt desert of Irak Ajind in Persia is about 380 m. in length, and 210 in breadth. There are besides, four other deserts in this country the whole occupying three-fourths of its entire surface. In Turkestan there are the great deserts of Kull Koom, and Khiva, which, with other tracts of a similar description, and equally sterile, extend over nearly half the country. The deserts of Afghanistan N.W. Hindoostan (the Indian desert) and Thibet, are also of great extent, and in S.W. Asia are the vast deserts of Arabia occupying many thousand square miles.

Rivers and Lakes.—Asia contains some of the largest rivers in the world. Those in W. Asia are the Euphrates and Tigris in E. Asia, the Amoor the Hoang-Ho, the Yang-tse-Kiang, the Hong Kiang, and the Sang Ho or Tonquin River. In N. Asia the Obi or Obi, the Irtysh, the Yenisei, the Lena, the Indigirka, and the Kalyne. In S. Asia, the Indus and its constituents, the Atick Jhelum, Chenab and Beidj the Ganges the Brahmaputra, the Irrawady, the Marabon, the Menam, and the Cambaja. Some of the basins of these rivers are of vast extent. That of the Obi is 924,800 sq. m. being the largest in the world with the exception of those of the Amazon and Mississippi. The basin of the Yenisei is 794,550 sq. m. that of the Lena 694,400 sq. m. while those of the Amoor Yang-tse-Kiang, and Hoang Ho, are all above 600,000 sq. m. The river of greatest length in Asia is the Yang-tse-Kiang the development of which is 9880 geo. m.; that of the Yenisei, 2800 m. The lengths of the other principal rivers are from 1400 geo. m. to 2400.

The largest lake or inland sea of Asia is the Caspian. It has no outlet, is about 750 m. in length from N. to S., and about 280 in breadth, having an area of 14,000 sq. m. Next in extent is Lake Aral in Turkestan about 370 m. in length and varying from 100 to 120 or 180 m. in breadth, area, 8873 sq. m. It is shallow, and like the Caspian, has no outlet. The

Vol. I.

other principal lakes to the E. are Lake Tengis or Balkash, about 150 m. in length, varying in breadth from 30 to 100 m., and Lake Balkh in Irachin, Siberia, the largest of Asian lakes. It is a fresh-water lake, embedded in a knot of mountains, is of a crescent shape and about 850 m. in length, by about 40 m. only in breadth. There are, besides, a number of smaller lakes dispersed over the continent. A great many of them are salt, some of them intensely so, and also bitter.

Minerals.—All the precious and useful minerals are found in Asia. Diamonds are found in Boudonland, Sumatra, Siam, the Deccan, the Ural Mountains, Siberia, and Ceylon, and various other places. Rock-crystal, amethysts, rubies, turquoise, corallines, apatite, crystals, beryl, lapis lazuli, topaz and many other precious stones, are found in numerous different quarters. Gold is found in a great many of the countries, but is, perhaps, most abundant in Siberia, in the Altai chain, called emphatically the Gold Mountains, in the Chinese province of Yunnan in the mountains of the Indo-Chinese peninsula, in Japan, and in Borneo. Silver is a product of China, Amur, Borneo, Annam, and the Japanese and Ottoman Empires, Mexico of China, Thibet, Japan, India, and Ceylon. Tin is met with over all the Malay peninsula, in Burmah, China, and some of the islands of the Indian Archipelago; copper and iron in Japan, Amur, Russia, Thibet, Hindoostan, Annam, Persia, Asiatic Turkey in most of which countries lead also is found. Coal has been discovered in N. China, Bengal, and in some of the islands of the Indian Archipelago, and doubtless exists in many other localities not yet explored. Salt is very generally diffused over the continent, few extensive districts being altogether destitute of salt lakes or springs, but our knowledge of the distribution of the mineral wealth of Asia as well as on many other points, is still exceedingly imperfect.

Climate.—Asia, as a natural consequence of its vast extent, stretching from the polar circle to the equator, possesses every variety of climate, from arctic to that of the most intense cold, being exceeded as regards the former by the tropical deserts of Africa alone. This variety of climate is further increased by local influences, particularly by the great heights of its table-lands and mountains by its compact configuration not being deeply penetrated by gales, and by the great extension of land it presents towards the pole and regions of perpetual ice. Beyond the 56th parallel of N. lat. which includes all Siberia, the ground is permanently frozen, and some places to the depth of 650 ft. and a degree of cold exceeding 90 below the freezing point, is here of annual occurrence, while, in other parts of the same range, such as Tobolsk, Bernal and Irkutsk, the summers are equal to those of Berlin, Münster and Charbourg, but are succeeded by winters of great severity the mean temperature being 0° to 4° U. The greatest heat experienced in Asia occurs in the province of Kutch, in Beloochistan, where, according to the natives, the summer breaks are made red by the scorching rays of the sun. The overpowering heat of this district corresponds with that on the Tahoma of Arabia, and of the countries on the banks of the Senegal, in Africa. But the remarkable variety of climate for which Asia is distinguished, is not manifested by its larger regions alone, but is equally exhibited within the limits of its different countries down to their provinces and districts. Thus, in Afghanistan, the snow lies in some places for three months in winter, and the thermometer sinks to from 10° to 15° below zero while, in summer it ranges from 90° to 84°. At Delhi, the winter's cold is sometimes 5° or 4° below freezing, while at Calcutta, the thermometer rises to 110°. These extraordinary varieties and sudden vicissitudes of climate are owing in the greater number of instances, to corresponding elevations and depressions of the earth's surface, but are, in some cases, the result of typhoons prevalent in S.E. Asia, between lat. 4° and 40° N. their sphere of action diminishing westerly to a space included between 18 and 25° N. lat. They thus comprise all China, and the empire of Annam or Cochinchina, to which countries, indeed and neighbouring seas, they seem to be almost exclusively limited. These destructive winds blow at all seasons, but rarely between May and December. The monsoons, which also prevail in this quarter of the world, extend into Asia, from their central region in the Indian Ocean, as far as lat. 35° N., including China, Hindoostan,

23

the Punjab, and part of Tibet. They blow regularly from the S.W. from April to October and from the N.E. from October to April, the change being accompanied by heavy rain, and violent storms of thunder and lightning. South of the equator the monsoons blow from the S.E. and N.W. during the same periods. The monsoon regions of Asia are of vast extent, one of these extends from Delhi in N. Hindostan to near Northlake in S.E. Siberia, a distance of about 3600 m., with a width of nearly half that extent. It includes part of Tibet, the great desert of Gobi, and part of Manchuria—a space estimated to comprise two millions of sq. m. The other is the continuation of the vast rainless region, which, commencing on the borders of Moreton, terminates in Beloochistan, of which latter it includes the greater part; with a large portion of Persia, the N. part of Arabia, and the S. of Syria.

Vegetation.—The vegetation of Asia is as various as its climate and is further diversified by geographical position and by the higher or lower elevations on which it is exhibited. The extreme S. portions only including Annam, Siam, the Malay peninsula, Burmah, peninsular Hindostan, the shores of the Persian Gulf and Arabia, exhibit the characteristic features of tropical vegetation, excepting in partial instances the upper portions display those of temperate regions, extending N. into those of the arctic zone. In W. Asia, the vegetation approaches nearly to that of India at the one extremity and to that of Europe at the other. N. of the Altai and Yablonoi Khibits Mountains perhaps the most characteristic vegetation is the pine tribes, which pervade this part of the continent throughout its whole extent. On the E. coast the pine descend S. through Manchouree and China, to near the tropic of Cancer, and in the W. of Asia, they proceed in a S.E. direction from the Caucasus Mountains along the plateau of Iran to the Himalaya Mountains over all which the species are plentiful and thus nearly quite circumboreal Mongolia and Tibet, regarding whose vegetation comparatively little is yet known. The N. parts of the continent, comprising Arab. S. Persia, Beloochistan, India, Burmah, Annam, Malacca, the S. part of China, and the islands of the Indian Archipelago are altogether a pine region. No cereals are cultivated in Asia N. of about lat. 62° N. From that parallel S. to the Altai there are two regions: the most N. characterized by the cultivation of barley, oats, and rye and the most S. by that of rye and wheat. Over both back wheat and potatoes are raised. The W. part of the continent, S. of the Altai to about lat. 31° N., is wholly a wheat region, excepting the coasts of Anatolia and Syria, where maize is likewise cultivated. On the W. coast of Arabia, and in the S. of Persia and Beloochistan, and the N. of India, wheat and rice are cultivated. The whole of S. India, and the littoral countries of the E. coast, as far N. as the S. end of the island Sumatra, including the Japanese Islands, and the islands of the Indian Archipelago, are characterized by the cultivation of rice. The rice-plant is cultivated over nearly the whole of China and Cochinchina, between lat. 17° and 35° N. and lon. 94 and 120° E., which includes Upper Annam; but is most abundant between the parallels of 25° and 32° N., which comprehends the principal tea districts. It is also cultivated in the Japanese Islands. Cotton is grown in Central and S. India, Burmah, Siam, Annam and China. Sugar in Bengal, and other countries to the E. just named also, in Malacca and Java. Ceylon and Java are famed for their coffee which is also grown on the coast of Malacca in Sumatra, and the Philippines. Cinamon is indigenous in Ceylon, probably its native seat, and is grown in Annam and throughout Siam, and pepper, having long been known as the products of the Siam and Siam Islands of the Indian Archipelago. In these latter localities also the sugar-palm attains the highest perfection and in many of them as well as on the continent of India, the valuable indigo-plant is grown. Nor would it do, even in this short and imperfect enumeration of the vegetable riches of Asia, to overlook that most valuable, and at the same time most beautiful plant, the poppy (*Papaver somniferum*), which flourishes in the S. parts of Anatolia, in Syria, and E. into India.

Zoology.—Asia has 288 mammals, of which 102 are peculiar to 64 species of ruminating animals, of which 66 are peculiar to 60 genera of cervidivore animals, and 190 species of apes and monkeys, all of which are entirely Asiatic. The

quadrupeds of the continent and islands include the elephant, rhinoceros, camel, lion, tiger, leopard, panther, hyena, tapir, wolf, bear, wild boar, dog, dog antelope, deer, chamois, stag, goat, buffalo, horse, goat, sheep, wild cat, monkey, ape, fox, hare, squirrel, jackal, etc., many of which are wild as usual. The habitat of the elephant extends from the S. point of Sumatra, lat. 6° S. through that island, across the peninsula of Malacca, over the S. provinces of China, throughout all India, including Ceylon, to nearly lat. 30° N. It is also met with on the Himalayas, at a height of 5000 or 8000 feet, and ranges wild in immense herds through the forests and jungles at the foot of these mountains. The habitat of the rhinoceros is nearly the same, only extending a little further N. in China. The camel is a native of Asia, where, from the earliest ages it has formed the chief means of communication between the different regions of the East. The greatest numbers and the best are produced in Arabia. The camel of Central Asia is the Arabian camel which has two humps; it is stronger and more muscular than the common or Arabian camel, and its hair much more rough and shaggy. The latter is the only description of camel known in other parts of Asia, where it occurs chiefly in a domesticated state. The Asiatic lion has no mane, and is confined to a comparatively limited region extending from Mount Zardak Koh in the Persian plateau, lat. 32° N. to Goolerat and the jungle countries of India on the E., and to the districts bordering on the Euphrates on the W. The tiger of Asia (royal tiger) has its chief habitat in the sultry jungles of Bengal and the islands of Java and Sumatra, but it occasionally wanders as far as the Altai and Himalaya Mountains, which it ascends to a height of 9000 ft. in search of prey and to the mountains of Persia and Ararat. It also penetrates into Siberia, and is distributed over Corea, Siam, Tonquin, and the Malay peninsula, where it abounds. But the tiger of the N. and E. regions of Asia, though equally large and strong differs considerably in its nature from the tiger of Bengal being much less ferocious, seldom attacking man during the day-time. The leopard, panther and hyena are common, and are met with everywhere, with the exception, as regards the last, of the Burman empire, in which there are neither hyenas, wolves, foxes, nor jackals. The species like the tiger ascends the Himalaya Mountains to great heights. The tapir is confined to the Malay peninsula, the S. provinces of China, and the Asiatic Archipelago, inhabiting the forests of Sumatra, and the N. parts of Borneo. Amongst the most remarkable of the Asiatic bears are the Syrian bear which is seldom met with, the Tibetan bear an inhabitant of the mountains of Tibet and Nepal and the snow bear of Sumatra. It is thought probable that the brown bear exists in Siberia and Kamtschatka, but this has not been ascertained. The wild boar and hog are very generally distributed over Asia, and several of the islands of the Asiatic Archipelago, particularly Celebes, Borneo and some of the Xallia Islands, which are inhabited by a singular species, called *Sus helyosensis*. The dog tribe abounds in the tropical province of Asia the greatest number of species next to Africa, being found there; but there are some in India beyond the Ganges, and in the Indian Archipelago only two species are known. The most deer inhabits the mountainous countries of Central and S.E. Asia, between China and Turkestan and in the regions extending from Lake Baikal to the Altai Mountains. It is also common in Nepal, Rhodan, Tibet, and the adjacent countries of China and Cochin. Four other species of deer occur in India, Ceylon, Sumatra, and Borneo. The reindeer occurs in the N. parts of Asia, the fallow-deer in the N. parts of Persia and China, the common stag or red-deer and the roebuck, in Siberia, between the Altai Mountains and the Lena. Two species of antelope are peculiar to Asia, two of which belong to the table-lands, the others are distributed in the Asiatic Archipelago. Various kinds of oxen have been domesticated in India from time immemorial. The most remarkable of these are the Indian ox, which has a hump on the shoulder and the Turkestan ox, with a beautiful white silky tail. The buffalo is native in China, India, Borneo, and the Sundra Islands. It is a large animal, and in its wild state formidable, but is universally domesticated. The horse is now known only as a domestic animal in Asia, although believed to have at one time roamed wild in the central plains of that continent. The greatest number of species of the goat family occurs in Asia, one of the most celebrated being the goat of

Cushners, which is also spread over Tibet, where they browse at elevations of from 10,000 to 18,000 feet. Another species, called the Dharma or yellow goat, is both swift and shy. The sheep is originally from the countries of W Asia, and, like the goat, is most numerous in this part of the world. They also browse at great heights, a species called the raa, which has straight spinal horns, living on the tablelands of Tibet at an elevation of 15,000 ft. above the sea. The wild ass or onager of Turkestan a lively and handsome animal, of great speed, is regarded as the origin of the common ass. It inhabits the dry mountainous parts of Great Turkestan ranging in summer as far as lat. 46° N. Whole herds of them are seen in summer, also, as far as the deserts of the Lower Indus but they are distributed chiefly over the E. provinces of Persia. The wild ass of Gutch and N. Gojerat, is not found further N than lat. 75° E. on the S. side of the Himalaya Mountains it especially frequents the salt deserts and open plains of Jodhpur, Jaisalmer and Bhukner. Wild asses abound likewise, on the elevated regions of Tibet, on the shores of the lakes of Manasarovar and Rakatal, at a height of more than 15,500 ft. above the sea. Of the ape and monkey tribes Asia has 180 species. Monkeys are found only on the coast of India, Ceylon, and the Sund Islands apex in the Sunda Islands, Malaysia, Sumatra, Borneo, and Celebes. The orang-utang in Sumatra and Borneo the latter and the Chimpanzee of Africa, approach the nearest to man. The Asiatic species of gnawers are all, with the exception of the jerboa, which burrows in sandy deserts, confined to Siberia the most remarkable of these is the flying squirrel. At the junction of Europe and Asia, on the coasts of the Black Sea and the Caucasus, the European and Asiatic forms of animals are mixed and pass into each other.

The chief kinds of the reptiles of Asia are the N and N E parts of Hindostan, between about lat 78 and 100° E. and between the Himalayas and the Bay of Bengal. China, in a low degree the islands of Ceylon, Sumatra, Celebes, and Java, in the latter in greater numbers and variety than in any other part of the world. The reptile fauna of Asia, as far as known, comprises only 44 species but there is little doubt that many more remain to be added to the list. At the head of this class of animals stands the crocodile, the Asiatic genera of which is the Gharial (*Gharial*), frequenting the Ganges and other great Indian rivers. The crocodile with the helmet (*Crocodilus galeatus*) and the double-crested crocodile (*Crocodilus porosus*) are numerous in various quarters, both continental and insular. There are 10 species of frogs peculiar to Asia, and nine species of toads but of the former three only belong to the mainland, the others are distributed through the islands, two being peculiar to Japan. Amongst the serpents of Asia are the Cobra de Capello, and a species of *Trit* genus, both amongst the most dangerous snakes in existence. Vipers, two species of which are peculiar to Asia. Tree-serpents, inhabiting the great tropical forests, box constrictors, pythons the largest snakes of the eastern world, chameleons, fresh water tortoises of which eight are peculiar to Asia. Sea and fresh-water snakes are also numerous the former swarm in the Indian Ocean and many of them are extremely venomous and ferocious.

The number and variety of birds in Asia is too great to attempt either enumeration or description. They include eagles, vultures, falcons, buzzards, quails, pheasants, partridges, storks, herons, cranes, swans, wild ducks, pelicans, nightingales, &c. In S E Asia and the islands of the Indian Archipelago, birds of the most gorgeous plumage abound while several of those above mentioned, though bearing European names, here present themselves in the splendid hues of the tropics. Asia is peculiarly rich in gallinaceous fowl, some of them possessing most brilliant plumage. Among these may be named the horned pheasants of the Himalaya, a species of *Tragophanes*, the gold and silver pheasants of China, and the Argus pheasant of Sumatra and Borneo. A large gallinaceous fowl (*Meleopodius*) of remarkable habits, is found in some of the islands of the Indian Archipelago; and to this region or to the S part of continental Asia, we are indebted for that most valuable of domestic fowl, the common cock and hen. The same or similar species of insects and fishes being found over a very wide extent of country it becomes much more difficult to adduce such as peculiarly characterize any particular locality than when dealing with quadrupeds, which

are not endowed with the same facilities of locomotion. We shall, therefore, on these departments of zoology refer the reader to the separate articles on the countries composing Asia, in which the more prominent genera of insects and fishes frequenting them will be noticed.

Races of Asia, Language, and Religion.—Asia is supposed to have been the cradle of the human race. It contains a vast variety of tribes and nations. The great divisions or families consist of the Caucasian group, the Mongol Turkestan group and the Malayan and Ethiopian nations. The first occupy nearly the whole of W Asia, the Himalaya to the Brahmaputra, and all India between these mountains and the ocean. The Mongol Turkestan family occupies all Asia N of the Persian table-land and of the Himalaya, the whole of E Asia from the Brahmaputra to Behring's Straits. It includes the Mongol and Turkestan tribes the Chinese, Indo-Chinese, and Japanese. The Malay nations occupy the Indian Archipelago. The Ethiopian, Ceylon, Borneo, Sumatra, Timor, and, exclusively or partially numerous other islands. These great divisions of the Asiatic population are again subdivided into numerous tribes most of which will be noticed in detail in the respective articles on the various countries of Asia. Of the four principal groups mentioned, the Caucasian is the least known, and probably the most intellectual though this admits of question. A portion of the Mongol Turkestan race are also capable of high culture, especially the Chinese. The Kalmuks, a branch of the same family who lead a pastoral life on the steppes of Central Asia, are as intelligent and well-formed race. The Malayan nations are dark, with black, coarse black hair flat faces and obliquely set eyes. They are active, ingenious, mild and gentle, in some places in other, fierce and vindictive. The distinguishing physical characteristics of the Asiatic races are well known to consist of a black complexion black woolly or frizzled hair thick lips projecting jaws, high cheek-bones and large prominent eyes. The most numerous of the great Asiatic races is the Mongolian, next the Caucasian, then the Malay and, lastly the Ethiopian, frequently now called the Papuan race, which is estimated at a million only.

The languages of Asia are nearly as numerous as its tribes, there being according to A. H. Burgess no fewer than 307 different dialects. The prevailing religions of Asia are Brahmanism and Buddhism the former being predominant in Hindostan the latter in China, Japan, Annam, Siam, the Burman Empire, Ceylon, and amongst the Mongols and Tatars. In the S.W. of Asia, Islamism prevails and Muhammadanism is numerous in India, Malacca and many parts of the Indian Archipelago. There are multitudes of other sects in various parts of the continent.

History.—The term Asia the origin of which is unknown was first applied to a small province of the peninsula now called Anatolia or Asia Minor but has since been gradually extended to the whole Asiatic continent. The early history of Asia may be regarded as that of the world. Here the human race was first planted and here also, from the few survivors of the deluge, arose in succession the primitive families, tribes, nations and dynasties of whose history only a few fragments remain. The ancient history of Asia is therefore divisible into four great epochs of mental condition, corresponding with the existence of four great dynasties—the Assyrian or Babylonian, the Mado-Persian, the Grecian, and the Roman, which last may be considered as extending to the period of the Mahometan conquest, in A.D. 638. It was during this latter period and when its power was at its height that the introduction and establishment of Christianity took place. This event formed a new era in the history of man, and became the source of great and favorable changes both in the physical and moral state of society. It has given a tone to all succeeding history and, apart from its blessed results to our race, must, even in a mere historical point of view be regarded as the most important event that has ever occurred not only in the history of Asia, but of the whole world. During that long period geography had made little progress. By Ptolemy's account it would appear that not more than about a fourth of the continent of Asia was known to the ancients who divided it into three orders, and Asia otherwise, the former corresponding with the modern Anatolia or Asia Minor and the latter with the rest of Asia then known.

The next division of Asiatic history is that which comprehends what are usually termed the Middle Ages, extending

From the commencement of the Mahomedan era to the end of the 15th century when Vasco da Gama discovered a passage to India by the Cape of Good Hope. In less than a century after the Hagen, or flight of Mahomet from Mecca, in 622 his imposture, which was destined to exercise so great and permanent an influence in the Eastern world, had been spread over a territory extending S. and N. from the Red Sea to the Caspian, and E. and W. from the confines of Turkey and India to the shores of the Atlantic. In 1037 the Tartars, under Tugul Beg, conquered the dominions of the Chinese, and in 1097 they invaded Syria, and Egypt. They also took and plundered Jerusalem, and by their cruelties towards the Christian pilgrims to that city aroused throughout Europe a feeling of indignation which led to the crusades. These memorable expeditions were undertaken in succession during a period of 300 years, commencing about 1095 and drew into their train some of the most powerful kings and most noted warriors of the Middle Ages. After various changes the dominion of the Saracens, about the middle of the 13th century the present vicinity of the way of Hajj, Khabul Khan, overtook the Saracens, and the Chinese, and other nations, and the Saracens, had contributed in the same way, and also degree than formerly to direct the mind of Europe towards Asia and the result was, the establishment of permanent commercial relations between them. About 1260 two Venetian noblemen, *Nicolo and Maffio Polo*, visited Asia as merchants, taking with them *Niccolo's son Marco*, who was afterwards the most celebrated Asiatic traveller of the Middle Ages. During a residence of 24 years at the Tartar court, by which he was frequently employed as an ambassador: he obtained much information respecting the manners, customs, religion, and political condition of the Tartars, the Chinese, the Mongols, the Uighurs, the Uyghurs, and perhaps all other countries lying along his voyage along the S. coast of Asia. His travels not only led much information regarding places which he never visited and his correct description of countries formerly unknown to Europeans, must be considered as having laid the foundation of modern Asiatic geography. After him several travellers published notices of Asia and their relations, in general, are full of fables, and the partial knowledge of China, and of portions of Northern and Central Asia, gleaned principally from the travels of Polo with the discovery by *Kubrat* of the great highway to an inland sea, may be regarded as the basis of the present knowledge of the interior of Asia. As far as the knowledge of the coast of Asia is concerned, it has been furnished, in addition to that possessed by the ancients, As length, the Portuguese navigator *Vasco da Gama*, in 1498 doubled the Cape of Good Hope, and, opening a new channel of intercourse with the E. ultimately led to a more accurate and more extensive knowledge of its geography. From the end of the 15th century to the present times the history of the East has gradually risen in importance and the progress of its geography has been much advanced. Within a few years after the arrival of the Gama on the Indian coast, the Portuguese, under *Alfonso Albuquerque*, discovered the Malacca Straits, and Cape Comorin in the Bay of Camboja, and established settlements in the Kingdoms of Cambaja, Cochinchina, Tonquin, China, and all the fertile islands of the great Indian Archipelago. At the death of their famous naval commander and hero, *Alfonso Albuquerque*, in 1512 their colonies were established at various points of the Asiatic coast, and extended from the Cape of Good Hope to the empire of Japan, a distance of at least 12,000 m. In 1600, the Portuguese encountered a new competitor and formidable enemy in the Dutch who sent a fleet of 10 vessels to the Bay of Camboja, under *Jan van Houtte*, and in 1602, had made them masters of all the E. islands not only, with the exception of some British settlements on the coast of Sumatra. The Dutch however in extending their settlements, acted chiefly on mercantile principles, and have not added much to our geographical knowledge. Their most important contribution was through the German naturalist, *P. Kämpfer* who has given a good description of Japan, in which he resided, in the capacity of Dutch physician, from 1684 to 1692. During the protracted wars between the Dutch and Portuguese, the N part of India, not only was subjected to successive or moderate, but suddenly changed the ownership, and having been won off the Tartar years in 1461, proceeded to make them masters of the conquest of *Kamer* in 1562 and *Ashrafi* in 1555, thereby extending our geographical knowledge over the basins of the Don, Volga, and Ural, up to the Ural Mountains. In

1978. Yennak, a lieutenant of the Cosacko, having crossed the Ural range with his troop, entered Siberia, the discovery and survey of which were planned so vigorously that, in 1666, the mouth of the Amur was reached and, in 1668 Deshkov, another lieutenant proved the separation of Asia from America by an open sea, by sailing round the N.E. cape from the mouth of the Koryma to that of the Anadir. Somewhat later a complete geographical view of the empire was obtained. But the British, who had obtained from the Emperor of the Great Mogul, who having risen to high favour in China, actually published a map of China, under the authority and at the expense of the Chinese Government. The attention of Britain had long been directed to Asia, and the discovery of the passage by sea had given a new impulse to their views in that quarter. For many years after their first, frequent voyages of discovery were made by British navigators, and several embassies and naval journeys were pursued to the East Indies, and to the Bay of Bengal. But the E. India Company in 1800, which ultimately established British authority in the E. has done more than any other event to extend our geographical knowledge in that quarter. At first the new information obtained was scanty but from 1760 during the war with the French in the Decade, and more especially from 1787 after the conquest of Bengal, it rapidly increased numerous expeditions, both military and exploring, have been made, and the knowledge of the interior of the East has been extended, within a comparatively narrow space.

Population.—The entire population of Asia is estimated at 499 000 000 which is considerably more than half the entire population of the globe. They are thus divided:—Caucasian race, 184 000 000 Mongolian, 291 000 000 Malay 24 000 000 Ethiopian 1 000 000, of which the Islands are supposed to contain between 60 000 and 90 000.—(Balfour's *Abridg. Foreign Quarterly Review*, Humboldt's *Asie Centrale*, *Aspects of Nature*, Combes, the Murray's *Cyclopaedia of Geography* *Treatise of Marco Polo Historical and Descriptive Account of British India* Johnston's *Physical Atlas* Mrs. Somerville's *Physical Geography* Lyell's *Geology* &c.)

ASIA MINOR. S. ARATOLIA

ASLAGO a tin. and dist. Austrian Lombardy gov. Vauze, prov. Vienna. The town esp. of the dist. stands on the ridge of an eminence, 40 m. N. E. by N. Verona. and is celebrated for the manufacture of straw hats, of which vast numbers are made here annually. Pop. 4670. — The district is known by the name of the Seven Communes (*Sette Comuni*). It is generally well wooded and its very productive in cattle and sheep great numbers of which are reared throughout the territory. It is also famous for its tannery cabinet-work, and other manufactures in wood. The inhabitants are of German descent. Pop. 25,500.

ASIATIC ARCHIPELAGO SM INDIAN ARCHI-

ASINAGOMY a lake Upper Canada, the centre is lat. 45° 58' N.; lon. 85° 50' W. It is about 12 m. in length, with a breadth varying from 2 to 4 m., and discharges itself into the E. extremity of Lake Superior by a stream about 85 km. long.

ASINAIUNGA [*Asin. Ad. Misissauga*] a tn. and com. township prov. of, and 57 m. S.W. W. from the E. locality of a hill in the plains of the Chena. It is well built, has wide and well-paved streets, a handsome collegiate church, in which are many fine paintings, an hospital, and a theatre. The surrounding country is well watered and fertile. Pop. 7767. (*—Diction. Upp. Can.*)

ASINARA, a small is. off the N W extremity of the island of Sardinia, 3 m N Cape Falcone lat 41 1/2 N lon. 8 18 15" E. (u.) It is about 10 m long by 2 broad moun-
tainous, but fertile and has a great deal of excellent pasturage.
The coast abounds with fish. It is now inhabited by a few shep-
herds and fishermen only. It has a good lighthouse, and an
excellent port called Porto Ferro.

ABRIH, an independent state, Arabia, occupying the high land on the confines of Hija, Yemen, and Najd. It appears to be of recent origin, for it was unknown to Niebuhr and though Burckhardt mentions the tribes of the Asir yet he does not seem to have heard of a state so called. The limits of Asir are formed by deserts or impassable mountains, and, like the boundary lines of all other Arabian states, do not admit of being precisely defined. Nearly in the 18th parallel of latitude, a number of small streams or torrents water the

fertile valley of Khams Mideh, enclosed within the rocky summits of the maritime chain of mountains. If the opening of this valley N., be followed it leads to Wady Shehran, which is also well watered still further N., or N.E., extend the valleys of Mamleh Kohb, and Mamleh Baghr (great and little Mamleh) the latter called also Hamdiah from Hamdiah, the name of a bird resembling a dove in size and figure, but with brilliant plumage. A little below Wady Shehran, the narrow bed of an occasional torrent with a well sunk in it, marks, in the sandy plain, the N. boundary of Asir towards Hajar. This point is probably not far from the parallel of $18^{\circ} 10'$. The chain of valleys forming the main portion of the territory of Asir may be presumed, therefore, to extend about 80 m. in length. The obvious advantage of this country are, first, its numerous mountain streams, which, with the aid of canals irrigate a wide extent of cultivated land and, secondly, its natural strength and general inaccessibility for though an overpowering force may march through the central valleys of Asir it cannot follow the inhabitants to the hills, so as to complete their subjugation. The streams seem to flow collectively into the river of Wady Bishah, which has water constantly and fertilizes a tract of about 45 m. in length, though the Arabs in their usual style of exaggeration, say that it reaches to the gates of Bagdad. The rivulets are dry during half of the year, but water may generally be found in their beds at a moderate depth, and when the heavy rain falls in violent thunderstorms (in August, and perhaps in May also) they are speedily converted into violent and impassable torrents. To persons arriving from Wady Bishah, which is low and sultry the air of this elevated region feels cool and humid there is not, however, any positive ground for supposing that the mountains of Asir rise to a great height. The favoured valleys of this country have probably an elevation of from 3000 to 4000 ft., while the rocky crests around them may rise 1000 or 1500 ft. higher. Granite seems to be the prevailing rock in the eastern chain, higher up in Asir M. Tannur thought that he found marble, with ore of tin and lead. In the lower valleys the date-palm grows to a great height, but the dates are inferior to those of Wady Bishah cotton is also cultivated higher up the date-groves are interspersed with almonds, figs, apricots, peaches, and vines the sides of the hills, where they offer any soil being clothed with forests of sidr or pine-like juniper. The valley of Khams Mideh, the most elevated part of Asir produces wheat, barley, *alfalfa* (*Holcus sorghum*), and excellent fruit in abundance. The middle of the valley in the neighbourhood of the stream is usually reserved to cultivation while the villages are perched on the surrounding heights, enclosed by walls, and otherwise fortified after the fashion of the country. In some places as in Wady Hamdiah each house is a little fort. The houses are generally two stories high, built of sun-dried bricks, and with roofs varying in different situations from flat to pointed, according to the local climate, and the violence of the rains. The ground-floor is given up to the cattle. The floor of the house is but a foot wide so that it may be made of a single date-tree plank. Besides the loop-holed and narrow-cloaked walls of the villages, which bear witness to the frequency of raids and intestine wars there are also regular fortresses, strong against native means of attack, near all the principal date plantations. It was in the wady near by Mehemet Ali with the Wahab, that the importance of Asir first came to light; the resources of that country and the courage of its inhabitants, proved the Pasha of Egypt's chief obstructions. Having subdued the Wahab, therefore, he turned his arms against the mountaineers of Asir and, between 1824 and 1827 the Egyptian army made three campaigns against them, which all proved unsuccessful the invaders being either beaten in the field, as in the first campaign, or worn out and smothered in marshes through deserted villages, surrounded by a vigilant enemy who allowed them no rest, and cut off all supplies, *etc.* at last they were compelled to negotiate a peace which virtually amounted to permission to retreat unmolested. The people of Asir are bigoted followers of Abd-el-Wahab by whom, it is said, they were first converted to Mahometanism in the beginning of the last century and many of their rites—among others their mode of circumcising—still retain a pagan character.—(Jomard *Recherches Géog. et Hist. sur l'Arabie* 1839 Tannur, *Voyage dans l'Arabie*, 1837)

AKIRINTAR, an active volcano in the island of Omo-koto or Amakuta, the most northerly of the Kurile Islands; lat. $40^{\circ} 40' N$ lon. $155^{\circ} 28' E$. Its height is not ascertained.

ASEK, or **ASAK**, a tn. Persia, prov. Mazandaran, dist. Larjan, of which it is the cap. about 13 m. N. by E. Mount Demavend, r. bank, Heras; lat. $36^{\circ} 0' N$ lon. $53^{\circ} 58' E$ at a height of 5900 ft. above the level of the sea. It contains from 1000 to 1500 houses.

ASKEATON a market-tn. and par. Ireland co. Limerick. The town is on the river Deel, about 2 m. above its junction with the Shannon, 16 m. W. S.W. Limerick. In the reign of Charles I. it was a large walled town, but is now a mere village. The parish church was formerly that of the Convent of Knights Templars, founded in 1298. There are here also a R. catholic chapel and several schools. The ruins of a Franciscan monastery founded in 1420 are beautifully situated close to the Deel which at high water is navigable for vessels of 60 tons up to the town. It is crossed by an old bridge of five arches which connects the two parts of the town. The principal trade is in grain and flour. Area of par. 6479 ac. Pop. 3890 of tn. 1907.

ASKERNE, a vil. England, co. York W. Riding $7\frac{1}{2}$ m. N. Doncaster pleasantly situated on a rocky acclivity ascending gradually from an extensive plain. It has risen during the present century from an obscure hamlet to an elegant and fashionable watering place through the celebrity of its sulphurous springs. The accommodation provided for visitors is very complete the hotels baths boarding houses, &c. being all of the first class and most of them agreeably situated in the midst of gardens and arboriculture. Permanent pop. 382.

ASKERSWELL, a par. England, co. Dorset 1161 ac. E. Bridport. 1 op. 244.

ASKHAM three parishes, England.—1 A par. and town-ship co. Westmorland 4387 ac. St. Andrew's par. 616. 2 (Ryedale) a par. and township co. York 1290 ac. W.S.W. York. Pop. 850.—3 (Shaker) a par. co. York 960 ac. S.W. York. Pop. 229.

ASKRIGG a small market-tn. and chapelry England, co. York, N. Riding. The town is built on an acclivity and consists of one street, well paved, and kept very clean. The houses are of stone, slated, and substantial. There is an ample supply of water from springs in the vicinity. It contains a church and a place of worship belonging to the Wesleyan Methodists, and a school supported by subscription. There is also a grammar-school at the distance of about a mile, which is now (1840) being rebuilt. Near the town are six almshouses for poor widows. The only manufactory in the town is a small mill for dressing wool for stocking-making. Market-day Thursday but very indifferently attended. There are four fairs in the year for cattle and horses. These are held in May June, July and September that in July is the largest sheep fair in Yorkshire. The country around is wild and mountainous, and has many picturesque waterfalls. Area of chapelry 4741 ac. Pop. 633.

ASLIA or **ASARLA**, a vil. Algeria, 149 m. S. Oran lat. $28^{\circ} 33' N$ lon. $0^{\circ} 50' W$. It is situated on the edge and crest of a plateau, on a small stream of the same name, which waters the little gardens that compose the principal riches of the inhabitants. The village consists of about sixty badly built damp, and unhealthy houses arranged so closely together that their exterior fronts, almost without opening in them, serve the purpose of walls. From a little distance the village presents the appearance of a ruined castle of the Middle Ages. In the centre is a sort of square, from which lead four little streets, conducting to all the houses, and to the mosque. It is a storing-place for the grain of certain nomadic tribes of the vicinity.—(Dul. *Geo. Soc.*)

ASLACKBY a par. England co. Lincoln 2894 ac. N. Folkestone. Pop. 493.

ASLACTON a par. England co. Norfolk 1194 ac. W. S.W. St. Mary Stratton, near the London and Norwich Railway. Pop. 413.

ASMANNSHAUSEN See **ASMANNSHAUSEN**

ASNA See **ENKENE**.

ASNIERES, the name of several villages in France, one of which, agreeably situated on the l. bank of the Seine, around St. Denis and about 4 m. from Paris, forms a station of the railway from Paris to St. Germain. The Versailles

railroad here branches off to the left, and the Rosen railway to the right. Before entering the village, the Sarno is crossed by a railway bridge of five arches. Pop. 709.

ASOLA, a small fortified town, Austria-Lombardy 30 m. N. W. Mantua, on the Chiese. It has an hospital and a silk spinning factory and is a place of high antiquity. Pop. 4000.

ASOLO, a small town, Austria-Lombardy 20 m. N. W. Treviso, agreeably situated on a hill. It has an old cathedral, some elegantly built houses, and the remains of a Roman bath and aqueduct. Near the middle of the town is an extensive old earth, now unutilized formerly the residence of Catherine Cornaro, Queen of Cyprus. The inhabitants rear silkworms. A little E. of the town is the famous quarry of Rocca. Pop. 3400.

ASOPH *See ASOF*

ASOPO [*anc. Asopus*] a river Greece it has its source about lat. 39° 10' N. lon. 23° 25' E. 5 m. S. S. W. Thiva or Thebes, and 3 m. W. by N. Athens. It falls into the channel of Megaropoli, lat. 28° 24' N. lon. 23° 47' E., after an E. by N. course of about 25 m.

ASPALL, a par England co. Suffolk 624 ac., S. Eya. Pop. 143

ASPATRIA, a par and township, England, co. Cumberland 9048 ac. N. E. Maryport reaches Maryport and Carlisle Railway Pop. 2246.

ASPE, a town Spain, in Valencia, prov. of, and 17 m. W. Albufera, at the foot of a low hill, near the river Eliche, having tolerably good houses, streets somewhat narrow and winding a church, townhouse, hospital, prison, abbott's several schools, a cemetery and two squares, in one of which is a fountain. Besides flourmills, there are here 18 mills, five soap manufactories and 10 brandy-distilleries. The commerce consists chiefly of oil, honey and brandy. Pop. 5744.

ASPE, a valley France, dep. Hautes-Pyrénées, extending about 27 m. S. N., from Mount Aspe to the ridge of the Pyrenees near Oléon. It contains about 15 villages, the inhabitants of which are mostly shepherds. Very little grain is grown, but a great quantity of timber for shipbuilding is felled and floated down to Bayonne by the Gave d'Aspe, which traverses the valley and, joining the Gave d'Oléon, passes into the Adour. The valley contains a quarry of alabaster.

ASPEDEEN a par England co. Hert. 1351 ac., S. W. Barnegate Pop. 508

ASPEREN a town Holland, prov. S. Holland, 20 m. E. N. E. Dort, 1 bank, Linde in form of a parallelogram walled, with four gates. Formerly it was strongly fortified and had two castles the ruins of one of which still exist. It has a townhouse, a church, built early in the 15th century a school and two annual fairs for cattle and horses, held in April and October of which the latter for sheep especially is the greatest in Holland. Pop. 1200

ASPERG Assam or Honsa-Assam a m. W. Hunsberg, circle, Kocler tal. of 5 m. W. N. W. Ludwigsburg At a short distance to the N. in the ancient fortress of Hohenz Asperg, upon an isolated rock, 1100 ft. above the sea level the only strong place in the kingdom and now or recently used as a military and state prison. Pop. 1570.

AMPERN or Gneiss-Aspern, a vil. archduchy of Austria, r. bank, Danube, nearly opposite Vienna. It was, with the villages of Ealling and Engsdorf the scene of a sanguinary battle, fought between 100,000 French, under Napoleon, and 75,000 Austrians, under the Archduke Charles, on May 21 and 22 1809. On this occasion the French sustained great loss. Marshal Lantini and several of their generals were killed, and they were forced to retreat to the island of Lobau.

AMPLEY-GUIER, a par England co. Bedford 1920 ac., N. by W. Woburn Pop. 1908.

ASPROPOTAMOS, or Aspro Potamos [*anc. Aschelus*] a river Turkey and Greece, having its source in the former and its termination on the W. shore of the latter. It rises in the N. E. corner of the Thracian range lat. 39° 50' N. lon. 21° 31' E. about 20 m. E. of the point it flows only from the sources of the Arta. From this point it flows due S. enters Greece at lat. 39° 3' N. traverses Livadia from N. to S. and now taking a S. W. by W. direction, falls into the Ionian Sea, near Cape Skropha, on the N. side of the entrance into the Gulf of Patres; its whole course being about 120 m.

ASSAB (RAY or) Abyssinia, about 40 m. N. W. the narrowest part of the Strait of Bab-el-Mandeb; lat. 13° 55' N.; lon. 43° 45' E. It is 16 m. in length, and upwards of 5 m. in width, at the broadest part; bounded, S. E. and E. and N. E. and N., by islands, the largest of which is Darmahab, nearly 20 m. in circumference very low and partly covered with jungle. The soundings inside the bay are 6 and 7 fathoms mud. Wood may be procured on the islands, but water is scarce and brackish.

ASSAL, an extensive salt lake, E. Africa, 25 m. S. W. Tajoura, about lat. 11° 40' N. and lon. 43° 40' E. It is, according to D'Hérécourt upwards of 700 ft. according to other authorities, 570 ft. below the level of the sea; of an oval form, 8 m. in length N. to S. and about 4 m. in breadth. The shores are covered with a thick salt crust, resembling ice, which in most places rests on the ground, the water having subsided the incrustation is frequently found to be about half a foot thick. Numerous ostriches from Abyssinia resort to the lake, to carry away the salt. D'Hérécourt describes it as having a singularly dismal and repulsive appearance the landscape around being lifeless and desolate, and much broken up by deep chasms and ravines, of volcanic formation, while the waters of the salt lakes 'become turbid, thickens, and slowly solidify under a burning sun. The same author advances the theory in which other authorities agree, that it is an ancient gulf of the sea, cut off from the ocean by a sudden up heaving of the land between the latter and the former a distance of about 5 or 6 m. (D'Hérécourt, *Voy. dans le Roy de Choa*.)

ASSAM, or ASAM a large district or country India beyond the Ganges, in the valley of the Brahmaputra between lat. 25° 45' and 26° 15' N. and lon. 90° 55' and 96° 50' E. Its limits, however especially on the E., are not well defined but its extreme length may be estimated at 400 m. with a breadth varying from 40 to 70 m. Area about 23,000 sq. m. bounded, S. W. by Bengal, S. E. by Bhutan, E. by Tibet, and S. by Burmah and Cachar. It is divided by the Brahmaputra into three parts, Outer, Middle, and Inner, comprehending those on the N. of that river, Dooars, comprehending those on the S. and the Mayell or Great Island formed by the separation of the stream into two branches, named the Lohit and the Dihing. It is otherwise divided into Camroop, Assam Proper and Bodiya or Lower Middle, and Upper Assam. The country has the appearance of a perfect flat, elevated over with little conical green hills, rising abruptly from the level plane to the height of from 200 to 700 ft. bounded on the N. and E. by lofty mountains. It contains several extensive tracts of well-cultivated land; amongst which are some districts of primitive soil, above the reach of inundation, and suited for crops of all kinds. Of these high plains, those at Dibruth, Chardwar and Chotagah, are the most considerable. Though the country is generally swampy and intersected with half-filled channels and stagnant lakes, yet in the dry season it is very susceptible of cultivation, and amply repays any labour and expense bestowed upon it. The soil is, for the most part, composed of rich black mould, though occasionally of red stiff clay. On the hills it is universally composed of red rich loam.

Assam has no fewer than 61 rivers, of which 37 flow from the N. and 24 from the S. mountains. Of the former the principal is the Brahmaputra. Most of the rivers, especially during floods, are navigable by the flat boats of Assam as far up as the mountains. Gold is found in nearly all the moon (see stream) that flow into the Brahmaputra, and also in the latter river itself. But the best is found in the most winding waters with the strongest currents. Iron abounds in most of the hill countries. Coal has been discovered in several places, and limestone and shell lime are found in considerable quantities. There are also mines of precious stones, and several amber mines, which are wrought with considerable advantage. The amber is cut into ornaments about one-fourth of an inch in diameter and 2 inches long, and is worn in the ear as an ornament. In the Kaga hills are numerous hot springs, from which salt is manufactured. Petroleum is found in small quantities in some parts of Upper Assam.

The climate of Assam has been long considered so unhealthy that some insurance offices exact a higher rate of premium on the insurances of lives in that province than usual. It does not appear quite to deserve this character;

many of those instances of extreme mortality on which it is founded having been the result of local mistresses, and of the unguarded conduct of the victims themselves. The wind here blows from the E or N E. for more than nine months in the year, and seldom from any other direction for more than a few days at a time. There is a greater equality of temperature during the year than is general throughout India. The hot weather also is much more moderate and endurable, and the nights are cool and refreshing. Very violent storms are frequent during April, May and June accompanied with tremendous thunder and lightning, hail showers and torrents of rain. The rainy season lasts six months; commencing in April and ending in October. During this season one universal deluge prevails and all the labours of the field are necessarily suspended. It might be thought that this would be a miserable time for the natives. It is quite otherwise. Every one, says MacCosh, seems happy and contented and lives luxuriously upon bunches of venison, or steaks of the hog or the buffalo. The natives anchor his boat to his own roof tree, performs his ablutions on his flooded hearth, and drags his net in his tobacco garden, where the oxen lately ploughed, they are sown across to higher pasture the sites of large villages are known only by their roofs above the stream. When the inundation has risen too high for the natives to wade from one house to another they paddle out of their houses in canoes, or roost on scaffolds with the frequent aid of their children falling out of their nests and being drowned.

Agriculture is generally in a very backward state and immense tracts of country are lying waste that might be profitably cultivated. Rice is the principal crop sugar-cane grows well, but does not attract much attention. Mustard cotton, and opium, are extensively cultivated. The tea tree, which grows wild on the mountains in great abundance, has become an important article of cultivation and commerce. Coffee, in its natural state, also grows luxuriantly but attracts little attention, and is, in consequence, not very fruitful. The betel nut palm is cultivated to a large extent about most villages. Fruit-trees with a very few exceptions, do not thrive in Assam. The ratan grows wild throughout the country and even forms impenetrable jungles. The plantain grows abundantly on most of the hills. India-rubber or caoutchouc is an indigenous production of Assam, but is inferior to the American. The tree producing this substance is one of the largest known the trunk often attaining a circumference of 74 ft., height 100 ft. area covered by branches, 510 ft. it occurs generally as a solitary tree, but occasionally two or three may be found grouped together. Many valuable gums are found in the forests, including gum-copal. Fig trees form a large proportion of the vegetation, but the fruit is uneatable. Valuable timber abounds in many parts.

Wild elephants are numerous, moving about in large herds and the deepest parts of the forests are inhabited by the rhinoceros. Tigers, leopards, bears, and buffaloes, also abound. Cows are of inferior quality and are generally in wretched condition. There are no horses indigenous to Assam but they are imported from Rhoon. Sheep also are imported from the same place and from Bengul. Wild hogs and wild game abound, but poultry is scarce. Porcupines, flying squirrels, iguanas, otters, pangolin, civet cat, and an infinite variety of monkeys and snakes, are common to the country. The white ant is very destructive. Crocodiles swarm in all parts of the Brahmaputra; and tortoises are also numerous. The rivers abound in fish of excellent quality which are nearly all taken by the net hooks being rarely employed.

There are few manufactures in Assam and, with exception of pottery and paper-mills, all kinds of artisans are brought from other parts of India. There are three different qualities of silk made, called, respectively Pak, Moong, and Judy the first is a fine and easily dyed; the others are of an inferior description, the last being the coarsest. Large quantities of lac are prepared for export. There is little or no trade. What there is, is carried on entirely by a few enterprising class of men, called Kyahs, emigrants from Marwar who establish themselves in all the principal parts of Assam, and, through their petty agents, carry on a barter trade exchanging salt for lac, gold-dust, and ivory. Nankins, silks, lacquered and China ware lead, copper and silver are imported from China and Burmah.

The natives of Assam chiefly consist of Hindoos, but there is also a large proportion of Mussulmans, who, however are held in little estimation. The Assamese have generally been described as a degenerate and weakly race, inferior even to the Bengalees. They are a shade or two lighter than the latter with high cheek bones, and a physiognomy resembling the Chinese. Their moral character is extremely low. Filthiness and knavery prevail to the greatest extent they are idle and indolent in their habits; childish and timid in their manners; and perfectly indifferent about providing for their future wants. Those represented in the accompanying wood-

ASSAMAREH. From a drawing by W. P. Fraser, Esq.

cut are Gossains, or land holders a fine race of people, of high Hindoo caste. Their large picturesque hats are beautifully made of straw or fine cane. The young men have his d'haa or large knife, in his hand with which he cuts his crops, or clears jungle. The father carries his food, tobacco, or any other little valuable, in neat-made ratan baskets, which have a covering also made of cane or leaves, impervious to water. The white clothes are of fine cotton the coloured of wild silk tissue called Tufik. The women form a striking contrast to the men being fair and handsome but their morality is at a very low ebb. Dénatation is extremely limited throughout Assam, and as in many other Eastern countries, is confined entirely to the male sex. The aggressions of the Burmese on the British territories led to a war which, in 1825, ended in their expulsion from Assam and the access on of that disturbed district to the British empire. The functionaries appointed by the Bengal Government are subject, in civil cases, to the court of the Sadar Dewanny Adawlut in criminal cases to the Ayanas Adawlut and in revenue cases to the Sadar board of revenue. The native government of Assam is composed of a king or raja, three gossains, or hereditary councillors of state the boro borra, or chief secretary six shorays phukons, or inferior councillors and 12 rajkhaoyas, or captains of 8000 men. The greater part of the land is bestowed in grants upon persons called paytas who are bound to work four months in the year for the king or his officers. Amongst the principal sources of the royal revenue are the gold mines of Takergut, the salt mine of Bodjia, and an iron mine in the Doyang district. The custom-house duties form another addition to the royal treasury and in 1888 the whole revenue of the kingdom amounted to 244,000 sterling. The towns of Assam are numerous, but are composed of long straggling ranges of huts, which scarcely deserve the name of towns. The country contains many ancient temples, and several large and magnificent universities. Pop. in 1881, 693,500. (Martin's History Asiaticus &c. of Eastern India, Hamilton's East India Co. Murray's British India Pemberton's Report on the Eastern Frontiers of British India M. Cosh's Topography of Assam.)

ASSAMAREH a large vil., W. Addis, L. bank, Niger about lat. 6° 58' N lon. 6° 45' E. Camwood abounds in the vicinity and is a staple article of commerce.

ASSASSINS or **HASSASSINS** [Persia, *Assassin*, a Persian] the name of a military and religious order formed in Persia, by a sect of Mahometans, in the ninth century who, in process of time, obtained possession of 10 or 12 cities, and chose a leader or king, to whom they gave the name of *The Old Man of the Mountain*, who resided in the hill-fort of Alamut, N. of Coorin in Persia, and surrounded himself with a devoted band, dressed in a peculiar manner and armed with sharp daggers, who paid the most implicit deference to his commands, attended assiduously to his wishes, and followed by his disciples, and who believed that the highest joys of paradise awaited them, should their lives be sacrificed in his service. Secret assassinations, against which no precaution could prevail, was the tremendous instrument of his vengeance. The greatest monarch stood in awe of him, for he was a power which they could not guard against, and many princes fell under the daggers of their followers, assassins who had succeeded in getting into their service, for the purpose of destroying them. About the middle of the 12th century however the mission was therefore exterminated, by the great Mongol conqueror, Mangoe Khan, their haunts all taken one after another and their inmates massacred without distinction.

ASSATCHINSKAJA SOKKA, an active volcano in Kamtschatka lat. 52° 2' N lon. 157° 45' E. Its last eruption occurred in 1828.

ASSATE, *see* Assate.

ASSCHER, a tn. and com. Belgium prov. S. Brabant dist. of and S. N. W. Brussels, on the road to Ghent. It has a considerable trade in grain, hops, flax and fruit. Pop. 5820.

ASSEERGHUR, or **ASSEERGHUR**, a tn. and fort. Hindustan, prov. Candahar presidency Bombar 15 m. N. Hindustan and 280 N. E. Bombay; lat. 21° 30' N lon. 78° 20' E. long distinguished as the key of the Dacca. The town, called a *petah* or suburb is large and irregular with one good street and a bazaar. It lies round the foot of a rocky hill 750 ft. high, on whose summit is the fortress the walls of which are built on the edge of a precipice about 100 ft. high and only accessible at two points, both strongly fortified. The fort is well supplied with water and has several magazines cut in the solid rock. The principal approach is on the S.W., where there is a double line of outworks of admirable masonry. It was besieged and taken in 1819, and, along with a small tract of unproductive country around it, ceded to Great Britain.

ASSEN, a m. Holland, cap. prov. Drenthe, and of arrond. and com. Assen, 16 m. S. Groningen at the N. end of the Smolder Creek, by which it communicates with Meppel Zwarte-ek, and the Zuider-Zee. It is the seat of the court of justice for the province, for the arrondissement and canton has paved streets and well-built houses, mostly having gardens attached, and altogether has such a good appearance, that it has been called a little town of palaces. It possesses a townhall, a handsome Government-house, a courthouse, prison, bank, a Calvinistic and a R. catholic church, and a Jewish synagogue, a gymnasium, and three other schools. The inhabitants are chiefly occupied in agriculture, and in the sheep and transit trade. An annual fair is held for cattle, &c. Pop. about 1700.—(Van der Aa.)

ASSENDELFT, a vil. Holland, prov. N. Holland, 7 m. N. N. E. Haarlem, and 8 m. N. W. Amsterdam. It has a townhall, a handsome cruciform Calvinistic and a R. catholic church, two orphan-houses, and some schools. Its inhabitants are employed in making butter and sweet-milk cheese and in weaving sailcloth, upwards of 500 looms being frequently at work. In the vicinity are four paper-mills, and two oilmills. Pop. about 2600.—(Van der Aa.)

ASSENEDDE, or **ASSENEDDE**, a tn. and com. Belgium, prov. E. Flanders, N. Ghent. It has dye-works, and manufactures of woollen and cotton cloths. Pop. 4306.

ASSEN, a small tn. and seaport, Denmark, W side of the island of Helsum, situated on the water part of the Little Belt, about 30 m. S. W. Olmunde lat. 55° 16' 6" N; lon. 7° 55' 45" E. (a.) It has some distilleries, several manufactures, amongst which is an extensive wood-carving manufactory, a considerable trade in corn, and a small but

safe harbour, with 12 ft. water. The town has ten vessels, gross tonn., 750. There is constant communication from Assen across to the Schiering coast. Pop. 3700.

ASSEE EARS, the name of various remarkable rocky peaks, in different parts of the world.—1, A double-peaked hill, near the mountainous peninsula, Jebel Hassan in Arabia, at the S. entrance into the Straits of Bab-el Mandeb.—2 Two sharp peaks near Kismay point on the S. coast of Arabia, in lat. 15° 30' N lon. 51° 48' E.—3 Two remarkable hills in Persia, prov. Fars, 5 m. E. the shores of the Persian Gulf; lat. 29° 22' N lon. 51° 14' E. (a.)—4, A rugged double-peaked hill in Malabar about 18 m. N. E. from Mangalore, and 13 or 15 m. from the sea lat. 13° 2' N it rises almost vertically from the low country.—5, Two spire-like peaks in the S. part of the island of Lingia, in the China Sea, about lat. 0° 18' S lon. 105° 4' E.—6, Two high remarkable peaks on the Hae-Poog or Ky-Poog Island, off the S. coast of China, prov. Quang-tung lat. 31° 54' N lon. 114° E. (a.) They rise from the same base almost perpendicularly from the sea, and sloping suddenly down on the N. E. side are united to a piece of moderately elevated land, which terminates that part of the island.—7 Two angular peaks on the S. end of the island of Timor or Teiman China Sea, off the S. coast of the Malay peninsula lat. 3° 54' N lon. 104° 18' E. The peaks stand on one base, and rise abruptly from the sea to a great height.

ASSEY a parish Ireland, co. Meath 1210 ac. Pop. 106.

ASSIN a small state in the Ashantee territory L. bank Amazon.

ASSINEE a river and vil. Guinea, N. W. coast, Africa. The river forms the W. boundary of the Ashantee territory as the Volta and Loka do the E. The village is situated at the mouth of the stream, which is in lat. 1° 15' N lon. 3° 7' W.

ASSINGTON a par. England co. Suffolk 2286 ac N. W. England. Pop. 76.

ASSINIBOIN a large river N. America, within the Hudson's Bay territory which affix a narrow course of about 450 m., having been previously joined about lat. 50° by the Red River flows into the S. W. end of Lake Winnipeg. It is navigable for canoes to its source and gives its name to an Indian tribe of the Sioux nation, residing in the W. part of N. America, near the Rocky Mountains.

ASSISI or **Assisi** [Latin *Assisium*] a Papal States delegation of, and 13 m. S. E. Perugia, 20 m. N. W. Spoleto picturesque situated in one of the finest parts of Italy it stands on a hill, across which a long line of aqueducts stretches, and is surrounded by battlements and towers, overhung by a lofty cinctured in ruins. It is the birthplace of St. Francis, founder of the order of Franciscans, and the most remarkable edifice which it contains is the double church which is built over the crypt where his remains lie and was erected in the 13th century. Its architecture belongs to the early Gothic, and has served as a model to all the churches of the Franciscan

THE PIAZZA, ASSISI.—From Giovanni C. Rossi.

order. It contains fine paintings by Cimabue, Giotto, Lo Spagno, Cavallino, and other celebrated artists of that period; and the tomb is annually visited by immense numbers of pilgrims, during a great fair which is held here between July 31

and August 1 and attracts visitors from all R. catholic countries by the indulgences which are then given. There are 70 other churches, and 13 monasteries for mendicant friars. In the Plaza, or square, stands a magnificent portion of the ancient Temple of Minerva. It consists of fluted columns and a pediment. The ruin has been attached to a church, to which it has given the name of Santa Maria della Minerva. Aerial manufactures of iron files and needles of the latter it produces 4000 lbs. annually. Assai gave birth to Malatasio, and is celebrated by Deane. Pop. 6000.

ASSMANNHILAUSEN a poor vil Measen r bank Rhine about 3 m. N W Rillshausen, celebrated for the excellent red wine grown in the Hellenberg, famed as far back as 1109. In early times the religious house and noblemen around seized on the vineyards, whence arose the poverty of the inhabitants. Pop. 679.

ASSO a tn and com Austrian Lombardy prov of, and 9 m. N E Como, and 7 m. W Lecco, on an elevated plain near the source of the Lambro having a parish church eight chapels of ease, and a school. It has a large bonded storehouse, two cotton factories, and a linen-weaving factory making cloth for the great hospital in Milan. Pop. 1832. — (*Dona Ugo Raba Riffalessari*).

ASSOFOODAH a tn. Fellatah country W Africa about lat. 10° 25' N lon 2° 55' E. The natives are Mahometans. Pop. 12 000.

ASSOS, or **ASSUN**, an iso. and ruined city Asiatic Turkey near Assiolo, near the modern Bazar or Boshrahm, on the Gulf and about 30 m. W the town of Aden. lat. 36° 30' N lon. 36° 20' E. It is surrounded by rocks which rise steeply to the height of 60 or 80 ft. and which were formerly crowned with temples. Among the ancient ruins here are numerous tombs, the ruins of temples, baths, theatres, &c.

ASSOUAN or **ESOUAN** (anc *Ayene*) a tn Upper Egypt, r bank Nile, near the tenth Cataract lat. 24° 50' N. Few remains of the ancient city now exist. The environs are sandy and barren, producing little else than palm, dates, and grain. Every other kind of provision being brought from other parts of the country. Dates are among the principal exports of the town. Sesame, charcoal, gums, wicker-baskets, and a few slaves, from the interior from Abyssinia, and Upper Ethiopia, are sent thence to different parts of Lower Egypt. Near Assouan commences the granite regions of Egypt; and the most interesting objects in the vicinity are the ancient quarries, whence obelisks and statues were excavated of the kind of granite called *assuit*. Syracuse was the place to which Juvenal was banished.

ASSOUR, a tn. Nubia, kingdom of Dongola, r bank Nile about 10 m. N W Merse, celebrated for the number of its pyramids. Fine rains abound in this vicinity.

ASSUAN See **ASSOUAN**.
ASSUAI MOUSSOIN, a lake, Lower Canada lat. 49° 28' N lon 78° 56' W. It is from 8 to 10 m in length, and about 4 m breadth, and is connected with a numerous series of small lakes which lie thickly around, all having common outlets with each other by small streams.

ASSUAY See **ASUTAY**.
ASSUMPTION or **ASTONON** (*Nuestra Señora D'Asuncion*) a city of S. America, cap. of the state of Paraguay, on a height, 1 bank Paraguay a little way above where it is joined by the Pilcomayo, 650 m N Buenos Ayres lat. 25° 18' S. lon 57° 30' W. Founded in 1535 by a colony of Spaniards, and originally but a small fort, from its advantageous position it became in a few years a city of some importance. It has a cathedral, three churches, four convents, and monasteries, an hospital, a disordered university and a college. It is ill built and irregular most of the houses are of earth, and the streets are crooked and unpaved. The inhabitants carry on a considerable trade in tobacco, timber, hides, and sugar; and especially in *mate* or Paraguay tea grown abundantly in the surrounding district, and exported to Buenos Ayres, Tucuman, Chili, Peru and other parts of S. America. The air is temperate, and the climate healthy. The adjacent country is fertile, and abounding in rich pastures, on which numerous flocks of cattle, and considerable numbers of horses, mules, asses, sheep, and goats are fed. Wheat, maize, sugar, tobacco, cotton, mulberries, and potatoes are extensively cultivated, and honey and wax are produced in abundance. Pop. about 19 000.

See L.

ASSUMPTION ISLAND.—1, An isl., N Pacific Ocean, Mariana Archipelago lat. 18° 41' N; lon. 145° 27' E. (c.) between 9 and 12 m. in circumference. It consists of active volcano of 2025 ft. in height, and is almost wholly composed of or covered with black lava, and presents a very diurnal and repulsive appearance from the sea. Poroso describes it as a most wretched place, but it has been somewhat improved since his time by the Spaniards, who have planted rice in it, and introduced horses, cattle, swine, and lambs. It produces also a few coconuts; anachorage *anachora*. —2, A small isl at the N entrance into the Mosambiqu Channel lat. (S E point) 9° 48' S lon. 49° 34' E. (c.) It is about 7 m. in length, is low, with some sand dunes, covered with shrubs.

ASSYE, or **AMAYE**, a small vil Hindooestan, prov. Berar 23 m. N Jabba, and 290 E N R. Bombay lat. 18° 15' N lon 73° 50' E chiefly remarkable as the spot where the battle was fought, on September 23 1803, between the British and native forces under Wellington, then General Wellesley and the combined armies of Dowlat Row Sindia, and the rajah of Berar. The forces under Wellesley amounted to 14,500 of which 4500 only were brought into action. The combined Indian army is variously stated at 30 000 to 50 000 and of these about 10,000 were regularly-disciplined infantry commanded by French officers. Notwithstanding this disparity of numbers the enemy was completely routed and British supremacy established in India. Ninety-eight pieces of cannon, seven standards, the camp equipage, and a large quantity of ammunition fell into the hands of the victors. The slain on the side of the British Indian army amounted to 1556 men killed and wounded, on that of the confederates to 1300. (Hamilton's *Short India Gen. Historical Account of British India Martin's East India*).

ASSYNT an extensive par N W coast, Scotland, co. Sutherland 28 m. long, 18 broad, and comprising 97 000 ac. It is one of the wildest and most rugged districts in Scotland. Some of its mountains are of considerable elevation and of basaltic form. The loftiest, Benmore, rises to a height of 2530 ft above the level of the sea. 12 numerous glades in the parish. In one part, there is a stupendous ridge of this valuable material, interspersed with sandstone, of about 1½ m in length and 300 ft. in height. There are also many beautiful quarries of beautiful marble one white and the other of a variegated colour and both capable of receiving the finest polish. These quarries were worked some years since, but, in consequence of the difficulty and expense of conveying the blocks to the coast, they have been abandoned. Fresh-water lakes are numerous the largest, Loch Assynt, is about 7 m in length, and 1 in breadth, where broadest. It abounds in trout of various kinds, and is surrounded with the most beautiful scenery. On a peninsula that juts into this lake are the ruins of the ancient castle of Ardarae to which the unfortunate Marquis of Montrose was confined by Malcolm of Assynt, after he had been taken prisoner by that chieftain. Of sea lochs or arms of the sea, which are numerous, the largest is also named Loch Assynt. It is about 14 m. long from Stone Point to the head, and varies from 6 m. broad at Stone Point, to half a mile opposite Deant More. Springs and streams also abound the former remarkable for their size, and for the purity and excellence of their waters. One of these springs discharges a current of four cubic feet. A large portion of the parish is laid out in *sl ass-walks*, a very small part only being cultivable. On this account the great bulk of the population live along the shores, where they have the benefit of fishing. There is no market-town within the parish, and only one village, Lochmire. The coast is bold and rocky but has some good harbours. The parish is the property entirely of the Duke of Sutherland. Pop. 2093.

ASSYRIA the name which is usually appropriated to the first of what are known as the four great empires of the world but which in geography is more correctly confined to what was called Assyria Proper and nearly corresponds with the modern Kurdistan. It was bounded on the N by Mount Niphates and part of Armenia, E by the part of Media toward Manna Chaborea and Zagros. S. by Babylonia and part of Babylonia and W by the Tigris. Its capital was Nineveh which is still feebly represented by a modern town of the same name, near which the ancient ruins may still be traced but though it had many other important cities, even the sites of the greater number are unknown.

ASTAREL, *SHAH ANZAR*, or *ISTAN ANZAR*, a town in the coast of the Red Sea lat. 38° 24' N. and lon. 40° 15' E. It is a good anchorage station in a deep bay formed in coral rocks. The plant *Passiflora ligularis* is found abundantly in the vicinity. From the long roots and twigs of this plant the Arabians make tooth-picks, which they chew that the seed juice thereby obtained may clean their teeth.

ASTAFFORT a town in France, dep. Lot-et-Garonne, 7 km. S. of Agen. It owes its origin to the English, and its name is said to be a corruption of Stafford. It was anciently a place of some strength, and is still surrounded by walls and bastions, in a ruinous state. In the neighbourhood of a field called *Champ de Huguon* commenced the defeat of a body of Protestants, headed by Corda who narrowly escaped being taken. Pop. 1318.

ASTARA, a frontier town, Russian gov. Georgia, prov. Shirvan, upon the river Astara, which forms the boundary between Russia and Persia. A quarter of a mile from its outlet into the Caspian Sea 45 m. N.E. Ardabek and 180 m. E. by N. Talysh lat. 38° 20' N. lon. 48° 20' E. It has a small port, in former times flourishing and exports grain, fruits, and silk.

ASTORIA a city in England, Cheshire 19,602 in 1861. It has a spacious beautiful church of all styles of English architecture, but more especially the latter. The screen and the stained glass windows are fine. Pop. 16,501.

ASTELLE'S ISLAND N coast of Australia, N.W. side of the Gulf of Carpentaria, one of the English Company's group, situated at the entrance to the Bay of Amherst. It is of considerable height, well-wooded, and contains iron ore.

ASTEN or *ATHEN* a village, Holland, prov. N. Brabant 12 m. S.E. Eindhoven. It is a large beautiful village in the S.W. part of the Peel and has a large handsome cathedral, R. catholic church, and an elegant townhouse, in the middle of which is the better walled house. Outside the village is a castle called the *Huis de Asten*. Two annual cattle-fairs are held. The inhabitants are usually all R. Catholics. Pop. 2800.—(Van der Aa.)

ATERABAD or *ATHARAB* [anc. *Zigraon*] a small prov. Persia (cap. Astrabad) between lat. 36° 20' and 38° N. and lon. 58° 40' and 67° 05' E. bounded N. by the desert of Khayr, E. by the Khorasan or Elilz range, S. by prov. Gorgan and N. end of the Attrak, and W. and N.W. by the Caspian. The S. border forming the abutment of the Elilz range is lofty and mountainous but immediately below an extensive plain of surpassing beauty and richness stretches out to the N.E. and W. Towards it the Caspian however the country though still continuing level, loses its beauty and fertility and exhibits the well-known characteristics of a steppe. Great part of the surface, both towards the S. slopes and throughout the rich plain is covered with magnificent forests, so close and tangled as not only to be often impassable, but to exclude the proper circulation of the air and generate pestilential vapours. The diseases thus spread over the province have repeatedly made fearful ravages and are so much dreaded by the ravaging Turkmans of whom the rural population chiefly consists, that when the rain sets in and begins to form stagnant pools and swamps they retire beyond the Attrak and prefer the verge of a burning sandy desert to the fatal luxuriance of Astrabad. The inhabitants of the villages, being stationary, have not the same resources, and suffer severely from sickness. No- is this their only calamity. Though the rich soil produces all kinds of grain and fruit in the greatest abundance, it too often happens that those who sow the crop are not permitted to reap it. The Turkmans who had retired usually return again before harvest, and make no scruple of appropriating it as their own. No cotton can be obtained. The King of Persia, though nominally sovereign, is scarcely able, and probably is not much disposed to interfere with these predatory horde, so long as they continue, as at present, to furnish him with the best *ashkadehs* or armed horsemen, of which his army consists.

ATERABAD capital of the above province lies at the foot of the N. slope of the Elilz range, and on a small stream which falls into Astrabad Bay in the S.E. of the Caspian, about 20 m. below. It has a circuit of about 8 m. and is surrounded by a dry ditch and a mud wall, which though once lofty and flanked by numerous towers, has been lowered down to an archaic mound, on which a low para-

pet, loop-holed for musketry has been erected. Great part of the town is in ruins, but the parts still standing have a lively and picturesque appearance. The houses are chiefly of wood, in a light and open style of architecture, with projecting fronts, and sloping roofs covered with red tiles or shingles. Not unfrequently they are furnished with verandahs, supported on wooden pillars and lofty square towers, called *minarehs*, with openings on each side which act like windmills, and maintain a circulation of fresh air throughout their interior. The large extent of open space within the town, generally planted or laid out in fine gardens, is one of its peculiar and most attractive features. None of the buildings are deserving of particular notice. The palace, in which the governor resides, is extensive; but has a mean appearance, and houses visible marks of decay. The bazars, though large are very indifferently supplied. The manufactures are chiefly confined to a few silk and cotton stuffs; and though the locality seems well fitted to make it the trade of commerce between the East and the Caspian the trade is inconsiderable. The greatest obstacle to its prosperity is its pestilential atmosphere, which has procured for it the ominous surname of "City of the Yagoo." During the summer rains no inhabitant whose circumstances enable him to depart, remains within it. It has been repeatedly ravaged by the plague, and when Burnes visited it, it had been so depopulated by that scourge the year before, that the streets were literally deserted, and half of the shops and houses shut from want of masters. Astrabad is the headquarters of the *Kajaks*, the reigning family of Persia and is always governed by a royal prince.—(Frasar Barnes Cheshy)

ASTERY a par. England, co. Lincoln 620 ac. N. Hornsea 7 sp. 312.

ASTFI 113 a vil. Brunswick in the dist. of vicinity of Wolfenbüttel, in the Harz Mountains. In a neighbourhood is a mass of furnaces lead, large zinc and silver. Pop. 664.

ASTHALL a par. England co. Oxford 1180 ac. E. by 8 Burford 1 sp. 383.

ASTI [anc. *Asis*, or *Hosta Pompeia*] a city Sarbanian States, gov. Alessandria, cap. prov. of Asti, 1 hour, Turin, near its confluence with the Tanaro, 38 m. E.S.E. Turin. The town is surrounded with decaying walls formerly celebrated for their 100 towers, although few of them now remain. It is in general badly built although it contains many noble mansions. The streets are wide, but little frequented. It is the seat of a bishop, suffragan to Turin, has a royal college, a court of justice, a school of jurisprudence, and a theological

THE CATHEDRAL CHURCH OF ST. MARIAM, ASTI.
It an Unhappy Cathedral.

seminary a rich picturesque building. The original cathedral fell in 1828 and was replaced shortly thereafter by the present fine venerable Gothic building in which are numerous fine paintings. Besides the cathedral, there are other three

the churches in Asti which moreover possesses a printing-office, carried on continuously since its establishment in 1473. There are likewise, in the town, several mills for spinning silk, and several silk manufactories but it has otherwise little trade and no great appearance of prosperity. The vineyards in the vicinity supply the best wines produced in Piedmont and a considerable trade is carried on in them. Asti was born here in the year 1749 (January 17). Asti is a town of high antiquity having been in existence long previous to 400, when it was devoted by the Gauls. It subsequently formed alliance with the Romans, and was afterwards again destroyed by the Gauls, but was rebuilt by Pompey the Great. After a series of violent invasions, extending through many centuries, and including many sanguinary visitations, it fell into the hands of the French, with whom it remained till about the middle of the 18th century when it passed into the hands of the Duke of Savoy to whose dominions it is still attached. Pop. 20,000.—The province one of the six intendants or subdivisions of Alexandria, is bounded, W and N by prov. Turin, S. by Aosta, S.E. by Alessandria, Pavia and N.E. by prov. Cuneo. It is hilly but fertile, and is celebrated for a sparkling white wine, resembling champagne called *vin d'Asti*. It produces, likewise, corn and fruits in great abundance; also, excellent silk, mulberries being cultivated to a great extent for feeding the silkworms. Pop. 118,769.

ASTLEY the name of three parishes in England—1 Co. Warwick 2550 ac. on the New brook, E 1/4 in ancient chapel remains of Astley Castle here. Pop. 341.—2 Co. Worcester 2958 ac. S. Bowdley on a tributary of the Severn. Pop. 883.—3 Astley (Abbots) Co. Salop 2248 ac. N Bridgeworth. Pop. 684.

ASTON in and par. England, co. Warwick. The town is 2 1/2 m N.E. by Birmingham and 6 1/2 m by railway from Liverpool. The par. contains three churches, and several dissenting chapels with attached Sunday schools infant and national schools almshouses, and a large union workhouse. The Birmingham and Liverpool roads, and a crossing by the Grand Junction Railway on a viaduct of 10 arches. The inhabitants, of whom there were 45,720 in 1841 are chiefly employed in various branches of the hardware and Birmingham toy-manufactures and there are likewise some small silk and cotton mills. Area 18,87 ac. Pop. 61,281.—Also the name of several hamlets in England.

ASTON the name of numerous parishes in England—1 Co. Hereford 920 ac. S.W. Ludlow. Pop. 47.—2 Co. Hereford 3038 ac. S.E. St. George. Pop. 636.—3 Co. York W. Easing 2915 ac. S. Eborac. Derby 8290 ac. S.E. by S. Derby. Pop. 1614.—20 Aston (White Ladies) Co. Worcester, 1280 ac. Pop. 356.

ASTORGA (ana. Astorica Augusta) a city Spain, prov. of and 89 m W. by S. Leon on a plain, 3 m from the bank of the Tago, 2500 ft. above the sea level. This city surrounded by ancient walls flanked with numerous semicircular towers, and described, by Ptolemy as magnificent in ancient times, was the scene of various military operations in the peninsular war; and its fortifications were dismantled

by the French in 1812. It has a noble Gothic cathedral, built in 1471 with a splendid sacristy, by Gaspar Becerra, a parish church, town and court-house, several schools, a hospital, some convents, and the remains of a palace of the Ovario family to which Astorga gives the title of Marquis. In the neighbourhood of the town is the small lake of Sanabria, which abounds with fish and has in the middle a rock on which stands the old castle of the Counts of Benavente. Astorga is the capital of the country of the Maragatos, a tract which comprises about 69 sq. m. S.E. of the mountain Telloso. The Maragatos follow the occupations of agriculturists and warriors, and monopolize nearly all the transit trade between Galicia and Castile, their own land which is rocky and stony, being cultivated entirely by the females. They are a strong-built, grave people, and remarkable for scrupulous honesty. Whatever is intrusted to them is conveyed to its destination in the most perfect security; while their character for intrepidity is such that few robbers care to attack them. They value their services, however at a high rate, and thus often acquire considerable wealth. They have their own peculiar dialect, customs, and dress, and never intermarry with other tribes. Pop. of Astorga, 2850.—(Madox Murray's Handbook &c.)

ASTORIA a small trading port and fort, Oregon, on the Columbia River about 8 m from its junction with the Pacific. It was established in 1811 by John Jacob Astor of New York, after whom it has been named. It is now called Fort George and is occupied by the Hudson's Bay Company who, however, pay little regard to its having abandoned the idea of importing it as a port, and, in consequence removed their principal seat of operations to Vancouver 80 m further up the river. Though formerly a stirring and considerable place it now consists of a few low-houses only with some sheds and pig-sties, and presents in all respects, an appearance of rapid decay. The Columbia River opposite to Astoria is 4 m wide, but is obstructed by an extensive sand bar on which there is only a few feet water. The situation of the port is very beautiful being surrounded with hills and forests, and presenting wide expanses of luxuriant sward covered with white clover. In the pine forests, in the rear of Astoria, some of the largest trees perhaps in the world are to be found, measuring many of them from 40 to between 60 and 80 ft. in circumference, and from 200 to 300 ft. in height, with a bark of 10 to 12 inches in thickness.—(U. States Exploring Expedition.)

ASTRABAD See ASTERABAD

ASTRAKHAN a gov. Russia in Europe, N.W. coast Caspian Sea between lat. 44° 40' and 49° 45' N. lon. 43° 5' and 51° 5' E. having the Molo-Lam for its N.E. boundary and the Manikoh for its S.W. It is divided into two nearly equal parts by the Volga, which traverses it from N.W. to S.E. Its coast line including minute indentations is about 530 m in length, and is crowded throughout its whole extent with small islands rocks, and shifting sand-banks. The entire length of the province is 340 m its greatest breadth 250. Area 83,000 sq. m. or 51,450,000 English ac. It consists almost wholly of two vast steppes or plains separated from each other by the Volga, the greater portions of which are arid sterile desert. The largest tracts of this description are the deserts of Marya and Bekok, the former in which occur hills of moving sand on the N.E. side of the Volga, the other on the S.W. The whole of Astrakhan was at one period submerged by the Caspian, as is evident from the saline nature of the soil, and the shells it contains, and as both are upwards of 80 ft. below the level of the sea of Asaf, should any deposition of sand come a depression of the intervening land, Astrakhan would again be overwhelmed by the ocean. The soil consists generally of mud, salt, and sand, intermixed and in some parts of extensive salt marshes rendering it almost wholly one wide and sterile waste, destitute of wood the few trees it has to boast of being met with on the banks of its rivers only. These are oaks, poplars, birches, and some mulberry trees the latter of which are found in greatest numbers along the Akkuba. Notwithstanding the general sterility of the country a few fertile tracts are met with on the skirts and delta of the Volga, including some excellent pastures. Here corn is grown, but not in sufficient quantity to maintain the population, with some fruits, herbs, vines tobacco, and cotton.

Salt lakes and pools are numerous throughout the province,

the largest of the former Beskitchak, is situated to the E of the Volga, and is about 12 in. in length and 5 in breadth. When exposed in summer the hills are covered with green weeds of low hills of gypsum and rock-salt also occur the same, very in some places the highest rising about 60 ft. above the level of the steppe they are mostly of semi-circular form, and many of them are water-shedded at the top. The salt hills rise to about the same height and contain gypsum, where which is sandstone, and over that the common yellow sand of the steppe. The salt is colourless, firm, and contains clear and perfectly transparent cubes

The principal rivers of Astrakhan are the Volga (which empties into the Akkuba, which runs parallel to it at the distance of 2 or 3 m., and the Serpa. The Kuma, which once formed a part of the S. boundary of the province, does not now reach the Caspian Sea, being absorbed by the sands 60 m. inland. The climate is extremely hot in summer and equally cold in winter and it is unhealthy to all but natives from the quantity of saline particles with which the atmosphere is impregnated. Pasturage and fishing constitute the principal occupation of the inhabitants the former of the rural and nomadic tribes the latter of the population on the coast and banks of the Volga. The livestock consists chiefly of sheep of the broad tailed breed. Cattle and goats are also reared, the latter principally for their skins. Horses likewise obtain some attention, but they are diminutive and ill-conditioned. The fisheries of the Volga are of great value, no stream in the world being more abundantly stocked with fish, particularly between the city of Astrakhan and the Caspian a distance of about 25 to 30 m.* On the ground, an immense number of venets and brants and many thousand persons, are employed in spring autumn and winter in taking fish sturgeon from the roes and bladders of which large quantities of salt glue and caviar are manufactured. The population is composed of a great variety of races, including Russians, Cossacks, Tartars, Kalmyks, Indians, Persians, Armenians, &c. The most numerous are the Kalmyks, who occupy large tracts to the E. of the Volga. They are a wild and intelligent people, who are devoted to the chase and to the raising of horses. The population is politically divided into four tribes—Astrakhan, Kizov, Yark, Yemoutyevsk and Tcherny-Yarik. The population of the government in 1850 was 390,000.

ASTRAKHAN a city Russia, cap. of above gov. on an elevated island in the Volga, about 80 m. from its embouchure in the Caspian Sea lat. 48 25' N lon 45 0' E. It is irregularly built, streets crooked, mostly unpaved and dirty, being covered with mud in winter and with sand in summer. Some of the houses are of brick or sandstone, but by far the greater number are of wood. Of streets, there are altogether 146 squares or public areas, 48 market-places, 8 11 wooden bridges, and 1000 boats. The upper part of the town stands on the embank, from the lower part of which a fine view of the city is obtained, with its broad streets and canal bordered by trees, the haven covered with ships and of the broad majestic Volga, with its beautiful green islands. The cathedral is in the form of a parallelogram, with four small gilt and painted cupolas on the roof, and a large one in the centre, for the admission of light. Its walls made of brick, being with coarsely-painted pictures, set in costly frames, mostly of silver filigree work. There are, besides, 51 stone churches, 1000 wooden ones, and 1000 mosques, the former richly ornamented and grandly furnished. The other public buildings of note are the archiepiscopal palace the Government-office, and the three theatre halls for the Russian, Asiatic, and Hindoo dealers or merchants. An interesting architectural antiquity is a small dilapidated Moscow church, in the fast of Peter the Great, said to have been built by order of Joan IV. Astrakhan is the seat of a Greek and Armenian ecclesiastical eparchy also of Greek and Armenian archbishops. It contains a high school of civil and criminal jurisdiction also a Greek school, a school of medicine, a gymnasium, and upwards of 20 mosques and ordinary schools, with about 1000 scholars of all ranks. The manufactures are inconsiderable, not giving employment in more than 200 work people they comprise silk, cotton,

Dr. Garbol says 84 vendors, or 94% million.

woolens, shagreen skins, morocco leather, and soap. The fisheries form the staple trade of the city. Immense quantities of fish, caviar and herring, being exported to foreign countries. In the fishing seasons, from 30,000 to 80,000 persons connected with the fisheries resort to the city. The haven of Astrakhan is now so sanded up as to leave only 6 ft. depth of water; so that large vessels have to land their cargoes on an island nearer the Caspian. A few steam tug

boats are employed in taking vessels up and down the river. In 1846 three iron steamers were started to ply between Astrakhan and the other ports of the Caspian. Previous to that period there was but one steamer on the Volga, and it was of only 40 horse power.

As a result of being a power in the city some attempts were lately made to obtain an increased supply by Artsevan wells, but these were found at a depth of 400 m. Below some of the borings, however, there streamed streams of carbonic hydrogen gas, which readily burnt with a clear flame. The population, as in the case of the province generally consists of various races but most of the trade of the place is in the hands of the Tatars and Armenians the latter of whom are also the chief cultivators of the land in the vicinity. The city was once fortified in the Oriental manner and many vestiges of Tatar residences are to be seen in the neighborhood, including numerous graves the stones of which have been taken by the inhabitants to form ovens. Several of the old embattled towers, and portions of dilapidated walls, still remain. In summer when the thermometer seldom falls below 38 in the day-time, the air is filled with gnats and other small insects, which are a source of much annoyance. The resident pop. of the tn. in 1843 was 45,793.

ASTROS, or Astro, a ca. and haven, Greece, in the
Murea, 20 m. S.E. Tripollis, W. shore of the Gulf of Naxos.
The second national congress of the Greeks was held here

ASTUDILLO a tn. Spain, in Leon, prov of, and 23 tn. N N.E. Palencia, in a valley and on the security of a small hill. The town is surrounded by a wall entered by five gates. It contains several squares, in one of which is held an important annual fair and its streets are narrow tortuous.

and badly paved. The public buildings are three parish churches, the principal of which is celebrated for its antique great altar & tower, prison, convent, two well-attended schools, and an hospital. Its manufactures consist of tanning, dyeing, cloth-weaving, shoe-making, and several other branches. Pop. 4151.—(Madrid.)

ASTURA, a vil. Papal States, 87 m. S. S. E. Rome, at the mouth of a small stream of its own name. It formerly had a haven and was a place of much greater importance than now. Here Cleora was beheaded and here the last of the Hohenstaufens was made prisoner by Charles of Anjou, after the battle of Tagliacozzo, in 1268. Near it, on the coast, are the ruins of a small castle. Pop. 350.

ASTURIAS, an old division of Spain, now prov. Oviedo (which see), formerly the kingdom of Asturia, and the only part unconquered by the Moors. It was inhabited by a race who maintained their independence against the Carthaginians, but were subdued by the Romans in the time of Augustus. After the fall of the Roman empire, Spain was overrun by the Goths and Vandals who were opposed by the Asturians with a courage that long rendered all their efforts but they were at last compelled to yield. Upon the Moorish invasion, at the beginning of the eighth century the mountains of Astura again became the refuge of those who still struggled against them. Pelayo was elected king and shortly after defeated the Moors at Covadonga, a battle which may be considered as the inauguration of the sanguinary struggle which lasted for eight centuries and ended in the final expulsion of the Moors. In 1288, it became a principality and was appointed appanage of the heir to the Spanish throne, who also has the title of Prince of Asturias. A remarkable security of person and property has long existed in this country and one consequence is that the peasantry instead of congregating in walled towns for protection, live in small farms, and often own the land which they cultivate. They are generally of kind and civil dispositions especially the women, who are gentle and attentive to strangers of sober and industrious habits, and proverbial for their honesty and fidelity. They are, however, great boasters and during the peninsula war afforded many instances of the common association of much talk with little work. Notwithstanding too, their proverbial honesty they have been accused of gross misappropriation of the money sent from England in support of the Spanish cause. The costume of the lower classes resembles that of the Swiss: the females, when dressed in their best, wear bodices of yellow or green, laced in front with gold ornaments, and coral necklaces. Dark-coloured serges are also in great vogue which, with black mantles or *capotes* are thrown over the head. The men generally wear white felt caps turned up with green. The patois spoken by the peasantry differs from the Galician, and is called *Bable*. Travelling in Asturia is performed on mule or horseback, the roads being impassable to carriages.

ASTWICK, a par. England, co. Bedford 570 ac. S. S. W. Biggleswade. Pop. 81.

ASTWOOD a par. England co. Bucks 1259 ac. N. N. E. Newport Pagnell. The female population are employed in the manufacture of lace. The church is an ancient structure with a square tower. It contains a handsome Norman font, and some curious and interesting monuments. Pop. 263.

ASUAY or **ASUAY** a dep. Ecuador bounded, N. by dep. Ecuador W. by dep. Guayaquil and Peru, S. by Peru and E. by Brazil length W. to E., about 644 m. breadth N. to S. about 376 m. It lies on the E. slope and to the N. of the Andes, and stretches E. over the immeasurable plains of the Marañon to the Ormazo and the confines of Brazil. The whole of its W. part is covered by the paramo or desert of Asuay whence the department is named. This paramo is a desert mass of mountainous running N. and W., joining the two N. and S. parallel ranges of mountains, and forms the S. boundary of the plain of Quito. It consists of porphyry mica-schist, and other primitive rocks and attains an elevation of about 18,000 to 18,500 ft. The department is watered by numerous streams, all affluents of the Marañon. The climate varies with the elevation, from very hot to very cold consequently the vegetable productions are equally varied partaking of the nature of those both of the torrid and temperate zones. In the warmer localities, sugar-cane, maize, indigo tobacco, yams, batatas, bananas, &c. are raised and in

the colder localities, the crops are wheat, barley, rye, fax, lucerne, potatoes, and all kinds of European vegetables. The rearing of cattle, horses, asses, and mules, and above all, sheep, is vigorously pursued. The department exports salted flesh, butter, cheese, wax, beams of London cattle, agricultural produce, and small quantities of cloths of various descriptions. It imports European goods of all kinds, cloths, stockings, linen, &c. wine, brandy oil and dried fruits. It is divided into the provinces of Cuzco, Liza, and Jan de Bracamoros. Pop. in 1827 110,894.—(Gutiérrez, Colombia.)

ASUNCION See ASSUMPTION

ASWABREY a par. England co. Lincoln 1548 ac. N. by W. Polkingham. The church is a handsome building, in the pointed style. Pop. 107.

ASWARDEY a par. England co. Lincoln 741 ac. N. W. Spilby. Pop. 67.

ASWATADA ISLANDS, Mozambique Channel. See QUEBRADA ISLANDS.

ASYA KALE (anc. *Jamsa*) a n. Asiatic Turkey at the head of the bay of same name, W. coast, near Amstola lat. 37° 15' N. ; lon. 27° 45' E. The ancient city occupied a rocky islet, about 1½ m. in extent now united to the continent by an isthmus. The N. side of the rock is abrupt and inaccessible, and the summit is occupied by a fortress. Here are remains of a theatre temple and other buildings, with ancient inscriptions, one of which is the age of Alexander the Great. The peninsula terminates in a flat point of land, with a small square fort at the extremity.

ASYR See ASSYR.

ASZALO a market tn. Hungary this side the Tisza, 1 bank, Harard 9 m. N. K. Szekes, in a valley. Pop. 1781.

ASZOD a market in Hungary co. and 23 m. N. E. Poth, on the Galga. It is well built, and has a R. Catholic, and a Protestant church and a synagogue manufactures of cloaks lined with sheep-skins, dyed blue and green and a considerable trade in corn and wine. Pop. 2470.

ATABAPO a considerable river Venezuela. It rises in lat. 8° 10' N. lon. 68° 40' W. whence it flows nearly due W. for about 70 m. or 80 m. then turning N. 45° E. into the Orinoco at San Fernando lat. 4° 4' lon. 68° 10' W. nearly at the same point where the latter river is joined by the Guaviare and Juridia. Total course, about 140 m. The waters of the Atabapo are dark, clear agreeable to the taste, and singularly cool and so great is their transparency that the smallest fishes are distinguishable at the depth of 20 ft. or 30 ft. and the bottom, which consists of white quartz sand is usually visible. There are no crocodiles in this river but water-snakes are numerous as are also leeches and fresh-water dolphins. The banks of the stream are also free from mosquitoes and other troublesome insects.

ATACAMA a large, thinly peopled sterile tract of country forming the N. portion of Chile and S. portion of Bolivia. No exact boundary line is fixed. The Chileans claim as far as the bay of Mejillones lat. 22° S. and the territory thence to the port of Iquique lat. 25° S. with the Andes for the E. and the Pacific for the W. boundary constitutes the present Chilean province of Atacama.

Its capital is Copiapo (which see) and it also contains the towns of Yallaur and Freriz, heads of departments of same name. In this province are found the richest silver mines in Chile; principally in the districts of Chiriquillo and Tres Puntas. In the latter discovered a few years back large masses of native silver are frequently found at the depth of 1000 ft. or 1500 ft. weighing half a ton and upwards and the country is everywhere rich in metallic deposits. The annual products of the mines amount to about one million sterling and from the frequent discovery of new mines, are rapidly on the increase. Next to silver copper is the most abundant metal, and a considerable quantity of copper-ore is annually exported, chiefly to England. From the dry arid nature of the country agricultural pursuits are limited yet a little cultivation exists on the banks of the rivers, and wherever irrigation is to be had.

A railway has lately been opened between the capital of the province and Calama, one of the three ports in this province, the others being Iquique, and Chiriquillo. The principal rivers are, the Copiapo, the Salado Juncal and Chiriquillo; all of them form safe anchorages at their mouths but all of

them having short canoes, contain so little water that they are nearly dry in the summer. Pop. (1841) 24,103.

TWO BOLIVIAN PROVINCES OF ATACAMA embrace the seaboard of the country bounded, S by Chilian Atacama N by the river Loa, which separates it from Peru E by the Andes W by the Pacific. The country throughout is a complete desert, without water or vegetation, and the lower grounds on the coast, which are within the saline district of S. America, consist of bare plains, with a dark brown marl and. It is said that in this desert the ancient Peruvians were accustomed to bury their dead, the dryness of the climate preserving them from decay for a long period. Some copper-mines are worked in the vicinity of the port (Cobija) gold in small quantities is found on the banks of the rivers. (Umas formerly settled in this province, but the deposits are now well nigh exhausted. In this prov., lat. 21° 35' S. lon. 69° 15' W. lies the Volcane of Atacama (18,000 ft.) one of the most S peaks of the Bolivian Andes. The only town is Cobija.

ATACAMES, a small seaport in Ecuador lat. 0° 53' S. lon. 79° 46' W. (n.) 15 m. S.W. Esmeraldas

ATALAIA a small tp. par Portugal, prov. Beira-Mar, 7 m. E. Thomas. It has an important annual fair. P. 2200.

ATALAIA a small tp. Brazil, prov. of and about 90 m. E. Alagoas, and close upon the banks of the estuary formed by the rivers Alagoas and Itagua. It contains a church, a townhouse and a prison. Its inhabitants carry on some trade with Bahia and Pernambuco in specious cotton, tobacco, and sugar all produced in the district. Pop. of tn. and dist. 3000.

ATARAIPU (the Devil's Rock) a remarkable isolated pyramidal granite peak in British Camena lat. 2° 55' N. lon. 58° 48' W. It rises from a plain between the upper waters of the rivers Gwandu and Kugumani, and from amidst a dense mass of foliage, which spreads around it in all directions, to a height of 900 ft. above the former river and 1500 ft. above the sea. For 350 ft. above its base, the mountain is wooded and for 550 ft. more it rises in a pyramidal form, dense foliage forming a striking contrast to the luxuriant growth at the base, and in all the surrounding country. There being no heights so elevated as Ataraipu for a considerable distance in every direction renders the appearance of this natural pyramid all the more curious. (Schomburgk.)

ATALA a tn. Spain in Murcy prov. Guaymas, 18 m. S.W. Toluca. In a valley & bank. Agaveas, surrounded by mountains. In the centre of the town is a square, containing the parish church and townhouse. The produce of the vicinity consists of grain, fruits, vegetables, and wood for charcoal and the river yields fish of various kinds. Pop. 2164.

ATAWAL (for Atual, the Long Island) an isl. Arahua, N. part of the Red Sea. It contains a large fishing village of the same name.

ATARA, a territory and river Kuba. the former sometimes called the island of Mero, from its being partially enclosed by the river Athar on the E.E. the Bahir el Jebel on the W and B.W. and the Nile on the N.W. Linnaeus describes it as a very flat plain with mountains scattered here and there like stones placed on a floor the surface, for the most part, thickly covered with trees and grass; but in some places entirely destitute of vegetation. The inhabitants are Bishara, Azaba, a handsome and bold race of people the women of slender and elegant form, with dark brown complexion, beautiful eyes, and fine teeth. The men go consistently armed, and are frequently engaged in quarrels, being according to Burckhardt cruel, avaricious, revengeful and uncharitable. The cattle of this territory are of a superior description and very numerous. The river Athar, one of the principal affluents of the Nile, is formed by the united streams of Tokoor, Oba, and Graana, and those of the Teceze and Angrah, all having their sources in Abyssinia. The two former uniting at lat. 14° 18' N. lon. 36° 28' E. the two latter at lat. 48° 11' N. lon. 36° 46' E.; and the conjoined streams then form the Athar, meeting near Bode, in lat. 14° 40' N. lon. 36° 25' E.; thence flowing in a N.W. direction and subsequently falling into the Nile at Assuan, lat. 17° 38' N. lon. 34° 32' E. The whole course of the Athar from Bode, the point of its formation to Assuan where it joins the Nile, is about 270 m. Burckhardt thus describes the appearance of its banks:—After a march of three hours among sandy plains, we came in sight of the river Athar,

and entered the groves of trees with which it is lined. The luxuriant vegetation which now surrounded us, filled with pleasure even the stony hearts of the slave-traders. Amongst the trees were different species of the mimosa, some trees of the largest size whose luxuriant clusters of fruits attracted the vision of the slaves; the salsob trees with its fruit ripe; the aloof, growing on a rich fat soil, similar to that of Egypt. At these parts of the river visited by Burckhardt, the banks were not more than 25 ft. high, and from 400 to 500 paces apart and the current so slow as to be hardly perceptible. During high water crocodiles are found in the river but no hippopotamus. (Burckhardt's Travels in Nubia.)

ATCHA, ATCHU, ATCHAM, ATCHAS or ATCHAK an Arabian isl. Andromedon group, lat. 3° 31' N. lon. 178° 40' W. (n.) about 73 m. long, by about 10 m. broad. At its E. point is a harbour near which is a volcano that throws out a considerable quantity of sulphur and at the foot of which there is a hot spring. Pop. 50 or 60. (Ritter's Lem.)

ATCHAFALAYA a river U States, an outlet of the Mississippi, which it leaves on the R. bank about 2 m. below the confluence of the Red River. It flows very irregularly for about 150 m., forming the R. boundary of the Mississippi delta, and enters a bay of its own name in the Gulf of Mexico, in lat. 29° 20' N. lon. 91° 20' W. Its navigation, however is greatly impeded by masses of floating trees called rafts, which have been arrested in their progress by snags, islands, shoals, and other obstructions, and made to accumulate, so as to form natural bridges reaching entirely across the stream. One of these rafts which was cleared away in 1830 after four years labour and which had taken 88 years to accumulate consisted of a mass 10 m. in length 220 yards wide, and 8 ft. deep. It was covered with beautiful sycamore and trees, some of the latter of which had grown to a height of about 50 ft. A floating light-venter has been lately placed in the bay, for the guidance of vessels.

ATCHAM a par. England co. Salop. S. 6 ac, S. E. Shrewsbury. Pop. 462.

ATCHEP N. See ACHEN.

ATCHEKA, a considerable tn. Hindoostan, S. Conca or Dhoonlah country 46 m. N. Goa lat. 16° 11' N. lon. 73° 57' E. It was formerly a place of great reputed sanctity and a numerous depot for goods obtained by piracy. It was captured by the British in 1816. (Harrison's East India Com.)

ATCHEK or ATCHAK. — 1 A tn. Siberia, prov. Irkutsk 75 m. W. Krasnoyarsk pleasantly situated. In a fertile country & bank Tshulya or Chulim an affluent of the Obi lat. 56° 49' N. lon. 67° 50' E. It has two churches and the exterior of the houses is in general remarkably hand some. The district around is fertile in grain and has brine springs producing a considerable quantity of salt. Pop. 2000. — 2 A tn. Russia, gov. Perm, and in the vicinity of the city of that name. It is one of the mining localities of the Government, where a considerable quantity of copper ore was wont to be produced. The miners inhabit a little village in a fertile dell close to the pits.

ATCHUEFF ATCHUC, or ATCHU an isl. on the E. shore of the Sea of Azof in the Strait of Euxine, a little to the N.E. of Taman, near the mouth of the Kuban, about lat. 45° 15' N. lon. 36° 40' E. and comprised in the Russian government of Taurida. It is mountainous, and full of swamps and morasses contains a castle and a port, and a small town called Cosad. The inhabitants, who are Cosaks of the Black Sea, follow the occupation of fishing and send large quantities of sturgeon in a dried state, caviar fish fat, and lampans, to Constantinople.

ATECA, a tn. Spain, in Aragon, prov. Saragosa 5 m. W. by S. Calatayud on the high road from Madrid to Saragosa. It lies on the Jalón, at its southern base with the Piedra and Maubiles, in a damp position, in consequence of which the inhabitants are much subject to ague. The Jalón here crossed by a handsome stone bridge, divides the town into two nearly equal parts, the smaller of which on the N.W. bank of the river contains the better streets. Atoea has six squares an ancient parish church, two chapels, guildhall, hospital, and three schools. The inhabitants are employed in agriculture, weaving, fishing, the manufacture of fire-arms, iron, tallow and wax, and they do a little trade in cotton fabrics, hardware, tallow, fish, &c. Pop. 2600.

ATEP (Sh.), a tn. N Africa, in the Sahara half a mile S. Nouadibou. lat. 23° 28' N. lon. 2° 18' E. It is walled, has two gates, and is composed of 500 to 600 houses, including six mosques. Here is a trade in grain, &c.

ATGERAT or **ADGERAT** a tn. Abyssinia, kingdom, Tigre, prov. Agams, 60 m. N N W Addis on an elevation 8180 ft. above sea level. It contains a royal residence, a large plain structure, and 3200 inhabitants.

ATELLA, a tn. Naples, prov. Basilicata, dist. of, and 6 m. S. Meil, on a river of its own name an affluent of the Ofanto.

ATEVA, a vil. Naples prov. Principato Citra, 45 m. S. E. Salerno. Pop. 3400.

ATERO or **FERGARA** (see *Aterno*) a river Naples, separating the two Abruzzi. It rises in Mount Etna and running past Aquila S. E. and then W. R. from Popoli, into the Adriatic Sea, near Pescara, in lat. 43° 28' N. lon. 14° 15' E. after a course of about 64 m.

ATESCH-JAH **ATESCHAU** **ATREMA**, or **ATREKINDA** [The Place of Fire], a spot on the peninsula of Apheron on the W coast of the Caspian Sea, the object of numerous pilgrimages by the Guebeks, who regard it as sacred, and worship the fire which issues from it by the ignition of the naphtha, with which the soil is thoroughly impregnated. The Atesch-Jah is about 1 m. in diameter, and from its centre when the weather is dry emits a yellowish blue flame visible by day but of course, much increased in intensity during night. A number of cottages are erected in the neighbourhood, and the inhabitants by several simple devices, apply the light to economical purposes. To prevent the escape of the naphtha vapour they cover their floors with about a foot of loam, leaving small holes which they can open or shut at pleasure. To kindle a fire, they have only to open a hole and hold a light over it, when a continuous flame is immediately obtained. An opening of 2 inches, has been known to give a flame of about 4 ft. To regulate the flame a hollow rod of the size required, and previously coated with lime, by the transmission of lime-water to prevent it from being consumed, is placed in the aperture. The vapour is perceptible, and hence, though both light and heat are obtained for nothing, the probability is, that being prejudicial to health, they are deeply purchased.

ATFESHA. See *Arment Jan*.

ATESHA, in Naples, prov. Abruzzo Citra, dist. of and 12 m. W N W Vasto d'Amante. It has a beautiful collegiate church, four parish churches, several convents, an hospital, and three *monasteri*. Pop. 7626.

ATFER a vil. Lower Egypt, 1 bank W branch of the Nile, about 14 m. above Rosetta, at the junction of the Mahmoudieh Canal with the Nile, where passengers who have come from Alexandria by the steamer and are going either to India or the interior of Egypt, embark in steamers for Cairo, which is about 90 m. distant S. E. The voyage by steamer is generally performed in a day and a half but in a sailing vessel, occupies about three days. The return voyage is accomplished by a steamer in from 12 to 15 hours having the advantage of the current in descending. The passage by the canal, from Alexandria to Atfeh, is made by truck boats. Thus occupying an important position on the overland route to India, and to Central and Upper Egypt, Atfeh has become a bustling place and is rendered still more so by an extensive trade in the canal being constantly lined with vessels loading grain and other cargoes.

ATFIEH or **ATFER**, a tn. Central Egypt cap prov. Atyh, r. bank Nile from which it is about 3 m. distant, and 41 m. S. Cairo. It was the capital of the Aphrodito polis nome, and according to Strabo, noted for the worship of a white cow the emblem of the goddess Athor the Egyptian Venus. The Coptic name of the town is Tphri or Pophri. It contains no monuments. Pop. 4000.

ATH, a fortified town, and com. Belgium, prov. Hainaut, on the Demer, about 17 m. E. Tournay on the railway from Tournay to Mons. It contains several churches, an orphan asylum, an hospital a theatre and a college. The principal buildings are the Hotel de Ville built in 1600 the magazines and several the church of St. Julien, founded in 1396 destroyed by lightning in 1817, but since rebuilt and the college, which was founded in 1410, and, with its buildings covers a considerable space. Among the ancient monuments of the

town, is a tower called Tour de Barbaud, supposed to have been founded about the middle of the 13th century. Dyeing, bleaching, and soap-making are carried on here to a considerable extent. There are also manufactures of gloves, lace, and linen cloths (of which last 25,000 pieces are annually sold in the market) a cotton press, a woollen mill, several brass and gun foundries, and a considerable trade in hemp, grass, elegant goods, leather cloth, wine, and colonial produce. Ath is famous for its trinkets, which circulated all over France; but the demand is now confined to Belgium, particularly Flanders and Brabant. The defences of the town were originally constructed by Vanban, but have been greatly improved and strengthened since the battle of Waterloo. The great barracks, which is bomb-proof, can accommodate 8000 men. Pop. of tn. and com. 6337.

ATHABASCA, or **ATHABASCOT** a river and lake, British N America, N W territory. The river rises at sources in the E slopes of the Rocky Mountains, near Mount Brown lat. 59° 10' N; lon 116° 30' W. From this point, it pursues a tortuous, but generally N E and W course till it falls into Lake Athabasca, at its W extremity. Its whole length, following the larger windings, is about 600 m. It receives the waters of the Lesser Athabasca, in about lat. 56° N by means of a connecting stream about 80 m. in length. It also receives in about lat. 56° 35' N the united waters of several small lakes. In the upper part of its course, it is known also by the name of the *Beche*, and in the lower part, or near its entrance into the lake, by that of the *Elk River*.

The Lake of Athabasca, or Lake of the Hills as it is frequently called, is situated about 190 m. S. E. the Great Slave Lake. It is about 200 m. in length from E. to W. and about 35 m. wide at the broadest part, but gradually narrows to a point at either extremity. It occupies an area of upwards of 8000 sq. m. The only outlet of the lake is by the Slave River, with which it communicates by several small streams that issue from its W. end, and by which its superfluous water are carried into the Great Slave Lake. The Slave River falls into it at its E. extremity. The N shore of the lake is high and rocky and thickly wooded with fir and poplars, &c. The S shore again is level and consists of alluvial soil. On this side there is a shoal of many miles in extent, formed by the drift timber and vegetable debris brought down by the Athabasca. The S. side of the lake abounds in fish, the most numerous are trout carp pike muskies &c.

ATHAN (Gr.) a par. S. Wales co. Glamorgan 1771 ac. E. Cowbridge. 10p. 876.

ATHASSER a par. Ireland co. Tipperary 1 769 ac. contains the ruins of a priory of great extent and magnificence. 10p. 4419.

ATHBOY a market tn. and par. Ireland, co. Meath, prov. Leinster. The town is 35 m. N W Dublin and 4 m. N W Trim. Its name, in the Irish language, meaning the yellow ford, being derived from its position on a stream called the Athboy river a tributary of the Boyne. The town contains chiefly of one long street and possesses a church, a chapel a sessions-house, and a constabulary barracks. Large cattle fairs are held here and the weekly cattle-market, on Thursday is well attended but there is little trade here. Two schools and a small widow almshouse are supported by the Earl of Derby to whose estate the town belongs. A loan fund was established in 1845. Athboy returned two members to the Irish parliament, but was disfranchised at the Union. Near the town, on the N. stands the Hill of Ward about 800 ft. high—a distinguishing feature in the landscape. Area of par. 11,884 ac. 10p. of par. 4117, of m. 1204.

ATHLLINGTON a par. England co. Suffolk 487 ac. S. E. 3 ys. 10p. 117.

ATHLENEY (Iris or) the ac. name now changed, of a rising ground situated in a marsh in the co. Somerset, England par. East Long, about 6 m. S. E. E. Bridgwater. The moors by which the island was surrounded was, in former times, all but impassable thus rendering it a place of security for which it was often made available. Amongst those who sought safety in this bog-dirt island was Alfred the Great, who fled thither after his retreat from the Danes, then overrunning Wessex. To commemorate this event, a small obelisk with an inscription has been erected on the spot by the owner of the land. Alfred founded a Benedictine

abbey here, about 838. Many architectural remains, bones and other relics, have been dug up on the site of the buildings, which appear to have been extensive and magnificent. The mound, now no longer isolated, contains about 100 ac. It was, in ancient times, covered with alders, in which swags, wild geese, and many other animals sheltered.

ATHELSTANEFORD a par. South. co. Haddington. 4000 ac. 18000. Office of the Treasury of Douglas, was for 10 years minister of the parish and it is the birthplace of Blair author of *The Grave*. 10 p. 91

ATHLATHY or **ATHLATHY** an ant. town, barony and par. Ireland, co. Galway. The town is 18 m. E.N.E. Galway and was originally called Athlath, from Ath-na-Buigh the king's ford or the abode of a king. It was at one time enclosed within walls, some vestiges of which still remain in the 15th century. The ruins of the Bishop's Palace, a site of lead for the foundation here of a Dominican monastery in account of which is given in *Grove's Antiquities of Ireland* but it was accidentally destroyed by fire in the 15th century. Part of the ruins are intact, as well as of the castle of the Birminghams, Earls of Louth. There was also a Franciscan friary founded here in 1444. It sent two members to the Irish parliament, but was deprived of the franchise at the Union. Having no manufactures or trade, it is a poor place, and wears altogether a very desolate aspect. Around the town, the country is flat and dreary presenting constant alternations of peat, marsh rich pasture, bare crag and (Hill) lands. — *The barony* is 20 m. in length, and from 1½ to 8 m. in breadth. Area, 25'82 ac. Pop. in 1851 4533. Area of par. 2651 ac. pop. in 1851 4605. Pop. of town in 1851 1487.

ATHENS, the name of a county and of numerous towns along the U. States. — A co. in the S.E. of Ohio area, 140 sq. m. watered by the Hocking, the Bassoon, and several smaller streams. The surface is hilly and broken but the soil is productive, and adapted for tillage or grazing. Iron, coal, limestone, freestone, clay and salt springs, add to the riches of the county which, besides many numerous herds of cattle, sheep and swine, yields wool, oats, potatoes, tobacco, &c. Pop. 19,109. — A post vil. cap. of above co. 72 m. S.E. Columbus. It is a picturesque village lies on a bend of the Hocking has well built brick houses a Presbyterian and Methodist church, a college founded in 1821 with five professors an academy, cotton-plant, two tanneries, three grist and three saw-mills. — Pop. 710. — **ATHENS** is also the name of townships in Maine, Vermont, New York, Pennsylvania, Michigan, Georgia, Alabama, &c.

ATHENS [anc. *Athena* *Athens*] the capital of Greece and not only for several ages the centre of European civilization, but still in many respects, particularly to the scholar and the artist, the most interesting city in the world. Its site equally magnificent for scenery and advantageous for commerce, is about 4 m. N.E. of the Bosphorus Gulf of Egina, in an extensive plain of its own name, watered by the Ilissus and Cephissus, and surrounded by hills on all sides, except towards the sea, where it lies open, and gives a fine view both of the gulf and the numerous islands which seem to float on its surface. The plain, instead of being uniformly level, is broken by numerous ridges of limestone, several of which with their intervening valleys, are partly occupied by the city while the highest of them rise up precipitously and form the Acropolis or citadel. The chief approaches to Athens are one on the W. by way of Eleusis, over a well made carriage road in a plain remarkable for the luxuriant beauty of its olivestones and another on the S.W. by the celebrated harbor of Piræus, along a tract which, though once a mere swamp, has been covered with vineyards, oliveyards, and fig-plantations. In its most prosperous days, Athens enclosed a large space, including not only the city proper but a long narrow suburb, stretching continuously to the Piræus, and was surrounded by walls which had a circuit of nearly 20 m. Parts of these walls still remain, particularly on the E. and W., but in several had been built, including a space which, during the occupation of the city by the Turks, was used for the purpose of accommodating its inhabitants. Since 1834 when Athens again became the seat of Government, the wall which was in a ruinous state, has been pulled down to make way for new

streets and additions, which are rapidly springing up on all sides, and promise to give the city at least the appearance of a modern capital, how much sooner they may do so to rival its ancient splendor. Previously to these improvements, the greater part of Athens was a mere heap of ruins the effect of the recent struggle for independence; while the portions still habitable furnished one of the worst specimens of a Turkish town, consisting of a mere labyrinth of narrow crooked, and irregular lanes. The houses in general had no architectural merit, and even those of them which it was impossible to pass unobserved, attracted attention merely by occupying sites on which some of the finest remains of ancient art were still standing, barbarously and grotesquely dovetailed into modern structures. A specimen of this curious and incongruous mixture is exhibited in the wooden on the following page, of a marble structure on the E. side of the Acropolis, supposed to have been dedicated to Rome and Augustus. It now stands across a street, the thoroughfare of which passes between its central columns and is seen proceeding in the direction of a Turkish mosque, while modern buildings not only about on the monument, but are built into and partly conceal it. Artists have too often taken these rude surroundings as the basis of their sketches of Athenian buildings, have exhibited them not in their actual state, but as they could imagine them to have once been, or expect them to become by means of the renovating processes which the present Government has begun in good earnest to employ. Though several public buildings well deserving of public notice have been recently erected, the chief interest connected with Athens must long continue to be derived from its antiquities, and with these, therefore, though contrary to the usual order it seems proper to begin. For this purpose the reader must transport himself to the Acropolis, a lofty limestone rock 150 ft. high, precipitous and inaccessible on all sides except the N. but terminating in a large expanse of an open plain enclosed by a wall 2380 yards in circuit. The second entrance on the N. side, and which round all it reaches the only entrance, the Propylæa, a splendid portal with a front of six marble Doric columns and two wings, giving admission by five doorways, all of which have recently been cleared of Turkish rubbish and once more appear almost in their original perfection. Immediately without the entrance, on the right side, a beautiful temple of *Winged Victory* has recently been brought to light by the removal of a Turkish battery. It is now in process of re-construction from its numerous fragments, which lie scattered about and both from its beautiful workmanship and commanding position, is expected ultimately to become one of the noblest ornaments of the city. On turning into the Acropolis the majestic Parthenon, justly described as the finest edifice, on the finest site in the world, bursts on the view. It stands near the centre, on the most elevated spot within the Acropolis, and is built of the white marble of Paros. It was in the form of a peripterous, 228 by 100 ft., its longest sides facing the N. and S. and consisted of a cell surrounded by a portico, which had eight Doric columns in front and 17 on the sides, each column 84 ft. high, and 6 ft. 2 inches in diameter at the base and standing on a pavement elevated by three steps. The whole height was 66 ft. The Parthenon stood almost entire, at least as the Emperor Hadrian had repaired it, till 1687 when, during a siege by the Venetians, a bomb fell upon part of it, which was employed as a powder magazine, and destroyed the roof. Since then, it has received numerous injuries, some of them of a very recent date, and its more delicate ornaments must now be looked for in private cabinets and public museums. The more solid parts are tolerably entire, though even these have suffered much, and must ultimately have disappeared under the barbarism of the Turks who not only in a case of necessity had converted its marble into cannon balls, but were in the practice of pounding it for mortar. The other principal building of the Acropolis is the Erechtheum or temple of *Minerva Polias*, consisting of a cell about 90 ft. long from E. to W. and intersected at its W. end by an irregular transept. The N. and E. porticoes were supported by Ionic columns, the S. by a kind of sculptured female figures, called Caryatides. The chief entrance in the Erechtheum was the temple proper at the E. end; the Propylæum, at the W. end, and in the centre, the Caraprium, supposed to have been so called from containing the remains of

Cecrops the first founder of the city. Immediately to the N.W. of the Acropolis, and separated from it by a narrow valley, is the Areopagus, or as our Bibles also call it, Mars Hill, famous for the venerable court which there held its sittings under the open air, and still more famous as the spot on which the apostle Paul pleaded the cause of heavenly truth against

THE GATE OF ATHENA, ATHENS.—From Theatre. Also known as Adonis.

Stone fatalists and Epicurean scoffers, and proved, by a simple appeal to the gorgeous temples around him, that in all things they were too superstitious. A little to the S.W. of this celebrated hill, and due W. of the Acropolis, lies a small valley forming the old Agora forum or market-place) and on a slope immediately above it the Pnyx, with its rude bench of stone, at which Demosthenes was wont to stand and fulminate forth his matchless eloquence to the half-covered and enraptured multitudes crowding the forum below. To the S. of the Pnyx and almost of equal height with the Acropolis, is the Maseurion Hill so called because Maseurion is said to have sung and to have been buried there but deriving its chief interest from a deed of shame—one out of four curious dungeons, cut out of the rock at its base, being by tradition that where Socrates drank the poisoned cup. At the base of the Acropolis, near its S.E. angle, was the theatre of Bacchus but a few seats, cut in the rock, are almost the only vestiges of it that remain. About 500 yards N.W. of the Acropolis is the temple of Theseus built A.C. 46. 50 years before the Parthenon, and more fortunate in its fate, having not only at one time been employed as a Christian church, but still forming the most complete ancient building of any extent within the city and serving as its museum. It is built of Pentellic marble, which has assumed a rich mellow hue and is equally remarkable for solidity and gracefulness. It is surrounded with Doric columns, 18 on each side, but of comparatively small dimensions, the cell being only 40 ft. long by 20 broad. Considerably to the S.E. of the Acropolis, and a little above the corner Ilissus, is the temple of Jupiter Olympus, which was the largest in Athens and though begun by Pisistratus A.C. 550, was first completed by Hadrian A.D. 145. It consisted of a cell surrounded by a peristyle of Corinthian columns, 10 in front and 10 at the sides, each 6 ft. in diameter and above 60 ft. high, and appeared to have had a circuit of 2500 ft. All that now remains is 18 columns, on an artificial platform, supported by a wall. It was almost endless to attempt to detail all the ancient edifices with which Athens

was adorned, and the remains of which may still be traced; but before passing to the modern buildings, there is one belonging to an intervening period, which ought not to be overlooked. It is the Cathedral, built of massive blocks of white marble, and furnishing one of the most interesting specimens of the Byzantine style. A modern story conceals the original dome but a frieze, running along the front, is carved with a curious Greek sodas. The interior is covered with paintings. The chief part of the modern town is to the N. where a new quarter of good houses has been built, to which the diplomatic corps has recently removed. In the W. also, a line of houses has lately risen up, not so regularly as could be wished, but all well built, and many of them large and commodious. Here the new palace has been erected but, unfortunately by an architect on whom the minds of his earliest predecessors appears not to have fallen. It is a large quadrangular building with massive walls of broken limestone, faced with cement but the front portico as well as a colonnade, together with all the wind-recesses corridors &c. are of Pentellic marble. The interior is highly decorated in the modern style of Munich. The university or Panepistimion is the finest modern structure of Athens, and when completed will not be unworthy of it but unfortunately from want of funds (the greater part of which have hitherto been furnished by subscription, chiefly from foreign Greeks) only half of the design has yet been carried out. It has a handsome portico of Pentellic marble, from each side of which an open corridor leads to the six lecture-rooms, an anatomical theatre, council room, &c. A double flight of stairs leads to the library which is a noble hall, and already contains about 30,000 volumes. The number of students exceeds 200. It is pleasing to see that among the different institutions which are springing into existence here, education holds its proper place. In addition to the university there are numerous schools supported partly by Government, partly by public societies and private munificence. Among the higher class of these establishments are the gymnasium which prepares for the university and has 600 pupils the polytechnic school for drawing geometry

and attended by nearly 200 (1 a summary or normal school and the Royal mechanical school so called after its founder and designed to give a preparatory education to students of divinity. Among the secondary schools may be mentioned those of the Greek committee of education, with about 250 pupils and the Athens free school, and the American school, each with 600. Athens has no manufactures, and as yet cannot be said to have any important trade, though it has an excellent harbour which seems to invite the commerce both of the E. and the W. This harbour, called, in modern times, Porto Leone, from the marble lioness lion which once stood upon it, but still better known by its ancient name of Piræus, is about 4 m. to the S.W. of the city and was brought within its enclosure by means of what was called the Long

Walls. It is very deep and capacious, forming a large basin which is somewhat difficult of entrance, but within which, in its best days 1000 triremes have rode. To the trade of this port, and the naval superiority connected with it, Athens was mainly indebted for the pre-eminence which she held among the states of Greece and apparently to the same sources must she still look, if she is again to become great. Of this the Government seems fully aware, and accordingly one of its earliest labours was to fill up a marsh, and commence the construction of a quay at which several hundred merchant vessels may lie. Piræus itself, instead of being a mere suburb is rapidly rising into a town. It has been almost entirely built since 1824, and already contains 1000 houses. See PIRÆUS.

The early history of Athens is obscured by fable and though Cecrops is universally admitted to have been its founder he is known of him that it is still disputed whether he came from Egypt or was a native Greek. At first the Acropolis, and a few cottages clustering round its base, formed the whole city but it soon rose into importance though it does not take a very prominent place till about a.c. 694 when Solon became its legislator. The jealousy of neighbouring states began now to be excited, and a combination, headed by the Spartans, was formed against it when the appearance of a formidable foreign foe showed the Greeks the folly of intestine dissension, and convinced them that union alone could ensure their safety. A numerous Persian host arrived in Athens and threatened to make Greece the prey province of a barbarian empire, but the battle of Marathon, a.c. 490 drove back the invader and laid the first foundation of Athenian renown. Ten years later Xerxes arrived with almost countless horrid vengeance, and partly obtained it, by laying the greater part of Athens in ashes. Defeat, however, overtook him at Salamis, and drove him across the Hellespont, a most inglorious and almost a solitary fugitive. Mardonius his successor, still remained, but again obtaining possession of Athens, left it to him, but the victory of Platenus rid the Athenians of Persian invaders and opened a career of prosperity which under the guidance of Themistocles, they were not slow to follow. The city suddenly rose with a magnificence which it had never before possessed, and was enclosed by a wall which not only secured it against sudden incursions, but extended so as to form a bulwark around its fleet. The Athenian naval supremacy being now established, an extensive commerce arose wealth flowed in from all quarters, and the magnificence of its rulers rivaled with the state in extending and embellishing the city. This prosperity both under the Athenians and their neighbours evoked the Persian ambition, which broke out and terminated most disastrously for Athens, which surrendered to the Spartans, a.c. 404, was deprived of its fleet and saw its Long Walls, and other maritime fortifications, demolished to the sound of music. It never completely recovered the shock and though not a few of its great names afterwards appeared internal degeneracy as well as outward force, concurred in preparing the Athenians for a foreign yoke. First Philip, and then Alexander, a.c. 338, became the conquerors of Athens, left it to him, but the victory of Platenus rid the Athenians of Persian invaders and opened a career of prosperity which under the guidance of Themistocles, they were not slow to follow.

ATHERSTONE (anc. *Adrieston* and *Adrieston*) a market town and township England co. Warwick, 20 m. N.E. Warwick, and 91 m. N.W. by N London, situated in a valley surrounded by easily-wooded hills. It consists chiefly of one main street, which is but indifferently kept. The houses are irregularly built, many of them are very ancient, some are of stone, the modern buildings of brick. The town is amply supplied with water and well lighted with gas. The chapel,

formerly belonging to an Augustinian priory founded in 1378, has been recently entirely rebuilt, with exception of the old octagonal tower which still remains. There are also in the town chapel for the Wesleyan and Independent Methodists and, in its immediate vicinity are a convent and chapel for Romanists, both handsome structures. The educational system of the place consists of a free grammar-school an endowed charity school and an infant school. Hats and stockings are manufactured here, the former to some extent. Athlone is said to be the birthplace of Drayton, the poet. The Great Valley Railway runs by the town and the Coventry and Lancy Canal passes at its N.W. extremely where extensive coal and lime wharves have been constructed. The county magistrates hold a petty session weekly. Market-day Tuesday. Three fairs annually. Pop. of township, 8810. — *ATHRONE-CROFT-STONE* is the name of a small parish in the same county hen. Kilgallon 1060 ac Pop. 421 — (Correspondent in Athlone).

ATHLONE, a tn. and barony Ireland. The town lies on the Shannon, about 67 m. W. by W Dublin and 12 N.E. Mullmalone, partly in co. Westmeath prov. of Leinster and partly in co. Roscommon, prov. of Connaught, and stands almost in the centre of Ireland. It is divided by the river into two nearly equal parts connected by a spacious and handsome new stone bridge of five arches, opened for traffic for the first time in November 1844 communication having been previously maintained by a narrow old bridge, erected in the time of Elizabeth, now removed. The two divisions were formerly called English town and Irish town, but are now known as the Leinster side and Connaught side. It is an ill built, irregular and ill-paved place and consists chiefly

of narrow dirty crooked streets, and obscure lanes and alleys. It is composed of three parishes: St. Peter and Kiltoom in the barony of Athlone, co. Roscommon, and St. Mary in the barony of Henbury co. Westmeath. The best private hotels, and the only clean street in the whole place are on the Leinster side. On the Connaught side is the castle of Athlone, erected in the reign of King John and enlarged and strengthened in that of Queen Elizabeth, and now strongly fortified in the modern style. It was once the residence of the Lord President of Connaught, and completely commanded the old bridge. The town was incorporated by charter from James I. and received a further charter from Charles II. It derives importance from being one of the chief stations or Government depots for troops and military stores in Ireland. The barracks, N.W. the castle, can accommodate 3000 men; to it an extensive and magnificent granary with marts for 15 000 men, and hospital, are attached, all occupying an elevated position on the river above the bridge, and, with the three large

squares for parade and exercise, cover at least 15 English ac. N W of the barracks and outside the town, are extensive out-lets and battens commanding the main roads from Galway and Ballinasloe. The extensive house is in the Connaught town. Besides the parish church, there are four E. catholic chapel, including those of the Augustinians and Franciscan friars; also places of worship for Baptists, Presbyterians, and Wesleyan Methodists, a charter school, and several free schools, one in the barracks with branches of the national and provincial banks of Ireland the usual municipal and county offices several lines, and a union workhouse, opened in Nov 1841. There are also two breweries, one of them very extensive, some large flourmills, and two distilleries. The main feature of fall lands, which has long been carried on here to a considerable extent is now declining. Fences and dunes are also manufactured. The markets, held three times a week are well supplied with sea and river fish vegetables and meat by means of a canal at Athlone, a mile long, constructed for the purpose of avoiding some fords, the Shannon is rendered navigable for 71 m above the town. The facilities for carrying on trade here are further augmented by the grand canal from Dublin which joins the Shannon 17 m below the town. The first bridge in Ireland was said to have been one built across the Shannon at Athlone, by Turlogh O'Connor king of Connaught in 1140. Athlone sent two members to the Irish Parliament, but sends only one to the British House of Commons constituency 388.—Pop of the 6218.—The barony is 16 m in length by 10 m breadth area 187 593 ac 1 op 16,128.—Ingles's *Ireland* O'Leary's *Tour in Connaught* Murray's *Diocesan for Ireland* *Parliamentary Papers*.)

ATHOLZ, or AZOULT, a mountain some 2000 ft. high, the most N part of Perthshire, Scotland 45 m. long and 80 broad. It comprehends a great portion of the ancient Caledonian forest, and along with Stronmont, constituted in the eighth century the possessions of a Pictish prince. It contains several lakes and richly cultivated valleys, and in the extensive forest of Athole game of various kinds is abundant. The pass of Kilshearnie, celebrated for the battle fought near it in 1689 in which Graham of Claverhouse was killed is in this district. It is a romantic, finely-wooded pass, ranging steeply on either side of the Garry. Amongst the most beautiful of its valleys are Glen Tilt and Glen Bruar. The district contains a number of villages. It gives the title of Duke to the ancient house of Murray. Athole is said to signify pleasant land, and Baidr Athole, the name of its principal valley is the field or vale of Athole. The famed Athole Brose is a mixture of whisky and honey.—Fennant's *Tour Anderson's Guide to the Highlands and Islands*.)

ATHOS MOUNT [Modern Greek, *Hayon Oro* Italian *Monte Santo*] the name given properly to a lofty mountain in the E.E. of Turkey lat 40° 10' N lon 24 21 E but generally applied to the whole of the narrow peninsula lying between the Gulf of Contama, and the Gulf of Monte Santo, and separated from the mainland of prov Selouschia by an isthmus, whose breadth from gulf to gulf at its narrowest point, does not exceed 14 m. This peninsula, which stretches into the Archipelago N W to S E 25 m with an average breadth of about 4 m is generally rugged, being intersected by innumerable ravines. The isthmus itself is flat and sandy standing only a few feet above the level of the sea; and traces have lately been discovered of the canal which Xerxes cut across it, to avoid a reconnoissance of the dangers which his fleet experienced in rounding the promontory; but immediately beyond the isthmus, at its N end, the ground rises sharply about 300 ft. forming the summit of a plateau, which for 12 m. maintains a height of 800 ft. From this point the peninsular becomes more decidedly mountainous, two of its heights reaching respectively to 1200 and 1700 ft. Near this stands the town of Karyes, picturesquely situated amidst vineyards and gardens. Beyond Karyes both the height and the ruggedness increase and dark forests of oak chestnut, and yew, extend without interruption to the foot of the mountain—an

isolated cone of white limestone or marble resting on a granite and schistose base, and rising abruptly particularly towards the sea, to a height of 6700 ft. The view from the summit as described as one of the finest panoramas in the world. The mountain belongs to Calyptea, or Greek monks, whose monasteries, chapels, &c. are scattered over its sides and have procured for it its modern name of Holy Mount. The monks attempt to trace their institution to the time of Constantine but their earliest authentic documents do not go further back than the 10th century. The site of these monasteries is very picturesque, but none of them have much architectural merit. They are remarkable chiefly for the solidity of their structure and its precautions adopted to make them secure as places of defence. One principal monastery St. Laura, stands on the S.E. side of the mountain facing the sea. It looks like an ancient fortress surrounded with high black walls, over the tops of which are seen numerous domes and pinnacles, odd-shaped roofs, and cypress trees. It encloses an irregular space of 3 or 4 ac. and has a front of about 500 ft. The only entrance is by a crooked passage defended by three iron doors. The interior consists of several small courts and two large open spaces surrounded with two churches, and buildings to accommodate the monks. These at present are only 120. The whole number now inhabiting the peninsula, has been estimated variously from 8000 to 2600. The latter is probably the more accurate estimate. At one time the whole of the monasteries were rich in ancient MSS. but the monks were in general too illiterate either to read them or know their value. Several of the most ancient, which had become more number and meet soon have rotted away altogether have been happily saved and now enrich various collections. (Curzon's *Discoveries, Handbook for the East* *Orographie de l'Europe*.)

ATHY a municipal and market town, Ireland, co Kildare in the parishes Athy St. John and Athy St. Michael, 20 m. S W Leam, and 37 m S W Dublin pleasantly situated on the Barrow which is crossed here by a stone bridge of five arches. It contains chiefly of a main street and market square having three Protestant and two E. catholic churches, two dissenting chapels, several parish schools a dispensary workhouse, a lunatic asylum, a fever hospital, large union workhouse, and prison barracks. Athy which was first incorporated in the reign James I is included in a circle extending 1 m from the town and governed by a mayor two bailiffs 12 burgesses, and a recorder. Before the Union it sent two members to the Irish Parliament, but was then disfranchised. It is, situated with the sea the sea town of Kildare quarter sessions are held in January and June petty sessions every Tuesday and a court of presentation is held in October. The modern importance of Athy is due to its position at the junction of the Grand Canal with the Barrow which is navigable hence to its mouth, and it is also one of the chief stations on the Carlow branch of the Southern and Western Railway. It has a large trade in corn which is sent in barges to all parts of Ireland; and it has two weekly markets, with six annual fairs. The manufactures however are quite insignificant. On the W bank of the river are the remains of Woodstock Castle, built in the 10th century by the seventh Earl of Kildare. It is in a tolerable preservation, and has a fine arched gateway and beautiful walled windows. Pop 1110.—The Parish of Athy St. John partly in Queen co and partly in co Kildare comprises an area of 1123 ac. Pop 1685. The parish of Athy St. Michael co Kildare comprises 1881 ac. Pop 2180

ATIBALA a town Brazil in the E of the pro São Paulo, on a river whence the town derives its name, 110 m. N N E Santos. It has a church, townhouse and prison and its inhabitants, who are subject to goitre, cultivate the necessities of life, and rear cattle and hogs for the market. Pop of it, and dist 7000

ATIZENA a town Spain in New Castle, prov Guadalajara, 16 m W N W Sigüenza, on the E. summit of a rocky hill, surrounded by a dilapidated wall, flanked with 14 towers, entered by three gates. It has an old and extensive castle on its N side, has ill paved steep streets, a square six parish churches, a hall of justice, a prison, an endowed school, hospital, and a convent. Pop chiefly agricultural 1988

ATINA [anc. Atreus] a town Italy prov Caserta, dist of and 11 m. S.E. Sorra, near the Melfa. It has a

cathedral, a convent, and an hospital, was formerly a bishopric, and is one of the most ancient towns of Italy being named by Virgil amongst the cities that took part in the war between Aeneas and Turnus, prince of the Rutuli. It was a Roman colony during the reign of Nero and then considered one of the most populous and important in the empire. It has some manufacturing of carpets. 1 pop. 6708.

ATZUNEN called also **ATZUN** a large lake, Brazil, prov. Para, in Brazilian Guiana, between the rivers Negro and Japura, 210 m. above the junction of the former stream with the Amazon. It contains lakes S. W. with the Codela, an arm of the Negro and N. E. with the Negro, through the rivers Anany and Iapara. Its banks are covered with the *Couba* plant.

ATILAN a lake and active volcano Central American republic Guatemala. The lake is 90 m. W. N. W. the city of Guatemala, 80 m. in length, about 10 m. in breadth, and entirely surrounded by rocks and mountains. There is little gradation of depth from its shores, and the bottom has not been found with a line of 800 fathoms. It receives several rivers, and all the waters that descend from the mountains but there is no known channel by which this great body is carried off. Crabs and a species of very small fish are caught in it; the latter are in immense quantities. The volcano is 11 m. 13° 47' N. long. 91° 45' W. and is 19,500 ft. in height.

ATLANTIC OCEAN the name given to the vast expanse of sea lying between the W. coasts of Europe and Africa and the E. coasts of N. and S. America, and extending from the Arctic to the Antarctic Sea, or as far as with sufficient propriety be said from pole to pole, being separated from the Pacific Ocean by lines drawn from Cape Horn and Cape Agulhas to the Antarctic Circle. Its greatest breadth is between the W. coast of N. Africa and the E. coast of Florida in N. America, the distance here being 4150 m. If the Gulf of Mexico in reality one of its bays, be included, it will extend to 5000 m. In least breadth, which is between Norway and Greenland is about 930 m. Between Cape St. Roque, Brazil and Sierra Leone, the breadth is 1702 m. Its superficial extent has been estimated at 25,000,000 sq. m. From the number and extent of its gulfs, gulfs, and bays its coast lines are of great length, the E. being upwards of 32,000 m. and the W. upwards of 56,000 m. Its principal gulfs and bays are Baffin's and Hudson's Bays, the Gulfs of Mexico, Honduras and San Juan the North Sea or German Ocean the Bay of Biscay and the Gulf of Guinea. The principal islands of the equator are Iceland the Faroe and British Islands, the Azores, Canaries, and Cape de Verde Islands, Newfoundland, Cape Breton, and the W. India Islands and N. of the equator Ascension, St. Helena, Trinidad, Columbus, and Tristan da Cunha, the last three being mere rocks. The Atlantic is of vast depth. In lat. 15° 3' S. lon. 23° 14' W. or rather more than half way between St. Helena and the E. coast of S. America Sir James Ross traced soundings with a line of 37,600 f. without finding bottom, this being the greatest depth yet satisfactorily ascertained, although it is believed that many parts of the Atlantic are much deeper. Some of the other more remarkable depths recently ascertained are—

N. ATLANTIC OCEAN 1863
Lat. 33° 51' S. lon. 20° 07' W. 14,000 f. S. James Ross.
27 59 10 14,500 f.

N. ATLANTIC OCEAN 1845
Lat. 22° 50' N. lon. 69° 15' W. 10,800 f. (One break) Capt. Burnett.
41 70 44 16 22,500 f.

In the Antarctic Ocean the depth was found by Sir James Ross to be generally about 2000 f. but on one occasion a line of 24,000 f. failed to reach the bottom. The saltness and specific gravity of the Atlantic are greatest near the equator diminishing gradually towards the poles, where they are affected by the melting of the ice. The degree of saltness is greater in the S. hemisphere than in the N. and is greater in the Atlantic than in the Pacific. The temperature of the Atlantic is higher in the N. than in the S. hemisphere, and is highest between lat. 6° 45' and 6° 15' N. where it has been found to be from 82° F. to 84° F. but in the Gulf of Mexico it attains a temperature of 88° 52'. The maximum temperature of the Atlantic Ocean does not, therefore, correspond with the terrestrial equator, the true of greatest warmth being found invariably N. of it.

Currents.—The great currents of the Atlantic are of two kinds, the drift current and the stream current. The former

is produced by the wind either by the perpetual or trade winds, or by prevailing winds; those having the former origin are constant, running always in the same direction and generally with a nearly equal velocity, those having the latter are not so constant, neither do they always run in the same direction, nor at a similar rate. The drift currents produced by the trade winds are found between the tropics, those resulting from prevailing winds, N. and S. of the parallels of 30°. They are comparatively slow in their motion, proceeding at a rate of little more than half a mile an hour and are confined to the surface or upper strata of water. The stream currents, again, the causes of which are but imperfectly known, extend to a great depth, and have, some of them, an average velocity of 80 m. per diem, the maximum reaching to 120 m. The great stream currents of the Atlantic are the *Gulf stream*, the *Equatorial current*, the *N. African* and *Guinea current*, the *Southern connecting current*, the *Southern Atlantic current*, *Cape Horn current*, *Brazil current* and the *Arctic current*. The *Gulf stream* originates in the Gulf of Mexico, passes through the Strait of Florida, runs N. along the shores of that territory to lat. 31° N. then in a N. E. direction to about lat. 36° N. when it crosses the Atlantic passing the W. of the Azores, and is lost in the ocean. Its average length, from commencement to the W. of the Azores Islands, is about 3000 geo. m., traversing in an average 30 degrees of latitude, or from 23 to 43° N. Its mean breadth is about 850 m. Its broadest part is between 40° and 60° W. lon. where it is upwards of 400 m. broad its narrowest, in the Strait of Florida and along the American coast to about lat. 34° N. where it does not exceed 60 m. and is often much narrower. Its comparative mean velocity in the Atlantic is 80 m. in 24 hours. In lat. 26° and 2° N. it was found to have a velocity of 80 m. in 24 hours, and at the end of the Gulf of Florida, in the parallel of Cape Canaveral, 5 m. in hour. On passing from the Strait of Florida it is of a dark indigo blue color, and is distinguishable from the green waters of the Atlantic for many hundred miles. The *Equatorial current* is called from its being under the line, commences on the W. coast of Africa, about lat. 10° S. or nearly opposite San Paul de Loando. From this point it pursues a N. W. direction till it makes 0° lon. when it proceeds due W. on both sides of the equator till it arrives at Cape St. Roque in S. America, when it is divided into two branches, one running along the Guinea coast, the other along the coast of Brazil and so called, respectively the *Brazil current*, and the *Guinea*, or more equatorial current. It throws off a third branch at lon. 23° W. called the *N. W. branch*, from its taking that direction. The length of this current from the coast of Africa to Cape St. Roque, is 2500 m. Its breadth near the commencement, is 160 geo. m. opposite Cape Palmas 360 and before dividing about lon. 31 or 32° W. it is 450 m. Its average velocity which is greater in summer than in winter is from 25 to 30 m. a day. The *Guinea branch* of the Equatorial current runs along the low coast of Guinea to the island of Trinidad where it enters the Caribbean Sea. It extends about 500 m. and has a velocity varying at different parts of its course, from 16 to 21 and 30 m. per day. Temperature, 81 to 84°. The *Brazil branch* flows at a distance of from 250 to 300 m. from the shores of S. America, and extends from lat. seven degrees into the ocean. The average velocity of its N. portion is about 30 m. per day. The *N. African* and *Guinea current* originates in the sea opposite the coast of France, between Cape Clear in Ireland and Cape Finistère in Spain. It flows in a S. E. direction to Cape St. Vincent, when after sending a mass of water into the Mediterranean it pursues a S. course to Cape Mesurado S. of Sierra Leone, keeping at a considerable distance from the land. It then flows rapidly for 1000 m. due E. to the Night of Biafra, where it seems to mingle with the Equatorial current. The two currents come first in contact off Cape Palmas, where they are found running swiftly in opposite directions. The breadth of the *N. African* and *Guinea current* varies with the season opposite Cape Palmas it extends to 180 m. It runs at the rate of 12 m. per day near the beginning of its course, but after passing Cape Mesurado its velocity is increased to 50 m. The *S. connecting current* is supposed to be united to the *Brazil current*, but this is not certainly known. It flows from about lon. 40° W. in a S. E. direction, passes the Cape of Good Hope at a distance of about 160 to 180 m. and enters the Indian Ocean, where

traces of it are found 2000 m. beyond the Cape. The *S. Atlantic*, or *S. African* current originates N of the Cape of Good Hope, from which it flows in a N W direction, at a rate of from 15 to 30 m. a day, and eventually merges into the Equatorial current. *Cape Horn* current flows constantly from the Antarctic S. Sea into the Atlantic Ocean, its general direction being E N E. and N E. Its velocity off Terra del Fuego is from 15 to 16 m. per day but in other parts it attains a velocity of 53 and 56 m. per day. In the vicinity of the coast its average rate is about 24 m. per day. *Remedy's* current commences near Cape Finisterre and, running along the N coast of Spain, turns to the N and N W along the W coast of France, and traverses the English and Irish Channels. It then passes Cape Clear in Ireland and about lat. 20° W bends round, and, proceeding S, joins the N African current. Its velocity is about 24 to 28 m. per day. The *Arctic* current is believed to originate in the masses of ice which surround the N pole, whence it runs along the E coast of Greenland to Cape Farewell having doubled the Cape it flows up the W coast of Greenland to about lat. 68° N when it turns to the S along the coast of Labrador. Arriving at the N end of Newfoundland, it sends a branch through the Strait of Belle Isle, the main stream passing between the great and outer bank of Newfoundland, and eventually joining the Gulf stream between lat. 44 and 47° N. Immense masses of ice are borne S by this current from the polar seas, and either stored along the coast of Greenland or carried into warmer regions, where they gradually dissolve and disappear. Many hundred icebergs have been seen at one time borne along by this current and it has been calculated that 20 000 sq. m. of drift ice are annually brought by it along the coast of Greenland to Cape Farewell. Besides these great and enduring currents, there are many of a temporary character of small extent, and of merely local influence. These are the periodical currents occasioned by tides, monsoons, and other long-continued winds, and temporary currents arising from similar causes.
